The best quality oilskin or slicker suits should be taken for wet weather. Cheap oilskins are sticky, or else they are not waterproof. Many prefer long rubber or oilskin coats to the jacket and trousers rig, but the latter has the advantage of keeping a man dry at times when he does not wear high boots. It has, however, a disadvantage in that the trousers in warm weather often make the garments beneath as wet from perspiration as they would have been from rain. All waterproof clothing sweats a man when exercising, and personally I would rather wear good cloth in anything but the heaviest downpours.

The keynote of comfort in the extreme winter cold of the Yukon is in the proper selection of underwear. Thickness does not count so much as quality. The smallest admixture of cotton is fatal. That I slept more comfortably than my partner when lying out nights on our trip up the river in January is due I think to the fact that my underwear, though lighter than his, was of better quality. His was manufactured especially for the Yukon trade and was very heavy, but probably not honest goods. Mine was the heaviest Jaeger I could purchase in New York, and the shirts were half a dozen sizes too large. Of course such shirts are big in every direction, and afford a wide margin of overlap where the garments meet; and moreover several of them may be worn at one time if desired. As a matter of fact I never required more than one undershirt to keep me warm, though I have frequently worn three pairs of heavy drawers at once.

Next in importance to pure woolen underwear is buckskin underwear, which is invaluable for breaking the wind and retaining the natural heat of the body. Buckskin underwear absorbs perspiration from the woolen underwear which is worn next to the skin, and becomes wet and soggy. It should not be worn except in the coldest weather. There is little stretch to it, and you want it plenty large.

Wristlets or pulse warmers are a good thing, and a money belt of some kind, leather or canvas, to be worn beneath the outer clothing, is a requisite.

For the feet, heavy socks are worn at all times. The progression of the seasons is marked by adding to or decreasing the number worn at one time. For the coldest weather our allowance was three pairs of ordinary heavy wool socks and one pair of German socks. If long trousers are worn the German socks are drawn up outside and tied below the knee. Arctic socks, which are a kind of felt slipper, are very useful. They keep out external dampness to a certain extent, and add protection against the cold just where it is most needed. A man's feet may be cold at a time when the bundled socks and drawers make the ankles uncomfortably hot. Two pairs of moccasins were worn outside this combination. When

entering a tent or shack the outer pair are removed, and the annoyance of melting snow thus avoided. Though light, this footgear makes a man's feet comically bulky. No. 10 moccasins are none too large for a man who at home wears a 7 shoe. The Indians have a standing joke among themselves about the white man's feet, similar to that so long in vogue about Chicago girls.

Lumbermen's rubber overshoes should never be taken into the Yukon. They have resulted in more frozen feet in that country than all other causes combined. They are all right for moderately cold weather, but when a drop below 40 occurs the wearer suffers, and not infrequently loses his feet. Two men coming down on the steamer *Rosalie* from Skagway who had had their feet frozen in Chilcoot Pass and expected to have them amputated had met their misfortune through this cause. At the time when number one had his feet frozen number two, who happened along, remarked that he thought a man should be able to tell when his feet were freezing and guard against it in time. A few hours later, when this man came to remove his footgear, he discovered that his own feet were badly frozen, and had been at the time he made the remark. They had pained him a good deal early in the day, but he thought he had succeeded in restoring the circulation, as they had become more comfortable. The cessation of pain apparently marked the time when they were frozen.

One can hardly err on the side of taking in too many socks or moccasins when traveling in winter, especially over the rough ice of the river. These things wear out very quickly, and despite the best of care they are frequently burned at the camp-fire. I used up five pairs of moccasins and nearly a dozen pairs of socks on our 450-mile tramp over the ice in January. The moccasins as a rule played out by being worn through on the soles, though in one or two cases the life was taken out of them by getting too much of the fire. Our footgear got wet every day despite the coldness of the weather, either from water coming up through cracks in the ice made by the river changing its level, or as a result of perspiration. Every night we had to sit up close to the camp-fire—"50 below zero in your back and 1,500 above in your face"—and dry out our footgear, when we would much rather have spent the time in sleeping. More than once I fell asleep while watching the long row of articles strung on a pole on the opposite side of the fire. Our moccasins were commonly frozen to our socks when we came to take them off for drying, and we had to thaw them out before they could be removed. The insides were full of frost, which collected chiefly at heel and toe. We tried the experiment of turning them inside out to dry the quicker. This worked all right with the Indian moccasins, which were sewed with sinew, but the moccasins procured in Victoria, which in other respects were much more durable, ripped as a result, and we had great difficulty in mending them, as the leather had become hard and required an awl to properly sew—something which we did not then happen to have. These Victoria moccasins were made of cowskin, I think. They were called moosehide, but differed very much from other moccasins I had, tanned and made by Jock Darling from the skin of the moose I killed on my first winter hunt with him.

The Indian moccasins sold along the river were very poor. With ordinary use they wore out in about two weeks, and rough walking would sometimes take the bottoms out in a day. They were made of caribou skin, hastily and carelessly tanned. They were said to be smoke tanned, but the Indians had gotten on to the white man's trick of making things to sell—not to wear—and considered it sufficient if they looked right. When making their own moccasins they were much more careful of the stock that went into them.

Their experience taught them that white men would buy anything and were used to being cheated. When there was a scarcity of skins they made the uppers of bed ticking, and such moccasins sold in Dawson for \$8 per pair.

To save their moccasins the more economical of the white men made for themselves canvas moccasins to be worn on the outside, and before the brash ice was covered with snow they manufactured insoles to protect their feet from the rough surface.

Moccasins manufactured by white men, whether in Maine or Victoria, as far as my experience goes, are much superior to the Indian article. Sometimes cowskin moccasins are made with the hair left on the inside. Oil-tanned moccasins are good for wet weather, but in dry cold weather they are slippery as glass, and a man who tries running in them after a dog team falls down a great many times during the day.

The common thing for wet weather in winter is a waterproof moccasin reaching nearly to the knee. Such moccasins are called muckluks, and the best are made by the coast Indians from sealskin with the fur left on outside.

For summer use, heavy, oil-tanned, hob-nailed shoes are good. The country is very rocky and very swampy, and the footgear should be waterproof and strong. Have the shoes good and large, and pay particular attention to the manner in which the reinforcing piece on the inside at the back is made.

The welt in heavy shoes is apt to chafe that part of the foot immediately above the heel, known as the tendon of Achilles. The heavy leather of the uppers, tendons, and ankles are also chafed. Rubber boots generally make blisters on the back of the heel or ankles. A good way to protect blistered feet is to cover the part with a strip of porous plaster. This sticks like grim death, and gives instant relief in many cases.

For wearing qualities the sea boots used by fishermen on the Atlantic coast cannot be beaten. These boots are oil-tanned, yellow or russet in color, and made of the very heaviest cowskin, with good leather soles an inch thick. They are waterproof and wear like iron, and would be invaluable for use in the work around a claim, but they are too heavy for traveling. E. A. Buck, of Bangor, Me., makes a first-class shoe for general use in the Yukon. His shoes should be ordered with extra heavy soles and hob-nails, and several boxes of hob-nails should be taken along for replacing those worn out or lost. Buck's shoes are the lightest weight shoes that I know of, that are both waterproof and durable.

I like a high shoe, but not the so-called sportsman's boot. Laced boots were worn to a considerable extent, but proved unsatisfactory in several respects, heating the leg where heat is not wanted and taking time to put on and keep in shape. Under some circumstances light canvas leggings are desirable, as, for instance, on a muddy trail, to keep the trousers clean.

Rubber hip boots with snag-proof bottoms are a necessary part of the outfit. A light pair of leather-soled, hob-nailed boots that I had gave excellent satisfaction. They fitted the leg tightly at the thigh and did not act as funnels for rain or receptacles for the slop of waves, which is a fault of ordinary hip boots. These boots were made for the sporting goods trade.

In the Yukon summer gloves are required as well as the winter article. The hands need a protection against mosquitoes and also for working in water. Rubber gloves are commonly taken, and other light gloves long enough to protect the wrists. For winter use, buckskin gauntlets, or badger, lynx, beaver, bear or other fur mitts were worn. These mitts are very large and sometimes reach half way up to the elbow. They are generally carried by a cord reaching around the neck and fastened to each mitten. They are lined with blanket material or fur. Rabbit skin is said to make the warmest lining, and is most prized by the Indians for this purpose. Not infrequently other gloves are worn inside. The big gauntlets are extremely awkward, and it is very difficult to chop with them on. I found that a heavy Arctic glove, of a quilted woolen material similar to that from which German socks are made, worn inside an unlined buckskin mitt, made a good, practical combination. For work requiring a firm grip I could slip off the buckskin gauntlets and wear only the gloves. There is a difference of opinion as to the proper way to make the fur mitts. Some say that the hair should lie toward the tips of the fingers to shed snow, and others that it should slant backward toward the arm, so that the wind will glance off. Of course in most gloves the latter plan is adopted.

At times when one is not living in a tent or cabin it is very difficult to dry out the big fur gauntlets, which are constantly getting wet from perspiration. The skins of animals scorch very easily, and after that the article is rotten and useless. There is just one zone of the proper temperature at a camp-fire where skin articles will dry out and not burn. A few inches inside this zone the heat is too intense, and an infinitesimal distance beyond they remain frozen. It requires a nice discrimination to select the proper distance and keep the things there under the changing conditions of the fire. Glowing embers fall over toward the roughly extemporized rack on which the articles are drying, and if they are not instantly removed they are likely to be ruined.

One of the mounted police told me that buckskin shirts "freeze dry," as he expressed it. All that was necessary, he said, was to hang them up outdoors in a current of air, and they would dry in the coldest weather. Nothing in my experience tended to corroborate this statement. The rule seemed to be that all articles accumulated frost from moisture with the utmost facility, and parted with it only under the compulsion of a considerable degree of heat continuously applied. However, I am still open to conviction on this point, for in a country where ice forms on the bottoms of rivers before the surface is closed and many other remarkable things happen, it is just as well not to be incredulous about anything.

For summer wear a felt Alpine hat is very satisfactory. Caps let the rain into your hair and down the back of your neck, and are a nuisance. A slicker hat, with ear tabs, is good for cold fall rains. The long, drooping back effectually protects the neck, and such hats are very warm and comfortable. In winter some kind of a fur cap is required with a flap reaching down to protect the neck, ears and sides of the face, and tying under the chin. It should reach low down on the forehead, and is all the better if it has a fur-lined vizor. Practically the only part of the face exposed is the mouth, nose and eyes. In temperate winter weather the flaps may be tied up on top of the cap, out of the way, and the vizor turned back. Some caps are fitted with face masks, but these as commonly made hinder the vision in a way that is annoying to the last degree. My face and nose were exposed in weather ranging from 50 to 60 degrees below zero, and were never touched by frost. This was at a time when there was no wind. In windy weather at even 25 below one's face becomes very numb and uncomfortable without protection, and for such times Mac and I wore nose protectors of our own design. These were simply strips of fur about an inch wide, reaching horizontally across the front of the cap, and covering the lower half of the bridge of the nose. They were permanently attached to one side of the cap, and arranged to button on the other side when in use. They came in opportunely when we crossed Chilcoot Pass in a gale of wind and with the thermometer at the lowest point it had reached up to February.

A fair supply of silk handkerchiefs should be taken along for winter use. They go a long way toward preserving one's peace of mind in cold weather. Also, in the interests of comfort, one should not neglect a liberal amount of toilet paper.

Be sure that your toilet soap is the kind that works in cold water; also that you have not forgotten towels. Towels are an important part of the outfit. If they outlive their usefulness for the purpose for which they were intended, they will come in handy for cleaning dishes.

A pocket comb and a little round pocket glass the size of a silver dollar will go a long way toward preserving a man's self-respect, and a razor should always be taken. Beards may be good to protect the throat and face in countries not quite so cold, but in the Yukon they are never allowed to grow any length, because they freeze and make it awkward for a man to talk or eat. Some men shave every week or two in cold weather, and others clip their mustaches and beard frequently.

They have a saying that in the Yukon a man only bathes in summer or when he breaks through the ice, and it is a fact that some men never take off their clothes. Mac and I, however, managed to wash from head to foot

quite regularly, despite the cold. We liked the water as hot as we could bear it, and cold baths in midwinter were not popular in our corner of the woods.

We had a wholesome fear of that horrible little animal which has a penchant for the unwashed class, and fortunately escaped without seeing one in the entire time we were in the Yukon. A precaution which we adopted, suggested by the police, was a cube of camphor, sewed in a bag, and suspended by a string about the neck. I also wore a tiny metal badge engraved with my name and address for purposes of identification. In the Yukon some indestructible form of identification is highly desirable.

For sewing outfit one should include scissors, large needles, and heavy linen thread or gill twine. A ball of yarn and darning needles are also required, and sail needles and twine come in handy. For heavy sewing a sailor's palm thimble is needed, and an awl for mending shoes and moccasins should not be forgotten. Take along wax for waxing thread, and some shoemakers' wax-ends as well. Also take a couple of yards of 8oz. duck for patching clothes, or making moccasins. Canvas will save the seat of a pair of pants when nothing else will.

Clothing and the small articles of personal outfit are carried in clothing sacks. The brown oiled canvas sacks are waterproof and satisfactory. A knapsack for small articles is also desirable. One or two pairs of stout pack straps should be provided. See that they are well put together, as they are apt to give out where riveted.

A good watch is of the utmost importance. Nothing but a full-jeweled movement will answer for a cold country, and even the best sometimes will not run in low temperature. Cheap watches depend on oil to lubricate the movements, and this oil freezes and stops the watches. In very cold weather a poor watch will not run, even if tucked down inside the clothing next a man's body. Nowhere in the world is a reliable watch more needed.

Natural History.

Notes on the Wildfowl and Game Animals of Alaska.

BY E. W. NELSON, BIOLOGICAL SURVEY, U. S. DEPARTMENT OF AGRICULTURE.

[From the *National Geographic Magazine*.]

AMONG the many interesting features to be seen by visitors to Alaska, the animal life is noteworthy for several reasons. During the brief summer the otherwise desolate tundras are animated by swarms of water fowl, which arrive from the south in spring as soon as the bare ground begins to appear, and after a short delay set about their summer housekeeping. The water fowl on the rivers and lakes of the interior are the familiar species which winter among the ponds and marshes of the western United States. The Canada, Hutchin's, white-fronted and snowy geese are there with swans and fresh-water ducks of many species. Besides these, sand-hill cranes and numerous waders abound. One of the most strikingly colored species along the small tributaries of the Yukon is the harlequin duck. The most interesting part of the bird life of this region, however, is found along the coast of Bering Sea. Four species of eider ducks occur there, some of which are

EMPEROR GOOSE.

very handsome. Among these the king, Steller's, and spectacled eiders are shown in the accompanying illustrations.*

The emperor goose is another fine bird peculiar to this country; it has its home in the marshy region between the mouths of the Yukon and Kuskokwim rivers. It is the most elegantly dressed of its kind in America. The top and sides of the head and neck are snowy white, the chin, throat and under side of the neck blackish, and the feathers of the back a soft, silky, gray color, bordered by a black crescent near the end and tipped with white. The under surface is similar, but duller, and the feet are vivid orange.

The black brant pass along the coast of Bering Sea in great numbers every spring, and afford royal sport to persons fortunate enough to choose good stands while the flight lasts.

During the four years the writer lived at St. Michael water fowl was a very important item in the bill of fare,

* I am indebted to Mr. F. W. True, Executive Curator, U. S. National Museum, for the photographs of bird and mammal groups in the Museum which illustrate this article.

and when the frosty autumn days approached he sallied out with his companions into the marshes to lay in a supply of ducks and geese for winter. The question of cold storage cut no figure, for the two or three hundred birds brought in were drawn and hung up in an old warehouse and the climate did the rest, enabling us to have roast duck or goose during the entire winter.

Among the numerous berries growing wild on the treeless hills of this coast, a kind of blueberry is very abundant in September, and the young ducks feed upon it

DALL'S MOUNTAIN SHEEP.

until they become excessively fat and so delicately flavored that they are delicious morsels. We became tired of hung duck, however, before the winter ended, and when the first solitary goose came flying over in spring, on a reconnoitering trip, there was general rejoicing. I still remember the hearty zest with which we put an extra edge on our knives and attacked the pioneer old gander that fell to our guns. He was lean and tough after his long flight, but was thoroughly enjoyed as an earnest of the coming season of plenty.

Two kinds of ptarmigan are common on the mainland, and will be considered dainty birds by many a hungry prospector, although to tell the truth they are about the poorest flavored of the American grouse. Their handsome summer plumage of mottled brown gives way in winter to one of snowy white. In winter, in the valley of the Kuskokwim, the ptarmigan called willow grouse gather in large flocks. During my sledge journeys I sometimes encountered flocks of hundreds among the patches of scrubby willows, and when flushed it seemed as if the snowy surface of the ground had suddenly burst up and taken wing.

When the first mossy knolls appear in spring the willow grouse begins to lose its snowy winter dress. At first a few brown feathers show above the base of the bill and gradually increase in number until the entire head becomes brown while the body is still white. This progressive change keeps pace with the melting snow, and with the disappearance of the last drifts the last white feather has been dropped and the bird is in full summer garb. The willow grouse begins its courtship in May, with the appearance of the first brown feathers, and it is vigorously carried on with loud challenging notes of defiance, accompanied by many fierce rough-and-tumble fights. When the ground is mostly bare, the snow remaining only in scattered drifts, the males

gives up the chase and fairly splits his throat with exultant notes. The Eskimos take advantage of this belligerency, and snare many ptarmigan by means of fine sinew nets placed on small stakes set on the snow around stuffed skins of male birds. The hunter conceals himself and imitates the challenge cries until a neighboring grouse dashes blindly at his supposed rival and becomes enmeshed in the net.

Aside from the birds which have a definite value as food are numerous smaller species, among which the "whisky jack" will become a familiar character to the miners. He is a kind of jay with a dull, smoky-brown coat and bright, inquisitive eyes, and is withal an intelligent and companionable little chap who has no hesitation in sharing your camp for the gratification of a frank curiosity and sound appetite. His impish ways were always highly entertaining to me, and, I do not doubt, will furnish amusement to many a gold hunter in his lonely camp.

Although I have dwelt upon the birds, because they are more numerous and more generally distributed than most other kinds of game, the man who loves the rifle will find his opportunity among the mountains and valleys of the interior. Formerly large mammals were much more numerous in Alaska than at present, and the decrease has come about almost entirely since our ownership of the country. The history of the fur seal is well known. The sea otter is another animal that is passing away. Its doom is even more certain than that of the fur seal, for it is a dangerous thing for an animal to wear a coat worth from five hundred to a thousand dollars. All that has kept the sea otter from extinction is its shyness and the fact that the stormy parts of the sea it frequents render its pursuit hazardous and uncertain. Upon the mainland are several fine mammals, among which native reindeer are the most generally distributed. There are two kinds of these deer—a large, dark-colored one, called the woodland caribou, which lives in the wooded district of the upper Yukon, and a smaller, paler kind, called the barren ground caribou, which lives in the open tundras or treeless country. Barren ground caribou were once exceedingly numerous, and the coast hills along the shores of Norton Sound are still scored with their trails, leading diagonally up to the cool summits, where the animals used to go in summer to avoid the mosquitoes that swarm on the tundras. But even so far back as 1877 the caribou was very rare along most of the coast of Bering Sea. When Alaska passed under American control it became possible for the natives to secure breech-loading rifles, especially where whalers and trading schooners called, and the result was a rapid slaughter of the large game.

Since the barren ground caribou usually live in the open tundras where there is no cover, it is extremely difficult for the hunter to approach unseen. Like the antelope of our Western plains, they are inquisitive animals, and before starting away often make a circuit about anything which excites their interest. Before they became sophisticated by the common use of guns the Eskimos had an ingenious method of stalking them in open ground, which the old hunters told me was very successful. The Eskimos hunted in pairs, and when they found a bunch of caribou on an open plain they would start directly for the animals, one hunter walking immediately behind the other, keeping step, with their bodies touching, so that from the front they appeared like one man. When they were still some distance away the caribou would throw up their heads and start off to circle around the intruders. The hunters kept on in their original course, apparently paying no attention to them, and when the men passed the first little bush, knoll

much of the interior, and during my residence in the country a single individual was killed in the Yukon delta close to the sea—a very rare occurrence. In summer they are rarely hunted by the Indians in the dense forests of the upper Yukon, but are killed every now and then on the banks of streams or while swimming across them. In winter they wander from place to place, browsing on the tender twigs of cottonwoods, white birches and willows, until the increasing depth of snow forces them to unite in "yards." When caught in deep snow or with a heavy crust they are easily killed by the Indians, who follow them on snowshoes.

On the upper Yukon the old method of moose hunting in early winter was for the Indians to go out on snowshoes after a heavy snowfall and search for fresh trails. When one was found the swiftest runner, stripped to a shirt and breeches, and carrying a light shotgun loaded with ball, started off after the moose, while the women and slower runners followed. Sometimes a moose would run eight or ten miles before being overtaken. At this season the cold is generally very intense, and the hunter would quickly freeze if he stopped while heated from his long run, and with so little clothing. For this reason, after killing the moose he returned to camp at a run, leaving the followers to cut up and drag the carcass home. When there was a light crust small dogs were used to bring the moose to bay and enable the hunter to kill it with less exertion. Before the snow fell in autumn the moose were stalked in the dense spruce thickets, but they were very wary animals, and usually became alarmed and started off at a swift trot, with a great clatter of hoofs, before the hunter caught sight of them. At such times the Indian, knowing the

HARLEQUIN DUCK.
KING EIDER.SPECTACLED EIDER.
STELLER'S EIDER.

country and the habits of the game, would run at his best speed to the opposite side of the small basin or valley and take a position where he could see for some distance on all sides, for when started in this manner the moose often made a wide circuit and returned within gunshot.

Two species of mountain sheep, quite different from one another and from the Rocky Mountain bighorn, are known in northwestern America. The first of these, a superb, snow-white animal, was described by the writer some years ago as *Ovis dalli*, in honor of Prof. Wm. H. Dall, the pioneer scientific explorer on the Yukon. The specimens upon which my description was based were obtained from the Fort Reliance country by Mr. L. N. McQuesten, now President of the Order of Yukon Pioneers. Dall's mountain sheep is found over a wide area, from the low hills beyond the tree limit near the Arctic coast south across the Yukon and Kuskokwim to the Alaskan range. Last year Dr. J. A. Allen described another species from the headwaters of the Stikine River and named it *Ovis stonei*. But little is known of this handsome animal, which has a dark, almost iron-gray, coat, very different from the white of Dall's sheep. The discovery of these two sheep in northwestern America indicates that we may expect other interesting, if less striking, new forms of animal life in the mountains of that region.

In the high mountains bordering the Pacific coast, north of Sitka, mountain goats occur, but we have little definite information concerning their range and abundance. Owing to the white color of Dall's sheep, it is quite probable that in many cases they may have been mistaken for goats.

Bears also are very numerous in some places, and several kinds are known to occur. The huge bear of Kadiak and the Alaskan peninsula is the largest species in the world, and the skull of an old male looks as if he belonged to the animal life of a former geologic age, when beasts of gigantic size roamed the earth. Black bears are generally distributed over the mainland, except on the barren tundras bordering the Arctic coast. About the last of October or first of November they find a sheltered cleft or cavern in the rocks, where they make a bed of leaves and grasses and hibernate until the warm days of April bring them out again. On the upper Yukon the Indians kill them with arrows, guns or spears. Some of the bravest and most powerful of the hunters will attack them armed only with a long-bladed knife. In such cases the hunter wraps a blanket about his left hand and arm, and with it thus protected thrusts it out for the bear to seize as it rises upon its haunches, giving him an opportunity to make a fatal thrust under the guard thus formed. Both Eskimos and Indians give these animals credit for supernatural knowledge and cunning. The Eskimo hunters are very careful not to speak in a disrespectful manner of bears, and are especially

BARREN GROUND CARIBOU.

choose these white patches as the stage upon which to strut and ruffle for the admiration of their female friends. In the tundras they may be seen and heard on all sides as they fly up with stiffened wings a few yards above the snowbanks and then glide down, uttering loud, harsh notes. Every now and then the efforts of some gallant cock become too obnoxious for his neighbor, who starts full tilt for his detested rival. The latter likes nothing better, and meets the enemy in midair. They clinch and fall to the ground, apparently using beak, wings and claws in the encounter. During such times the moult of white feathers is profuse, and the combatants are the center of a perfect blur of whirling plumage. Directly one of the birds gets enough and starts off in hasty flight, pursued for 30 or 40 yds. by the victor, who then

or other cover the one in the rear sank down behind it while his companion kept on. The caribou continued to circle as the single hunter advanced, and were almost certain to pass close to the concealed man and thus afford a deadly shot at short range. The sudden appearance of the concealed hunter drew the attention of the game from the man who had gone on, enabling him to drop flat upon the ground without being noticed. The caribou, in starting off wildly from the new danger, often ran within shot of the man who had last concealed himself. Hunters told me that in this way they often got several shots before the animals finally gathered their wits and left the vicinity.

The large woodland caribou of the upper Yukon lives in the forest with the moose. The latter ranges over

guarded against letting any one know of their plan to go on a bear hunt. They believe firmly that if they should speak of such intention these animals would know it at once and lie in ambush to attack them. Bears figure largely in the folk-lore and ceremonial dances of the Eskimos on the lower Kuskokwim and Yukon rivers.

About the Arctic coast the polar bear is a regular winter visitor, and a half-grown individual was killed near St. Michael in August, 1880. They are common on the pack ice of the Arctic Ocean north of Bering Strait, and many were seen during the cruise of the Corwin in 1881. The accompanying illustration represents a female

SEA OTTER.

killed by the writer near Wrangel Island, while with the Corwin. In summer these animals are usually well fed and avoid encountering men whenever possible. In winter, when hunger presses, they become dangerous, and I have heard of several Eskimos who were killed, and have seen others who were badly scarred from encounters with them.

In the fall, as the pack ice comes south through Bering Strait, it brings great herds of walrus and many white bears. The latter sometimes reach the Fur Seal Islands, but only at rare intervals. Some years many of the bears fail to retreat beyond the strait early enough in spring, and are left stranded on St. Matthew and St. Lawrence islands. During the summer of 1874 Mr. Elliott and Lieut. Maynard found them on St. Matthew Island to the number of several hundred. When these gentlemen landed on the neighboring Hall Island the same season sixteen white bears were in sight as the boat approached the shore, ten of which were together on the beach. Quite a number were killed and none showed fight. They were fat and when asleep were easily approached. When aroused they stood up and sniffed at the party as if to learn whether they were friends or foes, and when the men were scented the bears ran back into the hills. At this time they were seen feeding on grass and roots, with motions like those of a grazing hog.

Aside from the whales the walrus is the largest Alaskan mammal. Formerly it was very numerous around the islands and along the American coast of Bering Sea and the Arctic Ocean. During the cruise of the Corwin we saw thousands of them on the border of the pack ice. The Eskimos report the female walrus to be very dangerous in April and May, when they have young. At that time they say an old female will attack a man in a kayak on sight, and become as fierce and dangerous as an old bear. An Eskimo living at Cape Vancouver once told me of an encounter he had had with a walrus while seal hunting in the drift ice off the cape, in which he and a companion had a narrow escape. They met and killed a young walrus without having seen the female. A moment later she arose in the water, and catching sight of the hunters uttered a hoarse, bellowing cry, and dashed at them. The men paddled for their lives and reached a cake of ice just in time to escape. Several times, supposing she had gone, they launched their kayaks, but the moment they did so she appeared and drove them back on the ice. During our cruise in the Arctic we saw many females with young, and the watchfulness of the old ones was very noticeable. The young nearly always swam directly in front of its mother, and the latter in diving always carried the little one under with her by resting the points of her tusks on its shoulders and forcing it down.

In the old days, when caribou were abundant, wolves were common and ran in large packs. With the growing scarcity of caribou the wolves decreased until, during my residence at St. Michael, they were uncommon along the coast of Bering Sea and the adjacent interior. The white and blue Arctic or stone foxes are common on the barrens, and red foxes are also common and much more widely distributed. The region about Dawson City was formerly noted for the number and quality of the black fox skins taken there every winter. Canada lynxes, wolverines, land otter, American sable and mink are among the fur-bearing animals which helped make up the main wealth of Alaska until recent developments.

Among the "rats and mice and such small deer" are many animals of more or less interest. The whistling marmots live in the mountains about the upper Yukon and Tanana rivers, and the bob-tailed little conies are also found in that region. The last-named animal makes its home in broken masses of rock, and has an amusing way of barking at strange visitors with a squeaking voice like that of a toy dog.

The great increase in the population of Alaska which is now taking place cannot but have a decided effect upon the large game. Most of the prospecting parties will be provided with rifles and will take every opportunity of securing an addition to their scanty camp fare. With this going on in thousands of localities in the hitherto unvisited areas, the effect will necessarily be disastrous to such animals as bears, mountain sheep, caribou and moose. Unfortunately not a museum in the world has even a passable representation from Alaska of any of these animals.

The threatened early extermination of such fine species

is to be greatly deplored, but cannot well be avoided, and it is altogether probable that within two or three years it will be extremely difficult, if not impossible, to secure specimens for scientific purposes. The U. S. National Museum in Washington is the proper repository for a full representation of the animals indigenous to our territory, for exhibition purposes as well as scientific study, and it will be a great loss to science if any of the large Alaskan mammals become extinct before a proper series of skins and skulls is in the possession of this institution. I wish to impress this upon settlers and others going to Alaska the present season, in the hope that,

POLAR BEAR.

having their attention called to the importance of saving specimens, they may take a patriotic interest in placing them in the National Capital.

Game Bag and Gun.

Jim and I.

Jim keeps the drug store, and I don't do much of anything. There are several good drug clerks in the town, so Jim can get away whenever he wants to. Jim likes to shoot; same here. Jim can shoot. Well, I can shoot some, but you see Jim's a corker; and he is the sort of fellow who likes to see his partner grass a quail better than to do it himself, and he always seems to be thinking more of his partner having a good time than of having it himself. Then, if you can't shoot quail in the brush, he is awful handy to have along with you, because the brush don't seem to bother him a bit. He kills them just the same. Jim has a wonderful eye for squirrels too, and it's a mighty small bit of gray, way up in a tree, if he don't see it. Jim is bound to be all right, for old Joe always liked him, and old Joe is mighty particular about things. If you knew Jim you would want to go shooting with him, and if you went once you would want to go again.

Last September there were lots of hickory nuts, and there were squirrels too; so one afternoon Jim and I drove out to the big woods, just to loaf round and see if the squirrels were dropping any chips out of the hickories. There were abundant signs under a dozen or more trees in various parts of the woods; there were hundreds of hickory trees there, all of them bending with their weight of nuts; but the squirrels confined themselves to a few particular trees, as they always do. I happened to get a glimpse of a squirrel's tail in the fork of a big ash, fully 80 ft. high. Nothing was visible except a couple of inches of gray tail. Jim went round to the other side, and after going back some 40 yds. from the tree, said he believed he "could see the white under the squirrel's jaws." "I'll shoot anyway, and perhaps you will then get a shot." (He had a .22 rifle, and I a shotgun.) When he fired the squirrel jumped 2 or 3 ft. high, turning round and spreading its limbs and tail, and went sailing toward the ground at an angle of forty-five degrees. Supposing it was not hurt, but frightened into making one of those phenomenal leaps they sometimes make, I fired at it while it was in midair, and saw it tumble over and over the rest of the way to the ground. We found that Jim's bullet had smashed its lower jaw, and its hide was riddled with shot, whereupon Jim and I shook hands.

We did not see any more for a couple of hours, but along about 5 o'clock they began to wake up, and we heard two or three barking, and it being a very still evening we heard from where we sat a faint pattering of chips in several directions; so we separated and began to look for meat in good earnest. A rifle is a very poor tool for this kind of work, for the squirrels were constantly in motion, except when eating a nut, and then they took care to keep hidden, and would drop the nut and run if they caught sight of a man; so Jim only got one, while four fell to the shotgun, making six for the afternoon.

Late in November, when the frosts and the rains had somewhat beat down the weeds, and the winds had swept the leaves from the trees, and heaped them in the hollows of the woods, or piled them in the corners of the fences, Jim and I went up the creek to look for quail. We went into a big tract of weed-grown stubble. Along the fences that surrounded it, and along the two brooks that ran through it, were plenty of sumach and thickets of briars and bushes. Old Joe sailed into the weeds in a style that said: "I'll get 'em for you;" but he didn't get 'em, for they were not there. It was a long tramp that yielded nothing but great expectations. Then we went to a big weed field over on the creek bottom, and saw old Joe way off yonder some eighty rods, stop galloping, come to a full stop, snuff the air a moment, trot a few steps, then walk a couple of rods, stop, and presently sink slowly out of sight into the weeds. The old fellow was too tired to remain standing and had "lain down on 'em." When we came to him he was crouched flat on the ground with forelegs extended and

his head resting on them. When we came even with him he raised his head, slowly and just a little, and remained in that position until the birds took wing two rods in front of him. Four loads of shot followed, but only one bird stopped. Away they went through the open woods, two dropping behind a big log and the rest, some fifteen or twenty of them, kept on to the dense willow thicket on the creek bank. We got one of the two that stopped in the woods, and went on into the thicket. Here quail got up one, two and three at a time, and flew for the four corners of creation. We shot and shot, and quail flew away and quail fell dead. We

didn't know how many times we shot, nor how many got away, nor how many we killed; but old Joe gathered seven and then caught a winged one, which he was carrying so tenderly that it flitted itself out of his mouth and started into a muskrat hole. We got it out of the hole, and it got into the thick brush of a fallen tree top, with Joe tumbling and plunging through the brush in a chase that ended in the capture of the quail.

Then we went across an old pasture field on the way to another likely place, and Joe found a little bunch of quail right out in the pasture, and we got just one. We followed them and got one more. We tried to find another covey, but failed, and went back to where we left the buggy, Jim shooting a rabbit on the way.

As Jim got out of the buggy at home he said he reckoned we would go again, and we did; but that is another story.

O. H. HAMPTON.

St. Louis Notes.

THE commission merchants and game dealers of this city are still at work on their organization to assist the preservation of game by the cold storage process. Although they announced that sportsmen's clubs were working with them we note that all the officers of the association are commission merchants and dealers in game. So far as game is concerned the main object of this association seems to be to provide a wide-open market for this city. They intend to ask the coming Legislature to amend the game laws so that game not killed in this State may nevertheless be sold the year around in the St. Louis market. This means, of course, that the killing of game in this State will be continued irrespective of any game law. There will always be a market for what the market hunters may shoot. Considering that New York has just abolished this feature of their game law, it would be a strange move for Missouri to make such a retrogression in her legislation. The commission game dealers have plenty of money back of them and also the indirect aid of the big hotels and restaurants, which would like to be able to serve game the year around. Unless the sportsmen of Missouri wake up and do something to prevent this change in legislation it may be secured by the game dealers. Another change, which the game dealers desire is the abolishment of game wardens. Although this State has no appropriation for the wardens, yet good work has been accomplished by volunteer service, and many illegal hunters and fishers have been arrested and heavily fined. The game dealers intend to make a strong effort to have this "nuisance" abolished, as they term it. As a sample of what they are doing to influence public opinion they intend to print and distribute 50,000 circulars throughout the State.

Mr. Horace Kephart, who is well known to readers of FOREST AND STREAM, is interesting himself in the formation of a company of sharpshooters. At a recent meeting articles of agreement were drawn up, one of them being as follows:

"No one shall be accepted as a member of this company when it is mustered into the United States service unless he can hit the figure of an average-sized man ten times consecutively with the rifle at 200 yds., shooting offhand, not more than two re-entries being allowed."

There are plenty of marksmen in St. Louis who can meet this requirement, and there will be no difficulty in getting up such a company as Mr. Kephart desires.

A committee of the Castor River Fishing and Hunting Club recently went to southeast Missouri and picked a site for the club house, which is now in process of erection, and will be completed in about two weeks; the members are looking forward with pleasure to its opening. This club contains some of the best anglers in St. Louis, a number of them being readers of your journal.

So far this season there has been an excess of rainfall in this section of the country of nearly 8 in. This means that there has been continued high water since early spring, and it is yet too high for fishing except in a few inland lakes. This also means that the game fish will have time to spawn and take care of their young before they can be caught by the fishermen. If nature would provide for their protection every year as she has this year it would be a grand thing for fish propagation in this State. It will be a couple of weeks before the waters are low enough for fishing, and if the usual June rains come there will not be much angling before July.

If the game wardens of Illinois who are located near St. Louis will keep their eyes open on Sundays they may be able to bag a lot of netters who make a practice of going across the river on Sundays and seining the creeks, which are easily reached from this city. It is to be hoped that these parties will be caught and heavily fined.

ABERDEEN.

ST. LOUIS, May 7.

CHICAGO AND THE WEST.

Loss of a Landmark.

CHICAGO, Ill., May 2.—The burning of Maksawba Club house in Indiana on last Sunday afternoon, as briefly wired to *FOREST AND STREAM*, is the second calamity of the kind to occur to sportsmen of this vicinity this spring. In the case of Poygan Club house, of Wisconsin, it is very likely that the fire was the work of incendiaries. The Maksawba fire was pure accident, and occurred in broad daylight, while a number of the members were in the building. The club keeper, Ira Pease, came into the gun room and hastily told the members there to grab their belongings, for the building was on fire and was sure to go. The fire started in the old structure back of the main building, and was never under control. About \$6,000 insurance is collectible, and out of this a new building will no doubt be put up. The old building was not an architectural wonder, but with it went the treasured associations of over twenty years, and in its loss the wide marshes of the Kankakee lost one of the landmarks long known of all the shooting craft of this region. There has never been a more popular or more comfortable shooting club among our shooters here, and perhaps no Chicago club has grounds offering even to-day so great a variety of sport. Ducks are not so abundant now as they once were, but snipe, rail, woodcock, quail, grouse, rabbits, some small fur, and any amount of fine pike and bass fishing, are still among the attractions fortunately not injured by the fire.

Mr. Kinney lost a shotgun, and Mr. Organ lost a light gun belonging to his wife. The keeper lost a valuable 10-gauge Scott gun given him years ago by Mr. Cox, one of the members. A number of members had their lockers full of clothing, boots, ammunition, etc., all of which was a total loss.

Among others present at the time of the fire were Mayor Carter H. Harrison and ex-Mayor Hempstead Washburne, Messrs. Graham H. Harris, Jack Wiggins, John Watson, W. H. Haskell and John C. Harkell. None of these was able to do much toward saving any property. John Watson declares that he was innocent, some members having suggested that, as he had that day fired his last shot for the season on snipe, he probably had thought it best for everybody else to end the season at the same time!

Plover.

The jack snipe had pretty much left this latitude by the first of this week, but the golden plover are just coming in. Italian Joe, the great plover sharp of this section, killed 114 golden plover last Saturday near his favorite hunting grounds at Summit. The Graham boys, who live at Long Lake, north of Chicago, on the Wisconsin Central road, say that yesterday there were hundreds of golden plover working on the fields in that neighborhood. Not a great many of our shooters hunt plover, but for those who do this week should offer sport.

Ended.

Last Sunday ended the legal duck season in Wisconsin, which seems to have been prolific both of ducks and duck shooters. Upon the subject of spring shooting the Milwaukee Sentinel thus voices a growing belief: "This spring the slaughter of ducks in Wisconsin has been mercilessly prosecuted, some Milwaukee hunters having brought home as many as 150 birds as the result of a week's shooting. On Lake Koshkonong thousands of canvasback ducks have been killed by market hunters, on Poggan, Winneconne and Puckaway lakes bluebills and redheads have been chased off their feeding and breeding grounds, and in Waukesha county the ducks have scarcely had an opportunity to breathe freely, so sharp has been the pursuit of the hunters.

"A law should be passed at the next session of the Legislature prohibiting spring shooting," said a Milwaukee sportsman yesterday, while discussing the effect of killing ducks during the breeding season. "Every fall the complaint is made that the duck shooting grows poorer and poorer with each succeeding year, but the hunters seem to fail to recognize the fact that they cannot eat their cake and have it too. If the birds are molested in the spring they are driven elsewhere if not killed, and that is why I argue against shooting in the early part of each year."

Death of Mr. Shorb.

In an Ohio paper I read this week of the death of E. H. Shorb, of Van Wert, O., a member of the Fish and Game Commission, and in charge of the State pheasantry, in which position his work has attracted much attention. Mr. Shorb was in feeble health when I last saw him in Chicago last February, but we had no hint that his ailment was so serious. His successor is A. J. Hazlett, of Crawford county.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Spring Bay Bird Shooting.

CHINCOTEAGUE, Va., May 2.—Bay birds are getting quite plenty at Chincoteague Island, with the best prospect of an abundance from May 10 to June 1—the indications are that we will have a good supply. T. G. E.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Sea and River Fishing.

The Yellowtail.

AVALON, Santa Catalina Island, Cal., April.—It may be rank heresy for an old New Yorker who has spent most of his fishing years on the St. Lawrence among the black bass, and many years in the haunts of the gray snapper and tuna in Florida, to set up a claim for far-away California as a paradise of the game fish hunter; but I confess, after ten seasons at Santa Catalina Island, I am tempted to do it.

Within the past ten years California has become famous as a tourist resort; and gradually those who come West are beginning to learn that California is not a winter resort alone, but that the summers along shore are more comfortable and delightful than those in almost any other section of the country. It is this feature which gives an especial charm to the ocean fishing at the islands off shore. There are seven or eight of these, some beautiful and abounding in picturesque features; some are low and broken; others, as Santa Cruz, rise like a huge mountain with lofty cliffs; while others again, as Santa Catalina, are a combination of all. The last is famous for its game fishes and their vast numbers, and is the only one having fine hotels, cottages, and a town connected with the mainland by a daily line of steamers.

Avalon is on the bay of that name on the southwestern coast, thirty miles from the mainland, and three hours and a half from Los Angeles. It is one of the picturesque spots in California, and has earned a remarkable reputation for the variety and number of its game fish and the sport that can be had from April to December. The bay of Avalon is about half a mile across, forming

Gardner, Arnold Hodson, Chris Ringsen, and others, any one of whom the stranger can trust implicitly to give him a day's or a week's sport. The boat stands and the boatmen are features of Avalon. The boat stands are strung along the beach, skirting the main driveway, which follows the sweep of the bay. These are places of interest, and each boatman has his especial champions, and at night it is the correct thing to stroll from stand to stand to compare the catches, the size of the rods, and other points of interest, while in the morning the stands are filled with anglers, who are never weary of comparing tackle and discussing the big fish they have caught.

We have made arrangements for a day's fishing, and at 4 o'clock are down on the beach. The Venetian fishermen or bait catchers are just hauling the seine, and have beached half a ton of sardines, out of which our boatman is making his selection. The bait boxes being filled, we shove off. The boat is rather heavy, but a good rower, broad of beam, and rigged for three; the oarsman, who baits and "gaffs"; then in front of him sits a fisherman in a comfortable armchair, facing his companion in the stern, or the two may face the stern and fish on opposite sides. The equipment is two rods, weighing about 18oz. The reels are big Vom Hofe rubber affairs, holding 600ft. of wet 18-strand cuttybunk line. The hook, a bronzed tarpon hook, is attached by a 6 or 8in. piano wire leader. The bait is a big sardine, 6 or 8in. long, tied upon the hook so that it will run naturally and not twist, as anything approaching a spoon or its motion is a dismal failure. The fish must run along in a natural manner or like a sardine in distress. Sometimes a pipe sinker is used, if fish are lying low, but usually the start is made on the surface. About 100ft. of line is unreel, and with finger on the brake we are ready. The brake is an important feature, and, curiously, all reels are made without one. Some fishermen use a

YELLOWTAILS OF SANTA CATALINA ISLAND.

One day's catch by two men with rod and reel.

a perfect crescent, and guarded by rocky sentinels. The town skirts the shore, the houses climbing the hills and dotting the landscape here and there. The town is in the mouth of a deep cañon, which almost cuts the island in two here, and from the hills on its sides a scene of great beauty stretches away. One looks down on the blue ocean and hundreds of lateral cañons winding in every direction; 100 miles away the snow-capped peaks of San Bernardino, San Jacinto, and others; and in the immediate foreground the vineyards and orange groves of Los Angeles and other counties.

Santa Catalina is about twenty-two miles long and seven or eight miles wide at the widest point; a mountain range rising from the sea, cut and bored into strange shapes and breasting the sea with bold and lofty cliffs, which give it a grand and impressive appearance to the angler who rows along on the placid water beneath them. The shores of the California mainland are characterized by rough water, but here is a region of calms, where one drifts along the edge of the kelp a few feet from the rock, in water from 50 to 200ft. deep, reminding one, so far as the scenery is concerned, of some of the islands of the St. Lawrence, though the rocks here are vastly higher. A more peculiar fishing country one could hardly find. The season, roughly speaking, is from April to December, though fish of various kinds can be taken at all times; but this is the best time for yellowtail, sea bass, black sea bass, and tuna. During these months at Avalon one never sees a storm—that is, hardly ever—and from June until October or November the fisherman can positively count on clear, pleasant days without rain or squalls. In many seasons I have never seen an uncomfortably warm day here, the climatic conditions being fairly ideal; and when it is said that the roses bloom at Avalon in winter, and the island is covered with wild flowers after the first rain, some idea of this curious island climate may be had.

The game fish par excellence of Santa Catalina is the yellowtail (*Seriola dorsalis*), a gamy creature which runs up to 60 or 70lbs., and possibly larger; but 61 is the largest I have weighed; while our largest catch weighed 45lbs.; but the 27 and 30lb. fish are delight-givers of Santa Catalina. One of the first weight I took on my 8oz. split-bamboo, much to my astonishment and that of the rod. I worked an hour or more over the fish, which towed my boat a long distance before I brought it to gaff.

The fishing at Santa Catalina is in the hands of as fine a lot of boatmen as one will find anywhere. Among them are Billy Sarnow, Harry Elms, Mexican Joe, Jim

leather pad, and this with variations constitutes the brake.

The boatman turns to the south after we have passed out of the bay of Avalon and pulls leisurely along a pebbly beach, against which the waves roll musically. You are taking in the beauty of it all—the lofty mountains, the clear water, the garden beneath the sea—when suddenly an electric shock rushes up your arm and the reel utters a loud, sharp shriek, followed by the z-e-e-e! z-e-e-e-e! so delightful to the ear. Something has taken your bait on the run and walked away with it in a mad rush. If you are an old hand you know whether it is a sea bass, a yellowtail or a barracuda. Whatever it is, 50ft. of your line is away, despite your efforts, and your rod is bending in a way that is testing its every fiber. Lunge after lunge the fish makes, with such force that I have seen such a fish give a green hand so bad a case of "buck fever" that he almost dropped the rod. It is only after five or ten minutes, during which the boatman keeps you stern to the fish, that you gain a foot; then comes the fight, and for twenty or thirty minutes it is give and take; a series of rushes that soon wear a novice out. Finally you gain, and looking down you see a burst of silver in the deep blue water. In he comes, on the multiplier, fighting every turn, and a moment later is at the surface, swimming hard around the boat while your boatman feels the point of his gaff and waits with flushed cheek and sparkling eye for the word. It is a beautiful sight—a fish nearly 4ft. long, with a belly of molten silver, its back green and blue and iridescent, the median line tail and fins a dazzling golden yellow, shaped almost like a salmon, with twice its strength.

Such is the yellowtail that the gaffer now lifts with a struggle into the boat and holds up to your admiring eyes. "Thirty-eight pounds, sir!" comes a moment later, and all trembling and shaking with the hard work you drop back into the seat, satisfied and filled with delight. It is possible for a party to go out at Santa Catalina and take forty or fifty such fish by trolling with hand lines, but with the rod fishermen are satisfied with five or six a day, and when it is remembered that each fish usually requires half an hour for its capture it will be seen that this is an ample string. When I first visited this spot ten years ago there was not a rod on the island, and I was laughed at for presuming to catch a yellowtail with a rod. At that time these magnificent game fish were jerked into boats and upon the beach on hand lines which would have held a shark, and the slaughter was something terrible to contemplate; but to-day even the

boys look with contempt at the hand liner, and this noble fish is caught on the lightest rods and lines, and given every chance for its life.

In midsummer the water along the island fairly swarms with these fish. In July they spawn and are seen running in pairs. The devotion of a yellowtail to its mate is remarkable. I have hooked a fish which fouled the bottom, and when trying to clear it could see the mate standing by it, not roin. away, evidently trying to aid it.

The yellowtail is the bluefish of the Pacific, though not a bluefish, and much larger and far more powerful. In catching them several points are necessary. One is the holding of the rod, as the fish is so powerful that the novice is easily injured by pressing the butt against the body. The rod should rest over the left knee at an angle of about 45 degrees, the butt being just beneath the right knee. This gives the sitting angler complete control and a good leverage. A great question is whether to strike or let the fish hook itself. One of the best boatmen approves the latter, but I depend upon circumstances. In any event the yellowtail should not be struck too quickly, as playful fish often nose the bait and nip at it, while others take it wildly in a grand rush. I have spent many hours watching them from a high pile, and conclude that the angler must use his good judgment. I have fished for yellowtails with a number of old salmon fishermen, and almost all agreed that the yellowtail was far ahead of it as a game fish; and I commend the beautiful creature to those who appreciate a hard fighter with "never give up" qualities.

SEÑOR X.

Fishing Up and Down the Potomac.

Point of Rocks.

A DOCUMENT in the case:

WESTERN UNION TELEGRAPH COMPANY.

Washington Junction, Md., June 2.

A. B. Washington, D. C.—Water clear all the way to the Monocacy. Twenty-three bass caught here yesterday; one 4½ lbs. Charges 55 cents. C. D.

That settles it, and the afternoon train carries a couple of hopeful anglers forty-four miles up the Potomac—a mile beyond Washington Junction—to Point of Rocks. The ride is a pleasant one; weather not too warm; and a party of fishermen in the smoker, bound for Woodmont, help in a discussion of favorite lures, haunts, and noted captures. The tournament seems but just begun when our station is called. We have hardly noticed the canal, which lies between the railroad and the river, for the latter part of the ride, and as the river is not navigable here, carries the only shipping in sight. We have only given a nod of recognition to Sugar Loaf Mountain, which has loomed up in the distance to the right, and catches the eye at every journey around the horizon.

The Catoctin Range crosses the Potomac here, and Point of Rocks is named from its sheer bluff, which comes so close to the river that it must be tunneled for the road. The highest peak in the range is close by, and is about 1,200 ft.

In the early days they were a little short on names, or some old native had but one reply to all questions. The mountain on the Virginia side is Catoctin; and on the Maryland side also Catoctin; a little above the Point a stream makes into the Potomac from the Virginia side—Catoctin Creek; a couple of miles above another stream comes in from the Maryland shore—Catoctin Creek; and about half a mile further up a small run on the same side is down on the Government maps as Little Catoctin; and no doubt there are others.

This is one of the most frequented resorts for anglers, and for the same reason that white sheep eat more than black, has furnished more sport than any other point on the river.

We have made no arrangement for the evening fishing, so content ourselves with a stroll over the canal, and out on the long bridge which spans the river here. The water is low, shallow, clear, and with the evening shadows coming, the reflection of the green hills close to its banks on either side lends it the color of the edge of the ocean. The bottom of the river shows plainly every stone and pebble, and we are amply repaid for our walk in the watching of the antics of a respectable bass in the cove of a shingle shoal above the bridge, where he is chasing minnows, and having apparently as good a time as we expect to-morrow. He does not seem to mind his audience in the gallery, but a pebble which the ubiquitous small boy was irresistibly impelled to shy at him sends him scuttling to the green-room, and the performance was over for the evening; he was insensible to encores, as was the small boy to our mild protests; he argued the bass belonged to him—at least as much as to us—and the court adjourned in some confusion for supper.

The boatman comes over to the hotel later to make arrangements for to-morrow; a stranger is also here, who is to use bait; but we are all to start together early—so early we retire. About 3 o'clock a groan from my friend interrupts as pretty a struggle with one of Dudley Warner's 10 lb. fish as you ever saw, and there sat my companion on the edge of his bed, unable to get breath enough to tell what's the matter. Finally he gasps it is his heart—but as he has a chest like a barrel, had never been affected so before, and the sharp pain came only with inhalation, it was diagnosed (at forty every man is a physician or a fool; sometimes earlier) as a pleuritic attack, or an inflammation of the intercostal muscles, and duly prescribed for by one who had had the experience of a dozen such attacks. Though somewhat relieved, his fun was spoiled with the pain and the fright, which did not leave so suddenly, and he decided to catch the daylight train for home. Of course he was not to go alone, and we began a weary trudge with our bundles to the Junction, nearly a mile away.

We had hardly gone a hundred yards in the bracing morning air till he set down his bundles, drew a long breath, and said: "It's gone." And we turned back once more, reaching the hotel as it began to stir, to the surprise of the management, who took us for fresh arrivals.

He fished all day, and never thought of the trouble again. It is a good remedy.

After breakfast we went down to the canal, into which three punts had been dragged from the river, and tied one behind the other. Each angler boarded a punt and his boatman took a paddle in the stern. A boy-bestridden horse was hitched with a long rope to the forward punt, and in a few minutes was trotting up the tow-path of the canal, and the punts were throwing a shower of spray from their square prows with as much noise and show of speed as a 30-knot torpedo boat. The novelty, the dewy spring morning, the foliage and blossoms of tree and bush, the merry-go-round semblance of rush, and above all the love of out-of-doors, all helped to make the ride as thrilling as a scow on the raging canal could possibly be. We went in this fashion nearly to Brunswick, formerly Bremen, five miles away, as the low water, rocks and rapids make it impossible to take such craft up the river; then the boats were dragged over the bank of the canal into the river, and we set out to drift down to the Monocacy, some distance below the Point.

We fish backward and forward across the river; in the riffles and dead pools; under the bushes and behind the stones; we change our flies; we drown them; but, do what we can, we have not caught a fish at noon. We stop at a good spring in a deep gulch a hundred yards away from the river bank to eat our lunch, rest, and hold a pow-wow over our disappointment and its probable causes. Clear water and low, no wind, and clear sky, tell part of the story, but our conclusion, approved by the guides, is, they are not on the feed; and there is considerable argument as to when the bass does his feeding. It is popularly supposed that early morning and late evening are the best fishing times, and that the earliest start gets the longest string. There is an old proverb in favor of the man "who sets his net betimes," but there are exceptions, and many good anglers have given up what they call before-breakfast fishing.

Bass Fishing by Night.

It is in fact so much a matter of locality, climate, and habits of the food itself, that there is no rule. There may be places where most fish feed and rise in the gray dawn, but the writer has never found them. The noon hours are as a rule not so good, but occasionally our best catches are made then, and sometimes the bass cannot be caught in daylight at all. The Knobel Fishing and Hunting Club, principally a St. Louis organization, but with members from three or four adjoining States, has a club house on Buffalo Island in the St. Francis River, a few miles out of Paragould, Ark. This is in the sunk lands, the whole country having been wrinkled by the New Madrid earthquake in 1811. The St. Francis spreads out through several channels here, with so little current as to permit the growth of river grass to such an extent as sometimes to be impassable for skiffs, even with water 5 or 6 ft. deep. There are many varieties of these aquatic grasses, and some of them are very beautiful. No matter how turbid a flood comes from the headwaters, when it strikes the sunk lands the checking of the current and the sifting of the weeds clears the water, and it is always crystal, and anywhere that the rank vegetation permits the bottom may be seen.

The summer sun is hot enough here to drive whites within doors, and there are no colored people living in the county. The bass have sense enough to keep in the shade then, and in fact through all the daylight. Sometimes a stranger not so wise comes and tries to coax them out. One is recalled, who went to try for the big fish, and for two days wore his heart out whipping eight or nine miles of the narrow channels of the river, and caught four ordinary bass. The second night, when despair had settled down and thoughts of home were much more comfortable than any probable prospects for the morrow, the superintendent of the club house, who had turned out to be an old neighbor, came in about 9 o'clock and asked if the stranger was too tired to catch a bass. It was a cloudy night and dark as black cats, but, determined to find out something of which he had heard and only half believed, the rod was rigged with a single large white miller, to lessen chances of catching in grass or trees, and we set out; a box chair cushioned with an old comfort, and with a padded back, made the most comfortable boat seat ever invented, and following instructions, no effort was made until we were a mile from the landing. We were in a narrow opening, and could just distinguish the heavy woods on each side; it was impossible to see each other or the tackle. Only line the length of the rod was let out, but not half a dozen casts were made when the grateful gulp of a good bass announced that the fun had commenced, and it was repeated often in the next half mile; we got back by 11 o'clock, and brought back fifteen nice bass. The other visitors were principally gunners, and the fish were a welcome addition to the larder, which had sustained a practical bass famine for a week.

The next day the stranger did not fish, but spent the heat of the day in a hammock with some old magazines, and that night the guide reported at nightfall, and again with a single white miller we worked two or three miles of water, and came in at nearly midnight with twenty-eight bass, and the fly is not badly hurt now.

One more evening, and the fly used then was a non-descript on a large hook; a gray palmer as large as a half-grown mouse, and of the color; it is an imitation of the bushwhacking bait of the South, called a buck-tail, save it had a single hook instead of a triangle. That evening the superintendent, who had never tried a fly, took another boat and guide to accompany us, and we returned with thirty-two for one boat and a score for the other.

It is not sport; it requires no skill except caring for the light tackle, and the tackle need not be light. The fish takes it at the top of the water; the line is so short he never gets a run, and comes splashing on the surface to the boat, and this noise of his struggles is the only excitement in it. It is not fly-fishing, for no cast above 20 ft. is made; longer is not safe in the dark. The lure is not a fly, for a salmon fly used in this fashion is little better than a troll. It is said that a spoon used in the same way does murderous work sometimes, but that evening two of the unemployed guides had gone out together on their own hook, and passed down the river just

ahead of us, and returned with us, and alternately used a spoon the whole way, but they had only three fish. In this case color and shape of the fly evidently had nothing to do with attracting the fish; the writer's theory was that as the fly was pulled toward the boat it made a wake, and that the fish rushed at the point of the ripple for the living object; one is probably fishing with a mouse and doesn't know it. But no one but a pot-hunter would find sport in it; it does get fish, but every other pleasure is thrown away. The afternoon in the woods was far pleasanter. To go out for a squirrel and bring home a fine wild turkey is one of the possibilities that leaves pleasant recollections of a locality that is otherwise principally swamp and mosquitoes.

But to return to the Potomac:

With our lunch we imbibe not only coffee, but renewed hope, and start out refreshed. We are not out of sight of the landing place when each has a fish, and our basket has nineteen when we reach the hotel; none are very large, but they are up to the average, and we are abundantly satisfied.

We did not take one in the riffles, but the early ones in the shadows of the tall rocks, and the later ones on the edges of the weed patches. We have never caught many bass in swift water; they may take the minnow then better than the fly; or maybe we have not tried hard enough or been careful enough or tried at the proper times. At any rate we have few to our credit from the bubbles, and are sure they are not so fond of the foam as are the trout.

HENRY TALBOTT.

Fresh-Water Angling.

No. V.—Black Bass.

BY FRED MATHER.

(Concluded.)

BLACK bass fishing has not, so far, developed two distinct classes of anglers on the same line that trout fishing has, i. e., fly and bait fishers, but it has brought forth many methods of angling which are practiced by good anglers in many parts of our country, each one believing that he can either get more sport, or more fish, in his way than can be got in any other manner. This is always a very comfortable belief, not confined to anglers, for the lover of the gun often feels positive that the man who made his gun never made another quite equal to it, and as for dogs, why no man ever owned a dog like his, whether for grouse or snipe. I confess that I like to hear a man brag about these things, in moderation; it shows that he loves his dog and gun, which are his real companions in his trips, and knowing them more intimately than he knows other dogs and guns, he has learned to love them merely because he knows them.

The angler who loves angling for its own sake, and not as a means of "getting a mess of fish," is content to have a fair day's sport, and an outing, without a feeling of envy of another who has taken one more fish, or a larger one, than he. Angling is not a struggle, like the "pegging down" contests in England, which I do not fully understand, but think them to mean that the boat is "pegged" in one place and the catch is counted at night, much like those abominable, condemnable—here put in such language as you think I might use in conversation—"shooting matches" which were common in many places years ago, but are not now so frequent, where sides were chosen and several hundred men went forth to slay every living thing, putting a number on each kind, to see who should pay for a dinner.

The angler has, in a general way, too much of this spirit left. He is gradually learning that he may have many days, weeks, and even years, of pleasure without breaking any records for either size or numbers. If I had a boy, and that boy loved to fish, he would be taught that the best angler did not always catch the most fish, nor the largest ones; that these things were influenced by location at a certain time, in which the element of chance entered; and that if he contented himself with observing the general rules laid down by the masters of the angling craft, and adding to them his own experience, he would derive great sport in angling for itself, without thought of either pecuniary profit in getting a "mess"—how I hate that word as applied to fishing for a meal—or of beating any other angler. I would probably say: "My boy, your companion took a few more fish than you did, and they averaged larger; but did he enjoy the day, with its chances to enjoy life on the water and its glimpses of those little things which only those can see who look for them, any more than you did?"

If I have said this before, or something like it, let it be put down with Falstaff's "iteration," with which he was troubled; but it will bear repeating and "iterating" just as we keep hammering at spring shooting and the sale of game. The young angler needs to be started in the right way, and for him I write because the older one started in a wrong way, as I did, and thought that weight and numbers were the only things which supported his claim to be considered as a "brother of the angle." That was the old-time test, and few of the "old-timers" can break away from it; but the younger ones are gradually repudiating the "test," and are contenting themselves with fishing for the sake of fishing, and are fully aware that the fellow who hooked the biggest fish on their favorite lake simply happened to present an attractive lure at the moment when the big fish came along, and was in the mood to take that lure; if not, the fish might have gone on for weeks and have passed several lures which were more or less attractive, just as a man may decline a bit or a sup at a certain hour to-day and accept the same to-morrow.

In former articles in this series there has been something said about the fickleness of fish in taking lures; and at the risk of repetition I will say: Every bait, fly or other lure that the angler puts out is seen or nosed over by many fish which do not care for it; some are not hungry, and others are not in the humor for that particular food; hence we must try to learn their desire for that occasion.

Bait Fishing Below the Surface.

While all kinds of rods are used for black bass by anglers, the perfect one is a perfect trout rod, not too light nor too limber. If the natural cane is used, let it be as limber as possible and furnished with a reel, for although some men use stiff poles without reels, and claim to find sport in "snakin' 'em out," they have no idea of the sport of fighting a bass on a good rod, and they need a missionary to teach them that in "snakin' 'em" they may get a fish, if its jaw holds, but as for sport, they get none of it. The rush, the leap to the surface, the strategy needed to keep the bass from the brush or weeds, and above all the thrills which run through the line to the rod and into the angler's forearm, are akin to the ecstasy which the soldier feels in battle. It is a battle, but with an inferior being both mentally and physically, and therefore what O'Hara calls "the rapture of the fight" is only proportionate to that where the man meets his equal. Let the "snaker" learn to use proper tackle and give the bass a chance to fight for its life, and he will find that he never knew the real pleasure of "goin' a-fishin'" before.

For bait fishing below the surface, an ordinary trout reel and line is the best, say a click reel, for I do love "the song of the reel." Avoid all triple hooks and all "sure thing" devices; they are unworthy of a sportsman who proposes to pit his skill against that of his game. Just as the field sportsman despises the man who takes a pot shot at a bevy of quail on the ground, or the man who snares the ruffed grouse, so does the angler feel contempt for all hooks which look as if intended to jig a fish, or take one foully in the side or belly if it approaches his bait. Personally I prefer the Sproat hook for either trout or bass; it is springy and does not break readily nor straighten out. A hook that breaks is preferable to one that bends. The Sproat has no side twist, like the Kirby, and is a good "central draught" hook—that is, a pull on the line pulls in the direction of the point of the hook. I class the Edgar barbless hook with abominations because it has a snap to hold the fish on; of course a barb does the same thing, but not in the same manner. Use a leader 4 to 6 ft. long, and a float if you must, but it is of doubtful utility when a reel is on the rod.

In the last article of this series the food of the black bass is mentioned, and in bait fishing below the surface the dobson, or, as it is called, helgramite, is about the best; see cut on page 346. It is the larva of a great neuropterous insect which flies at night and is rarely seen. It lives under stones in running brooks and is caught by placing a net below and then lifting the stone. These things have jaws that can pinch one's finger hard enough to make the angler wish he had been careful. Take the critter by the thorax, the horny segment back of the head, and insert the hook under its hind end and bring it out next the head. Don't hook into the soft abdomen, and look out that your bait does not reach the bottom and shirk its duty by hiding under a stick or stone while you sit aloft wondering why the bass do not care for dobson, vide the old print of the angling philosopher who is reading a book while his bait, a frog, has climbed a stump and sits contentedly in the air.

Crawfish are excellent bait, especially when soft; this is the "crab" of fresh water, improperly (in English) so called. They should be hooked in the thorax and never be allowed to touch bottom, or they will desert your service, as has been explained. Somehow all these creatures seem possessed with a desire to fish for themselves rather than for man, and the angler must thwart that desire.

Angle worms may take an occasional bass, but are not worth bothering with. The minnow comes in a good third among the baits used in still-fishing. In England the name "minnow" is applied to a species of fish as distinct from all others as are trout and perch. In America the word is applied indiscriminately to most all small fishes, and in the rural districts is corrupted into "minny," and I've even heard of planting a brook with "trout minnies." Using the word in the American sense we find that our minnow net has brought in an assortment of small fishes. Handle them carefully and return what are not needed. Soft-finned baits are the best, and of these the suckers are the hardest; if there are plenty of these take no other. Perch and sunfish live well, but do not invite the bass as soft-finned baits do. The spawn-eater of the Hudson, *Notropis hudsonius*, which ranges from Lake Superior to New York, and in the coastwise streams to Georgia, is fairly hardy on the hook, and so is the horned dace or northern chub; but weakest of all is the shiner, *Notemigonus chryssoleucus*. I have tried to avoid all scientific names, but in this case there is no other way to indicate the fish meant. The last-named fish dies quickly, is very soft, and is only of value as living food for what we consider to be better fish. In a lake the edge of a bunch of weeds is a favorite feeding ground for bass.

In this style of fishing, hook the fish just under the dorsal fin, never through the lips, because you wish it to swim in a natural manner. Many good anglers put the hook in the fleshy part of the tail, but a fish so hooked does not swim in a natural manner; it bores down, stands on its head and does not conduct itself in a rational way; it is kept on an even keel when hooked under the dorsal fin. Be careful not to insert the hook so low as to injure the spine and thereby paralyze the bait. The bones of the fin-rays extend between those arising from the backbone; extend your fingers and place those of one hand between those of the other, and you will understand how the "intercostal" bones come in and how your hook will hold better if inserted just under the first few fin-rays and yet will not impair the vitality of the fish. I hope that this will be clear to those who have not studied anatomy, for clearness was intended, and not a dazzling array of scientific terms.

Before stopping the discourse on still-fishing it may be well to say: All talk about the fish biting at certain times of the moon, clear or cloudy days, east wind or other wind, or the signs of the zodiac, is sheer nonsense. Go for fish in season, and trust that the fish will take your baits or flies. The day may not prove to be as good as some other days, but none of the above old-woman's "signs" had anything to do with the result.

There is an element of chance in angling, which is one of its charms; the same is true of field sports, for if we could foresee that a day's work on stream or in field would yield a small creel or bag, we would decide not to go that day, and thereby be deprived of the pleasure of going, with its anticipations and its healthful change of occupation and its trip into the ozone factory of nature. Reduce the chase to a certainty, and its charm is gone.

Trolling.

Many troll from a boat with a hand line, but it does not afford the sport that trolling with rod and reel does. Whatever the lure may be, it should be far enough from the boat to allow the fish to have recovered from any disturbance caused by the oars or the boat, and the distance should not be less than 40 ft.; 60 ft. is better. The oarsman should row slowly and lightly, avoiding all splashing. The angler often does his own rowing, which he can readily do if his oars are so rigged that they can be dropped without losing them. He can lay the rod so that a striking fish may reel off some line easily while he is picking up his rod. There is no need of striking the fish, and the moving boat will hook the fish if it bites fairly well.

The long gang of hooks in triplets is killing, as it is intended to be, but I once said to a lad who occasionally fished with me: "Don't use that thing nor let anyone see it. When you get a chance burn it, for the fair angler despises such things; they are cruel and murderous things."

Boylke, he did not understand, and asked: "Why do people use them then?"

"Because they are afraid a fish will escape, and they don't propose to give a bass a chance for its life. They have little confidence in their own skill in taking a fish on a single hook, and so hope to fill its mouth with three hooks, set in different directions, that the fish which touches the bait is as good as landed. One of the charms of angling is its uncertainty, and if I was certain of landing every fish which touched my bait there would be no excitement in the contest, and no exultation over a victory."

The boy's reply indicated that it might be so, but that he went fishing to catch fish, and that is what the user of a minnow gang does; but the boy grew to be a man, and learned to angle fairly, and to appreciate the lesson. The best bass anglers also regard the trolling spoon, with its murderous triple hook, with disfavor, and if they troll it is usually with a minnow, alive or dead, hooked through both lips. In all trolling one or two swivels are necessary to prevent twisting of the line, and the best are made of brass; they come in different sizes; "box" swivels not larger than No. 3 nor smaller than No. 6 are about right. Put one or two just above the bait and attach the gut leader to the swivel. If two are used, put an inch of gut between them.

"When it comes to handling a fish with rod and reel, no matter how one is fishing or what the fish may be, do not indulge in "playing" for the sake of playing; give line when you must and reel in when you can, but beware of the rush of an apparently exhausted fish as you put the net under it. Often it seems played out, and has turned on its side as it nears the boat, but takes alarm at the net. Then keep it from getting under the boat, if possible, and let it have only such line as it fights for. A free line gives the fish rest. If near a bed of weeds, keep the fish from them and get the boat away from them and fight it out in open water, always keeping a strain on the rod.

Dropping the Tip of the Rod.

Thus far, in these two articles on the black bass, I have agreed with Dr. Henshall; but now we differ. He says: "If the bass breaks water, the best plan is to lower the tip so as to slacken the line, and immediately raise the rod and tighten the line when he strikes the water again; for if he falls on the tightened line he is most sure to escape; this is one of his most wily tricks." This is crediting the bass with a knowledge born of an experience which it has not had. The fish only knows that something is pulling on its jaw, but does not know that there is a line extending from that jaw to a rod which is out of sight. When the fish in despair shoots up into the air to escape it drags the end of the line up with it, leaving a bight in the water which the rod cannot make taut before the fish descends, because the resistance of the water to the line prevents it, and when the fish descends the line is slack. A leaping bass will not be in the air more than three seconds, and as it has dragged the line with it there must be some slack when it descends. Therefore, if the angler lowers his tip, the fish has still more slack. Several angling writers have followed the Doctor in this matter, but I cannot.

Some years ago the late Francis Endicott and I were fishing on Greenwood Lake, near New York city, and I was rowing. We always preferred to do without a boatman because of freer conversation, and we took turns rowing—that is, in theory—but he was not muscular nor a good oarsman; therefore at this particular time I was rowing. Frank sat in the stern trolling flies over the port side, nautically speaking, while I had the butt of my rod under my right knee and over the left one, trolling on the starboard side. A bass took my fly, and I dropped the oars, telling him to reel in, so that his flies might not foul the bottom nor my line, and then the struggle began. The fish leaped into the air and went its way. Then came a war of words about lowering the tip. We were old fishing chums, and in all matters relating to salt-water fishing I deferred to him, but fresh water was another thing.

"Do you know why you lost that big bass?" he asked, in a manner that indicated that he knew.

"Yes, the hook did not hold; it tore out somehow, but it did not strike a taut line when it leaped, and it did not 'shake the hook from its jaw like a bulldog' when in the air. I know what you think, but you believe a whole lot of things about black bass fishing that are not true. Think for a moment—"

"Reel in," said he; "I've got a strike." He had a gamy fish on; it made three leaps, and he finally landed it—a big-mouth of nearly 2 lbs. "There!" said he, tri-

umphantly, "that bass leaped from the water three times, and I lowered the tip each time, and there it is in the boat."

I had put the net under the fish and landed it. Picking it up, I showed Frank that it was so firmly hooked in the upper jaw that only the breaking of the hook could have divorced the fish from him. That afternoon he lost several fish by lowering his tip, and each time his attention was forcibly called to the fact. My own rule is never to give any slack line; if forced to yield line do so, but keep a strain on the fish and keep the fish busy all the time.

Grasshoppers, Crickets and Frogs.

Grasshoppers and crickets should be used on smaller hooks than most other baits, because a large hook tears them, and they should be kept alive and allowed to swim on the surface. If there is either current or wind to carry the insects away from the boat they are often very killing baits in the late summer and autumn months, when they are of good size.

If a frog is to be cast, it should be hooked through the lips, allowed to sink a little if it will, and then slowly brought to the boat by short jerks to imitate the swimming of the animal.

A better way to use a small, lively frog is to hook it well into the fleshy portion of one thigh near the backbone. They are often hooked in the middle of the back, but that may paralyze them, as any spinal injury is apt to do. Therefore it is better to put the hook in the thigh, hooking from the under side; the frog can then swim well, and is neither paralyzed nor drowned. It is then necessary to see that your bait does not reach the bottom and hide there.

Skittering.

In the North this mode of fishing is sometimes used for pickerel, but is practiced little, if any, by bass fishers. In Arkansas and in Louisiana I have watched native anglers taking bass in this manner. They used cane poles with strong lines tied to the tips, and the line brought down and tied again to the butt, in case the pole broke. They worked from the shore, or from a boat, skipping a spoon or a minnow over those parts of the water which were free from weeds. It is quite hard work, and involves much entanglement among the weeds, but is quite successful. There was no chance in those shallow, weedy waters to give a fish a fighting chance for its life, and so it was "yanked" in by main strength. It did not appeal to me as a mode that promised much sport, so I did not try it.

Bobbing.

Many years ago, while fishing on Bistineau Lake, in Louisiana, with that excellent colored fisherman, Augustus Caesar Trulo, who was embalmed in the amber of FOREST AND STREAM Feb. 12, '98, he asked: "Did yo' ever fish fo' trout wid a bob?" I had bobbed for eels with a bunch of worms, but bobbing for black bass, his "trout," was a new proposition, and I wanted to know all about it; but beyond the fact that "it is made ob a deer's tail, sah, an' is dragged behin' de boat" the information was not intelligible. He showed me one afterward, and it proved to be a great triple hook partly hidden by the hair of a deer's tail, and having several streamers of red flannel trailing behind—a home-made article which is said to be effective in the waters of that region. Dr. Henshall says it is common in Florida.

Casting the Minnow.

This is a mode of bass fishing which may be termed the highest form of bait fishing, because it requires skill which cannot be mastered in a day. It requires a shorter and stiffer rod than the fly-caster uses, and a master hand which cannot only make the cast, but can control the running of the line from the reel after the cast is made, and therefore it takes rank as one of the most expert forms of angling.

Here I want to digress to say that the average man who fishes is a trifle behind the average man who goes afield with a bird dog. He looks more to results than to means. The same man who would not take a pot shot at a woodcock or a bevy of quail on the ground will often take a fish in any way that he can get it, and will use gangs or other murderous implements in order to make a good showing. It is much better to leave these devices to the market fisher, who uses nets after dark, and who can sell you some fish to take home to show as your own catch, than it is to fish in ways which are as effective in the hands of any duffer as they are in those of an expert. The gunner glories in his skill in stopping the evanescent snipe while on the wing simply because it requires skill; therefore the angler who can properly cast the minnow from a free-running reel a distance of 40 yds., and land it where he chooses, has a right to be proud of his skill.

To cast the minnow there is no better rod than that known as the "Henshall black bass rod." It is made or kept in stock by all the large dealers, and is named after the inventor. It is 8 ft. 3 in. long and weighs 9 oz., more or less, according to material. Details of construction cannot be entered into here, but any dealer will supply the rod, or the amateur maker may find the formula in Henshall's book.

The reel must be a free-running multiplier, and be placed under the rod on a line with the guides and above the hand. The minnow is reeled up to the tip of the rod and the reel is turned up so that the thumb can regulate its speed and slightly check it if it runs faster than the line goes out, for if it does that the line will "back lash" and the flight of the minnow be stopped. In casting to the left the angler drops the point of the rod near the ground and smartly swings his hand to the left shoulder, giving the bait an upward throw into the distance. If the cast is to be made to the right he brings his right hand to his left elbow, with the rod pointing downward, and makes the cast by a sweep of the arm which ends with its extension, and the hand at a level with his eye. If the cast is to be straight in front he faces to the right or left and repeats one of the casts, but must not try to cast over his shoulder, as the fly-fisher does. In a general article like this only general

principles can be laid down; the novice must take them and by practice work out the details for himself.

It is essential that in casting the minnow the reel should be a free-running one; a click or drag is worse than useless; the only impediment that the reel should meet is the intelligent action of the thumb, which should be guided by the eye of the angler, which, after directing the flight of the minnow, should be concentrated on the action of the reel. If the reel is giving only as much line as the flight of the minnow demands it is well, but a well-oiled multiplier is apt to exceed its duty, and its zeal will overrun and take up line the other way, which we know as back lashing, and suddenly the cast is stopped. The point on which the angler must concentrate his attention is his thumb, until the minnow lands upon the water near the spot where it was aimed.

No amount of written or oral instruction will make a man expert at this, because it requires a nice personal judgment which nothing but experience can supply. To impress this upon the beginner in this kind of bait casting, or in fly-casting, let us glance at the various books which purport to teach the playing of musical instruments "without a master." They tell all that an expert can tell, but the pupil must work in order to profit by the rules and become expert. I do not mean that it is as difficult to learn to cast a bait or a fly from the rules as it is to become a musician from books, but use the comparison merely to show how difficult it is to put what one knows on paper, and how impossible it is for a novice to become an expert without practice.

The casting of the minnow is the main thing. By no other method than the one which has been described can a man cast a half ounce minnow roof, and experts consider that a short cast, and that is what makes this form of bait casting an art. After the minnow is cast it is worked toward the caster by the rod, to give it the semblance of a living fish, and the reel recovers the line.

Fly-Fishing.

Here we return to the trout rod and the click reel, and while we admire the deftness of the minnow caster and accord him a high place among angling experts, we old fly-fishers, who it may be figuratively said form the Old Guard around the tomb of Charles Cotton, think that the capture of one fish with the artificial fly is more of an event than several taken in any other way. Just as Cotton failed to convert Iz. Wa. from bait to fly, i. e., to thoroughly convert him, so some of the old fly-fishers of to-day look respectfully at the scientific bait casters, and, paraphrasing the comment on the charge of Cardigan's Light Brigade at Balaklava, which Tennyson has made immortal, say: "It is magnificent, but it is not [war] fly-fishing."

There is nothing to be said about casting the fly for black bass that has not been said in these articles about trout, except that the flies should be larger and more showy. The choice is large because anglers have success with a particular fly, or combination of flies, on certain waters, or at certain times. Most trout flies are good bass flies, but they should be allowed to sink and then be brought in by short jerks. Personally I like flies which have yellow in them, but every angler has his favorites, and as these have proved to be good killers in his experience he has a right to extol them. Mr. Orvis sent me a dozen bass flies a dozen years ago, which bore my name, and I kindly gave them to angling friends, but I have never heard that even one simple-minded bass was fooled into the belief that the drab-colored bit of feather was good to eat, and my friends have been kind in not mentioning the subject.

In a lake where both species exist, the big-mouth is the fish that the fly-fisher may expect to be a more frequent riser to the surface for an artificial lure. Whether his brother is more discriminating, or whether it generally seeks its food further below the surface, is a thing which we do not know. At times both species rise freely to the fly and at others they look at it with indifference. A good assortment of flies for the bass fisher is the coachman, golden dustman, oriole, Montreal, professor, red ibis, and white miller; while of the hackles he will find the brown, ginger and red to be useful.

New England Waters.

BOSTON, May 9.—The Rangeleys are well cleared of ice, and what seems like a good fishing season has begun. Rangeley Lake was the first to open, and Dr. Heber Bishop, of Boston, was one of the first sportsmen to arrive. With a friend, Mr. C. C. Williams, of Boston, he was in Farmington, in fact, when the news of the clearing of the lake came. They have been on a trip to Chain of Ponds, where they found excellent fishing. Wednesday they took eight trout, the four larger weighing 8½, 7¼, 6½ and 5lbs, respectively. The first trout for the season on the fly was taken at the head of Round Pond by Dr. Bishop. They found 2ft. of snow in many places near Seven Ponds. They will doubtless try the salmon at Rangeley Lake.

Fishing began in good earnest at the Upper Dam Thursday. Archie Poor and Cuvier Small, both of Andover, caught about 30lbs. of trout just above the open gate at the dam. From the apron below the dam they also took several trout. There were one or two trout of about 4lbs. in the lot. W. K. Moody took five trout above the dam and one below, the united weight of which was about 8lbs. Fishing the next day at Mill Brook, head of Richardson Lake, he took only one trout. That weighed 13¼lbs. The curious feature of this trout was the fact that in removing him from the hook he disgorged thirteen smelt, by actual count, that he had swallowed. Many of these little smelt are to be seen floating on the waters of the Rangeley lakes this spring, the same as last. Something has nearly or quite killed them, and the trout are simply gorging upon them. Supt. O. B. Brown, of the Berlin Mills Co., fished at the Upper Dam Thursday, though without great success.

At Bemis the fishing has started in good earnest. Saturday morning Capt. F. C. Barker saw the minnows and trout jumping in the bay in front of the camps for the first time since the departure of the ice. He called the attention of a couple of guides, and they soon had two fine trout. The sportsmen—there were already stopping

there W. L. Hinds, Walter Reese and George H. Gorton, of Portland; A. D. Barker, C. I. Barker, Ezra H. White, and George Drew, of Lewiston; and Charles E. Guild and D. E. Adams, of Boston—were notified, and part of them came out, though still at breakfast. Mr. Guild and Mr. Adams made a fine catch, their string weighing 13¾lbs., including one trout of 4½lbs. weight. The Lewiston party made a good catch, as well as some of the other guests there, including Frank G. Emery, of Portland, and E. R. Leonard and wife, of New Bedford; yet the honor of being high line for the day fell to a lady. Mrs. R. E. Taylor, wife of Station Agent Taylor, took a trout that turned the scales at 4¾lbs., "quick weight." Immediately she received the congratulations of the sportsmen, and later of the management of the Rumford Falls and Rangeley Lake Railroad. She took the handsome fish entirely alone.

Fish Commissioner Wentworth writes R. O. Harding that there is "big fishing at Sunapee Lake," New Hampshire. A Mr. Breck, of Claremont, has taken a salmon weighing 14¾lbs. Eight salmon in one day were taken from the wharves at Blodgett's Landing, weighing from 8lbs. up to 14¾lbs. A great many trout were also taken.

Mr. J. A. Wade, of Cambridge, writes from Newfound Lake that Tuesday morning William Hyde, of Salem, took a salmon of 10lbs. and a trout of 5lbs. Tuesday evening Dr. Webber caught two salmon of 4 and 5lbs. Wednesday morning Mr. Wade himself caught a 7 and an 8¾lbs. salmon. These fish were all taken at the head of the lake, near Hebron. J. E. Devlin, with a friend, and E. H. Wakefield, Jr., left for Newfound Saturday. Hon. E. D. Hayden and wife left for Newfound Thursday. A. F. Gotthold went Friday.

Commissioner Stanley writes from Lake Auburn that he saw lots of fish, but they would not bite. The weather is very cold, with easterly winds, which accounts for poor fishing. Mr. Hazeltine and Mr. Rankins, of Belfast, have taken two trout from Swan Lake, of 3 and 5lbs. weight.

Good luck continues to be reported at Newfound Lake. Among the many catches may be noted those by the guests at Grove Hill Farm, East Hebron; W. H. Griffin, a 10½lb. trout; G. G. Fellows, a 4lb. salmon. Other guests at J. W. Sanborn's have caught more or less fish, including Varnum Waugh, Boston; P. C. Hancock, Franklin Falls, N. H.; J. L. Byrne, Melrose, Mass.; Frank E. Foss and Mrs. Foss, C. A. Blake and Mrs. Blake, Hill, N. H. Tuesday, Albert F. Cate caught a 15lb. trout; C. A. Gale, 15lb. trout; A. T. Chase and F. H. Daniels, trout of 10 and 12lbs.

From Bristol are reported a number of catches, including a trout of 16½lbs., on Monday, by C. E. Rounds. The fish is described as 33in. long and very symmetrical in form. Late last week the same fisherman took two salmon of 4 and 4½lbs. respectively. George E. Fowler and Henry Davis have taken trout weighing 10lbs. each. George H. Fowler has caught four trout weighing 10½, 11½, 4 and 10lbs. A day or two after he took a trout weighing 8lbs. John Marston has taken three trout of 4¼, 4½ and 10½lbs. weight. Henry O. Page has a record of two trout of 10½ and 11lbs. weight; George H. Hartwell, a salmon of 4lbs.; George H. Greeley, two salmon of 6lbs. and 8lbs.; Mr. Adams, two trout; C. H. Fox and wife, and Miss Lilla Sargent, three salmon of 3, 4 and 5lbs., and two trout of 9 and 10lbs. Hon. F. D. Currier and Hon. H. M. Cheney have taken two trout of 3½ and 13lbs., and two salmon of 4½ and 8½lbs. At East Hebron the fishermen have had good luck in many instances, including H. E. Mills, three salmon of 8, 8½ and 4½lbs.; Charles Mills, a salmon of 4lbs. and a trout of 7lbs.; H. W. Paye, Robert Leggett, S. Barton, H. K. Armstrong, C. W. Gosse and E. Messenger have all been fishing, with more or less success, from Amasa Highland's place. SPECIAL.

ANGLING NOTES.

Trout Fishing.

A FRIEND who was fishing on Long Island on the first day of the open season made a cast over a pond, and before his flies struck the water two trout jumped at them, and both were hooked in the air and afterward netted. Curious things are continually happening to the fisherman, and oftentimes they illustrate that true fish stories are stranger than fish stories of fancy.

While a guest of the Camp-Fire Club in New York city at dinner one of the speakers told of his experience at a club in Canada, and without mentioning the club he described the place where he fished so clearly that I recognized the spot as the outlet of Wayagamack Lake on the preserve of the St. Maurice Club, and later when I questioned him about it he said that I had named the place. He was fishing in the outlet above the dam, and saw a big trout in the stream, but it would not rise to his flies, so he removed his stretch fly and put on a big hook and baited it with a minnow. Drawing this minnow-baited hook through the pool, the big trout seized it and directly after another trout took the fly above, and he had a pair of trout hooked in a space that was circumscribed. As the fish took refuge under a log and sulked he told his guide to walk out on the log and draw gently on the leader to stir the fish up, instead of which the guide took the leader in hand, and with a jerk parted it above the upper trout, and down stream the two fish went, yoked together with the remainder of the leader.

The next day another member of the club, fishing with flies in the same pool, hooked the big trout with the bait hook in his throat and a piece of the leader hanging from his mouth, and soon after hooked the other trout of the escaped pair with the fly and the rest of the broken leader in his mouth. The larger of the two trout weighed 6½lbs. The trout had parted the bit of leader which held them together after going below the dam, and had returned to the pool above, and the larger fish had taken a fly which he had previously spurned.

The opening of the brook trout season in New York has had no charms for me for a number of years past. There was a time when I fished on the opening day, in snow or hail or rain, and felt perfectly satisfied to return home at night wet and tired, with no fish, or with fish taken with bait, and that came out of the water like

so many suckers, and, in fact, that took the bait on the bottom exactly as though they were suckers. As a rule too the trout were poor, ill-conditioned, slimy things that gave no more pleasure in the eating than they did in the catching. Consequently I long ago gave up observing the opening day, and have been content to wait until the trout had had a run on the gravel and sand and cleaned themselves of slime, and had eaten of insect food and put on flesh, and were ready to take the artificial fly.

Opening Day in New Jersey.

This year I was fortunate enough to open the trout season in two States on the first day of the season in each State. I was invited by a friend to fish in New Jersey on April 1, and the invitation came to me in such a way that I would not have declined it if the snow had been 7ft. deep and the streams frozen over, for when a friend invites me to fish a preserved stream such as I did fish I mark the occasion as one to be treasured in memory even if fish are absent. There was snow and there was ice and rain too; but there was sunshine also, in great, solid chunks that warmed the fisherman so that the snow did not count when it came, particularly as we were under cover; and furthermore it is not all of fishing to catch and kill fish, as some wise man has remarked, and pleasant companionship is often more enjoyable than pulling fish out of the water against their will. Before the waters are warmed and insect food hatched out trout seem to come from the water under protest. Later, when food is on the surface, when fruit trees are in blossom, when the sky is blue and the air is soft and warm, trout rise with a dash as though they delighted in being taken from the water and placed on a bed of fresh green ferns in a trout creel.

For several days up to and including the last day of March the weather had been so warm there was promise of early fishing; but the 1st of April in New Jersey was cold, the 2d was colder, and the 3d was coldest. The superlative means that the ice would form on the line and make little balls at the guide rings, and the wind would blow through your outer and inner clothes and your flesh and chill your spinal column, and yet I never enjoyed fishing any more than I did on those days.

When one gets on a trout stream for the first time in the spring, if one is a real lover of fishing, the weather does not count for much, and the fish do not count for everything, for there is an indescribable pleasure in being out where the tender green is struggling to show itself and where the water murmurs things which only the fisherman understands, and at which his heart rejoices.

The first stream to be fished on the 1st was not large, and it was overgrown with alders in places, and my hook was baited with a lowly worm, and it soon produced a trout which furnished me with a better bait—its own belly fin. My friend and host is an artist in taking trout with the belly fin, and the way he will slide that fin down stream, under banks and overhanging trees and brush, using the Spey cast occasionally to throw the fin at almost right angles across the current into some nook that could not otherwise be explored, shows that it required years of practice to become expert in this particular mode of fishing. There are two flies made to represent the belly fin of a trout—the Parmachenee Belle and the fin fly designed by Mr. Orvis; and to use the belly fin well requires more skill than to cast a fly, if every portion of the stream is to be fished thoroughly without losing a score or so of hooks and leaders.

Once in a while a trout would come for the fin with a snap, but most of those taken on the first day were inclined to be slow until the stream widened and ran through meadows, and there they would doubtless have taken the fly in many instances, but two score of trout were all that could be disposed of, and they were creeled in time to return to the house while the sun was still high in the western sky.

Zebra Trout.

The next day I was to enjoy a new experience, for we fished a larger stream in which a cross-bred trout had been planted. In England these fish are called zebra trout, and are a cross between our common brook trout and the brown trout. They are mules, but in Europe they are crossed and planted annually in some waters simply for the fine fishing they afford. They rise to the fly earlier in the season than the native trout, and they make a better fight because when hooked, and in taking the hook, they come out of the water.

Perhaps it will be as well for me to explain that when I say that the cross between the brown trout and native brook trout is a mule, that it does not breed, I have reference to experiments made at the hatching stations of the Fisheries, Game and Forest Commission of New York. Males have been found with milk, but no females with eggs.

In Europe the hybrid is called zebra and leopard trout, the latter being a cross between the Loch Leven and our native brook trout. What is called a struan hybrid, that is a cross between our trout (*fontinalis*) and the Scotch char (*S. struanensis*), will breed, both being chars; but the cross between trout (*Salmo*) and char (*Salvelinus*) will not, in such experiments as have been made in this State of which I have knowledge, although Day has, I think, recorded that a cross between American brook trout and Loch Leven trout has proven fertile; but as I recall the experiments at Howietown without looking them up, the hybrids were old, weakly, and many misshapen monstrosities among them, so that comparatively few of the fry survived.

The zebra trout that we caught in New Jersey were beautiful fish, and they came to the fly with a rush and dash that was satisfying to the angler. On the table some of them compared favorably with the native brook trout, but as a rule their flesh was light-colored, and some were soft and tasteless; but I hope to try them again with fly and on the table, the latter under more favorable conditions. Certainly one cannot ask for a more game trout than the zebra; they are longer and more slim than a brook trout, and if their fighting qualities improve with warmer water and greater amount of food I shall not wonder that the anglers of Great Britain cultivate them for fishing.

Opening Day in New York.

On April 16, which is the general opening day for trout in New York, I was at Lake Champlain, where the Fisheries, Game and Forest Commission were planting a number of millions of smelt fry. There is in this lake one of the most delicious of food fishes, known locally as ice fish, as they are caught only through the ice. Complaints having been made that the fishing was not as good as formerly, owing perhaps to the increased numbers of fishermen to supply the demand caused by the fame of the fish having spread abroad, the New York Fish Commission made a plant of fry from eggs taken in Long Island waters. The smelt were planted in the morning, and a friend asked me to fish a trout lake up in the mountains in the afternoon. The ice had been out of the lake only since the Monday of that week, the 16th falling on Saturday. The day was all that could be desired for fishing, and the sun had warmed the air until an overcoat was unnecessary, and when we reached the little lake I could see an occasional break on the surface which indicated the rising of fish to feed. There was snow in patches in the woods on the south side of the lake, but the north side mountains were bare. The poplars were just beginning to show a greenish tinge from buds ready to burst, but the birches showed not the faintest touch of green. On the road to the lake one solitary shadbush had begun to blossom in a field under a hill, but at the lake the wild cherries, the earliest to blossom, gave no evidence that they were ready to burst into blossom.

We soaked a couple of casts of flies and went out in a boat as soon as possible after our arrival, but a little wind having sprung up, we could see no breaks at the surface. We had cast over a good stretch of the lake's shore without a rise, when suddenly a trout rose at a Marston's Fancy, on my cast, with a suddenness that startled me; but instinctively I struck and hooked the first fish. From that time until night the trout came to the flies as frequently as we could desire, for we decided that ten would be sufficient for our supper and breakfast, and all above that number were unhooked and returned uninjured to the water. As the sun went down the wind went with it, and then the trout could be seen breaking at the surface, not as they will later, but coming up and sucking a fly from the surface, except in the case of a caddis fly that had broken from its larval skin and was struggling to fly; then the trout would come with a rush, often miss, but in the end getting the fly. Caddis worms were everywhere at the outlet, and we had not expected a rise of the flies, but we saw a considerable number on the water. The fish that we killed were in prime condition without exception, and when they were opened their stomachs were stuffed with caddis worm cases, composed of decomposed wood. As trout that feed on caddis worms take the cases too (who has not heard of the boy who said that trout took gravel into their stomachs for ballast, so they could swim properly? He had opened trout that had been feeding on caddis worms that made their cases of sand and gravel, and could not account for the presence of the gravel except it was taken for ballast), it is said that their flesh tastes of the wood. That night at supper we could not detect any foreign taste to the flesh of our trout. Possibly if the trout had been dressed as quickly almost as they were caught the decaying wood and bark of which the cases were composed would have conveyed a flavor to the flesh of the fish. The trout were very slimy, as fish are in the spring before they have had a run on the gravel, but they were remarkably fat for April trout, admitting that the season was unusually early. Never in all my experience in the Adirondack waters have I known trout to rise so freely to the fly at such an early date. In spite of this I must adhere to what I have believed for years, that trout fishing should not open in northern New York before May 1. Make the season for brook and lake trout the same, and not open it before May 1 anywhere in the State except possibly on Long Island.

The lake that I fished on April 16 proves what food will do for trout. It has been planted with fresh-water shrimp; it contains the caddis worms in such quantities that they boil up through a hole cut in the ice, and the shores are covered with them. It also contains quantities of other flies, chief of which is the big green drake, and last year when I was there the trout were breaking from one end of the pond to the other, feeding on insect food. One trout that I caught was as red externally as any breeding male that I ever saw. Several were nearly as bright in color, but the one I refer to was so highly colored that it seemed as though the season must be October instead of April.

In New Jersey on the 1st I caught a trout with its belly distended with food of some sort, but I did not stop fishing to open it until I had returned to my friend's house several hours after the fish was placed in the creel dead. Its stomach was filled with a species of insect new to me, with a hard shell, and one of the bugs was alive when I opened the trout. I took it to my room, intending to bring it away with me and find out what it was, for I was informed that it was one of a number of insects sent to the stream by the late Prof. Baird as fish food, and that they had multiplied until the stream now abounds with them. At another time I will get some specimens and find what they are.

Landlocked Salmon.

The season for lake trout opens on May 1 in New York, and on that day the trout were at the surface in Lake George, and many were caught. Three landlocked salmon were also caught weighing 6, 5½ and 3lbs. respectively. That is, I have heard of three salmon being taken; perhaps others were taken or will be taken and reported later. The first plant of salmon was made in Lake George in October, 1894, and were fingerling fish hatched the spring of that year; consequently the oldest fish are no more than four years old this spring. It has been recorded in FOREST AND STREAM that the first salmon, a fish of 6½lbs., was caught in the lake last season. That three salmon should be taken on the first day this year is most encouraging, and promises well for future salmon fishing in the lake, if the fish are permitted to spawn unmolested when they run up the streams for that purpose.

A. N. CHENEY.

FOREST AND STREAM.

It Might Have Been.

OLD JOE, the guide, with steady stroke
Rows out beyond the fringe of reeds,
Across the channel green and deep,
Between the reef and pick'rel weeds.

The dimpled waters gleam and flash
With brightest gold and darkest green,
Catching the light of evening clouds
In tender rose and silver sheen.

The birds are singing in the pines.
Far off I hear the calling loon;
With easy hand the rod I hold,
And feel the throbbing of the spoon.

A sudden strike, a savage tug,
And out there leaps with mighty lunge,
All green and white, with fins of gold,
The king of fish—a muskallonge.

Then comes the test of rod and line,
And all the angler's craft and skill,
As back and forth, with sweep and swirl,
The desperate captive has his will.

Now rushing off with sudden speed,
He makes the good reel scream with glee,
Or fiercely shakes his mighty jaws
In vain to get the tackle free.

At last he wearies of the fight,
And slowly turns his flashing sides,
While, guided by the short'ning line,
Beside the boat he meekly glides.

The gaff is near his milk-white throat,
A moment more and he is ours;
When down he goes beneath the boat—
"The line has parted, by the powers!"

* * * * *
The sun has set, the sky is gray,
The evening wind blows sad and raw;
I only know that I have lost
The biggest fish I ever saw.

HENRY J. SAWE.

CHICAGO AND THE WEST.

Gone Fishing.

CHICAGO, Ill., May 3.—A number of anglers of Grand Rapids, Mich., are now absent from their accustomed places in town, having gone fishing with the first peep of day of the legal season. Dr. Hudson, Messrs. A. D. Porter, Harry Sherwood and F. S. Torrey went to the Pere Marquette River. Messrs. C. W. Duke, J. E. Pratt and F. M. Lee selected the Little Manistee. Others starting for different points are Messrs. J. H. Taylor, A. B. Richmond and Charles Merrifield.

The Season.

Eau Claire, Wis., May 5.—In spite of early indications the season is turning out backward and cold. No very good sport is yet reported. Messrs. Irvin Gray and A. W. Shelton, of Rhinelander, Wis., went to Deer Brook one day this week and took eighty-four nice trout, which is the best catch I have heard of so far.

Here at Eau Claire we have a number of trout streams, most of them pretty well fished, but still offering good sport to those who understand the game, of whom there are many in this lovely town. Elk Creek is one of the good streams here, and a drive of a dozen miles lands one in good trout fishing on that stream. We had trout for breakfast at the Galloway House this morning, and the landlord, Mr. Smith, tells me that he and some friends caught a few one day this week. He confesses that he is forced to buy most of his trout, however, and tells me that he sends to Pratt, Wis., for them. At that point there are several streams, the Marengo among others, where the trout are abundant enough to pay market fishermen. If I have time I am to inquire more closely into the trout resources of Eau Claire and neighborhood. The general belief is that it is still too cold. The season here is about a week or ten days behind what it is at Chicago.

In the Eau Claire River and in the Chippewa River, whose junction is within a short walk from the center of the city, bass and pike fishing has been good, and many anglers are out each day. At La Crosse, on the Mississippi River not far from here, the bass fishing has begun, and good sport has been had. At Wabasha, Minn., the anglers are expecting fine sport this year. The Father of Waters performed a unique feat this spring. Ordinarily high water lasts until midsummer, but this year the rise was in March and the fall in April, an unheard of thing.

Private Fishing Waters.

Attorney-General F. A. Maynard, of Michigan, has given the following opinion on the question of private fish ponds and the rights of the owners to sell fish from them. It is useful to note that he explodes the old and dangerous doctrine that a man owning a trout preserve could sell fish from it at any time he likes. The opinion in full follows, as addressed to Warden Chase S. Osborne:

"Dear Sir: In relation to the question mentioned in your letter of Feb. 8, regarding the fishing rights of the owner of a private lake or stream, as well as to what is meant by 'private lake,' or 'private pond,' or 'private waters,' the particular lake or pond in regard to which information is asked is not described, and therefore no opinion can be expressed as to the private lake or pond mentioned, but the general rule may be stated in reply to the questions asked.

"A private lake or pond, or waters, are those which are not navigable, and the soil under and on the borders of which is owned exclusively by the person or persons who claim the water as their private property; and having no connection with other streams or waters which are public, and through which fish may pass.

"Second question: What are the fishing rights of the owner of a private lake or stream? The owner of a private lake or pond is supposed to have so far reduced the fish therein to his possession that they have become his private property. He may take such fish for his own

use from such private waters at any time and in any manner. He may not sell or offer for sale during the closed season, when prohibited, because by doing so he interferes with the State in its protection of the fish belonging to the public. He may prevent any other persons from taking fish from his private waters, and may bring an action of trespass in taking his fish. He may make a criminal complaint against one who takes any of his fish, under Section 2197 K, Howell's Statutes, if he himself has first complied with that statute.

"I herewith inclose list of authorities upon which these answers are based, and which may be of value to you in the work of your department.

F. A. MAYNARD,
"Attorney-General,"

Chicago Fly-Casting Club.

The first of the season meets of the Chicago Fly-Casting Club will be held at Garfield Park next Saturday afternoon, May 7. Other meets will be May 21, June 4, June 18, July 9, July 23, Aug. 6, Aug. 20. June 25 and Aug. 27 are re-entry days. There will be four events at each meet, long-distance fly, distance and accuracy fly, delicacy and accuracy fly, and the anomaly of bait casting also, not uninteresting, but under an odd name.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Angling in Canada.

THE fishing season has opened here with a rush. Probably not for half a century past has the ice gone off Canadian water so early in the season. By the commencement of the present week all the lakes in the Lake St. John district were perfectly clear. Ouananiche have already taken bait in the Grande Decharge, and a few more days will see them rising to the fly in Lake St. John, from which the ice went out at the end of last week. When the trout season opened here on the 1st inst. a perfect throng of local fishermen went out to Lakes St. Charles and Beauport, fully a fortnight earlier than usual. The result in the majority of cases was quite satisfactory. A number of good fish were taken, but the best of the lot fell to the catch of Gen. Henry, of Vermont, the present U. S. Consul here. This specimen weighed a short 3lbs., and the General is particularly proud of catching it upon the very day of the great victory of his old schoolboy friend, Commodore Dewey. Lake Edward has been clear of ice for over a week past, and several 4 and 5lb. fish were taken there yesterday. A large party of Burlington fishermen is expected here next week en route for Lake Edward. A number of Quebecers left for the lake yesterday. The Messrs. McCormick, of Biscayne Bay, Fla., left on Thursday for Lake Edward with a party of ladies and a large retinue of servants. Several parties of American anglers are booked for Lake St. John for the latter end of this month, and the opening of the Hotel Roberval is fixed for about the 20th inst. Gen. Henry and Mr. Laird, the U. S. Commissioner of Immigration here, and a number of friends leave to-day for his preserve on the St. Bernard Club preserve in the rear of Louisville, and will no doubt make a big catch, as the trout are reported rising freely to the fly. Mr. Charles Simpson, of New York, and the Hon. G. W. Stephens, of Montreal, left yesterday for the lakes in the same district. There are a number of members of the Triton Club booked for their preserve next week, most of them coming from Syracuse.

E. T. D. CHAMBERS.

QUEBEC, May 7.

The Record Tarpon.

CAPTIVA PASS, Fla., May 3.—*Editor Forest and Stream:* Mr. Edward Vom Hofe, of New York city, killed on Captiva Pass on April 30 the largest tarpon on record taken with rod and reel. The weight, two hours after the fish was taken, was 210lbs.; the girth 45in.; length 6ft. 11in. The fishing was by moonlight, and the fish carried Mr. Vom Hofe out into the breakers on the strong ebb tide running at the time and was gaffed from the boat by John Bain in a very rough sea. The following people were present and can testify as to the size and weight of the fish, viz.: Mr. and Mrs. C. C. M. Hunt, of Palmyra, N. Y.; Mr. Frank D. Livermore, Sir Peter Walker, Lord Elphenstone, J. T. Powers, and the writer, of Providence, R. I.

GEO. L. SHIPLEY.

[The record for a tarpon taken with rod and reel has up to this date been held by Mrs. George T. Stagg, of Kentucky, with a fish of 205lbs., taken in May, 1891.]

Chicago Fly-Casting Club.

CHICAGO, May 7.—*Editor Forest and Stream:* The first contest of the year was held to-day. Owing to the high wind the scores are low, and there were but few entries. These are the records:

	Long-distance Fly.	Bait-casting.
	Feet.	Per cent.
I. H. Bellows.....	95	96
B. W. Goodsell.....	93	94 1-5
E. D. Letterman.....	..	93 2-5
G. A. Murrell.....	..	94
F. H. Peak.....	104	93 1-5
J. E. Strong.....	..	88 4-5
J. M. Rogers, Sr.....	..	74
L. I. Blackman.....	..	86
H. G. Hascall.....	..	95 1-5
E. L. Caldwell.....	..	86 4-5

The holders of medals are: For long-distance fly, F. N. Peet; for bait-casting, I. H. Bellows.

Fishing Near New York.

WRECK LEAD, L. I., May 9.—Easterly winds and low temperature interfered seriously with the pleasure of the few fishermen who came down last week. A heavy sea has prevented the larger boats from getting out of the inlet even if fishermen had cared to go off to the banks. Fluke and flounders have been plenty in the bay. They may be caught in the channels in the bay near Nick's Beach or in Wreck Lead. A few sheephead have been caught, and it is hoped that they will be plentiful later in the season. They have been very scarce for several years.

The Name Dolmieu.

WASHINGTON, D. C., April 29.—*Editor Forest and Stream:* Perhaps few of your readers remember me as formerly a frequent contributor to your admirable paper, and possibly not one of them now recalls the fact that I was Charles Hallock's assistant editor of FOREST AND STREAM in the beginning—in the summer of 1873. This mutually agreeable arrangement was made with the best of intentions on the part of each of us, and duly announced; that it never went into full force was owing to circumstances neither of us controlled. From that day to this I have never ceased to feel a friendly interest in the paper, and I am proud of its long, honorable, and highly successful career—very slight though be my own contributions to this result. During these twenty-five years I have seldom failed to read FOREST AND STREAM, and always enjoyed the reading. I admire its tone, tenor, and spirit. I hardly see how it could be improved. May its prosperity and usefulness be perpetual!

I do not write this letter either to recall old personalities, howsoever pleasant these be, nor to make the editor blush at praise, however well deserved; but to say how much I am enjoying Mr. Mather's fish stories now running in your columns. A man who can tell fish stories with as much truth in them as Mr. Mather indulges is evidently no ordinary mortal; and the way he makes his points is a caution to callow penmen who yearn to write before they know how. I am moved to these reflections by No. IV. of Mr. Mather's series on the black bass, in this week's FOREST AND STREAM. This is a model—text and pictures alike—even to the polyonymous helgramite. I have nowhere, not even in the works of a Gill or a Jordan, a Goode or a Bean, seen the distinctions between the two species of bass so clearly, so intelligently set forth. Mr. Mather has the art of putting things, as when he says that "the size of the mouth is not determined by opening it," but by the size of a certain bone of the upper jaw—which a glance at the picture shows. There are three kinds of men I like—the man who knows what he knows; the man who knows how to tell what he knows, and the man who knows enough to say "I don't know" about things he doesn't know. Perhaps Mr. Mather is all these three kinds of a man. I should judge so by the way he writes. There is one point he might elucidate for readers of FOREST AND STREAM. This is that queer word *dolmieu*, the specific name of the small-mouthed black bass. I happen to know about it myself, but do not tell all I know in one letter, and do not wish to steal any of the good bait with which the veteran fisherman fishes for readers in the pearly and purling columns of FOREST AND STREAM—columns which I hope "will run on forever," like Tennyson's brook. ELLIOTT COVES.

Camp-Fire Flickerings.

"That reminds me."

The Naturalist and the Bear.

I TOLD you once about Billy and the bald-face. Billy was scared and the bald-face was mad. But this is a different bear story.

In olden times, before the city of Vancouver was even dreamed of, New Westminster, on the Fraser's River, was the principal city of the mainland of British Columbia. The site of the modern Babylon, Vancouver, was at that time covered with a dense forest of mighty Douglas firs, mixed with hemlock and a ragged underbrush of devil's club, vine maple, salmon berry, and other stuff, while here and there and everywhere flourished the odoriferous skunk cabbage, the whole described as a "sure dandy spot for bear."

Away back in those times two men, on a nice spring morning, took a walk from Gostown toward New Westminster. One of these was Capt. Van Bramer, afterward of Cocos Island fame. The other was already famous as a coon hunter, bird stuffer, and all-round naturalist, not to mention prank player, and may still be found any day (except when he is wanted, which is not often) in the museum in Victoria, where he is continually going into abstruse calculations as to the number of pounds and cubic inches of tow and plaster it takes to fill some poor wretch of a coon's skin or mountain goat's pelt, in place of so many pounds of flesh, bone and sinew which have been skinned out.

After going a mile or so the naturalist, thinking he saw some rare mammal looking at him, stepped off the road a short distance among the logs and rampikes of a windfall through which the road ran. In wandering about among the logs it became necessary for him to climb over one which stood rather high up, it being that of a large tree. Just as he began to hitch himself up on the rugged bark he became aware of the fact that somebody was climbing up the other side of the tree; presumably it was Van Bramer. On the instant there rose above the log the head and shoulders of a two-year-old black bear, and looked at John with his little beady eye, his tongue lolling out with heat and exertion.

John drew himself up to his full height, and holding up an admonitory forefinger, said quietly, but firmly: "N-n-now g-g-go away—y-y—I-I d-don't want you!" This the bear immediately obeyed, with great speed and decisive action, while John at once withdrew to the road, where he found Van laughing insanely and making sundry stupid remarks about shooting, carrying a gun for fun, etc. It was useless for John to explain that the fur was no good at that time of year, and that it would only deprive some poor hunter of a chance of making a few dollars when winter came if he had shot him. But then some men cannot appreciate a great and good act. MAZAMA.

COMOX, B. C.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

The Kennel.

Dogs in the Arctic Regions.

SOME of my readers will remember that rather over twenty years ago there was a great scare throughout the country side between Winchester and Southampton Water. A wolf had made its appearance in a mysterious moment, and soon became the terror of the timid. And when it fell to worrying and killing the sheep, the farmers banded themselves together and sallied out, armed to the teeth, in search of the wild beast; so it was not long before they found and killed it, and restored peace and confidence to that beautiful part of England. Moreover, by showing the body of "the last wolf killed in England" at prices varying from 6d. to 1d. a head (according to discretion) they were able to repair to some slight extent the loss they had suffered.

Now this wolf was no wolf at all. It was simply an Arctic dog, which had escaped from Sir Allen Young's yacht, the Pandora, then lying in Southampton Water. The mistake made by the people in their ignorance would serve one well for a peg on which to hang a long and "instructive" article about the nature and breeds, the habits and diseases of the dogs that are native to the Polar regions.

There are practically three great breeds or races of Arctic dogs—the Eskimo or New World breed (Eskimo, *mikki*); the Samoyad or West Siberian breed (Samoyad, *voinaika*); and the Lena or East Siberian race. The last is the best, but at the same time the most difficult to obtain, and when obtained the least tractable to employ. The better of the remaining two kinds is the Samoyad dog, and it is this noble beast which our own countryman, Frederick George Jackson, is using in far-away Franz Josef Land in his attempt to reach the North Pole. The same dog too was taken by Fridtjof Nansen, the Norwegian, on his daring, though terribly rash, venture in the Fram. Peary, the intrepid explorer of Greenland, used Eskimo dogs, and used them with the most satisfactory results; yet, for pulling power and for comparative immunity from cold mania, the Samoyad dog is superior.

Mr. Jackson, in his entertaining book on "The Great Frozen Land" (Macmillan & Co.) describes the Samoyad dogs thus:

"The dogs (*voinaika*) of the Samoyads have a strong resemblance to the familiar Eskimo dog of Greenland, but in several points they are superior. The most striking characteristics which they have in common are the thick, woolly coats, which enable them to withstand such a rigorous climate, and the wild and savage temper they display toward each other. If you chained a number of these dogs together and left them to their own devices I am confident that they would speedily develop a feeling so grimly fraternal that one-half (the weaker half) would be absorbed with the least possible delay into the bosom of the other half of the family. When trained and educated, however, even by that unskillful pedagogue their master, they become exceedingly useful, and on the whole well-behaved, members of Samoyad society; and as the proof of the pudding is in the eating, so I may fortify this certificate of good character by the assertion that while you may buy a wild young puppy, and welcome, for a rouble and even less, you may have to give sixty, seventy, and sometimes a hundred roubles for a trained adult. But it is such hard work for the indolent Samoyad to bring his dog to the stage required for driving large herds of reindeer in the best manner, that I very much doubt your being able to persuade him to sell such a dog at all."

Roughly speaking, any Polar dog will pull a sledge with half a man's load, but he will take it twice as far in a day as a man can. A man's load may be reckoned as 200lbs. And though the Polar dog is accustomed to raw meat, and to carousers long and deep on newly killed game, he adapts himself to circumstances, and will do such work as I have stated on a ration of 1lb. of pemmican a day. What is pemmican? It is simply dried and pounded beef, enveloped in a greasy coat of fat and suet, and then slowly heated and poured in a molten condition into can or skin. For human temptation, currants, sugar and spices are added, which just place this dry and tasteless food above the insuperably unpalatable. It is the experience of Mr. Jackson that the Samoyad dogs take kindly to the biscuit. In addition to ordinary meat fibrous biscuits, he took out about six tons of Spratts cod liver oil biscuits, and these have proved a very successful diet with dogs that had never previously known what a biscuit was.

But the power of the Arctic dog varies, and the larger kinds are capable of doing really formidable work. Peary, for example, occasionally used only three dogs to drag a sledge load of 500lbs., and we have it on record that he traveled at considerable speed behind only two dogs with a similar load.

On the other hand, when sledging is to be prolonged, it is necessary to have full teams, for dogs, like reindeer, soon degenerate with regular work. Moreover, the mortality is very high. It will be remembered that Peary started on the first of his long journeys with twenty and returned with five dogs. That in a subsequent year no fewer than ninety dogs were taken, and only twenty survived.

As to the savage nature of these Arctic dogs, I attribute it almost entirely to their food. It is frequently stated by Eskimos, however, that in West Greenland the bitches are visited when on heat by prowling wolves, which might well tend to keep the temper of the offspring uncertain; but some suspicions have been cast on this statement, and in these brief notes I have no room for going into the question. On the other hand, the animal food on which they almost entirely subsist has much to do with it.

I remember a case in Norway, where cattle in a certain locality became most violent and wild. The cause was found in the fact that the owner had accustomed them to a fish diet—fish being more plentiful than grass in this particular part.

Now the dogs, having fed well for years on raw and blood-charged flesh, become extremely savage, and es-

pecially among themselves. Both Jackson and Peary have found that muzzles are necessary if they would preserve their packs from gradual extinction. For the Arctic dogs are demons at fighting, and although they recognize among themselves a leader and chief, that position has to be won by personal strife and retained by personal prowess.

The Samoyad dogs, in fact, had to be chained apart from each other, in what was, to all intents and purposes, "a hollow square." On one occasion, when several dogs were coming home from exercise, a quarrel broke out between a couple of the most refractory, and on one of them being pinned to the ground the rest immediately set upon him and tore him to pieces. This would have frequently happened had not precautions been regularly taken. We must not forget, however, that "hitting a fellow when he is down" is a trait not entirely unknown in the human animal.

Neither is this solely attributable to a heredity which has accumulated under severe climatic conditions, for a large retriever, which Mr. Jackson took with him to Franz Josef Land, has developed similar ferocity. Indeed, Mr. Jackson writes home of this beast: "Carlo, by the bye, has developed into a shocking blackguard, and is the sole representative of the criminal classes in Franz Josef Land. He now constantly wears a muzzle, which he usually has cocked over his left eye, giving him a very Bill Sykes-like appearance. He is the terror of the Windward people, and would kill every dog in the neighborhood if allowed to go about unrestrained." As a matter of fact Carlo killed two of the Siberian dogs before he was put under restraint.

It is quite certain that of all man's aids, apart from food and clothing, the Arctic dog has been the most valuable to the explorers of the Polar regions. By the help of this plucky little beast, with his single trace of raw reindeer hide (fastened to collar and saddle of similar strips), man has accomplished the greater part of those discoveries which now appear as lands and seas in our maps of the Polar area. Over 100 miles have been covered by these dogs in a single day, which is astonishingly good, seeing that snow is not continuously hard or smooth; that a full sledge load was carried; and that the additional weight of the explorers must be reckoned.

It happened, as most of my readers will remember, that the S. Y. Windward, instead of returning here in 1894, was delayed by the unusually early set in of the winter, and consequently spent nearly a year in the ice off the coast of Franz Josef Land. Now it chanced one day that the ship's carpenter was walking about a mile from the ship. He was taking a constitutional, and somewhat imprudently lost himself in thought—most probably he was thinking of home. Suddenly he looked up and saw a large white bear, also thinking, and evidently thinking of him. Discretion being the better part of valor, the carpenter looked anxiously round for a refuge, and found it in a neighboring ice hummock, about 6ft. high. To the top of this he very promptly climbed. But I may mention that this particular polar bear was a large one, and his skin, for I have seen it, is exactly 6ft. long. It is easy, then, to imagine how near his snout must have come to our friend "Chips" when he stood up on his hindlegs and made preparations for an affectionate embrace. The carpenter drew his revolver and fired, but, as is the way sometimes with revolvers, it missed fire, and then "Chips" was in a very awkward corner indeed.

Just at this moment, however—in the very nick of time—two plucky little Samoyad dogs (shown in the picture), who had scented Bruin when prowling near the ship, came up with their game and began to attack the bear after their manner, yapping and snapping at his heels and then retreating as the big beast turned round. Bruin, annoyed at the intrusion, turned savagely round upon the newcomers, while the carpenter availed himself of the opportunity to return to the ship! I do not guarantee it, but believe that it is an article of faith among his shipmates to this day that he covered that mile within record time.

All I can say is that here was a man's life saved by the timely intervention of two small dogs, who not merely helped him in his dilemma, but gallantly held the bear until my friend Frederick Jackson was able to come up with him, and convert him into the raw material of a handsome rug "with a reminiscence."—A. Montefiore in Kennel Gazette.

National Beagle Club.

THE regular quarterly meeting of the National Beagle Club of America was held on Thursday, May 5, at 3:30 P. M., at 15 Broad street. Members present: Geo. B. Post, Jr., John Bateman, H. L. Kreuder, A. J. Purinton, Wm. G. Rockefeller, Jr., Jas. W. Appleton and G. M. Wharton. Treasurer's statement was accepted and ordered placed on file. The chair appointed Mr. H. F. Schellhass on the auditing committee in place of G. W. Rogers. Committee on standard reported progress, Resignation of Jacob Zalt, Jr., accepted. Mr. Appleton proposed Mr. H. P. Whitney's name, who was duly elected. It was decided not to offer a special prize at the show to be given by the New England Kennel Club at Braintree, Mass. After an informal discussion in regard to the coming field trials, the meeting was declared adjourned. G. MIFFLIN WHARTON, Sec'y.

POINTS AND FLUSHES.

The Eastern Field Trials Club announces its stakes for its trials of this year, full particulars of which are given in our business columns. The prizes amount to \$1,700. The members' stake will be run on Nov. 12, open to all members. Entries close the night before the running. On Monday, Nov. 14, the Derby commences; \$300 to first, \$200 to second, \$100 to third; first forfeit \$10, second forfeit \$10, payable Sept. 1; \$10 to start. Entries close June 1. The all-age is open to all setters and pointers which have not won a first prize in an all-age stake in the United States or Continental clubs' trials. The prizes are the same as in the Derby; forfeit \$10; \$20 additional to fill. The last stake is the Eastern subscription stake. Simon C. Bradley, Secretary, Greenfield Hill, Conn.

Yachting.

THE combined effects of war and weather have sadly delayed the usual spring work of yachtsmen, and though it is now the middle of May but little has been done toward fitting out. One steam yacht, the Calypso, is at anchor off Bay Ridge, and a trip along shore shows some small craft ready for the season. Those of the large steam yachts which have not been sold to the Government show no signs of fitting out, nor do the large sailing yachts. With a change of weather from the steady rain of the past month, work will begin on the yachts of medium size, and a number of these will be ready in time for the first races. The majority of the yacht clubs along the Sound and the Eastern coast have opened their club houses to the officers of the United States Navy. Some have also declared off all their fixtures, but most of them will race as usual unless affairs take a more serious turn than now seems probable.

The Royal Nova Scotia One-Design Class.

THE Royal Nova Scotia Yacht Squadron, of Halifax, N. S., has had for the past two seasons a one-design class of small keel yachts, which has given very great satisfaction. The Squadron, like many other clubs, has of late years suffered from a lack of interest in racing, and with a good club house, a fine sailing ground and large membership, has at the same time had a difficulty in keeping up its fleet. By way of remedy for this unsatisfactory condition of affairs, it has resorted to the one-design idea.

The class was established in the winter of 1895-6, a committee being selected to decide on the general character and the dimensions of the design; the Squadron appropriating \$50 for special prizes for the class, providing that not less than four boats were built and regularly raced. The design here shown was made by Mr. H. C. McLeod, an amateur and an old member of the Squadron, but then residing in Chicago and racing on Lake Minnetonka. The design speaks for itself, and it is not surprising to learn that it has proved successful.

The size and character of the boats were determined by the requirements of the club and the locality. They had in the first place to be cheap, consequently small and of plain construction. They had to be substantial to stand hard usage and to last, so that a fair price could be had at any time for one. They had to be fit for general all-round use, day sailing, fishing, picnicking, etc., as well as racing. The prevailing winds about Halifax are very strong and squally, with a good deal of rough water, consequently they had to be able little craft, uncapsizable at any rate, and with a handy sail plan. Finally, though they were to be raced chiefly against one another, it was desirable to have them as speedy, quick in stays, and in other ways as up to date as was consistent with the main requirements.

They would have been improved in looks by a long overhang aft, but it was clipped to save expense. Four boats were built in the winter of 1895-6, and as soon as afloat the class became popular. The only fault found with them was that the designer had underestimated the weight of wind they would have to meet, and the 1,000lb. iron keel was not a sufficient stiffener, necessitating some inside ballast. Next season, by common consent, lead keels were substituted for the iron ones, and all inside ballast dispensed with.

So popular did the class become that in the winter of '96-7 five new boats were added, making nine in all. They have all been raced regularly every Saturday afternoon from the beginning of June to the end of September, sometimes in class races, sometimes in the open races of the club. After the change in ballast they have proved to be exactly what was required. They are stiff as churches. Their sail plan is small for light airs, but as soon as it breezes up they are very fast, especially going to windward in a chop; at that mark, when reefs have to be tied down, they are more than a match for a good English 1-rater. They are very dry, quick in stays, and handy as a bicycle.

The four original boats had 9ft. cockpits, with 1ft. gin. side decks and 7in. coaming, and could accommodate quite a boat load. Some of the newer boats have smaller cockpits for racing purposes, but the advantage seems doubtful, as none have ever shipped any water, though tried as hard as they could be driven. They go out in all sorts of weather and have shown themselves in every way most capable little sea boats.

Though one man can handle them anywhere in any weather with perfect ease, they are generally raced with three, as the courses are laid out with as many zigzags as possible (one of them has nine turns in eleven miles), and smartness at the buoys is indispensable. Besides racing, the boats are in constant use for general purposes. The general dimensions are as follows:

Length, o. a.....	23ft. 4in.
Length, l.w.l.....	18ft.
Beam	6ft. 6in.
Displacement to original l.w.l.....	3,550lbs.
Draft	4ft.
Least freeboard	1ft. 6in.
Ballast, lead keel	1,500lbs.
Mast, from stem at l.w.l.....	4ft. 3in.
Mast, from stem to upper hounds	20ft. 6in.
Boom	18ft.
Gaff	11ft. 9in.
Mainsail area, sq. ft.....	241
Foresail	64
Total	305
C. B., from stem at l.w.l.....	305ft.
C. B., from stem at l.w.l.....	10.01ft.
C. E., from stem at l.w.l.....	9.52ft.

The construction is simple, but substantial. The boats were all built on the same set of models, around which ribbands were run, to which the frames, of oak, were steamed and bent. The keels are of yellow birch, sided 4½in. and moulded 6in. at center; stem birch, sided 3½in.; sternpost and deadwood (both birch), 3in. Frames of oak, 1½ by 1¼, steamed and bent, spaced 9in. Beams of spruce, sided 2in. by 2½in. center, and 2in.

ROYAL NOVA SCOTIA YACHT SQUADRON. 18FT. ONE-DESIGN CLASS. DESIGNED BY H. C. McLEOD, ESQ., 1896.

ROYAL NOVA SCOTIA YACHT SQUADRON—18FT. ONE-DESIGN CLASS.

at ends, Planking of Nova Scotia white pine, $\frac{7}{8}$ in. Decks of same, grooved and tongued. Planksheer of birch. Fastenings galvanized iron. Spars solid spruce. Canvas 8oz. yacht duck. Spinakers of cotton drill. Spinaker booms limited to distance from mast to stem head.

The lead keels have added about \$55 to the cost, a rather serious addition in so small and cheap a boat, but even with them a boat can be built for about \$300. The boats were all well and substantially built by Joshua Mader, of Dartmouth, on the side of Halifax Harbor opposite to the city.

The design is an excellent one for many localities where a draft of 4ft. is permissible; either for a one-design class or as a safe and handy little boat easily within the reach of a fairly skilled amateur builder.

Massachusetts Y. R. A. Percentages.

THE executive committee of the Yacht Racing Association of Massachusetts, after giving the matter extended consideration, has agreed upon a plan for computing Association championship percentages. It is believed that the new plan has advantages over the old one which will justify its adoption. As last year, a championship medal and pennant will be awarded the yacht in each class winning the highest percentage in that class. Percentages will be figured as follows:

One hundred per cent. for winning first place, 75 per cent. for winning second place, 50 per cent. for winning

third place, 25 per cent. for each other yacht completing the course within the time limit.

Only open races which have been duly scheduled and accepted by the executive committee in advance of the race, and which are sailed under the rules of the Association, shall be counted for percentage. The total amount of percentage will be divided by the number of starts. In figuring percentages it will be assumed that a yacht shall have started in at least half as many races as the yacht having the largest number of starts in her class.

The racing season will commence May 30 and end Sept. 10, 1898.

The Seawanhaka Knockabouts.

THE Seawanhaka knockabouts and their owners are as follows: Dipper, Arthur Iselin, New York; Annawan, F. G. Bourne, Oakdale, L. I.; Æolus, L. J. Busby, Glen Cove; Mistral, H. C. Rouse, Oyster Bay; Kewaydin, R. C. Wetmore, Oyster Bay; Midge, F. W. Boyer, New York; Golightly, E. H. Norton; Taifu, George Bullock, Oyster Bay; Punkah, George Trotter, New York; —, W. R. Garrison; Bedouin, Jr., J. M. Mitchell, New York; Stella, John S. Hoyt, Oyster Bay; Nakodo, J. T. Sherman, Oyster Bay; Sito, K. R. Otis; Idle, W. H. Russell; Senta, Daniel Bacon, New York; Tosto, John C. Scott, Oyster Bay; Wyntjie, F. S. Hastings; Imshi, E. C. Benedict, New York; Bee, Nelson B. Burr, New York; Lady Blanche, C. K. G. Billings, Lake Geneva, Wis.; Francis, George G. Milne; Dacot, G. R. Maxwell; Bauble, T. S. Young, Jr., Oyster Bay; Gloria, J. R. Maxwell, Jr., Brooklyn; —, Wm. Laimbeer; Perchance, E. C. Potter, Westchester; —, J. A. Harriman, Westchester; Ditto, H. S. Redmond, New York; —, A. de Navarro, New York;

—, J. G. Agar, New York; Mosquito, E. Randolph, New York; Kathama, H. O. Havemeyer, Jr., New York; Lucille, Daniel Bacon, New York.

The cruise of the first fleet from Marblehead to New York is described by the Boston Globe as follows:

W. B. Stearns, of Marblehead, has successfully delivered in New York seventeen of the "one design" knockabouts built by him during the winter for the Seawanhaka and other clubs. The boats were towed around the Cape by the tug Nathaniel P. Doane, and the towing was very neatly done. The boats were strung out in a line astern of the tug, on one long hawser, to which was made fast the mast of each boat near the deck. A bridle from the bow of each boat to the hawser kept them steady, so that they required no special attendance or the carrying of a man aboard. Mr. Stearns himself was on the tug.

The tow left Marblehead last Sunday afternoon, and reached Oyster Bay, the Seawanhaka's home port, at 5 o'clock Tuesday morning. The boats were then put in shape for sailing, and on Wednesday, the day being a holiday in New York, many of them were given trials by their owners. The knockabout Mongoose, recently sold to New York, was also taken along with the tow.

The remainder of the boats, about the same number, will be delivered in the same way in about ten days. The boats now delivered are all for the Seawanhaka members, and bear the following names: Dipper, Midge, Golightly, Punkah, Bedouin, Stella, Nakodo, Idle, Frances, Senta, Tosto, Bee, Lady Blanche, Dacot, and Gloria.

Mr. Stearn has the other work in his yard well along. The Cohasset raceboats are ready for delivery as soon as their owners want them. A boat of this design, for Mr. Whitman, of Plymouth, was delivered yesterday. Two knockabouts of similar design are nearly ready for delivery to New London and Brooklyn owners. The 21ft. knockabout for G. W. Roberts is completed. The Percival 25ft. knockabout is nearly planked.

The 18-footer for H. M. Crane, from his own designs, is well along. She is very lightly built, having $\frac{1}{4}$ in. cedar planking covered with canvas. She is designed for and will be sailed in the Y. R. A. class, but could be put into the Seawanhaka 20ft. class if required.

ROYAL NOVA SCOTIA YACHT SQUADRON—18FT. ONE-DESIGN CLASS.

Winthrop Y. C.

THE Winthrop Y. C. has announced the following fixtures for 1898:

May 28, Saturday afternoon, 3 o'clock—Club race.
June 5, starting 10 o'clock, Sunday morning, destination announced at start—Squadron cruise.
June 16, Thursday evening, 7 o'clock—Water sports.
June 17, 18 and 19, Friday, Saturday and Sunday, starting from club house, Saturday morning at 10 o'clock—Cruise to Marblehead, Gloucester, etc.
June 25, Saturday afternoon, 3 o'clock—Club race.
July 7, Thursday afternoon, 3 o'clock; July 8, Friday afternoon, 3 o'clock; July 9, Saturday afternoon, 3 o'clock—Open races and water sports.
July 23, Saturday afternoon, 3 o'clock—Club race.
Aug. 6 and 7, Saturday and Sunday, starting Saturday afternoon at 2 o'clock—Squadron cruise to Marblehead.
Aug. 13, Saturday evening, 7 o'clock—Evening race.
Aug. 20, Saturday afternoon, 2 o'clock—Club race.
Aug. 21, starting 10 o'clock Sunday morning, destination announced at start—Squadron cruise.
Sept. 10 and 11, Saturday and Sunday, starting Saturday afternoon, 4 o'clock—Squadron cruise and association rendezvous.
Additional races will be provided if a sufficient interest is taken. Special programmes will be arranged for evening races, water sports, etc., for which suitable prizes will be awarded. Particulars will be announced later.

W. Y. C. racing rules will govern all club races. Championship prizes will be awarded in each class. The regatta committee reserve the right to handicap any club race.

Only such classes as have two or more starters will be raced, and only bona fide starters will be recognized. Numbered flags will be displayed from the club house, designating the courses which are to be sailed. Odd numbers indicate course to Deer Island light first. Even numbers indicate course to Buoy No. 6 first. Starts will be made from the club house and will be finished off Point Shirley. Starts flying. Time taken from the starting signal. A preparatory gun will be fired five minutes before first class starts, which will be followed by guns at five-minute intervals for the classes to start in rotation according to size.

The regatta committee is as follows: A. T. Bliss, Chairman; Joseph L. Rankin, Secretary; Harry M. Frost, Edgar A. Cook, A. R. Sanderson.

Taunton Y. C.

THE Taunton Y. C. has announced the following fixtures for 1898:

May 16—Regular meeting. We propose at this meeting to have the janitor get us up one of his famous clam chowders. After the meeting there will be a smoke talk.
May 30—The club house will be opened to members, their families and guests. On this date there will be a cruise to Thurston's for a clam dinner.
June 11—Club race. Races to start at 1:30 P. M. There will be music furnished during the race.
June 20—Regular meeting. Clam chowder and smoke talk.
June 30—Ladies' day and moonlight sail.
July 9—Ladies' day. Cruise to the new summer resort at Mt. Hope.
July 18—Regular meeting.
July 30—Ladies' day and moonlight sail.
Aug. 3—Cruise to Newport.
Aug. 13—Club race. Races to start at 3 P. M.
Aug. 15—Regular meeting. Clam chowder and smoke talk.
Aug. 27—Open regatta and water sports. Races to start at 11:30 A. M.
Aug. 30—Ladies' day and moonlight sail.
Sept. 10—Club race. Races to start at 2 P. M.
Sept. 19—Regular meeting. Clam chowder and smoke talk.
Sept. 30—Ladies' day and moonlight sail.

YACHTING NEWS NOTES.

The new house of the Atlantic Y. C. is nearly completed at Sea Gate, and the station will be ready before Decoration Day. The old house at Bay Ridge has been moved to the new location, as no purchaser was found for it, and will still be used by the club. In moving it the piles had to be sawn off some distance below water by divers.

We have received the year book of the Lake Sailing Skiff Association of Lake Ontario, now in its sixth year. The Association was formed to encourage the building and racing of sailing skiffs and small yachts, and is open to any sailing skiff or yacht club on the Lakes having a membership of fifteen and a fleet of five skiffs of 14ft. l.w.l. and upward. The Seawanhaka rule is used. The officers for 1898 are: Pres., F. E. Walker, Victoria Y. C.; Vice-Pres., G. R. Judd, Royal Hamilton Y. C.; Hon. Sec'y-Treas., L. J. Levy, Royal Toronto S. S. C.; Executive Committee, G. F. Brierly, R. T. Cuff, T. A. Riley and W. A. Watts. The Association now includes the Royal Hamilton Y. C., Victoria Y. C., Royal Toronto Sailing Skiff Club, National Yacht and Skiff Club, of Toronto; and Parkdale Sailing Club. President Walker has donated a handsome challenge trophy for annual competition in all classes, to be sailed at the annual regatta each season.

The Arctic yacht Windward, presented to Lieut. Peary by Alfred Harnsworth, sailed from the Thames on March 19 for New York and has not yet been reported at sea. While she has very light auxiliary power and is a slow vessel, she should have made the passage before this.

Varuna, steam yacht, J. Montgomery Sears, has been sold to George F. Dominick, of New York. Capt. John Holly will have charge of her.

Wanda, steam yacht, H. S. Henry, has been sold to M. S. Tweedy, of New York.

Surprise, cutter, J. D. Baird, has been sold to De V. H. Warner, of Bridgeport.

The Huguenot Y. C. at a meeting on May 2 decided to hold no races during the continuance of the war, and has canceled all of its dates in the Sound Y. R. A. programme.

Miranda, schr., for the past three years laid up at Manning's Basin, has been purchased by C. N. Nelson, and is now fitting out under the charge of Capt. Urias Rhodes, formerly of Sea Fox and Lasca.

On May 3 the steam yacht Endion, designed and built by C. L. Seabury & Co. for Com. Jesse H. Metcalf, Rhode Island Y. C., was launched at the works, Morris Heights, New York. She is 103ft. over all, 85ft. l.w.l., 14ft. beam, and 5ft. draft, with engines 7, 11 and 17½ by 10, and a Seabury boiler.

Daphne, cutter, Com. C. T. Wills, has been sold to George W. Copeland.

The Royal Canadian Y. C. has elected the following officers: Com., Æmilius Jarvice; Vice-Com., J. H. Plummer; Rear Com., G. H. Gooderham; Hon. Sec'y, F. J. Ricardo-Seaver; Executive Committee, C. E. Archbald, C. A. B. Brown, F. J. Campbell, F. O. Cayley, G. R. Hargraff, G. T. McMurrich, A. G. Peuchen, H. E. Ridley, James E. Robertson, Robert Watson. The club is in a prosperous financial condition, with a membership of 503.

Messrs. Reed Bros., of Fall River, have on the stocks a cruising yawl designed by H. J. Gielow for a New York owner, a similar boat to the well-known Fidelio and Pawnee. She is 46ft. over all, 30ft. l.w.l., 12ft. 9in. beam, and 5ft. draft, without board. Under the usual trunk cabin she will have a good cabin and stateroom, toilet room, etc.

The Spalding St. Lawrence Boat Co. has now under construction at its shop in Ogdensburgh several racing 20-footers. Two of these are for the local class on the St. Lawrence River, one for Mr. Charles M. Englis, of New York, and one for Mr. Henry Wilbur, of South Bethlehem, Pa. Mr. Henry Lane Eno, of New York, has ordered a 20-footer for the Seawanhaka races, from a design by Mr. C. H. Crane. There are in the shops several launches for the Alco-Vapor motor, one for J. C. Scott, of Oyster Bay, a 30ft. boat, and one of 33ft., of the hunting launch type, for James L. Swan, of New York. The company has a new design for a racing catboat of 16ft. l.w.l., from which it is building for Messrs. Archibald Rogers, Anson Phelps Stokes and J. R. Roosevelt, the boats to be raced on Lake Regis.

The Quebec Y. C. elected the following officers on April 30: Com., H. H. Sharples; Vice-Com., George C. Scott; Capt., M. Raymond; Sec'y, F. O'Farrell; Treas., W. A. Home; Managing Committee, T. T. Hetherington, A. Drolet, J. A. Shehyn; Sailing Committee, J. Piddington, H. G. Legendre, O. B. C. Richardson, J. S. Thom, D. Arcand; Room Committee, John Shaw, A. E. Scott, James Gingras; Auditors, Joseph U. Laird, H. S. Morgan.

At the annual meeting of the Kingston Y. C. on May 2 the following officers were elected: Com., Harry W. Richardson; Vice-Com., D. Allan Black; Rear-Com., W. Bruce Carruthers; Sec'y, J. H. Macnee; Treas., W. C. Kent; Executive Committee, J. A. Minnes, Frank Strange, R. Easton Burns, G. H. Smythe and J. E. Cunningham. It was decided to invite the Lake Yacht Racing Association to hold a rendezvous regatta at Kingston this season instead of a circuit of races, and to offer the association \$400 toward the prize money necessary for such a regatta.

The Queen City Y. C. has announced the following fixtures: May 21, cruising race; June 4, 22ft. class, Dodd cup; June 11, 19ft. and 16ft. classes, World cup; June 18, 22ft. class; July 2, 27ft. class; July 9, 19ft. class; July 16, 16ft. class; July 30, 27ft. class; Aug. 6, 16ft. class; Aug. 13, 19ft. class; Aug. 27, 27ft. class; Sept. 17, 22ft. class.

Atlanta, schr., of Boston, has been sold to E. H. Dickinson, of New York, through Kiley's Agency. She is 65ft. 4in. over all, 53ft. 2in. l.w.l., 17ft. 3in. beam, and 7ft. 6in. draft.

The first of the 21ft. raceabouts is afloat and ready for business. She is the Jilt, built by the Herreshoffs for W. O. Gay, and she is now at her owner's moorings at Cohasset, having been sailed around the Cape by Mr. Gay, assisted by his man. The trip was not exactly a pleasure trip, and yet it was not devoid of pleasant features, and was made in very good time, considering the weather. The little yacht left the Herreshoff Works at Bristol at 5 o'clock a week ago Saturday afternoon, and reached Lawley's yard in this city at 2 o'clock the following Monday afternoon. Much of the time was spent in beating up the back of the Cape against a strong northerly wind, but this with its hard work was compensated for later by the fine run across the bay from Race Point. The run of Saturday afternoon and evening was a fine one, but midnight in Vineyard Sound brought a heavy squall, which necessitated three reefs, and made wet sailing at that. The sail over the shoals Sunday morning was a beautiful one, but the beat up the Cape later was a long, tedious and tiresome one. Monday morning at 5 o'clock the Jilt was off Race Point, and from there it was plain sailing. The wind was moderate to light, but allowed of sheets being eased, so that the yacht came along very fast, reaching Lawley's at 2 P. M. There she was cleaned and put in shape, and was then sailed to Cohasset. She will be in Marblehead waters to-day, weather permitting, looking for trouble. Jilt is quite a different boat from her owner's last year's Fly, from Herreshoff's hands, being about 30 instead of nearly 34ft. over all, and having 5 instead of 6ft. draft. With her 600ft. of sail, instead of the 500 allowed under last year's rule, she is, of course, not so stiff, but will undoubtedly be much faster in average racing weather. Speaking of his boat, Mr. Gay said: "Of her actual speed I cannot judge, since we have sailed against nothing of our size, but she is a vastly different boat from Fly. All I can say of her now is that she is splendidly balanced, easily handled, and apparently powerful enough for our racing weather in Massachusetts Bay. I am perfectly satisfied with her behavior thus far, and am anxious for some racing. The class ought to give some good sport this season."—*Boston Globe*.

On May 3 the British steam yacht Lady Clemell, Mr. Wilkin, while lying in the harbor of Malaga, was attacked by a mob and forced to leave in a hurry, after her skylights were smashed by stones thrown from the dock. She put in to Gibraltar.

CANOEING NEWS NOTES.

The Yachting World of April 29 has an excellent portrait of Mr. Wm. Willard Howard, and a supplemental plate of his canoe Yankee.

The Brooklyn C. C. has arranged the following fixtures for 1898: May 12, June 11, June 25, July 16, July 30, Sept. 10, Sept. 24, club races, Bay Ridge; May 30, cruise on Delaware River.

The New York C. C. house, Harway avenue, Bath Beach, is now open for the season after being thoroughly refitted. The house offers every facility for members, rooms and meals being provided at a moderate charge. There is good bathing, the location on Gravesend Bay, with anchorage and boat houses, faces the best sailing waters about New York, and the Long Island roads are easily accessible for wheeling. The club's new one-design fleet promises some good racing and sailing this season. The opening regatta will take place on June 4 and the annual on Sept. 10.

Rifle Range and Gallery.

Cincinnati Rifle Association.

CINCINNATI, O., May 1.—The following scores were made by members of the Cincinnati Rifle Association in their last regular match. Conditions: 200yds., off-hand, at the German ring target. Nestler wins the Dietrich medal to-day. Trounstone wins the Uckotter trophy this shoot. Roberts was declared king to-day. A strong, gusty wind prevailed, making it difficult to make good scores:

King target:

Louisville Revolver Club.

LOUISVILLE, Ky.—On Tuesday evening, May 2, at the Armory, three members of the revolver club stood on the firing points and shot at the targets. The attendance was very large and the crowd enjoyed the contests. The contest was close between Messrs. Dye and Gilbert in the 10 and 15yds. distances. Another member of the club and an excellent shot, Capt. Fred De Funiac, of Battery A, 1st Regiment, will be missed when he leaves this week for the seat of war. At the next meeting a team of six men, which is to shoot against a similar team of the Brooklyn Club, for a challenge cup, offered by the Peters Cartridge Co., of Cincinnati, on the 24th of this month, will be selected from among the best shots left in the club, as the war has taken several of our crack local shots. Enough remain to give a good account of themselves against the crack club of the East in the coming match.

Below we give scores in full of the various events:

Event No. 1, 10yds., 2in. bullseye counts 10:

E B Dye	10	10	10	10	10	10	9	9	8	96
H S Gilbert	7	10	10	10	10	9	10	10	10	95
W C Magruder	5	8	9	7	3	4	7	4	9	66

Event No. 2, 15yds., 4in. bullseye counts 10, 20 seconds for 5 shots:

W C Magruder	5	10	8	10	7	10	10	8	7	6	81	Seconds.
E B Dye	8	8	8	6	6	10	9	8	6	4	73	31
H S Gilbert	10	9	7	6	1	10	10	9	8	1	71	31

Event No. 3, 20yds., 2in. bullseye counts 10:

H S Gilbert	6	10	10	9	6	7	7	9	7	10	81
E B Dye	9	8	6	5	6	7	7	10	10	10	78
W C Magruder	1	1	3	8	7	1	1	1	6	9	38

E. B. D.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

Fixtures.

May 25.—Louisville, Ky.—Tournament of the Kentucky Shot-gun Club; three days; two at targets, one at pigeons.

May 16-21.—Kansas City, Mo.—Annual tournament Missouri State Fish and Game Protective Association. G. M. Walden, Pres., Kansas City.

May 17.—New Haven, Conn.—First tournament of Connecticut State League, on New Haven Gun Club grounds.

May 17-19.—Macon, Miss.—Tenth annual shooting tournament of the Noxubee Gun Club. C. M. Scales, Manager.

May 18-19.—Crawfordsville, Ind.—Tournament of the Crawfordsville Gun Club. C. E. Lacy, Sec'y.

May 20-22.—Butte, Mont.—Montana State Sportsmen's Association's tournament, on grounds of Butte Gun Club. Birds and targets; \$500 added money. C. M. Smith, Sec'y.

May 24-27.—Omaha, Neb.—Twenty-second annual tournament of the Nebraska State Sportsmen's Association. F. S. Parmelee, Sec'y.

May 25-27.—Owego, N. Y.—Owego Gun Club's tournament. Two days at targets, third day at live birds. Frank B. Tracy, Sec'y.

May 30.—Canajoharie, N. Y.—Decoration Day shoot of the Canajoharie Gun Club. Targets. Charles Weeks, Sec'y.

May 30.—Newburgh, N. Y.—Glenmore Rod and Gun Club's holiday shoot.

May 31-June 2.—Circleville, O.—Pickaway Rod and Gun Club's tournament. G. R. Haswell, Sec'y.

June 1-2.—Peekskill, N. Y.—Trophy shoot, Hudson River Trap-Shooters' League, on the grounds of Peekskill Gun Club. J. B. Rogers, Manager.

June 1-3.—Springfield, O.—Open-to-all tournament of Ohio Trap-Shooters' League.

June 2-3.—Alton, Ill.—Second annual bluecock tournament of Piasa Gun Club. F. C. Riehl, Sec'y.

June 7-8.—Ottawa, Kans.—Annual tournament of the Kansas State Sportsmen's Association. W. L. Beardsley, Sec'y-Treas.

June 7-8.—Indianapolis, Ind.—Annual tournament of the Indiana Trap-Shooters' League, of Indiana, on the grounds of the Limited Gun Club.

June 7-11.—Peoria, Ill.—Annual tournament and convention of Illinois State Sportsmen's Association.

June 8-9.—Findlay, O.—Annual tournament of the Magautrap Gun Club. O. B. Marvin, Sec'y.

June 8-10.—Parkersburg, W. Va.—Second annual tournament of the West Virginia State Sportsmen's Association. Address all communications to Ed O. Bower, Sec'y, Sistersville, W. Va.

June 14-15.—Stillwater, Minn.—Tournament of the Stillwater Gun Club.

June 14-15.—Grafton, N. D.—Tournament and meeting of North Dakota S. S. Association.

June 15-16.—Portsmouth, Va.—Tournament of the Interstate Association, under the auspices of the Portsmouth Gun Club. W. N. White, Sec'y.

June 15-17.—Cleveland, O.—Fifth annual tournament of the Cleveland Target Co. Bluecocks thrown free of charge. Professionals and manufacturers' agents barred from programme events.

June 20-24.—Rochester, N. Y.—Annual tournament of the New York State Association, under the auspices of the Rochester Rod and Gun Club. Live birds and targets.

June 21-23.—Sioux City, Ia.—Fourth annual amateur tournament of the Soo Gun Club. Three sets of traps. W. F. Duncan, Treas.

June 21-23.—Sioux City, Ia.—Soo Gun Club's tournament. E. R. Chapman, Sec'y.

June 23.—Minneapolis, Minn.—Tournament of the Minneapolis Gun Club. G. J. McGraw, Sec'y.

June 25.—Long Branch, N. J.—Opening shoot of Hollywood grounds. Live-bird shooting every Saturday.

June 27-July 3.—Milwaukee, Wis.—Tournament of Milwaukee Gun Club, carnival week. Live birds and targets. \$1,000 added money.

July 1.—Sherbrooke, Canada.—Grand annual tournament. Targets. Regular sweeps, variety and merchandise. C. H. Foss, Sec'y.

July 6-7.—Meadville, Pa.—Tournament of the Interstate Association, under the auspices of the Meadville Gun Club. Chas. Stein, Sec'y.

July 7-9.—Denver, Colo.—First annual tournament of the Overland Association. Open to all. Inanimate targets. Added money. John W. Kane, Manager.

July 14-15.—Poughkeepsie, N. Y.—Trophy shoot, Hudson River Trap-Shooters' League, on the grounds of the Poughkeepsie Gun Club. J. B. Rogers, Manager.

July 14-15.—Bedford, Ind.—Tournament of Bedford Rod and Gun Club.

July 19-21.—Palmyra, Mo.—Eight annual tournament of the Missouri Amateur Shooting Association, under the management of the Palmyra Gun Club. Targets and live birds. Added money announced later. W. N. Bates, Sec'y.

July 26-28.—Little Rock, Ark.—Eighth annual tournament of the Arkansas State Sportsmen's Association. Paul R. Litzke, Sec'y.

July 27-28.—Meriden, Conn.—Tournament of the Interstate Association, under the auspices of the Parker Gun Club. C. S. Howard, Sec'y.

Aug. 10-11.—Marlborough, N. Y.—Trophy shoot, Hudson River Trap-Shooters' League, on grounds of Marlborough Gun Club. J. B. Rogers, Manager.

Aug. 17-18.—Waterville, Me.—Tournament of the Interstate Association, under the auspices of the Waterville Gun Club. E. T. Wyman, Sec'y.

Aug. 17-18.—Warsaw, Ind.—Lake City Gun Club's tournament. J. S. Campfield, Sec'y.

Sept. 7-8.—Kingston, N. Y.—Tournament of Hudson River League, on grounds of Kingston Gun Club.

Sept. 7-8.—Haverhill, Mass.—Tournament of the Interstate Association, under the auspices of the Haverhill Gun Club. Geo. F. Stevens, Sec'y.

Oct. 4-6.—Newburgh, N. Y.—West Newburgh Gun and Rifle Association's fall tournament.

Oct. 12-13.—Greensburgh, Ind.—Greensburgh Gun Club's tournament. W. Woodfill, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

Under date of May 6, Mr. Louis W. Schortemeier, of New York, writes us as follows: "On Decoration Day, Monday, May 30, a 20 or 25-live-bird handicap will be shot on the grounds of the East Side Gun Club, of Newark, N. J. The Plank Road, Newark & New York Trolley Line stopping at Foundry and Ferry streets, Newark, is the way to get there. The grounds are about half a dozen blocks from the Plank road. Entrance \$10, birds extra, four moneys, Rose system, 8, 5, 3 and 2 points, four misses out, with privilege of re-entering in case a chance can be had for the money. Handicaps to be made by the East Side Gun Club. Those who do not care for the Rose system of division will please stay away, as the club always shoots the Rose system in both live-bird and target events. The shoot begins at 10 A. M.; entries allowed in to the end of the second round. Birds 50 cents per pair. The last open live-bird contest, a 15-bird race, was held on March 2, this year, in which twenty-five men participated, all standing at 28yds. These men, if attending, will be handicapped as follows: W. F. Quimby and Dr. Hudson at 29yds. These two were winners of first money in the event on March 2. The winners of second money, Messrs. Geoffrey and Hassenger, will shoot at 28yds.; Sam Castle, Perry, Otten, Piercey, Schrafft, W. S. Canon, Sinnock, Lueddelke, Steffens, Baar, Astfalk, Harrison, Schortemeier, Henry K., Bender, Fischer and Leuthauser will shoot at 28yds. The latter six were shot out in the last contest. Feigen-span at 28yds.; Reibold, Hilfers, Perment, Weigert and Wagner at 27yds.; F. Van Dyke at 30yds., and Jack Brewer at 32yds.; A. Woodruff at 30yds."

The Worcester Gun Club, of Worcester, Mass., offers a most valuable list of prizes to its members to be competed for this season. The summer series will have four distinct events each week, handicaps, open to all members. The first is the Worcester county championship, the competition for which began last Saturday and ends Aug. 27. The prize is a handsome gold badge, made especially for the Worcester Gun Club, and will be the absolute property of the person winning it the most times. The targets will be five pairs, from the magautrap. There is no handicap and no entrance fee. There is a merchandise series, May 7 to July 11. There are two events of which guns are the prizes, one of which is a \$100 grade hammerless Parker, to be made to the order of the winner, to be competed for each week till Sept. 1. In this event each person shoots at the whole number of targets, and to the number which he breaks will be added such a percentage of the number shot at as will bring his rating up to 100 per cent. The 80 per cent. men will have 20 per cent. added to their scores, the 70 per cent. men 30 per cent., the 60 per cent. men 40 per cent., and so on. No ties will be shot off, but each high score will count a point toward winning at the end. The entrance fee each week is 25 cents. No handicap will be changed for any shooter after he has begun the series. Before he begins he may, if he is dissatisfied, protest and choose one member from the club, the officers will choose another, and these three shall choose a third, the three thus elected to determine his rating.

Messrs. W. F. Parker and J. R. Hull, representatives of the Parker Bros., gathered to themselves at Newburgh last week the two high general averages, the former breaking 274 out of 300 targets shot at, a .913 per cent. gait, the latter breaking 265 out of 300, .883 per cent. gait, both well up to the highest class of performance. Mr. Parker left on the evening of the second day. Mr. Hull remained over and participated in the live-bird shooting. Considering that it was his first effort at the traps, he made a most commendable competition, missing only three of the 25 birds he shot at, and losing 5 more dead out of bounds, thus scoring 17 out of his 25. He hit his birds very accurately, but allowed them several times to get well awing, thereby giving them a great advantage and making hard shooting for himself. However, a little practice will correct slowness, and no doubt he will be scoring up in the 90s on pigeons with the same certainty with which he now breaks targets.

Four clubs participated in the race of the Intercollegiate Shooting Association at New Haven, May 7, on the grounds of the New Haven Gun Club. Harvard won by a score of 131 out of a possible 150. Paul, of Pennsylvania, broke 28 out of 30, thereby winning the cup offered for the best individual score. Cornell was not represented in the contest. The scores were as follows, each shooting at 30 targets: Harvard—Campbell 27, Bancroft 26, Wallingrodt 26, Blake 27, Dana 27; total 131. Yale—Loomis 25, Knowlton 24, Bennett 22, Van Name 20, Spears 17; total 108. Princeton—Young 23, Laughlin 23, James 20, Chidester 20, Findlay 12; total 98. Pennsylvania—Paul 28, Steel 20, Singer 20, Nielsen 18, Kistler 10; total 96.

Mr. John L. Chartrand, secretary H. R. G. C., writes us that on Thursday of this week a match between H. M. Hefflich and G. Asbach, of the North Hudson Gun Club, on the one side, and J. H. Outwater and Capt. Frank Jack, of the Hackensack River Gun Club, on the other, at 10 birds, 30yds. rise, will take place, and that the match is for \$50 a side. A. S. A. rules to govern. Mr. Hefflich, in his communication, under the head of North Hudson Rod and Gun Club, informs us that the match is for \$25 a side, so that it would appear to be the correct procedure to settle which is correct before the match is shot. Also, same conditions, L. F. Kiebler and H. W. Kramer shoot against John L. Chartrand and Wm. Hexamer.

In his correspondence this week Mr. Paul R. Litzke mentions some excellent shooting at Memphis for the club medal, Messrs. J. P. Edrington and S. P. Walker tying on 25 straight kills each, Edrington winning in the shoot-off, this being his second win. A. H. Frank also has two wins, and a third win makes the medal personal property. Edrington shot at 62 during the day and killed all, some at 35yds.

Mr. Charles Macalester, of Baltimore, has been adding to his great fame as an expert wing shot by his performance at the spring shoot of the Philadelphia Gun Club at Eddington, Pa., April 19 and 20. The deadliness of his single barrel kills was specially noticeable. In the 25-bird event of the first day, standing at 30yds., he killed straight, using one barrel eleven times. Shooting in the different events, he made a run of 55 kills on the first day. In the sweepstakes his general performance was 69 killed out of 71 shot at. On the second day he killed 68 out of 74. He used 52grs. of Schultze in trap shells.

Mr. Ed Taylor, inspector of Laffin & Rand Powder Co., is not a familiar figure at the traps since our earnest debate began with Spain. His company is starting all its works to their full capacity, and Mr. Taylor's time is fully occupied in consequence. At present the works at Newburgh are engaging his attention. I had the pleasure of meeting Mr. C. B. Walker, whose specialty is the making of powders, and who is one of the company's experts. The intricate problems of pressures, velocities and powder compositions were as A, B, C to him, though so difficult to others.

On May 7 the Penn Gun Club, of Norristown, Pa., and the Shuler Shooting Club, of Pottstown, Pa., shot a team race at 25 targets, 12 men on a side. The Penn Club won by a score of 184 to 156. The men and scores were as follows: Penn Club—Yost 17, Cassel 15, Penn 19, Hagenbotham 20, Dotterer 12, Franklin 11, Gleason 17, Homan 12, Derr 12, Gross 12, Ritter 15, Smith 20. Shuler Club—Saylor 18, Davis 15, Wickersham 21, Slonaker 12, Seidel 13, Grubb 18, Dewitt 9, Williams 9, Showalter 13, Cole 10, Urner 11, Trego 5.

Mr. Gus Greiff, manager of the Troisdorf Powder Co., starts on a long Western trip this week in the interests of his company. He will take a swing through the Northwest, stopping short of the Pacific coast, thence returning through the Southwest and South. Mr. Greiff has been out of shooting form of late, something which is peculiar more or less to nearly all shooters, but it is only a matter of time till good form returns. When in good form he rates well up with the best.

Mr. E. D. Fulford, of Utica, the well-known expert of the Remington Co., gives valuable advice on the cure of flinching. He says: "In answer to your note in FOREST AND STREAM on flinching, will say I have given the matter a great deal of study. Flinching has ruined many a good score when I pointed right. I find a long, soft drag pull of 1/4 in. is the best thing I have tried. I never flinch now, for the reason it warns me, and I can let my gun off to a fractional part of an inch when I want it."

Mr. T. S. Dando, of the Riverton Gun Club, captured the Philadelphia Gun Club's annual championship, the conditions being 50 live birds, \$50 entrance, 30yds. rise, the competition being open to members of the Carteret, Larchmont, Westminister, Tuxedo, Country Club of Westchester, Riverton and Philadelphia gun clubs. He won by the excellent score of 48 out of 50, using 48grs. of Schultze in trap and Leader shells. Dolan and Welch were second with 47 each, Macalester third with 46.

Mr. A. C. Paterson still retains possession of the Chicago challenge trophy, he defeating Cunyngham by a score of 21 to 12 at Watson's Park, Chicago, on May 6, in a contest for it. They had tied on a score of 20 to 20 on April 29. If Patti continues as he began, the challengers for this trophy have a long road ahead. Mr. Cunyngham fell far below his class capabilities. In a practice shoot on May 4 he killed 18 out of 25.

We regret that J. J. Hallowell, of the U. M. C. Co., has been suffering from a severe attack of fever and chills, which set in before the Peru tournament. In Western Traps Mr. Paterson mentions that Mr. Hallowell has been laid up in Chicago for several days from the effects of the malarial trouble. It is hard to down a good man, however, and U. M. C. Hallowell will smash the chills in a long race as he smashes targets when in good form.

In the return match between the Riverton Gun Club, of Philadelphia, and the Herron Hill Gun Club, of Pittsburg, shot at Davis Island, Pittsburg, last Saturday, the Riverton Club won by 12 birds, four more than the number they won by in their match two weeks previous. The Pittsburg Club banqueted the victors.

An adjourned meeting of the newly formed San Joaquin Valley Gun Club Association will be held on May 15, to complete the matter of organization. A number of delegates met in Fresno, Cal., after the Fresno Gun Club's annual tournament, and Mr. A. T. Hyde, of Merced, was elected president, and E. Downing, of Visalia, was elected Secretary and Treasurer.

John Wright, manager of the Brooklyn Gun Club, announces that the cup shoot of the club will take place Saturday of this week, with other events. After the regular events are finished there will be some sweepstakes in events at one-cent targets, or one can shoot for targets only, as he pleases.

The Lyndhurst Shooting Association, Lyndhurst, N. J., will hold a live-bird handicap on Tuesday, May 17, commencing at 1 o'clock. Entrance \$10, birds extra. Grounds can be reached in thirty minutes from New York by the Erie Railroad to Rutherford, N. J., or D., L. & W. to Lyndhurst.

The return match between the Bound Brook Gun Club and the Dunellen Gun Club will be shot at Dunellen, N. J., on May 21, at 2:30 P. M. In their match at Bound Brook last Saturday the latter club won by a score of 144 to 139.

The first annual tournament of the Overland Association, open to all, class shooting, will be held at Denver, Colo., on July 5, 6 and 7. There will be added money. John W. Kane, Manager, 1457 Arapahoe street, Denver, Colo.

Mr. W. T. Hambright, of Lancaster, Pa., writes us that the leading sportsmen of that city and its county contemplate a grand prize shoot to be held in the second week of May; that is, this week.

Mr. Harvey McMurchy, the popular representative of the Hunter Arms Co., is smashing targets with his habitual ease between times on the Pacific coast.

M. R. Merrill, of Milwaukee, in a practice shoot at Watson's Park on May 4, killed 94 birds out of 100, a regular high-grade expert gait.

A very close match was that between Elliott and Heikes for the Star cup—Elliott 94, Heikes 93.

BERNARD WATERS.

Worcester Gun Club.

WORCESTER, Mass., May 7.—The scores made to-day by members of the Worcester Gun Club are as follows. No. 1 was for the Worcester county championship badge, 5 pairs. No. 2 was the Forehand Arms Co. gun race. No. 3 was the merchandise prize race. No. 5 was for the Parker \$100 hammerless. All the targets were thrown from the magautrap.

Boston Gun Club.

FOURTEEN shooters successfully negotiated the second prize shoot of the Boston Gun Club at Wellington Wednesday, May 4. The afternoon was leisurely occupied with about 100 shots apiece, fully dilated upon below, Williams, the slowest shooter on the grounds, but armed with a cannon to even up discrepancies, taking the first place in prize match with 28.

The regular afternoon programme was extended at 5 o'clock, owing to the appearance of some Harvard College shooters and their friends eager for practice in anticipation of the intercollegiate event Saturday, May 7, at New Haven, Conn. The traps consequently suffered no lack of patronage between the hours of 2 and 6. A team match for practice solely was improvised between Harvard and a picked team, composed partly of some ex-members of the Harvard Shooting Club. The erratic wind and dubious light interfered with particularly fine scoring on the part of either team, but the Harvards emerged with 20 to the good. Events as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11
Targets:	10	10	10	30	10	10	10	10	10	10	10

BOSTON.

Hudson River 'Trap-Shooters' League.

The second shoot of the series, given under the auspices of the Hudson River Trap-Shooters' League, was held on the grounds of the West Newburgh Gun and Rifle Association, May 4, 5 and 6, Newburgh, N. Y. There was a good attendance, and a gratifying success so far as financial results are concerned. Next season it is expected that in view of the benefits accruing from organized effort, many more of the clubs within the territory cultivated by the League will join the membership.

The events of the first day numbered ten, at 10, 15 and 20 targets, at a uniform entry of \$1, with price of targets added, which at 2 cents made \$3 for the 150 targets thrown, and \$10 entrance, a total of \$13 for the first and second days respectively, or \$26 all told. Those who preferred could shoot for targets only. To the shooters making the best averages in the regular events during the two days, \$50 was divided into six parts, \$11, \$10, \$9, \$8, \$7 and \$5. Ten per cent. of the entrance was set apart for this money. Manufacturers' agents and non-members of the League were barred from the regular purses, but not from the general averages. The purses were divided according to the Rose system.

WEDNESDAY, FIRST DAY.

The weather was cloudy, with a murky atmosphere and a dull light, yet not unfavorable for good work with the gun. The sky background brought out the targets distinctly, and the general conditions were favorable for good scores. Twenty-eight shooters participated in the competition. Seven extra events, Nos. 11, 12, 13, 14, 15, 16 and 17, were also shot. The scores were as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17
Targets:	10	15	20	15	10	20	15	10	20	15	10	15	10	15	10	10	*

* Five pairs.

THURSDAY, SECOND DAY.

The weather was unfavorable. It thickened up till about noon, when a light rain set in, which about 3 o'clock increased to a steady fall, which continued till after the day's shooting was over. The team race did not fill up to expectations, no doubt the bad weather being the cause of the light entry. The scores were:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	10	15	20	15	10	20	15	10	20	15
Parker	10	14	19	14	10	15	12	12	8	17

AVERAGES.

The averages of the six who shot through the entire programme of the two days, and the order in which they won are given in the subjoined table:

Shot	at.	Broke.	Av.	Shot	at.	Broke.	Av.
Parker	300	274	.913	Tallman	300	255	.850
Hull	300	265	.883	Swiveller	300	238	.793
Stansbrough	300	257	.856	Lewis	300	173	.576

FRIDAY, THIRD DAY.

The third day was devoted to live-bird shooting. It opened with a practice event at 3 birds, in which five of the shooters took part. In it Mr. Hull made his first attempt at live-bird shooting, yet he graced his 3 prettily.

No. 2, the 21st event of the programme, was the first of the day's regular events. It was at 5 birds, \$5. No. 3 was at 7 birds, \$7.50. No. 4 was at 10 birds, \$10. This was a total of \$22.50 for the three events. However, several of the shooters shot

Peru Tournament.

PERU, Ind., May 1.—History sometimes repeats, and in the instance of the second annual amateur tournament of the Peru Gun Club she proved a pretty good "repeater." When we announced to the sportsmen of Indiana and surrounding States that we were going to repeat our first annual, given in April, 1897, we had that confidence born of success that we would not disappoint them when we promised a large attendance. We were not disappointed, except that some of the old reliable shooters of the State, who never miss a tournament and whom we had every reason to expect, did not put in an appearance. We know that it must have indeed been important business that kept them away. A glance at the names as shown below will demonstrate that they missed a good thing, and we assure them that we would have indeed been glad to have them participate. There were present Messrs. Thomas Graham, of Sault Ste. Marie, Mich., and Mr. A. M. Barnhardt, of Hastings, Neb., both of whom had taken part in the St. Louis tournament the preceding week; Geo. Elliott, of Rochester, Ind.; Mr. Benson, of Kokomo, and Chas. E. Lacey, member of the executive committee Indiana Trap-Shooters' League; Max Stilwell, business partner of Ed Voris, now in Europe, both of Crawfordsville; Geo. Kolb, of Goshen; S. R. Valentine, Monroeville, O.; Paul North, of the Cleveland Target Company; Mr. John Parker, of Detroit, Mich., the popular and able representative of the Peters Cartridge and King Powder companies; Messrs. Streeter, Sheperdson and Vedder, of La Grange, Ind.; Mr. J. W. Hulbert, of Shipshewana; Ralph Trimble, of Cincinnati; Dr. O. F. Britton, of Indianapolis; Messrs. Bruner, Cumberland, Elmer, Edgar Apperson and D. S. Wallace, of Kokomo; Messrs. Burnison, Lovill, Smith and Tarlton, of Huntington; Gillespie (Guess), of Findlay, O.; F. H. Snow, Brooklyn, O.; Frank D. Alkire, Woodlawn, O.; A. W. King, Will Thompson, Dan Morgan, O. M. Wright and Chas. Rose, of Wabash, Ind.; Redmon, of Marion; Chas. Lockwood, W. M. Gentle and A. Grube, of Southport, Ind.; Milt Forbes, E. C. and W. B. Cooley, and Harry Heiney, of Hartford City, Ind.; L. C. Griffith, E. H. Tripp, Geo. Beck (commonly called Pa by Indiana Trap-Shooters), and Thomas E. Parry, of the Limited Gun Club, Indianapolis; John A. Ruble, of Chicago; J. R. Graham, of Fox Lake, Ill.; E. E. Neal, of Bloomfield, Ind.; Perry Garland, Marshall, Ind.; Joe Blistain, Lafayette, Ind.; W. Zink, Monticello, Ind.; E. R. Keirstetter, of Elkhart, Ind.; and Dr. R. B. Short and C. H. Terry, of Union Mills, Ind. There were several other visiting sportsmen who came to see the crowd, but whose names were not obtained. The weather was ideal, the shooters abundant, and the first day's scores as follows:

WEDNESDAY, FIRST DAY.

THURSDAY, SECOND DAY.

Thursday morning, April 23, was another beautiful morning, but a little dampness pervaded the air, foreboding rain. The crowd had, however, decreased quite a little, the less expert shooters feeling that one day against the best amateurs the Middle West can produce was enough. Manager Parker decided to keep the magautrap and the extra set of traps as well going in order to finish the programme as soon as possible. There were still something like thirty shooters on the ground, and as they were among the best, good scores were the order of the day, as will be shown by the following, there being one or two extras shot, but the scores were not preserved:

Events:	1	2	3	4	5	6	7	8	9	10	11	12

* Shot for targets only.

NOTES.

The tournament was under the able management of Mr. John

Parker, the efficient representative of the Peters Cartridge and King Powder companies. Jack demonstrated more than ever that he stands without a peer as a tournament manager, and he put in some good work for his companies.

Peru Gun Club feels greatly under obligations to Mr. Paul North too for his valuable assistance, as when Paul found that two of the club's active members, upon whom they had most depended to help Mr. Parker, were compelled to be absent, he threw off his coat and gave evidence of what he will do at their big tournament in June. Paul was happy too; the magautrap simply captured the crowd by its splendid work.

The general averages were won: First, F. D. Alkire, .9306; Second, F. H. Snow, .9107; third, John A. Ruble, .9102, and fourth, S. R. Valentine (Vail), .8908. These were hard pressed by Messrs. T. J. Graham, .8907; Grube, .8906; Apperson, .8903; Tripp, .8903; Garland, .8609; Partington, .8601; Beck, .8508; Neal, .8508; and several others who were above the 85 per cent. mark.

The winning of first average by Frank Alkire was a popular win. Does anybody know of a nicer gentleman than he? quiet, gentlemanly, nothing to say, except a pleasant word for everyone, and when he is losing (as he did several times during last season) he was the same Frank Alkire, and shot right along. May he win many another.

Ohio was again well represented by such crack amateurs as Alkire, Snow, Valentine, and Gillespie (Guess), to say nothing of Messrs. Paul North and Ralph Trimble, right-hand man to R. S. Waddell, the general agent of the Du Pont and Hazard powder companies at Cincinnati. Ralph did not even have his gun. He was barred from the events, but put in his time looking after his firm's interests.

Our club was unfortunate in one respect: Two of our shooters who were expected to shoot out the programme were called away on the evening before the beginning of the tournament upon business that could not be postponed. We have one member, however, that is certainly a hot number. Mr. John H. Cavanaugh again shot through the programme from start to finish, and had a lot of sport. He shot well too for a man who shoots at the traps about once a year, and that at the annual tournaments of his club. Cost him something? Certainly, a little; but, as Jack says: "Look at the fun." Mr. Cavanaugh is one of the Wabash Company's most efficient train dispatchers.

U. M. C., Jr., Hallowell slipped in to town afflicted with malaria. But as the old woman who lived in Michigan about 100yds. from the Indiana line said, "Look out for Indiana; them chills and fever is certainly awful, and I wouldn't live in that State for the world." Jack was better the second day, and was there to see U. M. C. shells carry off the two high averages. Guess he was satisfied.

T. J. Graham, of the Soo, was there or thereabouts when the average money was divided; .01 per cent. is a pretty close margin, but Tom was not shooting quite up to his gait. He is one of the best.

There is hardly a shooter in the country who has shown the wonderfully improved form of Elmer Apperson, of Kokomo, in the short space of twelve months. Elmer manufactures saw mills, horseless carriages and "straights," especially the latter. Note that 25 straight alone the first day. Paid something too—about \$22. He was a prominent candidate for first average at the close of the first day and up to the last three events the second. He did not finish in these three as he can and should.

Mr. A. M. Bernhardt, a very pleasant gentleman and clever shot, of Hastings, Neb., was a welcome visitor from a long distance. He is not one of the "old rounders," but was in search of health, pleasure and recreation. He struck the right place, and shows good judgment in his selection of a health-giving pastime.

Messrs. Burnison and Smith, of Huntington, are a couple of popular locomotive engineers upon the Erie. Mr. Burnison has been before the traps for years, and usually gives a good account of himself. Mr. Smith has only been shooting a short time, and this was perhaps the hottest crowd he has ever encountered. Mike showed his staying qualities by shooting in every event. He will show them all the way with a little more experience in such company. They were accompanied by Mr. Lovill, one of their conductors, who takes a great interest in the sport and usually shoots well on his home grounds, but business prevents the attending of many tournaments.

Messrs. Sheperdson, Streeter and Vedder, of La Grange, and Mr. Hulbert, of Shipshewana, are new shooters, but came down to mix up with the cracks. Hulbert and Sheperdson showed that they were "pretty warm" themselves. All of these gentlemen will be heard from in the future. Come again, gentlemen.

Messrs. Grube, Lockwood and Gentle, of the Southport Club, were in the thickest of the bombardment. Everyone was pleased to see Al Grube, the two-time State champion, again shooting in splendid form. Their club holds the next tournament sanctioned by the League. They deserve a splendid crowd on the 4th and 5th.

E. H. Tripp, of the Limited Gun Club, Indianapolis, was as usual shooting in good form, but not quite up to his average. This gentleman comes pretty near being Indiana's representative sportsman—shoots for pleasure, and has a world of it. He is well fixed with the wherewithal and allows his friends, who are numbered by the shooters he meets, to help him enjoy it. He is a member of the firm of Tripp Brothers, of Indianapolis and North Vernon, and is among our most prominent business men. Indiana sportsmen are proud of him.

Pa Beck was the youngest man in the crown. Pa lined out a straight occasionally just to show how he took the Grand Hotel cup away from his brother Tripp, and then defended it against several other aspiring shooters. Pa was a crackerjack before some of the present shooters could shoot a fire cracker. May he continue to be for years.

Dr. Partington Britton was again with us. His easy, graceful and effective style was again noticeable.

Mr. Thomas F. Parry, another of the Limited Club's very best shots, was with us to a finish. Mr. Parry is one of the superior gentlemen of the sport, and is a credit to it.

Young L. C. Griffith, the baby of the Limited Club, took time from his always pressing business to come up and shoot the programme through, and right well at that. He was a member of the squad that broke them all but one. He also scored straight in the only live-bird event which was not down on the programme. A golden plover came along on his way to Jack Cavanaugh's private snipe grounds about 100yds. from the club house. Griff stopped him, and the referee call "Dead, one!"

And speaking of that "hot squad," Messrs. Apperson, Snow, Garland, Ruble and Griffith were pretty warm in the fourth event the second day, scoring 74 out of 75. Who missed the bird? No one but old reliable John Ruble. Guess he now knows how Charlie Young felt at Cincinnati '95, and how Fred Gilbert felt at Cleveland last summer. When, oh when, will some squad break straight.

Mr. Elmer E. Neal, a recent acquisition to the shooters of the Indiana Trap-Shooters' League, was a welcome visitor. He came from Chicago, and brought along Messrs. Ruble and J. R. Graham. Ruble has been around the Indiana circuit before, but this was Graham's first visit. He was pleased and promises to come again. The Kokomo gentlemen are near neighbors and welcome visitors. They have a splendid club, which was well represented by Messrs. Bruner, L. W. Cumberland, the efficient secretary of the Trap-Shooters' League of Indiana; D. S. Wallace, S. Benson and the Apperson brothers.

Perry Garland, of Marshall, another stayer, was with us through the programme. Perry is one of our best shots, as shown by his scores throughout the country, and the latch string is always out. Come again, Perry.

Mr. W. Zink, of Monticello, Ind., is another new shooter who was with us the first day. He is certainly a comer.</

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY. }
SIX MONTHS, \$2. }

NEW YORK, SATURDAY, MAY 21, 1898.

VOL. L.—No. 21.
{ No. 346 BROADWAY, NEW YORK. }

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, \$4 per year, \$2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

THE DANGER TO FOREST RESERVES.

AN amendment to the Sundry Civil Service Bill passed in the Senate abolishes the thirteen forest reservations set aside by President Cleveland in February, 1897. With this amendment the House disagreed and it is now in conference committee.

The history of these reservations will be remembered by all readers of the FOREST AND STREAM. They were designated by the President on the recommendation of the Forest Commission nominated by the National Academy of Science at the request of the Secretary of the Interior, which commission was made up of the most competent and best qualified men in the country. After an extensive inquiry, which included a careful examination of a very large territory in the West, the Commission made its recommendations, which were followed out by the President in his proclamation. Although at first this proclamation greatly alarmed the public residing in the country adjacent to these reservations, the alarm ceased so soon as the recommendations of the Commission and the intentions of the Government were thoroughly understood, and the press of the entire country and a very large majority of the intelligent public are heartily in favor of the retention of these forests reserves, as originally established.

President Cleveland's action with regard to the forest reservations differed in no respect from that of Mr. Harrison. It was merely a continuing of the latter's policy and in each case the motive was the same—the good of the country at large. The setting aside of forest reservations by President Harrison at the suggestion of Secretary Noble was generally applauded, and a like satisfaction should have been felt that President Cleveland was a man broad enough to carry forward the policy of a political opponent.

The general opinion seems to be that the opposition to the reserves comes now chiefly from large corporations engaged in the lumber business, in mining and in railroad enterprises. These corporations are supposed to have influenced the Senate, and to be laboring with the members of the House to bring about the abolishment of the reservations. They are thought to believe that with the continuance of the reserves their supplies of free timber will be cut off, and they are therefore making the most of the original panic felt by the people in the West, a panic which has now entirely subsided.

We are not disposed to believe that this is the case. Large corporations are as a rule managed by intelligent, far-sighted men, who look beyond the immediate present. It is, of course, a very desirable thing to be able to secure free lumber, free timber for mines and free railroad ties, but the railroad men and the mine owners know that it is much more important to them than the price of timber or of ties that the water supply of the country should be kept up.

Persons in a position to express an intelligent opinion on the subject are inclined to believe that the cause for the abolition by the Senate of these forest reserves is purely political. The whole forest service is now in the hands of the General Land Office, and the Land Office is presided over by a politician, a man who is reputed honestly to believe that the United States will be better served by a Republican ignorant of everything connected with forestry than it could be by a Democrat who has been trained in that science. It is believed by many, therefore, that if the forestry service is established its force of employes will be made up entirely of Republican workers, and it will become a powerful Republican machine in the various States and Territories where it serves. Thus the Democrats, Populists and free silver men generally in the Senate object to the forestry service, and it is thought that this is the ground on which the Senate has ordered the repeal of President Cleveland's proclamation establishing the reserves. Whether

this explanation is or is not true, the fact remains that the continued existence of the reserves depends now on the temper of the House of Representatives, and especially on that of the three members of the Conference Committee. It is to be hoped that the members of the Conference Committee share the feeling of the House of Representatives, and that the public may depend on these members to have its rights protected.

Persons interested in the forest reserves cannot do better than to send to Washington for Mr. Gifford Pinchot's report on his examination of the reserves published in March last. It is the most complete paper that has been issued on the subject, taking up the reservations one by one, alphabetically, and describing them in detail as to the forests, the water, mining, agriculture, and the danger of fire on both slopes. In no way so well as by a study of this pamphlet can the value and the capabilities of these reserves be learned. This is but natural; when we recall the fact that Mr. Pinchot is easily the first among the few trained foresters in the United States, and by ability, enthusiasm and training is perhaps better fitted than any other in this country to report on this precise subject.

It must be remembered that these forest reservations are set aside not in order that the timber that they contain may not be cut, but in order that it may be cut and used, but cut wisely. For this is the foundation upon which modern forestry is based: that the forests are renewed and preserved by cutting them down. It will be an extraordinary thing if at the end of the century the United States, which claims to be the most advanced among nations, shall take a stand on questions of forestry similar to that held by France early in this century, or by Spain to-day.

SOME AUDUBONS AT AUCTION.

At an auction of household effects in this city last week several Audubon books were sold. The books were advertised as "The original and valuable edition of the Audubon Birds and Animals, with all the colored plates, comprising one large folio edition, two small folio editions, with eight volumes complete and full gilt." This description is of itself quite enough to stimulate the curiosity of any one familiar with the works of Audubon.

An inspection showed that the "one large folio edition" was the single elephant folio volume of the plates of birds, published by Roe Lockwood, New York, 1861, being the lithographic reproduction of the great work on copper, begun but never finished. This reproduction was set on foot here in America by Victor Gifford and John Woodhouse Audubon, sons of the naturalist. The lithographing work was done by Bien, of New York, and only one volume, containing about 140 plates, was ever issued. The text of the birds consisted of seven volumes, bound in six, published by Roe Lockwood, New York, 1861. In style and typography these resemble in a general way the ornithological biographies which go with the original work.

The Quadrupeds were represented by two large folio volumes of the plates, 1845, and by three large octavo volumes of the text, "published by J. J. Audubon," New York, 1856. The volumes were handsomely bound in old and somewhat worn leather, and full gilt. The title pages and one or two of the first plates of the folio volumes of the Quadrupeds have been injured by folding, and the binding of the elephant folio volume is in somewhat bad condition. The price paid for the lot was \$1,100, which was reached after sharp competition.

At least one of the New York papers—being under the impression that the works here advertised constituted an original edition of Audubon's "Birds of America"—speaks of these volumes as being extremely low-priced, and compared this sale with the last one, where \$3,800 was paid for a set. As a matter of fact, the price paid for that set was for a perfect copy of the original work, containing the four elephant folio volumes with 435 plates, and the five volumes of the text printed in Edinburgh, or possibly with the first volume printed in Philadelphia, as is the case in some sets. There is no comparison between the values of the books sold last week in New York and of a good copy of the original work, and while books so rare are of course worth whatever they will bring, book collectors will be of opinion that those just sold brought high prices rather than low.

SNAP SHOTS.

The Rochester Rod and Gun Club, under whose management the New York State shoot will be held in the latter part of June, sends us the draft of the new constitution, which will then be considered for adoption. As printed in our trap columns it proves to be substantially the old constitution of the New York State Association for the Protection of Fish and Game, so far as that instrument had relation to trap-shooting; and the name of the Association is to be retained. This is quite legitimate. The game protective element of the Association in convention at Syracuse last December abandoned the former title and substituted for it the new one of the New York State Fish, Game and Forest League. Those elements of membership in the Association which did not take part in the Syracuse convention are free to assume any title they select, either retaining the old or adopting a new one. They should be guided by a consideration of what may be for their interest and prosperity; and this in turn will depend upon what they propose to do in the future. If they are to labor chiefly for the protection of fish and game, the old title will correctly and intelligently define their organization and its purposes, and enlist for it the support of people concerned in such efforts. If, on the other hand, they are to be engaged exclusively or mainly in the promotion of trap-shooting tournaments, some other title, such for instance as New York Trap-Shooters' Association, whose signification would proclaim that purpose would be more appropriate and better fitted to popularize the sport and draw to it the support of the trap-shooters of the State. No mistaken sentiment should influence the choice. The adoption of a title should be governed wholly by a consideration of what will best advertise the character of the Association, will best make it known to trap-shooters, and most closely identify it with the sport. Whatever may have been the consideration which now nearly thirty years ago determined the title of a sportsmen's association, the time has long since passed by when we should choose any other than the most specific and clearly definitive titles for our various organizations. Trap-shooting holds such a place in the development of the shooting activities of the day that its importance and popularity amply sustain the dignity of an organization named and known as a trap-shooting association.

Mr. J. S. Van Cleef sends us an interesting note of the weights of trout in Catskill Mountain streams. Fishing those waters since the year 1859, he tells us, he has never taken with the fly a fish exceeding fifteen ounces, nor did his fellow anglers. When some one recently suggested to Mr. Van Cleef that for the sake of rounding out the story of a day's catch he ought to have stretched one of these fifteen-ounce trout to a pound fish, the retort was that "it is not in any way a matter of conscience, but simply of dignity, that a veteran angler is unwilling to tell an ounce lie in order to bring his catch up to a pound." In other words, a fisherman who has passed beyond the novice stage prefers always, as a matter of personal dignity, to tell and to have told him the simple truth. The thing that is, the actual performance, the truth, this has interest and value. The "fish story" so called is as purposeless, flat, stale and unprofitable as any other simple lie of exaggeration.

Uneasy lies the head that wears a crown; precarious is the perch upon the ladder's topmost round; what is fame but dew of the morning? the sun looks upon it and it is gone. There was a fisherman of Avalon who arose early and toiled late and persevered many days that he might make the record catch of yellowtails, achieve the distinction of being high hook, and hold a place of honor and of envy among all the mighty fishermen of Santa Catalina Island. How the enterprise was rewarded by the catch of such a string as no man had ever taken before and no man has taken since is told in our fishing columns to-day. There also is set forth the curious train of circumstances by which the hero of the yellowtail exploit has been done out of his high-hookedness, robbed of his credit, and shorn of his glory. Shorn only temporarily, let us hope, for to tell the story anew as it is here related is to put the credit where it belongs; nay, it is to give back to one single person the record of achievement which by the writer of last week was esteemed so prodigious that it was divided between two.

The Sportsman Tourist.

Ho! for the Wilderness of Maine.

WELCOME to the sunlight of Sept. 21. I put the finishing touches to my woods outfit and boarded the train. It soon carried me by the towns and forests, fields and lakes, until Bangor, Old Town, Brownville, had become things passed and "Norcross! Norcross!" was the brakeman's cry.

It was now twilight. Two friends had arrived by the morning train, and were probably well in on Debsconeg Carry, fourteen miles away, putting the finishing touches to a bed for four. My canoe mate had that blessed craft at the landing, and it only remained for me to tote the outfit over the thirty rods between the station and the cove.

As the shadows deepened we got afloat. The calm lake and bright moonlight made our work a pleasure. Out of the cove, through the crooked northwest passage, up North Twin, through the narrows, where a quick dip and strong pull are needed to stem the current, then through shadows and moonlight, past point and island, hearing the whir of a belated duck's wing, the distant loon call, the questions of an owl, and nothing else but the drip of the paddles. Off to the north Katahdin lifts her brow into the clear sky. A great star shone over her as though it were a light kindled upon her highest point.

Coats are off, and we are making good time, yet not so busy as to be unable to tell of the race down this same lake last fall before the northwest gale, when the only trouble was to keep out of the way of the combers.

"Just around that island B. C. and I camped on the sand beach three years ago."

"Did you ever hear of his improved camp bed?"

"This was the way of it. He was at the mattress factory in Portland and saw them putting together woven wire beds. The thought struck him that it would be fine to have such a bed in camp, so he bought 7 ft. of the wire. It rolled into small compass and was not inconvenient to carry. This is how we stretched it. We cut two spruce poles and put pins in each far enough apart to stretch the wire. Then we split two poles and nailed them back together again with the end edges of the wire between. Rigging a double purchase, we sprung these cross-end pieces over the pins and moved all into the tent.

"We ate a hearty supper and retired. A few extra blankets served as a mattress. B. C. was in ecstasies. I felt the pin giving near my shoulder. He slumbered before the catastrophe came, and did not awake till morning. Cramps and rheumatism twinged him into consciousness at last, but as that was a common experience of his he laid none of it to the bed.

"All the morning he bragged about his good idea, and it was only when we broke camp later in the day that he discovered that he had lain all night hard down upon the sand. We do not let him forget it. That wire went back into the woods beneath a log to await our return to civilization."

Nine miles of Pamedomcook, and we enter Nahmakanta stream, shoal, crooked and snaggy. Only a little way up the carry is found upon the right. Twenty rods at first, then a narrow stretch more of water to cross requiring the canoe, and we reach the main landing. The greater part of our outfit was placed beneath the overturned canoe, but we shouldered the bags containing the blankets and picked our way over the trail for half a mile to our friend's camp. On the corduroy portion of the trail the logs were covered with frost. It was quite a feat to keep our feet in crossing them.

A midnight vision. The rising wind swaying the tops of the tall trees, a full moon, shadows from the branches weaving ever changing patterns upon the carpet of tinted leaves, fallen and ever falling. A turn in the road adds a faint, wavering spiral of smoke, while in glimmer of moonlight and glow of fire the white tent stood offering shelter and rest.

Our coming awakened the sleepers, and the echoes. We were united again after months of separation.

What a wooing to slumber. Plenty of weariness, a fragrant bed, warmth at our feet and zephyrs of cool, sweet-scented, pure air about us, while the murmur of the forest was a perfect lullaby. Try it, ye insomnia-cursed mortals whose midnight weariness is caused by courting sleep.

The red squirrel is the usual morning awakener. Jolly, jollier, jolliest, sound that ever broke woods silence is the squirrel's laughing glee. He is so full of it that he swells and wriggles and hops with the utterance. Enlivened by his merriment it is so easy to bid drowsiness good-by and add the snap and crackle of blazing kindlings to the woodland melodies.

"Breakfast."

Coffee, toasted bread and some kind of broiled or cold meat, with all the little things that make up the larder of the experienced camper and an appetite that has already assumed a very domineering tone, putting the emphasis continually upon more, more; these constitute the meal.

And now for the hard work of the carry, always a terror. It finds each man green to burdens of the sort he must take, and unused to the roughness of the road. Problem: Shall we load light and tramp more, or tramp less with heavier loads? Nothing seems light after it has been carried a mile and a half. Everything possible is packed in bags for convenience. The canoe is heavy anyhow. To many it would seem the worst load, but it is not. There is a springiness about it that eases the shoulders wonderfully, while some bag that has in it the provisions will put misery into its worst form for him who lugs it.

This world is full of cost and compensation. A hard carry is made with the definite assurance that few will take it and that the chances of hunting in good territory are much greater, while the chances of being shot are reduced.

The first load is taken along until the shoulders rebel, then left by the wayside while we go back for another. The walk rests us, and the lighter load is taken far

enough by to give us a new start. Debsconeg never looked so handsome as when we laid the last burden on its shore.

The sky was cloudy, occasional rain drops fell, but the lake was calm and the four miles of paddling proved a delight. The spot chosen for camping was a new one, just above a boiling spring, ground high and dry, well sheltered and wood of the camp-fire quality abundant. We hastened to get up the tents before the ground got wet. This should always be the first thing done in making camp. Well sheltered, you are ready for anything. The tent is easily pitched. Down came the yellow birches with echoing crash. A pile of water from the spring, and soon the fire is merrily flashing beneath the black kettle. It was late when we sat down to dinner, and as we ate a good while, not much of the afternoon was left when we were done. One task remained; to a novice it would seem impossible, namely, to put down a dry brush bed when all the brush was wet. This was how we did it. After cutting the brush to proper size we took it piece by piece and passed it through the fire, drying it in a hurry.

In the gathering darkness our brisk fire and brightly burning lanterns made the tents as light as day. We ate again, of course planned for the morrow, enjoyed the sense of deliverance from all usual cares, talked till tired, mused till sleepy, then got out the needle and twine and sewed the blankets into bags, put the largest logs at hand upon the fire, slipped into the bags and our sleep was first quality, double extract, until broad daylight.

He who sleeps by an open fire, upon a fir bed, will always have an appetite for breakfast. If he has the extra pleasure of getting it ready himself, it will taste all the better. This morning we have before us the pleasant task of fitting up the camp for our three weeks' stay.

First of all, we put the spring in order. Noon found us with that job well done. An excavation deep into white sand, lined with split hemlock and roofed with split fir. The water came in so abundantly that a small stream flowed through the trench below. That water was distilled through the granite mountains above, and filtered through gravel for many hundred yards before it gushed to the surface so convenient to our camp.

An old box, which we found on the carry, furnished boards for our table top. Split fir, trued and smoothed with the axe, made a good shelf and rough table for the cook, while cedar splits were just fine for a cupboard. Comfortable folding chairs were made from small spruce poles and wire nails, with a bag for the seat. The top of the table was laid off into a board for checkers and chess, good amusement for a rainy day and long evenings.

Ah me! would I were there again! Our camp faced the south. A mountain and its ridges towered just back of us. The heavy forest completely sheltered us from any stormy wind. Before us stretched the beautiful lake, broken by many a point into coves and inlets. Hard and soft wood ridges hedge it in. Among these ridges gleam a score of large and small lakes abounding with trout. Moose, caribou and deer roam around their shores or tramp the ridges, while beneath the beaches the partridge scolds at every intruder. What days were in store for us!

"I go a-fishing." How gladly do we follow Peter's example. Beautiful Galilee could hardly be more beautiful than the little lake to which we went. We took the canoe to the outlet, carried over to Second Debs, and crossed this to near the mouth of a rushing brook that bounds over the rocks and glances through the low-hanging bushes of the hillside. Here we followed an old road and had a sharp climb for ten minutes, then turned to the left along a spotted line, keeping near the brook. We passed one lake and soon reached another, the Mecca which we sought, girt by hills upon the north and west, the grand old trees extending their arms over its waters, deep, cool and glorious as a mirror of the frost-painted foliage above. We were entranced, but the thought of trout within those waters soon awakened us to action.

On the north side a giant pine had fallen out into the lake, and was well staked into the mud by its many broken limbs. Stubs of other limbs offered convenient support to the angler. Here two of the boys tried the attractions of salt pork, squirrel meat and partridge's breast upon the trout, while two of us went to the other side and built a raft out of dry cedar. Six logs roft, long, with short cross pieces of fir notched and fastened to the logs by wooden wedges staked over the cross pieces. A rider was put across between the tops of the wedge stakes to prevent their loosening; side poles, used also for propulsion, were laid as rails, and the logs were floored over with cedar splits. All this came quickly together under the skillful hands at work, and we were afloat.

Trout flies were daintily taken, but a piece from the little fellows cut to the backbone from just front of the vent fin, then along the bone and out at the middle of the tail, proved very killing.

One of the boys started for the inlet, where he fished without success, then moved to a big rock, which he reached by wading. Here also he was unsuccessful, and started for the shore. I see him yet. Tall, slim, lean; his pants would easily roll away up. In one hand he held his shoes, in the other his rod. The water was as deep as he could conveniently wade. When in the deepest part he stepped his naked foot upon a sharp something. Like a flash he went down on all fours, and the water fairly flowed over his back. We heard the splash and looked in time to see a tall man, a slim man, a soaked man emerge from the water, and holding aloft two shoes in one hand and a fish rod in the other, drain himself. It was a ludicrous unfolding. Shouts and yells of laughter echoed over the lake. J. has not yet heard the last of wearing his shoes on his hands and wading on all fours.

Rain began to fall, and soon we were all as wet as J., but a good fire, the sizzling pork, frying trout and steaming coffee banished all discontent.

With a good string of fish we hurried back over the trail, crossed the lake, made the carry and were soon dry clad within the shelter of our tents.

"Tired?"

"Yes, rather."

"Hungry?"

"Most decidedly."

Abundance of wood was cut yesterday. We pile the back logs high and lay one, well packed in dirt, close against the bottom, inside. Two solid 8 in. and iron sticks support an abundant pile of large and small wood. Kindling wood is stuffed beneath and a match applied. Up into the darkness flashes the blaze, and the air is filled with the odors of birch and resins.

Oh! the comfort of a rainy night in camp! The tent is snug beneath its abundant spray cloth; the door flap is raised to turn aside all water from the entrance; a fire fierce enough to bid defiance to the downpour; a good trench forbidding the water to run under the tent; the rubber blankets and the woollens spread upon the springy, fragrant boughs; lantern light and firelight combining to cheer; abundant warmth, and added to all, the jolly companionship. Could heart desire more?

KTAADN.

Yukon Notes.—VII.

Tools.

Perhaps the most essential tools for use in the Yukon are axe, cross-cut saw, brace and bits from $\frac{1}{4}$ to $1\frac{1}{2}$ in., auger (1 or $1\frac{1}{4}$ in.), draw knife or spoke-shave, plane, hammer, chisel, and plyers, as well as a supply of copper or annealed iron wire, rivets, wire nails, including a few of the largest made; tacks, files (chiefly for use in sharpening axes and saws), whetstone and oilstone, etc. Extra helves for the axes should be taken, and if the party expects to build a boat, pitch, oakum, caulking iron, and whipsaw. A large ball of marlin twine will come in service for innumerable uses, and plenty of small rope should be included.

A great luxury up next the timber line in the passes where green wood and roots must be used for fuel is a small bellows. It is wonderful how quickly one can start a fire, with the worst possible material, with these bellows. Miners also put them to other no less important uses.

Candles come in very nicely for starting fires where the fuel is poor, or in winter when the hands become quickly numbed, and it is highly desirable to get the fire going from a single match. A roasted birch bark roll will do in place of a candle. The Yukon birch bark does not burn as freely as Eastern bark, for some reason, and is better if dried out in the oven of a stove.

One should have at least two waterproof match safes. In lieu of anything better a small bottle will answer, but two brass shotgun shells make the best safe. It is well to carry matches in two of your pockets, for it is very easy to lose one supply, and a man can't afford to be out of matches for a single moment.

For the same reason it is well to carry two compasses in different pockets, putting one where it can easily be consulted, and holding the other in reserve. When selecting a compass get one with the needle an inch and a half or two inches in length. The compass with needle that takes the longest time to settle after oscillating is best.

I would suggest taking at least a dozen best quality jack knives, each having a good, heavy blade, broad and with point not too sharp. Such knives can be put to good use even if you do not require them yourself, and are always valuable for trading. Adirondack guides have a single-bladed clasp knife with a fastening and ring at the butt that will stay by a man and prove very useful if fastened by a thong 18 in. in length to his belt and carried in his hip pocket. At times, with cold hands, it is very convenient to be able to let go your knife with the blade open, with the certainty that you can find it any moment when required.

Such a knife is handy for a vast range of uses, from cutting shavings to start the fire to slicing bacon or eating. For use at meal time, however, a combination knife, fork and spoon is the thing. Incidentally, the spoon will get the hardest usage.

Two or three traps for small animals may on occasion prove valuable, and likewise a half ounce of strychnine for wolves or foxes. A pair of field glasses, magnifying glass and camera may also be taken.

If you take a camera, select one having the very simplest spring shutter, with provision made for time exposures. Pneumatic shutters freeze at the slightest approach to cold weather and are useless. Film at times proves unreliable, but it is made to stand cold better now than a few years ago, and is not nearly so likely to strip though it is just as brittle and tears on the slightest provocation. For this reason, and also because such film keeps better, daylight rolls will be found much the most satisfactory. The paper backing of such film has a very beneficial effect in keeping out dampness and preventing the film from sticking in the roll.

Developing powders and fixing salts and a paper ruby candle lamp may be taken in if desired, and also velox printing paper. It is sometimes very satisfactory to be able to develop and print a few pictures on the spot where you happen to be.

A thermometer is very useful to indicate the difference between ordinary cold weather and exceptional cold. If a man relies solely upon his own sensations he is apt to make many mistakes. Ice forms on a man's beard in zero weather, and old-timers know it is 40 below or more when the camp-fire sends up columns of steam. Such indications, however, are altogether too general for practical uses, and a good spring thermometer is worth its weight in gold in the interior. Mercury freezes at a comparatively moderate temperature and is useless. Incidentally, kerosene freezes milk-white, and is mighty cold stuff to handle with bare fingers. We had an accurately adjusted spring thermometer, and took great satisfaction in it.

Firearms and Fishing Tackle.

If only one gun can be taken, the shotgun is likely to do most to earn its salt. A single-barrel gun with good, strong action, or a Winchester repeating shotgun, will answer very well. Take along ball cartridges adapted for the gun, but have the bulk of the ammunition suitable for ducks and partridges. The ball cartridge will do very nicely for a stray bear or moose.

If a rifle is taken, it should be a hard-shooting gun,

capable of accounting for big game, and if a black-powder gun is selected the owner should take along reloading tools—"machines," as the Indians call them. Powder and lead may be procured at any trading post, though it is just as well to realize that these are long distances apart. Have waterproof covers for the guns, and I would also suggest a sling for the rifle.

A pistol or revolver with 6in. barrel and good, strong sights is a very handy thing to have for picking up stray grouse.

Some weapon for self-protection is an absolute essential. Men as a rule are obliged to administer their own justice in that country.

On the approach of winter the mechanism of guns and revolvers should be taken apart and carefully wiped, so that no particle of oil remains. Otherwise the guns will clog or "freeze up" when cold weather comes. It is not advisable to use reloaded ammunition in nickel steel barrels, or to reload smokeless ammunition. The small caliber, smokeless powder guns with factory ammunition are perfectly satisfactory in the Yukon, despite reports to the contrary. I shot seven red squirrels one day with a .30-30 Winchester, at a time when the thermometer was 50 below zero. The gun worked perfectly and was accurate, and if there was any loss of velocity it was trifling and of no consequence.

For fishing tackle I would suggest a few trout flies, assorted hooks, large pickerel spoons, and suitable lines. A fish spear may also be included. A 40ft. net may be of great service if you happen to camp on a lake. Throughout the fall and winter quantities of whitefish may be taken in such nets.

Medicines and Miscellaneous.

The family physician should of course be consulted regarding the contents of the medicine chest. First of all, the supply should be adapted for your particular requirements. In nine cases out of ten the simplest remedies will be the only ones used. In the Yukon pain-killers heads the list. Salve, whisky, quinine, and surgical sticking plaster, are all old stand-bys.

Flexiderma, a preparation intended to take the place of sticking plaster, and somewhat resembling bicycle cement, is good for rough and ready doctoring, and so are porous plasters and salvacea. Chlorodyne, which is an English preparation compounded of morphine and chloroform, is wonderfully efficacious for diarrhoea—one of the commonest diseases of the trail. Laxatives are not required. A little citric acid for an occasional refreshing drink is good. Nessmuk's mosquito prescription—pine tar, castor oil and pennyroyal—is invaluable. Antiseptic solutions and cotton are good.

Note paper, Canadian and United States postage stamps, a diary and a dozen lead pencils will all be required at some time or other. Also, for use in a prospective cabin, it is well to take some window glass, or photographic film, which is lighter and answers the same purpose. A candle lantern with extra chimneys is very serviceable for camp use.

The maps published by the Geological Department of the Canadian Government at Ottawa, and the United States Coast and Geodetic Survey at Washington, are invaluable.

Dawson's map of the headwaters of the Yukon above the juncture of the Pelly and Lewis, which may be procured for a nominal price from the Canadian Government, is the best for practical use. Our Geological Survey has very recently published an interesting map based on the June, 1897, chart of the Coast and Geodetic Survey, showing the gold and coal fields of Alaska and the Yukon district, which is well worth having.

Finally, as a last hint, and perhaps the most important of all, learn how to cook. A few practical lessons from a skillful cook and a simple cook book taken along will go a long way toward lightening the hardships of a sojourn in the wilderness.

Even Job was afflicted with nothing worse than, some of the cooking seen in the Yukon last winter.

J. B. BURNHAM.

Just About a Boy.—XII.

THE second morning of our river trip found a lazy pair of voyagers, I am afraid, for the sun was up and sending long, level beams of light in among the restless maple leaves overhead before we opened our eyes and looked out of the tent.

A great maple had been bent down by the ice or snow when it was a sapling, and had grown into a great hump-backed tree that described half a circle in front of camp.

Two squirrels were playing on this freak of timber that bright morning, racing up and down, bounding from limb to limb, chasing each other round and round the trunk with a reckless disregard for the laws of gravitation and the safety of their own necks, such as squirrels only are capable of exhibiting.

I watched them with keen interest as they went through their antics, and I must say that I saw more of the animal instinct for fun that morning than I ever saw before.

"Hain't they cute little fellers?" whispered the boy, who had also been aroused by the clatter of the squirrels, and was peering over my shoulder.

"Seems like it's wicked to shoot such things, don't it?" he continued. "Gee! I thought that 'n' 'd sure fall that time! Funny how they c'n ketch onto a little twig 'ith one foot that way 'n' not fall clean down t' th' ground, ain't it?"

Something frightened our performers, and with a final skurry and wave of plumes they vanished into the upper limbs of a nearby cottonwood, and the woods resumed their wonted quiet, with only the bird voices to mingle with the rustling whisper of the leaves.

"Less git up an' git a hike on us," said the youthful savage by my side, as he kicked the blankets flying and came to his feet with a bound—the spontaneous elasticity of youth coupled with a perfect condition of mental and bodily health. You know, that is as much a part of a growing boy as his hands or his freckles.

"Why should one grow old?" I mused. "Why not always remain as healthy, happy, vigorous and youthful as that boy?" Yet I knew that the time would come when that supple frame, now so buoyant, would be stiff

and bent, and then this day that we were living would be only the ghost of a mind, something to dream about in the warm sun, and that the old man with the bent body and weak eyes would look back—look at himself as he appeared to me to-day—and perhaps sigh and wish the old days back again.

"Say, what's matter 'ith you 's mornin'? Gittin' lazy er homesick a'ready?" asked the boy, with a merry laugh, as he saw me still reclining on the blankets and looking intently into a spot of sunshine on the ground.

He was busy with a fish just out of the water, while I dressed and began packing the blankets out to a sunny place.

"Say, here, you watch this fish 'n' these taters, sost they don't burn. I'm a-goin' t' th' spring 'n' git some water fer coffee. Don't yeh burn that fish 'n' spoil it now, tinkerin' round a-lookin' 't squirrels 'n' things—won't git no breakfast if yeh do!" And away he went, swinging the black coffee pot and whistling merrily.

When he came back his face wore a look of seriousness and apprehension.

"Say! smell the grass smoke in th' air? I bleeve they's a big fire somer down th' river. Been purty dry, 'n' grass 's mostly dead now, sost it'd burn gickaloodin if it got started.

"Wind's 'n th' south, 'n' comin' up 'ith th' sun, 'n' I bet sompin 's a-burnin' down ahead of us."

"Well, what if it is? We are on the river, and the fire couldn't do us any harm even if there is one," I answered.

"Dunno 'bout that," he replied. "I seen fires round here 'at ud jump clean crost th' river.

"Give 'em a good haff a gale o' wind, 'n' th' river don't 'mount t' much towards stoppin' em.

"Nen it gits s' hot 'at yeh can't stay nowheres, 'n' smoke's s' thick yeh can't breathe hardly.

"I seen s' many o' these big fires 'at I don't like 'em, 'n' they allus make me nervous some."

"Oh, I guess we're all safe enough, even if a big one comes along," I answered.

"Well, now, I tell yeh," said the youngster, with a sniff in the air. "It's on'y 'bout three mile fr'm here t' Iron Mountain, 'n' that's a mighty good place to git away fr'm fire if one comes 'long. Less pack up 'n' go down there, nen climb up 'n' look round 'ith th' glass.

"If they's a fire 'ithin twenty er thirty mile o' here we c'n see it fr'm th' ole mountain all right.

"They's a lot of limestone gulches down there where little creeks comes tumblin' int' th' river, 'n' I reckon a feller c'd git away fr'm fire there if he could anywhere."

"Very well," I answered, "we can stop there as well as not, and see how things look, anyway."

"Less move, then, 'cause you nodiss this smoke's gittin' thicker every minit. I don't like it a heap, I tell you that."

The boy had lived in this country all his life, and I thought he might know more about prairie fires than I did, and besides the smoke was thickening rapidly, and the wind was rising, so that the whole situation did not look encouraging, to say the least.

We hurriedly stowed our camp outfit into the canoes, ate breakfast, and started down the river right toward the fire, and put our muscle on the paddles with such good effect that we were soon at the foot of the "mountain."

Here we ran ashore and climbed up the three or four hundred feet of nearly perpendicular bluff to the top.

We did not need the glass, for all too clearly we could see the red line of flame leaping high in the air to the south of us.

The smoke seemed to be going away above our heads, and what we had to contend with seemed more to be that drawn back toward the fire by the eddy in the wind current, which now had apparently changed and was blowing toward the fire.

Five minutes' watching convinced us that we had no time to lose in hunting shelter.

"Say, now, we'd better git to the gulches on th' north side o' th' mountain, 'cause th' fire won't burn haff as strong down th' hill as it will comin' up on th' south side, 'n' 'sides that, they won't be sech a strong wind to push it. I know a good place where we c'n pull th' canoes over a little bar 'n' git into a purty big, long stretch o' still water in a crick runnin' in fr'm th' west. They's a high bluff o' rock on the south side, 'n' th' fire c'n come right to th' top o' th' bluff 'n' not hurt us much. They's kind o' short grass 'long there too, 'n' some timber, so it won't burn so fast there anyhow. Liable to be a lot o' smoke though, 'n' we'll haff to look out fer that too. C'mon, less git a hustle on us."

Down the hill we went, helter skelter for the canoes, and jumping in, paddled swiftly to the creek the boy spoke of, about an eighth of a mile back up the river.

Landing, we quickly unloaded and carried the canoes over a riffle for about soyds., and launched them in the back water of the creek, where we reloaded them again, and then carefully picked a path through the shallow water until they were safe and snug under the high rock bluff that formed the south bank.

A safer place to escape could hardly be found in the country, and to the boy's quick judgment and intimate knowledge we owe our lives, probably, to-day.

"Say, I'm goin' to th' top o' th' bluff 'n' see how things is," said the boy when we had everything safely fixed, and up he went, climbing the straight sides of the bluff by clinging to the few bushes and points of rock that offered a foothold.

Reaching the top, he stood for a moment or two looking at the smoke cloud, and then, turning, shouted: "C'mon up, 'n' fetch th' rope 'n' some matches. It's only juss started down fr'm th' top o' th' mountain, 'n' we c'n backfire, if we hurry up, 'n' fool th' fire sure. Come a-runnin', cos we hain't got no time to swap jack knives."

I climbed up the bluff too, then, carrying the coil of half-inch rope—about 60ft. of it that we used in handling the canoes in rocky riffles sometimes.

The boy took the line and doubled it around a small jack oak that grew on the brink of the bluff, letting both ends hang down. "Now we got a quick way to git down if we haff to run," he said.

"C'mon, less start a backfire now," he continued, as

he gathered up a great bunch of dry grass and leaves, and twisted them into a torch shape.

"We got to hurry, she's a-comin'!" he said, as he ran toward the coming fire.

A hundred yards from the creek bank he stopped, lighted his torch and ran parallel with the creek, dragging the burning mass along the top of the grass.

Immediately tiny flames leapt up and began growing, spreading to the north and south.

When his torch was burned out the boy dropped the remains of it and came bounding down toward the creek like a scared rabbit.

"Slide down!" he shouted, and down I went.

A moment afterward he scrambled over the edge of the bluff and slid down the double rope too; then catching one end he pulled the line down and coiled it up.

"Guess it can't bother us now. Yeh see that fire 'at I set 'll burn up to the top of the bluff here 'fore th' big fire gits this far, nen it burns toowords the big fire too, 'n' when they meet they 'll both go out, 'n' there you are."

Even as he spoke little wisps of burning grass came tumbling down from above and we were kept busy watching the canoes and their contents.

In about ten minutes there was nothing but a blackened smoking stretch of country to the south and the big fire had swept by, "jumping" the creek and going on north like an express train.

We were safe, but pretty well choked with the pungent smoke and our eyes were red and swollen to a painful degree.

"It's all right now, let's git back to th' river 'n' g'won down," said the boy.

Soon we were afloat and hurrying down to the south with the current.

On both sides there was nothing but the black, smoking world; no life anywhere in sight. The river was more or less covered with charred embers of wood and the debris of the fire too.

On reaching the first little town down stream, we learned that the fire had followed the river for a number of miles, and so concluded to give up our voyage, as there would be no pleasure in floating so far through such a desolate country.

That evening we loaded the canoes in the baggage car and went back home on the train.

The fire had burned to the river south of town, and there a combination of river, fields and small creeks, coupled with a change of wind, had stopped its rush and it died a natural death.

EL COMANCHO.

Random Shots.

ONCE more summer is upon us and the chains that bind to business gall as at no other season of the year. It is yet a full month to the open season for trout, but my tackle is overhauled, the fly-book has been replenished, leaders tested, rods rewrapped and everything is in order for a month's campaign on Strawberry, the Duchesne and the Uinta Reservation—a long, long distance from civilization. It seems to me that under our present laws, enforced as they are, trout and bass are multiplying rapidly; deer and ducks hold their own, but grouse are decreasing very rapidly. This may be due to extreme cold, to the encroaching of ranches upon their breeding grounds or to the violation of law by herders.

The past year saw the organization of a Utah Fish and Game Association. It organized; that was all. Owing to the fact that it is controlled almost entirely by Salt Lake sportsmen the shooting and fishing fraternities of the "cow counties" in which most of the game is found are unwilling to affiliate. Just after the organization of the association one of its most prominent members was arrested and fined for the violation of the duck law. The close of the duck season on Feb. 1, instead of April 1, as heretofore, has resulted splendidly, and never have ducks been more plentiful than this spring. There have also been more geese than usual, with quite a large quota of jacksnipe. I have not heard of any arrests in Utah county for the violation of the duck law, but Commissioner Newell has had his hands full in protecting the trout. Last fall some power plant people built a dam in Provo Cañon across the river some eight miles above its mouth. They put in a fish ladder, but it was too small, and at too great an angle for the lake trout, as they were running up to spawn. As a result the pool below the dam has been full of beauties running from 1 to 8lbs. in weight. At every moment of the day they can be seen trying to scale the dam, but up to date they have been unsuccessful. Many have been caught with a spoon. One lad came to my house with a trout for sale some two weeks ago. I have since learned that he makes a business of illegally catching. The next Friday he was arrested and fined \$8. Not having the "stuff," he spent eight days in the county jail, from which he was discharged on Saturday afternoon of last week. The next morning (Sunday) he was at my house before breakfast with another trout for sale.

One of the most amusing arrests was that of a woman who was business in every sense of the word. She was allowed to go on her own recognizance. When she appeared for trial she demanded a jury of women, who promptly acquitted her on the ground that she had a perfect right to fish on her own property. Such was not the happy lot of a brace of American Fork poachers. Commissioner Newell from his lookout saw a couple of men put out from American Fork in a rowboat. After going about eight miles they anchored and from their actions Newell concluded that they were spearing something besides carp. When they started on the return trip he hitched up his cart and reached American Fork before them. He sauntered leisurely down to the lake, and when they arrived he was repairing an imaginary break in the telephone line. Naturally he walked back to town with them. When they were about to leave him he asked what was in the sack. They told him carp and suckers, whereupon he revealed his identity. Gross result: 36lbs. of black bass confiscated and sold, and \$40 cash turned into the treasury of Utah county.

Speaking of bass reminds me that our bass (the big-

mouth) are constantly deteriorating in quality and flavor. Can this come from their inshore habits, frequenting the sloughy shallow waters? Only occasionally does a bass have the right taste, and then it is caught in deep water or on the more rocky western shore of the lake. Catfish, planted in 1890 and 1892, are beginning to show up in the seines. I have heard of none caught with hook and line.

One afternoon about a month ago I took a walk along one of our streams and was arrested by a piteous squealing at my feet. Looking down I saw a little creature that I should have taken for a newly born kitten had it not been that the foundling was absolutely naked. As I stooped to handle it I heard a chattering and a female weasel came within 5 ft. of me, and stopping short, surveyed me with a most quizzical air. She was herself quite attractive from her unusually large size and the brilliant lemon color of throat and belly. I remained motionless, and she evinced no fear, for she came to my feet, picked up her infant in her teeth and departed without undue haste and in a dignified manner. An hour later a boy told me that there was a deer lying in an adjacent pasture. It was even so. A doe, shot through the head. She had probably been wounded some distance away and had run down into the settlement, where the hunter dared not claim her.

Cats can be trained to hunt. I have proved it. Last summer I was stopping in the cabin of a rancher named Bigelow in the top of the Wet Mountains of southeastern Colorado. Mr. B. had a cat that aroused my curiosity, for every time he would go after the cows or up on the mountain after his horses that cat would follow like a well-trained dog. As we sat at the supper table one Saturday night, a rifle in close proximity spoke two or three times. We rushed to the door in time to see a limping deer leave the oats and enter the timber. It took a little time to get on our boots and fix our shooting irons, and then we joined Mr. Bigelow's neighbor, who had done the shooting. The cat came along, as much interested as anybody. It was already after 8 o'clock and the woods were so dark that it was impossible to track. We beat about in vain for some time, when the cat ran ahead for a little ways, jumped on a quaking asp log and commenced to scratch. We followed and found a blood spot. Then the cat went on until she found another spot and again she scratched. So we followed her for half a mile, when it became impossible to see our hands before our faces, and we had to feel our way back. I realize that this yarn sounds very fishy, and I should not have believed it had I not been an eye witness; but what a cat that would be to breed a race of hunting felines from! SHOSHONE.

PROVO, Utah, May 10.

Natural History.

New Mammals.

THE extraordinary way in which new forms of mammalian life in America are being brought to light is well exemplified in the last issue of the Proceedings of the Biological Society of Washington, dated April 30. Here in thirty-nine pages, many of which are partially blank, are described no less than forty-six species and subspecies of mammals. The actual issue includes pages 85 to 129, but of these six are devoted to a discussion of some points in the nomenclature of the bats by Dr. T. S. Palmer.

The first paper in the series consists of descriptions of eleven new species and subspecies of voles, or meadow mice, by Vernon Bailey, of the Biological Survey. The localities from which these different forms come are widely scattered, one being from the Great Gull Island, N. Y.; another from Labrador; others still from Mississippi, the Indian Territory, Utah, California, etc.

Under the name of *Procyon maynardi* Outram Bangs describes a new raccoon from Nassau Island in the Bahamas, the species being named after Mr. C. J. Maynard, of Newton, Mass. This small species is abundant upon Nassau Island, but little is known about it, and it is uncertain from what continental form it is derived. Mr. Maynard has, or had recently, two living specimens of this raccoon at his home, but the type is a young male collected in August, 1897, by Mr. H. L. Claridge, of Nassau.

Mr. Bangs also describes under the name of *Urocyon aquilus* a new fox from the Santa Marta Mountains in Colombia. It is a dark form, similar in general appearance to our Southern gray fox. Mr. Bangs also describes a small opossum from Margarita Island, Venezuela. Five specimens of this new form are collected by Lieut. Wirt Robinson, U. S. A., four of which went to the National Museum and one to Mr. Bangs. It is named *Marmosa robinsoni*, after its discoverer.

From the same island, and collected by the same officer, come three new rabbits closely allied to some of the mainland forms. One of these is now described by Gerritt S. Miller, Jr., under the name *L. margarita*. Except for its long ears and short, dark-colored tail it bears a superficial resemblance to one form of our common gray rabbit.

An interesting paper by Dr. C. Hart Merriam determines the earliest generic name for the North American deer and describes five new species and subspecies. The genus *Cariacus* was established by Lesson in 1842 to contain the Virginia deer and its allies, but in 1895 Mr. Oldfield Thomas reinstated the name of *Dorcelaphus* as having priority by one year. Dr. T. S. Palmer, however, has pointed out that two of Rafinesque's names were still earlier—*Panallodon*, in 1831, and *Odocoileus*, in 1832. The first of these Dr. Merriam rejects for abundant reasons, but the second was based on an upper premolar of a Virginia deer, found in a cave near Carlisle, Pa., and the tooth was described by Rafinesque in detail, and figures of both outer and inner faces were published of natural size. Thus identified, there can be no question as to its place, and our common whitetail deer, which at various times has been *Cervus*, *Cariacus*

and *Dorcelaphus virginianus*, now becomes *Odocoileus virginianus* (Bodd).

Of the five species and subspecies described by Dr. Merriam, one from Sitka, and one from California, are of the *O. columbianus* type; of the other three, one is of the mule deer type, the other two seem to be of the Virginia deer type.

From among a great mass of material brought back from Mexico by Mr. E. W. Nelson, Dr. Merriam describes three new species of mice of the genus *Microtus*, representing three subgenera, two of which are new.

The remaining papers of this issue are Random Notes on the Nomenclature of the *Chiroptera*, by Dr. T. S. Palmer; Descriptions of Twenty New Species and a New Subgenus of *Peromyscus* from Mexico and Guatemala, by Dr. C. Hart Merriam; and A New Genus (*Neotomodon*) and Three New Species of Murine Rodents from the Mountains of Southern Mexico, by Dr. C. Hart Merriam.

It is well known that during tertiary time the group of animals which contains the camels and the llamas was very greatly developed, and that in America there were many different forms of these animals, some large and some small, some quite similar to the representatives of the group found on earth to-day, and some very different from them.

The same thing may be said of the group which contains the horse and horselike animals, whose evolution, worked out many years ago by Marsh and Huxley, was regarded at the time as one of the strongest pieces of evidence confirmatory of the doctrine of evolution.

Dr. J. L. Wortman, of the American Museum of Natural History, has recently published in the tenth volume of the Museum's Bulletin an interesting paper treating of the extinct camels of North America and some associated forms. This paper consists of a review of the genera and species of the North American camel-like animals, with descriptions of additional material pertaining to types already known, as well as of some new forms; a consideration of the various steps in the development of the group; and a study of certain characteristics of the higher selenodont even-toed (so-called) animals in its bearing on the transmission of acquired character.

The camel-like animals constitute an aberrant group which branched off from the main stem of the artiodactyle stock very early in the tertiary; but it is not until later eocene times that animals were found with true camel-like characters. The earlier forms were small animals with short legs and separate radius and ulna and tibia and fibula, while according to Dr. Wortman the union of the metapodial bones and consequent formation of the cannonbone took place much later. Dr. Wortman traces the development of the present camels back through different forms to some of their early ancestors.

In the same volume of the Bulletin, Dr. J. A. Allen describes a number of new species of mammals from western Mexico and Lower California. The material on which he has drawn are a number of specimens received from Mr. Oldfield Thomas, of the British Museum, and a collection from Mr. A. W. Anthony, who collected on the islands off the west coast of Lower California in 1897. The new species include an opossum, three forms of hare, several pocket gophers, several bushytail rats, and a number of mice. Included in the collection made by Mr. Anthony were two females of the desert mule deer and a specimen of the California sea lion.

Notes on Wisconsin Hawks and Owls

I.—OWLS.

THE order Raptores, containing hawks, owls and other birds of prey, is one of special interest to those who would study bird life from an economic as well as an ornithological standpoint.

It was the desire to learn more of the nesting habits of certain species of Raptores that led me to make special effort along this line during the season of 1896. The following notes are based on observations made during what time could be spared from business, and are not as complete as I would wish.

I remembered having seen a very large nest of some kind, late in the spring of 1892, on an island above the inlet of our lake, but close attention to business had prevented an earlier visit. On the afternoon of March 17, accompanied by the editor of our local paper, who went along to see an owl's nest, and incidentally to take a snap shot of same, I started out to see what could be found in the way of nests.

We drove across the lakes, up the winding inlet, and made a circuit around the marsh to reach the road which leads to the island. Hundreds of acres of marsh surround this island, which rises abruptly on all sides, and is about one-half mile long and nearly as wide. It is covered with heavy timber, with the exception of a few acres of cleared land in the center, thus making an ideal nesting site for hawks and owls.

Hitching the horse at the east end, we made our way along the south edge of the woods without locating any nests, and worked east again, coming nearer to the place where I had seen the nest in '92. Finally we caught a glimpse of a big bunch of articles high up in a large black oak. A moment later and the editor, who was in advance, shouted: "There's one! see his horns!"

Sure enough, there sat *Bubo virginianus*, with tufts erected, peering at us over the edge of the nest, still some few rods away.

I was at the foot of the oak in short order, and found it a comparatively easy one to climb. I was half way to the nest before it was vacated. The greatest trouble was in getting around and over the bulky affair, in order to see the contents. After much hard pulling and hanging on—for a stiff March wind was playing with the branches—I managed to get above the mass of sticks, and there on a bed of feathers, pulled from the breast of the bird, rested three white, globular eggs,

I picked one up immediately, but what was it that I heard? I turned the egg over, when I saw a hole and something move within, then another pip-pip, and then I realized that I was too late.

The mother owl's work of incubating was about over, for the other two eggs were both cracked, one slightly more than the other, which showed that incubation began when the first egg was deposited. We left the eggs to hatch, and shortly after we saw the old bird trying to escape from a flock of crows which had attacked her as soon as she left the nest.

I shall never forget how that nest looked as I peered over its edge, just two weeks later. There in the center was a mass of down. It took but a touch, and the mass of down became three separate bodies, each covered with grayish white down all over. The eyes were dark hazel gray, not the bright yellow iris of the adults. Bills were black, while the ear tufts were just beginning to appear in the way of elongated pin feathers on the largest of the three. There was considerable difference in size, which indicated the order in which they were hatched. They had evidently been well fed, to judge by the size they had attained, and no wonder. Arranged around the nest were the hind quarters of a rabbit, a very large rat with the head off, and the back half of a bluebill duck. Variety enough to suit all tastes had been procured by the provident parent. In this instance the heads and foreparts seem to have been eaten first.

The nest was 70 ft. from the ground and nearly 3 ft. across, and had evidently been added to year after year till it was 1½ ft. thick at center. It was very shallow, being hollowed just enough to keep eggs from rolling to the edge.

I found another nest of great horned owl on March 23 in a tall black ash tree, 60 ft. up. The bird was sitting on a branch near the nest, but flew away at our approach. A climb to the nest revealed one egg. The nest was lined with the tawny feathers of the breast, while the body of the nest was made of sticks and twigs, not making as large a nest as the former. On blowing the egg I found that incubation had begun, but the embryo had died, and the egg became addled. This probably accounts for the disconsolate manner of the bird sitting on the limb. The female may have been shot after laying the first egg, and the male was thus mourning her loss; but this is merely a conjecture, as close search failed to reveal any signs of other eggs being broken in or below the nest.

A nest of the American long-eared owl was found April 19 with one egg, which was taken. Another visit was made to the nest on the 26th, when three more fresh eggs were found. The nest was placed 25 ft. up in a well-formed fork of a small black cherry tree, in a dense thicket of second growth, along an immense marsh. It was compactly built of sticks and twigs, was 7 in. across inside, and 5 in. deep, lined with bark from posts and a few feathers.

The female stuck to the nest while the tree was shaken a number of times. She then flew away, but soon returned with the male, and then what a snapping of bills and scolding ensued. First one would fall to the ground, sprawl its wings, drag its legs, and flutter in terrible agony, only to have the same thing repeated by the mate, while the other would then fly back and forth, passing close to the nest, from tree to tree. This was repeated time after time during our entire stay in the vicinity. The female would sometimes perch herself on a nearby tree top and utter a guttural wo-wo-wo-wo. The attempts at deception on the ground, in feigning disability, fairly rivaled those of the killdeer when it has young.

These birds are quite common here, but on account of their habit of keeping concealed in dense second growth are rarely met with outside.

Another species that is common here at times is the short-eared owl, but I have not found it breeding. During the winter of '92 about twenty-five of these birds made their roosting place in a long row of spruce trees on the south side of town, and continued to hang around there even after several of them had been shot.

The barred owl is our most common species, many of them being shot wantonly by hunters going through the woods. I did not find it breeding last year, but hope to learn something of its nesting habits the coming season.

A number of snowy owls have been shot here during the past few winters, as they came down from the north, but being very wary are hard to approach, especially when you have a gun.

GEO. A. MORRISON.

FOX LAKE, WIS.

The Wild Pigeon in Mexico.

MACOMB, Ill., May 4.—*Editor Forest and Stream:* After writing to almost all points of the United States and Central America, making inquiry for the American wild pigeon, I have found them at last in Mexico. It is true they are not there in such flocks as they were in the United States some forty or fifty years ago, when they would break the limbs off of the trees when they were nesting. I received a letter from the Hon. A. M. Beaupré, Consul General at Guatemala, Central America, a short time ago requesting me to write to the Hon. Samuel E. Magill, Consulate General at Tampico, Mexico, as he had been informed that the American pigeon was in that section of the country. I addressed him a letter and I now inclose his reply:

W. O. BLAISDELL.

CONSULATE OF THE UNITED STATES OF AMERICA.—Tampico, April 27.—Hon. W. O. Blaisdell: My dear sir—Yours of 17th inst. received. The wild pigeon of the United States is not thoroughly domiciled here, and does not occupy the position in the fauna of this country that he did in ours when seen at his best. Used to living on nuts of small size like our beech nuts, he does not find here the food he craves, hence does not reproduce as numerously as he would under certain conditions and is not seen in large flocks here.

Another pigeon very similar to ours does better here and is more numerous, but it is not the wild pigeon of the United States, Yours truly,

SAMUEL E. MAGILL, Consul.

The Hosts of the Birds.

NEW JERSEY.—*Editor Forest and Stream:* Having considerable leisure time at this season of the year, I put in the greater part of it in strolling around through the woods and fields and along the streams, or else paddling or floating in my canoe upon the mill ponds in this vicinity. My wife often says that I was cut out more for a good-for-nothing wood loafer or a savage than for a civilized being; and often I think so myself.

While off in my canoe on Saturday three weeks ago—a very pleasant day it happened to be—I shot a very large hawk, measuring nearly 5 ft. from tip to tip of its wings—the largest bird of that species ever shot in this section of the State, so several of the local gunners who saw it said.

But I write this to let you know of the great abundance of bird life here this spring. I do not recollect that I ever saw in any other time and place so many of the perchers as during the last few weeks—robins, bluebirds, larks, purple grackles, red-wing blackbirds, catbirds, thrushes, chewinks, little ground and bush birds, and others, in great numbers.

Let one go around through the fields and he will hear and see them in all directions; the same in the woods. While I am paddling or floating along by the shores of the ponds around here the birds swarm among the bushes along the shores in myriads, warbling and nest building.

Around the house are quite a number of very large and tall white pine trees, and I should judge that not less than fifty and perhaps a hundred purple grackles (crow blackbirds) are nesting among the branches. Just at the peep of day I can hear their matin warblings or gabblings, making a regular pandemonium of bird notes, from the tree tops, and while they are flying from and to their nests. Many robins also are nesting among the other trees and the buildings.

After thinking the matter over I have come to the conclusion that the present abundance of bird life is owing to the strict laws enacted in many of our States protecting the perchers, and I find that in different parts of the State where I have been the laws relating to the smaller birds are almost wholly respected; for I have not known this spring of any one, either man or boy, killing or maiming even one bird of the protected species, or disturbing their nests in any known way.

I think the people, both old and young, are learning more and more each year about the benefits arising from the greater abundance of bird life, and are one and all taking a much greater interest than formerly in the protection of our little feathered friends.

Florida Drought and Alligators.

MR. E. J. WATSON, who came up in the schooner *Veatless* from Chatham Bend last Saturday, says the unprecedented drought still continues. The Big Cypress, on which water most always stands, has gone dry. The gator hunters are the only ones who appear to profit by the drought, as they are enabled to slaughter thousands of gators in the Big Cypress. G. W. Storter, who keeps a store near Chuckaluskee, has shipped 5,000 gator hides since Feb. 1 last. —*Fort Myers Press*, May 5.

Game Bag and Gun.

"Roostin'" Turkeys on Alligator Gully.

AFTER Prince was unharnessed and given his fodder—a bundle of cornstalks—I proposed that we make camp, but Skinner said "no, if we was goin' ter roost them tukkies 'twas time to be on the move." We had outspanned on the banks of Alligator Gully; just before it entered Cypress Swamp, about seven miles from Skinner's place in the flatwoods of South Florida, and about that distance from any house. Time, an hour before sunset. We had come out to "roost" turkeys and "run" deer. The first named is the favorite method of the native hunters for taking this noble fowl, and is founded on a careful study of its habits. The birds feed by day in the uplands and prairies, on pine mast, acorns and the like, and toward sunset repair to their roost, generally a thicket in some almost inaccessible swamp, which they have occupied for generations. The particular roost we were to watch was an island of thick pines in Cypress Swamp, a jungle of giant cypress, small bay and live oak, palmetto, vines and plants, and covered with water and mud about mid leg deep.

We took our fowling pieces, one barrel loaded with nine buckshot, the other with smaller turkey shot, crossed the Gully, and followed a trail made by wild cattle and deer along the edge of the swamp. Presently my guide halted. "We're about opposite the roost," he said. "You sit here and I'll go farther up. When the tukkies cross this open space a-gittin' to their roost is the time to take 'em." This "open space" lay between the swamp and the palmetto scrub of the upland, and was about two rods wide. I took my seat on a cypress boll and waited. The red sun sank in the smoky October haze of a southern winter. Crows flew cawing about, and one settled in a pine just over me; a kingfisher lit upon a dead tree over a stagnant pool on my right and uttered his sharp, peculiar cry. I waited and watched. By and by in the twilight I heard a great pother among the crows on the bank of the Gully below me; there seemed to be something there which they decidedly objected to, and they darted and circled about, filling the air with their discordant cawings. The next moment a gaunt gray body came loping up the trail toward me as lightly as a feather; it stood as high as a dog, and there was a purring, expectant expression on its countenance, as if it were saying to itself, "Now very soon I will have a good fat rabbit or turkey for my supper." When about 30 ft. away it scented me, stopped, crouched and looked me directly in the eye as I stood with gun

leveled at it. There was an inquiring expression on the brute's face, as if asking, "What sort of creature is this, and is it good to eat, I wonder?" However, it did not have long to speculate, for the next instant two buckshot were in its brain, and two more in its spinal column, and it sank down and died without a struggle; in fact, it died so quietly that I suspected it was crouching to spring on me, as I approached, and slipped another cartridge in my gun before doing so. About this time Skinner, who had heard the gun, came up, and together we approached the quarry, which proved to be a full grown wildcat, one of the largest, Skinner said, he had ever seen. These creatures are common in Florida, but are rarely seen, as they hunt by night, and lie in their dens by day; sometimes, however, the hunter's dog routs them out; if the latter is alone the cat will fight and whip him, but if his master is near it will usually take to the nearest tree, where he shoots it at his leisure. As to whether the cat will attack a man or not, there is a difference of opinion among the native hunters, some saying that he will not; others that he will when rendered desperate by hunger, especially if the man is carrying meat.

I said to Skinner that I should always regard the crow as a friend hereafter, for having warned me of the approach of the cat.

"I've often heard 'em make that row over a snake," said he. "Three of the largest diaman' backs (rattlesnakes) I ever killed the crows helped me too in that way, an' I've known 'em git a coon in a tree an' torment him most to death that way. It's pure mischief on their part, I reckon, for the cat never troubles 'em."

We went back to camp carrying the cat between us, and after supper skinned it by the light of the camp-fire.

Skinner was a veteran hunter and cowboy, and I was curious to learn from him their method of making camp. First he built a fire of "fat wood" (pitch pine), so abundant in the flatwoods, using a fallen tree for a back log. Then from the wagon produced a side of bacon, a bag of sweet potatoes, coffee, bread, sugar, spoons, knives and forks, tin cups, a frying pan, and a small tin pail to serve as coffee pot. Water from the Gully was put in the pail and it was set on the coals to boil, the sweet potatoes were ranged around the edge of the fire to roast, and slices of bacon cut and put into the pan to fry; when the water boiled coffee was put into it; the potatoes, turned at the right moment, baked quicker than one would have thought possible, and in a very short time an appetizing, if rude, meal was placed before us on newspapers spread on the ground. When we had eaten and the debris cleared away, we heaped up a plentiful supply of firewood and pine knots, skinned the cat, lighted our pipes and sat with our feet to the fire, while Skinner told hunting stories, and I listened.

"Are there really any deer and turkeys in these woods?" I asked.

"Plenty of 'em," he replied. "There's just as good tukky signs in that swamp as I want, but they're hunted so much they're mighty shy; I reckon that danged wagon scart 'em, an' your gun finished the job. I allow they'll roost to-night at the no'th end o' Cypress, an' we'll have a chance at 'em in the mornin'." I calculate to get a deer afore noon too, because Riley Jacobs is comin' out in the mornin', an' his Ring is jest the best dog for deer in the flatwoods; a slow trailer, don't git too far ahead, so when he jumps the deer you're there to shoot."

"How many deer did you ever shoot at one time?" I asked, to keep the conversation moving, for Skinner was a dreamy sort of man, and inclined to lapse into reverie unless jogged a little.

"How many deer?" he replied. "Three"—after thinking a while. "You see, at certain times o' the year the deer separate, the bucks bunching together and the does keepin' to themselves. One day I saw through the palmetto three bucks lying down with their heads toward me and fired and killed the three at one shot. I killed one onct without seein' him; it happened this a way: I was goin' through the scrub an' saw one git up to change sides, an' then lie down again. I fired at him an' he lay still; I mistrusted there was another, an' walked up with the other barrel ready, but he didn't jump, an' pretty quick I cum on him dead too. My shot had killed him and his mate both."

It was past 9 and bedtime in the woods. We had gathered pine boughs for bedding before the daylight faded; over these Skinner spread the canvas cloth used as a cover for his wagon, with the sheep skin and sacking that formed the wagon cushion, and a quilt, and our bed was ready; then wrapping our blankets about us we laid down to rest. How black the forest was outside of the circle cast by our fire, and save the occasional hoot of an owl, and a deep booming sound that Skinner said was made by the sandhill crane, a profound silence reigned. My companion dropped off to sleep quickly, and his sonorous snores shook the forest. I lay and dozed awhile, trying to fit the projecting portions of my anatomy into the yielding pine boughs, and then I too slept. About 1 we both awoke from the extreme cold; the fire had died down, and a stratum of cold air seemed to have settled on the earth, as is often the case in Florida. We rose, and with the axe chopped down dead spines of pines laden with turpentine, piled them upon the fire, and in a few moments had a sheet of flame soaring almost to the tree tops, then lay down and slept again. I was next awakened by Skinner's moving about. The first faint rays of light were breaking in the east.

"I'm goin' after tukkies," said he. "Will ye go?"

As it included a mile tramp through mud and water up to one's knees over tussocks frequented by the treacherous moccasin, I said I would stay at home and mind the camp. A little after sunrise, a cheery voice said "Good morning," and looking up there stood Riley Jacobs, the most renowned hunter in the flatwoods, with his dog Ring at his heels. He had got up at 4 and walked in through the darkness from his place, five miles distant, following his own trail through the forest; how he did it I can't imagine; it must be a seventh sense.

"I should 'a' been heah afore," he said apologetically, "but that ther' Ring, he jumped a coon in Blue Heron Swamp; he couldn't muckle him, an' he wouldn't leave him, so I had to wade out an' shoot the critter to git the dog. The varmint looked as if he'd like to get away mighty well when he see me comin', but 'twa'n't no use," and he sat down and lifted up his heels to get the water

out of his shoes. As he is a type of his class, allow me to sketch Riley Jacobs. He is short, thin and wiry, with tanned and sawy face, and wears an old, black, slouch wool hat, a woollen shirt, pants of strong woollen cloth held up by a leather belt in which are pockets for twenty-six cartridges, and stout plantation brogans. His face is unshaven, and he talks with the slow drawl peculiar to the Florida-backwoodsman. Jacobs is a Soft-Shell Baptist, and has an excellent reputation among his fellows. His dog Ring is also worthy of being limned; a thin, bony, long-legged, bob-tailed mongrel, with such an alert, intelligent, friendly expression in his keen gray eyes that one's heart unconsciously warms to him; he is the best deer and bear dog in the country, as his master is the best hunter.

Skinner comes in presently, with a fine fat gobbler on his shoulder, and finds a good fire and the water boiling for coffee.

"Ain't been to breakfast, hev ye, Riley?" he asks.

"No, I ain't," was the reply. "Got up at quarter ov four an' lit out. Was plowin' in co'n all day yesterday, an' cum night was plum' tired. Thort I'd rather sleep ter hum an' cum out in ther mornin'."

Breakfast dispatched, we set out after deer—Skinner, Jacobs, Ring and myself. The Florida hunter has several ways of taking the pretty creatures, as still-hunting, fire-hunting, etc., but the one chiefly depended on is to jump them with dogs. The deer feeds by night, and at daylight seeks some thick hamak or bay head, and lies there concealed all day. The hunter puts his dog on the track of the deer, which follows it to its lair, starts it up, and the hunter shoots it as it jumps or rushes forth. This is the whole art and mystery of jumping deer as practiced in Florida.

We crossed some pine barrens and came upon one of the prettiest landscapes I had seen in the South—a wide prairie filled with bayheads or islands, here of bay or gum with green, glossy, shining leaves; there of cypress, which, shedding its leaves in autumn, stood up gaunt and bare, except for its covering of fleecy white moss. How large the prairie was I know not, but the islands extended rank beyond rank into "the rich heart of the West." Skirting this prairie we advanced about a mile; then Jacobs halted, and pointing to a spot of green in the piney woods to the south, said, "You see the bay head yonder? I'm a-going' to put Ring in here at Blue Hills Swamp. If he jumps a deer an' I don't drop him he'll be sure to run across that neck, one side or other, of that bay head, an' one of ye wants to sit on one side an' one on t'other, an' take him as he jumps."

"All right," said Skinner.

To reach our posts we had to cross a piece of marsh covered with long grass, and here we flushed snipe after snipe, which got up in most tempting proximity, but we were loaded for deer, and manfully withstood the temptation to fire. Concealing ourselves behind trees we waited and watched a half hour or so, but no welcome bark of Ring announced that he had started a deer, and presently hunter and dog appeared bedraggled from the swamp; they had seen nothing.

"We'll try Alligator Gully," said Jacobs. This was the stream our camp was on, but we were now above, toward its source. Its banks were a perfect jungle of saw palmetto, bay, huckleberry and blackberry bushes and gum, and wet and marshy.

"Just the place for moccasins," said I.

"Yes," replied Skinner. In point of fact I had looked for rattlesnake or moccasin before putting my foot down all the morning, but the men strode along with their eyes on the dog, seemingly careless of consequences. I too looked at the dog; he seemed to have struck a fresh trail, for his stump of a tail wagged vigorously, and he snuffed eagerly as he ran through the thicket, doubling and twisting on his track; at length he leaped into the air once, twice, as if to get his bearings, and then darted into the thicker portion of the jungle on the banks of the Gully. The next moment we heard a whistle from Skinner, who had taken the opposite side, and saw two fine deer skipping over the barrens light as air, their antlers up and their white tails curled over their backs; the wind had blown from us to them and they had winded us before we were near enough for the dog to jump them. After that we beat Alligator Gully back to camp, but saw no more deer. As we approached a flock of buzzards got up and flew heavily away. They had cleaned every vestige of flesh from the carcass of the wildcat that had been thrown on one side after skinning the night before. Not a sign of one had been visible when we left camp. How they discover so quickly the presence of dead meat, whether by sight or smell, was a question neither Skinner nor Jacobs could answer. "But they git ther' powerful quick," added the latter. "Ther' was a man out on Peace River last summer got thunder struck, an' before anybody could 'git ter him the buzzards had picked his eyes out."

CHAS. BURR TODD.

Currituck Sound.

CURRITUCK SOUND, May 10.—Judge Robert C. Cornell and Mr. John White spent a part of last week at the Currituck Sound Shooting Club. The migratory flight of yellowlegs and curlew was large, and the bags made were good ones. Wednesday they killed 170, mostly large yellowlegs, with a sprinkling of curlew and dowitchers; Thursday 72, and Friday 121 of the same kind. It was a beautiful lot of birds, and afforded keen sport. But when the judge found that the hen birds were full of eggs, he decided to give up spring shooting, which does seem wicked, when one considers how many more this 363 snipe would have brought back with them in the fall.

I am glad to see you have a law in New York which prevents the sale of game in New York after the first of May. This will save many thousands of birds here, as the nearby markets, Norfolk and other Southern cities, are too small to use many of them, consequently the gunners cannot dispose of them.

The flight of Eskimo curlew still continues, and has been larger than I ever knew before; redbreast plover (robin snipe) are just beginning to come, and like gray backs (dowitchers) will be abundant until about June 15.

CURRITUCK.

Some Adirondack Preserves.

Editor Forest and Stream:

You ask me for a short history of the game preserves in this section of the Adirondacks, and facts about the game and fish preserve of the Racquette Club in particular, of which you make the mistake of addressing me as president. In order to correct this error I will state here that the club once known as the Racquette Club has been changed to the Massawepie Club, and W. J. Arkell, of New York city, is the president. The writer of this article has the honor to be a member, but would not like to drag off the honor of being its president without consent of its members.

In giving a history of the different game and fish preserves in this section of the Adirondacks, I will first say it would be much less trouble to give a history of the wild lands that are not game preserves. Fifteen years ago there was hardly a game preserve in this section, while at this time there is hardly a piece of wild land of any account that is not under preserve, except what State land there is, and that is so much scattered and so badly adapted to hunting and fishing that it affords but very little amusement for those who are not interested in game preserves. This seems a little severe on those who are not able to take advantage of the situation, but at the same time it has had the effect of saving our game and fish, whereas if the same old indiscriminate hunting and fishing had been allowed for the past fifteen years that prevailed up to that time, instead of to-day having more game and fish than we had fifteen years ago, our forests and streams would have been entirely cleaned out. Taking this view of it, while we admit it seems at first a little hard on the old hunters who had always roamed at will over other people's land, we are convinced that the end fully justifies the means; and we believe the old hunters have as a rule accepted this view of it, for we hardly know of an instance where they have not submitted to the law without a murmur.

In taking up the different game preserves in this immediate section, I will not name them in the order of their value as game preserves, nor in the order of their desirability or availability. It is not my purpose to advertise. I have no game preserve for sale, and am in no way interested in the sale or disposal of wild lands.

The Vanderbilt Preserve.

The first game preserve that I shall mention, however, is perhaps the best known preserve, and I think no one who is familiar with the locality will find fault with me if I say it is the best game preserve for its size in the Adirondack Mountains. It is what has been known as the Vanderbilt Preserve, situated in the township of Kildare, and takes in Jordan Pond, Amber Lake, and quite a section of the Jordan River, with several other small ponds and streams. This preserve was one of the first to be established in this part of the Adirondacks. It was put under strict preserve, I think, about fifteen years ago. It contains in all about 8,000 acres, has had the best of care by the Vanderbilts for the past fifteen years, and has not been hunted nearly up to its capacity. The woods are literally full of deer, and the ponds and streams are well stocked with trout. We understand that as many as sixty deer have been seen on Amber Lake in one day. The preserve changed hands last season, and is now owned by a New York city party not known to the writer.

The Vilas Preserve.

The preserve known as the Vilas Preserve is situated in Township 16, in Franklin county, and I think it contains about 12,000 acres. It joins the Vanderbilt Preserve on the east, and its proximity to the Vanderbilt, with the fine trout streams and beautiful deer ponds it contains, makes it a very desirable preserve. The waters on this preserve are McDonald Pond, Potter Pond, Elbow Pond, Wolf Pond, Long Pond, and a long stretch of both the west branch and the middle branch of the St. Regis River. This preserve is not owned by a club. It is the property of the Vilas estate, of Plattsburgh, N. Y., and has been preserved and kept up and well cared for by Dr. E. A. Carpenter, of Cambridge, Mass., for the past ten years. The timber has never been cut on this tract, and while it would make a very desirable club property, the fact that the timber still remains on the property makes the value of it very high for a game park.

The Cutting Tract.

The next preserve in line is known as the Cutting Tract, of 7,000 acres, which joins the Vilas Preserve on the northeast, and is also in Franklin county. This is owned by Frank A. Cutting, of Boston, Mass. It has never been controlled by a club, but has been under preserve by Mr. Cutting for about five years. It contains the waters known as Train Pond, Weller Pond, and a long stretch of Stony Brook and Balsam Brook, both good trout streams. The timber has recently been sold on this tract, and we understand Mr. Cutting is anxious to form a club to control the game preserve.

The next preserve on the north of the Cutting Tract is a small preserve owned by Mr. Frederick M. Heath, of Potsdam, N. Y., and takes in the famous Ozonia Lake, on which is located the summer hotel known as Fernwood Hall, owned and managed by Mr. Heath. This is a beautiful lake and an ideal spot in the mountains, but the game preserve connected with it is small, only taking in a few hundred acres, making the sporting facilities somewhat limited.

The next preserve in order is an 8,000-acre tract situated on the west branch of the St. Regis River, in the township of Riverdale, joining the Vilas Tract on the north and the Cutting on the west. The waters on this tract are Mud Lake, a long stretch of Stony Brook and Balsam Brook, and about five miles of the west branch of the St. Regis River, of which three miles are still water for boating, and two miles a succession of rapids and falls, which make the best of trout fishing at certain seasons of the year. This preserve is owned by the National Bank of Potsdam, which is now

in the hands of a receiver. The lumber has been cut on this tract, and the game preserve is quite a desirable one. It has been controlled for the past four or five years by the hotel known as the Sylvan Falls Hotel, located at the foot of the three miles of still water in the west branch of the St. Regis River, near the west line of the preserve. The National Bank of Potsdam, N. Y., was a large owner of Adirondack lands, and still has in the hands of the receiver several other very desirable hunting and fishing tracts, some of which come within the scope of this article.

Another very desirable preserve, also owned by this bank, is a 7,000-acre tract in the township of Kildare, and joining the famous Vanderbilt Preserve on the north. The proximity of this tract to the Vanderbilt Preserve, being all in one unbroken forest, in connection with the fact that it is an excellent feeding ground for deer, makes it, perhaps I may say, one of the best deer parks for its size in the Adirondacks outside of the Vanderbilt Preserve. The waters on this preserve are Whitney Pond, Thirty-five Pond, and quite a long stretch of the inlet of Jo Indian Pond, which is a stream not large enough for navigation with small boats, except in places where dams have been constructed for the purpose of floating logs. This stream furnishes good trout fishing, and good hunting where the ponds occur; also some of the best still-hunting in the woods. The famous Jo Indian Pond, also located in the township of Kildare, joins this preserve on the north. This tract contains 1,700 acres, and is also owned by the National Bank of Potsdam. Jo Indian Pond is one of the largest of the so-called ponds in the Adirondacks, and ranges in size with Lake Ozonia and Bay Pond in Franklin county. It is a natural trout pond, and has never been ruined by the introduction of other fish. This 1,700-acre tract has been controlled and under lease for the past four or five years by a club, the name of which is not familiar to me. The 7,000-acre tract mentioned above has been under lease for the past ten years to a club known as the Inlet Club, who have constructed a temporary club house on the property. Taking these two tracts together would make a very desirable game preserve. This land has all been lumbered, and we understand the receiver has only a limited time in which to dispose of this property.

This practically describes the game preserves on the east side of the Racket River. On the west side we have only three well-organized preserves in this immediate vicinity, viz., the Granshue, the Hollywood, and the Massawepie.

The Granshue Preserve.

The Granshue Preserve is owned by the Granshue Club, is located in the township of Granshue, and contains about 6,000 acres. It has the waters known as the Ormsbee Pond, Long Pond, and quite a long stretch of the east branch of Grass River. It is in the heart of the wilderness, and although a hard place to get to it is a famous hunting ground.

The Hollywood Preserve.

The Hollywood Preserve is located in the township of Hollywood, and is owned by the Hollywood Club. This club is, we think, the oldest game preserve club in this section, and perhaps in the entire Adirondacks. It was organized by Dr. French, a reverend gentleman who resides somewhere in the vicinity of New York city, about twenty years ago. They have a membership of twenty gentlemen, and are remarkable as a club for their religious proclivities. They have a fine club house, and their buildings are all very complete and convenient. The number of acres in their club property is not known to the writer. The tract they occupy joins the Granshue Club property on the south, and they must control in all about 6,000 acres. The waters on this preserve are Clear Pond and Lake Pleasant, also a long stretch of Dead Creek, which is good trout fishing. They also have Little Blue Pond and a portion of the branches of Grass River, known as Trout Brook. It is an ideal game preserve, and was a favorite place for old hunters for years before game preserves were known.

The Massawepie Club.

Last, but not entirely least, I will mention the Massawepie Club, of which I have the honor to be a member. This club controls about 2,200 acres of as good hunting grounds as can be found on this side of the woods. Although comparatively small in acres, it is large in resources. There are five small lakes or ponds situated on this 2,200 acres, and every one of them is considered a "star" pond for hunting. Only one of the ponds, however, is considered good for trout, and our trout fishing is somewhat limited. It has been under preserve for the past twelve years, and has never been hunted up to its capacity. Deer are very plenty here. Partridges are also quite plenty in season, and occasionally a black bear has been found on this preserve.

Speaking of Bears.

Speaking of bears brings to mind a little bear hunt that took place on these grounds several years ago. The story has never been published, and perhaps would make a good ending for this article, which must of necessity be somewhat uninteresting to those who are not seeking for information on the subject of game preserves. In the fall of 1891, in company with my brother and two other hunters, I went to our camp the last days of October, for a week of still-hunting for deer. We had been in camp for three days, and as the weather had been dry and what the hunters call "noisy," we had not succeeded in securing any meat for camp. On the fourth morning in camp my brother took down the old double-barrel shotgun after breakfast, and said he was not going to hunt for deer that day, but would go out and get some partridges for a potpie. As he was filling his cartridge belt with cartridges loaded with fine shot I suggested to him to take a few buckshot cartridges to use in case he did run on to a deer, and agreeably to my suggestion he did put four buckshot cartridges in his hunting coat pocket. He started out, and after he had been gone about thirty minutes I took down my .45-90 Winchester and started off in another direction from the one taken by my brother. I had not gone more than 100 rods from camp before I heard my

brother shoot over in the woods about a mile and a half away, and I remarked at once that he had fired one of the buckshot cartridges. I could tell the difference at once from the fact that the buck cartridges were loaded with 5½ drs. of powder and 12 buckshot, while the fine shot cartridges had only 3½ drs. of powder; the gun was a 10-bore. I halted for a moment to see if he shot again, as we always consider two shots in succession a good indication for meat, and sure enough, I very soon heard the second shot. This was also a buckshot cartridge, and soon after that I heard the third and the fourth shots roar out from the old gun. I said to myself: "Mat must be in trouble;" and I immediately changed my course, and took a lumber road that would lead in the direction of where I heard the shooting. I knew he had only four buckshot cartridges, and as I had heard him fire all of them I was sure it must mean something.

I had not gone more than half or three-fourths of a mile before I heard something coming toward me, tearing through the woods, making as much noise as an elephant, and I soon saw Mat coming up over a little hill on a dead run, dragging his old shotgun behind him by the muzzle. He looked somewhat tattered and torn and blown when I met him, but I could see by the snap of his eye that he was still in the ring and would come to time all right with a little encouragement. I asked: "Mat, what's the matter?" "I have shot a bear." "Is that so? Where is he?" He told me the bear was back in the woods, and after he had given him four shots, all the buckshot cartridges he had with him, and had succeeded in knocking him out of a tree, the bear set up such a terrible scream that he thought he must have gotten into a bear's den, and all the other bears in that country round about would be down on him, and as he had nothing but fine shot cartridges with which to fight them he had concluded that discretion was the better part of valor, and had taken to his heels, leaving the bear lying on his back, still screaming for help.

I told him my .45-90 was full of cartridges, and that seemed to inflate him with renewed courage, and we started back to the scene of the bear massacre, full of grit, and at the same time feeling our way carefully. When we reached the point in the woods where the bear was first sighted Mat said: "I started the bear here, and he ran up that little hill toward that great hemlock tree, and climbed the tree." We went up to the tree, and sure enough, there lay the bear flat on his back, as the old hunters say, "dead as a colt." Mat said he had run the bear up this tree, and as he had neared the top above a fork in the tree, which was hidden somewhat from the point where we then stood by foliage, he fired his first shot and the bear fell back into the fork. I looked up at the point indicated, and said: "What is that in the fork of the tree now?" "There is a bear up there yet!" he exclaimed, and this proved upon further investigation to be another dead bear. The facts were, when he shot the first bear the bear fell back into the fork of the tree and lodged there dead, and when he stepped around the tree to get a better shot, as he supposed, at the same bear, he saw bear No. 2 still further up the tree, and from where he stood he could not see the bear that had lodged in the fork, and supposed of course it was the same bear, which had dislodged itself and was again climbing up the tree, and without waiting to investigate the bear in the fork of the tree he fired the second shot, and bear No. 2 came to the ground. He then fired two more shots at him, which no doubt in his excitement were not very effectual; and as the bear on the ground kept up a terrible screaming he decided to leave that vicinity.

We were obliged to return to camp to get an axe, as the tree had to be chopped down to secure the bear in the fork, and we also took a horse back with us and hauled our game to camp, which proved to be two very fine black bears of the same age, and evidently of the same family. Their fur was quite prime, and my brother still has them as evidence of the truth of this story, which on the face of it may seem a little fishy; but it is nevertheless true, and my brother, whom I call Mat, is Mr. M. V. B. Ives, member of Assembly from the second district of St. Lawrence county, N. Y., and the man who introduced the present no-hounding law into our State Legislature.

H. L. IVES.

POTSDAM, New York, May, 1898.

In the Garden of Eden.

BASSORAH is situated on the Shat-el-Arab River, sixty miles from its mouth, whence it runs into the head of the Persian Gulf, and is one of the hottest places in the world in summer. The heat begins to slacken off after September has passed, and the climate from October to April is delightful. We had been stationed at Bassorah all the summer, and were looking forward to the time when the snipe and duck began to make their appearance, which they usually do toward the end of October.

On Oct. 15 two of my shipmates, A. and B., and myself hired three belems. A belem is a canoe-shaped boat, with a very flat flooring, averaging 25 ft. long and 4 ft. beam, and can stow fifteen or twenty at a pinch. We took a crew of two Arabs for each belem, and my steward to superintend the cooking and commissariat. Our intentions were to go up the river as far as Journah, forty miles above Bassorah, at the point where the Euphrates, Tigris and Shat-el-Arab meet, and the generally accepted site of the "Garden of Eden." The Garden is now a mass of date trees and paddy fields.

Having arrived at our destination about 11 P. M., we passed the night in comparative peace only, owing to the swarms of mosquitoes and sand flies, and in close proximity to the celebrated Tree. We "showed a leg" before the sun's upper limb was clear of the horizon, and by the time we were into our shooting kit the steward had a fire alight on shore and a pot of cocoa under way. The mornings and evenings are most delightful at this time of the year, but by 10 o'clock it begins to get a trifle warm for wading on the mud flats. Having packed some leaves from the Tree to send to our friends, we crossed over to the north bank and formed line on the tash—the tash being the foreshore, which at low water affords fine feeding ground for snipe

and ducks, with just sufficient cover of weed to let one get within shot. Later on in the year the birds are all in the paddy fields; but so early in the season as when we were out the fields are as hard as bricks, and it takes a deal of rain to make them soft enough to enable the snipe to get their bills to work.

"No birds," I said, after half an hour's trudge. But I was a bit premature, for up got a snipe in front of A., our doctor, and was dropped gracefully. Another and another got up, one coming my way, but having one leg up and the other down deep I missed clean; B. grassed the third nicely. By 10 o'clock we thought we had had enough for the time, it being very hot, so we returned to the belems, and having satisfied the inner man we resumed operations. The birds were fairly plentiful, but wild, and at sunset, when we ceased shooting, we had bagged sixty-seven and a half couple of snipe and four mallards. We camped for the night on the river bank, were nearly eaten alive by mosquitoes and sand flies, and were up betimes in the morning. We did not try the snipe again, but went into some dry reeds where we thought we might find partridges. We were lucky enough to get thirteen, and at mid-day started on our homeward journey, arriving on board by dinner time.

Circumstances necessitated our leaving the river from that time until the end of November, and on the 25th of that month the same three guns, with another, proceeded up the same ground in a steam launch, lent us by one of our numerous friends on shore.

We found a good many more birds than on our previous trip, but they were wild, owing to a strong breeze blowing and it being rather a raw day. However, we returned the same evening to Bassorah with 108 couple of snipe, eleven ducks, and a wild goose. This part of the country is particularly suitable as regards climate for consumptive patients; it is also a grand field for a naturalist or geologist. The ship which winters in the gulf is always looked upon with envy by the rest of the squadron.

A curious incident happened during our first trip. A snipe and a partridge were flushed close to the river; the doctor killed right and left, the partridge happening to fall into the water. A hawk swooped down and was off with the snipe before we could wink, and a large fish at the same moment took the partridge, and we never had either. This is not a fish story.—*Correspondence London Field.*

Out of the Usual.

To show how extremely hurtful it is to fire guns after sundown where ducks come in to roost, let me relate an incident: Late in November last the wildfowl shooting at Wapanocka Lake, Ark., was superb, and the limit of fifty game ducks was easily and often reached. About the best and most abundant shooting, both on ducks and geese, was around Thanksgiving Day; and a bank cashier, who could but seldom leave his duties, heartily enjoyed the success of his outing until nearly dark, when he and his new paddler, Quay Douglass,

Our Lost Hunter.

missed the mouth of Little Lake, and were missed by his companions at supper in the club house, when toasts and scores were discussed. The searchlight party seeking him fired volleys on the lake, and at 10 o'clock clinked glasses in the club house to the safety and success of the lately lost brother; but the salvos on the

The Safe Return.

lake startled the wildfowl, and the next day was a blank; indeed, shooting was ruined until new flights of wildfowl arrived.

On rowing homeward, or clubward, about dusk in December last I was tempted beyond resistance by the clanging honks and swishing wings of a flock of Canadas, and crashed into them with Du Pont and chilled 5s at short range, but this deadly double was fatal to the

next morning's shoot, since it routed thousands of roosting ducks from this Arkansas lake, and they quacked their adieux.

Myriads of English sparrows some months since roosted in magnolias overhanging a white stone front pavement (and their litter, or guano, was grief to maid and mistress), which evil cats and air rifles failed to remedy; and poisoned seeds and dough we could not use because of poultry. I remembered how grievously we had routed the wildfowl, to our sorrow, so tied bunches of fire-crackers in these trees and at night exploded this mine under the sleeping horde of pests, and not one has ever returned.

But, returning to web-footed game and their oddities, I was in a duck blind last fall, and had routed out an enormous number of greedy mallards, teal and sprigs, and was gloating over their certain and early return.

The Turkeys are Flushed.

Just behind me, in the woods, a flock of turkeys flushed from the noise of dragging out of sight our boat; and the paddler, Greer, who is insanely fond of hunting and outwitting turkeys, pleaded eagerly for the gun to kill a gobbler before the ducks began decoying back. The morass was so waxy and full of bog holes I let him pursue the turkeys for a specified fifteen minutes or less, and with only the two cartridges in my gun. Just as my grand flight of ducks came pouring in and circling low, alighting all around me, and rushing storms of green-wing teal fanned my face by the thousands, I heard those turkeys flush again. My paddler's hunting blood was up, and he must have a turkey, or at least a shot, so he followed them out of hearing of my whistles, calls, prayers, and imprecations, while I was literally besieged and bombarded by the grandest flight of hungry and reckless ducks I ever saw, until 10 o'clock, when, full and sociable, they all settled in the middle of the lake, nooning; and the warm south wind drifted them in an enormous body within 20yds. of me in the blind, without a gun. Precisely a similar drift of snoozing, nooning ducks bore down on my friend, Jim Neely, in this same charmed spot once last season, and he shot nineteen of them from Trexler's corner; but my absent man was a mile away, "calling" through a turkey's wing bone, and I was almost sweating blood, and had it in my eyes; when, after an eternity, he came sloshing through the mud, up rose at my feet thousands of ducks, to come no more till the evening flight. Yet the only

"Hunting without a Gun."

difference was that I killed my limit in the afternoon instead of morning—fifty ducks.

In this same dead angle for wildfowl I once found seventeen dead and frozen ducks, blown across the lake from a party shooting opposite, the previous day, in a gale that had made boat retrieving extremely dangerous in the whitecaps.

As I now toast the FOREST AND STREAM in a midnight nightcap, I see an historic legend, graven on my silver set of eight beautiful pieces, saying: "Presented by FOREST AND STREAM at Memphis Field Trials, 1875. Won by Tom (setter) for George W. Campbell and W. A. Wheatley."

MEMPHIS, Tenn.

W. A. WHEATLEY.

The Yukon River Illustrated.

THE Alaska Miner, printed at Juneau, is publishing a very interesting sketch of a journey from Juneau over the passes and down the chain of lakes and the Yukon River to Fort Michael, from notes and photographs by its editor, Mr. W. A. Beddoe, which are none the less interesting to the reader at the present time because they are strictly true, which cannot be said of much of what is written. Could Lieut. Schwatka have possessed himself of this journal when he made his tour of exploration in 1883, it would have been of essential service to him.

CHICAGO AND THE WEST.

Indians and Eggs.

CHICAGO, Ill., May 14.—At last I can give an authentic instance of an Indian robbing a duck's nest, and it isn't in Alaska either. Dispatches of St. Paul journals have the following:

"Chamberlain, S. D., Special, May 7.—On complaint of local sportsmen, the Board of County Commissioners has passed a resolution requesting the United States Indian agents at Crow Creek and Lower Brule agencies to prohibit the Indians on their reservations from destroying ducks and duck eggs in or near any and all lakes and artesian well ditches in Brule county. The lakes and watercourses of the county are becoming famous as the rendezvous of numberless ducks and other wildfowl, and it had become the practice of Indians from the adjacent reservations to slaughter the ducks when very young and carry away the eggs."

I am unable to state whether the above egg depredations have been committed by the Indians because of the Alaska duck egg stories, which have been given great circulation, or whether the Alaska stories originally began because the Indians in Dakota took some eggs.

St. Louis Game Dealers' Association.

I have earlier mentioned the formation of an organization of the game dealers of St. Louis, a body somewhat similar to the recently defunct Produce Exchange of Chicago. The purposes of these two bodies were identical, and both are deceptive and specious. Both were careless of the protection of game and both sought to tinker with the game laws for purely commercial reasons, while asking the support of sportsmen for "better game laws." The only sort of "better game laws" which the St. Louis dealers want is the sort which will allow them to sell game more openly and more easily. The milk in the cocoanut is obvious in view of recent utterances of some of the interested parties. Mr. P. H. Kiely, a dealer of that city, says:

"St. Louis is the greatest city in the country for game, but the law prohibiting the sale of game after the lawful season for killing the same has expired is proving injurious, as it prevents this city from handling game from States where the law has not been violated in killing the same. The season for killing game in Missouri is shorter than in any other State."

"In Chicago the dealers are allowed sixty days after the expiration of the game law of that State to handle game from other States, and here we must cease selling just as soon as the Missouri law expires, no matter if the game we have on hand was killed in some State where there is no game law. It is our intention to ask the Legislature to amend the present law in the respect I have named."

"So far as punishing men for the unlawful destruction of game and fish is concerned, the commission men are heartily in favor of the same. The principal local game handled here is quail. One firm here disposed of \$20,000 worth last November and December, and a large per cent. of these birds were killed outside of this State. The Missouri law prohibits the shipment of quail and prairie chickens from one county to another, and as such game can only be lawfully killed and exposed for sale two months in the year, while in every other State a longer time is allowed, it will be observed that the St. Louis commission men are laboring under a discrimination in comparison with those living outside of the State and engaged in the same line of business."

What the St. Louis dealers want is to be placed on an equality with Chicago, and what Chicago wants is to be placed on an equality with New York and Boston, and what New York and Boston wants is the last living game bird left in the West. Meantime the Supreme Court of Missouri has gone on record with no uncertain sound against the whole cold storage proposition, giving the sportsmen of the country one of the best decisions ever placed in their magazines of offense. From all this I infer that in Missouri as well as Chicago the press of popular sentiment is beginning to become too strong for the dealers. They can no longer run things in the old high-handed manner. The cause of protection is making rapid and actual progress these days, and in no way faster than on the point of selling game, a product which never ought to be sold at all in this country.

Illinois Jacksnipe's Nest.

Mr. Ruthven Deane, of the Illinois Audubon Society, writes me in regard to the mention in FOREST AND STREAM of the finding of a nest of the jacksnipe on Maksawba Club grounds in Indiana:

"I read with interest your note on the finding of the nest and eggs of the jacksnipe in Indiana. Could you give me the name of the finder, so I could get the exact date of his discovery? Geo. Morcom, formerly member of the Maksawba Club, now of Los Angeles, Cal., has a nest and eggs of this snipe taken on the club marshes a number of years ago."

The name of the discoverer of this nest is John Watson, of Grand Crossing, Ill., a gentleman very well known among Chicago shooters. Mr. Watson will no doubt tell Mr. Deane the exact date of the discovery, which was late in April. Mr. W. C. Haskell, of this city, is also, I believe, credited with finding a jacksnipe's nest, but this occurred a while ago, as I understand it. No doubt Mr. Haskell would be glad to give Mr. Deane any information possible.

Maksawba Club.

Members of Maksawba Club held a meeting last week and completed plans for rebuilding the Maksawba Club house, lately destroyed by fire. The new building will have a larger assembly room than the old one, with ample sleeping accommodations and everything to make life easy. The club even shows a marked disposition toward luxury, in that it will light the new domicile with gas, instead of the big lamps which in the past have shone over so many fair women and brave men.

Spring Shooting Over.

—So far as I know, most of the spring shooters have now put up their guns, as the law is up all over the West,

even in Illinois. Yet, although it has been illegal for some thirty days to shoot in the spring, I suggest now that the ducks are sitting on their nests and are much attached to their duties and not so wary, it would be much easier to shoot them than it was a few weeks ago. And then, think of the eggs you can get with the nest, too.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

A Wary Old Grouse.

YEARS ago, near my old home in Michigan, grouse were plentiful in thickets and wood patches, and as a boy I frequently took up arms against them, with varying success.

A favorite haunt for them was an alder thicket that lined the banks of Ashry Creek, a small stream that wound through pastures, fields and woods till lost in the more pretentious waters of Belle River.

Although not a crack shot in those days, I managed to collect toll from that alder thicket until, near the close of the season, but a single partridge out of an original dozen or so remained within its limits.

This old fellow—I say old because his wisdom indicated age—had managed to elude me time and again by lying close until I was nearly through the patch, and then bursting from cover away in the rear, he would wing himself to the safer seclusion of the thick woods that lined the lower reaches of the creek, his flight hastened by a parting salute from the old muzzleloader, given to show, at least, a proper resentment to his success in outwitting me.

Failure only stimulated in me a stronger determination to bag the old fellow. I was not then the possessor of a bird dog; but familiar with the haunts of the game, I worked the cover carefully with eyes and ears alert, trusting to my quickness in covering the birds, rise when they might, within the range of my old gun. The experience of repeated failures had taught me that if I secured that bird he must be flushed in front of me, and not behind; so I decided to work the cover very carefully, quartering the ground with but little distance between the laps, thus being brought close to every spot that would afford the bird a possible hiding place.

One bright day in late winter found me at the scene of former vanquishments and defeat, putting in operation the strategic plan of attack that promised much of victory.

Stooping down below the branches of the alders, so that only the trunks of them obscured my vision, I began a slow and careful hunt. Almost on my knees I crawled, peering here and there, my heart thumping with suppressed excitement, and all my senses keyed to highest pitch, expecting every instant to see rising before me the form of that much coveted bird. Half the cover was worked, and still there was unbroken silence. Could some one have robbed me of my prize, or had he divined my purpose and sought some safer spot?

I was drawing near the further edge of the patch, when with a roar of wings that sent the blood tingling and surging through my veins the bird broke cover to my right and started with lightning speed for the woods across the creek. A hurried swing, a glance along the barrels, both discharged in quick succession, a closely following thump upon the dry leaves beneath a beechen tree, and he was mine.

Not the successes of later years, nor hammerless guns and bigger bags killed over well-trained dogs, ever gave a tithe of the pleasure that the lying low of that old grouse brought to my youthful heart. B. W. SPERRY.

NORTH CAROLINA.

The Men of Yesterday.

WEST VIRGINIA.—I was much impressed by the item "To-day and Yesterday" in a recent FOREST AND STREAM, by John C. Briggs, of Iowa.

Fifteen years ago, when I was a boy, I had among my acquaintances several old men, famous hunters in their day, when deer, bears and wild turkeys were numerous where now the much talked of red squirrel holds full sway. Recently I visited my old home in Pennsylvania, and not until it was suggested did it occur to me that but one of the old-time hunters that I knew is now living, and he is past fourscore years. I had the pleasure of hearing him recount some of his very interesting hunting experiences, as I have many times in the past, but this time I listened to him while sitting at his bedside, and very probably for the last time.

I have always been an enthusiastic admirer of the old pioneers, who built their cabins in our country when it was a wilderness, and killed their meat with the old flintlock rifle, and whose pleasure it is in their declining years to relate incidents of "early days." Very soon we shall have these facts pertaining to the situation of the country and abundance of game in the early only as second-hand stories.

Do we appreciate these lingering pioneers, and their interesting but truthful stories of the old times, as we should? I would be glad indeed to have more effort made to record actual occurrences as related by them, during the very short time we have a few lingering with us.

EMERSON CARNEY.

Each his Own Pew.

MILTON, Vt.—*Editor Forest and Stream:* In a recent issue a good deal was said regarding the extermination of our birds and animals, and of the investigations of Mr. Hornaday. Sportsmen have not awakened to the situation. They read in the papers of the decimation of the game, and then many start for a hunting trip on which moderation is not exercised; the desire to slay becomes the controlling passion, and the work of extermination moves one jot nearer to its closer drawing end. The remedy for this lies with the individual sportsman himself; and with each man working for the cause of moderation in the field, the tide, I am confident, will turn and the balance will not be so uneven.

Some years ago it was my good fortune to know a Vermont preacher who was called to a charge in a coun-

try town where the church had been for some time unused. The congregation were discussing plans for the cleaning of the edifice, which had become rather untidy during its disuse; little was done, however, and one day a committee called upon the dominie to consult him in regard to the matter. He promptly advised them to try the plan of each cleaning his own pew. The advice was good; we might profit by it; and instead of howling for better legislation and more game protection, knuckle down to the work of cleaning up "each his own pew."

Of course moderation in shooting is practiced by many, but with others the only ambition seems to be to kill. This is done thoughtlessly, perhaps, but it figures up tremendously in the end. Though I do not wish to pose as a saint, I may say that I have reconciled myself to thinking that one grouse in the pocket of my shooting coat does just as well as if I had a dozen. Market shooting and the sale of game are of course recognized as great evils, and should be stopped. But killing for numbers is the greater evil, and until each sportsman does his part all legislation and its enforcement will be in a great measure in vain. Now clean up your pew.

KENEWAH.

Small Bores and Big Game.

CINCINNATI, O., May 11.—*Editor Forest and Stream:* I inclose an extract from an exceedingly interesting volume, "The Fall of the Congo Arabs," by Capt. S. L. Hinde, who saw nearly three years' steady fighting in the service of the Congo Free State. Hinde was an ardent sportsman as well as a soldier, and scattered all through the book are items of interest to lovers of rifle and gun. The Mannlicher rifle's bore is not given. As used by the European nations it varies from .256 to .315; the Belgian army Mauser is .301, the Lee-Metford .303. I presume the metal-jacketed hard bullet was used. I believe the soft-nosed bullet that "mushrooms" easily is not available for the big, thick-skinned animals of Africa.

G. W. D.

"It is unwise to approach big game, especially in a circumscribed space, with a small-bore rifle such as the Mannlicher, since, however great its accuracy and penetration may be, its stopping power is practically nil. In this particular case my shoulder-shot at the first hippo passed through both shoulder blades and a rib, in each case leaving only a small hole, through which it would have been difficult to force an ordinary cedar pencil. My second bullet had entered just above the right eye and had penetrated the brain. It is fairly safe, as I afterward often found, to fire at the head of big game with the new small-bore rifles, for though it is improbable that the game will be bagged, except by accident, the animal is too stunned to know what he is doing, and his mad charges are without method. The use of a small-bore rifle for big game seems, however, hardly sportsmanlike, since the number of animals wounded in this way compared with those killed outright must always be enormous. Some two years after this I had nine close, careful shots with a Mauser rifle at a big bull elephant, the bullet used being within half a grain of the same weight as the Lee-Metford rifle; yet I did not succeed in bagging him, and eventually he made off at a pace which defied pursuit. The poor beast probably died in the depths of the jungle before many hours were over."

Sea and River Fishing.

The Salmon Fisher.

A Song of Nova Scotia.

You shall hear how Hiawatha
Angled in the Tusket River,
In the streams of Nova Scotia;
Angled for the lordly salmon,
Silver-sided, mighty swimmer,
Salmo salar, leaping salmon.

All his flies are in his fly-book,
Silver-doctor, Durham-ranger,
Jockie-Scot and Montreal;
Flies for bright and sunny weather,
Flies for dull and cloudy weather,
Flies of any sorts and fashions,
Many flies of many colors,
To entice the wary salmon
In the gleaming Tusket River,
In the streams of Nova Scotia.

Strong and supple is his fly-rod,
Double-handed, mighty fly-rod,
Strongly made, the best of Gotham;
Proper rod for skillful angler,
Angling in the Tusket River,
In the streams of Nova Scotia,
Angling for the lordly salmon,
Salmo salar, leaping salmon.

And his guide is Abraam Toney,
Indian guide and crafty hunter,
Hunter of the moose and wild deer,
Trapper of the bear and wildcat,
Catcher of the trout and salmon;
Skilled in hunting and in fishing,
In the ways of stream and forest,
Skilled in all the arts of woodcraft.

He will guide him to the river,
To the rushing, roaring river,
To the flashing, foaming river,
To the gleaming Tusket River,
To the streams of Nova Scotia.

He will choose the place for camping,
Cut the poles and stretch the canvas,
Lay the beds of fragrant hemlock,
Build the fire and cook the supper,
Skin the trout and fry the bacon,
Brew the tea and make the coffee,
Boil the maize, the antimony,*

While the silly gulls at nightfall,
Flying homeward from the ocean,
Flying homeward o'er the marshes,
In the silence of the forest,
In the stillness of the evening,
Laugh and scoff and jeer above them.

In his tent lies Hiawatha,
Wrapped in bison-robe and blanket,
Rubber sheets are spread beneath him,
Closed the tent-door, safely fastened,
Shutting out the chilling north wind,
Shutting out the fog and sea air,
Lest a cold should fall upon him,
Lest the rheumatiz should seize him,
Seize him on the Tusket River,
On the streams of Nova Scotia,
Angling for the lordly salmon,
Salmo salar, leaping salmon.

Now he feels the air grow warmer,
Feels the fire burn hot and hotter;
Like an oven seems the wigwam,
Like the rocks and sand at noontide,
When the midday sun is blazing
In the sultry summer weather.

Hotter grows my Hiawatha,
Bison-robe he lays from off him,
Now one blanket, then another,
One by one till all are off him,
As you peel a fragrant onion,
Till the tears come to your eyelids,
Till your eyes are red with weeping.
From his tent comes Hiawatha,
Forth into the moonlight striding,
All his clothes from off him throwing,
Walking in the quiet moonlight,
Heedless of the gulls, who mock him,
In the silence of the forest,
In the stillness of the evening;
Till the breeze has cooled his forehead,
And to slumber he returneth.

Early rose my Hiawatha
From his bed of fragrant hemlock,
From his bison-robe and blankets,
While the dew was on the grasses,
And the early bird was seeking
For the worm among the rushes,
And the porcupine was sleeping
In his den upon the hillside.
Rose and wandered to the river,
To the flashing, sparkling river,
Dancing in the early sunlight;
Plunged him in the shining water,
Bathed him in the cooling river,
Lost his sponge, a fresh and new one,
Lost it in the foaming river,
Lost it in the Tusket River,
In the streams of Nova Scotia,
Where the lordly salmon lieth,
Salmo salar, leaping salmon.

In the camp beneath the birch trees,
In the camp beside the river,
Toney cooks a fragrant breakfast,
Fries the trout and fries the bacon,
Makes a Johnnycake of cornmeal,
Of the golden maize he makes it,
Maize that comes from old Virginia,
From the sunny land of flowers,
From the Shenandoah Valley,
From the fair and balmy southland.

Then they step into the birch bark,
Lightly step into the birch bark,
Swiftly gliding down the river
To the pool where lies the salmon,
Lies the mighty silver salmon,
Salmo salar, leaping salmon.

Slowly rises Hiawatha,
In his hand the rod he poises,
Casts the fly upon the water,
Gently casts it in the water,
Deftly casts it on the water,
Casts it on the foaming river,
In the pool where lies the salmon.

Sees the fly the lordly salmon,
Gazing upward through the water,
Sees it sparkling in the sunlight,
Sees it swimming in the river;
Rising upward, quickly takes it,
Takes the fly of Hiawatha.

Strikes him now, my Hiawatha,
Strikes him till the hook has pierced him,
Strikes him till the fly has stung him.

Then in anger rose the salmon,
Shook his head in wrath and fury,
Rushing through the water madly;
As the birch bark shoots the rapids,
As the wild horse on the prairie,
As the iron engine rushes
On the railway of the white man,
In the country of the paleface,
In the land of Massachusetts.

Bendeth like a bow the fly-rod,
Screams the reel as if in terror,
And the stream is full of splashing,
And the birch bark rocks and trembles,
As the salmon strives for freedom,
Strives to break the line or leader,
Struggles from the hook to free him,
And to loose the fly that stings him,
Leaps from out the foaming water,
Leaps into the sparkling sunshine,
All his silver side revealing,
All his shining length revealing.

But my Hiawatha, standing
Calmly in the rocking birch bark,
Firmly holds the bending fly-rod,

* So our guide called hominy, on a notable fishing trip in Nova Scotia.

Gives no slack unto the salmon,
Laughs to see him madly rushing,
Laughs to see him leaping upward,
Till the lonely crane, the heron,
Pausing in his flight to watch them,
Lights upon a shining sandbar,
Standing on one leg to watch them.

Long and bravely fought the salmon,
Till he weary grew and fainting,
Till his strength began to fail him,
And he knew that he was losing,
That the line was slowly drawing,
Drawing slowly through the water,
Drawing to the fatal birch bark,
To the landing net of Toney.

Then he thought him of the camp-fire,
Of the frying-pan he thought him,
And he made a rush for freedom,
Made a mighty leap for freedom;
Almost in the birch bark leaping,
Splashed the water in the faces
Of the angler and the Indian,
Snapped the rod and broke the leader,
Broke the rod of Hiawatha.

"He is off," said Hiawatha,
"He is gone, a twenty-pounder!"
And his heart was cold within him,
Like a lump of ice his heart was.

Then returned my Hiawatha
To his home in peaceful Salem,
To the City of the Witches,
To his home in Massachusetts.

There he told the wond'ring people
Of his camp beside the river,
Of his tent beneath the birch trees,
Of his talks with Abraam Toney
By the camp-fire in the evening,
Of the porcupine and heron,
Of the laughing gulls that mocked them
In the silence of the forest,
In the stillness of the evening.

Not a word he said of angling,
Not a word of lordly salmon.

B.

The Avalon Yellowtail Record.

Editor Forest and Stream:

As a close and constant reader of the ably edited angling department in that best of angling papers, FOREST AND STREAM, I was more than ordinarily interested recently when I read the well written article of Señor X., published in your issue of May 14, wherein is described a spot which is truly one "of blessed memory." I refer to that fisherman's paradise, Santa Catalina Island, Cal. Señor X.'s description of the game qualities of the yellowtail gave me much pleasure; for in this gentleman I readily recognized a worthy brother of the rod and reel, who, like myself, can recall many a battle royal in the past with this truly splendid athlete of the sea. Moreover, when I looked at the photograph reproduced on page 387 I felt a peculiar thrill of satisfaction—as when one meets a friend whom he loves and whom he has not seen for long—for the fish pictured there are old friends of mine, and for the very best of reasons: I caught them all myself. However, as this conflicts with the description printed beneath the photograph, "One day's catch by two men with rod and reel," I wish to beg a little of your space as follows, so that I can substantiate my claim as above to this, the Catalina rod and reel record for yellowtail.

I spent the entire summer of 1895 at Avalon, Catalina. I went there for the fishing, and more especially to kill with rod and reel that tremendously powerful and game creature, *Stereolipis gigas*, commonly called jewfish. I made a careful study of the game fish of that locality, and during all my stay I had as a tutor the ablest guide I have ever seen. He is mentioned by Señor X. I refer to Harry Elms. To Harry, who was simply tireless in my service, I owe almost all the success that fell to my rod. Avalon is a most wonderful spot for fishing, but it is like any other place that I ever saw. To make the largest catches one must do the hardest work. Consequently, as we were both ambitious for the distinction most coveted of man and guide at Catalina, namely, of being "high hook," Harry and I did work faithfully. We were always on the way to the fishing grounds before dawn, nor did we return usually until after dark. Often we covered twenty odd miles in a day, pulling double, of course, coming home, but it was well worth it; for what Eastern angler, man of brooks and lakes, ever so much as dreamed of fishing like that which fell to my lot day after day? With the exception of the lordly tuna, easily the grandest game fish in the world, and which posed as a sort of mystery at Catalina in 1895, I took with rod and reel every species of fish enumerated by Señor X. and many more besides. Nor were they wasted—an all too common practice at Avalon, I am sorry to say—for everything went to the professional fisherman, who gladly exchanged an ample supply of bait for my daily catch. Harry was very anxious to have me break the Island rod and reel record for yellowtail. As the summer drew toward a close the fishing grew better and better, but try as we would, it seemed beyond me. Mr. James Neale Plumb, of New York, the best salt-water angler I have ever met, had established the record that same season, and had set all Avalon to talking thereby. On one occasion, using two trolling rods and having the services of two boatmen, this gentleman had actually killed in one day no less than sixteen yellowtail. I feel safe in saying that although this means little or nothing to the novice, the man experienced in the splendid game qualities of *Seriola dorsalis* will appreciate this angling feat at its true value. I know that I did, for I almost despaired of duplicating it. Nevertheless we kept on trying hard, working like beavers, the record problem always before us. Twice I was almost within sight of it, with catches of fifteen fine fish, which aggregated respectively 252 and 282lbs. This was good, but not quite what we wanted. Early in September our turn came.

The yellowtail were biting well about fourteen miles from Avalon, too long a row, however, for the early

morning fishing. We got at the beauties nevertheless by going up the night before, well provided with bait, and camping, rolled in our blankets, on the pebbly beach. We were out by starlight, and just as the dawn was flushing in the east, and when it was still too dark readily to locate the always dangerous kelp stems, I struck my first fish, a 20-pounder. Thereupon followed some really wonderful fishing. The limits of this article prohibit a detailed description of that red letter day; but suffice it that fish after fish took my silver smelt eagerly and greedily, tried my tackle to the utmost, and finally yielded to Harry's unerring gaff. Many we lost in the kelp as a matter of course—always the case in yellowtail fishing—but when I finally laid aside the rod from very weary fingers and took up instead an oar for the long row home, Harry, as happy as a boy, and with the scales in his hands, turned to me and said: "Mr. Beard, you've got the record—twenty fish, 368lbs!" Now I come to the photograph mix-up, the which has caused me to write this article.

On the following morning, early—for we had not reached Avalon until after dark—I had the photographer snap a picture of Harry and myself and the fish. This done, I was on the point of turning the catch over to Vincente, the fisherman, so that he could send them to Los Angeles by steamer, as was his custom, when one of the onlookers said to me: "Do you mind, Mr. Beard, if I have my picture taken with those fish?" I never could see any fun in being photographed with another man's catch, as some of the visitors at Avalon seem so fond of doing, but that's no affair of mine, and on the spur of the moment I said: "Go ahead." It never occurred to me that this fellow would ever be standing in my shoes and claiming what I had worked so hard to earn. Whereupon, together with his friend, they took our places, and in an instant the thing was done.

As far as I know, that is still the one-man, one-rod, one-day record on yellowtail at Avalon. Consequently, when I look at this picture of the man on the right and remember that he was the then bartender of the Hotel Metropole, and probably never caught a fish on a rod in his life, it gives me a queer sensation, to say the least, seeing him as I do quietly posing there and claiming my fish and my record. I took four jewfish, 624lbs., and 131 yellowtail, 2,332lbs.—largest fish 43lbs.—making in all a total for my summer at Catalina of 5,412lbs. of game fish.

STUART-MENTETH BEARD.

NEW YORK CITY, May 14.

Williams River Suckers.

THERE is a fish, purely North American, found between Canada and Florida, which must be familiar to nearly every fisherman, but which has never been written about to amount to anything, and the books of reference which are at hand ignore it altogether. The humble, but useful, sucker is referred to. He is unfortunate in name, and though he is related to the Cyprinida family, keeps the even tenor of his way and leaves it to others to establish his claims to that apparently aristocratic name. The sucker is a sluggish fish, but very good to eat. It seems of even less intelligence than other fish, and the canard of one being taught to drink whisky from a nursing bottle was suggested, no doubt, by the fancied resemblance, to the suckers, of the lips of those who are continually thinking upon alcoholic joys.

Our gang takes an annual fish for suckers in Williams River, and this is written hoping that it will be of interest to the sportsman to hear of the recent camping trip for that purpose. The stream in which they are found is one of the clearest, coldest trout streams in the West Virginia mountains. The day is past when a large catch can be made, but it is still possible to catch a couple of dozen very fine trout in a half day's fishing. The sucker is only found in one part of the river. The stream at the Meadows is perhaps 30ft. broad. At the head of the "improvement" the river dashes down a rough fall of 30 or 40ft. For a mile or so it has a great fall. The rapids are interspersed with trout pools until the Deadwater is reached. There for nearly two miles the stream is apparently without a current, and the water is deep and wide. This is the home of the sucker, and the safe retreat for the trout in low water and the winter, and it has kept them from being wholly exterminated. It may be added that such a sluggish stretch of water is very unusual in a mountain stream, as they generally slip away with a uniform fall. In this Deadwater it is very common to see drift floating up stream when the wind is drawing that way. It is the place where the deer used to run when chased by dogs, and untold numbers have been killed there, swimming in the water. We have not chased deer here for eight years, and the last Legislature made a close season of five years for killing deer.

The suckers live in this deep water the whole year round with the exception of two weeks about the first of May, when they come up on the riffles to spawn. When they first make their appearance they can be caught. They must either be taken at the spawning season or not at all, and as it is just as destructive to take a fish in January that will spawn in May as to take that same fish in May, I cannot see but that we have a moral right to a certain number of fish every year from the countless numbers in Williams River. In early spring this fish can be caught at the rate of about one an hour, in the style of Rip Van Winkle, who "would sit on a wet rock, with a rod as long and heavy as a Tartar's lance, and fish all day," and I have taken them that way.

The suckers raised in this cold mountain stream, just before spawning, are good to eat. They rival the mountain trout—and there are many who maintain that they surpass trout as an edible fish.

On the last occasion our gang camped underneath some beech trees on the edge of the river, where there was a great rack heap handy for a big camp-fire. By the way, a big fire at your feet is the secret of being comfortable at night in camp. In a short time a mountaineer came by and told us that under that rack heap lived the biggest trout in those parts; and thereby hangs a tale.

We were equipped for trout fishing, and this same man

told us that the suckers had not come up. A few hours' fish netted thirty-one trout from 9 to 11in. in length. A few suckers had been seen, but only one caught. We were afraid we were too early. We had a very comfortable night and a pleasant awakening, for this is the home of the birds. To say that their noise was deafening would be to exaggerate; but the sounds were truly wonderful.

After breakfast we took our rods and started down stream for trout. The writer had caught eight, all large, and was not caring whether the suckers had come up or not, when on a shallow riffle he discovered the advance guard. The bottom of the stream was literally paved with them. There must have been a thousand in sight. Down the stream for deeper water they went, exposing themselves and making a show that would have moved the blood of a dead fisherman. All hands and the cook got below them and drove them up stream like a flock of sheep to an eddy about 2ft. deep in a bend, where lay two submerged logs. The implements were a dull, a set of hooks to drag into their mouths, and a steel gig. The gig proved the most effective, and would have been most terribly destructive had not one prong after another broken against the bottom, until only the middle prong remained. Then it was a sportsman's gig. It took a very expert man to kill a fish with it. It amounted only to a spike pole. It was at this stage in the game that a most destructive method was introduced, and it was all owing to an article recently read concerning taking trout in Scottish streams by stroking them. The fish would make the water very muddy, and only one or two could be taken at a time.

Then it was that I won a point. Openly derided by my companions as the worst kind of a fool, I lay at full length on the sunken log, getting wet all over, and reached out in the pool as far as I could. I felt fish lying several layers deep, and it gave me an indescribable sensation to find that my hand did not disturb them. I was actually able to pick out a big fish for my experiment, and I commenced at its tail and passed my hand gently along its body to its head, when I grasped it and threw it to the bank. This was repeated until I had thrown out twenty-three, when we decided we would have to stop if we wished to fish the next morning. When the fish were strung and counted we found that we had eighty-two. They were from 12 to 19in. long, and had an average weight of about 1½lbs.

The next morning the fishing was repeated, and the hand method was the only plan pursued. We took sixty-three, making the catch 145, which would weigh at least 200lbs. We had friends to use this supply of fish, and it is no exaggeration to say that we could have tripled the catch easily, so I think we were moderate; and while it was a good deal like a general slaughter, the fish seemed to be appreciated by the friends at home.

When we got back to camp we found we had a visitor. A Southern colonel, in whose demesne we were camped, had called to take dinner with us. It should be stated that we had been fishing for trout in odd times, and had caught some large ones; but do what we would we could not get the big one under the rack heap by the camp to bite. We had tried all hours, and all kinds of bait and flies. But just before dinner the Colonel, who had probably not caught a fish since he was a boy, picked up a rod, and putting on a corpulent worm, stepped heavily out to the shingle beside the pool and made a cast. The bait had hardly touched the water when there was a splash, and the Colonel had him. He was fishing with a light and valuable fly rod, but he jerked the fish out before he could turn, happily without breaking the rod. It was a 13in. trout, of heavy build. There was a muttered swearword or two from the man who had fished the most persistently for that identical fish, but the Colonel was so well pleased that we could not quarrel with him for his good luck.

ANDREW PRICE.

MARLINTON, W. Va.

Fish-Eating Birds.

WHEN young Von Steinwehr, of Cincinnati, shot the loon on Geneva Lake, in Minnesota, last summer, nearly all the guests at the beach condoned the act, because, they said, it was a most excellent shot, right in the eye, from a moving boat, at a distance of 100yds., with a Winchester rifle. The big bird was not mutilated at all for a specimen, and it was accordingly stuffed forthwith by taxidermist Lindquist and mounted as a trophy at the Geneva Beach Hotel. It stood on the glass cigar case in the office, where its long indicative bill pointing constantly toward the open "tickler" on the disk, served as a perpetual reminder of unpaid dues for boat hire, cigars, fish bait, frogs and ginger ale.

Old man Updegraff, however, declared that it was a shame to kill the loons. There were only a few of them left, and he loved to see them flying from lake to lake, and to listen to their weird call just before a rain. "For," he said, "it is a fact that rain is sure to follow the cry of a loon within twenty-four hours after."

This statement was disputed on its face by Prof. Vandemore, who declared that he was at the beach one whole summer when it did not rain at all, and the loons hollered every night all the same.

"Oh, that was an off year," Mr. Snedcor rejoined. "They just hollered out of spite, because it didn't rain!"

All hands were examining the specimen just after it had been brought in, and presently one happened to notice the tail of a four-ounce perch sticking out of its gullet, which the bird seemed to have been in the act of swallowing when it met its fate. This circumstance was thumbs down for Mr. Loon, for it at once directed prejudice against him as a fish destroyer, and anglers are jealous of their prerogatives, especially when they fish for count, as most of them seemed to do at Geneva Beach. Any feathered pirate (kingfisher, loon, gull, crow, or fish hawk, land bird or water fowl) which would detract one iota from the chances of an angling competition would come under the ban and be destroyed at once if reached.

This disturbing factor naturally raised the question as to the actual damage done to sport and the economic fisheries by fish-eating birds, as well as to their number and variety; and I was accordingly induced to investigate from data opportunely at hand whereby I was

enabled to reach results which I am certain will surprise your readers as much as they did me. The facts I gather were first submitted by Robert Ridgeway, Curator of the Ornithological Department of the National Museum at Washington, to the International Fisheries Congress, held in London in 1885; and as the summary is my own, compiled from the Ridgeway list, I doubt if the like has ever been published before. From the prefatory note in the catalogue it would seem that there are no less than a grand total of 277 aquatic species, in addition to the fish-eating land birds, like the kingfisher, osprey, osel, etc., which live largely upon fish. Indeed all water birds may be assumed to be piscivorous. Grouped in their orders, they would appear as follows:

Catalogue of Aquatic Fish-Eating Birds.			
Order of Herodiones or Herons.			
Herons, varieties.....	14	Ibises	4
Storks	2	Spoon-bill ibis.....	1
Total, 21.			
Order of Limicoles or Shore Birds—Eat Eggs or Spawn.			
Oyster catchers	3	Curlews	5
Turnstones	3	Yellowlegs	2
Plovers	15	Greenshanks	1
Snipes	5	Willetts	1
Sandpipers	22	Tattlers	2
Woodcock	2	Phalaropes	3
Godwits	4	Avocets	2
Total, 70.			
Order of Paludicoles or Marsh Birds			
Rails	10	Coots	2
Gallinules	2	Limpkin	1
Crakes	2	Cranes	3
Jacana	1	Flamingo	1
Total, 22.

Order Pygopodes or Divers.			
Grebes	8	Puffins	5
Loons	5	Doyekie	1
Auks	7	Guillemots	14
Total, 40.			
Grand total, 277.			

We discover, however, that reprisal is the prime order of nature, and that the water birds do not have it all their own way; for the pikes, muscalonge, and gars feed largely on shore birds, tilts or sandpipers especially; while many a loon, teal or dipper becomes a prey to the larger fishes, who incontinently turn the tables upon them and swallow them whole. Swallows, when flitting upon the calm surface of lakes in summer, are often caught on the wing, and small land birds sitting on branches which overhang the shore are often picked off by ravenous pike, which leap 2ft. upward to seize them. And sometimes a mother goose with her family of goslings will be sitting unsuspectingly on the water when one of the brood suddenly flutters and disappears, and presently another follows, and then another, until at last the old lady, who is unable to count, finds herself wholly bereft and childless, despoiled by a voracious pike. In the ocean too the angler or goosefish with gaping mouth, the shark, the barracouda and the cod all live on sea birds; and in Newfoundland the fishermen use the petrels, shearwaters and hagden for bait in catching codfish; and on the seal islands in the Pacific the fish known as killer will hang around the rocks and snatch the seals off as they clamber up the kelp-covered slopes.

Thus goes on the struggle for existence. It is not only "dog eat dog," according to the adages, and "fleas which have other fleas to bite 'em, and so go on ad infinitum," but in all the animal kingdom we find the law of reprisal in constant operation. Man's sympathies go with those which affect his own subsistence least. If edible ducks were the customary victims of the pike, it might become a question with the sportsman as to which he would incline, depending mainly upon his proclivities as angler or hunter. As for the loons, gulls, grebes, hawks and kingfishers, which enliven our lakes and give them charm, I would spare them all and grant the few fish they catch; for a wilderness without animal life is as desolate as a hearth without a fire. Tenantless, it is almost as a body without a soul.

CHARLES HALLOCK.

Spring Fishing at Charleston Lake.

CHARLESTON, Ont., May 12.—Spring salmon fishing is at its best here now. Col. Van Cleef, Comptroller Hancock, Judge Woodruff, Messrs. Gummere, Montgomery, and Capt. R. Reading, of Trenton, N. J., made their annual visit last week, and catches averaged from twelve to eighteen fish to a boat. Messrs. Iffland, Wisner and Waldman, of Newark, N. J., are here, and having phenomenal success. Largest fish caught this season, 18lbs., 13¾, and 12¼.

The fishing for small-mouth black bass opens June 15, and the guides say that it promises to be an extra good season, as the bass are very large, and the water is at the proper height. W. H. LEAVITT.

BOWMAN'S BLUFF, N. C.—Inclosed is check for one year's subscription to my favorite periodical. Go on saving your Plank. Game law's a dead letter here, and every poacher does as he likes, unless you can catch him.

Fresh-Water Angling.

No. VI.—Pickerel, Pike and Mascalonge.

BY FRED MATHER.

HERE are three good American game fishes which somehow seem to be mixed up in the minds of anglers who fish, but do not read. They know the three names, and in a vague way attach them to the fish found in their local waters. To readers of FOREST AND STREAM the differences have been pointed out in print and in picture many times, but these things require to be hammered at and reiterated year after year before a few anglers in separate localities are well enough informed to begin the education of their neighbors. There is no good reason for confounding the three species, for they are not only distinct in points of structure, but their colors differ so greatly that there should be no confusion, and color is more regarded by the angler than by the ichthyologist. A man should not only know how to catch fish, but also how to name them correctly. With others I have labored at the herculean task of correcting our mixed and often absurd nomenclature of American fishes, and thirty years ago I hoped to accomplish it. To-day I am content to help with the good work, which may be completed a century hence.

Pike is an old English word applied to the only member of this family and genus which inhabits Europe. The Germans know it as "hecht" and the French as "brochat." This is the *Esox lucius* of the books. The English have three names for the fish, to denote different sizes, just as they have a dozen or more names for a salmon, to express its age or condition; when small it is called a "pickerel," just as a cock under a year old is called a "cockerel," the termination being a diminutive. Therefore "pickerel" is a name denoting a small pike, and scholarly anglers of America so accept the name and apply it to one of our five species of this family, for we have that number, while Europe has only one. In England when the fish has grown to 4lbs., more or less—I am not certain about the limit—it becomes a "jack," and is so known until it can pull the scales down to 10lbs., when it receives its third degree and is entitled to be known as a pike. These three names were imported into America by our ancestors and applied indiscriminately to three species, and we have never been able to correct the error in the popular mind.

Added to this, they found a giant member of the family with the Indian name which has been perverted into mascalonge, and this added to the confusion. In this attempt to straighten out the kinks of nomenclature I am following the best authorities, and make no claim for original work in this line. If the angler will consider the fact that of all the species of fresh and salt-water fish which inhabit or frequent the North American Continent there are only three which bear the same name from Maine to Florida, he will get a fair idea of the abominably mixed state of the names of our fishes among anglers. They are all straight among the fish sharps, who use Latin names that are recognized by scientists of all countries; but the busy man, who has no time nor taste for such investigation, wants a plain, single-jointed name for his fish, and the three fishes which have a common name all over our coasts, rivers, and the Great Lakes, are the shad, eel and sturgeon. These are all English names of English fishes, and could not be misapplied because there was no chance to mix them, as in the case of the pike family. Outside of these three fishes there is no other American fish which has not from six to thirty names in different localities—I was about to say sections, but in our now united country such divisions no longer exist. With this as a preamble, necessary to a fair understanding of the pike family, we will take a look at each of the three prominent members of it, and then "go for 'em" with hook and line, with that good old Latin war cry inscribed on our corks: *Soc et tu em*.

The Species.

It has been here recorded that America has five species of this family, and as the family has but one genus, *Esox*, that is all there is of it. Two of these species are small, rarely exceeding 10in. in length, and therefore may be dropped as far as the angler is concerned, although for the table these small species are the only ones that I value enough ever to buy in market. They infest cold trout brooks, and should be eaten to get them out of the way. One of them inhabits the coast-wise streams east of the Alleghanies, and the other the Mississippi Basin; and as they are as voracious as their larger relatives they are great pests in trout streams and ponds. Long Island brooks are infested with them, and they devour trout fry in great numbers, as well as the young of other fishes.

Pickerel.

In portions of Canada this name is applied to a hard-finned member of the perch tribe, and in parts of the United States it is used properly, and also improperly, for the great pike. The pickerel, *E. reticulatus*, gets its specific name from the Latin *reticula*, a net, on account of a more or less distinct black network on its yellowish or greenish sides. This should be a sufficient guide to the angler, but in some waters where this and the next species exist there are anglers and fishermen who do not separate them, or if they do they call the larger species mascalonge when they are simply pike.

In the three species of which this paper will treat the shape and position of the fins is the same. Except in large specimens there is no aldermanic abdomen, the lines of the back and belly being nearly parallel, with the soft dorsal fin set far back, near the tail, and but slightly in advance of the anal fin, which, with its fewer rays, comes out about even behind.

Structural differences, which are the most important points in determining species, have been illustrated recently in FOREST AND STREAM, and we will skip them, for the angler considers color to be the main thing, which in this family is sufficiently constant and varied in the species for our purpose.

The pickerel is called "jack" in Virginia and Southern waters, and as they have no other species there we can

get on understandingly. It is found in the clear, grassy streams and ponds of the Atlantic coast from Maine to Alabama, but not west of the Alleghanies, nor in the Great Lake region. It was introduced into the Adirondacks from Fulton county, N. Y., in 1842,* and they have spread from the "south woods" north to Meacham Lake, ruining many good trout lakes and streams, for worms, insects and their larvæ do not enter into the diet of this family to any noticeable extent; they live on fish and are the sharks of fresh water. The pickerel seldom exceeds 6lbs. in weight, and 8lbs. is believed to be the limit of its size.

Pike.

In early American angling literature Frank Forrester called this fish "the great northern pickerel," Genio C. Scott, 1875, did not know it, but he wrote of it all the same. He was a salt-water angler only, and padded out his work by borrowing from previous writers, without credit in most instances. Norris follows Forrester in his nomenclature, but figures a pike, and not a pickerel, as the "Great Lake pickerel," and he also figures the mascalonge correctly, and under the head of "the pond pike, or common pike," he gives an indication of the network on the sides of the pickerel. This is in his edition of 1865, and the tangle was being slowly worked out for anglers. Of course the scientists had it all clear, but they are so learned (and only condescend to write for those who are as learned as themselves) that they talk over the head of the ordinary angler, who, by the way, does not see their dust-covered tomes, and would not understand them if he did.

The pike grows to a weight of 40lbs. and over, and this fact makes some fishermen confound it with its big brother, the mascalonge. Its color is a bluish gray, with oval white spots about the size of a white bean. As the mascalonge is black spotted, plain or slightly barred, the confusion in names can only exist among those who have not seen both species. The fact that it has no scales on its cheek and none on the lower half of its gill cover would not be noticed by the average angler.

Range of the Pike.

The pike, *Esox lucius*, has probably the greatest range of any fresh-water fish. It is found throughout northern Europe and as far south as Italy. It occurs in Asia, and we would not be surprised to find it scooping in the smaller fishes in some of the lakes and streams of Africa, when the British angler explores that continent in search of new fields and fishes. Ah me! if I were only twenty now, with the spirit of adventure that once raged, and the geographical knowledge and possibilities of travel of to-day, the streams of Siberia, South Africa and India would be a mine of fishy wealth to explore.

In America the range of this fish was originally from Lake Champlain to northern Indiana and the northwest to Alaska, according to Jordan. It has been extended to the Adirondacks of New York by vandals who placed it in the trout lakes there for reasons best known to themselves; let us hope that it was in ignorance of the destructiveness of the fish. In places where the pike occurs it is commonly mistaken for the mascalonge because it is larger than the pickerel, the exceptions being where both of the larger species are found. How any man who has once seen these two great pikes can confound them is a great puzzle. I quote the following from my "Adirondack Survey Notes" to FOREST AND STREAM in 1882, when I was the ichthyologist of the survey, under Supt. Verplanck Colvin, and had the noted guide Jack Sheppard detailed to serve me:

"There is a fish in Long Lake which some call a mascalonge and others a pickerel," said the guide, "and no one seems to know exactly what it is, or if they do, the others who differ from them don't accept their decision. You should go there and see the fish and settle it."

"On arriving at Kellogg's on Long Lake we found the question of maskinonje versus pickerel being argued in the hotel office. One man said that he had been all through New York markets and had asked the differences between the fish, and the market men had always shown him fish like those in the lake for maskinonje, or mascalonge, as it is here called. Fortunately the landlord had one in the kitchen, and Sheppard suggested that it be shown to me. There was no difficulty in determining it to be the great lake pike, *Esox lucius*. It is singular how much mixed the mass of anglers are about this family of fishes. The colors alone are sufficient, generally, to identify them without going into the structural differences, as scales on cheek, etc., yet many who can distinguish the two named do not distinguish the great pike from the smaller pickerel, *E. reticulatus*, the one which only grows to 5 or 6lbs. and has black network on its sides, but call them both 'pickerel.' We only stopped next day long enough to take four specimens, two of which were too large for the alcohol tank, and therefore had to be given away. The smaller ones, about 2lbs. each, were preserved."

An angler is not half an angler unless he knows his fish. To catch a fish, or to shoot a bird, and be unable to identify it, proclaims one to be a duffer unless the specimen happens to be a stranger in the country where it is killed, and is therefore a legitimate subject for speculation and for appeal to higher authority. There is no good reason why any intelligent angler should, in this late day, mistake or confound any members of the pike family, because the colors alone will furnish a key to them, even if he has no knowledge of their structure, on which scientists base the difference.

The Mascalonge.

The name of the giant American pike is variously spelled; the above is a popular way, and is nearer to the original than "muscalunge," which is a further corruption. Our older angling writers, Scott, Roosevelt, et al., failed to grasp the fact that the Canadian French took the name of the fish from the Ojibwas, and twisted it so that it would appear to be derived from the French *masque-allonge*, or long face. Forty years ago I knew some Ojibwa, enough to interpret in a small way for a Government survey, and in FOREST AND STREAM in the

* Twelfth Report of the Survey of the Adirondack Region, 1882.

WESTERN BROOK PICKEREL (*Esox umbrinosus*).

PICKEREL (*Esox reticulatus*).

PIKE (*Esox lucius*).

MUSCALONGE (*Esox nobilior*).

80s I fully explained, to my own satisfaction, that the original Ojibwa name of mas-kinoje had been corrupted into its many modern forms just as their tribal name has been perverted into "Chippeway." In their tongue "kinoje" means a pike, and "mas" is their term for spotted.

In those days I had paid little attention to the different fishes beyond the species which I had seen in the Hudson and Mississippi rivers, but I clearly remember seeing what I then called "pickerel" drying by hundreds on the frames built by the Indians for preserving food for winter, a strange form which was black spotted, and which the Indians called "mas-kinoje," a name easily twisted into maskinonge, etc. The book spelling has been followed, but the name of the pike, as I remember it from the spoken Ojibwa, was more like "kinozhee," but it is hard to put an unwritten language in type. Scott says: "The Ojibwa name of this fish is 'maskanonja,' meaning 'long snout.'" When we take this all in it is funny, because Scott took his translations at second hand. Norris, that American Walton, wisely skips all reference to nomenclature, and only tells what he knows, and therein discounts all the writers who came after, with their accumulated knowledge of strange fishes which were not accessible in the days when they wrote.

The range of the muscalonge is quite limited. It does not exist in the Adirondacks, although the St. Lawrence River and Lake Ontario are its home. It is found in the Great Lakes and in Chautauqua Lake, in the southwest corner of New York, which, although near Lake Erie, drains its waters into the Alleghany River through Conewango Creek, and thus the fish gets into the Ohio Valley. Curiously, this isolated branch of the species is not spotted, nor does it grow as large as in the Great Lakes, where there are legends of its having obtained a weight of 100lbs. I have seen this fish among the Indians about Crow Wing and Mille Lacs, Minn., in the 50s, but never saw one that would weigh over 10lbs. with them. These were black spotted, and as these waters flow into the Mississippi River, the only reason that they differ from their brothers of the upper Ohio Valley seems to be that there must be impassable water in the rivers before they join.

Differences in Habit.

The pike will go on mud flats in spring freshets, and in

hot weather is found in shallow, warm water among the weeds, while a muscalonge loves deep, cool lakes or swift, clear waters. Floods do not tempt him to roam over lands that are temporarily flooded, and with this knowledge we may find a key to the problem of distribution and of the isolation of some members which by interbreeding have lost the spots. The Wisconsin fish are spotted.

Pickerel Fishing.

The angler for pickerel may take his fish in many ways, and with as little consideration for his game as the pickerel has for a toothsome trout. The fish is the worst kind of a cannibal, and one that weighs twice as much as another thinks of his smaller relative merely as something to decorate his interior. This is the best trait in the character of this whole family—they destroy each other—and as a fishculturist I wish they would emulate the famed Kilkenny cats. The world would be better without them. Therefore any kind of a mouthful of steel is pardonable to use on the brutes. I took one of about 4lbs. weight which had three small trout in its pouch, and which wanted my chub to add to its collection. Three trout to feed a durned pickerel! It brought to mind the portents which foreshadowed the murder of Duncan by Macbeth, as related by the Old Man, who said:

"On Tuesday last
A falcon, towering in her pride of place,
Was by a mousing owl hawked at and killed."

From my point of view those three trout were sadly misplaced in the economy of nature; for they should have met a better fate; they were "lads of high degree," and they went to sustain a fish which Adirondack guides call a "snake-eater."

In trolling for pickerel, if you use a spoon, and it is as good to troll with as a minnow gang, and less trouble, let it be suited to the size of the fish which you may reasonably expect to strike. A pickerel has an eye for fish which will fill his bill, and seldom makes the mistake of tackling a fish which is too big, although in the South Kensington Museum, London, I saw a plaster cast of a 20lb. pike which had choked to death in trying to swallow one too near its size, and had been captured and set up as a horrid example of greediness. Therefore let your spoon or minnow be in proportion to the

game which you expect to get. This is something which the beginner must learn, and perhaps there is no better way than to consult a first-class tackle dealer, but it is better to err on the side of smallness, whether of spoon or minnow.

Trolling the Spoon.

In trolling from a boat, use an ordinary trout or bass bait rod—a fly rod is hardly the thing if the fish are large. Row slowly, with just enough motion to spin the spoon well, and you can judge of this by putting it over the side and watching it. The slower the better, if the spoon spins and glitters well.

These remarks apply to all of this family, and therefore there is no need of repeating them for the pike and muscalonge. Having fed all these fishes in the confinement of aquaria, and watched them take live minnows, I may be pardoned if I say just how all the pike family approach and take their prey. When they are very hungry they will make a sudden rush from below and seize the living minnow and then retire with it to consider the next move. Then, if it has been taken cross-wise, or tail first, it is ejected and turned so as to be taken head first, when the fins and scales lie in the proper manner to slip down easily.

If, however, the pike or pickerel is not hungry, but would take a little something if it looked tempting, the tactics are different. There is no sudden rush; the game is pointed as a setter points a woodcock. There is no motion of the body, nor of that propeller which we call a caudal fin, but a wary motion of the dorsal and anal fins sends the fish slowly ahead, while its eye glitters with suppressed excitement. The distance is gauged, there is a rush, a flash, and the minnow or spoon is engulfed.

If using a spoon the angler knows whether his game is hooked or not, and that the fish cannot eject the bait if it would; and then, after a short struggle, the fish yields. In describing how a pickerel, which is not hungry, approaches a fish, the only object is to warn the angler not to row too fast and thereby pass too quickly from the field in which a pickerel or other member of the family wishes to approach its prey.

The Minnow Gang.

There is a gang on gut or gimp, consisting of a lip hook for the minnow and a hook to be carried over its back and inserted under the dorsal fin, and then one of a triplet is hooked into the tail in a way to bend the minnow and thereby give it a semi-rotary motion. It is a most murderous combination, but none too severe for this cannibalistic family.

Skittering.

A stiff cane is used for this work, and should be from 18 to 20ft. long in order to cast 30ft., and then "skitter" a minnow on the surface of the water. I have used a ringed Limerick hook, size 4-0, but do not know why this has been preferred further than that it was the first hook I used for the work, and so to use it has become a habit. To-day, if a change was made, it would be for the more modern turn-down eye Pennell hook of that size, or of a size larger. A foot of gimp or of piano wire should connect the hook with the line. The minnow or frog should be hooked through both lips, and it is merciful to pierce the brain with a knife, because the bait is as good dead as alive, and it is cruel to kill it by such rough usage as skittering.

From the shore the bait should be cast into open places among the weeds, but from a boat the angler should stand in the bow and cast ahead into unbroken water.

Still-Fishing.

A good bait rod and reel are the proper tools, and a live minnow hooked just under the dorsal fin, or a frog hooked firmly in the muscle of a hindleg, near the backbone, is the best of baits. If a float is used it should allow the bait only 3ft. to go down, unless the water is over 10ft. deep, because all of this tribe seek prey that is above them, as is denoted by their lower jaw being longest. A float is a nuisance when a reel is used, but is one of those evils which we sometimes term "necessary."

Keep Cool!

When a pickerel seizes a spoon hook it is either well hooked or lost at the moment of contact, as the fish knows at once that it has made a mistake, and will get rid of the combination of steel and other ingredients if possible. With a minnow or frog it is different. The pickerel may take it crosswise in its mouth and run to cover with it. Let him run and have time to gloat over his prize, eject it, and take it head on and pouch it. This may consume some minutes, during which there is no sign of life at the far end of the line. Wait. After the bait is fairly down the pickerel moves and finds itself fast, and then the angler may begin the fight with no danger of drawing the bait away and alarming his game by a premature movement.

Pike Fishing.

The same methods are used for pike as for pickerel. Their habits are much the same, and they are found in similar waters. For the larger fish we must use larger hooks and baits. Where pike of 10lbs. may be looked for, a 7-0 hook or larger is the right size, and the minnow should be 5 to 6in. long, frogs in proportion. Spoons are made in so many shapes (and the makers have a scale of sizes of their own) that the angler must work out this problem of size.

There are spoon baits in great variety, and all of them will catch weeds, some more than others, and the angler must reel up occasionally to look for weeds, since a bit of green weed on spoon or minnow tells your game that it is an undesirable morsel, for the fish knows that no living minnow or frog drags weeds with it.

Both pike and pickerel are taken through the ice with live baits, and this is the only winter sport of the fresh-water angler. Many holes are cut and the lines are attached to "tip-ups," which signal the fact that a fish is hooked.

Muscalonge.

It is in the Great Lakes where this king of the pike

family grows to its greatest size, but with an increased population they do not live long enough to attain their maximum weight. The clear waters of the Thousand Islands, at the head of the St. Lawrence River, is a famous place for them, but their numbers have greatly decreased in late years. It is a gamier fighter than its relative, the pike, and coming from clearer waters it is a better table fish.

It is mainly caught by trolling the minnow or the spoon, with an 8ft. bait rod, a multiplying reel, and rooyds. of good cuttybunk bass line. The best seasons for mascalonge are in June and again in September and October. All fish weighing over 10lbs. should be gaffed; the landing net is too light for them.

The Maine Season.

Boston, May 13.—Fishing at the Rangeleys is not yet up to expectations. The woods are still full of snow, and snow water is not considered conducive to good fishing. Camp Prospect, Richardson Lake, is open. Mr. Cristie, of Portland, and Messrs. F. O. Walker and W. M. Small are there. A lady of the party is reported to have landed a trout of 4½lbs. the other day. At the Upper Dam fishing has continued rather slow, but will be improved by warmer weather. The fishermen rather expect to be disturbed by the sluicing of the logs through the dam, which will soon begin. The Berlin Mills Co. has 14,000,000ft. to go through the lakes and the Upper and Middle dams this spring. It is suggested that the log sluicing and towing will "stir up the trout." The Tuttle party, including Messrs. R. A. Tuttle, C. A. Hutchins and E. H. Sampson, will be on their regular spring fishing trip at Lake Point Cottage, Rangeley Lake, for the next three or four weeks. Mr. and Mrs. C. W. Porter go to their cottage at the Rangeleys tomorrow. Mr. C. W. Barney, of Lynn, is about ready to go to his cottage at the Rangeley Lakes. Mr. J. A. E. Hall will go to Allerton Lodge, Mooselucmaguntic Lake, this spring with the Haskell party. Hon. A. P. Williams, of California, has gone to his summer home at Fairfield, Me. Soon he will make his annual fishing trip to Indian Pond, in the Moosehead region, where he has been for so many years.

The Megantic Club houses and camps are open to members and friends. The boats, wharves and buildings have been put in good repair, and some of the people are already there, though snow is still to be found in abundance in the woods, and it will require warm weather to make the best of fishing. The buckboard road from Eustis to the club's preserve, begun last year, will be pushed to an early completion, so that members and guests desiring the novel ride through the forests will have the opportunity. Mr. L. Dana Chapman, secretary and treasurer of the club, will start Sunday evening for the club preserve with a party of members and friends.

Mr. E. H. Wakefield, Jr., and R. O. Harding fished Chamberlain Brook, and the Cape, the other day, with fair success. Later Mr. Wakefield is a happy man; made so by the capture of a trout of 9½lbs. and one of 4½lbs., at Sunapee Lake, on Tuesday. Late reports from Newfoundland Lake mention a cold and blustering week. Mr. Levi Woodbury has just returned from that lake with two trout of 11 and 9lbs. respectively. He heard of a trout taken there weighing 20lbs., and of two salmon weighing 10½ and 8lbs. Mr. G. W. Tenney has returned from the same lake with two salmon and several trout.

Boston, May 16.—The reports of catches of trout and salmon begin to come, since the warmer weather. At Lake Webb, Weld, Me., the fishing is reported good. Fish Commissioner L. T. Carleton was high line there up to last Tuesday with a trout of 7lbs. He has also taken a salmon of 5lbs., and two smaller trout of 2lbs. and 3lbs. Farmington reports say that fishing is good at Varnum's Pond. H. C. Russell has caught two lakere; C. H. Mahoney, one lakere; Sheriff Blake, two salmon; Dr. Hitchcock, one salmon; Dr. Hardy, one salmon; Mrs. Ellen Smith, one salmon; Mrs. C. E. Lincoln, one salmon. At Clearwater Pond the catches have been good. Mr. Francis Hernwood, of New York, has caught one lakere of 4½lbs.; Mr. Ben. Woodcock, one salmon of 3½lbs. On another day Messrs. Pierce and Hernwood took three salmon of 5, 4 and 3lbs. respectively.

The latest reports from the Rangeleys mention a 10lb. salmon taken by Rev. W. H. Ramsay, of Farmington. Mr. N. F. Prentice, of Worcester, has made the champion catch of the season thus far, in the vicinity of the Mountain View House. He took twenty-nine trout of the united weight of 65½lbs., among the number were trout of 5½, 5¼, 4, 3½, and 2½lbs. At the Mooselucmaguntic House, on the lake of the same name, Mr. and Mrs. G. H. Heywood, of Gardiner; Mr. and Mrs. E. R. Lewis, of New Bedford; Mr. and Mrs. A. S. Hinds, and Mr. Walter Hinds, of Portland, have been having great luck. Mr. Heywood's best day was nineteen fish, weighing 56lbs., including one salmon of 7lbs. and a trout of the same weight. Mr. Walter Hinds took a salmon of 7½lbs., and eight other fish weighing 32lbs. Mr. and Mrs. Lewis took twenty fish in one day, the string weighing 61½lbs., the largest a salmon of 6½lbs. Mr. A. S. Hinds also made a big score the same day, including a 6lb. salmon, and fifteen trout and salmon weighing from 2 to 4½lbs.

From the Upper Dam come reports of good catches. W. D. Nelson has taken six trout weighing from 1 to 2½lbs. May 9 he caught six trout, of from 1 to 3lbs. May 10 W. D. Brackett, of Boston, who, with his fishing partner, Mr. Clark, of Peabody, Mass., has fished those waters so many years, took a trout of 6lbs. weight. This fish was taken at the South Arm. May 11, R. H. Brown caught six trout weighing from 1½ to 2lbs. The same day the F. O. Walker party, of Camp Prospect, from Runford Falls, took 70lbs. of trout, and Thursday they caught forty-five trout averaging 1lb. May 12 Messrs. Clark and Brackett caught twenty-nine trout of about 1lb. average. May 12, W. D. Nelson also took a trout weighing 6lbs.

From the Middle Dam and the Narrows come reports of good fishing.

Fishermen are also moving toward other points as well as the Rangeleys. A number of parties are off for

Moosehead, and others will go later. The lovers of fly fishing, many of them, prefer to visit Moosehead later, rather than the Rangeleys early, for trouting and bait fishing. Mr. Walter L. Hill, to whom so much of the success of the Sportsmen's Show was due, will go to Moosehead the first of June.

Mr. J. W. Farley is about to go to the Adirondacks for a short trip. D. H. Blanchard and his long-time fishing friend, V. P. Keeler, will soon start for Maine; the location not yet fully decided upon. F. A. Turner was to start for the Rangeleys Saturday. He goes to the home of the Oquossoc Angling Association. Dr. F. E. Greene is about going to his beautiful private camps at Winnepesaukee. From Weirs, on that lake, comes a report of twenty-four trout caught in one day, not two miles from the station. The Hon. Henry Hitchcock, of St. Louis, is about to go to Mountain Lodge, Herkimer County, N. Y. SPECIAL.

CHICAGO AND THE WEST.

Trout Boom in the Southern Peninsula.

CHICAGO, Ill., May 14.—There seems to be a veritable trout boom in the Michigan south peninsula this spring. Never before have more anglers gone out, and rarely since the old original days of plenty before the day of replenishment have so many trout been taken. For part of my advices I am indebted to that extremely well-posted sportsman, Mr. W. B. Merston, of Saginaw, and I shall ask liberty to use the news of letters he has sent me. Speaking of the opening of the season at the club house on Kinne Creek, Mr. Merston says that he was up soon after opening day, fishing for one day only. He got twenty-two trout, nine very little ones.

"There were eighteen club members there opening day," he says, "all of them satisfied with their catches. There were no old lunkers taken, though there were six or seven that by actual weight were as good as a pound. George Morley claimed to have seen a trout in shallow water, well down stream, that he was certain would give five pounds. Whether he has got this mixed with the jack pot of the night before, or is telling the truth, you will have to guess. We think the new club house and surroundings are immense, but leave that for you to pass judgment on later."

On May 9 Mr. Merston writes again regarding the sport at the club stream:

"There were ten of us there and we took 264 trout. Not a bad average. A slate colored fly, Wickham's fancy, on a No. 8 or No. 10 hook, is what you want, with a few small professors and any dark fly you can get to imitate that caddis fly they were jumping at so when you were there. The stream is literally alive with fish, and they were doing the same jumping act last night."

It is a wonderful stream that the members of the Flint and Pere Marquette Club have, this Kinne Creek, and they are much to be congratulated upon it. Yet the open streams of this grand angling region of the south peninsula also offer fine sport. Mr. Merston writes me again, under date of May 13, a very interesting letter:

"I have just had word from a friend of mine, Dr. Richardson, of Mt. Pleasant, telling of an eight days' fishing trip on the Au Sable, which is something remarkable. They (two of them) took over 1,600 trout; they fixed their limit at 7in. and above; he said that about sixty of them were from 12 to 14in. long, and about 30 per cent. of their catch were rainbow trout; that they got a few, I think about half a dozen, grayling. They kept them all alive in crates until they wanted to come home, and then turned loose back into the river about 800 fish, and gave away about 400 to less fortunate fishermen. I like to get sportsmanlike letters of this kind, but they are too rare. The majority of those that fish Michigan streams gobble everything in sight from the length of your finger up, and even if they cannot get the fish out of the woods without spoiling, they never think of throwing one back. Michigan streams have been filled with anglers this year, who uniformly report good catches, but it is going to take heavy stocking and rigid protection to prevent the depletion of many of our trout streams. I hope to get away for my salmon fishing the last of this month, but cannot count on it for certain. If I am home in June, let's you and I run the Au Sable from Grayling to its mouth, taking about a week to do it."

I have always wanted to see the Au Sable, if only as a part in my sporting education. To see it in such good company would be an additional and exceptional pleasure. It is really too bad that I have to work any at all, I could have so much fun if I didn't have to work. It is pleasant to hear about the grayling. I can give Mr. Merston a tip on a stream which I believe will be still better for grayling than the once inimitable Au Sable; but very likely he knows of the same stream and is keeping it up his sleeve. It is pretty tough when you have to go around with a grayling river up your sleeve, for fear somebody will get into or onto it and reduce it to permanent Au Sableism.

The town of Baldwin, Michigan, is about as troutful a point as one can head for, albeit, not so good as it was in the palmiest days of the Little Manistee, the Pine, the Pere Marquette, and any one of a half dozen lesser adjacent streams. Baldwin has been well patronized this spring by the angling craft, each party heading out from that center to the special stream on which they have had the strongest tips. It is a singular thing, this divergence of tips on trout. One man tells you to go to a certain point. Another, who has been there on a day when the mysterious trout was off his feed, gives you equally urgent advice to go anywhere else on earth except to the place which the first man recommends. And so forth. I expect I have wandered more than four thousand miles over upper Wisconsin and Michigan, following tips on trout, most of which proved too good to be true. It was only last week—but that is so long a story that I shall have to postpone it till another day.

Among other parties who have tried the lovely Pine River, in the south peninsula, are J. H. Clement, J. W. Gilkey, A. L. Reese, E. J. Aderson, J. J. Howe, and R. L. Soule, all of Plainwell, Mich. These gentlemen were out last week on the Pine and got between 400 and 500 nice trout.

A great number of Grand Rapids anglers celebrated

opening day along the streams of the vicinity, many of them starting out long before daybreak, in carriages, on bicycles, in chaises, and on foot. Mr. W. Melville caught fifty-five trout. Mr. A. B. Richmond and party brought home 128 trout. These men report that the streams were lined from one end to the other with eager anglers. Mr. Jack Gibson, of Bennett, is reported to have taken 108 trout in one day, and that day was Sunday last.

The local newspaper at Baldwin, Mich., says that seven anglers got off the train at Greenwood Club house Saturday evening, eleven more left at Nirvana, a few stopped at Baldwin, and over twenty went to the Little Manistee. The same paper goes on to say:

"We have read with much interest many times from many writers that the several trout streams about Baldwin were on the wane and not many fish to try for, and we give a few names and catches made on the opening of the season, and think it is fair, considering the day, as it was unsettled weather and rather unfavorable. But here is how the boys turned out the trout and all got a mess: Maurice Veber 96, David Colton 29, Andrew Bradford 28, John Slocum 16, David Moore 16, E. H. Pace 15, Art Carr 11, James Carpenter 18, Billy Wayman 17, Will Smith 29, Al Allen 29, John Bradford 30, Jay Delong 16, William Duffing 14, Walt. Hooper 6, John Updegaaff 16, Luther Griffin 16, Jess Lucas 3, Artie Drilling 4.

"And there were others, many of them, who made good catches, but who failed to report. There are trout, lots of them, left in Baldwin streams, and in interviews we have held with strangers from the south part of the State who are here fishing they report excellent sport and good catches."

All in all, we must conclude that there are trout left in Michigan yet—plenty of trout for all who are satisfied with a good day's sport and who do not want to catch them all right away.

Trout in Wisconsin.

Mr. Graham H. Harris and his friend, Mr. Hilliard, returned Thursday morning from a three days' trip to the Prairie River of Wisconsin, they leaving the road at Merrill and going to Dudley's place. They brought back over 200 trout with them, some very nice ones. They think the best of the season has not yet begun, though the sport was good enough for them.

The Menominee Brule is reported to be good again this spring, and I know of several parties who are speaking of trying it. There are still trout in this stream and many of them, but it is one of the most uncertain waters ever fished, and if the angler does not happen to strike it right he will go away vowing that there never was a trout taken from it. If he does strike it right, he will be persuaded that never a better water lay out of doors. The fish there are exceptionally large when they begin to transact business on a working basis. Stager, Mich., on the Chicago & Northwestern road, is the point most kept in mind by the knowing one for this stream. From Armstrong to Stager is about as good water as one will find on the river.

The Fence River, reached by the same road at Floodwood and other points adjoining, is this season spoken of very highly by those who have been in there. This is a pleasant fishing stream and has trout good enough for anybody. I have fished it and know this to be true, though, of course, this stream is like all others, subject to revision without notice. It all depends on how the trout are working. If one gets two days out of the week on a trout stream when the fish are really rising well, he has no reason to complain.

Pratt, Wis., is another point which I must mention again as a good one to be kept in mind. The Marengo, or "Marong" as it is, sometimes called, after the way of the old voyagers who first struck it, was once a remarkable trout river, and it is still as good, relatively, as many other of the once noble famous streams, such as the Upper Brule, the Fence, the Pike, etc., all of which are still fine streams, but which have naturally been fished very steadily because of their excellence. I shall next week take up the question of yet other Wisconsin streams, which will this season offer good sport to the lovers of the most lovable of all sports, trout fishing with the fly.

Minnesota Fish.

Reports from Minnesota indicate a rather cold and backward angling season for trout thus far, and I do not hear of many heavy catches. The legal bass season begins in Minnesota to-morrow, May 15, on Sunday. It is legal to catch pike, pickerel, whitefish, and sturgeon after May 1, and as local papers report that a number of parties have been out, "casting all day steadily," during the past week, I am led to suppose they were casting for sturgeon or whitefish, both of which are known to take the frog with exceeding avidity. The bass season in the lower part of the State of Minnesota will be early enough to offer sport from the first legal day, especially in the shallower and warmer lakes, where the bass have already begun spawning.

A weird story comes down from Minneapolis telling of three muscullunge caught this month at Buffalo, Minn., the smallest of which weighed 44lbs., and the largest 61lbs. Of course, these weights may be correct; but as a 44lb. 'lunge is something few men have ever seen of late years, and as 61lbs. is heavier than any weight I ever heard ascribed to any 'lunge taken west of the St. Lawrence, I think we have license in asking verification of these weights. Messrs. Henry Weigand and George Taylor, of Minneapolis, are the lucky anglers to whom this rare good fortune is attributed.

The northwest corner of Wisconsin offers a favorite trout fishing country to many Minnesota anglers. Last week Mr. Thomas Kenyon, of Minneapolis, with Dr. P. de Mille, Sam Holmes, and John Wolford, of Baldwin, Wis., fished the Bolan Creek for two days, using worm bait. They took 575 trout between them.

A friend last week told me that the finest trout stream he had ever fished was the Kinnikinnick Creek, of Wisconsin. This stream has been stocked repeatedly and carries many mammoth rainbow trout as well as the brook trout. Many fish of more than 4lbs. have been taken in it, and the average size is said to run very large. The beauty of the stream is its accessibility and

its perfection as a fly-fishing water. Many streams of Wisconsin and Minnesota have plenty of trout in them, but can not be fished with the fly. The best place to strike the Kinnikinnick is at Little Falls, Wis., on the Chicago & Northwestern road, thence driving up about eight or ten miles. Anyone having leisure for a trout trip this spring will do very well to keep this stream in mind. It is a water much affected by anglers. I have heard of it a great many times, but have never personally tried it. I offer it as one of the best tips for the season.

Wisconsin Bass.

Bass and pickerel began biting last week all along Lake Winnebago and adjacent waters, according to an Oshkosh newspaper, some very fine strings of bass being taken up the Fox River by still-fishing. In Lake Winnebago the bass are taking the spoon and the catch averages very good in size. It appears that the anglers are reaping the benefits of the hot fight waged against the netters by the wardens under Capt. Johnson, details of which have many times been printed in these columns. I should be still happier to print this news about the bass fishing if it were not for the fact that the bass season does not open in Wisconsin until May 25. Can it be possible that the wardens need also to look after the wielders of the rod as well as the netters? Or does the rod fisherman believe that he can do no wrong?

Illinois Bass.

We have no bass law in Illinois so far as hook and line fishing is concerned, except the law forbidding ice fishing. Already some good catches of bass have been made in the lakes along our upper tier of counties, in Fox, Grass and Marie lakes, all waters very familiar to Chicago anglers. The latter will not be pleased to learn that spearing of bass has for two weeks been going on openly in all the above mentioned lakes. A little later the thrifty country farmer will have open his "summer resort" and will be bidding for the dollars of the city man, whom he has robbed in advance and wants to rob some more. My advice is to leave such a country alone and go on to some place where it is known the residents insist on the enforcement of the laws. That is the way to treat a certain class of summer resort places. This week I was on the Prairie River in Wisconsin, and while there made the usual inquiry as to the prevalence of market fishing. I was pleased to learn that the farmers have a club, and look strictly after the enforcement of the fish laws, allowing no illegal fishing. I asked if anybody was in there fishing for the market. "I should say not!" was the indignant answer. That is the sort of place to go to with your custom and your money. Let the former market fishermen keep their lakes, or wake up and see that they are protected.

Poaching.

Two market fishermen, Peter Hughes and John Weimer, working for the large firm of Bartson & Hurley of Peoria, have been arrested for setting nets on the territory of the Duck Island Club, whose preserves run along the Illinois River. They were using trap nets, and the market fishing firm above named holds that such nets are not forbidden by law. Of course they are not! Everything ought to go with this concern. It is repaying very well the courtesy shown it by the Illinois State Fish Commission. Give them the whole river, and perhaps they would be satisfied, until they saw a part of the rest of the earth and wanted it included in the "concessions."

Ohio Bass.

The bass have begun to run the Pelee Islands in Lake Erie, and several members of the Pelee Island Club have gone over for a try at the sport. The Quinnebog Club, on Old Hen Island, sent a party of eight anglers last week and they expect to meet good sport.

The record bass for Ohio, and very likely for the entire West, has been taken very early in the season this year. It was a small-mouth, weighing 7¾ lbs., and was taken two miles east of Westerville, O., by Charles Alexander. It is said that this fish has been known for several years, having its home in a deep pool below Boehm's bridge on Walnut Creek. The old fellow was too shrewd to be taken for a long time, but at last fell a victim. Probably he was so old that he had grown tired of living where he was and wanted to see more of the world.

Fly Casting Records.

When Mr. W. D. Mansfield, of the San Francisco Fly-Casting Club, is not feeling very well he goes out and breaks a few records before breakfast. Two weeks ago he broke all his own breaks by casting 125 ft. 6 in., but last week he gave other people hope by falling back to 116 ft. He beat out all competitors with this cast, though hard crowded by W. E. Bacheller, 115 ft., and Dr. Lowry, 114 ft. It surely would seem that the glorious climate of California holds some quality very nourishing to the wrist and forearm.

California Yellowtails.

They catch yellowtails by the cord along the lower coast of California these days. A rope, a wagon and a plaster for a tired back are portions of the equipment.

Washington Salmon.

The salmon are still taking the spoon in the harbor of Tacoma, according to late reports. A catch of half a dozen to a dozen daily has not been unusual. The Pacific salmon has not yet reached that stage of its unrollment when it takes the artificial fly in company with its Eastern brother, but it is a very delightful fish even in its present lower plane of life, where it prefers tin to feathers.

Uneasy.

The war troubles have naturally caused a certain suspension of interest in sport this spring, but now that the issue bids fair not to join immediately many men who find themselves coming out of a Chicago winter wearied and pulled down are beginning to get uneasy, and some of them are snatching time from the bulletin boards and are stealing away for a day or so outside of town. The season in upper Wisconsin continues rather slow, being

about ten days or more behind the season here, but around Chicago everything is now fresh and green, and if we had peace we should have fishing. It is not ignoble to go fishing, even though we are at war with another nation, and it need not be asked whether or not the sportsmen of the country will go to the front when the time comes. They will go then. Meantime, with the superb American calm, they will go fishing. One of the elevator boys of the building in which the FOREST AND STREAM office is located has gone with the militia to Springfield, and writes back gleefully that he has passed the examination and been mustered into the United States Army. He used often to talk to me about going fishing some day, when his two weeks of vacation should come. I hope he will have the vacation safe and sound.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Home Notes from Maine.

CORNISH, Me., May 9.—Cold weather and high water have given way to more favorable angling conditions at last. Although plenty of fishing had been done up to within a few days no good catches were made. Now we have reports of many strings of from twenty-five to one hundred, and one, at the head in point of numbers at least, of nearly 300 good trout, taken by a party of two in one day's fishing. There have also been a good sprinkling of catches small in number, but including beauties of from half a pound to over a pound. My brother and I had the good luck to secure forty-four fine trout yesterday afternoon in the rain. Wet skins went with them, but we were satisfied.

Most of the big trout here come from Little River, a stream rising among the hills to the southward, and uniting with the Ossipee near the village. Early in the season a young man who had occasion frequently to cross a bridge on this stream often saw a big trout lying in the shadow of the bridge. Day after day he tried to catch the fellow, but without success, until at last he bethought him to tie his line to the bridge and leave it. Upon returning he found the fish safely hooked—a beauty, weighing nearly a pound.

Then a village lad took a 12 in. trout from this same stream. He insisted that he had got hold of a larger one at the time, and verified his claim by returning to the spot and landing a trout 2 in. longer than the first.

But perhaps the best luck on this brook was that of a young man who visited it for a short fish after supper and took three trout from a single pool, two of which measured 11¾ in. each, and the other over 14 in. No faking about any of these either. In the last-named case the lucky fellow called at my house with his prize to show for themselves.

At Kezar Falls, four miles further up the Ossipee, a boy of eleven took a 12 in. trout, and another was caught of 18 in. Yet strange to say, a trout is never taken from the Ossipee at this point.

Game hereabouts is believed to have wintered well, though a few partridges are reported as having been caught by foxes. I myself in sundry rambles on the crust have found the remains of several of reynard's feasts.

Deer are getting surprisingly plentiful, owing largely no doubt to the special protection they have enjoyed in this and a few adjoining counties for several years, and which expires, I believe, in '99.

Last fall a man living almost in the shadow of the high school building heard a loud cackling among his fowls just back of the house, and on going to the spot found that a fine doe was the cause of the clamor. A short time ago two boys, May flowering, saw a deer in a swamp just across the river, while yet another man came upon two quietly feeding by the road. They showed no alarm at his approach, and as he passed by he saw a third in the bushes.

W. E. Blake, one of the best known hunters in this section, who has hitherto been forced to go to the wilder portions of this State and New Hampshire for his deer hunting, thinks he may soon be able to get a few saddles nearer home. Blake visited the country about the West Machias last fall, returning with a good stock of pelts and small game, besides his quota of deer. He reported the woods there as being full of hunters. TEMPLAR.

Pennsylvania Trout.

CANADENSIS, up in Monroe county, Pa., has had its share of rain during April, and the famous trout streams about the Spruce Cabin have been little more than touched. The sun for the past week, however, has once more gilded each ripple on the streams, and the trout are jumping to catch their share of its radiance, and as a business end of it, the long sap bug and the gray-winged May fly. Catches on old Brodhead, Stony Run and Spruce Cabin Run have been numerous and heavy during the past few days. A trip to Stony Run by two newspaper men on Saturday resulted disastrously for twenty-eight beauties averaging 10 in. in length. The largest of the catch was 13 in. and the smallest 9½ in. in length. The actual fishing time on the stream was one and a half hours. This paradise for the trout fisherman was reached in a half hour's drive by buckboard from Spruce Cabin Run. The wood road was rough, but almost unscathed by the woodsman's axe and lovely beyond description.

The streams at Canadensis have been practically unfished this year, and a rise in every riffle rewards the fly-caster who doesn't mind a bit of walking to reach the haunts of the trout.

W. H. Parsons, Jr., and E. B. Holden and their wives, all of New York, are at the Spruce Cabin Inn, and both gentlemen have made successful catches.

Preston Parton, of Scranton, went home with an "even basket" on Saturday night, and H. A. Widdifield, Arthur Moore and John E. Hanifen, of Philadelphia, have brought in to the pan a steady supply of fish. Never before have the fish in these streams more liberally rewarded the man who knows how to catch trout, and the fish seem to run heavier than has been known for many years. This is probably due to the mild winter and early spring, which have been all in favor of the trout.

As usual the fish which have been lost this spring have been the biggest, but many of those actually landed have run over 12 in., and a pound fish is an every day

trophy. The weather is at last settled fair, and early fishermen are reveling in the loveliness of the woods and the prolific yields of the streams. B.

Trout Waters and Trout Weights.

POUGHKEEPSIE, N. Y.—The streams in this county are largely meadow streams, few containing swift water, as compared with mountain streams, and as the result the trout in this county have been known to grow to a weight of 4 lbs. or a little over. In the ponds in the Catskills they commonly grow to a size of from 2 to 3 lbs., and one was taken by James Murdock in the fifties out of a lake near his place for P. T. Barnum which weighed 5 lbs. 2 oz.

In the swift mountain streams, however, trout of 1 lb. and upward are not very often taken with a fly. There are large trout in these streams, but they generally have their haunts in some deep pool or under a mill dam, and they are very seldom taken except with bait.

As I have already told you, I took in one year, about 1859, three trout, two of which weighed 1 lb. each, and one 1 lb. 5 oz.

About that time I commenced fishing with a fly exclusively, and have taken quite a large number of trout weighing 15 oz., but none tipped the scales at 1 lb.

Judge Fitch, after fishing the Beaverkill with a fly for about forty years, told me that he had never taken a trout in that stream with a fly that would tip the scales at 1 lb., and I know that he never took one of that size in the Rondout with the fly, for I was with him on every trip. He also gave me the same report as to his two companions, Messrs. Adams and Smedburgh, and they also told me the same thing.

What Judge Fitch did in the Neversink I do not know, as he never told me, but I do know that in a noted pool in the East Branch of the Delaware a mile or two above Margaretville, and which contained many very large trout, he took quite a number with the fly, the largest, according to his statement, not exceeding 2 lbs.

The trout in this pool were long since destroyed by the black bass in the river.

If there is any point to this story, it is simply this: That trout are not apt to attain the same size and weight in rapid mountain streams that they do in more sluggish waters; and also that nature is wise in the distribution of her favors, for it is really more sport to handle a 15 oz. trout in the rapid waters of a mountain stream than one of twice or three times its size in a lake or pond.

J. S. VAN CLEEF.

New Jersey Coast Fishing.

ASBURY PARK, N. J., May 14.—From a source which I regard as entirely reliable I am informed that the blue-fish have put in an appearance off Barnegat. While this is not earlier than they have been known to appear in the years gone by, still it is much earlier than has been their custom of late. If warm weather prevails we should have them with us in the very near future. The sea is fairly swarming with menhaden, and that fact no doubt accounts for the presence of the blues. No bass as yet has been taken along the beach, although some earnest endeavors have been made. The calico crab is now abundant in the surf, and that is usually a sign that the striped fellows will soon be along. They will receive a royal welcome at sight.

Enormous numbers of ling are taken every day now from our piers, so great are the catches that it becomes difficult at times to dispose of them. In a short time last night I took twenty-one very large ones. While they are in no sense a game fish, still to the ardent it means something, and breaks the monotony of the long wait to which we are accustomed. Plaice are being taken in the pound nets in fairly good numbers, and will soon be in the inlets of our streams, and they are always looked to as the beginning of our summer fishing. Sluggish though they are, still when taken on light tackle from a boat and in a strong tide-way they are not to be despised; a man can easily be in worse company. We will be relieved this season from many of the pound nets, as the serious reverses of last year have worked a cure that no other logic might. LEONARD HULL.

Fishing Near New York.

EAST ROCKAWAY, L. I., May 16.—Weakfish appeared in the bay on Thursday last for the first time this season. The net fishermen from Atlantic Dock brought in several hundred pounds, and hook and line fishermen at once started for Broad Channel and Wreck Lead. The cold stormy weather and heavy sea made the fishermen who came down on Sunday uncomfortable, but they filled their baskets with fish, mostly flounders and fluke, and returned to the city as happy as possible. A macadam road will soon be completed to Long Beach, when fishermen can go directly to Wreck Lead on a wheel. From Wreck Lead they can go to the Fishing Banks in yachts, or to the fishing holes in the bay in small boats, or fish from the railroad or boulevard bridges. G.

Acres of Dead Sea Catfish.

A LETTER from Swansboro, N. C., dated May 2, says that tens of thousands of dead salt-water catfish have been found floating in White Oak River and Bogue Sound during the past few days, and farmers are utilizing them to manure their land. Mr. G. E. Watson gathered 2,000 in half a day, all of them catfish. The cause of the mortality is not known. C. H.

St. Louis as a Fishing Center.

ST. LOUIS, April 26.—Missouri has not had any great reputation as an angling region hitherto, but a booklet just issued, entitled "Outing with Rod and Reel," shows that nearly every railroad running into St. Louis has good fishing along its line within an hour or two of the city limits. JAMES H. HARRIS.

New Hampshire Fish and Weather.

CHARLESTOWN, N. H., May 10.—It has been very raw and cold here since May 1, but is warming up this afternoon, and I hope to have a try for a few trout in a day or two. There were some few good ones caught Sunday, May 1, but I do not hear of any since. VON W.

The Kennel.

Some Dog Law.

THE importance of the case recently determined in this State, denying the authority of societies to destroy unlicensed dogs summarily, is such that we have procured the full text of the decision, which runs as follows:

APPELLATE DIVISION, THIRD DEPARTMENT.

Frederick Fox and M. L. Evans, Appellants, vs. The Mohawk and Hudson River Humane Society, Respondent.

Appeal from a judgment in favor of the defendant, entered in Albany county upon the decision of the court made upon the trial without a jury.

The plaintiff, the owner of four valuable dogs within the corporate limits of the city of Albany, refused to take or pay the defendant for a license for his dogs, and brought this action to restrain the defendant from seizing, killing or disposing of them, which the defendant, because of plaintiff's refusal, was about to do.

The defendant is a corporation created by and under Chapter 292, Laws of 1894, having its principal place of business in the city of Albany, and having the powers given generally to societies for the prevention of cruelty to children, and to societies for the prevention of cruelty to animals. Chapter 448, Laws of 1896, purports to confer upon the defendant the powers which it threatens to exercise in respect of plaintiff's dogs. The plaintiff challenges the constitutionality of the act. The act is as follows:

Section 1. Every person who owns or harbors one or more dogs within the corporate limits of any city having a population of more than twenty thousand and less than eight hundred thousand, where a duly incorporated society exists, or may hereafter exist, for the prevention of cruelty to animals, except in the City of Buffalo, shall procure the yearly license for each animal, paying the sum of one dollar for each one, as hereinafter provided; in applying for such license the owner shall state in writing the name, sex, breed, age, color and markings of the dog for which a license is to be procured.

Sec. 4. Every dog so licensed shall, at all times, have a collar about his neck, with a metal tag attached thereto, bearing the number of the license stamped thereon. Such tag shall be supplied to the owner with the certificate of license and shall be of such form and design as the society empowered to carry out the provisions of this act shall designate; duplicate tags may be issued only on proof of loss of the original, and the payment of the sum of one dollar therefor.

Sec. 5. Dogs not licensed pursuant to the provisions of this act shall be seized, and if not redeemed within forty-eight hours, may be destroyed or otherwise disposed of at the discretion of the society empowered and authorized to carry out the provisions of this act.

Sec. 6. Any person claiming any dog, seized under the provisions of this act, and proving ownership thereof, shall be entitled to resume possession of the animal on the payment of the sum of two dollars; provided, however, that such claim shall be made before the expiration of the forty-eight hours provided in section 5.

Sec. 7. The incorporated society, organized for the prevention of cruelty to animals, and having jurisdiction in either of such cities, is hereby empowered and authorized to carry out the provisions of this act; and such society is further authorized to issue licenses and renewals, and to collect the fees for such, as is herein prescribed, which fees are to be used by such society toward defraying the cost of carrying out the provisions of this act and maintaining a shelter for lost, strayed or homeless animals, and for its own purposes.

LONDON, J.

This case differs from *People v. Gillespie*, herewith decided. There the question was whether the owner of a dog upon which he had paid the tax was deprived of due process of law, in respect of the penalty declared by Section 125 of the county law, upon his refusal to obey the order of a justice of the peace directing him to kill his dog immediately. We held that he was not, because upon being sued for the penalty, he would have his day in court upon all the material facts.

Here the plaintiff's dogs are not alleged to be dangerous; he refuses to buy a license for them from the defendant, and the defendant, because of his refusal, threatens to kill the dogs, or confiscate them.

The field of the defendant's jurisdiction is the city of Albany. The county law which provides for the taxation of dogs, by section 111 exempts the city of Albany from its provisions. Chapter 448, Laws of 1896, requires the owner of every dog within the city to procure a yearly license for it and pay the defendant \$1 therefor, under penalty, upon refusal, of death to the dog, or its confiscation, and vests the execution of the law and the proceeds of the license or sale of the dog in the defendant.

No doubt the Legislature may enact that no one shall keep a dog unless licensed to do so, in like manner as it may enact that no one shall sell liquor unless licensed to do so. That this is a proper exercise of the police power is well settled. But the important question here is: Suppose he refuses to take out a license for his dog, can the dog be summarily killed or confiscated without any process of law whatever? When the law of the State was that dogs were not prima facie property, but must be proved to be valuable before they could be treated as such, it followed that the killing or confiscation of a dog, prima facie, affected no property right, and was no legal grievance. (*Sentell v. N. O. & C. R. R. Co.*, 166 U. S., 698.) But now dogs in this State are property (*Mullaly v. People*, 86 N. Y., 365), and of course within the laws for the protection of property. If one sells liquor without a license, the liquor, in the absence of a law enacted before it was procured declaring it to be a nuisance per se, cannot be confiscated in this State without due process of law. (*Wynehamer v. People*, 13 N. Y., 378.)

It is true that certain instruments and appliances found in use in violation of law, as fishing nets in prohibited waters, i. e., in flagrante delicto, may be destroyed as nuisances by the proper officer (not by any corporation), provided they are of small value (*Lawton v. Steele*, 119 N. Y., 226; s. c., 152 U. S., 133), but if of considerable value, as a bawdy house or a smuggling vessel, cannot be destroyed without due process of law—ib., a distinction which may be right, however much we may doubt that the right differs with difference in values.

Now it is plain that whether a dog is licensed or not does not affect its character. A good dog is none the less so, though it wear no collar. The statute of 1896 does not declare the keeping of an unlicensed dog a misdemeanor, nor does it declare that the dog that wears no collar is presumptively a nuisance. The plaintiff does not put his dogs to an improper use. They are

neither vicious nor dangerous. There is, therefore, no ground upon which we can assume that the plaintiff's dogs are a nuisance, and hence the defendant's right to kill them must rest upon some other basis, or be denied altogether.

Unlike the county law, the act of 1896 prescribed no money penalty for plaintiff's refusal to take out a license for his dogs. If we assume that the killing or confiscation of the plaintiff's dogs is the penalty prescribed for his disobedience of the statute, then the same reasons which entitle him to his day in court before a penalty in money can be exacted apply, before the penalty in dogs can be exacted. In neither case can he be deprived of his property without due process of law. The currency in which the penalty is exacted cannot affect the principle.

But there is another ground upon which we think the plaintiff can rest his action. The act of 1896 assumes to vest in the defendant, a private corporation, the execution of certain police powers of the State, and thus in effect to make the defendant a public officer.

The constitution of the State provides for the election and appointment of certain officers, and vests the Legislature with power to provide for the election or appointment of the rest. "All city, town or village officers whose election or appointment is not provided for by this constitution, shall be elected by the electors of such cities, towns and villages, or of some division thereof, or appointed by such authorities thereof, as the Legislature shall designate for that purpose." (Art. 10, Sec. 2.) If a corporation was eligible to a city office, the Legislature could not appoint it.

But a corporation is not eligible to any public office, for the reason, if there were no others, that it cannot take the oath of office, that it is not a human, but a legal being; it has legal attributes only, and the law cannot attribute to it moral qualities, although it may try to secure some respect for them under penalties which touch its pocket or franchise. It is obvious that the execution of police regulations, which affect the life, liberty, property, health and happiness of human beings, should be vested in human beings, and not in such legal entities as cannot be endowed with moral qualities, and cannot be adequately punished for official misconduct.

It is true, as the defendant contends, that the Penal Code, Sec. 668, provides: "The officers and agents of all duly incorporated societies for the prevention of cruelty to animals are hereby declared to be peace officers within the provision of Section 154 of the Code of Criminal Procedure." Section 154 provides that "A peace officer is a sheriff of a county, or his under sheriff, or deputy, or a constable, marshal, police constable or policeman of a city, town or village." Whether the officers or agents of the defendant within the terms of the constitution above cited can thus be appointed peace officers, we need not inquire, since none of them is a party to this action, and the defendant does not justify under any of them.

The defendant contends, however, that Chapter 448, Laws 1896, under which it claims the powers here called in question, creates it a "subordinate governmental agency." If by that assumed designation it is meant that without being a police or peace officer, it can nevertheless execute the police powers conferred by the act, than it is incumbent upon us to discover whether such powers are official powers, or the mere incident of them, such as the officer or department charged with the execution of the main power may delegate to a non-official subordinate, servant or helper.

There is no doubt that public officers can in many cases employ corporations to do work for the Government. Thus banks or trusts companies can be made fiscal agents for the custody of public or trust moneys to be disbursed upon proper official vouchers. Mails and Government property may be transported by railroad companies. Corporations may become contractors for public works. Water, gas, and electric companies can supply the Government with their products or services. Such matters are regulated by contract, or by statutes or statutory regulations having the force of a contract. The Government in the discharge of its duties must be the employer of various kinds of service or labor, from that of the common laborer to that of the expert in art and science; but the employment of such persons is, with possibly rare exceptions, committed by law to some officer or department. Within the restrictions imposed by the constitution the State may dispense charity through the medium of the private charitable corporations selected by it.

Such corporations or persons thus employed may, perhaps without impropriety, be designated as "subordinate governmental agencies."

In the police department, if it is necessary to kill dogs, perhaps the proper officer can employ some one for the purpose, and thus we would have another instance of "subordinate governmental agency," differing in dignity and degree from those first mentioned, but not in principle.

In *Trustees of Exempt Firemen's Fund v. Roome*, 93 N. Y., 313, a case much relied upon by the defendant, the phrase "subordinate governmental agency" was applied to the plaintiff as justifying its right to receive a license fee or tax which the State had imposed upon certain foreign insurance companies doing business in the city of New York, as the price of admitting them to the privilege of doing business within this State. The right of the State to impose the tax or license fee for its own purposes was held to be clear. The right of the plaintiff to receive and use it for its own corporate purposes was challenged, among other reasons, because it was a gift of public money to a corporation, and thus forbidden by the constitution. (Art. 8, Sec. 9.) The court held that it was not a gift, but a payment by the State to the exempt firemen, members of the plaintiff corporation, of the money the State morally owed them for their past services, and thus an appropriation to the public use, and that in giving the money to the corporation the State selected it as "a subordinate governmental agency, employed by the State to fulfill its obligations due to the exempt firemen for the service they had rendered at the request and by the procurement of the State."

It is obvious that the corporation plaintiff in that case had simply the function of collecting certain moneys appropriated to it, and applying them to the uses of the exempt firemen, members of the corporation. In

this sense, the term "subordinate governmental agency" has a meaning much too narrow to cover the functions which the act of 1896 seeks to confer upon the defendant.

The defendant by its answer alleges "That the defendant has, and has exercised, and at the time of the commencement of this action was, and now is exercising certain police powers conferred upon it by the statutes of the State of New York and more particularly by Article 5 of Chapter 559 of the Laws of the State of New York of 1895, and by Section 668 of the Penal Code of the State of New York;" "that this society has entered upon the execution of the duties prescribed by Chapter 448 of the Laws of 1896, providing for the licensing of dogs."

The defendant admitted upon the trial "That defendant, unless restrained by order of the court, will seize and destroy or otherwise dispose of the property of the plaintiff."

Under the act of 1896, no dog in the city of Albany has a prima facie right to live unless it wears the collar of the defendant. No person has a right to own or harbor a dog except licensed by defendant. By paying the defendant \$1, a person can get a license for his dog, however mad, vicious or diseased it may be. If he does not choose to pay, the defendant can confiscate the dog, unless redeemed within forty-eight hours by paying \$2. The defendant need not kill the dogs it confiscates, but may sell them, and the defendant can manage its business upon a basis the most thrifty for itself, thus placing the public service at the mercy of corporate interests.

It is thus seen that the powers assumed to be vested in the defendant are not merely to render services incidental to the execution of the powers of some other official department, such as the receipt of a tax which the defendant ought to pay, but they embrace the execution of all the powers which the State has suspended over the plaintiff's rights and liberties in respect of his keeping this kind of property, including those of a discretionary kind authorizing its destruction or sale; in short, police powers. The grant of a license is the exercise of sovereign power. To require the individual to pay a private corporation for a sovereign favor seems to be contrary to the fundamental principles of popular government.

No attempt was made in the case cited to seize or confiscate the defendant's property without giving him his day in court. The phrase "subordinate governmental agency" which was there used with great hesitation and caution would be misapplied and abused if perverted into a justification of the corporate invasion of the people's right to be governed by officers chosen from among themselves, and from the like invasion of their right to be secure from deprivation of their property without due process of law.

We have no doubt the defendant is a most worthy institution, but however great its merits, they cannot obscure the vice of such legislation.

For these reasons, without passing upon others urged by the plaintiff, we think the judgment should be reversed, and judgment directed for the plaintiff. If, however, the defendant request a new trial, in place of the direction for judgment, the order may be so entered, costs to abide the event.

Yachting.

COM. J. PIERPONT MORGAN, of the New York Y. C., whose steam yacht *Corsair II*, has just been sold to the Government, has already taken steps to provide himself with another ship. The new boat will naturally be designed by J. Beavor Webb, who designed the second *Corsair*. The dimensions reported are 252ft. l.w.l., 33ft. 6in. beam, 14ft. draft, and about 1,400 tons measurement.

IN consequence of the reports of Spanish war vessels off the coast in the vicinity of Nantucket, the channels of New York Harbor are now protected by extra contact mines set directly in the channels at night and removed each morning. Every mine has half a dozen primers on the top, requiring but a 7lb. blow to explode the mine.

WINDWARD, the missing Arctic yacht, arrived safely at New York on May 11 after a voyage of fifty-two days from London. She is a sturdy-looking craft, specially built for Arctic work, and one of the strongest vessels afloat. Her length is 118ft., beam 28ft., and draft 16ft. She is now off Tompkinsville, S. I., but will go to the Brooklyn Navy Yard to refit, sailing in July.

A NUMBER of yachts have recently been added to the first lot purchased by the Government, including the new *Felicia*, *Comanche*, *Dorothea*, *Illawarra*, *Atlanta*, *Aileen*, and *Enquirer*. The latter yacht hails from Buffalo, and had to come to New York by way of the St. Lawrence River and Gulf. Free Lance, steam yacht, presented to the Government by F. Augustus Schermerhorn, is now in use by Admiral Erben, in charge of the patrol fleet of New York harbor.

The Quincy Challenge Cup.

THE defender of the Quincy Y. C. challenge cup, designed by J. R. Purdon, is now well under way at Lawley's yard, South Boston. She is a modern skimming dish of the Glencairn type, of very light construction. The following dimensions are given for her, and also the Mower boat, the challenger, and the Crane boat, which may also race for the cup:

Designer.	Over all.	L.W.L.	Beam.	Draft.	Total S.A.	Mainsail.
Purdon....	86ft.	21ft.	10ft.	7in.	850sq. ft.	600sq. ft.
Mower....	29ft. 6in.	18ft.	5ft.	6in.	700sq. ft.	550sq. ft.
Crane....	33ft.	18ft.	8ft. 6in.	6½in.	620sq. ft.	500sq. ft.

It appears that the challenger is smaller by 3ft. than the defender. Though no mention of time allowance is made in the declaration of trust, the challenger will apparently receive time from the defender. The fact that the competitors will be of different classes, and that the result will depend on time allowance, will do much to lessen the interest in the races.

Massachusetts Y. R. A.

THE following fixtures are announced by Secretary Bliss for the Massachusetts Y. R. A.:

May 30 (Decoration Day)—South Boston Y. C., off Marine Park.

June 17—Massachusetts Y. C., off Nahant.

June 25—Dorchester Y. C., Dorchester Bay.

June 28—Mosquito Fleet, off City Point.

July 2—Jeffries Y. C., off Jeffries Point, East Boston.

July 4—City of Boston sailing regatta, off Marine Park.

July 7, 8 and 9—Winthrop Y. C. series, off Winthrop.

July 23—Quincy Y. C., Hull Bay.

July 27, 28 and 29—Manchester Y. C. series, off Manchester.

July 30—Burgess Y. C., off Marblehead.

Aug. 1—Manchester Y. C., off Manchester.

Aug. 3, 4 and 5—*Corinthian Y. C., invitation races, off Marblehead.

Aug. 6—*Corinthian Y. C., off Marblehead.

Aug. 6—Wollasset Y. C., Quincy Bay.

Aug. 8—American Y. C., off Newburyport.

Aug. 9—Squam Y. C., off Annisquam.

Aug. 10—East Gloucester Y. C., off Gloucester.

Aug. 13—Cohasset Y. C., off Cohasset.

Aug. 18—Plymouth Y. C., off Plymouth.

Aug. 19—Kingston Y. C., Kingston Bay.

Aug. 20—Duxbury Y. C., Duxbury Bay.

Aug. 22, and each day following until finished, series of challenge cup races for 21-footers—Quincy Y. C., Hull Bay.

Aug. 22—Cape Cod Y. C., off Provincetown.

Aug. 23—Wellfleet Y. C., Wellfleet Harbor.

Sept. 3—Savin Hill Y. C., Dorchester Bay.

Sept. 5—Lynn Y. C., off Nahant.

Sept. 10—Hull Y. C., Hull Bay.

Sept. 10 and 11—Association rendezvous at Hull; Association parade, leaving Hull Sunday at 3 P. M.

* Not members of Y. R. A. of M.

Royal St. Lawrence Y. C.

THE Royal St. Lawrence Y. C. opened its season on May 14 with a race for the cup class, and will follow it up by numerous other races until the fleet is in the best racing form. The fixtures for the season are as follows:

May 14 and 21—20ft. class for club prizes.

May 24 and 28—20 and 18ft. classes—First Ross series.

June 4—"A" and 30, 25, 20, 18 and 15ft. classes—First Ross series.

June 11—20, 18 and 15ft. classes—First Ross series.

June 18, 25—20, 18 and 15ft. classes—Second Ross series.

July 1—"A" and 30, 25 and 20ft. classes—Club prizes. Morning races.

July 1—20, 18 and 15ft. classes for club prizes. Afternoon.

July 2—20 and 18ft. classes—Second Ross series.

July 9—20, 18 and 15ft. classes—Second Ross series.

July 16—20, 18 and 15ft. classes—Club prizes.

July 23—"A," 30, 25 and 18ft. classes—Club prizes.

July 30—25, 18 and 15ft. classes—Club prizes.

The Sir Donald A. Smith cup is open to the "A," 30 and 25ft. classes.

The Hamilton trophy is open to the 20, 18 and 15ft. classes.

Club prizes will be given for all races in addition to any cups or trophies with the exception of the Ross series of races for the 20-footers. The Sir D. A. Smith cup will be sailed for on the morning of July 1. The Hamilton trophy on July 16.

On May 24 the 20-footers will sail (if possible) two races in the first Ross series.

On July 1 the 20-footers will sail two races in the morning and three in the afternoon. Each race only once around the course.

Beverly Y. C. Fixtures.

THE Beverly Y. C. announces the following fixtures for 1898:

June 18, Saturday—First Corinthian.

June 25, Saturday—Second Corinthian.

July 2, Saturday—Third Corinthian.

July 4, Monday—Open.

July 16, Saturday—Fourth Corinthian.

July 23, Saturday—Fifth Corinthian.

Aug. 6, Saturday—At Marion, forenoon, Van Rensselaer cup; afternoon, open.

Aug. 13, Saturday—Sixth Corinthian.

Aug. 20, Saturday—Seventh Corinthian.

Aug. 27, Saturday—Club meeting with informal racing.

Sept. 3, Saturday—Eighth Corinthian.

Sept. 5, Monday—Open.

Sept. 10, Saturday—Ninth Corinthian.

Unless otherwise specified, the races will start off Wing's Neck, Buzzard's Bay. The Corinthian races will count in the championship record of percentages, special prizes being also offered in each race for the winners.

The Y. R. A. Rule.

THE Yachting World of April 29 describes the two new Fife cutters Senta and Viera, as of the fin-keel type, though built under rules in which girth is a factor. The Glasgow correspondent of the Boston Globe verifies this information as follows:

The new 65ft. cutter designed and built by Mr. William Fife, Jr., at Fairlie, for Mr. Busing, of Hamburg, has been launched, and besides being a handsome yacht, has the unmistakable sweet look of Fife's yachts. Designed for the Baltic girth rule the cutter, contrary to expectation, has quite as much draft as our 40-ton cutters, built sleeping place in the cockpit, there would still have been the deeper body promoted by the new rule of the Yacht Racing Association, the new cutter has a pronounced hollow bottom, which runs into her fin, which is deepest just aft the mast and becomes shallower towards the sternpost.

When Watson designed his first five-tonner, the yacht was laughed at because her keel resembled a cart wheel, a form which Fife in his latest design seems ap-

proaching, at least as far as the after end of the keel is concerned. The new cutter, in spite of the Yacht Racing Association's interference, is a nearer approach to the racing machine than any 40-tonner yet built in the Clyde. She will be an easier driven cutter than Fife's famous Isolde, and in consequence will have lighter spars and some less canvas. Until the cutter is officially measured her exact dimensions will not be known. This cutter is named Senta, and it is hoped she will not leave for the Baltic before her speed has been compared with Isolde's.

The 52ft. or 20-ton cutter building by Fife for Messrs. Connell, of Glasgow, is about ready for launching, and has been named Viera. The cutter seems to be simply a replica of the new 65ft. cutter with a trifle more depth of hull. This new cutter will be somewhat of a contrast to the new 52ft. cutter designed by A. E. Payne, of Southampton, and building by his firm, Summers & Payne. The cutter Penitent, built by the firm, was a large-bodied yacht and got pretty generally beaten by Fife's Saint. The winner of the coupe de France, the Gloria, designed by Payne, was too good for the French defender of the cup, L'Esterel, unless in light winds. Fife's new cutter will be a light weather 20, and Gloria will probably be too much for her in a breeze.

Yacht Building at Tottenville.

BESIDES their regular commercial work, which includes steamers, tugs and other vessels, Messrs. A. C. Brown & Sons, at Tottenville, S. I., are busy with three of the new one-design schooners designed by Messrs. Cary Smith and Barbey. The design and specifications for these boats were published in the FOREST AND STREAM of Jan. 8, 1898. The first one ordered, for Mr. A. N. Chandler, of Philadelphia, is just ready for launching, the outboard joiner work being completed with the exception of the bulwarks and rail, and the interior being finished. Next to her in the building shed is Mr. P. T. Dodge's boat, with planking nearly completed, deck laid and cabin trunk nearly finished. The third boat, for C. P. Buchanan, is not yet in frame, and the keel is not cast, but her keel, which is already worked to shape, shows the class of work which is being done on these boats. It is a fine stick of Staten Island white oak, in a single length, and almost wide enough to work the full width, the fore end having a natural crook that works to the sweep of the keel line. Nine tons of lead are carried beneath this keel, fastened by twenty-five Tobin bronze bolts. The midship frames of this boat will be cut in a natural sweep from one big oak root. The frames throughout the three boats are of oak and hackmatack, two steamed timbers between each set of double timbers. The planking is of clear yellow pine. The general work carried on in the yard calls for a large stock of timber, and the best of this is picked for the yacht work.

The three boats, as the plans previously published show, are of modern type, with long, graceful ends, but in no way extreme, the draft being but 6ft. 6in. They are of a thoroughly wholesome type, built to last for years, and with excellent accommodation, well adapted for all-round yachting and cruising. There is a large cockpit aft, the companion, on the starboard side of the centerline, leading to a roomy and well-lighted saloon with 6ft. 3in. headroom, and making up two berths in the wings on each side. The centerboard trunk is partly beneath the floor, the remaining portion forming part of the middle bulkhead. In the Chandler boat the toilet room is under the fore end of the house, on starboard side, the owner's cabin being abaft of it. In the Dodge boat this arrangement is reversed, the owner's room being forward and the toilet room opening on a short passage connecting it with the main saloon. On the port side in each boat is a passage, with small stateroom next to the saloon and a pantry forward. The forecabin has three or four hammock cots. The interiors are finished inexpensively, but very neatly, in white pine paneling, enameled. The work throughout, in hull and cabins, is of the best, and these boats are as well worth their cost as any yachts recently built about New York. The spars are all ready, as well as the iron work, made at the yard by Robert Brown, the yachtsmith, formerly of New York.

Under the shed with the larger boats is a centerboard sloop of 21ft. l.w.l., 10ft. beam, and 4ft. draft, designed by T. E. Ferris for Sands Bros., of New York. She is a shipshape little craft, with good overhangs; the centerboard trunk comes up in the middle of the cabin, forming a table, and there is 5ft. gin. headroom. She has an iron keel, through which the board works. Like the others, the workmanship shows a good finish throughout. The steam yacht Carrie, I. J. Merritt, is still on the ways, where she has been lengthened 10ft. during the winter. The cutter Kathleen is laid up ashore, and the sloops Eclipse and Bonita, with several other yachts, are in the basin. On Wednesday of last week a large wooden freight and passenger steamer, the Ocrakoke, built by Messrs. Brown & Sons for the Old Dominion Steamship Co., was successfully launched.

Continuous Records.

THE plan of giving prizes for continuous performances through the entire season is each year becoming more popular, and various systems have been proposed for calculating the average performance of each yacht from her position in each race, with regard to the number of starters, etc. The Beverly Y. C. has this year adopted a new system, shown in the following table:

NUMBER OF BOATS SAILING IN RACE.										
Place.	1	2	3	4	5	6	7	8	9	10
1....	1.000	1.000	1.000	1.000	1.000	1.000	1.000	1.000	1.000	1.000
2....		.500	.677	.750	.800	.833	.857	.875	.889	.900
3....			.333	.500	.600	.677	.714	.750	.778	.800
4....				.250	.400	.500	.571	.625	.667	.700
5....					.200	.333	.429	.500	.556	.600
6....						.167	.286	.375	.444	.500
7....							.143	.250	.333	.400
8....								.125	.222	.300
9....									.111	.200
10....										.100

Every yacht completing the course receives a figure to her credit, as compared with others not starting or withdrawing; thus offering an inducement to start as frequently as possible.

Gilberts Bar Y. C.

WAVELAND, Fla., May 7.—The Gilberts Bar Y. C. held their monthly regatta on Saturday, April 30. There was a very light easterly wind. In the first class there were four entries; in the second only one. Times of races as follows:

	First Class.	Actual.	Corrected.
Albatross	Did not finish.		
Britannia	1 29 51		1 28 31
Joker	1 20 48		1 19 41
Omega	1 20 32		1 20 32

Winner, Joker.

	Second Class.	Actual.	Corrected.
Swallow	1 16 15		

H. E. Sewall, commodore, Sewall's Point, Fla.; Paul M. Aston, secretary, Waveland, Fla.

YACHTING NEWS NOTES.

The regular May meeting of the Seawanhaka C. Y. C., on Tuesday of last week was not held, there being present one less than the required quorum; it will be held on May 28, at Oyster Bay, the formal opening of the season. Com. Rouse, who after a severe illness last fall spent the winter abroad, was present on the 6th, but no formal business was transacted. It was announced that the trustees had offered the use of the Oyster Bay Station to the U. S. Government, which offer had been courteously accepted by Secretary Long. Races will be held on May 28 at Oyster Bay, the new knockabout fleet being all ready. The golf links will also be in condition.

The Riverton (N. J.) Y. C. has elected the following officers: Com., William R. Ellison; Vice-Com., Charles M. Biddle; Treas., James S. Coale; Sec'y, Somerville Solomon; Meas., H. McIlvaine Biddle; Finance and Elective Committee: J. C. S. Davis, chairman, E. R. Showell, C. C. Rianhard, C. W. Davis, J. Hayes Carstairs; Regatta Committee: James S. Coale, chairman, H. J. Mitchell, Blair Ferguson.

Owing to the amount of work in hand, Hanley has been compelled to decline the order for a 51-footer of J. W. Hanan, and the yacht will not be built.

Enterprise, steam yacht, A. J. Cassatt, arrived at Philadelphia on May 8 after a winter cruise in the West Indies.

Com. Morgan has reappointed J. Beavor Webb as fleet captain of the New York Y. C.

The Corinthian Y. C. of Philadelphia formally opened its station at Essington, Delaware River, on May 7. The new fleet of seven knockabouts was at anchor, having arrived the evening previous from Harlan & Hollingsworth's yard, but a heavy N.W. wind was blowing, so the proposed race was postponed, as it would have necessitated reefing the new sails. A large number of members and guests were present.

The Gravesend Bay Y. C., of Bath Beach, will build a new club house at the foot of Bay Thirty-first street, Bensonhurst, the house being on the end of a long pier. A landing stage will be retained at the old site, Ulmer Park.

The Y. R. A. blue book for 1898 has been issued by Messrs. Harrison & Sons, St. Martin's Lane, London, the price being two shillings and sixpence. The book contains the usual rules, allowance tables, list of members, proceedings of the Association and Council, instructions for measuring, etc. The rules are practically unchanged from last year, as then published in the FOREST AND STREAM. The official list of recognized British clubs numbers eighty-five. The new secretary of the Y. R. A. is B. Heckstall-Smith, Esq., 2 Haarlem Mansions, West Kensington, W. London.

The New York Y. C. will hold no annual regatta this year, not so much on account of the war as from the fact that there are now no large yachts in the racing. The annual cruise will probably take place as usual.

Barracouta, steam yacht, D. P. Reighard, before reported disabled at Nassau, N. P., is still at that port awaiting a new shaft.

The Annisquam, 15-footer, building at Eccles' Nahant shop for H. H. Wiggan, of Somerville, from designs by Parker H. Kemble, was unfortunately destroyed by fire last week, but will be replaced as soon as possible. The boat was to be double-planked, with a thickness of linen between the planking. The linen was to be laid in pitch, and as it was thus being laid the pitch took fire from the melting pot and the boat was consumed. A chest in which were the original designs for the boat was badly charred, but fortunately the drawings were not injured, so rebuilding will be an easy matter. It has been begun and will be pushed.—*Boston Globe*.

The East Gloucester Y. C. has arranged its fixtures as follows: Commencing June 7, and every Tuesday evening until Sept. 1, a pennant race will be sailed from off the club house to Ten Pound Island Buoy, leaving it on port, around buoy off the Hawthorne Inn, leaving it on starboard, around buoy off Stage Fort, on the starboard, returning to the finish. The starting gun will be fired after 6 P. M. The course is a triangle, the upper section of which just skirts the outer bay, and is plainly visible from the shore. July 4—Club races, rules and regulations to be determined later. Aug. 10—Massachusetts Yacht Racing Association, open race. Cruises.—June 11 and 12, July 9 and 10, Aug. 13 and 14, to Marblehead and Salem Willows; July 31 and Aug. 1, ladies' moonlight sail; July 17, 18 and 19, cruise to Nahant, joining the Winthrop, Jeffries and Quincy clubs to the cruise to Marblehead, Salem Willows and Gloucester. The classes will be as follows: First class, 21 to 26ft.; second class, 17 to 21ft.; third class, 17ft. and under. Regulations—Any boat not having a competitor in her class shall be allowed to sail over the course and claim percentage. All boats to sail without time allowance. No restrictions in regard to jib and mainsail. Time limit, two hours. Boats finishing first, second, third and fourth in each race will have a percentage of 100, 75, 50 and 25. Boats making the largest total percentage at the end of the series will be presented with a silk pennant. Boats making the second best percentage will be presented with a bunting pennant.

The twin screw steam yacht Atmah for Baron Edmond de Rothschild, of Paris, built to the design of Mr. G. L. Watson, was launched on May 7 by the Fairfield Shipbuilding and Engineering Company, Glasgow. Dimensions: length, 235ft.; breadth moulded, 34ft.; depth moulded, 21ft. 3in.; and 1,550 tons y. m. Atmah has been built under special survey, and will class 100 Al at Lloyd's, and 13-311 Bureau Veritas in the yacht register of both societies. The hull is of steel, with side bar and bilge keels, clipper stem and elliptical stern, topgallant forecabin, and raised quarter deck. The bottom of the vessel is of the semi-longitudinal character of construction, with an inner bottom fitted under the main coal bunkers, forming water ballast tanks for a length of about 50ft. There are seven water-tight bulkheads throughout the ship. On the shade deck provision is made for carrying several quick-firing guns. A system of hot-water heating is carried throughout the ship, and a hot-water supply provided to all owner's and guests' rooms and lavatories, etc. A complete installation of electric light, including a powerful searchlight, is also provided. The machinery consists of two sets of triple-expansion engines, each set having four cranks and four cylinders, there being one high-pressure, one medium-pressure, and two low-pressure cylinders. The yacht, which will be rigged as a two-masted schooner, with a squaresail on the foremast, is to be fitted out in an elaborate manner with all the most recent improvements. The ceremony of naming the yacht was, in the absence of Baroness Rothschild, performed by Mrs. Edmund Sharer, and among the company present were Sir Wm. G. Pearce, Bart.; Dr. and Mrs. Elgar; M. Paul Reuf, Paris, Baron Rothschild's representative; M. and Mme. Cordemay, M. Rien, Mr. G. L. Watson, Mr. and Mrs. Jacks, Mr. and Mrs. Wedgewood, Mr. Sharer, Commander Marshall, R.N.R., Mr. Joseph Beardmore, etc. Sir Wm. G. Pearce proposed "Success to the new Yacht and Health of Baron Rothschild," to which M. Reuf replied, and also proposed "The Builders" and "Mrs. Sharer."—*The Field*.

The rules of the Yacht Racing Association of Long Island Sound, revised to date, have been published in pamphlet form by Thompson & Co., 55 Dey street, New York. The price is 10 cents per copy.

Ailsa, cutter, now owned by F. B. Jameson, is now at Fay's yard, where she is being converted to the yawl rig. Satanita has had her mast removed and reduced in size, though it is not stated whether her rig will also be changed.

Britannia, cutter, is laid up and on the sale list, after a rather unfortunate experience with two owners, who were not yachtsmen.

Capt. John Carter, who has been seriously ill during the winter, has not yet recovered his usual health. He will command the new Watson schooner Rainbow.

The Yachtsman of May 5 contains a complete tabulated record of the late Mediterranean races, giving the position of each yacht in each race.

Canoeing.

The Evasion of Rules.

THE Field comments as follows on some proposed open flagrant violations of the rules of the R. C. C. cruising class, intended to bar the racing machine and to turn canoeing into new channels of prosperity; an end which it now promises to achieve. The condition of canoeing in England this season is in marked contrast to this country, there a veritable revival of racing is under way, weekly races having been held on the Thames for the past six weeks, with good entries. Mr. Linton Hope has returned to canoe racing, sailing his own canoes, and this alone is likely to add much to the interest in the sport. The evasions mentioned in the Field would, if permitted, at once wipe out the rule. We have always been of the opinion that if American canoeists had acted with ordinary foresight and good judgment over a dozen years ago in at once prohibiting all canoes without sleeping space in the cockpit, there would still have been canoes and canoe racing in this country to-day.

There never was a rating rule made which could not in some way be evaded in the spirit and intention, while the letter of the rule was obeyed; that is to say, that where every possible evasion is to be guarded against in anticipation, the rule must necessarily occupy pages of the club book of rules, and certainly would be a most difficult thing to pass through a general meeting, where amendments may be sprung upon almost every sentence. The simple and effective plan adopted by the Yacht Racing Association of the council giving instructions to the measures as to the carrying out of the rule, or reporting evasions for its decision, has nipped in the bud many a letter-perfect breach of the spirit of the rule.

The Royal Canoe Club has followed the Y. R. A. in this connection, and on the arising of certain questionable modes of reading the Classification Rules, has answered the intending builder's arguments, and has instructed the official measurers how to act in the matter within the fair reading of the rule. A new canoe is about to be built for the challenge cup races, and her designer very fairly admitted that racing was his intention, and that he preferred to build, for racing, a canoe of the "cruising class," probably because of the extra six inches of beam allowed in that class, and also that the class permits an underbody rudder.

But he wanted to go one further in the racing machine direction, while yet claiming to be a "cruiser," in that he wanted to have a long dagger center-plate, the case for which would extend from end to end of the required "sleeping compartment," and would thus cut such compartment completely in two. The rule requires that in a cruising canoe there shall be a sleeping compartment of not less than 3ft. 6in. in length, with hatchway thereto of not less than 18in. in width for a distance or length of 3ft. The committee decided and instructed that if it was the intention of the owner that the sleeping space is to be on one side only of the C. B. case, then the opening or access thereto must be not less than 18in. by 3ft. Therefore the coaming of the hatchway would come out inconveniently near to the side of the canoe, unless the C. B. case was kept inconveniently low in its height above waterline.

The other point, relating to the same canoe, was the length of mast. A very short waterline was to be given to the canoe in order to get a large sail area, under the rating of L. W. L. X sail area; but the rule, in order to discourage extremes, or machines, limits the length of any spar to be not longer than the L. W. L. of the canoe's rating, consequently where a very short waterline is attempted it is found to give inconveniently short spars on which to set the large sail area obtained. To override this, the designer desired to measure his mast *qua* spar only, and then to stick that 12ft. spar into a metal tube standing high above the deck, so as in effect to get a mast hoist of, say, 14ft. from deck to truck.

Clearly this was an evasion of the spirit and intention of the rule; had the mast been stepped, as in nearly all canoes and boats, fairly down through the deck to the keelson, and then had it been fitted with a ferrule at 12ft. from heel, and a mast headpiece shipped into the ferrule, so as to lengthen the workable hoist to 14ft. above deck, it would, without question, be a breach of the rule. Then if this same jointed mast were turned bottom up and the mast headpiece stepped into the deck, the nature of that jointed spar would not be changed, and the evasion would remain unaltered. So, in fact, the committee unanimously found, and ordered that in the case of a mast, the length will be taken from the head of the mast to the bottom of the heel support or step.

The Forest and Stream Publishing Co. are the largest publishers and importers in America of Books on Outdoor Sports. Their illustrated descriptive catalogue will be sent free on request.

Rifle Range and Gallery.

Louisville Revolver Club.

LOUISVILLE, Ky., May 12.—The members of the Louisville Revolver Club met at the Armory Tuesday evening, May 10. The attendance was good. Seven members shot in the three events, which were witnessed by the large crowd present.

Friday noon the 1st Regiment leaves for Lexington, Ky., for mobilization, and the local club will practice in earnest for the coming match with the Brooklyn Club, which will come off on May 24. There have been such large crowds at the Armory lately that very little practicing among club members has taken place.

Mr. Lou Scott, an old sportsman, and representing the Burrell-Walker Clay Mfg. Co., of this city, was present and gave out samples of King's Smokeless and Semi-smokeless powders. Lou has many friends in the club and they had him to act as scorer during the evening.

Mr. R. S. Witherspoon, of the firm of Witherspoon Bros. & Co., a new member, made a very good score with a .38, 3 1/4 in. barrel S. & W. hammerless, for his first target shooting, and it is predicted he will soon be near the top as a marksman.

It is an acknowledged fact that one of the best shots of the club made the poorest score at the beginning of any member that has joined the club. We are especially anxious for more of our business and professional men to join to learn how to shoot. It is quite an art to be a good marksman in revolver shooting.

The club will meet on Tuesday evening of each week during the month for practice. Mr. H. S. Gilbert expects to leave in two weeks for Tatum Springs for the summer months. Messrs. Witherspoon, Miller, Gilbert, Taylor, Board, Burnett and Dye have formed a Smith and Wesson Pistol Club, using .22cal. S. & W. 10in. barrel pistols exclusively, and as soon as the range is completed on the Kentucky Shotgun Club's grounds they will be pleased to hear from clubs, especially Stevens clubs, using the above caliber pistols, to arrange for a match to come off in June. Below are the scores of the last shoot in full:

Event No. 1, 10yds., 2in. bullseye counts 10:												
H S Gilbert	10	8	7	10	10	8	10	10	10	10	10	93
E B Dye	10	10	10	10	10	10	8	7	1	86		
S Watkins	6	8	9	9	10	9	10	10	8	6	85	
M Board	10	7	7	5	9	7	9	9	9	8	81	
R S Witherspoon	5	10	9	8	9	8	7	10	3	10	79	
F M Taylor	5	6	9	1	6	8	8	5	3	10	61	

Event No. 2, 15yds., 4in. bullseye counts 10, 20 seconds for each 5 shots:												
S Watkins	9	9	8	8	5	10	10	10	9	6	84	
H S Gilbert	10	8	8	8	5	10	10	8	8	83		
F M Taylor	9	8	8	7	8	8	8	7	5	75		
E B Dye	9	9	7	4	3	10	9	8	7	62		
R S Witherspoon	5	1	0	0	10	10	9	9	7	51		
Geo Kneblekamp	10	10	8	7	1	9	9	6	6	62		

Event No. 3, 20yds., standard American target:												
H S Gilbert	8	9	9	7	7	6	6	7	7	8	67	
E B Dye	4	8	6	9	1	4	5	8	7	7	59	
M Board	9	8	1	7	4	1	1	6	10	6	53

Geo Kneblekamp	1	4	10	3	4	1	1	10	1	6	41	
R S Witherspoon	1	3	1	3	4	1	7	1	1	23		

E. B. Dye.

Rifle at Shell Mound.

SAN FRANCISCO, May 9.—Yesterday was club medal day for several clubs who shoot at Shell Mound range. Two of Germania Club's marksmen distinguished themselves. F. P. Schuster broke the club record. Only one entry of twenty shots is allowed per month. Schuster made 454 rings, thus beating Dr. Rodgers' record, which was 445. In the 3-shot re-entry match Aug. Jungblut made 75 rings, the possible.

In the Schuetzen Verein shoot A. H. Pape made the fine score of 444 yesterday—only one entry allowed.

Scores of the Columbia Club: Columbia target, rifle, 200yds., champion class (only one entry)—D. W. McLaughlin 47, F. E. Mason 61, Dr. Rodgers 69, F. O. Young 75. First class—A. B. Dorrell 71, Gorman 75, Bremer 92. Second class—Barley 82, M. J. White, 104.

Rifle, re-entry—Dr. Rodgers 45, Pape 58, McLaughlin 66.

Rifle, re-entry for lower classes—Dorrell 57 and 64, Gorman 63. Pistol, Columbia target, 50yds., champion class (only one entry)—Dr. Rodgers 50, Daiss 53, White 55, Gorman 57, Dorrell 62, Young 64, Pape 68. First class—McLaughlin 63, Mason 65, Barley 72.

Revolver—Young made 44 in 10 shots—a fine score. Militia practice was almost nil, as most of the boys are now United States volunteers and are expecting to go immediately to Manila.

ROEL.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

Fixtures.

May —.—Louisville, Ky.—Tournament of the Kentucky Shotgun Club; three days; two to targets, one at pigeons.
May 17-19.—Macon, Miss.—Tenth annual shooting tournament of the Noxubee Gun Club. C. M. Scales, Manager.

May 18-19.—Crawfordsville, Ind.—Tournament of the Crawfordsville Gun Club. C. E. Lacy, Sec'y.

May 20-22.—Butte, Mont.—Montana State Sportsmen's Association's tournament, on grounds of Butte Gun Club. Birds and targets; \$500 added money. C. M. Smith, Sec'y.

May 24-27.—Omaha, Neb.—Twenty-second annual tournament of the Nebraska State Sportsmen's Association. F. S. Parmelee, Sec'y.

May 25-26.—Findlay, O.—Annual tournament of the Magatrap Gun Club. O. B. Marvin, Sec'y.

May 25-27.—Owego, N. Y.—Owego Gun Club's tournament. Two days at targets, third day at live birds. Frank B. Tracy, Sec'y.

May 30.—Canajoharie, N. Y.—Decoration Day shoot of the Canajoharie Gun Club. Targets. Charles Weeks, Sec'y.

May 30.—Newburgh, N. Y.—Glenmore Rod and Gun Club's holiday shoot.

May 30.—Woodlawn.—All-day shoot of the New Utrecht Gun Club. E. G. Frost, Sec'y.

May 30.—Plainfield, N. J.—All-day shoot of Independent Gun Club.

May 30.—Newark, N. J.—Decoration Day shoot of East Side Gun Club; live birds; open to all.

May 30.—Oil City, Pa.—Decoration Day tournament of the Oil City Gun Club. H. C. Reeser, Sec'y.

June 2.—Peekskill, N. Y.—Trophy shoot, Hudson River Trap-Shooters' League, on the grounds of Peekskill Gun Club. J. B. Rogers, Manager.

June 1-3.—Springfield, O.—Open-to-all tournament of Ohio Trap-Shooters' League.

June 2-3.—Alton, Ill.—Second annual bluerock tournament of Piasa Gun Club. F. C. Richl, Sec'y.

June 7-8.—Willmar, Minn.—Willmar Gun Club's third annual amateur tournament.

June 7-8.—Indianapolis, Ind.—Annual tournament of the Indiana Trap-Shooters' League, of Indiana, on the grounds of the Limited Gun Club.

June 7-11.—Peoria, Ill.—Annual tournament and convention of Illinois State Sportsmen's Association.

June 8-10.—Parkersburg, W. Va.—Second annual tournament of the West Virginia State Sportsmen's Association. Address all communications to Ed O. Bower, Sec'y, Sistersville, W. Va.

June 14-15.—Stillwater, Minn.—Tournament of the Stillwater Gun Club.

June 14-15.—Grafton, N. D.—Tournament and meeting of North Dakota S. S. Association.

June 14-16.—Ottawa, Kans.—Annual tournament of the Kansas State Sportsmen's Association. W. L. Beardsley, Sec'y-Treas.

June 15-16.—Portsmouth, Va.—Tournament of the Interstate Association, under the auspices of the Portsmouth Gun Club. W. N. White, Sec'y.

June 15-17.—Cleveland, O.—Fifth annual tournament of the Cleveland Target Co. Bluerocks thrown free of charge. Professionals and manufacturers' agents barred from programme events.

June 20-24.—Rochester, N. Y.—Annual tournament of the New York State Association, under the auspices of the Rochester Rod and Gun Club. Live birds and targets.

June 21-23.—Sioux City, Ia.—Fourth annual amateur tournament of the Soo Gun Club. Three sets of traps. W. F. Duncan, Treas.

June 21-23.—Sioux City, Ia.—Soo Gun Club's tournament. E. R. Chapman, Sec'y.

June 25.—Long Branch, N. J.—Opening shoot of Hollywood grounds. Live-bird shooting every Saturday afterward.

June 27-July 3.—Milwaukee, Wis.—Tournament of Milwaukee Gun Club, carnival week. Live birds and targets. \$1,000 added money.

June 30-July 1.—Milwaukee, Wis.—National Gun Club's tournament.

July 1.—Sherbrooke, Canada.—Grand annual tournament. Targets. Regular sweeps, variety and merchandise. C. H. Foss, Sec'y.

July 6-7.—Meadville, Pa.—Tournament of the Interstate Association, under the auspices of the Meadville Gun Club. Chas. Stein, Sec'y.

July 7-9.—Denver, Colo.—First annual tournament of the Overland Association. Open to all. Inanimate targets. Added money. John W. Kane, Manager.

July 15.—Poughkeepsie, N. Y.—Trophy shoot, Hudson River Trap-Shooters' League, on the grounds of the Poughkeepsie Gun Club. J. B. Rogers, Manager.

July 14-15.—Bedford, Ind.—Tournament of Bedford Rod and Gun Club.

July 19-21.—Palmyra, Mo.—Eight annual tournament of the Missouri Amateur Shooting Association, under the management of the Palmyra Gun Club. Targets and live birds. Added money announced later. W. N. Bates, Sec'y.

July 26-28.—Little Rock, Ark.—Eighth annual tournament of the Arkansas State Sportsmen's Association. Paul R. Litzke, Sec'y.

July 27-28.—Meriden, Conn.—Tournament of the Interstate Association, under the auspices of the Parker Gun Club. C. S. Howard, Sec'y.

Aug. 11.—Marlborough, N. Y.—Trophy shoot, Hudson River Trap-Shooters' League, on grounds of Marlborough Gun Club. J. B. Rogers, Manager.

Aug. 17-18.—Waterville, Me.—Tournament of the Interstate Association, under the auspices of the Waterville Gun Club. E. T. Wyman, Sec'y.

Aug. 17-18.—Warsaw, Ind.—Lake City Gun Club's tournament. J. S. Campfield, Sec'y.

Aug. 24.—Warwick, N. Y.—Special shoot, Hudson River Trap-Shooters' League, on grounds of Warwick Gun Club. J. B. Rogers, Manager.

Aug. 24-25.—Minneapolis, Minn.—Tournament of the Minneapolis Gun Club. G. I. McGraw, Sec'y.

Aug. 24-27.—Omaha, Neb.—Indian tournament, on grounds of Omaha Gun Club; three days targets; one targets and live birds.

Sept. 7-8.—Kingston, N. Y.—Tournament of Hudson River League, on grounds of Kingston Gun Club.

Sept. 7-8.—Haverhill, Mass.—Tournament of the Interstate Association, under the auspices of the Haverhill Gun Club. Geo. F. Stevens, Sec'y.

Oct. 4-6.—Newburgh, N. Y.—West Newburgh Gun and Rifle Association's fall tournament.

Oct. 12-13.—Greensburg, Ind.—Greensburg Gun Club's tournament. W. Woodfill, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The programme of the Owego Gun Club's tournament, Owego, N. Y., May 25 to 27, can now be obtained of the secretary, Frank B. Tracy. The first and second days will be devoted to bluerocks; the third to live birds. The target events number twelve for each day, six at 10 targets, six at 15; \$1 and \$1.50 entrance respectively. There are four live-bird events on the last day, as follows: 5 birds, \$5, three moneys; 7 birds, \$7, the moneys in both these events being divided 50, 30 and 20, birds deducted. No. 3 is at 10 birds, \$10, 40, 30, 20 and 10 per cent., birds deducted. No. 4 is a miss-and-out, \$2. The programme contains the following information for the club's patrons: "The grounds of the Owego Gun Club are within five minutes' walk of D. L. & W. station, and one mile from Erie and Lehigh Valley stations. Carriages will meet each incoming train. Lunch served on the grounds. Arrangements have been made to have ammunition for sale. The shooter's platform is under cover, with comfortable house attached. Rain will not interfere with shooting. Targets are thrown toward the northeast, and nearly all angles give sky birds. It is strictly an amateur shoot and all professionals and experts are barred from competing, though they will be permitted to shoot in the events by paying for the targets. All amateurs are cordially invited. Ship ammunition care of Ahwaga House."

The programme of the Nebraska State Sportsmen's Association's twenty-second annual tournament, May 24 to 27, open to all, can be obtained of the managers, Messrs. G. W. Loomis, F. S. Parmelee, or J. C. Read, Omaha, Neb. Each of the first three days will have ten events; the fourth day eight events, 20 targets each, \$2.50 entrance, \$25 added; in all thirty-eight events, with a total of \$950 added. In addition there will be cash prizes of \$10 for each of the five best general averages. Five moneys, 30, 25, 20, 15 and 10 per cent. On the fourth day, besides the eight events, there will be two events open only to Nebraska shooters, namely, first, the gold medal event, 25 targets, the trophy being emblematic of the championship at targets, entrance \$3, four moneys, 40, 30, 20 and 10 per cent. Second, at 15 live birds, 30yds. rise, for diamond badge, emblematic of the live-bird championship, \$15 entrance, four moneys. Shooting commences at 8:30. Grounds will be open for practice on May 23.

The tribe has issued a document which cedes a tournament to the palefaced of the world. It is signed by the renowned Chiefs Bald Eagle, Wipe Stick, Moonface, Heap Talk, Buffalo Hump, High Kick, Long Talk, Dago, High Ball and No Talk, known more commonly as the Indian squad. They set forth that in the third week of August, on the grounds of the Omaha Gun Club, they will hold their second tournament, to consist of four days of target shooting, ten events each, \$2.50 entrance, \$20 added, five moneys, 30, 25, 20, 15 and 10 per cent., and \$100 for the ten best general averages, as follows: \$20, \$15, \$12, \$10, \$9, \$8, \$8, \$6, \$6, \$6. Aug. 27, the last day, there will be a live-bird handicap, 26 to 32yds., \$25 entrance, birds extra, \$100 in cash added, four moneys, 40, 30, 20 and 10 per cent. Professionals and experts will pay 50 cents extra in each of the target events, the purse thereby provided to be divided among the amateurs who shoot through the programme.

J. S. Remsen, the president of the Brooklyn, N. Y., Gun Club, and also a member of the Carteret Club, has unlimited facilities for target practice at his home, Flatbush, L. I. In fact he has a little club all to himself and his invited guests. With great ingenuity he has laid out grounds in a field near his home, and has put in a set of traps, Sergeant system, and has made a wire pull that cannot be baten for effectiveness. He inaugurated his new pull, etc., on Tuesday of last week, May 10, inviting Capt. A. W. Money, Edward Banks and a novice to try their hands at bluerocks from his traps. There was a strong wind blowing right in the faces of the shooters, making the shooting very difficult, but as goose eggs were distributed rather generously all around, no complaints were heard. To make things interesting, a series of team races were shot during the afternoon, Capt. Money and his partner, Mr. Remsen, getting "did up" by Mr. Banks and his side partner —, who shall be nameless for this once.

Mr. John B. Rogers, secretary and manager of the Hudson River Trap-Shooters' League, writes us as follows: "At a meeting of the board of directors of the Hudson River Trap-Shooters' League, held at the U. S. Hotel, Newburgh, N. Y., May 11, it was decided to hold only one-day shoots in the future, and the following dates were fixed: June 2, Peekskill Gun Club grounds, trophy shoot. July 15, Poughkeepsie Gun Club grounds, trophy shoot. Aug. 11, Marlborough Gun Club grounds, trophy shoot. Aug. 24, Warwick Gun Club grounds, special shoot. Sept. 9, place undecided, trophy shoot. It was also decided to offer \$25 average money, to be divided as follows: \$6, \$5, \$4.50, \$3.50, \$3, \$2, \$1, among amateurs only. Targets will be thrown free to all manufacturers' agents. Programmes for the Peekskill shoot will be mailed the first of the week."

Mr. O. B. Marvin, secretary of the M. G. C., Findlay, O., writes us that on account of the tournaments given at Indianapolis, Ind., and Parkersburg, W. Va., on June 7-9, the Magatrap Gun Club, of Findlay, have changed their dates to May 25-26. All those wishing programmes will receive the same by addressing Mr. Marvin.

On May 11 the West Chester Gun Club defeated the Florists Gun Club in a team shoot, twelve men on a side on the club's grounds at Wissinoming, Pa. The conditions were 25 targets, known traps and angles. A high wind made difficult shooting. Will K. Park made the highest individual score, 22 out of 25. Following are the scores: West Chester—Harman 19, Davids 21, Hoar 18, C. Brinton 21, P. Brinton 16, Sellers 19, Ferguson 16, Jackson 18, Twaddell 14, Alexander 15, Earhus 21, Place 20, total 218. Florists—G. O. Bell 16, W. K. Park 22, C. D. Ball 14, J. C. McKarhar 14, J. J. Stuer 15, J. W. Colflesh 21, J. Burton 21, Jones 13, Cartledge 21, Craig 10, L. Ball 12, Anderson 20, total 199.

The Handicapping Committee of the New York German Gun Club fixed the following handicaps for the season of 1898, all members shooting from the 28yd. mark: Dr. George V. Hudson is the scratch man, and is handicapped at 7 points; John Schlicht and John Wellbrock are handicapped at 6½ points; John P. Dannefeler, Fred Sauter, Henry Nobel, and Henry Leopold, 6 points; Robert Debacher, Fred Kronsberg, Adolph Lucas, Edward Rodie and Bernard Koenig, 5½ points; Henry Meyer, Philip Moersch, M. J. Bouton, August Schmitt and W. S. Meisenholder, 5 points; A. Le Mout, Henry Oehl, Charles Voehringer, Charles W. Horney and John Boesenecker, 4½ points, and Jacob Bissinger and Ed Hotz, 4 point.

At the annual meeting of the Saginaw Gun Club, Saginaw, Mich., a list of officers was elected as follows: John B. Baum, President; Jacob Henny, Vice-President; John M. Messner, Secretary; John Popp, Treasurer; Ed Carpenter, E. L. De Lange, H. G. Krogmann, John Brechtelsbauer, Henry Henny are captains. The auditing committee is Chas. Schmidt, Henry Henny, Charles E. Lown. A trophy in the shape of a gold medal has been presented to the club by Mautner & Krause, to be shot for by members, three successive victories entitling the winner to its permanent possession.

The opening shoot of the Border Gun Club League will be held on Greenville grounds, May 19. Shooting commences at 10 A. M. There are fifteen target events on the programme, 10, 15 and 20 targets respectively, \$1, \$1.50 and \$2 entrance, moneys divided 40, 30, 20 and 10 per cent. The League race, the feature of the tournament, will take place between 3 and 4 o'clock, between five-men teams from each of the following cities: Greenville, Junction Park (Rochester, Pa.), Warren, O., and Newcastle, Pa. J. M. Reed, Sec'y.

Charlie Budd is not much of a diagnostician in the matter of his own shooting abilities, for after shooting at Reading and Baltimore he was almost convinced that he had lost the art of shooting targets in expert form. Thereupon he goes home, turns to and makes a score of 96 out of 100, winning the Schmelzer trophy thereby, and defeating all the high-class artists.

Capt. A. W. Money, president of The American E. C. & Schultze Powder Co., leaves on Thursday of this week for a visit to England. We wish him a pleasant and safe voyage. Until his return, there will be one shooter less who shoots through the programme and through the extra events, and stops only when night comes.

The annual shoot of the Canajoharie Gun Club, Canajoharie, N. Y., will be held on May 30. There will be fifteen events, 15 bluerocks, entrance \$1.30, targets included. Ten dollars will be added for best average in events 5 to 14 inclusive. Moneys and averages divided 30, 25, 20, 15 and 10 per cent. Paid men barred from purse, but allowed to shoot for targets. Charles Weeks, secretary.

Messrs. H. P. Collins and Elmer E. Shaner dropped into this city last week on their way home from the Brunswick, Ga., shoot. Mr. Collins, who represents the Du Pont Powder Company in Baltimore and the South, reported nothing doing, while Elmer Shaner said that big game shooting, such as Spaniards, etc., was attracting more attention in the South than target shooting.

The Oil City Gun Club, Oil City, Pa., will hold a shoot on Decoration Day, May 30. Money divided according to the Rose system. There are eleven events, 10, 15 and 20 targets, \$1, \$1.50 and \$2 entrance, three, four and five moneys respectively. Targets deducted, 2 cents. Shooting commences at 10 A. M. Those who wish may shoot for targets only. H. C. Reeser, secretary.

Under date of May 13, a correspondent writes us that Charlie Budd's shoot was a great success in every way—weather fine and the birds a good lot. The boys all go from Des Moines to the Missouri State shoot. Charlie Budd will give a shoot next year and add \$1,000.

In Charlie Budd's shoot, Fred Gilbert, the Wizard of the West, was first general average with 93½ per cent, a great showing in a total of 600 targets. In our special dispatch from Kansas City, Mr. Paul Litzke mentions that Gilbert broke 125 straight. He will at the present rate be in truth the man who never misses.

Barney Worthen, the well-known expert, of Charleston, S. C., won high average on both days at the Interstate tournament, held May 4-5, at Brunswick, Ga., using a Parker gun and E. C. powder. He represented The American E. C. & Schultze Powder Company at that tournament.

The New Utrecht Gun Club will have live-bird shooting on Saturday of this week, at Woodlawn. Also, that club will hold an all-day live-bird shoot on May 30, same place. Full particulars will be given at a later date.

The Bath Gun Club will hold its annual tournament on June 2, the programme of which will be issued later. George E. Thompson, Sec'y.

The third annual amateur tournament of the Willmar Gun Club, Willmar, Minn., will be held on June 7 and 8.

BERNARD WATERS.

Audubon Gun Club.

BUFFALO, N. Y., May 14.—A big attendance manifested the competitive earnestness of the Audubon Gun Club's shoot, held to-day. The interest centered in the Du Pont Handicap, shooting at 10 live birds per man, for an elegant silver trophy, donated by the Du Pont Powder Co. through their Buffalo agent, Mr. Clinton Bidwell. Kirkover, Krotz, Zoeller, Warren, Lodge and Dutton tied on the first string of birds. Kirkover won in shooting off the tie and received the trophy.

In the club badge shoot F. D. Kelsey won a Class A badge, Gus Krotz won Class B, and U. E. Story won Class C. The scores:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6

Auburn Gun Club.

AUBURN, Me., May 8.—The Auburn Gun Club held their regular weekly shoot to-day; a fine day for the sport, and the boys all enjoyed themselves. The new pulls and traps worked to perfection. In the 25-bird event for the gold badge Fletcher and Barker tied on 21. Barker won on the shoot-off, and wears the badge for the next week. Following are the scores:

Events:	1	2	3	4	5	6	7	8

L. A. BARKER, Sec'y.

Kansas City Shoot.

[Special to FOREST AND STREAM.]

KANSAS CITY, Mo., May 16.—The prospects for the success of the tournament are most flattering indeed. There are a host of shooters present, including all the cracks of the country, the East being strongly represented. The events on the programme were the State team championship, and the individual State and interstate championships. The team race had ten entries, and the honors went to the St. Louis team, whose total was 58 out of 60; both lost birds were dead out of bonds.

Score: St. Louis—Kling 15, Pendergast 15, Starkloff 14, J. W. Smith 14. Total 58.

Washington Park: Wright 15, Beach 11, Jarrett 12, D. Elliott 15. Total 53.

Pastime: Hallowell 14, Lee Horton 13, Whittier 13, Thomas 13. Total 53.

Kansas City: Durkee 14, Curtice 14, J. Porter 13, R. Jarrett 12. Total 53.

Stock Yards: Barse 14, Walden 13, Campbell 13, Steele 12. Total 52.

Veterans: Maegley 13, Stockwell 13, Norton 13, Riley 13. Total 52.

O K C.: Herman 14, Hickman 13, K. W. Herman 12, Gottlieb 12. Total 51.

Belt Line: Guinotte 14, Glasner 13, F. Smith 11, Von Quist 8. Total 46.

Foresters: Abemothy 12, Russell 12, Tyree 11, Jackson 10. Total 45.

Joplin withdrew.

The individual race closed with thirty-eight entries; of these only twenty-five have finished. Jim Porter and Gilbert are the only ones who killed twenty-five straight.

In the target sweeps Gilbert was easily first, as he broke all targets he shot at, 125 straight.

PAUL R. LITZKE.

The conditions of the State Association team medal shoot are: Open to only one team of four, belonging to any club resident of the State of Missouri, fifteen birds to each man, making sixty birds to the team; entrance \$20 each team; birds extra; \$100 to club holding last medal, and \$100 additional guaranteed, that is to be divided among the second, third, fourth and fifth teams in the race, in sums equal to 40, 30, 20 and 10 per cent.

The Missouri State individual championship, limited to Missouri State Association members, was at twenty-five birds, entrance \$12.50, including birds; \$50 in cash added. The Association offers in this event a \$25 gold medal emblematic of the State championship at live birds, moneys divided 40, 30 and 20 per cent. First money goes with the medal, but the trophy must be shot out in case of ties.

Haverhill Gun Club.

HAVERHILL, Mass., May 14.—The Haverhill Gun Club held its regular weekly practice shoot this afternoon, the fourth since the season opened. Mr. J. R. Hull, representative of Parker Bros., had sent us word that he would be with us, and bring Mr. T. H. Keller, the popular agent of the Peters Cartridge Co. and King's Powder Co., with him. Accompanying them when they arrived was Mr. Hooker, a member of the Lynn, Mass., Fish and Game Protective Association. As a result, the members turned out in good force to welcome them, and a lively and enjoyable afternoon's shoot was had, notwithstanding the frequent showers, which, however, had no appreciable effect in dampening the ardor of the shooters.

Mr. Hull had along a couple of Parker guns, and Mr. Keller had Peters loads "to burn," and they were burned all right too; there was no other way to dispose of them.

Mr. Hull had sent along a case of loads, but they failed to materialize, and he was obliged to shoot a lighter load than he is accustomed to use, but it didn't seem to affect his shooting very much, as he landed first for general average with 88 per cent., and during the afternoon broke 30 straight, 15 at reversed pull and 15 at unknown angles and traps, walk-around system, in succession.

The gentlemen made many friends during their visit, and many and sincere were the wishes for a speedy renewal of their acquaintance when the time came to bid them good-bye.

Below you will find events and scores in tabulated form:

Events:	1	2	3	4	5	6	7	8	9	10	11	Shot		
Targets:	10	10	15	10	10	15	15	15	15	10	10	at.	Broke.	Av.

Hull	9	7	14	10	6	13	15	15	12	10	10	115	101	.878
Osborne	5	6	8	7	6	9	10	10	10	10	10	70	41	.585
Merritt	8	6	11	8	7	12	11	10	10	10	10	85	63	.741
Brown	7	6	10	5	4	9	10	10	10	10	10	70	41	.585
Orne	4	3	8	6	6	8	8	10	10	10	10	85	43	.505
D S Short	6	8	12	7	6	8	11	6	11	7	4	135	86	.637
Keller	7	7	10	7	9	14	9	10	10	10	10	85	63	.741
Miller	10	10	12	9	8	9	12	10	14	7	10	125	101	.808
Putnam	3	5	4	1	8	10	10	10	10	10	10	60	21	.350
Pray	5	13	4	8	12	10	10	10	10	10	10	60	42	.700
Lambert	9	11	9	10	11	9	11	14	8	7	10	125	99	.792
George	11	3	8	12	15	11	13	9	4	10	10	115	86	.747
Webster	11	10	8	11	12	10	10	6	4	10	10	105	72	.685
Bradford	6	5	12	11	9	10	6	4	10	10	10	100	63	.630
Leighton	3	7	10	8	10	10	10	10	10	10	10	50	28	.560
Bickel	5	8	8	10	10	10	10	10	10	10	10	35	21	.600
Ingham	8	9	12	10	10	10	10	10	10	10	10	60	45	.750

Events 5, 9, and 10 were known angles; 1, 2, 3 and 6 at unknown angles; 4 and 7, known angles, reversed pull; 8, unknown angles and traps, walk-around, and 11 was at 5 pairs.

GEO. F. STEVENS, Sec'y-Treas.

Centredale Gun Club.

CENTREDALE, R. I., May 16.—We had another beautiful day for our practice shoot Saturday, and some of the best scores of the season were made. If some of our boys could only shoot as well when shooting for prizes and pennants as they do when practicing we would probably have a chance to win some of the trophies which are being shot for bi-weekly, but then the season has but just begun, and who can tell what we will do. As I predicted in these columns two weeks ago, my friend Billy Sheldon won the C. F. Pope Co. trophy last Thursday, and I guess everybody was pleased that he did. His club, the Pawtuxet, also lowered the colors of the Providence Club, by winning the pennant from them, which they have so gallantly defended these last two years.

Events:	1	2	3	4	5	6	7	8	9	10	11
Birds:	25	10	25	25	25	25	25	25	25	25	15
J B Collins	20	9	15	21	20	13	19	23	10	13	13
Reiner	22	10	22	23	20	12	10	10	10	12	12
Root	9	17	14	20	22	22	22	23	10	10	10
Sowden	21	21	17	20	14	10	10	10	10	10	10
Remington	15	11	10	10	10	10	10	10	10	10	10
Smith	12	12	10	10	10	10	10	10	10	10	10
Sweet	10	10	10	10	10	10	10	10	10	10	10
Voelker	10	10	10	10	10	10	10	10	10	10	10
Thrift	10	10	10	10	10	10	10	10	10	10	10
Andrews	10	10	10	10	10	10	10	10	10	10	10
King	10	10	10	10	10	10	10	10	10	10	10

No. 2 was 5 doubles. Root did some fine shooting the last five strings. Collins is fast getting into form. Sowden, who has been absent from the traps for ten years, is getting his eye on to the birds in good style, and ought to make them all hustle pretty soon.

N. F. REINER, Sec'y.

Uxbridge Gun Club.

UXBRIDGE, Mass., May 14.—Nos. 2, 6 and 8 were at unknown angles; Nos. 1, 5 and 7 were regular; No. 3 was reverse; No. 4 was Sergeant system; Nos. 5, 6, 7 and 8 were the medal shoot, 50 targets in all:

Events:	1	2	3	4	5	6	7	8	Shot		
Targets:	15	10	15	10	15	10	15	10	at	Broke.	Av.

Club average									820	417	.674

WESTERN TRAPS.

CHICAGO CHALLENGE TROPHY.

CHICAGO, Ill., May 14.—The rules finally adopted for the government of the Chicago challenge trophy have under test proved themselves to be singularly deficient. For instance, they say nothing about the procedure in case of a tie, as was the situation in the Paterson-Cunningham race. The decision of the question in that case was left to the referee, the trustees not passing on the matter. Mr. Watson, referee, decided that Mr. Cunningham would have to pay for the birds in both races, which was probably correct enough in view of the blankness of the rules on that head.

Yet another and more serious fault in the rules came to light in the question of priority of challenges for this trophy. One challenger feels himself aggrieved because his verbal challenge, unaccompanied with money, did not receive precedence. Others, who under the rules filed their challenges and forfeits with a local paper designated under the rules as the proper repository, claimed precedence each for himself. The rules do not state that the regular challenge first filed shall be accepted. Having in view possible entanglements under this clause of the rule, the trustees held a meeting and agreed to practically nullify that clause by demanding that henceforth all challenges must be sent in to the trustees. All the trustees agreed that this would be advisable, but soon after the agreement one of the trustees, Mr. T. P. Hicks, is stated to have gone to the office of the aforementioned newspaper and left there his challenge for the trophy. This action was regular under the rules as adopted, but contrary to the agreement of the governing body of trustees. In view of this fact, and of the other difficulties and deficiencies above mentioned, the trustees have sent out a notice for a meeting of the original contributors to the trophy, at the office of E. S. Rice, on Monday of this week, to consider suggestions that will be presented for their consideration.

It is highly desirable that such meeting be held, and that the powers of the trustees be properly extended and specified. Of course, the real difficulty lies in the narrow and mistaken policy—itsself a most absurd proposition from a sporting standpoint—of constituting a newspaper concern as the governing board of a trophy to which very many have contributed, and in which the general public is asked to take an interest. This same narrow and selfish action has in the past killed several sportsmen's bodies and sportsmen's movements, and the lesson of history would seem to be so plain as not to admit of the mistake finding repetition. At first sight it may seem a bit large and glorious for a newspaper to be designated as the holder of \$10 worth of stake money, but really the ambition for such position is selfish and not broad. If a trophy is to be made a popular one, it should have strings taken off from it. As it has not been offered by any one concern, it should not be kept in the kitchen of any one concern. Such a restriction kills all the value of a competition. The only natural and common sense thing to do with these rules, if the trophy is to be a public and not a private matter, is to amend the rules so that the givers of the trophy may see it governed by the officers elected by themselves. This I say not from any standpoint of professional jealousy. It is simply a question of sportsmanlike attitude. Sporting newspapers are very often designated to hold challenge money, and this is proper enough, as it is in the line of their business. But any public trophy should ask the courtesy not of a narrow section of the press, but of all the sporting press. Otherwise it demeans and debases itself to just the extent to which it has allowed itself to be the dupe of narrow and selfish interests, and it lays itself open to the charge of being subject to the manipulation of a clique or ring. We have already too many cliques and rings in Chicago, and do not need any more. If the Chicago challenge trophy is really to belong to Chicago, let us take all the strings off from it and give it to Chicago, with a sportsmanlike set of rules to govern it, and a body of trustees who shall be indeed trustees of the honor and integrity of the competition in which our shooters are asked to enter. This, I am sure, is the more sportsmanlike and least selfish view of the situation, and I hope to see sufficient interest has been taken in the meeting of Monday to bring about its due accomplishment. This trophy is now old enough to stand on its own feet.

CHICAGO, May 16.—There was a stormy meeting to-day over the Chicago challenge trophy rules. Fourteen men were present. The rules were changed as follows:

Rule 2 now reads:

"All contests shall be at twenty-five birds per man, and handicap birds as fixed by trustees, whether at first general or subsequent individual contests, and shot under rules known as the American Shooting Association rules, except wherein the following rules may differ:

"In event of contest resulting in a tie, it shall be declared no contest and shall again be shot off under the conditions governing the previous contest, and the challenger shall post bird money as in previous event. In event of the challenger's failure to shoot off the tie on the day specified, not later than ten days from the date of such tie race, he shall forfeit the amount posted to the holder, unless some good and sufficient reason shall be given, which shall be decided by said trustees."

Rule 3 is unchanged.

Rule 4 is unchanged up to word "affixed," after which add "giving written notice of such handicap to parties in interest not less than three days prior to contest."

Rule 5 is unchanged, except add "and to pass upon all questions arising under these rules."

Rule 6, insert "resident" before word "shooter."

Rule 7 reads: "All matches shall be at twenty-five live birds and handicap bird when allowed by trustees, the challenger posting a sum of money requisite to cost of fifty birds and no more. The challenger shall in all cases pay for all birds used in the contest. The holder shall name time, giving challenger not less than ten days' written notice, and shall, while our respected fellow sportsman, John Watson, continues to manage a shooting park, name such park as the place for the contest."

In Rule 8, insert after the word "Chicago," "and a copy of same forwarded by challenger simultaneously to the chairman of committee."

Rule 9 now reads: "The trophy shall be delivered to the trustees on the day of each and every match and by them delivered to the winner upon his executing a satisfactory bond."

Add to Rule 10, "all challenges for the trophy shall be in writing and shall pass through the mails."

Rule 11 unchanged.

Rule 12 cut out entirely.

Balance unchanged.

BELLE MEADE SHOOTING PARK.

Mr. Irby Bennett, of Memphis, writes me a personal letter which I am sure he will allow me to use on account of the news it contains regarding one of the most remarkable private shooting grounds of the country, the park established by Gen. W. H. Jackson, of Nashville, Tenn., for his own personal pleasure. Mr. Bennett goes on to say:

"On an invitation of Gen. W. H. Jackson, of Belle Meade Stock Farm, Nashville, Tenn., eight or ten members of the Memphis Gun Club left here on Friday night last to spend a day at Belle Meade, and take part in an invitation shoot, which Gen. Jackson tendered our club. We arrived at Belle Meade at 6:30 on Saturday the 7th, and were met at Belle Meade Station by Gen. Jackson, W. H. Jackson, Jr., and Mr. Will Elliston, son-in-law of the General. Belle Meade Station is only about three hundred yards from the splendid old residence, and after a brisk walk to the house we were driven over the magnificent grounds, and then invited to a most delightful breakfast. Gen. Jackson is famous as an entertainer and host, and assisted by his son and son-in-law gave us a most enjoyable time.

"I want to write you about the grounds and appointments of the Belle Meade shooting box: Gen. Jackson has always been a lover of the gun and dogs, and finding game growing scarcer every day, has taken to trap shooting, of course, not altogether. Both W. H. Jackson, Jr., and Will Elliston are very enthusiastic sportsmen, and seconded the General in his efforts to establish at Belle Meade a shooting box equal to any. A beautiful piece of ground was selected near the center of the six thousand acres composing Belle Meade farm, and the Cincinnati building at the late Nashville Exposition was purchased and moved to Belle Meade, where it was erected, and a more complete building could hardly have been designed for the purpose. It has a broad veranda extending entirely around the house. The entrance leads up a broad flight of steps into a spacious hallway, appropriately furnished and handsomely decorated. On either side of the hall are large rooms set apart for the shooters, and there is a ladies' parlor, which is handsomely furnished in antique furniture, most of which has been in possession of Gen. Jackson's family for a century.

"At the north end of the building is a set of live bird traps. On the east is a maugtrap, and on the south another set of live bird traps. All so arranged and constructed that the trapping can be done very rapidly, and with the exception of Elkwood Park I do not know of a place in the United States as well appointed and equipped for trap shooting. Broad plank walks lead from one set

of traps to the other, and in bad weather the shooter does not have to expose himself to the elements. All onlookers can remain in the building and have an unobstructed view of the shooters and every bird trap.

"About half a mile from the club house there have been constructed large and commodious pigeon coops. A building 50x35ft. and two stories high. Running around one side of the building there is a wire net work, forming what might be termed an excellent "training ground" for the birds. At one end of the building there is another cage made of wire netting, the same length and width of the building. Birds can go at will from the building into these separate compartments. It seems to me the arrangements for keeping the birds are equally as good as the arrangement for shooting, and the General at all times keeps on hand from two to three thousand birds. I am sure there are no private grounds in this or any other country to compare with these. Understand, the General does not expect to hold tournaments, or make anything out of these grounds. They were constructed simply for the pleasure of himself, family and friends. They are private grounds for the use of a private gentleman and his invited guests."

Mr. W. R. Elliston is good enough to supplement Mr. Bennett's letter with scores and comment on the shoot above referred to. It would seem that there was a large attendance of spectators as well as shooters. The honors of the day were carried off by Mr. James Neely of Memphis, who killed twenty-five birds straight, winning a handsome silver cup. Messrs. Fite and Elliston tied for second with twenty-one each. In the 10-bird handicap, Messrs. W. H. Jackson, Jr., and Dudley Weaver tied on nine birds, and in the 25-bird handicap Messrs. Bennett and Elliston tied with twenty birds each. In a miss-and-out a hot competition ended in a victory for Mr. Elliston, who scored ten straight. Mr. Neely made one run of twenty-four straight live birds. Mr. Abe Frank, of Memphis, also came in for deserved applause, as did Mr. Edrington. The oldest shooters present stated that they had never seen the birds any better or harder to stop, a stiff north wind carrying many dead out of bonds. Mr. Elliston sends also a fine photograph of this magnificent private lodge, fit capital building, one of the most princely sporting grounds of the South. Following are the scores:

May 7, event No. 1, 7 live birds, sweep; all stood at 30yds.:	
Frank	2220222-6
Bennett	2022222-6
Norton	2222202-4
Walker	222221*-6
Edrington	2222222-7
Neely	22222*-6
Weaver	111*212-6

Event No. 2, 10 live birds, sweep; handicap:	
Frank, 30.....	2220222*212-8

PIASA SHOOT.	
That bland, amiable, urbane and innocent gentleman from Alton, Mr. H. R. Willis, dropped into the FOREST AND STREAM office this week with a strong tip on the coming tournament of the Piasa Gun Club, of Alton, which will be held June 2, 3, and 4, thus immediately preceding the big Illinois State shoot at Peoria. The club adds \$150, and will give \$50 to the man who is lucky enough to be high gun among such men as Gilbert, Grimm, Budd, Sargent, Crosby, McMurchy, Thompson, Parker, Herschey, and Tucker, all of whom have promised to be present.	

OHIO LEAGUE.	
The Ohio Trap-Shooters' League will meet at Springfield, June 1, 2, 3. Two days will be given to targets, and a third to a live-bird handicap, 25 birds, five moneys.	

MONTANA STATE ANNUAL.	
The fifth annual meet of the Montana State Sportsmen's Association will be held at Butte, May 20, 21, 22, open to all except in the State events. A good attendance is expected from Montana towns, and also from Utah and Idaho. Among the latter events is the live bird championship, represented by a handsome medal. Full target and live bird programme is offered, with good cash prizes for averages.	

STOCK YARDS OF KANSAS CITY.	
At its regular monthly medal shoot this week, the Stock Yards Gun Club, of Kansas City, made the following scores at live birds: C. P. Baldwin 12, J. A. Isaacson 14, G. M. Hendley 12, J. W. Olander 9, R. P. Barse 14, M. Steele 11, R. G. Warden 12, Ed Fletcher 15, R. Kelly 15, Jake Fry 10, C. J. Mustion 12, L. O. Nutter 12.	

YOUR UNCLE TOM.	
Mr. T. B. Laffin, who will be remembered as one of the close ones in the Grand American handicap, this week had a little live target shoot at Rock Island, Ill. Mr. Laffin and J. J. Paddock tied against A. D. Sperry and Mr. J. Bush, of Wilwaukee, at twenty live birds. Messrs. Laffin and Paddock scored 18 to their opponents' 16.	

THE PROFESSIONAL IN SPORT.	
The San Francisco Report in a recent issue had the following opinions to express in regard to the professional in sport:	
"Sportsmen call attention to the fact that the day of the trade shooter is on the wane. There was a time when the professional trigger-puller was very useful to his firm. He educated the novices. Now that the public is extremely well tutored and the teacher is no longer needed, special powders, makes of guns, and shells will still need introducing to the shooters, but the great 'booming period' has gone forever. Much good has been done by the temporary introduction of the professional class. The remarkable work done by the paid men caused many to take an interest in and to become finally infatuated with the sport who would otherwise have never heard of 'clay pigeons.' The prominence also given to the sport has had its effects in clearing the shooting world of many abuses. Years ago a man who shot at the traps was not altogether respected by his neighbors; now it's the reverse, and trap-shooting has become the sport of the business man in his hours of recreation. The drawing of a strict line between professionals and amateurs is a long stride in the right direction."	

WHY IT IS SO.

The scene shifts next week to Kansas City, where there will be seen one of the most remarkable instances of the development of the modern trap shooting. There will be other large tournaments given during this season, but perhaps none larger or more perfect than that at Kansas City. The reason for the success of all the shooting enterprises of Kansas City is easily to be discerned, and is covered tersely by the comment of a New York daily:

"Kansas City is full of gun clubs and each club is a strong one. There seems to be no rivalry among them, at least nothing; but friendly rivalry. They pull well together and are a grand example of the truth of the proverb that in union lies strength. A local daily, the Kansas City Star, does a great deal to help sport in Kansas City."

E. HUGH.

1206 BOYCE BUILDING, Chicago.

CHICAGO, Ill., May 14.—The Garfield Gun Club, of Chicago, whose club house was recently burned, has again located its building within 200yds. of the place where they were formerly located and the club house is now under process of construction. The building is somewhat larger and more modern than the building which was burned.

This being the opening shoot of the season quite a few shooters were in attendance. The sky was overcast the entire morning, with a cool wind from the northeast, which continued until the early part of the afternoon, when it commenced to rain, and continued throughout the afternoon until dark, when the shooting ceased. Notwithstanding the elements, the enthusiasm of the participants continued, and most of the boys shot throughout the afternoon in the rain.

The following are scores made in practice and sweep events during the afternoon, 15 targets, known traps, unknown angles:	
Events:	1 2 3
Targets:	15 15 15
Dr Shaw	9 .. 13
C P Richards.....	8 8 ..
C Stickle	9 8 ..
E E Neal	12 11 13
W A Jones	7 10 5
J H Amberg	8 11 ..
H E Wiley 13 ..
Dr Meek 10 ..
J Workman 7 ..
F Baird 5 ..
Events:	1 2 3
Targets:	15 15 15
S Palmer 13 6 8
Dr Meek 9 4 ..
T P Hicks 9 8 ..
A Smith 12 ..
M J Eich 13 11 11
Patti 11 ..
Fehrman 13 ..
Dr Shaw 11 ..
Bortree 6 ..
F S Graham 11 10

After the practice and sweepstake shooting followed the medal contest, which is at 25 single targets, known traps, unknown angles, classified; the result was as follows:	
Dr Shaw	1011111111110111111011011-21
C P Richards.....	11111001100111111010101-18
De Maris	11010011001011011010110-15
C Stiger	00110111100100110110101-16
H Wiley	10111111111110110110101-20
E E Neal	1110101111011010011111-19
S Palmer	1101100010101000111110-15
T P Hicks	0111001011011011000011-16
W A Jones	0001111001011011011010-15
M J Eich	11010001010111111001101-16
J H Amberg	1101111010111111111111-22
A C Paterson.....	1101111100 011111110101-19
J Fehrman	100110101010001000000-10
Dr Meek	1101111011111110110111-20
J Workman	00010110001001010111011-13
F Baird	10111100010010111100001-14
E S Graham	1011011011111010011101-17
Bortree	0110010010100110110100-12
R Kuss	0111111111001011001010-17
Eaton	11111011111001000101101-17

Dr. Shaw won in Class A, J. H. Amberg in Class B, Mr. Eaton in Class C.

The club grounds will continue to be open for the summer season from this time on, and from all appearances the club seems assured of a good and prosperous year. The shoots will be held on each Saturday until the end of the season.

EUREKA GUN CLUB.

The Eureka Gun Club, of Chicago, held its regular weekly contest on the club grounds. It was fairly well attended considering the weather, the wind blew quite hard from the left quarter with an overcast sky and hard falling rain, which continued throughout the afternoon.	
Following are the results in practice events and sweeps. Event No. 1, 20 targets, known traps, unknown angles; event No. 2, 15 targets, known traps, unknown angles:	
Events:	1 2
R B Carson.....	10 9
H B Morgan.....	11 11
Events:	1 2 3 4 5
Targets:	20 15 15 10
H B Morgan.....	11 11 6 8 7
J S Houston.....	14 13 8 12 6
Ed Steck.....	.. 13 14 6
A W Adams.....	.. 6
R B Carson.....	10 9 5 8 4
Events:	1 2 3 4 5
Targets:	20 15 15 10
Prickett 4
Doc 12 14 6
Smith 11 8 3
De Wolf 6
Boroff 6

Following are detailed scores in trophy contest, 25 single targets, known traps, unknown angles, classified, A. W. Adams winning Class A, C. W. Carson winning Class B, C. Boroff winning Class C:	
Class A.	111111110100111110111111-21
Adams	1101111111111011111111-23
Houston	11101001011100001011110-15
Class B.	111111110111101101101101-20

CALUMET HEIGHTS CLUB.

The Calumet Heights Club, of Grand Calumet Heights, Ind., will open its season on Decoration Day, May 30. The shooting committee has decided to secure some very handsome prizes in the way of medals, in each class for target shooting, and a gold watch for first prize in the season's live-bird events, together with other prizes. The committee has laid out an elaborate programme for the year's work, and no energy will be spared to make the year one of success and pleasure.

FROM OUT OF TOWN.

Mr. E. E. Neal, an out-of-town member of the Garfield Gun Club, spent the day with the club. He went to Lafayette, Ind., to shoot a race with Mr. Erb.

A. C. PATERSON.

Fort Smith Gun Club.

FORT SMITH, Ark., May 9.—In spite of the high water, the regular weekly shoot took place at the club grounds on Saturday evening.	
Messrs. Chas. Boyd and Scott Robertson made their first appearance of the season and did excellent work considering the lack of practice.	
An incident occurred that has rarely been seen at the traps before. Two birds, accidentally discharged from traps Nos. 1 and 2, met in the air at a distance of 25ft. from the screen and were smashed to atoms before the shooter could train his gun on them. It would be interesting to know if the same thing has ever occurred on any other grounds.	
Matthews was off, losing 6 birds out of his second 15. Echols is coming to the front again, and is striking his old gait. Walter Boyd says it is all in the gun. He broke 14 out of 15 with somebody's else gun, and about 9 out of 15 with his own. Charlie Boyd says that he can break them all if he wants to, but doesn't want to make the old-timers feel bad. Matthews bet Robertson that he would break 18 out of the last 20 targets. A pretty nervy bet, but Matthews won the shells on 19.	
Following is the score:	
Shot	Shot
at. Broke. Av.	at. Broke. Av.
Leach	50 45 .90
Echols	50 42 .84
Matthews	66 55 .83
A W Boyd.....	50 38 .76
Payne	50 37 .74
Edlin	50 35 .70
Robertson	50 34 .68
Torreyson	50 28 .56
C H Boyd	40 22 .55

The Dansville Gun Club, Dansville, N. Y., will hold an all-day shoot on May 30. The secretary writes us that the members expect forty or fifty shooters from neighboring towns to attend.

New York State Shoot.

THE Rochester Rod and Gun Club, of Rochester, N. Y., under whose auspices the New York State Association for the Protection of Fish and Game holds its convention and tournament June 20 to 24, is pushing matters as fast as possible to completion. The withdrawal of that part of the Association that held its convention during the winter has necessitated the revision of the constitution and by-laws of the Association. This has been done, and herewith please find copy of same.

It is not changed materially, but is applicable to the conditions that now exist, and it is to be brought before the convention at its next meeting for approval, and amendments or changes desired by the Association can be made at that meeting.

The Rochester Rod and Gun Club has been to a great deal of expense to get up this entertainment, and has every hope that its efforts will meet the approval of those who attend the tournament. The club will add nearly a thousand dollars to the different purses, thereby making the sweepstakes especially attractive. No handicap will be enforced in the sweeps. There will be three magautraps used; one for State events, one for experts and one for amateurs. Experts will not be allowed to contest with amateurs. An amateur can, if he so elects, contest with experts and amateurs also. An amateur who wishes to shoot for birds alone can enter in the usual way in an amateur event and shoot for the birds. An amateur making a record of 85 per cent. or better must become an expert until his score as such entitles him to return to the amateur traps again. Known experts will be classified the first day. After that they classify themselves by their record.

These are a few of the conditions known. State experts in State events will probably be restricted to first and second moneys.

T. R. GRIFFIN, Secy.

CONSTITUTION.

ARTICLE I.—NAME.

Section 1. The name of this Association shall be the New York State Association for the Protection of Fish and Game.

ARTICLE II.—OBJECTS.

Section 1. The objects of this Association shall be: To procure the enactment of suitable laws for the protection and preservation of birds, quadrupeds and fishes; to promote the observance of such laws; to conserve and foster the game and fish supply; to preserve the forests and to encourage a high standard of field sportsmanship.

Section 2. The further objects of this Association shall be the promotion of kindly intercourse and generous emulation among sportsmen by competition in trap-shooting and other sports.

ARTICLE III.—MEMBERSHIP.

Section 1. This Association shall be composed of clubs and individuals. The term "club" when used in this constitution shall be construed to mean also "society," "league" or "association."

Section 2. Any club duly organized for the purpose named in Article II, shall be eligible to membership in this Association. Any individual more than eighteen years of age, a resident of the State of New York, shall be eligible to associate membership.

Section 3. A club or individual seeking membership shall make application to the secretary of the Association, upon a form furnished by this Association, together with the dues of the current fiscal year. Such application shall be acted upon by the committee on credentials. It shall require the affirmative vote of two-thirds the members present to elect.

Section 4. Associate members shall be entitled to all the privileges of the Association, but no associate member shall be entitled to vote unless he is a delegate. The president of the Association shall appoint as a delegate one associate member to every twenty-five associate members or a major part thereof.

Section 5. Membership in the New York State Association for the Protection of Fish and Game shall carry with it an obligation on the part of the clubs and individuals to obey the letter and spirit of all game and fish laws, and to encourage, by personal conduct and influence, a public regard for game and fish protection. All members, whether clubs or individuals, shall be pledged to a hearty support of any legislation regarding fish and game approved at an annual convention.

Section 6. Honorary members may be elected at any meeting by unanimous ballot. They shall be exempt from the payment of dues and shall have no vote.

ARTICLE IV.—MEETINGS.

Section 1. Convention.—There shall be an annual convention of the Association for the objects named in Sec. 2 of Article II. The place and time of meeting shall be determined at the preceding convention. A special meeting for the same objects may be called by the president and shall be called by him on the written request of five members, and due notice of such meeting shall be mailed to the president of each club at least fifteen days before the date fixed for it.

The management of the convention shall be intrusted to one of the constituent clubs chosen by ballot from year to year in the preceding convention. Such club shall conduct the meeting under the rules and regulations hereto annexed. The financial control, expenses, liabilities, profits or losses of the meeting shall be vested in such club. No funds of the Association shall be expended or liability created for a meeting.

Section 2. Special Meetings.—At a special meeting no business shall be transacted other than that specified in the call.

Section 3. Representation in Convention.—In any meeting named in Sec. 2 of this Article, each club shall be entitled to representation by five delegates.

Section 4. No club whose dues are unpaid shall be entitled to representation in any meeting. No delegate shall represent more than one club.

Section 5. No delegate from any club shall participate in any meeting until he shall have filed with the secretary his credentials signed by the president or secretary of such club.

Section 6. Quorum.—Delegates representing ten clubs present at any regular or special meeting of the Association shall constitute a quorum for the transaction of business. A smaller number present at any regular or special meeting of the Association may adjourn to a specified day.

Section 7. Any meeting on motion may adjourn from time to time.

ARTICLE V.—OFFICERS.

The president, the vice-president, the recording secretary, the corresponding secretary and the treasurer of the club, under whose management a meeting shall be held, shall be the officers respectively for the current year.

ARTICLE VI.—RULES AND REGULATIONS.

Section 1. The rules and regulations hereunto annexed shall govern all contests in the convention of this Association.

Section 2. Immediately after the election of officers in the convention, the president shall appoint a committee of five delegates who shall constitute a standing committee on rules and regulations relating to the convention. The committee shall hold office for one year or until their successors shall have been appointed.

Section 3. All proposed amendments to the rules and regulations shall be submitted in writing to the standing committee on rules at least one month before the date of the annual convention and shall be acted on in such convention.

ARTICLE VII.—ORDER AND DEBATE.

"Cushing's Manual" shall be the authority for order and debate.

BY-LAWS.

Section 1. The order of business at all regular meetings shall be as follows:

1. Roll call.
2. Reading of minutes of previous meeting.
3. Reports of the committee on credentials.
4. Nomination and election of new clubs.
5. Unfinished business.
6. New business.
7. Selection of place for next convention.
8. Good of the Association.

Section 2. No person shall be allowed to discuss any question under debate without rising and addressing the chair.

Section 3. No member shall speak more than twice on any one question, nor more than five minutes at any one time, unless by unanimous consent.

Section 4. Every person present shall be required to vote on all questions unless he is directly or personally interested or excused by a vote of a majority of the members present.

Section 5. Any gentleman belonging to this Association behaving in an ungentlemanly and unsportsmanlike manner may, by a vote of two-thirds of the members present, be expelled.

Section 6. All charges against any member or club must be submitted in writing, and notice of such charges furnished such members or club so charged, who shall be entitled to submit a written defense.

Section 7. No outside shooting whatever shall be permitted within the inclosure where the trap-shooting takes place. Nor shall there be any contest for money on the grounds of the

Association during the days advertised for annual contests until the termination of the tournament, other than such as has been advertised to take place on such days in the usual announcement of prizes.

Section 8. Special rules may be made by the club having the management of the tournament that in their judgment may be for the best interests of the Association.

Section 9. No person shall be permitted to contest for prizes in the State events who is not a citizen of the State of New York and has not been a member of one of the several clubs belonging to the Association for a period of not less than one month immediately prior to the date of contest.

Section 10. No person who is not a member of a club duly organized, or whose fees are not paid to the State Association, shall be allowed to contend for the prizes offered at the convention of the State Association.

Section 11. No betting of money, either on individual skill or on the result of matches, will be allowed on the grounds of the Association.

Charlie Budd's Shoot.

CHARLIE BUDD opened the tri-city circuit at Des Moines, Ia., on May 10, 11, 12 and 13, to good business. The crackerjacks were out in force. The shoot was one of the best ever given in the State, and the scores went high up into the realms of recordom. The shooting was from known traps, unknown angles, and the boys early caught the curves. Runs of 40 to 65 targets came along, and the working of the big target grinding machine proceeded without any friction. Fred Gilbert set aside all questions of his temporary loss of form by going to the front on the first day, breaking 188 out of a possible 200 in the ten events of 20 targets each. Le Roy was second with 187 and Fulford kept up his hot gait with 185. Tom Marshall and Charlie Grimm were trotting hard also, and tied with 181 each. Elliott was fifth with 180. It is not often that one sees more good ones more closely bunched. The weather was windy and not altogether suitable to good shooting, but a very enjoyable day was passed none the less. The city of Des Moines handled the visitors admirably, and it goes without saying that a shoot conducted by the Dago Chief is one run according to the most strictest Hoyle. Following are the scores of the first day:

Events:	1	2	3	4	5	6	7	8	9	10	T'l.
Targets:	20	20	20	20	20	20	20	20	20	20	T'l.
Hallowell	16	16	16	16	16	12	11	17	16	16	151
Hood	17	16	15	18	19	14	17	18	14	18	166
Kibbey	16	16	16	15	13	14	15	17	13	15	150
Fanning	19	19	15	19	18	18	17	17	17	15	174
Powers	18	19	15	16	19	18	17	17	17	17	173
Merrill	14	16	19	18	15	20	19	20	16	19	176
Marshall	17	20	17	19	19	18	18	17	17	18	181
Gilbert	18	17	19	19	20	18	18	20	18	19	188
Fulford	18	19	20	17	19	17	20	15	20	18	185
Parmelee	17	18	17	18	18	16	18	19	18	15	174
Le Roy	19	20	19	18	19	19	17	19	18	18	187
Courtney	16	18	17	12	16	16	15	16	16	18	160

Mitchell	15	15	15	15	15	15	15	15	15	15	150

SECOND DAY.

Gilbert still kept in front, tying his record of the day before, 188. Jack Fanning pushed up into second place, 184, and Powers held third average alone with 183, Le Roy dropped back to 181 and Grimm and Heikes tied on 180. Following are scores of the second day:

Events:	1	2	3	4	5	6	7	8	9	10	T'l.
Targets:	19	17	17	17	12	19	18	15	17	17	168
Hood	15	16	17	14	13	18	18	17	12	15	155
Kibbey	14	19	16	18	12	15	16	18	14	17	159
Fanning	18	18	18	19	19	18	17	19	19	19	184

Smith	15	15	15	15	15	15	15	15	15	15	150

THIRD DAY.

The regular programme of ten 20-target events was followed, and a special added in the shoot for the Schmelzer trophy, at 100 targets, reversed pulls. This trophy was won by Charlie Budd himself, with the wonderful score of 96 out of the 100 targets. He broke 25 in the first string, got 24 out of his next 25, 23 out of his third string of 25, and 24 out of his last string. This breaks into fragments the record on reverse pulls, 90 out of 100, made by Sexton at Leavenworth. Mr. Budd scored his victory over the cracks of the country, there being twenty-six entries in all, and among these Fulford, Gilbert, Marshall, Dickey, Elliott, Heikes, Powers, Fanning, Grimm, Hallowell, Parmelee, Le Roy, Courtney, Merrill and others. At the end of the first 50 targets only three men were left in the running, Budd, Fulford and Dickey. In the last 50 Budd drew away and won decisively. Those who have been of the belief that Charlie Budd was anywhere back of the first notch will now perhaps modify their belief, and the sturdy shooter of Des Moines will be gazed on with respect by any one contemplating going to that city in search of Italian scalps.

Mr. Budd used a Parker gun, Hazard powder and U. M. C. shells.

In the race for the trophy Fulford followed Budd close with 93, and Dickey was close with 92.

In the target programme for the third day, Fulford was high gun with 190 out of 200. Powers was second, 188, and Heikes third, 187. Following are the scores of the day:

Events:	1	2	3	4	5	6	7	8	9	10	T'l.
Targets:	17	15	15	14	11	17	19	17	19	16	163
Hood	17	13	16	17	16	20	18	18	18	16	169
Kibby	14	15	16	18	17	17	15	19	16	16	163
Fanning	18	19	18	19	18	18	18	20	16	18	182
Powers	19	18	17	19	20	18	20	18	20	19	188

New York, N.Y.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR, 10 CTS. A COPY, {
SIX MONTHS, \$2. }

NEW YORK, SATURDAY, MAY 28, 1898.

{ VOL. L.—No. 22.
No. 346 BROADWAY, NEW YORK. }

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, \$4 per year, \$2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

BOUNTIES FOR NETS.

NEW YORK has just entered upon a system of paying bounties for the destruction of illegal nets, which gives promise of accomplishing more to abate the nuisance of this form of piracy than any expedient hitherto adopted. Nets unlawfully used have long been declared public nuisances, and as such have been subject to destruction by officers of the law. The constitutionality of the statute which authorizes a game protector to destroy such nets summarily has been affirmed by the Supreme Court of the United States.

The new statute is the result of agitation by the Onondaga Anglers' Association, of Syracuse. It declares that fish nets of every kind (except minnow nets and such as may be licensed by the Fish Commissioners) are public nuisances, and may be removed by any person and taken before a justice of the peace, town clerk, or town or ward supervisor, who, upon the affidavits of two persons that the net or nets are illegal or not licensed as provided for by law, and that they were taken from water inhabited by fish, or from ice over such water, shall order the net destroyed by the person seizing it, in his presence. "Upon payment to him of a fee of fifty cents for each net ordered destroyed, said justice of the peace, town clerk or supervisor shall deliver to the person seizing and destroying a net or nets as herein provided, a certificate to the county treasurer that the person named therein has seized and destroyed according to law a net or nets, as the fact may be, and that he is entitled to a bounty on the same as follows: For each scap net, drop net, dip net, minnow net, gill net and seine net under one hundred feet in length, \$3; for each fyke net with hoops less than four feet in diameter and for each seine net and gill net over a hundred and under two hundred feet in length, \$5; for each five-foot trap net, for each fyke net with hoops over four feet in diameter, for each seine net and gill net over two hundred feet and under three hundred feet in length, \$7.50; for each trap net over five feet and for each seine and gill net over three hundred feet in length, \$10, and for each pound net, \$15. Before granting a certificate for bounty as herein specified, an examination of the net or nets shall be made by the justice of the peace, town clerk or supervisor from whom a certificate is requested, and in case it is found that they are rotten or worthless for fishing purposes no certificate shall be granted, and his decision as to the facts of such matter shall be final." The bounty is paid by the county treasurer, who in turn collects it from the State.

The promoters of this system anticipate that the rewards offered will be sufficient to encourage fishermen who are not netters, and the people who live near the net infested waters, to take the law into their own hands. Such a general authorization of the private citizen to deal personally with an illegal contrivance wherever he encounters it should stiffen the backbones of the long suffering anglers of Central New York, who have for years endured the plague of fish piracy. The new law makes every man his own fish protector. The working of the system will be watched with wide interest, for if it shall aid to solve the problem of net abolition in New York, it would be as efficient in other States, and we may look for its general adoption.

The Monday following the date of this issue will be celebrated in many States as Decoration Day; and it will be in large measure an occasion of pleasure outings and sports. Some of the members of the Grand Army of the Republic, noting with growing impatience and regret this conversion of the memorial occasion into a holiday given up so largely to pastime and merry-making, are discussing a plan of so changing the fixture of the anniversary that it shall always fall on a Sunday. This might indeed restore to the day something of its

lost solemnity and the seriousness of its observances. But to attempt to stay the growing holiday character of the day, so long as it shall be other than a Sunday, is a hopeless resistance to that tendency of human nature which has always and everywhere eventually converted such holy days into holidays.

THE BOARD BILL GUIDE.

THE guide who works out his board bill is a distinct species. You encounter him in Maine, in the Adirondacks, in every district much frequented by sportsmen, and where guiding is an industry. He is usually a spurious, no-account woodsman, not for a moment to be classed with the competent, efficient, woods-wise men whose services and companionship on the trail and in the camp contribute so largely to the satisfaction and success of an outing. The board bill guide's only excuse for guiding is that he is in debt to the landlord of the hotel where the tenderfoot happens to land on his way to the wilderness. When the newcomer asks the landlord for a guide, the landlord, having in mind the fact of the incompetent man's indebtedness, recommends him and gets him a job for the sake of securing payment of the back board bill. In this way numerous sportsmen are every year imposed upon and their outings spoiled by this unconscionable fraud. The injury extends not only to the employer, but to other guides, competent men, who are thus deprived of employment. There is only one remedy for the imposition, and that is to hold a hotel-keeper to strict accountability for the character of the guides he recommends. Every visitor to Maine who has an incompetent board bill guide saddled upon him by a hotel-keeper should make such a vigorous protest, private and public, that the abuse may be thoroughly exposed. Exposure means correction.

A BIT OF LOGIC.

THERE is now before Congress a measure designed to secure protection for the black bass and other game fish of the Potomac within the confines of the District of Columbia. The bill, which was introduced by Senator Proctor, has passed the Senate and gone to the House. Its terms forbid net fishing, restrict fishing to angling, set the minimum length at nine inches, and make a close season from April 15 to June 1. Going further than this, the bill makes it unlawful to have fish in possession or to expose them for sale during the close season for fishing. In support of this clause the report of the Committee on the District of Columbia says:

"Washington City constitutes the natural and largest market for these fish, so that if taking the fish alone out of season from the waters of the District was prohibited the fishermen would merely drop their boats below the District line, a short distance from the city, and could supply the local demand from there. This would be practically at the expense of fish on their way from or to the waters of the District. Hence it was thought necessary to incorporate a clause forbidding exposing for sale or having in possession the enumerated species during close seasons."

This is incontrovertible logic.

The only way under heaven to make a close season effective is to stop the sale of fish in that season. With this anti-sale clause in operation the purpose of the Potomac bill may be attained; without such a prohibition the law will be just so much rubbish.

By the abolition of netting and by an adequate restriction of the drain upon the supply of black bass, it is the intention of Congress to provide in the Potomac within the District limits a permanent spawning ground, where the species "will have immunity from the many pot-hunters and fishermen who are regardless of their preservation."

If the waters within the District are to afford spawning grounds, the fish must be given an opportunity to reach those grounds; if they are to reach the grounds, they must be immune from netters outside of the limits, and one way to insure immunity is to take from the netters any opportunity to market their catch. With Washington City markets wide open the fish will not escape; with closed markets the problem will be comparatively simple: We trust that the House may concur in the action of the Senate, and that the bill may become a law,

Since the foregoing paragraphs were put in type Congress has passed the bill; it became a law last week, and the first conviction for violation of the provision against netting has already been had.

SNAP SHOTS.

Our Utah contributor Shoshone notes that the black bass, which in that State is an introduced species, is gradually deteriorating in flavor. The phenomenon is not unusual. All fishes are susceptible to the influence of their surroundings in that respect. An instance is recalled of two adjacent bass waters in Wisconsin, one a natural lake fed by springs of abundant flow; the other formed by a dam and fed from the first lake. In one the fish were bright, clear and well flavored, in the other dull and tasting of the mud in such degree as sometimes to be inedible.

By courtesy of Mr. Hammond Van Vechten we are permitted to print in our angling columns to-day a chapter from an unpublished manuscript by S. H. Hammond, author of "Wild Northern Scenes" and other well-known books on woods life. This spirited sketch of fishing on the St. Lawrence, and the other chapters which are to follow it, will be read with all the more interest because they come from the pen of one who in his day did so much to establish the dignity of forest and stream recreations, and to popularize them with the men of his generation. Hammond was a contemporary of Joel P. Headley, whose "Adirondack, or Life in the Woods" appeared in 1849. "Hills, Lakes and Forest Streams," by Hammond, was published in 1854, and described adventures in the Chateaugay woods. "Wild Northern Scenes" followed in 1859. It was the fruit of ten years of annual excursions into the wilderness, and had a wide influence in directing attention to the attractions and health-restoring and strength-giving influences of the region. The Adirondacks in 1859 were virgin wilderness in truth; Hammond makes record of having been within shot of twenty deer in an afternoon, and of having seen forty within view at the same time feeding on the margin of one of the beautiful lakes hid away in the forest. "Here," he writes, "I heard the howl of the wolf, the scream of the panther and the hoarse bellow of the moose."

Statistics are going the rounds to illustrate the dangers of shooting as practiced in Austria. It is alleged that in the year 1896 "Bohemian sportsmen shot and killed about fifty men and women and wounded 2,014 persons. They also killed over 15,000 dogs, 2 horses, 15 cows, 132 calves, 276 goats, and 129 sheep." Considering what store of comfort some of the writers of field sports find in these figures, and with what unction they recite them, it would be cruel to question the accuracy of the census and to show it to be fanciful. But they have no bearing on the actual conditions of field shooting in this country, for we do these things better over here. Americans know how to put projectiles where they should be landed, whether moose hunting in Maine or sinking warships in Manila Bay. What a fine tribute to American skill that was the other day, when after the superb gunnery of the Olympia, the Boston and the Baltimore had destroyed the Reina Maria Cristina and the Isla de Cuba, Admiral Montejó sent word by the British Consul to Admiral Dewey that he wished to compliment the Americans upon their marksmanship. To which amenity the American returned in kind, congratulating the Spaniard for "the gallant manner in which you fought."

When a person is heard to say that the more he sees of men the more he likes dogs, if it be a young person who says this we may safely put it down as parrot talk which does not mean anything; if an older person, the probabilities are ten to one that his digestion is disordered, or that he has been cooped up too long and should take a day off to go fishing.

It is rarely that we have the privilege of presenting a paper of such historical interest as that contributed to the present number by the writer who prefers to be known by the pen-name of Jack Hildigo.

The Sportsman Tourist.

A Humble Grave.

A Story of Decoration Day.

As the band struck up the livelier strain of an old war song, and began to march from the graveyard, with the scattered procession straggling into line behind it, I, as a stranger in the little town, stood apart, curiously looking on at the procession and its spectators.

There were the band, very much absorbed in itself and its own performance; the fussy little marshal, who evidently considered himself a more important figure than the oldest grizzled and scarred veteran of the little company that marched behind the band with the unforgotten swinging step which had borne the flag that still flaunted so proudly above them, to its final victory in the old historic days. There were the larger company of the Sons of Veterans, whose faces shone with the pride of the reflected glory of their fathers' achievements. After them came the town authorities, selectmen, and justices, preserving with difficulty at the same time their dignity and their step. Then came an order and a society whose numbers helped to lengthen the procession to which some of the unclassified crowd attached themselves, while others held aloof, mere lookers on, like myself.

Of these were some who, if they had not been actors in the great drama which the day commemorated, must have beheld something of it, but there were more: so young that it must have seemed to them an almost mythical tradition. Its heartaches, its heartbreaks, its prayers, its tears, its thanksgivings, its offerings and sacrifices, its weary waitings, and its triumphs and all its thronging emotions, they could scarcely imagine.

My attention was drawn to an old soldier who had fallen out of the ranks of the veterans and who now joined a woman of about his own age and evidently his wife, for he addressed her as "mother," after a common custom of New England husbands. She still carried a small wreath of apple blossoms and a bouquet of wild violets and moose flowers whose bloom the backward season had deferred till now, as if nature had withheld them for this commemoration.

I wondered why the flowers had not been laid on some grave, and watched the couple with a good deal of curiosity as they went slowly down the road, he leaning on her, and going with such a halting gait that I thought him quite excusable from marching further with his comrades.

When the two were left behind by the rear of the procession, they quitted the highway and held across the fields, as it chanced in the direction of my temporary lodgings, whither I took my way after wandering awhile in the old graveyard, deserted now by all but myself and its steadfast tenants, among whom were representatives of three wars, for it was an old burial place and some soldiers of the Revolution were laid there, their sunken graves as profusely garlanded as those of the fresher mounds of later patriots.

The fields were pleasant with the fresh greenness of spring, the joyous song of lark, bobolink and sparrow, alight in the grass or on wing above it, of orioles flashing through the new-leaved elms, like shuttles of flame thrown athwart warps of tender green, with kine and sheep grazing too eagerly to heed a loitering stranger or the frolicking lambs, so that I strolled along in leisurely enjoyment of the peaceful scene and its sweet natural sounds, with which the dull throb of the drum and the mellowed blare of the brazen horns were not inharmoniously mingled.

As I came to an old orchard on the hillside behind an old farmhouse, whose sides were as gray as the gnarled tree trunks, and the roof almost as green with moss as their tops with opening leaves, there I found my old soldier and his wife sitting on the grass in the dappled shade of apple leaves and blossoms beside a small grave.

The wreath was hung on the low headstone, which was a short slab of rough slate, and the bouquet was laid on the mound, from which the woman was carefully plucking some intruding thistles.

I did not wish to disturb their privacy and would have withdrawn, but had forced my way through a cordon of wild raspberry briars to the orchard wall before I observed them only a few yards before me, and the noise of my passage having made them aware of me, it seemed the better way to keep on. I said as much by way of apology and was about to pass on when the man explained, smiling pleasantly:

"We was just a-puttin' some posies on Jack's grave. We always do just the same as on t' others."

"He must have been a pretty small soldier," I said, "a drummer boy, perhaps?"

"O no, he wa'n't even that, he wa'n't only a dog. Just Jack, see?" He pointed to the headstone, to which I drew near and read the roughly cut inscription:

"Jack, A Faithful Friend. Died Aug. 3, 1870, Aged 12 years."

"Yes, that's what he was, and I ought to say so, for he saved my life."

"No more'n I ought to, father," said his wife, looking on him tenderly, and though she had at first seemed rather annoyed by my presence, she gave me a kinder glance when I said:

"Nq wonder you are both so fond of him. How was it, if you don't mind telling me?"

"Sartinly, if you care about hearing it. Set right down here," motioning to a place beside him, and presently he began the story:

"Mother and me hadn't been married more'n three months when the war broke out, an' I kinder hung off about enlistin' for quite a spell, but afore the summer was gone I did, for most all my mates had gone to the war, an' I was ashamed not to. It was hard for mother an' me to part, as you may know, an' so it was for me an' Jack. He was goin' on three year old and had been with me every day since he was a puppy. He wa'n't no particular breed, just dog, I guess, if he wa'n't part human, for you can't make us believe he hadn't got a soul. You could see it in his eyes as plain as ever you

did in anybody's. An' he was harn'some too, if he was—but mother never would allow that he was yaller," and he gave me a quizzical glance.

"Indeed he was not yaller," his wife broke in, with spirit. She plucked a spear of last year's faded grass, and holding it out to me said, "There, sir, he was the color of that an' I'll leave it to you if that's yaller."

"No, I should say tawny, the color of a lion, you know," I said, whereupon she nodded triumphantly at her husband.

"Well, they say a good horse can't be a bad color, and I s'pose it's the same with a good dog. But as I was a-sayin', Jack took on terribly at partin', an' they said that he'd go to the depot every evenin' to meet the train from the South an' watch for me to get off of it an' then go home an' mump around till the same time next day."

"Yes," said the wife in confirmation, "he'd mope round all day till he heard the train whistle for the crossin', an' then he was off, lickity-split, for our station, an' then after a while would come back as woebegone as ever. I do b'lieve he was more down-hearted than I was, though the Lord knows mine was heavy enough every day of all these years, but I had plenty to do in doors an' out, with the house an' farm to tend to. We was livin' here then."

"So I went to the war," the veteran resumed, "an' took my shar' on't one way an' another; got wounded an' was in a hospital a spell, then went back to my regiment an' was took a prisoner, but they thought I was killed an' sent that word home. A good many times I thought I might better have been, but after a spell there was four of us got away, an' me an' one other feller got into our lines just alive enough to say so. It's quite a story how we done it, but Jack don't come in there, an' it was him I started to tell about. They give me a furlough, an' I come home an' got here afore a letter did I wrote. It was dark when we got to our depot, an' I didn't want nobody to hinder me a-talkin' from gittin' to mother, so I got off from the car on t'other side from the depot an' scooted across lots the highest way. There was a thunderstorm comin' up an' it was black as a wolf's mouth only when it lightened, but I knew every step o' the way an' could see the light of our house to steer by."

"There's a pretty steep holler that I had to cross, with a little brook runnin' through it, but I knew to a rod how far it was from the corner of Adams' meader to where a cattle path run down an' up t'other side, so I mogged along the spryest I could, weak as I was. Then I heard something comin' full tilt behind me, an' next I knowed it piled on to me like a thousand o' brick, an' it was Jack. He'd found my track to the depot an' overhauled me. He was crazy glad an' I pretty nigh as tickled as he was, but afore long we steadied down an' visited along as we traveled, an' I began to think Adams' meader had growed mighty wide, an' so it had, for he'd took in a lot o' pastur' and moved the fence since I see it."

"But by and by I come to it an' over it an' doubled my jumps, for the further I went, the bigger my hurry an' the slower I seemed to go. An' then the next thing I knowed I stepped off into nothin' an' lit all in a heap in the bottom of the gully, and then I didn't know nothin' till I found myself to home layin' in bed with a bandaged head an' a broken arm an' a sprained ankle." He paused and his wife took up the story.

"Yes, sir, I was a-sittin' in the kitchen with my brother, me a-sewin' an' him a-readin', when all of a sudden Jack come tearin' in just as different as could be from the way he generally come home, an' he barked an' run out an' then in again an' barked an' pulled at my dress, an' in a minute it come over me that father had come back, for I never had give up that he was dead for all everybody said so."

"My heart stook stock still a-waitin' for him to come in, but he didn't, an' says I to my brother, 'John has come back, but I'm afraid something has happened to him; light the lantern an' we'll foller Jack.'"

"An' so we did, that dog runnin' back an' to, an' whinin' an' barkin' till he fetched us to the holler, an' there father lay as still as if he was dead, which I thought he was, an' almost died to have it so, an' him so nigh come back to me."

"But we see signs o' life, an' Jim an' me we lugged him up the path this side. Jim wa'n't but sixteen, but was stout as a moose, an' we got him up some way, he wa'n't much more'n skin an' bone, an' you never see any human bein' tickleder 'n what Jack was."

"Well, we hadn't more'n got to the top when there come a roar louder'n the thunderstorm that was a-comin' up, an' a-growin' louder an' louder, an' then afore we had time to guess what it was that gully was full of a rushin', ragin' flood, with timbers an' logs an' stones tearin' an' tumblin' along with it. The reservoir dam had broke away, an' I liked to have fainted thinkin' what would have become of father if we'd been five minutes later, but we'd got to git him home, so there wa'n't no time for such nonsense."

"It was pourin' long afore we got him under shelter an' we was all soaked, but it didn't seem to hurt father—the water didn't. He was bad enough off, but he begun to pick up right away an' mended so fast that I was 'most afraid he'd have to go back again."

"But afore he got able to, though he wa'n't never again, really—the war was over an' wa'n't I thank! An' you'd ought to see Jack hang around him just as anxious an' as thankful as a person. My! More'n most!"

"While he lived there wa'n't nothin' too good for him, an' ever since he died we've put flowers on his grave. I s'pose some thinks it's foolish, but we wouldn't miss of it for anything."

"We sold the farm ten year ago an' went to live down to the village. We keep a little store an' the post office, father he's postmaster. Maybe you'd have occasion to stop in and see us. Well, I guess we've pretty nigh tired you out, an' anyway we must be goin', father."

"Children? Yes, one boy. You might ha' seen him 'mongst the sons, one o' the tallest, nigh the head of the company. Good bye."

With that they went their way and I mine, thinking there might be graves less worthy of decoration than that of this faithful and loving dog.

ROWLAND E. ROBINSON.

FERRISBURGH, Vermont.

The Appomattox Apple Tree.

THERE are doubtless many readers of Mr. Fred Mather's delightful recollections in *FOREST AND STREAM* who have become participants with him in an interest in the history of the three Sweeny brothers, one of whom, Joe, he calls practically the "inventor of the banjo." I can contribute very little to their general family history; but there is one incident connected with them which I have never seen stated in print, and which, to those who knew of them, will doubtless have some interest. One of that family probably planted the celebrated Appomattox apple tree, under which, it used to be said, Gen. Lee surrendered to Gen. Grant. One of the brothers was in the Confederate army, and was detailed as a courier for Gen. Jeb Stuart. I have had him pointed out to me riding after Stuart along the lines, and heard often of the banjo serenades Gen. Stuart would give the ladies of his acquaintance whenever his camp was near them. I do not know what became of him after Stuart was killed in May, 1864.

But about the apple tree I happen to know a great deal. On the morning of April 9, 1865, the Confederate army, "one of whom I was which," found itself pursued by one superior Federal force and headed off by another. Under these circumstances Gen. Lee rode back, about 7 A. M., to meet the force in his rear, with whom Gen. Grant was supposed to be, in order to make the surrender. Meanwhile the last line of battle ever formed by his army was thrown across his front within about a mile of Appomattox Court House, where Sheridan was driving back the Confederate advance guard under Gen. Gordon. After some sharp fighting Gordon sent a flag of truce to Sheridan, suggesting that they stop killing each other until the result of Lee's meeting with Grant was known, to which Sheridan agreed.

After a time Gen. Lee returned from the rear, having learned that Gen. Grant had left the troops in the rear and was passing around his flank, and would after awhile communicate with him from the front. Just in front of his line of battle and on the right of the road to Appomattox Court House was a small apple orchard, with a house at the edge furthest from the road, say 40yds. My recollection of this house is that it was about 18 by 36ft., two stories high, without porches or any prominent outhouse, or any shade trees except the apple trees in front. The house seemed inhabited, and yet I can recall seeing no one during the two or three days I remained in the vicinity. Probably, as generally happened, the occupants ran off when the fighting began in the vicinity. This was the house of the Sweeny family. It was probably about 10 A. M. when Gen. Lee rode into this orchard and dismounted, and for some little time was occupied in receiving and sending messages. Finally he was left entirely alone, and turning around said: "I would like to sit down. Is there a place I can sit?" I happened to be, I think, the only person near enough to hear him. Only one of the apple trees was in enough leaf to give any shade. It was perhaps 50ft. from the road near the middle of the orchard, and some couriers were squatted under it, holding their horses. I asked them to remove the horses and to bring a dozen or so rails from the fence, and we made a nice seat under it, which the General took and thanked us. Some of his staff, who had all been sent off on errands, soon returned and joined him, and later Gen. Longstreet. Other prominent generals also came and went from time to time. The line of battle, infantry and artillery, about 100yds. in rear, and stretching right and left for some distance, was still maintained, the men at rest and the officers generally in front. Gen. Lee remained here, I think, for about three hours. About 1 o'clock Col. Babcock, of Gen. Grant's staff, riding a fine bay, which looked exceedingly fat by comparison with our horses, came riding from the front, and was conducted to Gen. Lee at the apple tree. He came to say that Gen. Grant would soon reach the little village of Appomattox Court House, and to invite Gen. Lee to ride there and await him. So Gen. Lee mounted, and accompanied by Col. Marshall, of his staff, and a courier, and Col. Babcock and his courier, he rode away. He stopped to water his white horse, Traveler, in the little creek some 200yds. in front, and made the whole group wait until Traveler had his fill. Everything remained as it was until he came back, about 5 o'clock, and then we knew that the war was over.

I made my bivouac in the apple orchard close by the Sweeny house for two or three days, while paroling of the men and turning over arms and artillery was going on. On the evening of the next day, coming in from an all-day absence, I found the whole apple tree gone, and on the second evening there was only a big hole where its remotest roots had been dug up. I never thought of securing a memento for myself until it was too late. I could not find a splinter, and never since have I been able to find any one with a piece of it, or to hear of but one single piece. A sister, refugeeing through South Carolina, first heard of the surrender from a private in a Texas regiment, footing it home. He told her about Gen. Lee's having sat under the tree, and showed her a piece of it. Doubtless the old soldiers in that last line of battle, who watched Gen. Lee under the tree for three hours, waiting for the end, were the ones to carry it off and scatter it from the Potomac to the Rio Grande.

JACK HILDIGO.

Reminiscence.

"WHICH, them boats thar, you mean? Them's dug-outs. That long, crooked un wuz chopped aout'n a cypress log sorter in a hurry when the water wuz a-risin' an' it ain't got much shape, but that smooth lookin' cottonwood one agin it is all right fur trappin' an' raftin', an' the like. Hit's stiddier'n it looks. But that little'n thar is the dandy! Pap made that'n aouter sassafrax 'n' th' aint many folks 'at kin set in it. Hit fools Pap onct 'n' a while. I see him onct—hit wuz a-rainin' drizzly like 'n' cold—he wuz gittin' in from baitin' his traps up to Cooterfoot, 'n' had killed a passel uv ducks, 'n' he wuz comin' daown the bayou jest a sailin'. That sassafrax dugaout kin scoot, too! 'N' Pap wuz a-tryin' hit an' sorter showin' off to Uncle Laz'rus an' me on the bank, 'n' you see the slopin' bank jest above you thar? Pap gits

right opposite to that 'n' then gives his paddle a side rake 'n' whirls araoun' to come straight fur that slopin' place in the bank. Pap sot to the paddle like he wuz tryin' to shoot the sassifrax clean aout on the bank, 'n' when it hit, the baouw run way up yonder, 'n' that made the stern le'daown; 'n' if Uncle Laz'rus 'n' me didn't laugh when we see the tail end o' the dugaout sunk under 'n' Pap settin' in the water up to his arms, a-feelin' araound fur his new Winchester 'n' a-cussin'!

"You riccerlict that ole long muzzle loader you seen up to the haouse? Hit kicks, 'n' when Pap shoots sideways aout'n the sassifrax, he kinder leans for'ard jes' 's he jecks the trigger to kinder ketch the kick 'n' keep the boat settin' straight. One day las' December Pap wuz up to Little Cooterfoot 'n' he run acrast a big drove o' ducks, 'n' Pap got hisself fixed up to shoot both loads at onct. Pap never had did it before in the sassifrax, but he had it figgered aout that he'd hev to lean for'ard twict as hard fur both kicks comin' at onct, 'n' when he leant an' jecked both triggers the tubes must 'a' been wet 'n' both caps snapped. Pap took Cooterfoot head fust, 'n' that's some o' that same rust on the old muzzleloader yit."

MISSISSIPPI.

Natural History.

"Birds of Village and Field." *

AMONG the many popular bird books which have appeared within the last few years, Miss Florence A. Merriam's last deserves, and will take, a high place. It is certainly one of the most useful of these books, because, as its title tells us, it is a "bird book for beginners," and it thus appeals to the widest possible class. It takes nothing for granted. It begins at the beginning. Notwithstanding the flood of popular bird literature that has recently appeared, instruction is still greatly needed by many people who are out of doors enough and sufficiently observing to note that there are birds, and to admire them and their ways, but who know about them little more than the popular names of the most common species. To instruct such individuals, to make them interested in bird life, is not only to perform a great service for those receiving the instruction—to widen the range of their interests, to stimulate their powers of observation, and to sharpen their intelligence—but is to perform a real service to the country at large by adding to the general interest in bird life, and so increasing the little army of bird protectors. Each bird protector is an assistant to the agriculturist, and so adds something to the production and to the wealth of the country.

There are birds enough all around us, and Miss Merriam gives interesting examples; of a lady in Chicago, who in a shrubby back yard near one of the main thoroughfares saw fifty-seven species in a year; of an orchard in Brattleboro, Vt., where an observer noted seventy-nine species in a year; and of Mr. Sage's observations within the limits of Portland, Conn., where ninety-six species have been known to nest.

It is not then a question of finding birds, but of recognizing them when they are found, of knowing them by name. Miss Merriam has had a wide experience with field classes of beginners, of those who are absolutely

size, color, markings, shape, appearance, movements, and flight, being subdivided in a way so suggestive as to teach the careful reader just what he should look for.

The book's introduction is simple and unaffected, yet as direct as possible. It ends with an ample illustrated field color key, based on the markings of different birds which are easily to be seen in the field, and this when followed down will lead by page references to the descriptions and figures of the bird in the body of the book. On the other hand, if the student knows the family to which his bird belongs, he can turn to that family in the index, which will give him a reference directing him more quickly to the name of the bird. In this same introduction we are taught where to find the birds, how to watch them, and how the birds affect the village trees, gardens and farms. To this last important matter

LONG-BILLED MARSH WREN.

From Florence A. Merriam's "Birds of Village and Field."

considerable space is given, and a plain story—illustrated by examples—is furnished of the unconscious services which birds perform for man. Some space is given too to suggestions as to how to keep birds about the house.

With the field color key already referred to, the introduction ends and we come to the body of the book. Here no attempt is made to follow any scientific classification. The birds which are most familiar are those which come first; those less known, later. Thus in five pages the charming story of the hummingbird is told, then that of the catbird, then of the crow, robin, wood thrush, chimney swift, and so on. These life histories, very brief though they often are, are full of feeling, and Miss Merriam has selected with rare good judgment those points concerning each species which are most pertinent to its story, and most likely to be interesting to the reader. In connection with the account of the ruffed grouse, for example, she mentions Mr. Thayer's law of protective coloration, published some little time ago in *The Auk*, in which he has shown that "animals are painted by nature darkest on those parts which tend to be most lighted by the sky's light, and vice versa." The sub-keys to the families are often remarkably simple and plain, and will be very useful to the reader who has made sufficient progress in bird study to know even in the most general way what some of the characteristics of the chief bird groups are.

Miss Merriam's book is very fully illustrated by drawings by Ernest Seton Thompson, Louis Agassiz Fuertes and John L. Ridgway. Many species are figured in the charming groups for which Mr. Thompson is so well known, but much more important than these are the numerous illustrations of heads, bills, wings and feet, there being 220 figures in the text, besides twenty-eight plates. Most of these illustrations merit very high praise. Especially charming are the plates of the chimney swift, of the hermit thrush, and of the Canada jay. Among the illustrations are many of birds and of noxious insects which come from the Department of Agriculture in Washington.

Miss Merriam's various books on birds are all interesting and valuable, but we are inclined to assign the first place for usefulness to "Birds of Village and Field," and we hope for it a very large circulation.

The printing and binding are quite what might be expected from the press of Houghton, Mifflin & Co., to whose kindness we owe the accompanying illustrations.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

East African Mammals.

BY D. G. ELLIOT, F.R.S.E.

(Continued from page 304.)

BAIRA ANTELOPE (*Dorcotragus megalotis*, Menges). NATIVE NAME, *Baira*.

This beautiful and very rare antelope was only met with at one place by any member of my party. On three successive days Mr. Akeley saw a small band on one of the peaks known as Nasr Hablod, or the Virgin's Breast, about half way between our camp at Hullier and Hargeisa. It would seem to be strictly a mountain species, at home on the rocky cliffs and deep defiles of high peaks, running at full speed over the precipitous places with a sureness of foot and certainty of step that would seem wonderful for an animal to possess, if you did not know the peculiar shape of the hoof, and how admirably it is adapted for clinging to steep inclines as well as for guarding against shocks to the body when making long leaps downwards. The hoof is of an entirely different shape from that of the klipspringer, alikud of the somalis (*Oreotragus sylvator*), in which genus the describer of this species placed it, but it is equally well padded, although in a different way, nor does it rest upon the ground in a like manner. The klipspringer stands entirely upon its toes, so to speak, that is on the tips of the hoofs, these being vertical with the ends only touching the ground. The hoof of the baira has a wide spread, and the two halves are narrow in front and pointed, forming a perfect cushion on which the animal walks and runs, keeping the hoof, unless at its extreme point, free of the ground. At my request Mr. Akeley has given me the following account of the capture of the specimens brought back by us:

"I had killed an oryx, and sent my gun bearer to camp for a camel to transport the carcass back, and leaving my shikari to watch the animal, took a stroll about the jungle. The peaks of Nasr Hablod, or Virgin's Breast, were only a few hundred yards in front of me, and I was irresistibly drawn toward them, influenced probably by the memory of the big bull koodoo I had killed at their base the day before. I moved cautiously toward them, hiding myself as much as possible in the gullies and ravines, until I had drawn very near the base of the small peak, and stepped behind some huge rocks. Further I could not go without exposing myself to any animal in front of my position. From my post I took a careful look over the ground, and saw a band of antelope running up the sides of the peak. They stopped in the shade of a spreading thorn tree and gazed in my direction. From their manner of moving and their great size and peculiar slope of their ears, they seemed to be koodoo cows and calves. To my right was a great mass of rocks, which if I could reach I would be within two hundred yards of the animals, as the distance seemed to me at the time. I crawled on all fours behind the rocks and then made a wide detour, keeping in the gullies, and finally gained the desired place. Peering cautiously over the rocks I saw them still standing in the shade of the tree. I fired two or three times, my bullets all going high, and then I began to realize that instead of shooting at koodoo two hundred yards or more away, I was firing at a much smaller antelope only about seventy-five yards from me. The steep mountain side strewn with small stones, together with the koodoo-like movements of the animals and their large ears, had completely deceived me. They were now thoroughly alarmed, but as they could not tell where the shots came from on account of the echoes they merely ran about in a confused way. I took careful aim and knocked one over, but he immediately rose and crawled under a bush. At the next shot I killed one in his tracks, and the remaining ones made a dash to escape, running past me at about forty yards. I succeeded in stopping one for a moment, but it rose to its feet and fell again two or three times, and at last stopped as I supposed for good. I then tried to take possession of my game and got within ten feet of the one I had first wounded and stood looking at it, surprised to find it was such a little fellow. It was a hard thing to come down from the idea of a big koodoo, one of the grandest of African antelope, to a little thing not over twenty inches high at the shoulder. I noticed that it had straight, sharp horns about four or five inches long, and just then it came to the conclusion it was time to disappear, and it did. I have never seen any animal move so quickly as did that one. I had a fleeting glimpse of him a few moments later going up the side of the opposite peak on three legs, and from the way he traveled I think he could have got on fairly well with only one. I returned to the one that was really dead and found it to be an adult female. Then I went to look for the young one I had seen kicking the gravel, but found only a few drops of blood. Nearly roasted by the mid-day sun, we took the one little antelope and went back to the oryx to find that a horde of vultures had eaten the carcass; my shikari, hearing so many shots, being unable to remain behind, had disobeyed his orders and left the animal to come and see what I was shooting at. The camel arriving, we returned to camp with such booty as was left.

"The next morning I returned again to the same place, and had hardly reached the base of the peak when the young baira jumped from almost under our feet and ran swiftly, but only for a short distance, as it was very weak. We soon captured it, and after hunting the mountains thoroughly without finding a trace of the others, returned to camp. I went back to this place nearly every day for a week in hopes of getting an old male. Once I saw a bunch of four. After hunting everywhere with my shikari, and seeing nothing, we sat down on a large rock, when he suddenly made an exclamation, and looking in the direction he pointed, I saw the baira moving swiftly up the side of the peak, stopping occasionally to look back. So perfectly were they protected by their color that when they stopped they became nearly invisible, and if I took my eyes away from them it was almost impossible to find them again until they moved. We watched them until they disappeared over the top of the cone, and then climbed as fast as we could up the sides of the peak, hoping to head them off, but on looking carefully over the top we saw the nimble creatures just leaving the base to go onto the plain. I took a few rapid shots at them, but only made

CHIMNEY SWIFT.

innocent of bird knowledge, and understands thoroughly the peculiar disadvantages under which they labor. It is for such persons that this book has been written, so that they may know the birds they see without shooting them. Miss Merriam says she has "written for those who do not know a crow or a robin, as well as for boys who would get a start in bird work, and teachers who would prepare themselves for this increasingly popular branch of nature study." She has written well for both these classes.

It is with this in mind that Miss Merriam in one of the appendices of the book has given a list of points to note as an aid to identification; the seven points of

* *Birds of Village and Field, a Bird Book for Beginners.* By Florence A. Merriam. Illustrated. Houghton, Mifflin & Co.

the stones fly. They went out onto the plain and stopped under a bush. We followed them unsuccessfully for an hour or more. The third time, thoroughly tired with a long stalk, and nearly dead with the heat, I was looking for my boys to return to camp when, turning to take a last look at the sides of the peak, I saw at the top, clearly defined against the sky, three pairs of great ears in a row perfectly motionless. I imagined the animals had seen me before that morning and had become reckless when they supposed they were taking a farewell look at me. I started to stalk them when they wheeled and disappeared. With my remaining strength I climbed to the top of the peak, where I had a commanding view on all sides, but I never saw them again.

Of all the antelope we hunted this species is the most difficult to capture. Their color assimilates so completely with the stony ground they frequent that at a hundred yards, unless the animals are moving or stand on the sky line, it is almost impossible to see them, even though you know almost exactly where they are. This practical impossibility of observing them, together with their wonderful speed, accounts for the few that are killed and the rarity of the species in museums.

[TO BE CONTINUED.]

Philadelphia Zoological Society.

THE twenty-sixth annual report of the Board of Directors of the Zoological Society, of Philadelphia, has just been received. It shows the operations of the Society for the year ending Feb. 28, 1898. The total membership, exclusive of loan holders, in 1898. The admissions during the year were 173,999, of which almost 113,000 were adults paying at the gate, and more than 40,000 children paying at the gate. The largest attendance during any month was 26,711 in August, and the smallest 5,147 in December. The greatest number of visitors on any one day was 4,373, on Saturday, May 29; the total receipts from admissions for the year was \$23,908.76, an increase over last year of \$128.54. The receipts during the year on Sundays amount to \$9,393.77; on Saturdays to \$6,382.40, while the days of the smallest attendance were Tuesdays, which footed up only to \$1,370.92. During the year 725 specimens were added to the collection, of which 191 were mammals, 134 birds, and 410 reptiles and batrachians.

Among the specimens of special interest received were three young West Indian seals (*Monachus tropicalis*), a little known species which has only recently been seen alive in this country. Unfortunately those received at Philadelphia did not live long. Two pairs of South African ostriches were purchased by the garden within the year—bred in Southern California. Three beautiful specimens of the Carolina parakeet were received during the year, a fourth one still living in the garden, having been there since 1884, having been presented by Mr. Robert Ridgway, of the U. S. National.

Among the animals born in the garden were three prairie wolves, five elk, two buffalo calves, one red deer, two Indian antelope. The garden lost in November, 1897, a splendid male orang, a most unfortunate mischance. The superintendent notes that, "while it has more than once been pronounced by high authority anatomically impossible for an orang to maintain any attitude without touching some means of support, this animal was repeatedly observed walking about his cage in an absolutely erect position without having his hands in contact with any fixed object."

An Indian elephant and a fine male Rocky Mountain sheep were also lost during the year. Some changes have been made in the locations of different animals in the garden, and several new and modern cages for mammals and birds have been erected. The buffalo herd in the garden, perhaps the finest in the country, is in excellent condition.

A Colorado Audubon Society.

At a recent meeting of the Denver Woman's Club, an earnest plea was made to preserve the little songsters from the ravages of a market which supplies their feathers for hats and other trimmings. So great was the interest aroused that an Audubon society was formed. A petition also was introduced and signed, to be forwarded to the Colorado State Senators and Representatives at Washington, urging that they help Senator Hoar in his efforts to pass the bill against importing birds and feathers from Europe for millinery purposes. In order to more effectually spread the idea against bird destruction a committee was appointed to wait on the school boards of the city and secure their interest and co-operation to introduce Bird Day in the public schools, which might be observed the same day as Arbor Day. The vast audience present promised by pledge and unwritten assent to not wear feathers any more in their hats. Next autumn they will absolutely refuse to buy a hat trimmed with birds. The business men will find little demand for feathered trimmings from the 3,000 or more women constituting the club membership, which body in its influence may be counted upon to mean three times that number.

Wild Pigeons in Illinois.

MACOMB, Ill., May 19.—*Editor Forest and Stream:* Since writing to you last week, a gentleman saw two flocks of wild pigeons about three miles from this city. The first flock was flying, and there were not less than 300 in it. The next, of about seventy-five, soon followed, but it was very near the ground and some of them flew into some trees and remained for a short time and then followed the others. W. O. BLAISDELL.

The Muse Afield.

MR. OTTO STECHHAM, of Indianapolis, publishes a little book of verse inspired by field sports and outdoor life. The title is "Rudder, Rod and Gun: Poems of Nature." My Dog and I, Fly-Fishing, Hunting the Pheasant, In the Marsh, The Deer Hunt, Hunting the Snipe—these are some of the titles.

Game Bag and Gun.

Reminiscences of an Old Sportsman.—XII.

(Continued from page 265.)

I SHALL never forget how one of my favorite covers came to me. It was in the sweet springtime, when the modest cowslip was at its best, and trout were in their prime, and I was in a state of mind to enjoy to the full the beauties of the one and the gamy qualities of the other. I had followed the well-known woodland path to the headwaters of a favorite trout stream and had fished down to the old mill, where I usually found a few good-fish in a pool a short distance below the dam. There was a foot-bridge across the stream just over the dam, and at one end of the dam there was a chute for waste water about 3ft. in width, made of planks that extended down to the water below at an angle of about forty-five degrees. At the end of the chute there was a broad pool 2 or 3ft. in depth, which extended about 15ft. to a ledge below, where the water poured over the rocks in a narrow channel into one of the most trouty looking pools that I have ever seen. Standing back from the ledge, where the water was about a foot in depth, I was just ready to make a cast when I heard a light footstep on the bridge behind me, and turning I saw a girl of some fifteen or sixteen summers crossing it. I have ever been an admirer of the beautiful, and as she was very pretty, I of course admired her as she gracefully tripped along. When she was just over the chute there was a sudden crash of breaking boards, a half stifled scream and she disappeared from view, but only for an instant, for I at once caught sight of her coming my way down the chute at a rate of speed that was not at all calculated to display the easy grace that I had been admiring. Although the mouth of the chute was not more than 10ft. from me, she got there before I was more than half way, although I rushed through the water at my very best rate of speed. When she reached the end of the chute her feet struck the bottom of the pool, she straightened up, leaned toward me, and with all the force engendered by the momentum of her rapid descent, that natty spring hat struck me just below the belt, and in less than the tenth part of a second I was standing on my head in 3ft. of water. I was young and active in those days, and gained my feet in time to assist her to rise. She was game and tried to turn the affair into a joke, but her laugh was a trifle forced and ended in a moan of pain, when she informed me that her ankle was so badly sprained that she could not bear her weight upon it. There was only one thing to be done under the circumstances, and of course I volunteered to do it, and placing her arms around my neck I clasped my arms around her, and with many misgivings as to my ability to get safely over the slippery stones I finally succeeded in carrying her to the bank without a single misstep, and seated her on a stone; then, at her request, I went to the house, which was only a few rods distant, and informed her parents of the accident, and we were soon by her side, when her father and I, clasping hands, seated her upon the chair thus formed and carried her to the house. Her parents were very grateful and could not do enough for me, and I was at once rigged out in the miller's best suit and my clothes were put to dry by the kitchen fire.

At noon the brother of my water nymph came home, and as he thought the world of her he was even more effusive in thanks than her parents had been. While at dinner the young fellow expressed sorrow that he was not a fisherman in order that he might be of some service to me in showing me the best places, adding that if I were only a hunter he could show me the best place for woodcock in the whole region. Now I had explored all the visible covers in this section in search of a woodcock cover that I had heard of as something wonderful, but had been unable to find anything that approached the description, and had given up the search, thinking that the wonderful cover was either a myth or that some one had perhaps struck it rich during flight time, and in this way laid the foundation for the tale, so when he spoke of a good place for birds this tale came into my mind, and as I found upon questioning him that I had never seen the place he described, I proposed that we should visit the spot at once, to which he readily agreed, and as it was only about two miles from the house, we were soon on the ground. The cover was situated upon a gentle slope and contained about one hundred and fifty acres of springy land covered with a scattered growth of alders and birches, and was indeed an ideal place for woodcock. I had not found it when exploring in the vicinity, for it was impossible to see it from any point until one was actually in the cover, as it was surrounded upon three sides with a heavy growth of timber, while a ridge of high land upon the upper side completely hid it from view. I was well pleased with the appearance of the cover, and made my companion happy by promising to visit it with him as soon as the season opened.

When the first of September came I made an early start, and as the place was only about ten miles distant I was soon at the miller's house, where I received a most cordial greeting from the whole family. Taking my young friend in the wagon, we drove to the cover and were soon among the birds. When we returned to the house in the middle of the afternoon we counted out twenty-two woodcock and nine grouse, a very good showing for a half day. After this I was a frequent visitor to this cover, and found it to be one of the surest places for both woodcock and grouse that I knew, and many famous bags have I made here, especially in flight time, when the score upon several occasions has exceeded forty birds.

There were birds in those days, and as pleasant memories of the good old times bring back to me no nigardly portion of the joys of these glorious days of successful sports, there are few of them that outrank some of those that came to me in this one of my favorite covers.

I was once exploring a very good looking range of

covers in the town of Thompson, Conn., and had beaten out all the best looking places upon one side, and was about to turn back and work the other edge, when I was startled by a full chorus of feminine screams and shrieks that came from the edge of the thicket a few rods beyond. Now in cases of this nature both youthful training and natural impulse prompted but one course, and before the first scream was half accomplished I was tearing through the brush in the direction of the sound at the best speed I could make, fully determined to rescue the score or more of distressed damsels from the deadly peril that I had no doubt threatened them. When I arrived at the edge of the thicket and glanced at the very exciting panorama that was in process of demonstration I blessed my lucky stars that had guided my footsteps in this direction. In the fence corner some 20ft. to my left were three girls; one little sprite of ten summers was balancing herself on the top rail of the fence, while the two others of fifteen or sixteen years were hugging each other and winding themselves together in the most bewildering manner, in the corner of the fence, and all with wide open mouths were screaming louder and oftener, and in a more heart-rending manner than I would have believed possible had I not been there to hear. The little darling on the fence completely won my heart by the very artistic and sylphlike manner in which she performed her role, and I have often wondered how it was possible for even a skilled ropedancer to go through such evolutions upon so shaky a support with never a miss or falter in tone or quality of the highest notes. The two in the fence corner were also well up in their parts, and taken all together the performance was decidedly the most interesting that I had ever witnessed. The star performer, however, was a big red bull that was three or four rods away in the open lot also performing his part with a gusto and abandon that never come to second-raters. Just in front of him was, as I afterward learned, the twisted remains of what had once been a parasol, and as I came upon the scene he had lowered his head and with a most portentous half growl, half bellow, he viciously charged upon it, and catching it on his horns threw it some 10ft. to one side, and as it struck the ground he prepared for another charge, but he never got there. He was headed from me, and as he again started for the mutilated remains my gun somehow came to my shoulder, and just as he lowered his head and uttered the first note of that growling bellow somehow the gun went off, and that portentous growl ended in one of the most surprised howls that I ever heard, that head came into the air and how those legs did take him away from there straight to the opposite fence, through which he went with a crash, and the last we saw of him that tail was still gyrating in big and little circles as though trying to put on more steam.

Beauty in distress brings out the finer feelings of our nature, is always interesting and all that, but considered merely as beauty the distressed damsel can never hope to compete with her own bright eyes and mantling cheeks that sparkle and flame as she gazes upon the valiant knight who, with couched lance, has met and overcome the dragon in her path, especially when that dragon takes the shape of a dreadful loud-roaring bull. It was with thoughts something like these that I approached the trio of maidens in the fence corner, and with my very best bow gave them good afternoon and tried to look and appear as unconcerned as though I were only an ordinary mortal instead of a full-fledged hero, but it was of no use, they would not have it.

My innate modesty of course could only blame that incomprehensible mystery called mysteria for the treatment I received, and I never for a moment thought the girls were to blame in the least. The little elf on the fence set the pace, as with a flying leap she came to the ground, and approaching me with words of praise and thanks, threw her arms around me, and in less than a second I was the center of one of the most interesting groups that I ever encountered. After matters had become straightened out a little they began all together, as fast as they could talk, to give me a synopsis of the eventful occurrence, from which I learned that this was a blackberry party, as indeed I had known from the first by the tin pails that were scattered around promiscuously like, to say nothing about the tell-tale marks on their cherry lips and rosy fingers. I also learned that they were having just a lovely time until the aforesaid dragon, with hideous roarings, had charged upon them, and that just before he had caught and killed them all the parasol was inadvertently dropped, which the monster at once tackled, thus giving them a short respite, when I so fortunately came to the rescue, and by my well-directed shot saved them from their expected doom. When they reached the climax, hysteria again seized them, and once more the bewildering evolutions that had so confused me were repeated, but the little sprite broke up the performance with a shriek of laughter, in which we all heartily joined, when she called attention to the numerous blackberry stains that somehow had become quite a prominent fixture upon my countenance, thus turning to a jest one of the most solemn and interesting episodes that had ever come to me.

With one accord they insisted that I should accompany them to the home of the little one, near by, where the other two were visiting, in order that they might present to their friends the preserver of their lives. So we started for the house, where we soon arrived, and I was presented to the parents of the little one in due form, and received their hearty thanks with becoming modesty. Her father was profuse in praise of the part I had taken in the affair, adding that he had always thought that hunters were a worthless lot, and he had never allowed them on his grounds, but now that he had found one who was the right sort he just wanted me to take my dog and gun and go with him, and he would show me partridges and woodcock enough to make up, as he put it, for the time I had lost on account of the girls. This suited me, and we were soon walking up the green slope behind the house. When we arrived at the top of the rise, some quarter of a mile away, and I gazed upon the extensive and inviting looking cover in the valley below, I began to think that my new-found friend must be correct in his estimate of the number of birds to be found here, for sweeter spot to look at I

had seldom seen, but when we had taken a hurried beat through a portion of the cover, as it was getting late and we had not much time for exploring it thoroughly, I came to the conclusion that he had greatly underestimated the wonderful resources of this ideal cover, especially in the matter of grouse, for I had never in so short a time found so many. The woodcock, he informed me, were to be found in abundance upon the gentle slope beyond, among the birches and pines.

It is needless to say that I accepted the pressing invitation extended to me by every one of my new friends to pay them an early visit, and three days later I took an early start, arriving at the house in time to join the family at breakfast, receiving a very cordial greeting from all and an embrace from the little sprite that so strongly reminded me of the performance in the fence corner that I felt the cold chills creeping along my spine, but as I saw no signs of hysteria in the older girls I was soon in my normal condition. After breakfast, accompanied by my host, I went to explore more thoroughly the El Dorado that had so unexpectedly come to me. Walking down to the lower end of the cover in the valley, we beat out the whole of it to the grove of tall pines at the upper end, finding more grouse than I had ever seen in a cover of this size; but their education, reason or instinct, call it what you will, was fully equal to that of their more persecuted brethren in covers that were frequented by shooters, although I could not account for it, as my companion informed me that not a gun had been fired anywhere in this vicinity for several years, but they nearly all appeared to be well posted, for they flushed wild and made straight for the tops of the pines that I have mentioned, and in consequence I obtained only a few shots when compared to the number of birds found, but I was well satisfied with the result, for when we arrived at the upper end and sat down beside a spring for lunch and smoothed out their plumage we laid them side by side on the green grass

several years I kept all knowledge of this resort from the public, only taking a few choice spirits to enjoy with me its pleasures, and many glorious days did we have here, but as time went on, adding numberless attractions to the graceful form of the aforesaid little sprite, another shooter fell a victim to her artless wiles, and worse than this, somehow, she took a liking to him and gave him a pointer on my El Dorado, and thus I lost possession of one of the best of my favorite covers, for the fact that I no longer had an exclusive right to it spoiled my pleasure, and I turned to other scenes.

Why she should take a liking to this fellow I never could understand. He was fairly good looking, but I could give him cards and spades on this score, and beat him dead easy, and as for shooting, I could double discount him and still have plenty of birds to spare, and it is my candid opinion that when it came to shooting a bull he would not have been in it for a little while. Well! well! this was long, long ago, and time has somewhat smoothed over the matter, but there is still deep down in my heart a sincere feeling of regret for the loss of that beautiful "favorite cover."

SHADOW.

[TO BE CONTINUED.]

A Hippo Hunt.

Editor Forest and Stream:

Probably most of the readers of the *FOREST AND STREAM* have not had a shot at the hippo in his home and an account of one would be of interest to them. "Hippo" is the usual shortening of hippopotamus:

Like the majority of people in this part of the country, with hippo only three or four days from our doors, I had never shot one, even though I had hunted, traded and traveled in Manissa for the past six years.

I was on a hunting trip in the valley of the Myamkara River, and my headquarters were at a Kaffir kraal

ornamented calabash. About his loins was still another bark cord serving to hold up a leather apron in front and a leather breech piece; on his ankles were twisted wire anklets, about twenty on each. He had a Martini-Henry rifle and one cartridge. The pickanny had his solitary blanket. He was thus ready for a day's or a month's trip as far as everything but food was concerned.

It was late in the afternoon when he arrived, and so I ordered my boy Villum to get my things together, and to tell a couple more boys to be ready to start early next morning. I laid aside to be packed my tent, a light 8x8x7 A shape, some flour, salt, sugar, tea, rice and dried meat for grub, my waterproof double canvas-lined rubber sheet and a blanket, a change of clothes and a suit of pajamas, a tea kettle, a gridiron, a frying pan and a three-decked dinner carrier and some extra cartridges, also quinine and fruit salts. We five bearers and myself, got away at daylight next morning and tramped about twelve miles to a kraal at the junction of the Honde and Myamkarara, where I had for my usual 11 o'clock breakfast of tea (three cups), bread, rice and dried meat stew, native pumpkins and honey. This over, and a good smoke, we made a tramp of about fifteen miles to an old hunting camp of the natives, which was on a hill near the Pungwe (above the junction).

Next morning early my guide went to a kraal near by (ten miles about) to get a man who knew the river and the location of the pools where hippo were likely to be found.

In the meantime I amused myself poking about, and was lucky enough to drop a reit buck (a long-legged, slender antelope, found in the long grasses near water and weighing from 80 to 150lbs.). We later moved camp to nearer the river. About 2 P. M. my guide returned with two men from the kraal and reported another following down the river to try to find a pool with hippo in. I therefore ordered camp to be struck, and had it not quite packed when the other turned up and gave me the pleasant news that he had found four hippo in a pool about four miles off.

When we got near the spot (we went directly for it, as the wind was in our faces), I had all my boys, excepting my guide and the locator of the hippo, remain and we three went on carefully. I found great quantities of fresh hippo spoor (marks); there is no mistaking a hippo track if once seen, for it is a double path very broad and knocking down small bushes and grass quite flat.

We could hear the river, and soon caught sight of the silver glint of the water through the trees and long grass; the locator and myself then went ahead.

I'll never forget the first glimpse I had of the hippo undisturbed. As we pushed our way quietly through the dense growth on the bank, there just below me stretched a large sheet of smooth water, about half a mile long by 300yds. wide, and in it were some black objects that looked like stumps; these were moving slowly and I soon knew they were heads of hippo, for one suddenly sank with considerable noise of rushing air, and another bobbed up where none had been before. The heads looked about 4ft. long and a foot and a half wide, and had six distinct points on, two sharp little ones just past the middle, two larger rounder ones in the middle and two high and largest at the front. These were the ears, the eye sockets and not the nose holes, as I at first thought, but the upper-lips stretched over the huge tusks on each side.

The hippo, not having been alarmed, were swimming high and the heads were half out of water and a large part of their huge backs were showing too. I watched them for some little time, for the double purpose of getting cooled down and to study how they behaved. Then I sat down and took a long and careful aim just between the eyes of the one nearest me, and let drive. A bang—a little splash a few inches in front of the head—a loud snort—a big splash, and a sudden disappearance of all the heads. I had underestimated the distance and taken it for 100yds., whereas it was about 150yds. I felt awfully crestfallen, for I was under the impression that a miss meant that all the hippo would go into the long reeds near the banks, and that they would only put enough of their noses above water to breathe, and that I would not get another shot.

My man knew better, and he touched me on the arm, motioning me to go back into the dense reeds and further down the pool. We did so and I followed an old hippo spoor to a good cover behind some large boulders near the rapids, where the pool ended. Here I waited, it seemed an hour or so, but as my man seemed satisfied I concluded that the game had not finished. A black object appeared, there was a loud snort and the object was gone again. This happened again and again at intervals I should judge of really about four minutes. However, I saw that the object, which I recognized as part of a hippo's head, always appeared in the same place and each time remained longer on the face of the water.

Further up the pool I saw the other three heads bobbing up for a time as the nearest was doing. After a while one hippo put his head high up and had a good look round for the cause of the disturbance, and seeing nothing disappeared, and must have been swimming under water, for he got much nearer. The one near me was now making quite long stays above water and showing much more of the head, so I sighted on it, but it had a very aggravating way of going down just as I felt quite sure of my aim and was about to pull the trigger. However, it came up once too often and stayed a little too long, and aiming at the ear I pressed the trigger. This time it was quite different. After the loud bang was heard the thud of the bullet, and the brute threw its head back convulsively and sank with a big splash, and then bubbles of air breaking on the surface told the plain story of the breath escaping from the lungs, and I knew I had killed one hippo.

Then the fever of killing got hold of me, and I finished two more, I regret to say. Hippo, if killed, sink at once, and when the gases from the stomach generate sufficiently to give buoyancy it comes to the surface, a matter of from four to twelve hours, according to the heat of the water and quantity of food in the stomach.

The next morning my head boy woke me early to tell me there was a hippo stranded at the foot of the pool.

THE HIPPOPOTAMUS.

From Brehm's Animal Life.

and counted fourteen of the beauties. After lunch we tied them together, and hanging them over a limb started for the woodcock grounds, a short distance away.

This was an ideal woodcock cover; the ground sloped gently to the south, and was covered for the most part with a fairly open growth of birches, while every few yards there was a depression through which trickled a minute stream that came from springs on the slope above, while tall-growing ferns marked its course to the valley below. From about the center of the cover to the upper edge there was an occasional bushy pine from 6 to 10ft. high, adding beauty to the scene as well as making capital hiding places for grouse, where they were nearly always sure to lie well. This cover contained more than a hundred acres and nearly every foot of it was capital ground for both woodcock and grouse, and as we beat out each nook and corner, finding birds in abundance, I blessed that big red bull for putting me in the way of adding to my list of favorite covers so delightful a spot as this, and I mentally resolved that redoubled speed should quicken my footsteps when next I heard the cry of distress, and that the next dragon I encountered should receive the contents of both barrels. When we returned to the spring where we had left our grouse we added two more to the string and then counted out nineteen plump October woodcock; a pretty good day's work for a boy, indeed this beat my previous record by seven birds and I of course was correspondingly happy. This was one of the few of my many favorite covers that came to me by accident, and it could not have been otherwise, for I should never have found it, as it was completely hidden from view from any road, nor was there any other cover that overlooked it. For

(village) only a few miles above its junction with the Honde, whence they flowed a few miles further and then emptied into the noble Pungwe. I had returned to headquarters for a fresh supply of provisions and to have a couple of days' rest and dry clothes, and was lying reading on my folding stretcher (cot) when my head boy (all male natives from sixteen to eighty years are termed "boys"; younger fry are known as pickaninnies) came to my door and told me a man wished to speak to me. I said he might come to me. I recognized him as the "boy" who had promised a few days before to return next day and guide me to where a hippo pool was, and who had not turned up. A native's promise to come on the morrow may be stretched to a week or so of morrows, for they are not slaves to exact time, nor even to truth in abstract. However, here he was, very dirty, and as he soon informed me, fearfully hungry (dying of hunger, he delicately put it). He had a pickaninny with him likewise dirty and hungry. He told me his mission and I ordered skoff (food) to be given him. He was a typical native, about thirty-five years old, with short curly hair all over his head, a slight straggly beard, a few hairs on his chops and a miserable mustache. His skin was a light bronze color. He was of medium height, thin but wiry, and with muscles well defined, and bones very slender compared to those of a white man. The Mashona is a Kaffir and should not be confounded with the negroes, who are quite different race and are confined to the west coasts and center of Africa. The dress of my visitor was quite in fashion for a "raw boy" (one not having had to do with white invaders), dirty, simple and lasting—a bark string around his neck carried a charm; another bark string over his left shoulder had suspended from it his snuff box, in this case a small

Naturally I was in a great hurry to see dead my first hippo, but I feigned indifference and called for my tea and biscuits, and then as leisurely as I could dressed and went down to see the brute. It was rather funny to see how elaborately attentive my boys were (a lively sense of meat to come); the path was cleared of everything likely to hinder me, branches were held till I passed, and my rifle was taken out of my hand. The hippo presented a very odd sight. He was stranded on the shallows and half on his back, his little stumpy legs sticking up in the air, at one end his enormous head and neck, and at the other his ridiculously small tail. The upper part of the body was a dark gray to almost black, and the belly and unexposed parts a light red to almost white. There were a few coarse, black hairs on the back (perhaps four to the square foot) and a dozen or so on his tail. The tail has no bone proper, but a little gristle in place of it; it is about 12 in. long and 4 in. thick at the base.

The natives refused to touch the brute till I went out to it, a rather difficult matter, as the river ran breast-high at the sides and over smooth, slippery rock. Taking off my boots and trousers, and keeping on my socks (a sure preventative against slipping on wet rocks) I waded in. There was a channel fully 6 ft. deep and 3 ft. wide, and I was helped over this, for I had no desire to be carried down to the pools below and make acquaintance with the crocodiles, with which the deep parts of the river swarm.

Before my natives would start skinning the animal or even touch him I had to cut off his tail, and they were fearful that I might not throw it away. The reason, they said, was that otherwise they would have fearful stomachaches on eating the meats—a superstition I have not yet been able to get at the bottom of. Having cut off the tail and thrown it away, and leaving directions to cut two strips of 4 in. broad from the top of the neck to the root of the tail, I left them to skin and cut up the beast to drag ashore. My boys made long ropes of bark, and fastening one end round a tree on shore and the other round a part of the beast, they would sever this and pull it on land. It took several hours to get it all (and they wasted nothing excepting the tail) high and dry. I tried a bit of kidney (a quarter of one), which filled my plate, for breakfast, but it was rather rank. The tongue was excellent, and the under-cut good too; the feet I have since learned are very fine (a good-sized "trotter").

After breakfast I went down to see to the cutting up and making strips for belting. I reserved for my own use and trading a hindquarter, the fat (a bucketful when boiled down), the tongue, lips and undercuts, and let the boys fight for the remainder, and fight and squabble they did all day. All night and next day the meat was smoked over green wood fires.

The great size of the body and extreme shortness of the legs are surprising. The leg bones are little longer than those of a man, but are tremendously thick and solid. The head and neck are very massive. The animal, I should judge, weighed from four to five tons. The one at the Zoo in London weighed, I am told, six tons odd. The large tusks of mine were 2 ft. 9 in. round the curve.

The bullet had entered the head just above the ear, had split the back of the skull its complete length and gone out, carrying away the other ear. My rifle is a Martini-Henry action and boring (.45 cal., 85 grs. powder and 500 grs. lead), and fitted with a Lyman hunting rear sight and a sporting bead fore sight, and is a very handy, strong weapon, and hits hard enough to kill anything alive; the great trouble is that the trajectory is not as flat as one would wish and therefore distances must be judged correctly if hits are to be made.

My boys, knowing that the one hippo that was stranded at the bottom of the pool was more than they could carry, would not look properly for the other two, so doubtless these only went to feed fishes and crocodiles. I have always regretted being carried away with excitement and killing three hippos where one sufficed, and I hope I'll keep my head next hunt.

With boys that happened to drop in I had twelve carriers to go back to the kraal with. I made them take equal portions for themselves and for me, and so had lots of meat to trade for vegetables, etc., and to eat for a couple of months.

The fat lasted me nearly a year; it is much more delicate in flavor than pork fat and has not the same bilious tendencies that lard has. Long boiling made it as solid as beef tallow.

My boys all made themselves ill by overeating, so the much-feared "bellyaches" troubled them notwithstanding my having thrown the tail away. A couple of doses each of salts in warm water and then a little quinine fixed them up for the march back.

The junction of the Pungwe and the Honde rivers (some few miles E. S. E. of where I hunted) lies about 18 degrees south and 33 degrees east of Greenwich.

When I got back to headquarters there were great dances and songs of rejoicing on the strength of gifts of meat expected all around. It is my intention to go back to the Pungwe and kill another hippo soon.

SHOKULILA A. GWANZA.

RHODESIA, South Africa, February, 1898.

The Asian Birds in Illinois.

MACOMB, Ill., May 15.—We have not heard anything of the imported chuckor partridges for over one year. I cannot help thinking they are still alive somewhere, but may have emigrated to another part of the State. They will live in any climate. When the mercury dropped to 28 degrees below zero they would fly on top of the barn and seem to enjoy it. These birds can be bought in Karichi, India, for \$1 per pair. Mr. H. W. Loveday, our State game warden, will recommend to the Governor to establish a game preserve in this State. Should this be done, I think we will have some foreign birds imported. India is full of beautiful game, and any of them will do well in this country. W. O. BLAISDELL.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Changes in Iowa Fauna and Flora.

CIVILIZATION, so called, is not always "progressive"; but is in ways often destructive. No class of persons recognize the truth of this statement more forcibly than does the naturalist; and to a lesser extent, the socialist.

For nearly forty years the writer has been a resident of northern Iowa, and being by profession a naturalist has witnessed with sadness the havoc wrought upon our native fauna and flora by the hand of our boasted civilization.

We are not one of those who look upon the past as containing all that is good and desirable, but we look with deep regret upon the passing of those good and desirable things which can never more be recalled. Only those who take an abiding interest in the fauna and flora of a region, and who have been intimately acquainted with it in any given region of the West for the past one-half or even one-quarter of a century, can form any adequate idea of the immensity of the change—and often consequent ill effect and great loss to mankind—which has taken place within this period.

Along in the early fifties, when the northern central portion of Iowa was first settled by the white, the native fauna was exceedingly rich and varied. Elk and deer occurred in droves, and were seen almost everywhere; and even as late as 1885 their "shed" horns were occasionally met with. During the deep crusted snows of the exceedingly severe winter of 1856-7, however, most of these noble animals were exterminated by "hide hunters."

Subsequent to this date comparatively few of these animals roamed this region, and to-day, as well as for many years past, not a single specimen of this species roams at large anywhere within the borders of this region.

The last buffalo of this region was killed in the early fifties, although prior to this time they roamed in great numbers over the rolling prairies. Gray and prairie wolves occurred in numbers then, and occasionally timber wolves were seen. Now only the prairie wolf is left, and he few in numbers. The gray and red fox were quite common then, but now only at long intervals is a specimen of the former seen, while the latter has disappeared.

Black bears and wildcats were quite commonly met with in the timber along the streams when the country was first settled, but only an occasional specimen of the latter is seen in these present days, while not a specimen of the former has been known for at least twenty-five years.

Other large animals were sometimes met with in this region, but they all disappeared many years ago.

This was the trapper's paradise then; and otter, beaver, mink, muskrat and coons were very numerous. Crossing the smaller streams at intervals were seen numerous beaver dams; mink were met with along all the streams, ponds and sloughs in the region. To-day, in this their former home, an otter or beaver would be looked upon as a greater curiosity than a ferocious wild animal from some foreign land.

Mink and muskrat are still with us to a limited extent, and so is the coon, although in greatly diminished numbers.

The skunk is with us, and has grown from occasional to many. The badger, which once was more or less common on our uplands, has now become almost extinct, while the common gray rabbit has increased vastly in numbers since the early days, although occurring in abundance then. Up to within about three years, the jack rabbit didn't occur here, but is now found in considerable numbers over most of northern Iowa. They are leaving the sparsely settled western prairies and making their homes in the fields of the well settled portions of our State.

The weasel was once abundant, but is not often seen at the present time. The gray and striped gophers were once so numerous as to be considered a pest, and the former is still plentiful in some localities, while the latter is becoming rare. The pocket gopher once occurred here in large numbers, and still is quite common, although in some respects their habits have changed greatly since the early days. Chipmunks, gray and red squirrels still abide with us, and have changed their habits but little or none at all. Woodchucks were unknown in early times, but are common now.

Greater or lesser changes have been observed among all other fur-bearing species of the region—some have become extinct, while others have increased in numbers, and still others have changed their habits to a more or less marked degree.

The reptilian and piscine faunas have also undergone equally as great a transformation as the others. The rattlesnake was once the dread of the early settlers, but is rarely ever seen now. The blacksnake or blueracer was once frequently seen, but went the way of the world long ago. The various species of snakes have very greatly diminished in individual numbers, and other changes are noted among them.

Fish of many kinds once swarmed in our waters, some of which have entirely disappeared, while others have taken their place—been introduced by man. Other changes also are observed in this great class of life with us.

In the insect world also other and vastly important changes have taken place, and this mainly through the agency of man. Often through blind ignorance of inevitable consequences, civilization has disturbed nature's equilibrium, and consequently has suffered vastly for it, and still but few have learned the lesson their folly has wrought.

Among the bird forms, the changes have been none the less startling. When the settlers first entered this region, the prairie chicken occurred in millions, and flocks containing thousands of these noble birds were seen in the winter. Our civilization has now so nearly destroyed them that it is difficult for the sportsman, equipped with the best of guns and trained dogs, to bring to bag more than from one to seven of these birds in a day afield. This bird with us has materially changed its habits since the early days.

Quail, like the prairie chickens, have about "given up the battle," and are rapidly succumbing to their inevitable fate. Wild ducks, geese, brant, white and sandhill cranes once were wont to stop with us in vast numbers on their

annual migrations, but now they not only seldom ever stop, but have to a very great extent even changed their migratory course and avoid mainly this portion of the State. The once common and beautiful pelicans and swans are now rarely ever observed.

The wild pigeon, which once was with us—stopping mainly in its migratory flight—in vast numbers, is not now observed; in fact for very many years I don't know of a single individual of this species having been seen here. There have also been other and great changes in the bird life of this region since the country was first settled. I well recall the immense flocks of blackbirds which were with us in the fall, and how these flocks in their flight would reach unbroken for miles and miles, and what indescribable melody they would make as they settled down in some grove to sing. These scenes and events are among the sweet recollections of the past, and of a time forever gone. Perhaps the saddest change has been the utter passing away of a race—or races—of men from this region which for untold centuries had been their home. We here refer to the Indian and the mound builders. Only a lingering, fast-fading memory—their silent tombs and almost vanished trails—remains.

The flora of this region has to the ordinary observer undergone perhaps a more noticeable change than has the fauna. When this portion of Iowa was first settled the vast prairies were covered with a wonderful growth of rank native grasses 4 to 5 ft. in height, and the myriads of bright wild flowers made it a paradise of beauty and presented a scene which, when once viewed, could never be forgotten.

Timber skirted the streams in belts of varying widths, and sometimes occurred as isolated groves on the prairies. The beauty and luxuriance of this flora it is impossible to convey an adequate idea of to any one who has not seen it in its own wild glory. All this is changed now. The beautiful prairies have been broken up; their floral loveliness destroyed, and in their place is seen the stubble and the cornfields. The limited areas of timber have been recklessly reduced to aid in the accumulation of the almighty dollar. The result of this pitiless and almost criminal destruction of our timber lands is already being felt, and shows itself in the increasing aridity of our once moist climate, the shrinking and drying up of our water sources—springs, lakes and streams.

Of such vital importance to the welfare of our people and nation has this question of forest preservation become that the general government has begun in earnest to take steps to insure it.

CLEMENT L. WEBSTER.

CHARLES CITY, Iowa.

In the Jungle.

ONE of the neatest and prettiest stalks that has ever come under my notice was made by a friend (H.) some years ago when living on the Malabar Coast. He was a well-known shikari, and had killed possibly more big game of all sorts than fall to the lot of most hard-worked Government servants.

H. was out one morning after spotted deer, and had only his favorite little small-bore rifle, which he invariably carried himself, being no believer in the usually inevitable gun carrier coolie or shikari, and much preferred being alone when out for a shoot.

Having had no luck, he was on the point of returning to camp, as it was getting unpleasantly hot, when he heard voices in the distance, evidently coming in his direction, so sat himself down to await the arrival of his unexpected visitors.

The party were evidently in a considerable state of excitement by the row they kicked up, and on reaching my friend began to unfold their tale of woe.

They were timber contractors, they said, and had lost one of their tame elephants, a female, that had been enticed away by a tusker; they had followed the pair some distance into the jungle, but the tusker had made for them, and was very vicious, they said, and what were they to do, and would the Sahib help them, and so on *ad lib.*

Having satisfied himself that the story was apparently true, H. informed his visitors that if they would go and bring their elephants' mahout, he would see what he could do for them.

This they promised to do, but said it would take an hour or so before they could return, as the mahout was in another camp some two or three miles away.

On my friends agreeing to wait for a couple of hours, the timber contractors made "plenty salaams," and started off to bring their "anakaran," as the mahout is called in the language of the Malabar Coast.

Before very long the party returned, bringing the missing mahout, who, after a long talk with H., assured him that he would faithfully carry out the instructions received as to the *modus operandi*, should they come up with the elephants.

Taking one of the timber contractors as a guide, H. lost no time in starting for the scene of the abduction, and after a few miles' trudge they came upon the guilty pair, apparently dosing under a big cotton tree.

And now commenced the stalk. The mahout had assured H. that, barring accidents, he felt sure he would be able to walk up to his female and hold her by the ear, as is their custom; and as by a bit of luck the tusker happened to be on the far side, matters were simplified considerably, so with a few extra words of advice and caution my friend and the mahout started off, leaving the timber merchant behind.

Cautiously approaching the female, who showed no signs of alarm, evidently recognizing her keeper at once, the mahout, as directed, got up alongside of her, and catching hold of her ear induced her to stand perfectly still, and under her cover H. gayly marched up and found himself within about 10 yds. of the tusker, who was so far in happy ignorance of the approach of danger.

The female, at first, seemed rather to object to a stranger coming up alongside, and began to fidget about and otherwise show her disapprobation at being made a "stalking horse" of. So fearing a catastrophe, H. moved off a few paces, while the mahout, by whispering soft nothings into the lady's ear, succeeded in pacifying her.

The tusker, whose head had been partially hidden by

some projecting branches, now moved into the open and gave H. a lovely shot, which he immediately availed himself of, and putting one of his little bullets nicely into the tusker's ear, dropped him dead as the proverbial door-nail.

The female, however, was intensely alarmed at the shot, and broke away from the mahout, nearly capsizing my friend as she rushed off. She was, however, shortly captured, and the party returned in great glee at the doubly successful termination of the stalk. H. was simply overwhelmed with thanks by the delighted contractors, who were naturally highly pleased at the recovery of the erring lady, and my friend returned to camp, considerably pleased, and not a little amused at the success of his dodge for stalking the amorous old tusker.—*The Asian.*

CHICAGO AND THE WEST.

Cowboys in Chicago.

CHICAGO, Ill., May 21.—The Dakota Regiment of Cowboys, Col. Grigsby commanding, arrived in Chicago to-day en route for the front. They are a very workmanlike lot, and if they have half a chance will come nearer to running down and roping the Spanish fleet than anybody has for the last thirty days. Better troops than these and their fellows, now in camp under Cols. Wood and Roosevelt at San Antonio, never threw a leg over a saddle. There is going to be news, and not just rumors, if these folks get into Cuba.

Naturalized Quail.

The Rod and Gun Club of Spokane, Wash., last year imported a lot of Bob White quail from Kansas, and turned them down among ranches near that city. The very encouraging report comes that the birds have wintered finely, and have been breeding this spring, so that many broods of young quail have been seen in different parts of the country. The sportsmen are congratulating themselves on their success.

Confiscation.

State Warden Loveday told me this week that he had himself, personally, and in the city of Chicago alone, confiscated just 18,972 head of illegal game during his first year, which has just ended. This is good work. And it shows where the game goes.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

A Played Out Game Country.

TEN SLEEP, Wyo.—*Editor Forest and Stream:* No one who saw this section of country a few years ago could credit the rapidity with which the game has been cleaned out. Where within a decade there were thousands of elk roaming over the Big Horn Mountains, now there are not 100 (about one to every ten square miles), and for every elk there are about two to three rifles, which are going from January to December.

The immense flocks of sheep that are herded the whole length of the mountains of course have aided in the destruction of game. Between 300,000 and 400,000 are roaming every summer from one end of the range to the other. This drives the game to the foothills, and as soon as a deer or an elk shows up it is killed. One man here who acts as a guide makes a boast of having caught a band of elk in some deep snow and shot seventeen as they passed him. It is hard to say how many he wounded. A band of seventeen now would be a rare sight. It is not tourists, although they get the blame, who slaughter; it is would-be hunters, who shoot at a band as long as they are in sight and come home and tell of the blood they found and all they wounded and probably do not get one.

Not only is the game played out, but a saw mill on Ten Sleep Creek, once the finest trout stream in the country, will very soon wind up the fishing. As usual I have had numbers of letters from old friends, whom I have guided, and have written all of them that their vacation will be wasted if they come in here.

Had this game had the protection that Maine provides it would have been a source of wealth for years to come, and unless something is done, and done quickly, it will be simply a second edition of the buffalo.

About 200 miles west from here and south of the Park there are plenty of elk, but of course no one will outfit here for that country, as it takes all the time going and coming through a gumbo desert, with nothing of interest to see.

A GUIDE.

Eagle and Deer.

THE illustration of the eagle and deer, which has an interesting resemblance to the Audubon painting, of which an engraving was given in the issue of May 7, is from Mr. Harting's recent work on Falconry. The berkute or bearcoote, the golden eagle, is trained and used by the natives of Tartary and the Kirghis Steppes for hunting foxes, wolves, boars and deer. Mr. Harting quotes this description from Atkinson: "We had not gone far, when several large deer rushed past a jutting point of the reeds and bounded over the plain about 300yds. from us. In an instant the bearcoote was unhooded and his shackles removed, when he sprang from his perch and soared into the air. I watched him ascend as he wheeled round, and was under the impression that he had not seen the animals; but in this I was mistaken. He had now risen to a considerable height and seemed to poise himself for about a minute. After this he gave two or three flaps with his wings and swooped off in a straight line toward his prey. I could not perceive that his wings moved, but he went at a fearful speed. I gave my horse his head and a touch of the whip; in a few minutes he carried me to the front and I was riding neck and neck with one of the keepers. When we were about 200yds. off the bearcoote struck his prey. The deer gave a bound forward and fell. The bearcoote had struck one talon into his neck, the other into his back, and with his beak was tearing into the animal's liver."

Sea and River Fishing.

Fresh-Water Angling.

No. VII.—Some Odds and Ends.

BY FRED MATHER.

THESE articles have brought quite a number of letters on angling, several of them asking for details which had not been entered into because there was no intention to write an exhaustive treatise on fresh-water angling. That is the province of a book, while these little sketches were merely intended to touch on the main points of distinguishing our more common fishes and then to indicate the tackle, baits, etc., used in taking them. As in some cases several anglers have asked the same question it is easier to reply through *FOREST AND STREAM*, and picking up these odds and ends there is also a chance to reply to some things that have appeared in these pages.

The Name Dolomieu.

In the issue of May 14 Dr. Elliott Coues hints that this name, the specific one of the small-mouth black bass, has some mystery attached to it which he has solved and may tell.

I know of the name only what I have read in the "Book of the Black Bass," p. 86, as follows: "Etymology: Dolomieu, proper name (in honor of M. Dolomieu)," and that it was given to the fish by Lacépède in 1802. Only this and nothing more. Who the gentleman was that is thus rendered famous is unknown to me. Did he catch a bass and present it to the learned man who gave the name to it? Or did he show him how to cook one? I never gave the subject thought before, but now there is curiosity to know who the man was whose name will go thundering down the centuries by being attached to a grand American fish. Will Dr. Coues or Dr. Henshall tell us about him?

Fishing for Gars.

And now comes an angler from Michigan who wants to know the best bait for gars, and says: "They are sometimes called gar-pike, and on one of our lakes I saw about fifty of them in shallow water, playing around, but they disappeared into deep water when my boat approached. I tried to get them to bite at a shiner, but did not succeed, and am desirous of giving them a trial with hook and line."

Success to you. Catch, and be sure to kill, every one of these beasts that you can. They belong to a past age, and if they had perished when most of the other ganoids did there would be more fish. They eat nothing, but fish and are not fit to eat. Before man appeared and used his destructive methods, this fish had a mission to keep down other species. Man attends to that now, most thoroughly, and the mission of the gar is ended.

I took a large one on a spoon in Pamunky River, Va., some years ago, but the long, slim nose of the gar is not made for spoon victuals for it takes its prey sideways and may thus bite the spoon and avoid the hook. The gar moves slowly to its prey and alongside it, with its nose beyond the unsuspecting minnow, until right for a smart side snap which takes the minnow crosswise in its bill and then awaits a chance to eject and turn it in shape to swallow, and all this time you must wait.

Use a narrow hook, i. e. with short distance between point and shank, for the beast's throat is small. A 2-0 Carlisle, or the same sized Pennell with turned-down eye, is about right, and fasten it to your line with a foot or more of steel wire out of respect to those saw-like teeth. Hook your minnow through the lips if you cast or troll it, and just under the dorsal fin if still-fishing. Use any kind of tackle at hand, but be sure to let the gar swallow the bait and begin to fight before you do a thing after it strikes. The hook does not penetrate the jaw well, but once into the interior of the gar he is yours and you can learn something of its anatomy while dissecting the fish to recover the hook, but beware of a side blow from its jaw on your hand. When you kill a few tell us all about it. You may catch on to some new wrinkle. I never fished for them, but they have favored me with attention while looking for better fish.

Gaffing.

Two anglers wish to know about gaffing a large fish, as one says: "A great pike or lake trout." Any blacksmith can make a gaff, but not one in a thousand can give the proper kink to the point which makes it draw into the flesh and make sure of the fish which you have fought to a standstill. This thing has been thought out with as much care as the form of a fish-hook, and the men who make for the trade make the best. Don't think of making your own gaff unless you understand the lines of draught, or are too poor to buy one.

For boat fishing a 3ft. gaff is long enough, but for fishing from steep banks or from rocks it should be longer. If kept at the club, or near the fishing ground, it is better to be in one piece, and in this case the well-sharpened point should always be protected by a cork. There is a compact gaff made which has a telescopic handle with a steel protector for the point, and this is the best form for traveling with. Beside the risk of dulling the point there is danger from having such an implement lying around loose and lacerating anglers instead of fish.

Suppose that you have a grand fish exhausted and lying on its side and your boatman makes a jab at it in an awkward way, just enough to alarm it, and with an energy begotten of fear it makes a supreme effort and breaks away. Words which you did not realize were in your vocabulary suddenly assert themselves and there is a sudden lowering of the temperature between yourself and the boatman, and no matter what he may do with other fish you can neither forgive nor forget. A blunder at this time is worse than a crime. A man who handles a gaff has no right to be ignorant of its proper use, unless he is also the angler; then there are no remarks to be made, unless to blame the dealer for such a weak line, or leader. The dealer, not being present, can be laid out in great shape and so some satisfaction for one's own blunders may be attained.

I once had a boatman who knew all about gaffing a fish and I had fought a great pike to the side of the boat when my man raised the gaff in air and struck at the fish. The pike was only sparring for wind, tired, "somewhat disfigured, but still in the ring," and when it saw the gleam of that gaff descending it rallied its reserve force and was no longer one of my angling assets. With my heart pumping thousands of gallons per minute, and my bulging eyes gazing on the biggest pike that ever swam, I sat down. Like the old fellow with the load of apples who found that the boys had lifted the tail board of his wagon as he went up hill, "language could not do justice to the subject."

A model gaffer for pike or lake trout was Jack Sheppard, formerly an Adirondack guide. Before the fish was alongside the boat the gaff was in the water, and when the fish was near enough the gaff was slowly slipped under it and with a quick, upward motion the fish was impaled either in the belly or in the gills. Sheppard never lost a fish which I had brought alongside the boat. And this point should be remembered: the tired fish is still vigilant, its eye sees as well as ever and it is alert and observant of a condition of things which never happened to it before. Because it turns on its side is no proof that its vitality is exhausted; it is merely resting tired muscles, but its brain is active. With this in mind no thinking man would treat an exhausted fish as if it was a saw-log.

A gaff mark in the belly of a handsome fish has a cruel look, and if it can be avoided it is well to do it, for the angler has a pride in the appearance of his game. Years ago Jack Sheppard told me that he preferred to put the gaff in the gills instead of the belly, and last summer I received a 25lb. salmon, caught by Col. Charles H. Raymond on the Restigouche, but there was no mark of gaff. The jaw showed where the fly had been, but the fish was too big for capture in a landing net. A closer inspection showed that the Indian guide had slipped the gaff from below under the gill cover and had retrieved the fish without marring it.

This tells the story of gaffing. It is a delicate bit of work that requires tact, for it is actually the coup de grace to a fish which the angler has brought to a condition of weariness where it can be delivered.

The Relation of Rods and Lines.

This is a question that has not been treated by any angling writer that I have read, and it is an important one. A wrong combination of the best rod and one of the best lines may result in disappointment to the beginner in fly-casting. Tackle dealers advertise all kinds of rods and all kinds of lines, and will give you advice on the subject to the best of their ability, if you ask, but in their brief catalogues there is no hint of the proper equipment of line and rod. The absence of this from books is more remarkable, as almost every subject in connection with angling has been treated of in the numerous angling works.

It is doubtful if the subject would have occurred to me to write about, but for such intelligent readers of *FOREST AND STREAM* as write from Newark, N. Y.; Newark, N. J.; West Pownal, Vt.; Dubuque, Ia.; Denver, Colo., and Bay City, Mich. I feel indebted to these gentlemen for opening a question which has been neglected, and which is vitally important to the fly-caster who has no time nor means to experiment in this line. As an angler pure and simple, a knowledge of the correct weight of line for a certain weight of rod might not have been obtained in years of ordinary fishing. What I know of it has been obtained as manager, referee, or judge, in the contests of experts in the best fly-casting contests ever held, and in training amateurs for those contests, all of which has been recorded in these pages for many years. The lines used by experts, with tricks of splicing to give weight in the middle in order to get out a long line, are familiar to me, but that is not angling, and, while there is no claim to infallibility, or in other words to make a hard and fast rule that the angler should use a certain weight of line for a certain weight rod, there is a limit of which he should be the judge, basing it not on absolute weight, but upon "backbone," or stiffness. For this no exact formula can be laid down.

S. D. C. wants to know the proper line for a 5oz., 9ft. trout rod—also best length of leader, reel and maker of flies, "the very best regardless of expense." To him I would say: For trout fishing get braided waterproof silk line, size G, 30yds.; a 9ft. A leader, and flies of "A" quality. In these articles I will not advertise any make of rod, reel, lines nor tackle. For dealers in these things see advertisers in *FOREST AND STREAM*, they are all reliable men.

J. E. A. asks: "What weight of line should I use on an 10½oz., 10½ft. bass rod, which has a stiff backbone?" He needs an E line, if not as heavy a line as D. I use a line of the latter size on a trout rod about the size and weight of his bass rod. B is the heavy waterproof silk line, and then they grade smaller to H. For the lightest trout rod I would use a G, but others prefer a lighter one, for every man has his notion.

The worst combination is a light line on a stiff rod, better have the line a trifle heavy than a bit too light. Some tournament casters have weighted their lines with white or red lead, beginning about 30ft. from the end. This is the principle: There is a certain weight of stone that your arm will cast furthest, if lighter or heavier it will fall short. You can throw a silver dollar further than you can a quarter, and so it is with a rod, it must have something of weight to cast, and as a rule the lines are too light for easy work with the rod.

Once I was trouting with a friend and we each had 8oz. rods of about the same action, and I could easily reach a rising trout at 60ft. while he used much effort to get there, but failed. We exchanged rods and the case was reversed. "Your rod has a finer action, and casts easily," he said.

"The chances are that your line is too light," I replied. He had a G, and I an F line. He had the popular notion that a line must be of the lightest, and we argued the case while fishing. After getting into camp I proposed to change lines, and to his surprise he found the "finer action" had changed from my rod to his, and the result was that he bought a heavier line.

No hard and fast rule can be laid down that a rod of a certain weight requires a line of a given size. It

depends upon the "action" of the rod, and by this is meant its "backbone," or stiffness. Weight in a rod means little. Balance, in connection with weight, means more; and this leads to another subject.

Balance of Rods.

Suppose an 8oz. rod, without reel, has most of its weight in the butt and balances on the finger a short distance from the reel-plate; and another rod of the same actual weight, on the scales, is top heavy and its center of gravity is nearer the middle. The action of the two will differ greatly, and if the rods are put together, "limbered," and placed in your hands you will say that the top-heavy rod will weigh several ounces more than the other, yet the scales will show your error. That is what the late William Mitchell, the most famous of makers of wooden rods in America, called "the leverage of a rod." I do not remember to have seen this written up, but my memory has a blue mould over it, yet I well remember hearing Mr. Mitchell say to me: "The weight of a rod tells nothing about it but its avoirdupois; it's the overhang, the leverage, that tells on the arm."

Anxious to hear the veteran rod-maker talk, he must have been about eighty then, when we were holding tournaments in Central Park, in the 80s, I said, as secretary of the National Rod and Reel Association: "Mr. Mitchell, we must make our rules for entries in the different classes according to the weight of rods, as shown by the scales, there seems to be no other way of classifying rods."

The great rod-maker took a 6oz. rod and laid it on the scales. Said he: "I can take an ounce out of that butt and the rod will not be well balanced, but with an extra ounce in the reel it will come right again. Some of these so-called light rods are not lighter than others except in the butt, and the balance is restored by a heavy reel."

As men do not agree on any one subject, and it is well that they do not, I cannot indorse all that the master rod-maker said. The very light rod of to-day has a butt piece which is distinct from the old-fashioned first joint, so far as there is no taper to meet the "grip" of the rod. The modern light rod has a spring, under heavy strain, down almost to the hand. There was little spring in the rod of twenty years ago, until the second joint was reached.

If there is a trout rod which will bend so that its tip beats "triple bob majors" on the angler's knuckles as he presents the butt to the fish, I don't know it. Pictures have been made of such a limber-go-shifless kind of a rod, and stories have been told of the quivering tip tapping the knuckles, but if there is such a rod it will not cast a fly to any decent angling distance, say 40ft., and if a rod will not do that I would prefer a hand line and sinker, in boyhood style. Light tackle and delicate tackle is desirable, but there is a limit to its usefulness, too much must not be sacrificed to these qualities. The excessively limber rod is slow to strike, and the trout may have discovered the fraud of steel and feather and ejected it, if possible, before the limber "double-action" rod can strike.

A Double-Action Rod.

In a bundle of old letters marked "rods" there is one which asks "What is meant by a double-action rod?" As this angler did not know the meaning of the term it is fair to presume that there are others. We will consider the question. The original alder or cane pole had a quality of stiffness which responded to the wishes of the angler. When he gave it a jerk over his shoulder the whole outfit followed the impulse and the fish knew that it had received a call. Some genius evolved the thin "ever limber" rod, which is so weak in the second joint that when the angler strikes with a double-action rod the middle obeys his hand, but the tip dips down and actually gives line. Some men get used to having a rod do the contrary thing, but I have no desire to get into that way. Such rods are made and used, but why they are used is a question. Old Nessmuk described one as having "a kick in the middle," and that's about right. Such a rod is useless to me, and it seems that to use it successfully one should give the thing a jerk forward if he wishes to strike. When a cast is made with one of these invertebrate rods the tip wobbles round and round in the circumambient air like a bob-tailed pussy cat after the space where the tail was. From these remarks it might be inferred that my taste has not been educated to the point of enjoying a double-action rod. But if a lover of that slimy rod will show its superiority he may find a convert, but he will work hard if he gets him.

More about Hooks.

As this article is a sort of "Answers to Correspondents" screed, I will say to the man from Clyde, N. Y.: Go to any good tackle dealer and ask to see the turned-down eye Pennell hook. The name should tell its character without asking to have it figured. It is different with A Young Duffer, as he calls himself, who asks why I prefer sproat hooks. This is a short question that would require a very long answer if all details were gone into, but in a short article we must boil down.

The sproat is a flat hook, i. e., has no side bend. Space forbids entering into this question, but I do not care for the side bend of the sneck and other hooks. To me this seems a useless point of weakness, which might twist the hook to the breaking point without any corresponding advantage.

Again, the sproat has such a bend that when placed point down on a piece of soft wood the point will draw in deeply; this is central draft. Consider this: If all men agreed on all things this world would be a horrible place. Thousands of good anglers, many better than the writer, prefer other hooks—or the other hooks would not be made. This was well expressed by an old Ojibwa, who said: "Glad all men not eyes alike, for den dey all want my squaw."

I like the round bend of the Aberdeen Carlisle, but not the same hook when given a side bend and called Carlisle Kirby. For salt-water fishing for blackfish and sea bass the Hemming and Virginia hooks, with their heavy wire and side bend, will answer every purpose, but with a light wire I have yet to learn the use of a side bend, and until I do learn its utility I will continue to use a flat hook for all fresh-water fishing.

The "spring steel Pennell Limerick" with the turn-down eye is a candidate for favor, and those which I have used have given satisfaction, and this season I have ordered more. This turning down of the eye is an excellent feature, whether for gut or gimp; it shifts the draft and makes the hook draw in. This cannot be explained here, but the angler can easily test it for himself by taking an old style Limerick hook and a turn-down eye Limerick, and by attaching lines to them can see how they draw into a board, table-cloth or other material, when he pulls the hook, back up, toward him. That is the test of the correct bend of a hook and the angle at which its point is set. Some angler may know why the points of some hooks are twisted sideways, but I do not. Therefore I prefer a flat sproat hook.

About Creels.

Johnny Gardner, who says he is twelve years old and lives on the Rappahannock River, Va., says, among other things: "Pap bought me a new fish pole and a lot of other things for fishing for our chub, or black bass, as you call them. Among the rest was a basket to put fish in, an' it had straps on it to go over the shoulder, an' I don't know how to work it. The thing looks all right, an' Pap says it is the proper thing to bring fish in. He takes FOREST AND STREAM, but he skims it over for the shooting, while I read it all. Say, how is this thing slung?"

Johnny, I don't know how it is to be slung, because there are different methods of slinging creels, and what you call a "basket" is a creel. There is only one place for a creel, and that is on the left hip of the angler. He reels in his fish, takes it in his left hand and removes the hook with his right, and then drops the fish into the hole of the creel.

This is after he has changed the landing net from his left to his right hand and laid the rod aside.

A wicker creel is neat when it is bought. Fish slime is not neat and is hard to remove. Therefore dry your fish with plant leaves and line your creel with grass or leaves, which will not only keep the fish moist and fresh, but will protect your creel. The best form of sling is a web to go over the left shoulder, while a strap from the back passes under the right arm and crosses the breast to snap into a ring. This throws the whole weight on the left shoulder and leaves the right arm free.

Rubber Baits.

There are a lot of rubber frogs, crickets, dobsons and perhaps other things. I see them in the tackle shops, and that is as far as I care to know them. The shops have many useless things to sell to those who wish to buy them. To G. A. I will say let these things alone. If you want to use frogs and crickets for bait get the real thing. The moment a fish gets one of these things in its mouth it knows whether it is real or a fraud, and if a fraud will eject it if possible. Under no circumstances would a fish ever swallow a rubber bait. A rubber bait is a double fraud—one on the fish and one on the angler. Naturally a fish may be occasionally taken with a rubber bait, but they are things which the angler can afford to leave in the shops.

Disgorgers.

In bait-fishing for pike and other fishes, which are liable to be hooked down in the stomach, a disgorging is a handy thing to have around. It saves disfiguring a fish by cutting into its abdomen to release a hook, and most anglers like to show their catch in good shape. The disgorging slides along the line and hook, and engaging the latter in its curve brings a direct pressure on the point of the hook and afterward protects the point from entering the fish as the hook comes up through the throat and mouth. Bait-fishers will find a disgorging to be a useful tool.

There is another useful tool which goes with me in my fly-book, which is not on the market. It is a small 3in. ivory "marlinspike," as a sailor would call it, and it was made and given to me by the late Ira Wood. I had picked at knots in lines and in leaders with the sharp point of a penknife, to the detriment of lines and leaders, when Ira gave me this delicate, round-pointed bit of ivory, and I never fish without it. It will work into a knot without hurting the most delicate gut, and every time I use it the memory of Ira Wood comes up, and I can hear him say: "Stop picking your leader into rags and use this. There! now the knot is untangled and your leader is as good as ever. No; keep it as a remembrance."

This is the way it has been remembered, and among the useful things which an angler, whether a fly or bait-fisher, may add to his kit is one of Ira Wood's marlinspikes, if some dealer will put them on the market.

American Fisheries Society.

THE twenty-seventh annual meeting of the American Fisheries Society will be held at Omaha, Neb., July 20-22. This meeting will be the first held by the Society beyond Chicago, and it is expected there will be a large attendance, from the further West, of those who have heretofore been unable to attend on account of the remoteness of the place of meeting.

By that time the Trans-Mississippi Exposition will be fully opened and at its best, and its attractions will give an added interest to the meeting of the Society. The exhibits relating to fish, the fisheries and fishculture promise to be full and complete in all details, affording object lessons for study, as to history, methods and progress in all branches.

At the last meeting it was decided to prepare and issue to members and others interested in the objects of the Society an advance programme of the papers to be read at the coming meeting, and it is hoped this programme will be issued not later than the middle of June.

In the last few years a deep and growing interest has been manifested in the value of scientific investigation and study of the manifold questions relating to the fisheries and fishculture, and much valuable knowledge has been gained through such inquiry. Investigators and students have been carrying on this work independent of State or Governmental aid. Several States have es-

tablished field stations and laboratories for systematic investigation of the fresh and salt-water fauna, flora, etc., in charge of skilled and competent men.

It is expected that many of the persons engaged in this work will be in attendance at the meeting, and will read papers relating to the work in which they have been engaged, thus contributing to the interest of the sessions by their presence and participation in the debates on the questions presented.

HERSCHEL WHITAKER, Sec'y.

72 MOFFAT BUILDING, Detroit, Mich.

Fishing Up and Down the Potomac.

High Island.

ABOUT five miles above the Aqueduct Bridge in old Georgetown the Feeder Dam across the Potomac, on the site of what was once part of the Little Falls, sweeps in a graceful curve through a broad valley, and the waters tumble over the heavy rip-rap for its entire length. The bubbles sweep down and die in a broad pool below, which is interspersed with many little islands and weed patches, or grass puds, as they are called in the tide water country. A mile and a half below, the wide pool suddenly narrows to a gorge, and the Little Falls proper drops its waters down to meet the tide with a rush. They have reached the channel of the Lower Potomac, the head of navigation, the end of the spawning run for the anadromous fishes. Here these are sometimes netted, sometimes snagged, and fished for every season with hook and line by those who enjoy catching the spring run.

This last month has probably furnished tons of white perch, taken with hand lines from this point to Georgetown. Some remarkable catches have been made both in number and weight. Fortunately under such conditions these fish do not take the fly, and we are spared a temptation which has seduced better men. They are usually caught in from 10 to 30ft. of water and best with small minnows.

Tide water fish are supposed to need no protection from anglers, since they are wanderers, and would be lost in any event, but a spawning fish is not fair game.

The Feeder or branch, which runs from the river into the canal, is not necessary now, as it was in the days when the canal crossed the Potomac over the Aqueduct Bridge and run to Alexandria, with its locks, its high bridge across Four-Mile Run, with two banks to maintain through a soft country, and its consequent numerous leaks and wastes. Now with only a single level to the terminus at Georgetown, the Feeder is hardly required, but still remains.

Where it leaves the river for the canal it cuts off an island, whose only elevation is at this point, and gives it the name. The place is easily reached by electric car and has visitors every day of the long summer. The Feeder itself furnishes many bass to minnows, and most days of the season has a float or two somewhere on its short course. The Feeder stop lock, intended only to regulate the flow of water, is a gate within a couple of hundred yards of its junction with the canal, and is a favorite spot with some; it is shady and quiet, and less liable to interruption by wandering picnickers than the head of the Feeder, and a good many good fish are picked up here with bait. We have done little in the Feeder with the fly. When the river is muddy so is the Feeder, and when the latter is clear it is a deep, narrow channel, with overhanging trees for most of its length, and there are so many better places in the river that we have wasted few hours with it. There is a swampy, shallow spot at one point in its length nearly midway, where we have raised a few bass, but mostly we do not count it as part of our private preserve.

The long, inclined face of the dam is a first rate place for fly-casting, either into the turbulent water below or the quiet pool above, but it is somewhat too exposed for deadly havoc, and the fish caught here with the fly cost many an hour's casting per pound.

There are many cozy nooks about High Island, and that in midstream crossed by the dam, where a float fisher may have a pleasant afternoon and usually catch some bass when the water is not too muddy. The very best fishing, however, to be found in this neighborhood is about the narrow channels and numerous green puds of the lower pool. These can be reached only by the enthusiastic wader, as no boat is kept here. The difficulty of fishing the water protects the fish, and by far the best baskets here have been secured by those energetic enough to wade far and strong, and fortunate enough to find the water right.

For the wader in northern waters warmer clothing may be necessary than here, though anywhere nothing is safe but wool, and our outfit would probably be open to criticism and perhaps uncomfortable in some localities, but for this place we find the most convenient togs to be a combination suit. Bicycle trousers and golf hose; lawn tennis shoes (the fifty-cent cloth top sort, with corrugated rubber sole, called sneaks); a short, thin canvas shooting coat, all pockets; an outing shirt, and a light canvas yachting cap. That's borrowing from everybody, but each item has its advantages, and all it lacks of being the angler's distinctive costume is that it isn't generally worn.

The shoes are light, hold no water, dry quickly, stick to the rocks till they wear slick, are inexpensive, comfortable and nothing like so noisy on the rocks, where the bass hide, as the hob-nailed shoes usually worn, to say nothing of the weight of the latter in warm weather, or the discomfort of leather drying on the feet. The knee breeches and hose are infinitely more comfortable than long trousers, and get through the water easier, especially if one gets clean overboard, as sometimes happens, even to the careful. The pocket-coat, like good wine, "needs no bush." The cap is light, ventilated, of just the shape to hold random casts, with visor enough for the eyes, and best of all beats anything but a golf cap in the bushes, where a straw or felt hat is a constant source of vexation and delay. A broad brim in the underbrush along the bank of a Southern stream, and some pools must be gone round, is a menace to that contented spirit every fisher is supposed to cultivate, and

an incentive to the use of language popularly credited with a certain result of ruining the chances of a catch. We formerly had our caps made with a narrow band of thin cord about the rim to hold the flies, but found the arrangement bungling and useless; the loop of the leader passed over one of the buttons on the side and the point of the hook set in the flexible rim holds plenty, and a half dozen extra rigged batteries may be easily carried, if there were need for so many.

The stones of the Potomac here are generally a lonesome lot. Mostly gneiss, it is like wandering through a burnt forest. There are no signs of life in these cinders of a primeval furnace. One gets the beauty of mass and form, of rugged contour and moss-grown face, but save the sparkle of mica sand or coarse attempts at crystallization of quartz or feldspar it is one grand monotone.

It is all particularly disappointing to one accustomed to the paleontological treasures of the sedimentary deposits in the central Mississippi Valley, where an hour's walk along the bed of a little run may be equivalent to an excursion a thousand feet deep into the bowels of the earth; where every stone is a tomb, on every pebble is an epitaph; where innumerable fossils show in every shelf of rock; where crinoids are so plenty any careful seeker may discover some beautiful lily of an undescribed species, and the boys play taw with dainty penitencies; where there are hills of solid coral, on whose summits are the tombs of forgotten races. He who seeks sermons in stones finds they speak a various language, but it is richer in the heart of the continent.

The mountains of the East are so old. Born of the fire, they bore no life to the surface, and the remains of that which lived upon their surface after has been swept for a million years to the bottom of the sea. Out of the sands from the summits of the Alleghanies and the Rockies, carried down by the Ohio and Missouri, the coral insects of the great inland Gulf of the Mississippi built the foundation for the pivot on which the center of our population now rests. The geological beauties of these Potomac hills lie in their arrangement of mass. In the less rugged middle West it is the detail which charms.

Over the dam, in spring freshets, there rushes a splendid body of water, and canoes have been literally shot over this by reckless boatmen; it is a foolhardy risk, and the last Maid of the Mist of which there is any record was long ago, and came to grief. Members of the Washington C. C. sometimes make pleasant excursions up here, coming up the river from their club house to Ead's mill, then a portage into the canal and through the Feeder into the level above the dam, where they have big water for their voyages of discovery.

Who uses bait here, as in nearly all parts of the Potomac, must carry it with him. Time was when a dip net would secure all the bait one needed anywhere along the shore, but the once or twice overcrowding of bass seems to have completely swept the river of minnows, and a school of any size now above tide water is far more of a curiosity than a good bass.

HENRY TALBOTT.

Days on the St. Lawrence.*—I.

BY S. H. HAMMOND.

WE are here, my boatman and I, upon the majestic St. Lawrence, opposite the pleasant little town of Cape Vincent. The cool breeze, as it comes whispering through the woodlands that skirt the shore, and sweeping lazily over the river, is balmy with the odors and genial with the freshness of forest and field. The stars have just vanished away into the depths of the sky. In the east fleecy clouds, lighted up by the early sunbeams into a blaze of glory, are drifting across the heavens, while in the west the grayness of the morning twilight still lingers. The birds are filling the air with the melody of their early songs. The swallow, fresh from its night perch, with unwearied wing, glances, in its arrowy flight, along the surface of the river, dipping its pinions in the quiet waters as it flies. Above us, high in the heavens, almost a speck in the azure depths, soars an eagle, "towering in his pride of peace," while away beneath him hovers an osprey, turning his keen eye downward, watching for his finny prey. The sea gull in his ceaseless flight circles around us, scanning with curious gaze our little craft. In the bay, at the upper end of the island over against us, is a brood of young ducks, sporting with unfledged wings in playful gyrations around the staid and anxious mother. Away out in mid-channel floats a loon, lifting up its clarion voice, ringing, clear, metallic, like a bugle echoing over the waters, and rebounding from the rocky islands. The morning is perfect in freshness and beauty; brightness and glory are all around us. Away behind us, moving slowly through the water, is a minnow pendant from my silken line, the rod is in my hand, and if bass, or pickerel, or muscalunge—Hurrah! He has seized the bait! The hook is in his jaw, and away he plunges skiving madly through the waters in his frantic efforts to escape! Steady now! Press the reel gently! Steady now! Steady! Give him head! Let him run! See how he makes the line hiss again, bending the elastic rod like a reed. Steady! His efforts are relaxing! Reel him in! Give him no rest! Gently now! But reel him in! Faster! Faster still! See! a new fury has seized him! He leaps clear from the water, shaking his head fiercely to throw the hook loose from his jaw, and away he skives again! Now toward the middle of the river; now straight toward the bottom; now like an arrow down the stream, now again across, this way and that, up, down, every way. Steady again! Press the reel gently! See! He has exhausted his energies, and rises to the surface, gasping with distended jaws, and ceasing almost to struggle! Reel him in! Faster! Faster still! There! He sees us, and with renewed fright he plunges away! Let him run! It is his last struggle, his last battle for life! Press the reel gently! Harder now! He has ceased his flight! Reel him in again! Steady! Reach forth the landing net! It is under him now! Raise it quickly! There! Hurrah! Landed safely! Hurrah! A 5lb. bass! And the gamest fish that swims! Hurrah! Hurrah!

The sun is rising in the east, a stream of light blazes

through the branches of the island trees, and flashes in a long line of brightness across the water, as if a great conflagration were raging in the low forests beyond. And see how majestically the great orb sweeps in glory up over the tree tops, marching with imperial tread into the heavens, red and fiery as he glows through the mist and smoke and haze that hang, in the early morning, like a shadowy veil above the river. A splendid sight, a beautiful phenomenon is the sunrise. Have you ever witnessed it? Does your memory call up from the dimness of vanished years, from the depths of the long, long past, how in the early morning, when summer was in its prime, when the air was full of freshness, and balmy with cooling dews of the night, when gems were sparkling on the grass, and the leaves on the trees rustled and shook themselves with glee as the soft breeze stirred among them, when—Hurrah! Again hurrah! Hurrah! The hook is in his jaw, and away he plunges for the broad, deep water; a hundred, two hundred feet. Give him play, but press the reel always. There must be no slack, or he is gone; keep the line taut always, feeling him always; restrain him in his flight; reel him in if he pauses; give him no rest. There he goes again for the bottom. Let him dive, but keep your thumb on the reel, and your rod bent. See, he ceases to struggle, holding back, like an obstinate mule. Reel him in! See, he comes to the surface. Reel him in! Faster! Faster still! Handle the landing net. But no! One more struggle for life, and away he plunges again! But no matter! He is ours. Let him run, but press the reel. Harder now! See, he has surrendered. He floats on the surface, rolls over and over, as you reel him in. There! Lift away! Hurrah! Hurrah! Hurrah! A 10lb. pickerel! Hurrah! Put on another minnow and row along.

I was saying something about the glories of the early morning, the splendor of a summer sunrise. I think I was asking you if you remembered having seen the stars stealing away into the vaults above, withdrawing their watch from the sky, or noted the lighting up of the east, when the sun rose from his bed of darkness, flashing his brightness across the heavens, gilding with glory the mountain peaks, and chasing the bright shadows down their rugged sides, and bounding like a courser above the hills, started on his career across the sky. If you have not noted how full of joy and gladness every living thing seemed to be, and how a shout of rejoicing, a hallelujah, an anthem of praise, a loud shout of—Hurrah! No! he's gone! No, again. He's there! Hurrah! Reel him in! But how is this? No resistance! No struggle! A surrendering without an effort? No battle for life? Well, reel him in! Pshaw! A plebeian perch! Top him overboard. Who courted his acquaintance? Or what right had he to thrust himself into the company of his betters? Top him overboard. Send him back to his vulgar associates with the practical admonition he has received, and a message of warning. His insignificance is his protection. Let him be cautious, however, for the future. There be those to whom everything is fish that comes to their net, and once in their hands there would be an end of his career in the bright waters of the St. Lawrence. Top him overboard.

I was speaking of the sunrise. I was endeavoring to persuade you to search among the caverns of your memory, to call up from the twilight of vanished years recollections of the change, from the dark silent inanity of night to the recuperated vitality the brightness and glory of the morning, where nature, starting from her slumbers, donned her robes of beauty and—What is that? Has the hook struck the bottom? Are we fast to a rock, or a sunken log, or a root? Back, boatman! Back, or my line will be parted. But see! Hurrah! I am fast to no rock, no sunken log, no root, no dead thing! Per Jupiter! there is life, activity, strength at the other end of my line! Hurrah! Hurrah! There must be skill, coolness, science in this contest! Press the reel! Harder! Harder still! Measure his strength, but remember that the line by which you hold him is frail. He must not be permitted to exhaust it. An instant of dead pull and he is gone, and an instant of slack and he may throw the hook loose from his jaw. Feel him always, but play the elasticity of the rod against his strength, or he will snap the line like a pack thread. Press the reel harder, but let it whirl. See! there is scarce half a dozen fathoms of line left! Check him in his flight! Let him bend the elastic rod into a semicircle, but let the reel turn! Pull, boatman, pull in the direction of the flying fish, follow swiftly in his wake! Slowly now! There! He has paused in his career. Reel him in! See! He darts now directly toward you! Reel him in! Faster! Faster yet! Here he stops again! Gently now! But reel him in! Keep him busy—give him no time to consider—no time to calculate the means of escape. There he goes again! Let him run, but press the reel. Keep the rod bent, feeling him always. He is becoming exhausted now! His strength is failing, reel him in again! See! He rises to the surface, gasping with distended jaws for breath! Jupiter Tonans! what a fish. Boatman, handle the landing net, be ready to lift him in. But steady! Not yet! Make no motion; the battle is not over. One more struggle and we have him! There, he sees us, and away he plunges! Steady now! Give him a 100, 200ft. of line, but press the reel always. Harder! Harder now! There—his flight is over. He has surrendered to his destiny. Reel him in. Now boatman, the net. Steady! It is under him! Hoist away! Seize him by the gills! Safely landed! Hurrah! A 30lb. muscalunge! Hurrah! Hurrah!

I despair, my friend, of the sunrise. Permit me, however, to say in the earnestness of perfect sincerity, that the sun still rises in the morning as gloriously as it did long ago, when you and I were young; when life with us was in its morning; when our steps as our hearts were light, before time had laid his hand upon our heads, sprinkling them with the frosts of age, or his "effacing finger" had swept our unfurrowed faces. I speak of the fact on no doubtful authority. My senses are my witnesses. I have seen the stars vanish away, and the sun rise in his glory—home now, boatman, to breakfast.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

CHICAGO AND THE WEST.

A New Sort of Fly-Fishing.

CHICAGO, Ill., May 19.—I have had occasion to mention a number of times this season the lovely little stream known as the Prairie River of Wisconsin, and shall take this opportunity to speak of it from a personal acquaintance. It may perhaps be remembered by some of those who make enquiry at this office for good trout fishing in the pine region north of Chicago, that I have many times said I had never found a stream in all Wisconsin where a man could wade comfortably, could cast the fly comfortably and could really catch a good number of trout. I have fished perhaps fifty streams in that State, but have found that I arrived too late to get good fishing on any of the streams which offered practical fly-fishing. I have found many good streams where one could take plenty of trout by bait fishing, or by fly-fishing a part of the time, as the brush and windfalls permitted. I have tried the great Brule River, once a magnificent stream, and still good at times, but that is a boating river and is nowadays notoriously capricious as to trout. Never, until this past week, have I found the stream which may be called absolutely ideal for the lover of that most fascinating sport, wading and casting for trout with the fly—and catching them! I give my word that the Prairie River is all of that, this season, and I hope it will long remain so. As I have earlier stated, the stream is reached via Merrill, Wis., on the Chicago, Milwaukee & St. Paul Railroad, thence by wagon some sixteen miles to points near Dudley post-office, at which point there are good accommodations.

I personally stopped at Delos Cone's farm house, a couple of miles lower down the stream, where we found the chances for large trout better. Here the stream runs within a stone's throw of the house, and the place is all right for a fisherman. We usually took the water a mile or so below Cone's, and fished down so that we had about three miles or so to walk at evening. Mr. Cone always comes out with a rig in the evening when not busy, so that the trip home is not so long. At the time of my fishing there the water was low, a threatened log drive being provisionally postponed on that account. I found the stream perhaps 50 to 100ft. wide, with no tangle of forest to prevent perfect casting. The bottom is not sandy like that of many of the Michigan south peninsula streams, and a nicer water to wade a man never stuck his foot into. The bottom is rock and pebble, and nowhere did we find the water too deep to fish in hip boots. I did not once put on waders, and yet we crossed the river as we liked and only took to the woods at one bend, where we could not quite get through without going over our boots. I submit that all these conditions show a stream simply ideal. When I add that catches of over fifty trout to the rod, all on the fly, were many times made at Dudley's place above us by anglers fishing there, that my companion had taken much more than that in his fishing on several days, that we took ourselves each day something like 20lbs. of trout whose average was over a ½lb., that we had several up to a pound in weight and very many ¾lb., I shall have said all that any trout fisher who knows Wisconsin cares to hear. Such fishing is not much to speak of from the standpoint of Canada, New Brunswick, or Maine, but it is a great deal to say for any trout fishing accessible from Chicago so easily as this. I do not hesitate to say that the basket of trout I brought back with me was the finest I have ever seen come into this city from north of here. Lest I be accused of boasting, I hasten to say that I did not catch all of them, nor half of them, though they were all taken fairly on the fly. On the train with me were Messrs. Harris and Hilliard, whose take I mentioned last week. They freely admitted that they had seen no such trout at the place where they were fishing. All parties who know that river and its habits also admit that no one who fishes there ever takes such trout as we had. Let all this be noted, and presently there shall appear the reason for my heading to this story, wherein I claim to have discovered a new style of fishing with the fly, or rather to have discovered the man who discovered it, which is the same thing so far as FOREST AND STREAM is concerned.

How the Tip Came.

I stated a while ago that a Mr. Edward Taylor had several times come into this office to speak of this Prairie River and to ask me to come up there with him. He always said that he had heard I liked to cast fly for trout, and that he was very fond of that sport himself. He also said that he never cared to fish for little trout, but worked after the big ones, and he told me something of his method of getting them, which I presumed must be something similar to dry fly-fishing. After a time I learned that Mr. Taylor was up on the Prairie, and as I happened to be in Northern Wisconsin, I made a long trip across country, partly to gratify my natural love for a day on a trout stream, and partly to see if there was anything to the news of a new thing which I had gotten track of. The result of the trip was a great satisfaction both in a personal and a newspaper sense. I think Mr. Taylor has invented a sort of fly-fishing which certainly is not wet fly-fishing, certainly is not dry fly-fishing, certainly is not fishing such as I have ever heard of before, and which just as certainly is the most killing way of taking large trout I ever saw or heard of. So confident am I of this that I would very cheerfully back him against any angler, I do not care how skillful he may be in other styles, but who has not mastered this way of fishing for trout with the fly. I have never seen it described in any sporting paper. It has nothing to do with long distance casting with the fly. Mr. Taylor has had a lot of the cracks at that sort of thing with him on the Prairie River, and has beaten them until they were ashamed of themselves. It is not a question of "accuracy and delicacy," which I am now ready to classify as among the popular but exploded fallacies which have long decorated the literature of the fly. It isn't any sort of trick—no baited fly or that sort of thing. I will say that we waded right down on to our big trout, caught them with a line not much longer than the rod, caught them on the lightest sort of trout rods (40z. rods), caught them on a single fly or at most two flies tied for the cast, and so far from trying to do that

* See editorial note.

old-time "thistle-down" act with the fly, deliberately did the opposite. We made all the splash with the fly that we could. We defied every known rule of trout fishing, and we caught the biggest trout taken on that stream! We can do it again. We can beat any man catching big trout who sticks to the old-time, conventional, and I shall add strictly erroneous, though strictly orthodox, way of trout fishing with the fly. Look through all your literature, and read every authority of the experts or the would-be experts, and see if you can find anything about this sort of fly-fishing. If so, it will be news to me.

The Part of Genius.

It is the part of genius to set aside the old ways and to strike out new lines of thought. I don't claim any of this genius, mind. I only say that I fished with the man who had it. Maybe he doesn't know anything but trout fishing—I didn't have time to ask him—but he surely knows that. He has done his own thinking for himself, and not followed in the tracks of others, and I confess a certain admiration for any fellow who is built that way.

I didn't think any man could take me out for two or three days and make me completely abjure all my old religion about fly-fishing for trout, but this man did. I didn't think anyone could prove in fifteen minutes that all the old doctrines are dead wrong, but this man did. Moreover, I had a sneaking suspicion that there wasn't anybody who could take me out on a trout stream and give me cards, spades, trumps, big and little casino, both bowers and the whole deck and skin me easy to a finish catching trout; but he did, and he can do it again. He can do it to any of you, unless you come to his theories, which aren't theories at all, but practical and proved methods. He will take you on the same stream, and let you fish ahead of him, and he will come right along behind you, and at night you may have a few big trout, but he will have a whole lot of big ones. You may have a basket of trout, but he will have two baskets. You may have half a basket, but his basket will be full, and full of big ones. Inasmuch as Mr. Taylor was a stranger to me until I thus met him on the trout stream, I may be discharged of any plea of bias. This is just news, and about the oddest news I ever ran across. To think of abandoning the long-line and light-fly theory of trout fishing. What heresy! But if this be heresy, I am willing to be excommunicated, for never shall there fade from my sight the spectacle of fine fat trout, over a foot long, which we daily laid upon the bank to admire—not the wrinkled, skinny, shriveled little 6 and 8 in. trout which ordinarily fall to the angler of our mid-West streams, but great, shiny, fat, thick-shouldered fellows, that jarred the arm to the shoulder when they hit the fly.

The Heresy Propounded.

But I must tell more explicitly about this, pausing in the mere exultation of it, though I am half minded to leave it all unexplained, as a mystery never to be made known, even to the readers of *FOREST AND STREAM*, until after my death, when sealed packets should give it to the public as a priceless secret. "How to Catch Big Trout"—would not that be a legacy for a poor newspaper man to leave behind him? But as it will very likely be a long time before I get to the legacy stage, I think I will just give this thing away now.

Mr. Taylor and I waded into the river together. "Go on ahead," he said, giving me the place of honor on the stream, with which many days of angling had made him perfectly familiar. I stepped on out, feeling with pleasure the gurgle and wash of the cool water for the first time this season, and I was very happy. I had tried a cow-dung and a coachman, according to suggestion, and I began to lay out a goodish line to the many promising corners I found, along logs and roots, and under banks, and across such rapids and riffles. I passed on down the river around the bend, and it did not take long to make me believe that it was yet too early for much success. I had a few strikes, not very savage, and mostly while the fly was submerged. I took four trout which I kept, and as many that I threw away. Then I got lonesome and waded back up stream to see how things were doing there. I met Mr. Taylor coming down. He had three trout, all good ones. He said he had lost his leader on a big one at the rapid just above. Now I had fished that same place myself carefully, and only taken one small trout there, so I did not relish hearing about a big one I had passed over without raising. As we talked, Mr. Taylor came on around the bend, and I noticed that he had apparently gone stark, staring mad, though I was too polite to say so. He had shortened his line until it was only about 10 ft. long. He had on a leader not over 5 ft. long. He was wading, it was true, with ghostlike care, not making any ripples on the surface and not grating any stones together on the bottom. But what folly, this thing he was doing! Instead of casting with lightness and delicacy, he was slashing away as hard as he could, cutting up the surface of the water into long ridges, the whole leader and part of the line landing on the water and creating the greatest confusion. I saw that he was bold and confident, and that he tapped the whole length of a half sunken log with careless ease, his fly going up to the limit of an inch or so and never with any entanglement. Evidently he could cast a bit; but if so, why take leave of his sane mind and proper senses in this absurd fashion? It was only my great native courtesy which prevented me from telling him he was a pink-edged idiot.

"Come in along that cut bank over there," said I to him as he got into the bend where I was sitting watching him. "You'll get a strike in there. Let your fly sink a little, they aren't coming up yet." This I said in the kindness of my heart, because I felt bad about him.

The object of my advice stepped out in midstream and tapped at the edge of the whole bank, with his short line, his stealthy step, and his absurd slashing, noisy, disturbing casting of the fly. He did not wait for the fly to sink. As though cutting with a whip, he would slap the fly straight down upon the water, instantly removing it. Once, twice, sometimes three times, he would cut the water just at the spot he wanted to reach, then at the next cast he would let the fly remain. Partially dried, it would not sink so quickly as a wet fly, but would stay on the surface a moment, then gradually sink and

drop out and down with the current. Never a bit of line showed below the fly, the angle of the cast being such that the fly, when it straightened out, would have all the line above it and no bight sagging below, as is usually the custom in across-stream casting, where the fly is allowed to float down and across with the current, perhaps gently lifted with the conventionally jiggling touch of the fly-fisher, which latter usually ends by finishing the cast with the fly drawn up against the current until the line is ready for the recovery and the back cast.

A Big One.

Mr. Taylor came on down along the bank to a fringe of alders where I had fished carefully as I knew how. He sidled off across at a little angle, and instead of tapping at the other edge of the alders, he began to go right in among them with the fly, casting boldly into every little 6 in. opening, until his fly landed right up against the roots and holes under the bank. Here, of course, the virtue of the short line was apparent, but I could not approve of the absurd and noisy way in which the fly was slapped down on the water, exactly the opposite of the theory of the dry fly. I was thinking of this when I heard a short exclamation from my companion. "One in there," he said. A second after I saw a flash, and at once the rod went up into a bow as a heavy trout made his first rush after being hooked. Then we both broke into very joyful cries, and both enjoyed the fight, which resulted in the capture of a trout which weighed well on to a pound. I was amazed at the success of this sort of craziness, but thought it might be a fluke, and so resolved to keep quiet a while longer.

We went on down around the next few bends, side by side, I with what I thought was a very pretty style, and he with his same short, chopping, slashing casts along the hiding places. It grew late and warmer and the fish began to feed, and presently I began to realize that I was only one who also fished. From under logs where only a few inches of water ran, along banks where the water was flat and shallow, in open riffles and at the edge of still water—in short, from every sort of place except the sort where one would expect it possible for a trout to lie in hiding, my companion kept on picking out trout, not little trout, but big trout. He did not cast across stream and let his fly swim down at all. He never lifted the tip of the rod and twiddled the fly on the surface or under the water. He kept to the edge for the most part, and even if he fished a sharp riffle always tapped along its far edge as though to knock at the door of the trout and ask him to note his arrival. "Here I am!" was the obvious challenge. "Here I ain't!" is the conventional attitude.

At last I quit fishing again and went up to watch him. He was coming down a narrow, deep rapid which I had fished as well as I knew, and where I had taken two or three trout. He stopped at a long log lying in shallow water just above this spot, and uttered an exclamation, saying that a very heavy trout had come out from under the log. This nettled me, for I could get no response there at all. As he came into the narrow space in the stream, he tapped along the end of a log which ran into it, and hooked a trout. Then there was another big splash, and he had on a grand double right where I had been fishing with only small trout for response! We landed these fish and then sat down for lunch. After a while he explained it all to me.

How it is Done.

"You have on too long a leader," said he. "You shouldn't use over 6 ft. at the outside. One fly will do, or two if you like. I am using No. 8 hook. You should not use a long line, because it can not be handled so closely and accurately. A difference of 2 or 3 in. from just the right place may make the difference between a fish and no fish. Don't try to cast easy. Make all the splash you can. Wake up your trout. That is what I do. I wake them up! I tantalize an old big trout till he can't stand it any longer, and has to run out and grab that fly! You may laugh, but that is just what is the truth.

"Now, you may fool a little, young trout into believing that a fly, any sort of drowning insect, will float down across a stream, and then begin to float up stream; but you can't fool any old, big trout into believing any such thing. He knows better and he won't tackle anything of that sort. A long line scares more fish than it catches, because it bellies down stream right across the water you want to fish.

"An old trout will lie in under a bank or a log as far as he can get. He can't always see you when you wade along, if you go carefully and don't put him on by making ripples in the water or making a noise on the bottom. If you are careful, you can wade up within 10 ft. of the biggest trout on this stream, if you take advantage of the cover. He will be back out of sight under something, not roving around all over the stream, like a little trout.

"Suppose you are a big trout, old and very shrewd. You lie under the bank, where no one would think you had water enough to cover you up. You can't see what is going on out in the water, and you don't want to see it. You are not curious, because you are too old and shy to stick your nose out. You wouldn't swim far for any bug that ever buzzed.

"But though you are an old trout, you must live, and moreover you are a bit irritable and cranky after all. While you are lying there snoozing, you hear a spattering on the water, where some dragon fly, in dipping his tail in the water, trying to get up out of the water, or just cooling his feet for the fun of it—you know how you will always see a trout rise at a dragon fly if one crosses a pool, and how it will always be a large fish that will rise. A bass will jump at a dragon fly. But fish like big feed. Well, you are a big trout, and you see ripples spreading into your house under the log, and you poke out your nose an inch to see what in the world it is all about. If it were a tiny, delicate fly that had fallen and was swimming by, you wouldn't know anything about it, and wouldn't care anyhow. You don't care much for little dead flies. But a big fly, and an impudent, annoying fly—that is different. The first time that big fly strikes the water your nose is out in sight, just far enough so that you can see and not be seen. The second time it alights, buzzing with its tail on the water, you get ready for it. Again it dips into the water, it falls

and begins to drown, floating away with the current. You rush out and grab it at once. And there you are!"

Results.

This then is the theory of this sort of fishing. It is, as are all successful theories, founded upon pure reason. The reason of its success is that all big trout like big feed; all big trout are half caution and half pugnacity, and all big trout like live food rather than dead, like any other animal of prey. Moreover, all big trout know that dead flies do not swim up stream, or have a long string ahead of them.

Now, natural as this theory seems when you come to look at it, it is a narrow explanation for results such as those which I saw it show—saw not once or twice, but continuously. Mr. Taylor came along behind me, and sometimes we fished side by side for quite a way. He would cast over spots where I had cast, and pick up fine big trout right where I had failed to get a sign. If I had not seen him do this I might have suspected some trick about it, but it was bona fide fly work. He was not afraid to go within an inch or so of a bush, or a log, or a cut bank. Sometimes he would pause for quite a while and work away at the same spot, fishing very slowly and carefully over and over again at some nook on which he had set his heart. Always the result would be the same. After a time there would be a rush, a flash, a scream of the reel, and the bent back of the rod.

We came into a nice bend, where the deep water ran about the middle of the channel. A big oak tree stood at the bank, but there was no hole under the roots, and the bank did not look like a good place to fish. We came down into the pool side and side, and each took a fish out of the deep water. Then I edged to the right and Mr. Taylor was inside, nearest the bank, where the water was bright, open and shallow.

"Did you fish that bank?" he asked, and I told him I had and that there was nothing there. He cast in two or three times, and from where I stood I could see his fly plainly tapping along the shallow bank about opposite to me. Then there came a flash, and a big trout appeared from somewhere, I could never tell where. My companion laughed at me as he landed the fish. Then he cast back in and did the same thing over again! This second trout, which weighed over 3½ lb., took the fly not 10 ft. from my legs as I stood in the water. Now if I were altogether a tenderfoot on a trout stream, this sort of thing might seem different, but I had fished trout enough to know something about it; that is to say, something about it according to the old principles.

We went on down around another bend, a bank with deep water alongside, offering a likely looking country. Here I got a fish, but only one. Following along just behind me, Mr. Taylor took four from the same bank, and asked me if I really thought I had fished that bank.

I had now seen enough to satisfy me. I capitulated, and went in to learn what I saw to be the best way of fishing for big trout. Under careful instruction I began to get the hang of it, and caught a share of the fish after that, the size of my take steadily increasing. We took in two very nice baskets of trout that evening, and with my fish I included a few very badly shattered theories and doctrines about trout fishing. I was deeply contented when we laid out our catch. I do not recollect just the number, about three or four dozen, I should say, but they were of very large average, the largest I had ever seen taken on a Wisconsin stream. They were all the speckled brook trout, and we had no rainbows. Mr. Taylor tells me he has taken 2 and even 3 lbs. weight in this stream. We had nothing that day over a pound, but I should say none of our fish, barring one or two that I saved early in the day, would go less than 8½ in.—I mean that length by the foot rule and not by guess. I should think the average length would have been over 9 in. by the rule, and we had some over 11 in. and still larger. Now if the reader will take a second look along the same foot rule, and will cast his eye back to the 6 in. mark, he will get about the average length of the Wisconsin brook trout (6 in. is the legal limit, but many are kept which do not measure that). A simple sum of subtraction, effected by a look along the rule up to the 9, 10 and 12 in. mark, will show him just the difference between the old way of fly-fishing and this new way, between the past and the present, between orthodox and heresy, between dogma and progress, between conventionality and genius.

Mr. Taylor modestly says that he never goes out with any one who can take so many trout as himself—this not in a boast, but as matter of fact. He adds to his system a very keen eye, a light foot in the stream and a thorough knowledge of the habits of his game.

We tried the same reach of the river a second time on the day following, but the weather came off cold and blustery, and we had not so good luck. Mr. Taylor again was high hook of the two, taking a couple of dozen of very nice ones, one very large one. Again on the following morning we went out—for as the trains are only one a day each way, and the stage goes only three times a week, one may fish till noon and yet get out in time—and fished for an hour or so in the forenoon. Again I saw my companion wade right up alongside of log piles and deep bank holes and lead out big trout which one would never suspect could be taken so boldly. He got two that morning that ran to the pound notch, and I was lucky enough with my last fish to break our record in size, taking a very handsome trout which gave me a lively fight and made a fine addition to our take. Mr. Taylor helped me pack up a nice lot of our best trout to bring home with me, and, thanks to his contributions, I had what I have above stated, the best average of trout I have ever personally seen come from Wisconsin into this city with an angler who used the fly.

Details.

Mr. Taylor tells me that very often he casts a dozen or twenty times over the same spot before he can get his fish to come out. He says it "teases" a fish into striking. It is contrary to his belief that a fish will be frightened and not strike if it sees a fly and does not at once take it. He says he has very often waded down on to a big trout in open bright water, whipping the surface into a band of ripples so that the fish could not see him. He has had a fish strike so short and sharp while he was thus whipping as to nearly break his rod. Personally I

know we caught a great many of the biggest trout on line not over 8 or 10 ft. from the tip of the rod. We both used short leaders. Mr. Taylor explained that while the leader is whipped rapidly in the air and not allowed to lie on the water, the trout can not see it, and indeed can not see anything except the confused break where the fly splashes on the water. The last cast is made so that the fly will handle lightly and float away into the current without showing the line or leader. The first splashing wakes up or "teases" the trout, which sees the annoying insect at length drawing away from it after alighting upon the water near at hand. The lightning-like rush of the trout completes the drama. This drama I saw enacted a hundred times, always with interest. So we came to cover our stream carefully, slowly, inch by inch, not hurriedly and with prospective eye. We came to see that the trout do not always lie in the "likely holes." When we found a place where we thought there was a trout covered up, we stayed there until repeated knocking brought him angrily forth. Naturally we lost a number of fine fish. I lost in one bit of deep water a fish which I had played for several minutes and which was so heavy I could not get him up so I could see him. Finally he made a rush and broke away the entire leader. Yet again, in a heavy piece of water, I struck a fish very hard and tried to lift him. He made one surge and broke clear—perhaps the heaviest fish we struck at all. I think either of those fish might have gone 1½ or 2 lbs., judging from the way the other trout fought, but perhaps they would not have seemed so big if we had seen them. Mr. Taylor says that the weather is still too cold for the big ones, that is to say the very big ones. June will be a grand time for that stream, and any warm day from now on, provided one does not hit a log drive, will surely afford as pretty sport as any one could ask.

I offer my story of this new way of fishing with the fly for what it may be worth to the readers of the anglers' paper. I am not sure that the printed description will enable an angler to adopt the style effectively, but it may give a suggestion for later working out, at the pleasure of the fisher who loves the fly. I do not know any better name for this than to call it fishing with the "fluttering fly," or perhaps "live fly-fishing." It may be seen to be neither wet nor dry fly-fishing. In practice it is much more difficult than either of the above, as the wrist is in continual motion all day long, whipping the fly up and down. It is a style naturally adopted, I should think, to hard-bottomed and rapid streams. Perhaps it would not work so well on highly educated trout in bright, shallow streams. All I can say is that on the Prairie River it was a success, and the trout did not run away from it. It is an absurd and crazy way to fish, but it gets the fish, albeit contrary to the common law of angling, cherished these many generations as the immutable rule of correct fishing with the fly.

The Grayling not all Gone.

CHICAGO, Ill., May 21.—It seems that the grayling has not entirely disappeared from the Michigan streams, even in the lower part of the State. The Big Pine River has been known to hold a few of these fish, and this week Deputy Warden C. E. Brewster, of Grand Rapids, and his friend, Deputy Henry, were so lucky as to catch several fine grayling in that stream. Nowadays if one gets a grayling it is pretty certain to be a large one, the theory being that the trout eat the small ones. One of the grayling taken by these gentlemen weighed 2 lbs., and they will have it carefully mounted by a taxidermist.

A Big Rainbow.

Mr. A. C. Merryman, of Marinette, Wis., last week captured a 5 lb. rainbow trout in the Iron River, Michigan Upper Peninsula. I have heard of large rainbow trout in different parts of that region, but this, I believe, is the heaviest I have ever seen mentioned. Mr. Merryman is an enthusiastic trout fisherman, and his lumbering business has taken him into some of the best of the wild streams of the upper pine country. He says he had never seen so large a trout as this.

Herring Biting.

In the early days of Chicago one could catch all the perch and herring he cared for at any of the piers along the lake front. Lately the catch has fallen off, so that a few small perch are about the only reward. This week, for some reason or other, a heavy run of lake herring came in, and along the Sixty-eighth street pier they have been biting fast and furiously, and offering great fun to the favored few who have learned of the fact.

Muscallonge are Rising.

Mr. W. S. Sparrow, of Chicago, is just back from a long fishing trip in Minnesota and Wisconsin. He tried first for trout in Minnesota, but found it too early, the trout not taking the fly on the surface. He fished with indifferent luck on the famous Willow Creek preserve, not far from St. Paul and Minneapolis. Thence he went to the muscallonge country of Wisconsin and put in a number of days on the Manitowish Chain, east of Mercer, on the Chicago & Northwestern road. He fished for the most part in Spider Lake, and he tells me that for the last few days the muscallonge were rising beautifully. He caught a fine lot of them, though none of very great size. He says the next two weeks will be just right for 'lunge fishing in the waters of the Manitowish and Turtle chains.

Minnesota Season.

The Minnesota bass season has opened very well, and good catches are being made in all the bass lakes around the cities of St. Paul and Minneapolis. I learn of some good catches of bass and pike in the lakes near Ortonville, Minn. Messrs. H. C. Jewett and J. H. Jackson, of Aberdeen, S. D., with some other gentlemen of Aberdeen, had splendid fishing there last week. It is stated that they took 257 croppies in a little while one afternoon, besides numbers of bass.

Illinois Bass.

It may be stated with assurance that big-mouth bass fishing will be good in all the Fox Lake chain of Upper Illinois from now on until hot weather. At Long Lake, Fourth Lake, Grass Lake and other waters of that

vicinity, very fine catches of big-mouth bass have been made on spoon and frog within the past two weeks. Early this week Messrs. C. L. Hills and R. E. Miller caught twenty-four bass one day in Fox Lake. It is likely that the fishing will be better now than it will be a few weeks later, after the bass have returned to the deep water. They are now working in the shallow water and the spawning season is as yet not well under way. The spring has been very backward.

Energetic Stocking Work.

Mr. John Hunter, Jr., of the Hunter Arms Co., Fulton, N. Y., writes to convey pleasant news of success in the enterprise of stocking the Oswego River. He says:

"Through the strenuous efforts of the Hunter Gun Club, of Fulton, N. Y., the Oswego River has been stocked with 1,000,000 pike fry. It required a good deal of influence and energy to make this a decided success, as the season for sending fry out by New York State had already passed, but the boys in the club knew which string to pull, and it was decidedly successful. Senator Stranahan was the winning influence in the case."

The Oswego River offers good bass fishing even in these days, and with its pike supply, so much augmented, should certainly soon prove a delectable angling water.

Angling Club Organizing.

I am in receipt of the prospectus of the So-sa-wa-gaming Club, which is just going in at the mouth of the Yellow Dog River, Lake Superior, Mich. The officers of this club, Messrs. J. M. Longyear, President; Gad Smith, Vice-President; E. H. Towar, Treasurer; M. E. Asire, Secretary, will be glad to communicate with any one contemplating membership in a good angling club, and they invite any one who would like to look at the country to come up and make a visit as a guest of the club. The Yellow Dog River flows into Lake Superior twenty-five miles from Marquette, Mich. This is only fifteen miles from the Huron Mountain Club, one of the most successful sporting organizations of the upper peninsula. The new angling club above mentioned has its buildings already erected, and accommodations are ample for all who may come. There is fishing for bass, pike and trout, both in streams and lakes, and there may also at proper season be found a chance at the grand sport of rock angling for large brook trout in Lake Superior. Brook trout up to 5 lbs. have been taken there in the lake. There are many trout streams easily accessible. It is stated that there is not intended to be any profit to any one in running this club, the sale of shares to go to the running of the club. Any of the above officers, addressed at Marquette, Mich., will no doubt be glad to give particulars.

Illinois Fish Matters.

That breezy and hustling individual, Mr. Nat H. Cohen, of the Illinois Fish Commission, called at the FOREST AND STREAM office this week. Mr. Cohen says that from now on all illegal nets along the Illinois River, regardless of ownership, alibis or first offences, will be seized. He thinks that the large fish dealers have not in all cases respected or appreciated the courtesy shown them by the commission, which has sought to live up to the law and yet not injure the commercial industry of taking food fishes. Mr. Cohen also says that henceforth the commission will instruct all market fishermen in purchasing nets to buy them of 2¼ in. mesh, so that when tared they will not shrink to less than the legal limit of 2 in. mesh. At present the great majority of nets on the Illinois River are probably less than 2 in. mesh, and of course under the law would be illegal, as it makes no difference what size the mesh may have been at an earlier stage in its history. The policy of the commission has been not to destroy these nets, on the ground that it would be an injury to the poorer fishermen.

Mr. Cohen says that the Fish Commission last week sent nearly 1,000 lbs. of confiscated fish to the volunteer troops now in camp at Springfield. The question of what to do with confiscated fish and game often causes complications, the latter in some cases of amusing nature. Thus this week a local fish warden was at the commission house of George Randall on South Water street. Mr. Randall had just received a barrel of fish, and he poured these out on the floor in the presence of the deputy warden, whose name is Goetter. Mr. Randall sorted out a number of short fish and told the deputy to take them home with him, as he was not going to offer them for sale. Mr. Goetter took the fish, but soon returned with a warrant and arrested Mr. Randall for handling fish against the law. This seems pretty tough on the dealer, and Mr. Cohen says he wishes to look into the matter a bit. This is really a case of hardship, but what are you going to do about such things under the law? I am sure that if Mr. Randall is fined he will be apt to write a warm letter to the man who sent him these short fish. At the same time one cannot approve of such detective work as the above.

The White Bass.

Mr. Charles A. Shriner, fish and game protector, of Paterson, New Jersey, writes me as below, asking for information about the white bass of our Western waters:

"I take the liberty of suggesting to you to tell us something about the white bass of the great lakes. Although information of this nature would be appreciated by a great many here, my request is partly selfish. I have tried to learn something about the spawning habits of this fish, and although I applied to Dr. Bean, A. N. Cheney, the commissioner at Washington, and a great many other people, I am still in the dark, and do not know whether in spawning the fish takes after the black bass or its salt-water congener, the striped bass. I have brought a great many of these fish from Lake Erie to our Jersey waters in the past year, and am naturally anxious to know somewhat of their habits."

I must plead an equal ignorance in regard to this fish. It is one of which we hear something occasionally here, but it does not cut much figure as a sportsmen's fish in this region. Yet sometimes it offers great sport, as in the heavy schooling runs at Lake Geneva, Wis., or in the wonderfully fast fishing it gives at the mouths of some of the short rivers, which run into Lake Michigan

on the west coast of the south peninsula. When the run of white bass is on in the spring at one of these points, the piers are lined by anglers of all sorts. The fish will bite a bit of rag as readily as anything else, and the catches are sometimes remarkably heavy. Then the run subsides and the fish is hardly heard of again until next year. I cannot say much about its spawning habits, because I have never personally tangled up very much with it in angling matters, but I should think it a spring spawner. It seems to school or band up more than the black bass. It takes minnow and fights well. The white bass is not found in any of our more common angling waters around Chicago. We do not take it in the Indiana lakes or rivers, nor in the lakes of the Fox Lake chain near Chicago; but it is abundant in the Illinois River and often gives good sport to the rod. It runs to 2 lbs. at times, I am told.

If Mr. Shriner will write to Dr. S. R. Bartlett, of the Illinois State Fish Commission and of the U. S. Fish Commission, addressing him at Quincy, Ill., he will get a full description of this fish, so far as the lower waters of this State are concerned, and no doubt Dr. Bartlett can also tell about the habits of the fish in the great lakes. Another gentleman who could, no doubt, give detailed information would be Warden C. E. Brewster, of Grand Rapids, Mich. (I understand that State Warden Osborne is now not at home.) Of all the anglers who go out from Chicago, I think I have never heard any one mention having taken any of these white bass, except that now and then one has told me of fishing at some such point as Grand Haven, Mich., when the fish were moving from the deep water of the lake to the mouths of the rivers.

Confiscation.

At Prairie du Chien, Wis., on May 16, deputies Miller and Wing burned 3,000 ft. of nets and three fishing boats, just to show there was no coldness.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Quebec Waters.

LAKE EDWARD, P. Q., May 12.—*Editor Forest and Stream:* The ice left Lake Edward on the 2d inst., and at this time most of the larger lakes of the Triton and Tourilli clubs are clear. I have been spending a few days on some waters recently leased by Robert Rowley, of the Laurentides Hotel, of this place; and even as early as the 6th inst. I had excellent sport. These waters consist of the Vermillion River and the lakes tributary to it, some thirty in number. I visited five and fished only two of them, taking some twenty trout, averaging 2 lbs., including a double of 2½ and 3¼ lbs. respectively. This is virgin water; not a fly had ever been cast on it before I did so.

I used scarlet-ibis, brown hackle and Montreal, the ibis proving the most killing.

The morning of the 8th I fished the Vermillion River and took many quarter and half-pounders, all of which I returned to the waters uninjured. This is undoubtedly the best territory for fly-fishing in the vicinity of Lake Edward and it is very easy of access.

Leaving the hotel early in the morning, a small steam launch lands the angler at the half-mile portage leading to Lac Boquet in an hour's time. This lake furnishes excellent bait-fishing, but has never been thoroughly tested with the fly. From the foot of the lake a half mile portage leads to Lac Eugene, a beautiful sheet of water, which has never been fished. From Lac Eugene an hour's paddle on the outlet carries one to Lac Algonquin, which is four miles long and said to contain very large trout.

The portage from Lac Algonquin to Lac St. Stanislas is not over 200 yds. long. In the outlet of this lake I did most of my fishing. This outlet is short and rapid, containing two excellent pools, the lower one being at the head of Lac Ecarte, where a substantial log camp has been built for the accommodation of sportsmen. From the camp trails are being opened to all parts of the tract, and most excellent sport is to be had by the angler who is fortunate enough to visit it.

In the fall and winter the shores of these lakes are much frequented by caribou.

I intend visiting some of our Triton Club lakes next week and hope to be as successful as my father was last September. He killed a 7¾ lb. trout with a 4¾ oz. rod on a bucktail fly after an hour's work. The angler visiting this country in the spring should equip himself with large gaudy flies, those on No. 4 hooks with reinforced snells being the best. His outfit should also include a few bass flies on No. 1-10 hooks to short treble-twisted loops. Parmachenee-Belle, ibis, brown and black hackles, professors, yellow-drake, and Montreal are the most killing in the order named.

I have designed two flies that are more successful than the standard patterns, and described as follows for the benefit of your readers:

Lake Batiscau.—Wings, equal parts scarlet and white; legs, black; hackle, wound entire length of body. Body, black mohair; tail, yellow.

Moise.—Wings, equal parts of scarlet and yellow; legs, brown hackle; body, silver tinsel; tail, scarlet.

I will report my luck when I return from the Triton waters.

W. F. J. McCORMICK.

Fishing Near New York.

LONG BEACH, L. I., May 23.—The fishing season at Inner Beach and Wreck Lead is now fairly open, and parties who have gone off to the fishing banks have had fine sport. One party who went to the spot known as the wreck of the Iberia, in front of Long Beach, caught over half a barrel of blackfish (tautog) and ling. They also caught the first sea bass of the season taken with hook and line. Weakfish are plentiful in the bay, and the net fishermen have made a good week's work. No large catches of weakfish by hook and line have been reported. Crabs are quite plentiful, but they will be more plentiful and in better condition later in the season. There are plenty of fluke and flounders in the creeks and channels of the bay.

G.

New England Fishing.

BOSTON, May 23.—Trout and landlocked salmon fishing in Maine is good. Reports mention greater catches, in several directions, than have ever been known. This is especially true of the Rangeley lakes, though the fishing has scarcely begun in Rangeley Lake itself, and Upper Richardson Lake is yet behind. Both these lakes are expected to improve, however. Messrs. Brackett and Clark have had great sport at Mill Brook, Richardson Lake. The only trouble seems to be that the brook is being fished altogether too hard, and more than any waters in the world can stand. There is a strong feeling manifested among the guides to close the brook by means of a petition to the commissioners. One of the Brackett and Clark party is reported to have taken thirty trout on a fly there in one day, early as it was. It seems that the trout began to rise as soon as the smelts were done running. As soon as the party arrived at Mill Brook they raised the Stars and Stripes, and dedicated the spot as Camp Dewey. There they took their lunch each day, making their tea or coffee, and "frizzling their bacon," in true outdoor style. In the party were A. D. Brackett, W. P. Clark and S. N. Brown, all prominent business men, who have visited the same spot many years in succession. Mr. Nelson, of Lynn, has continued to make some good catches at the Upper Dam. At Bemis the fishing has been excellent. At the Birches great fishing is mentioned. In four days' time guests at the Mooselucmaguntic House have taken about 400lbs. of trout and salmon. Mr. A. Lincoln, of Boston, took in one day thirty-six fish weighing 99lbs., the greatest single catch reported so far. Mr. and Mrs. Francis Henwood, of New York, stopping at the Rangeley Lake House, have caught two salmon, one of 9¼lbs. and one of 10lbs. They have also taken several trout of 4lbs. weight. Mr. Henwood is building a cottage on the southerly shore of Rangeley Lake. The Sturtevant party, of Springfield, Mass., is stopping at Whorff's new camps, Haine's Landing. In the party are Mr. and Mrs. W. F. Sturtevant, Mr. and Mrs. C. Bemis, Mr. and Mrs. W. Stewart, Mrs. A. Benton, Miss Masales, Mrs. M. Smith and Mr. Leonard Brown. They are all catching fish. Mr. Sturtevant has taken trout of 5 and 3½lbs., and Mr. Brown a 5lb. salmon. Mr. S. has fished the Rangeleys many years in succession. Mr. and Mrs. Harry Dutton, of Boston, are at their camp at Pleasant Island, with Mr. and Mrs. H. E. Russell, of Cambridge, as guests. They will visit Mr. Dutton's camps at Richardson Pond. Mr. Train, of the Tuttle party, at Lake Point Cottage, has taken a salmon of 8¼lbs., and Mr. Hutchins, of the same party, has caught one of 7 and one of 4lbs.

Later: At the Upper Dam more good fishing is reported. Mr. W. D. Nelson, of Lynn, took five trout on Saturday, the largest weighing 3½lbs. There were two in the string of about the same weight. Mrs. Lester Poor, of Andover, took six trout in three and a hours, on the 15th inst., the lot weighing 19lbs. The largest weighed 7lbs. On Monday Mr. Charles Thompson caught eight trout, of the united weight of 15lbs. A few days before the same gentleman made a record of four trout, the largest weighing 6lbs. The same day Mr. G. E. Doyle caught a trout of 4½lbs. On Tuesday Mr. Freeland How, who has fished at the Upper Dam every season for many years, caught seven trout of a total weight of 17½lbs., the largest 3½lbs. In the pool below the Dam a number of salmon have been taken. This is all the more remarkable when it is remembered that only a few have ever been taken there before, or at least since the Rangeleys have been stocked with landlocked salmon, though a good many have been taken in the lakes above, especially in Rangeley Lake. The first were taken on Monday by Mr. G. E. Doyle. He caught three weighing 4¾, 4½ and 3½lbs. respectively. The same day he made a catch of fifteen trout, weighing in all 17½lbs. On Wednesday W. P. Clark caught a salmon of 5lbs., and another of 2½lbs. The theory is that the salmon are working down the lakes.

At the Middle Dam fishing is reported to be the best ever known. The same is reported from Lower Richardson Lake, the Narrows and B. Pond. Some of the catches from Lower Richardson, the past week, are as follows: F. C. Hinds, of Boston, May 13, eight trout, the largest 6, 3 and 2½lbs.; May 14, five trout, total weight 15½lbs.; May 16, a 5lb. trout and several smaller ones; May 17, twelve trout on the fly, averaging about 1lb. weight. May 14 Mr. T. J. McDonald and Dr. Bates, of Lowell, caught twenty-two trout, the largest weighing 6½lbs. and the smallest 2lbs. May 15 they took eight trout, the largest 5lbs. May 16 Mr. C. P. Stevens caught in the Narrows a trout weighing 10lbs., and nine that weighed in all 36lbs. Certainly Mr. Stevens is high line at the Rangeleys thus far. At B. Pond, Harry Dutton and wife, and Harry Russell and wife, took on the fly, May 17, ten trout, the number weighing 20lbs. in all. The same day they took sixteen trout of about 1lb. average weight. The next day they caught twenty trout of 1½lbs. average weight. Fly-fishing seems to have begun unusually early.

The latest reports from Kineo, Moosehead Lake, mention better fishing. One of the best catches so far is that of Mr. G. L. Burnside, of New York, who alone has landed fifty-seven trout of an aggregate weight of 97lbs. Mr. Robert McLaughlin, of Bangor, is also very successful, having averaged about twelve trout a day, the most of them on the fly. On Wednesday Mr. A. F. C. Hill, of Boston, brought in a fine string of lakere. Sunday was the best day of the season for the fishermen, over 80lbs. of trout having been taken by the guests of the Kineo House. Mr. Clement Moore, of New York, made the best catch of the day, his score being fourteen trout, the string weighing 31½lbs.; all in a few hours' fishing. This is Mr. Moore's fifteenth season at Kineo. C. M. Harriman, of Boston, is at Moosehead for his seventeenth season, and is keeping up his record of good catches. Mr. and Mrs. F. S. Snyder, Mr. and Mrs. J. S. Snyder and Mr. and Mrs. N. J. Mead, of Everett, Mass., and Mr. and Mrs. H. M. Priest, of Magnolia, Mass., have just returned from their camp at Williams Stream, a part of the Moosehead waters. They have been in camp ten days and in that time have landed over 200lbs. of trout. Mr. J. H. Willett, Mr. and Mrs. A. W. Chester, of Boston, and Mr. M. A. Pingree, of Haver-

hill, have been making good catches at Moosehead the past week. There have been brought to Kineo during the week over 300lbs. of trout, most of which have been taken with the fly.

Newfound Lake, N. H., continues to turn out some excellent fishing reports. The largest fish so far reported has been a lake trout of 16lbs., caught by E. W. Morse, of Brookline, Mass. Mr. F. W. Calley, of Bristol, N. H., is well up to Mr. Morse with a lake trout of 12lbs. and a salmon of 3½lbs. Dr. Q. A. Ballou, of Bristol, has caught two trout of 6 and 9lbs. respectively. A. F. Cate, of Bristol, has landed three trout weighing 11¾, 10¾ and 5¼lbs. John and Freeman Berry, of the same place, report a total catch of 21lbs. Other Bristol people who have been successful during the week have been C. W. Tukey, with a 4lb. salmon; A. H. Wellington, a 5lb. trout; George E. Fowler, a 2½lb. salmon; Charles E. Rounds, a 6½lb. salmon; Capt. Saunders, a 6¾lb. trout. Mr. and Mrs. H. R. Philbrick, Mrs. Mary L. Swallow and Mrs. W. L. Davis, of Dorchester, Mass., have returned from a successful fishing trip to Newfound Lake. Mrs. Swallow took a salmon of 11lbs. weight, which it took thirty-five minutes to land. Mrs. Davis caught a 12lb. trout and Mr. Philbrick a 9lb. salmon. From Grove Hill come excellent reports of catches. Dr. A. R. Brown, of Boston, has brought home a 5lb. trout, and C. C. Jones, of Concord, a 7lb. trout.

Great success is being reported from Camp Diamond, Diamond Pond, N. H. Among the successful fishermen for the past week may be noted State Fish Commissioners Shurtleff, Hughes and Wentworth. Another party has included C. C. Hatch, Henry C. Hatch, Dr. M. F. Young and J. M. Cooper; all having had good success. Another fishing company has included M. R. Buxton, C. A. Roby, F. O. Ray, E. B. Milliken and F. W. Maynard, of Nashua, and F. Chase, of Hudson. W. P. Buckley and Merrill Shurtleff, of Lancaster, have had most excellent success with the trout.

Mr. Rodney P. Woodman, one of Boston's most successful anglers, has again returned with a beautiful catch of landlocked salmon. He showed in his window, No. 153 Federal street, the other day, six handsome salmon weighing from 2½ to 4lbs. The string came from Sebec Lake, in Maine. Reports say that the fishing there has been better than ever before, and that the catches cannot be beaten in any other waters. On Tuesday Eugene Parsons took twelve salmon, weighing 27lbs., and five trout of about 1lb. each. The same day H. L. Getchel caught six trout of about 8lbs., and two salmon of 5lbs. weight. Edward Runkee was also successful, taking three good salmon and two trout.

Great fishing is reported at Naticus Lake, Me., with a number of Bangor parties enjoying it. The lake is easily reached in half a day from Bangor. A party of New York anglers are reported to be looking the location over with a view to building a club house there, so greatly pleased are they with the fishing. Lake George, Showhegan, Me., is becoming noted as a fishing resort. Though stocked but recently, a Mr. Brown has succeeded in taking this spring a landlocked salmon there of 6½lbs.

Mr. and Mrs. L. O. Crane, of Boston, are at Round Mountain Lake, Me. They are having fair success, though it is still early for fly-fishing. At each outing they have taken trout: the first nineteen, second twelve, third six, fourth fourteen, fifth six. All these fish were taken with the fly, as they fish in that manner only.

Visitors to the Boston sportsmen's show will remember the many courtesies of S. J. Byrne. With his friend, Mr. S. S. Hibbard, he has been making successful catches of brook trout in the Moosehead region. Their total catch has amounted to 75lbs., and they have shown a very handsome string in the window of the John P. Lovell Arms Co. The range was from 1 to 3lbs. each. The trout were all caught at the Northeast Carry, within five minutes' paddling of the Winnegarnock House.

Mr. George H. Heywood, of Gardner, Mass., died very suddenly Tuesday night at the Mooselucmaguntic House. With Mrs. Heywood he was enjoying his annual spring fishing, they having visited that resort for a number of years. He had fished all day, with good success; had eaten heartily and retired, apparently as well as usual. Two physicians were at his bedside as soon as alarmed by Mrs. Heywood, but life was nearly extinct. He had for a long time known that heart trouble was liable to carry him away at any moment. He was but thirty-eight years of age; a devoted angler, whom it was a pleasure to meet.

SPECIAL.

Trouting in the Empire State.

ALL central New York is now radiant in the glow of apple blossoms, a sight always enchanting to the fly-fisherman, for then trout are at their best, and on the alert for any fresh-born bug or fly which may be so unfortunate as to drop or alight near the shades where they are hiding. A lad at the head of one of our fly-dressing departments, a veritable "Fishing Jimmy," and a sleek one with a fly rod, is just in front the foothills of the Adirondack Mountains with a bonny lot of trout. None so very large, but all above 6in. in length. A few in the lot would scale 8 to 12oz. each—a fine and royal catch.

As I was dreaming very early this morning of old-time sports, the rhyme turned to

THE COON AND THE FROG.

Out on a log in a dark lagoon
Sat a cute little bit of a ring-tailed coon.
A green little frog came swimming along,
Charmed by the notes of the coon's sweet song.
When out on the log the frog took a halt,
The coon took him in without pepper or salt.
"Then what for do you kick?" said the coon to the frog,
"When so kindly I took you in from the log?
Had you lived till the day when your saddles were prime,
Some nabob would have feasted on you and fine wine.
It is better, dear froggie, you quietly rest
With me and those birdies up there in their nest.
For soon they'll be planting your graveyard around
With flowers as fine as e'er sprung from the ground."

JOHN BRAINERD MAC HARG, SR.

ROME, N. Y.

American Anglers in Canada.

QUEBEC, May 21.—The recent long spell of cold May weather, that seemed as if it properly belonged to the early days of April, has given way to a warm spring-like spell that has brought out of their winter cases and other hibernating places the first insect life of the season upon the surface of our inland waters. The result is that trout are rising freely in all parts of the country; Americans are flocking into Canada, and the recently opened buds of the birch and maple are rapidly spreading into full leaf. Less than a fortnight ago Gen. Henry and party visited their club lakes at St. Bernard, and though fish were plentiful and took bait readily, scarcely any of them rose to the fly. This week all this has been changed. Mr. Porter, son of Dr. Porter, of Bridgeport, Conn., has spent the last ten days on the waters of the newly organized Bostonnais Fish and Game Club, situated between Kiskisink, Lake Edward and the St. Maurice, where he has enjoyed splendid sport, the fish all the time rising very freely. The lakes of this club are drained into Rat River, a feeder of Lake Edward, and may be reached either from the latter place or from Kiskisink. Already Messrs. C. G. Gregory, T. D. Wilken, A. T. Brown and L. C. Smith, of Syracuse, have left for the Triton tract, where they will be followed to-day by Messrs. A. N. Cheney, State Fishcultivist, of New York, and a party of friends, including Mr. Goddard, Mr. Walter Witherbee and Mr. Hewitt. Messrs. N. Benham, Burns, J. P. Warner, C. P. Bradley, Wm. D. Bishop, Samuel Dodd, John W. Coe, W. B. Hale, A. Chamberlin, Geo. A. Fay and Frank S. Fay have left for the Metabetchouan Fish and Game Club, and to-night Dr. Geo. L. Porter, W. E. Lincoln and Edward S. Hotchkiss, of Bridgeport, Conn., leave for Kiskisink.

Lake Edward continues to yield the large fontinalis for which it is so noted, and a bait fisherman returned to town from fishing there last Monday, having as part of his catch a 5-pounder and a 3-pounder landed at the same time. Fly-fishing is good on Mr. Rowley's preserve on the Vermillion River, west of Lake Edward. From Mr. John B. MacHarg, Jr., of Rome, N. Y., the dealer in flies and tackle, I have received two specimens of new flies at the instance of their designer, Mr. W. F. J. McCormick, of Miami, Florida. One of these is called the "Moise," the other the "Lake Batisca," and both promise to be killers. The localities whose names they bear are noted for the large trout that they produce. The "Moise" has a silver body, a brown hackle, red tail and yellow and red wings. The "Lake Batisca" has black palmer hackle and body, yellow tail and wings of red and white, sometimes like those of the Parmachenee Belle. Mr. McCormick is now fishing on the Triton tract and his father, Mr. R. R. McCormick, vice-president of the Bank of Bay Biscayne, Florida, is for the present at the Laurentides House, Lake Edward, which he will make his headquarters until the 1st of November next, making, in the meantime, various excursions after the finny tribes to Lake St. John and the far north as well as to the Triton and other club limits.

As an instance of the immense resources for anglers of the Lake St. John country, it is interesting to note that some sixteen to twenty new lakes have recently been discovered on the Laurentides Club's limits.

Ouaniche are rising very freely to the fly in large patterns just now, but not in the Discharge. I look for the fishing there to open about the 8th of June this year, which is about a week earlier than usual. The mouths of the Ouitchouan and Metabetchouan rivers have given good yields. An angler from Chicoutimi last week took forty-five at one catch. A specimen weighing 8lbs. and measuring 30in. in length was shown at Chambord the other day.

E. T. D. CHAMBERS.

Scores and Records.

Editor Forest and Stream:

The hopelessness that comes to the would-be record hoister is pitiful in the extreme, when a new score is made by some fortunate individual. Yet there is something sublime in the way the horde girds up each his loins and strikes away at the numerical and pound-weight top-notches in the endeavor to make little his own puny stature beside the vast heaps of flesh taken from land and sea.

These photographs of men with records—what spectacles! It shows such a curious state of mind. The man photographed, the captor of the fish, stands there with a beautiful desire of self abasement. "See!" he says, "these fish, more cubic inches than I, more pounds weight, more brains than I, fighters from way back, more radiant, more beautiful than I—yet I, who am so small beside them, so apparently insignificant—behold, I say, what a man am I!"

Sometimes certain strictures are laid on men who kill game, or fish, beyond limits hitherto observed. But why is this? If people wish to make themselves mere irritating bacilli in a background of feathers, fur or fish scales, let them do so. Their reward shall be great in proportion to their deeds.

Let no man fail to put an exclamation point after fish or game records! It is a duty owed to mankind. I remember that a man killed eleven cow elk one day. He told about it in this paper. He had such an exclamation point put after his record as he and many others will never forget.

On a time I too have striven for a record, have tried to see if I could seem small beside my game. My best impression of this event is that on a Christmas, when I was still in knickerbockers, the "boys" at Northwood had a "shoot," and everybody wanted to get game in unlimited quantities. I was after unlimited game, too.

I tramped all day. It was deep snow time, and rabbits, partridges and red squirrels were plentiful. At nearly noon I saw a red squirrel away up in a spruce tree. I shot with my .32cal. rim-fire rifle, and the squirrel came down, shot through the hips. I ran to pick the cripple up, but it ran too, ran two rods and climbed 3ft. up a birch tree into a hole and out of my reach. It was the only thing I saw that day to shoot at. But I have a record. It was written on the snow that day, and in the tree is the parchment with an official record of the

CINCINNATUS PRIDE.
Copyright, 1898, by Edward A. Burdett.

fact that I made it, written on it and properly attested to. I had the record at the count up that night, too, and got a properly stamped leather medal. I am rather proud of it now—only I think of that other record, and it isn't so pleasing then. So ended my try for counts. I have killed game since, and had killed game previous to that record hunt. But I hope that in sports I got something besides a mere pound or so of flesh; I mean to say that I hope I made a record on every trip I ever went on to, either stream or wood patch; that some feature of nature, hitherto unobserved, was seen and remembered. Every boy should have a gun and every man a pair of eyes.

It isn't so much that a record maker really wants to kill the victims as that he wants to be seen to have killed them. He wants to stand in the arena with sleeves rolled up, with a dripping sword in his hands, showing his wiry and exceedingly tough figure while Nero applauds. He cannot see that there may be a delicate, finely grained kind of record, which is far higher in every sense save coarseness, and far more valuable. They have not been properly educated. But they are learning or dying out.

RAYMOND S. SPEARS.

NEW YORK CITY.

Hawking for Salmon.

A LEGAL STUDENT writes me anent my notes upon the wholesale slaughter and sale of undersized fish, which is steadily destroying the fisheries around our coast. Says the student, we have in such matters something to learn from Queen Anne; she regulated the length of every fish—from eye to tail—allowed to be landed on our shores and exposed for sale, and the penalty for infringing this law was thus set forth: "The offender to be sent to the House of Correction, and there to be kept at hard labor and be severely whipped for six days, or not longer than fourteen days." Those were the "good old times," and it appears that we shall have to resort to similar drastic methods if the English harvest of the sea is to be saved from extinction. By the way, this same old statute of Queen Anne's made the close time for salmon from Aug. 1 to Nov. 12; and there is a special reference therein to the use of hawks for the taking of salmon being also prohibited during the close time. In the course of my reading I have never come across any reference to this method of catching salmon or trout with hawks; but it is fair to assume that Queen Anne would not have prohibited a practice which did not prevail.—*Illustrated Sporting and Dramatic News.*

Chicago Fly-Casting Club.

CHICAGO, Ill., May 21.—*Editor Forest and Stream:* The second contest of our club was held to-day, with results appended. On account of high wind only the bait contest could be cast. The scores were:

I. H. Bellows	96 3-5	J. E. Strong	86 2-5
B. W. Goodsell	92 3-5	J. W. Rogers, Sr.	84 2-5
E. D. Letterman	87 1-5	G. W. Salter	72 3-5
C. A. Lippincott	92 4-5	E. H. Strong	95 2-5
C. G. Ludlow	83 2-5	C. F. Brown	84
R. B. Miller	95 4-5	M. C. Heston	81 3-5
G. A. Murrell	81	A. C. Smith	92
H. A. Newkirk	96 4-5	H. G. Hoxall	95 1-5
F. N. Peet	94

Sept. 8.—Manitoba Field Trials Club trials. William C. Lee, Sec'y, Winnipeg, Man.

Cincinnatus Pride.

THIS week we publish a portrait of the famous black, white and tan English setter Cincinnatus Pride, the greatest combined bench show and field trial winner in America. His bench show winnings make a long list, made in the best of competition. In practical work he is a most finished performer, whether he is competing against dogs specially fitted for field trial work or whether he is affording sport afield by working to the gun. He is a living illustration of the fact that the best field trial dog is the best field dog. He shows a thorough understanding of all the details of field work,

and a masterly execution both in seeking for game and pointing it after it is found. He won first in the all-age stake of United States Field Trials Club's fall trials, at Newton, N. C., in 1897, defeating many famous dogs in that competition, and in the same club's winter trials at West Point, Miss., in February, 1898, he repeated his victory. In the Continental Field Trial Club's trials, at the same place the following week, he again won first in the all-age stake.

His A. K. C. S. B. number is 34,364. He was whelped Aug. 25, 1893, so that he is still in the prime of dog life. His sire and dam were famous bench show winners, the former being Cincinnatus (12,214, Vol. VI.), the latter Albert's Nellie (No. 26,237). The portrait will be recognized at a glance as coming from the hand of the eminent artist, Mr. Edm. H. Osthaus.

A Discriminating Dog.

CENTRAL CITY, W. Va.—Mr. Martin Simmons, of Huntington, W. Va., was the owner of a black and tan dog, of the bench-legged type, whose peculiarity was even more marked than is that of my dog Billy, mentioned in the FOREST AND STREAM some time ago. As I said, my dog takes no notice of musical sounds, except that of the violin, which seems to distress him. Mr. Simmons' dog was indifferent to all musical sounds, except when the tune to which "Nearer, my God, to Thee" is usually sung was played on the organ. If any other piece of music was being played and there was a sudden shift to this particular tune he would go to his mistress, leap upon her lap or upon a chair near her and join the singing as best a dog can. His voice would rise and fall in correspondence with the tones of the instrument.

N. D. ELTING.

Manitoba Field Trials.

MR. WILLIAM C. LEE, secretary of the Manitoba Field Trials Club, reports a promising outlook for the trials, which will be held in September, beginning on the 8th. It was thought that the new game law might interfere with the projected event, but the apprehension was groundless. The club has been successful in making suitable arrangements with the customs authorities for the entry into Canada of competing dogs.

Bamboo Spars.

BAMBOO for spars has never been obtainable in this country. At one time, nearly twenty years ago, we searched New York over without success in the effort to obtain bamboo of the size and quality suitable for canoe masts. Very little larger than the common fishing pole was to be had, and that of most inferior quality. One result of this has been that the art of making hollow spars has reached a high state of perfection in America, and we doubt whether bamboo can compete in weight and strength with the Butler spiral veneer or Young's hollow spars. It is still used in England, however; the Field discussing it as follows:

The use of bamboo, both for mast and spars, is now so general that it is rather unusual to see wooden spars, but whether such universal use of bamboo is wise or even

necessary for lightness is a question of much interest and can be best answered during the next few weeks by the experiences of the racing on Hendon Lake. Such racing, however, will scarcely be a full test, because it is in jumping across head seas in a good weight of wind that the severe strains are put on the mast, and this cannot be obtained at Hendon. We have lately seen Bubble and Dragon on the placid waters of Teddington Reach with their bamboo masts buckling to very near the margin of breaking, and a few jumps, such as can be got and must be sailed through on the Solent, would probably have done the trick. The absence of shrouds or backstays and stay on the Bubble has, at the utmost, saved but 1/2 lb. of rigging, and therefore is absurd; but on the whole rig there may be a considerable saving of weight in the using of bamboo instead of solid spruce. None the less, the exact amount is as yet not ascertained, but we intend to get the figures for comparison. Especially can this be done in the cruising class, as the rigs of Bubble and Vanessa and Nautilus are, within an inch or two, all round of same size in length and nearly same in substance, the two former being all of bamboo and Nautilus all of spruce, and the weight of a pair of backstays and stay can be added to Bubble's total.

At Burnham last year there were frequent breakages of gear reported, and canoes were thrown out of the race for the time. Such things ought not to be, and, instead of receiving commiseration, the owners should be slated for careless fitting; indeed, in some cases it is not a result of wear and tear, or of unseen flaws in metal work or spars, but of original defect and faulty fitting. The new cruising canoe Vanessa, while saving weight in bamboo spars, is fitted with wire rope of such size that if she used one stand out of each of her present shrouds as shrouds, it would be enough, and the remainder might be presented as shrouds to Bubble for a blowy day. The question of rigging is always an interesting one for the canoe man who intends to do much cruising, especially the material of which his spars should be made. The acme of lightness of rig is quite as essential for the convenience of the man who travels in his canoe as it is necessary to the success of the racing man; but the margin of probable immunity from breakage must be sooner drawn for cruising work than for racing, in that the cruising man's accident to spars will on a voyage probably come in much more difficult and dangerous places than the accidents in racing, and will most likely happen when he is alone with no aid near. For instance, in coast or large lake cruising, the canoe man may easily find himself embayed on a rocky lee shore in a nasty sea and strong wind. It is too late then, on seeing the bamboo mast cracking open, to vow that it would have been better to have carried the extra pound or so of a reliable spruce mast, for in this case, if the mast goes by the board, the paddle will probably be found useless, and the rocks will settle the carcass of the canoe, if no more.

The bulk of bamboo spars, compared to spruce, is also a question which, considering its windage, must detract somewhat from the gain in weight; and then also, be it remembered, each end of the bamboo mast must be suitably plugged with a solid wooden head and heel piece, to which rigging can be affixed, and to take the stepping and pinch of the deck. One further point is that, unless the weight advantage is very great, the unsightly, un-yachtlike look of bamboo spars is antagonistic to all sailorlike pride of ship. If prizes were given in the clubs for the best rigging and fitting, and for the neatest and most useful novelties of the season, canoeing would be better served than by giving of pots for mere racing.

Toronto C. C.

THE Toronto C. C. has of late years awakened to its old-time activity, and this year it is preparing for a very lively season. The war canoe racing, which was introduced in 1889 by the T. C. C. in the famous old Unk-ta-hee, will be a prominent feature. The club has arranged the following fixtures:

June 4—1, T. C. C. tandem relay race; 2, fours (scratch race); 3, launching of war canoe and war canoe race.

June 18—1, novice single-blade; 2, T. C. C. relay fours race; 3, tilting tournament.

June 25—Cruise to Humber.

July 2—Club cruise.

July 9—Annual regatta—1, single-blade junior; 2, single-blade (open); 3, handicap tandem; 4, fours (open); 5, tandem, lady and gentlemen; 6, single-blade senior; 7, handicap fours; 8, tandem (open); 9, lady passenger race; 10, war canoe race; 11, water polo match; 12, tilting tournament.

July 23—1, double-blade junior; 2, handicap sailing and other events to be arranged later.

Sept. 3—Club championship races—1, double-blade race for international trophy and gold medal; 2, single-blade; 3, tandem; 4, fours. For all these events gold medals will be presented.

New York C. C.

THE spring regatta of the New York C. C. will be held on June 4, off the club house, Bensonhurst, starting at 2:30 P. M. The programme includes a sailing race, single and tandem paddling, upset, club four, open combined, tournament and hurry-scurry race. The Regatta Committee includes Messrs. Barron Fredericks, F. G. Palmer and J. C. Mowbray.

Yachting.

Miramichi Y. C.

THE twelfth annual meeting of the Miramichi Y. C. was held at Newcastle, N. B., May 14. The following officers were chosen: Com., J. C. Miller; Vice-Com., J. L. Stewart; Rear-Com., F. L. Pedolin, M.D.; Secy-Treas., E. Lee Street; Meas., Geo. Watt; Trustees: Hon. L. J. Tweedie, R. H. Gremley, P. B. Wheeler.

The following fixtures were agreed upon:

Tuesday, May 24, club cruise. Thursday, June 16, Newcastle, Gov. Fraser cup. Friday, July 1, club cruise. Thursday, July 14, Chatham, Thos. D. Adams cup. Thursday, Aug. 18, Oak Point, Steward pennant. Thursday, Sept. 29, Newcastle, Gould cup. Thursday, Oct. 13, Chatham, Watt cup.

Geneth.

WITHIN the past year or so we have published a number of designs of small cutters, more or less of the knockabout type, and of about 21ft. l.w.l. The design here given is of English origin, but is sufficiently near to the American craft to afford an interesting comparison. Geneth, as she is named, was designed by an amateur, Charles Livingston, Esq., of Liverpool, for Russell Allen, Esq., of Birkenhead, and built at the latter place by Samuel Bond, the well-known builder of small yachts and canoe yawls. She was designed solely as a cruising boat and for rough waters, the Mersey and the Irish Sea, these conditions calling for a greater sacrifice of speed to other qualities than is demanded in the American knockabouts. The lines require no comment, as they show a very fair and well moulded form, with a notable absence of freak features. The yacht has proved very successful, showing good speed and excellent qualities as a sea-boat. The small diagram shows her section compared with that of the Stearns 21-footer Verona, and Spray, lately illustrated in our columns. Her dimensions are:

Length, over all.....	30ft.
Length, L.W.L.....	21ft. 9½in.
Overhang, bow.....	3ft. 1½in.
Overhang, stern.....	6ft. 1 in.
Beam, extreme.....	7ft. 4 in.
Beam, L.W.L.....	6ft. 10½in.
Draft.....	4ft. 3 in.
Freeboard, least.....	1ft. 9½in.
Sheer, bow.....	1ft. 8 in.
Sheer, stern.....	5½in.
Displacement, salt water.....	3.73 long tons.
Displacement, per inch immersion.....	52lbs.
Coefficient of displacement.....	0.52
Lead keel, calculated weight.....	1.87 long tons.

Midship section, area.....	11.20sq.ft.
Midship section, coefficient.....	0.42
L.W.L. plane, area.....	99.12sq.ft.
L.W.L. plane, coefficient.....	0.67
Lateral plane, hull, area.....	61.65sq.ft.
Lateral plane, rudder, area.....	8.75sq.ft.
Lateral plane, total.....	70.40sq.ft.
Lateral plane, coefficient.....	0.67

Station O to center of L.W.L.....	10.89ft.
Station O to midship section.....	11.62ft.
coefficient.....	0.53
Station O to C. B.....	11.43
coefficient.....	0.52
Station O to C. L. R., with rudder.....	12.18ft.
Station O to C. L. R., without rudder.....	11.98ft.
coefficient.....	0.56

Mast, from Station O.....	6ft. 2½in.
Mast, diameter in partners.....	4¾in.

Geneth is sloop rigged, pole mast with single jib. During the past winter Mr. Livingston has had built for himself at Bond's yard a cruising cutter of 33ft. l.w.l., of similar design to Geneth.

The Quincy Y. C. Defender.

IN the small boat shop at Lawley's the Quincy cup defender Splasher is to be seen. Splasher is an odd craft, and is bound to make a sensation. She is what most people call a "freak." She is now planked up, and the peculiar lines of her hull are to be seen to advantage. With a length over all of 38ft., and a width of 10ft. 8in., Splasher is to have a draft of but 8in. That tells the story of her shape. She is the absolute pumpkinseed in her lines. Nothing flatter could be built and still have space between deck and floor. Her bow is so flat that the overhang looks as if it were to be about 2in. free most of the way to the stem. She has a square stern at the end of a broad taper.

The materials from which Splasher is constructed have been selected with a view of giving extreme lightness combined with all possible strength. Her planking is double, but of extreme thinness. One layer is 3-16in. thick, the other 5-16ths. The two layers are fastened together with brass screws, and the timber fastenings are also of brass. The timbers are of white oak, and about ½in. thick.

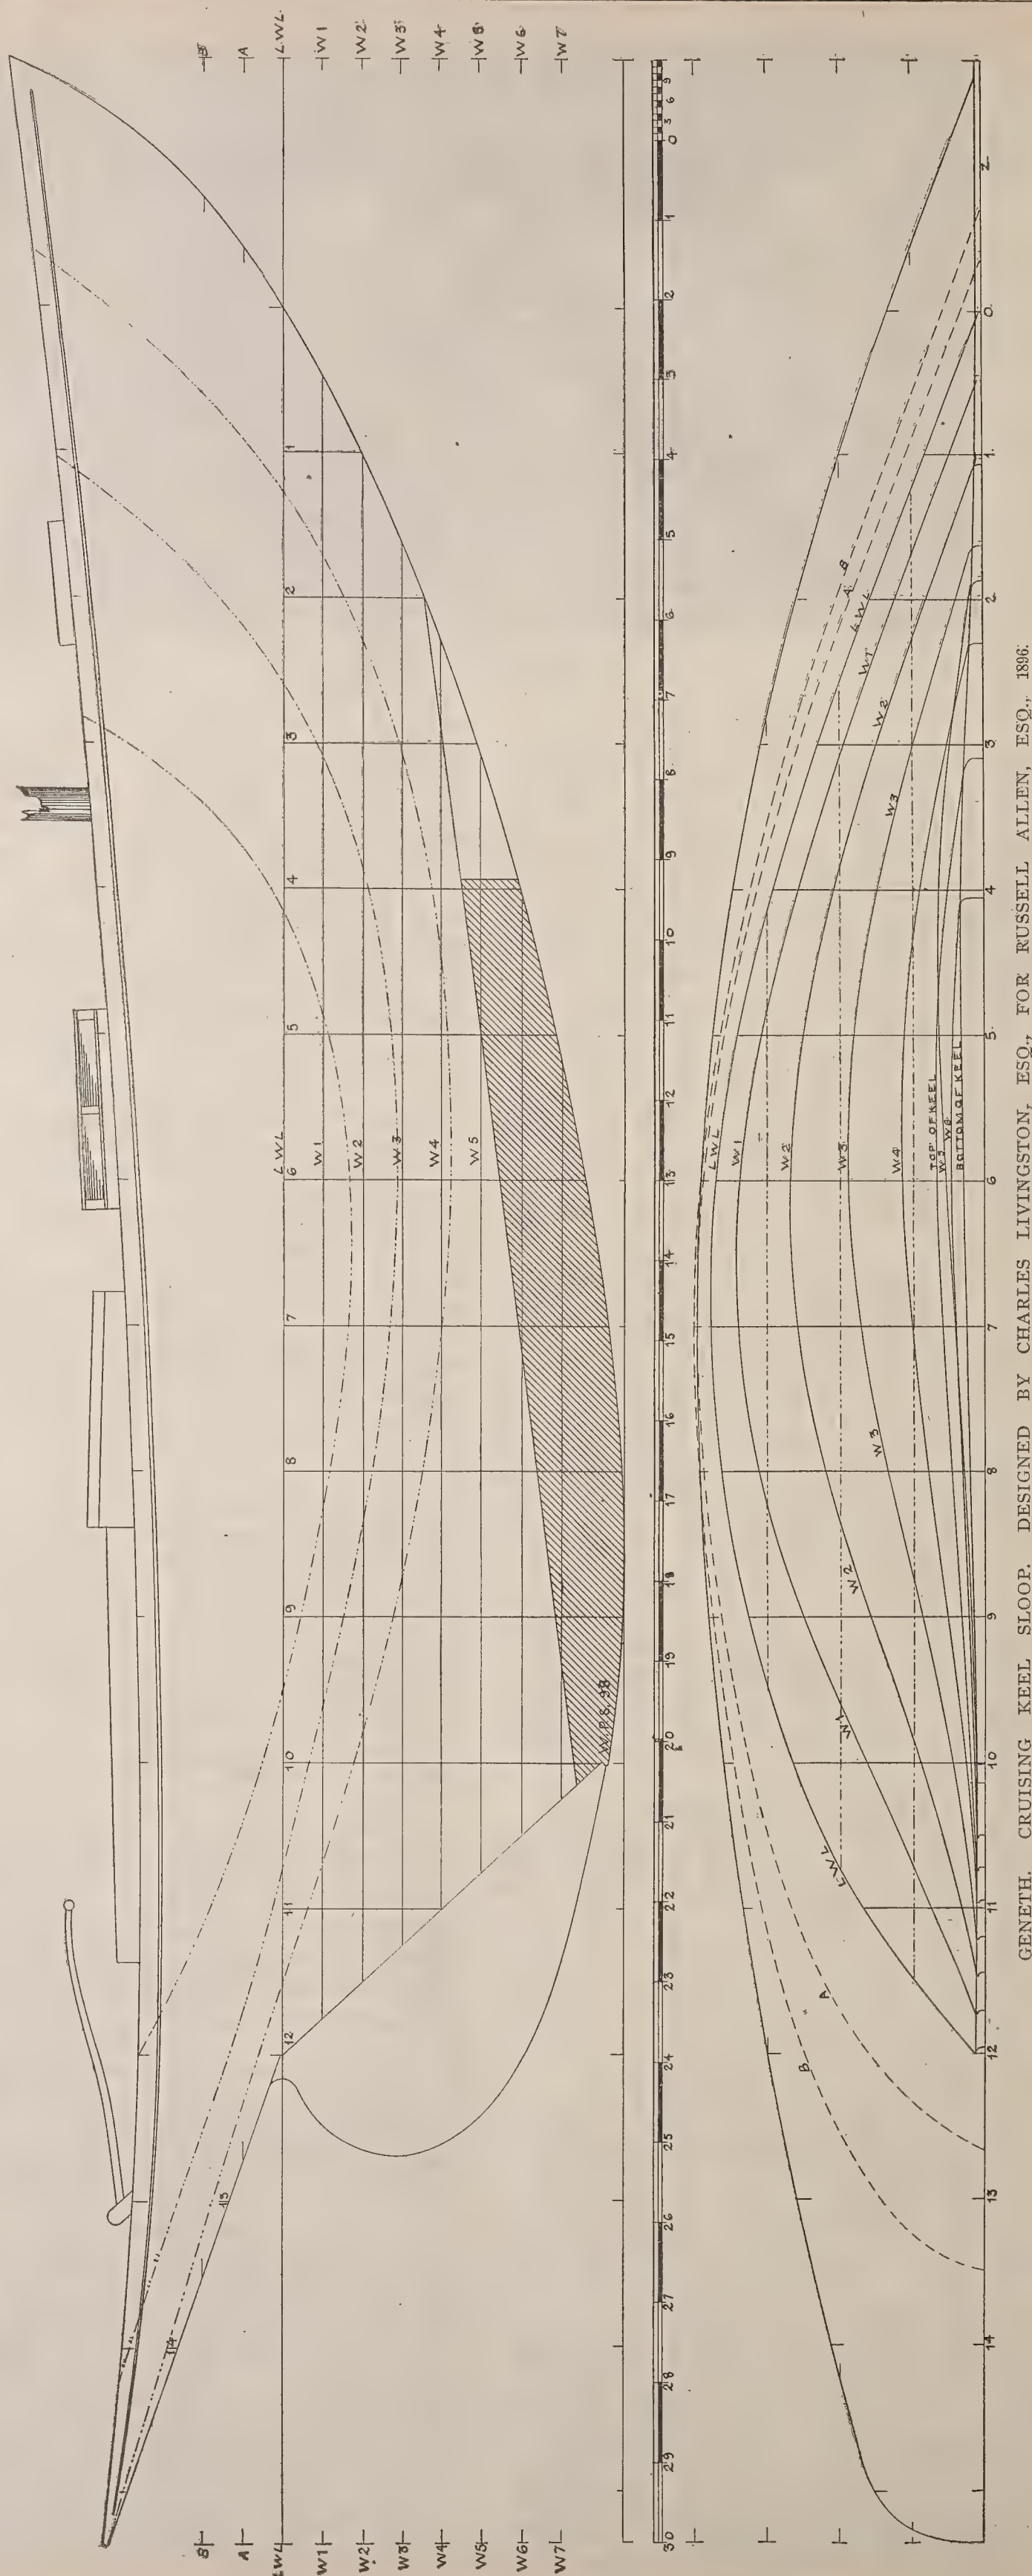

The boat is expected to be ready for the water June 10. She is built after plans by John R. Purdon. The original design was for C. H. Adams 2d, and was drawn according to Mr. Adams' ideas of what a racing machine should be.

The syndicate for which this boat is being built is headed by Com. F. B. Rice, of the Club. It is understood that he will sail her himself with the best racing crew the club can furnish him.—*Boston Globe*.

The Launch of the Rainbow.

Messrs. D. and W. Henderson & Co. launched on May 7 from their shipbuilding yard at Partick the schooner yacht of about 300 tons, Thames measurement, which they have built for Mr. C. L. Orr-Ewing, M. P., from the designs of Mr. G. L. Watson. This vessel is considerably larger than any of the sailing yachts which Mr. Watson has undertaken recently, and, though she has been designed and fitted out as a comfortable cruiser, she will enter for the principal cruising races, and the large masts of Oregon pine which are to be fitted indicate that she will have a good spread of canvas. Capt. John Carter has been appointed captain of the new vessel, and, though owing to his ill-health the yacht will be in charge of Jay for a month or so, it is hoped that Carter will be well enough to take charge of her before long. The schooner yacht is a vessel which of late years has not been much seen in the principal races, but the advent of this new vessel will perhaps bring the schooners back to the position they held before the steam yacht ousted them as cruising vessels. On entering the water the vessel was named the Rainbow by Miss Orr-Ewing, daughter of the owner.—*The Field*.

Corsair, steam yacht, recently the flagship of the New York Y. C., is now the Gloucester, U. S. N., under command of Lieut. Richard Wainwright.

GENETH. CRUISING KEEL SLOOP. DESIGNED BY CHARLES LIVINGSTON, ESQ., FOR RUSSELL ALLEN, ESQ., 1896.

YACHTING NEWS NOTES.

The May meeting of the New York Y. C. was held on May 19, with Com. Morgan in the chair. It was decided to abandon the annual regatta set for next month, on account of the mines in New York Bay and the stringent harbor regulations. No action was taken concerning the August cruise, and it will be determined later whether it will be abandoned. The following members were elected: Edward K. Jones, Rafael R. Govin, Allen Wallace, Julius Fleischmann, William Jackson Littell, United States Navy; Austin M. Greer; William H. Alderdice, United States Navy; Reginald R. Belknap, United States Navy; John V. Chase, United States Navy; E. Rollins Morse, Frederick A. Haight, J. Thomas Tompkins, United States Navy; Robert L. Russell, United States Navy; Charles W. Mayer, Robert W. Hawkesworth, Louis L. Driggs, Frank B. Griswold, Richard P. Hart, Edward McVickar, George F. Dominick, Arnold Wood, and Rear-Admiral G. Dewey, United States Navy.

The Seawanhaka Corinthian Y. C. has arranged the following programme of races for the coming season: Saturday, May 28, Seawanhaka knockabout class race for club prizes; Monday, May 30, Seawanhaka knockabout class race for Robert Center memorial prizes; Wednesdays and Saturdays, Seawanhaka knockabout class series races as per schedule given below; Monday, June 20, to Monday, June 27, Seawanhaka knockabout class racing cruise to New London to attend Yale-Harvard-Cornell boat races; Wednesday, June 29, annual race; Monday, Tuesday and Wednesday, July 11, 12 and 13, Seawanhaka international challenge cup trial races; Saturday, July 16, Roosevelt memorial cup race; Saturday, Monday, Tuesday, Wednesday and Thursday, Aug. 13, 15, 16, 17 and 18, Seawanhaka international challenge cup match at Montreal, Canada; Monday, Aug. 22 to Aug. 26, knockabout class match with Philadelphia Corinthian Y. C. at Oyster Bay; Saturdays, May 28 to Oct. 1, club catboat races. The dates set for the knockabout racing cruise and interclub matches are subject to change. Any series race falling on the date of an interclub match will be postponed to the next convenient day. The club house at Oyster Bay will be opened informally and the ferry service established on Friday afternoon, May 27. On Saturday, May 28, at 12 o'clock noon, colors will be hoisted and saluted, and the club house placed in commission for the season. The clay-pigeon shooting grounds will be ready for use, and guns may be hired and ammunition purchased at the club house. Unfavorable weather has delayed the completion of the golf course, and announcement will be made when it is ready for use. Herbert L. Satterlee has been appointed fleet captain, and W. G. Ushoeffler has been appointed signal officer for the current year.

After a conference with the Engineers' Department of the Army, the Atlantic Y. C. has been compelled to abandon its extensive racing programme for the season, as the mining of the Narrows and Lower Bay, and the incidental restrictions on all craft using the waters, make it impossible to race. Some races may be held for the smaller boats through the season. On May 21 a number of members visited the new club station at Sea Gate, the house being completed, and enjoyed an informal opening, dinner being served in the evening. John R. Parkhurst has been appointed superintendent and Emile Dugas steward. The steam-boat Defender has been chartered for the season, and will make four trips daily between Liberty Island pier, at the battery, and the club dock. Pass books will be furnished upon application to the superintendent. Members not having them will hand their cards to the captain.

The Harlem Y. C. will hold its annual regatta, the first of the Sound Y.R.A. races, on Decoration Day, as originally scheduled. The club has issued the following notice: "In answer to numerous inquiries the regatta committee herewith submits to the members and friends of the club the abstract of a letter received from the War Department in answer to an inquiry regarding the safety of the steamer and yachts from danger of any kind during the coming regatta, viz.: 'United States Engineer's Office, Willets Point, Queens County, N. Y., May 12, 1898.—Mr. A. G. Wigand, Secretary Regatta Committee Harlem Y. C., No. 519 East 121st Street, New York City: Dear Sir—There will be no danger from submarine mines, to lives or boats, while the latter are following the regatta course shown on the chart accompanying your note of May 11, 1898. Very respectfully, John G. D. Knight, Major Corps of Engineers Commanding.' As all questions relative to any danger whatever are thus set aside, the committee herewith gives notice that the regatta will be held without fail, and trusts that the members and their friends will favor us with a large attendance."

A meeting of the trustees of the Knickerbocker Y. C. was held on May 19, and it was decided to postpone the annual regatta of the club until a later date, owing to the obstructions placed in the Sound by the United States Government. It was reported that in the vicinity of Throgg's Neck there was a channel only 500ft. wide that was clear of submarine mines, which was considered inadequate for maneuvering the yachts in a race.

The opening race of the New Rochelle Y. C. will be held on Saturday, May 28, starting at 2 o'clock. Entries close with the secretary of the regatta committee, Box 735, New Rochelle, N. Y., on Thursday, May 26. Races have been arranged for the 30 and 25ft. classes of cabin cats, and the 25 and 20ft. classes of open cats. In addition there will be a special race for the open class of 21ft. knockabouts. Silver prizes will be awarded in each class.

Aileen, steam yacht, is in use about New York Harbor as a patrol boat.

The U. S. Government has recently ordered of the Daimler Motor Co. six launches for use as patrol boats.

The early publication is announced by Horace Cox of an entirely new book, by Mr. Dixon Kemp, entitled "An Exposition of Racing Rules, Customs and Practices Observed in Match Sailing, including Decisions on Particular Cases of Protest."

Queen Mab, cutter, N. L. Francis, has been sold to J. S. Fay, Jr., of Boston.

The new knockabout Indianola, designed by Mr. Crowninshield for Mr. Alburger, of the Indian Harbor Y. C., has been completed by Eccles, of Nahant, and has sailed for New York. Eccles has started a Mongoose II. for A. D. Irving, Jr., to replace Mongoose I., the new boat being also designed by Crowninshield.

Rifle Range and Gallery.

Cincinnati Rifle Association.

CINCINNATI, O., May 15.—The following scores were made by members of the Cincinnati Rifle Association in regular competition to-day. Conditions: 200yds., off-hand, at the German ring target. Trounstone wins the Uckotter trophy with a score of 210. Payne was high on the honor target; he also was declared king to-day with a score of 218. Weather clear and warm, with some wind. Payne fired fifty shots to count in a match with Frank Heim; results will be forwarded when Mr. Heim is heard from:

	Honor target.	Special scores.

C A Torney	180				

Rifle Note.

CHAMPAIGN, Ill., May 13.—The University of California and the University of Illinois held their annual contest, each being represented by ten-men teams. The University of California was again victorious. The competition prescribes ten shots each by the ten members of the team at a distance of 200yds., the best possible score being 500 points. The California team has had the advantage of winter practice, while the local marksmen have had but three good days, and are much encouraged by the close rub they gave the Western students. California's score this year was 416 to Illinois' 400, both scores being exceptionally good for amateurs.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

Fixtures.

May —.—Louisville, Ky.—Tournament of the Kentucky Shotgun Club; three days; two at targets, one at pigeons.
May 17-19.—Macon, Miss.—Tenth annual shooting tournament of the Noxubee Gun Club. C. M. Scales, Manager.
May 18-19.—Crawfordsville, Ind.—Tournament of the Crawfordsville Gun Club. C. E. Lacy, Sec'y.
May 20-22.—Butte, Mont.—Montana State Sportsmen's Association's tournament, on grounds of Butte Gun Club. Birds and targets; \$500 added money. C. M. Smith, Sec'y.
May 24-27.—Omaha, Neb.—Twenty-second annual tournament of the Nebraska State Sportsmen's Association. F. S. Parmelee, Sec'y.
May 25-26.—Findlay, O.—Annual tournament of the Magastrap Gun Club. O. B. Marvin, Sec'y.
May 25-27.—Owego, N. Y.—Owego Gun Club's tournament. Two days at targets, third day at live birds. Frank B. Tracy, Sec'y.
May 30.—Canajoharie, N. Y.—Decoration Day shoot of the Canajoharie Gun Club. Targets. Charles Weeks, Sec'y.
May 30.—Newburgh, N. Y.—Glenmore Rod and Gun Club's holiday shoot.
May 30.—Woodlawn.—All-day shoot of the New Utrecht Gun Club. E. G. Frost, Sec'y.
May 30.—Plainfield, N. J.—All-day shoot of Independent Gun Club.
May 30.—Newark, N. J.—Decoration Day shoot of East Side Gun Club; live birds; open to all.
May 30.—Oil City, Pa.—Decoration Day tournament of the Oil City Gun Club. H. C. Reeser, Sec'y.
June 2.—Peekskill, N. Y.—Trophy shoot, Hudson River Trap-Shooters' League, on the grounds of Peekskill Gun Club. J. B. Rogers, Manager.
June 1-3.—Springfield, O.—Open-to-all tournament of Ohio Trap-Shooters' League.
June 2-3.—Alton, Ill.—Second annual bluerock tournament of Piassa Gun Club. F. C. Riehl, Sec'y.
June 3-5.—Green Bay, Wis.—Green Bay Gun Club's second annual tournament.
June 6-7.—Grand Rapids, Mich.—Valley City Gun Club's tournament. C. F. Rood, Sec'y.
June 7-8.—Willmar, Minn.—Willmar Gun Club's third annual amateur tournament. Lewis Johnson, Sec'y.
June 7-8.—Indianapolis, Ind.—Annual tournament of the Indiana Trap-Shooters' League, of Indiana, on the grounds of the Limited Gun Club.
June 7-11.—Peoria, Ill.—Annual tournament and convention of Illinois State Sportsmen's Association.
June 8.—Butler, Pa.—Butler Gun Club's tournament. E. E. Gumpfer, Sec'y.
June 8-10.—Parkersburg, W. Va.—Second annual tournament of the West Virginia State Sportsmen's Association. Address all communications to Ed O. Bower, Sec'y, Sistersville, W. Va.
June 14-15.—Stillwater, Minn.—Tournament of the Stillwater Gun Club.
June 14-15.—Grafton, N. D.—Tournament and meeting of North Dakota S. S. Association.
June 14-16.—Le Mars, Ia.—Le Mars Sportsmen and Shooting Association's tournament. E. Miller, Sec'y.
June 14-16.—Ottawa, Kans.—Annual tournament of the Kansas State Sportsmen's Association. W. L. Beardsley, Sec'y-Treas.
June —.—Portsmouth, Va.—Tournament of the Interstate Association, under the auspices of the Portsmouth Gun Club. W. N. White, Sec'y.
June 15-17.—Cleveland, O.—Fifth annual tournament of the Cleveland Target Co. Bluerocks thrown free of charge. Professionals and manufacturers' agents barred from programme events.
June 16-17.—Dayton, O.—Dayton Gun Club's amateur tournament.
June 20-24.—Rochester, N. Y.—Annual tournament of the New York State Association, under the auspices of the Rochester Rod and Gun Club. Live birds and targets.
June 21-23.—Sioux City, Ia.—Fourth annual amateur tournament of the Soo Gun Club. Three sets of traps. E. R. Chapman, Sec'y.
June 25.—Long Branch, N. J.—Opening shoot of Hollywood grounds. Live-bird shooting every Saturday afterward.
June 27-July 3.—Milwaukee, Wis.—Tournament of Milwaukee Gun Club, carnival week. Live birds and targets. \$1,000 added money.
June 30.—Auburn, Me.—First annual tournament of the Auburn Gun Club. L. A. Barker, Sec'y.
June 30-July 1.—Milwaukee, Wis.—National Gun Club's tournament.
July 1.—Sherbrooke, Canada.—Grand annual tournament. Targets. Regular sweeps, variety and merchandise. C. H. Foss, Sec'y.
July 6-7.—Meadville, Pa.—Tournament of the Interstate Association, under the auspices of the Meadville Gun Club. Chas. Stein, Sec'y.
July 7-9.—Denver, Colo.—First annual tournament of the Overland Association. Open to all. Inanimate targets. Added money. John W. Kane, Manager.
July 15.—Poughkeepsie, N. Y.—Trophy shoot, Hudson River Trap-Shooters' League, on the grounds of the Poughkeepsie Gun Club. J. B. Rogers, Manager.
July 14-15.—Bedford, Ind.—Tournament of Bedford Rod and Gun Club.
July 19-21.—Palmyra, Mo.—Eight annual tournament of the Missouri Amateur Shooting Association, under the management of the Palmyra Gun Club. Targets and live birds. Added money announced later. W. N. Bates, Sec'y.

July 26-28.—Little Rock, Ark.—Eighth annual tournament of the Arkansas State Sportsmen's Association. Paul R. Litzke, Sec'y.
July 27-28.—Meriden, Conn.—Tournament of the Interstate Association, under the auspices of the Parker Gun Club. C. S. Howard, Sec'y.
July 29-31.—Milwaukee, Wis.—Milwaukee Gun Club's tournament. S. M. Du Val, Sec'y.
Aug. 3-4.—Worcester, Mass.—Tournament of the Worcester Sportsmen's Club. Targets.
Aug. 11.—Marlborough, N. Y.—Trophy shoot, Hudson River Trap-Shooters' League, on grounds of Marlborough Gun Club. J. B. Rogers, Manager.
Aug. 17-18.—Waterville, Me.—Tournament of the Interstate Association, under the auspices of the Waterville Gun Club. E. T. Wyman, Sec'y.
Aug. 17-18.—Warsaw, Ind.—Lake City Gun Club's tournament. J. S. Campfield, Sec'y.
Aug. 24.—Warwick, N. Y.—Special shoot, Hudson River Trap-Shooters' League, on grounds of Warwick Gun Club. J. B. Rogers, Manager.
Aug. 24-25.—Minneapolis, Minn.—Tournament of the Minneapolis Gun Club. G. J. McGraw, Sec'y.
Aug. 24-27.—Omaha, Neb.—Indian tournament, on grounds of Omaha Gun Club; three days targets; one targets and live birds.
Sept. 7-8.—Kingston, N. Y.—Tournament of Hudson River League, on grounds of Kingston Gun Club.
Sept. 7-8.—Haverhill, Mass.—Tournament of the Interstate Association, under the auspices of the Haverhill Gun Club. Geo. F. Stevens, Sec'y.
Oct. 4-6.—Newburgh, N. Y.—West Newburgh Gun and Rifle Association's fall tournament.
Oct. 12-13.—Greensburgh, Ind.—Greensburgh Gun Club's tournament. W. Woodfill, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The programme of the fifth annual tournament of the Chamberlin Cartridge and Target Co. provides eight events for each of the three days, June 15, 16 and 17. Nos. 1, 2, 3 and 4 are at 15 bluerocks, the other four are at 20. A uniform entrance of \$2 is charged in each event. Event No. 6 on each day will be merchandise events. In event No. 8 all money will be divided and ties for merchandise will be shot off. Professionals and paid experts will shoot the same programme as the amateurs, and all amateurs who desire to do so can compete with them by paying extra or double entry fee and have one score count on both books. All purses will be divided into five moneys, class shooting. The competition will commence at 8:30 A. M. Take Woodland or Broadway cars, transfer at Wilson and get off at Kershaw street. No dropping for place will be allowed. Manufacturers' experts and professionals barred from all amateur events, merchandise and average prizes, excepting the special prize for best average in their class. Manufacturers' agents, under the classification used, are those who receive any compensation of any kind from any manufacturer or his agents for services rendered in introducing his goods. All stand at 16yds. Magastrap rules will govern. All cartridges shipped in care of the Chamberlin Cartridge and Target Co. will be delivered on the grounds. All cash, extra entry fees and merchandise received in exchange for advertisements will be given in average or merchandise prizes. In the regular events all amateurs who break 90 per cent. or over the first day, and all who break between 85 and 90 per cent. will pay \$4 and \$2 respectively for competing in the next day's programme. The second day's averages will govern their entry fee for the third day. These extra fees will be set aside and be divided as average prizes among the amateurs who shoot the programme through. Those who desire may shoot for targets only, for which a charge of 25 cents each event will be made, this money to be added to the average prizes. From each of the programme events \$2 will be deducted, the total sum thus obtained to be applied to the purchase of two diamond watch charms, to be given respectively to the ones making the highest averages in the two classes. The tournament will be held on the grounds of the Cleveland Gun Club, which will be open on June 13 and 14 for those who desire to practice.

The Hudson River Trap-Shooters' League has issued the programme for its third tournament on the grounds of the Peekskill Gun Club, Peekskill, N. Y., on June 2. This the patrons will note is a one-day tournament, therefore they will need to be all on hand promptly. There are ten events in the programme, at 10, 15 and 20 targets, entrance respectively \$1.20, \$1.30 and \$1.40. The average money, \$25, is divided into seven moneys, open only to amateurs. It is divided as follows: \$6, \$5, \$4.50, \$3.50, \$3, \$2 and \$1. Targets will be furnished free to all manufacturers' agents. Purses are divided by the Rose system. Targets, two cents each, so that the entrance is one dollar with price of targets added. Shooting begins at 9 o'clock sharp. The team race will be called at 1 o'clock. It will compete for the American E. C. and Schultze Powder trophy, five men to a team. Each man shoots at twenty-five targets, unknown angles, the team making the best average for the season to become the owner. Teams must belong to league clubs. Mr. T. H. Keller, of the King's Smokeless Powder Co., has offered a prize to be awarded to the league shooter making the highest score for all programme events each month. J. F. Hull, of Parker Bros., has donated a cup to be awarded the member making the highest average in programme events in trophy shoots. The United States Powder Co. presents thirty-five 1lb. cans of Gold Dust Powder, eight cans to be given to the eight high guns in the last programme events.

Keep in mind that on May 30, Decoration Day, there will be shoots given by Canajoharie, N. Y., Gun Club; by the Glenmore Rod and Gun Club, Newburgh, N. Y.; by the New Utrecht Gun Club, Woodlawn, Brooklyn; by the Independent Gun Club, Plainfield, N. J.; by the East Side Gun Club, Newark, N. J.; by the Oil City, Pa., Gun Club; by the Dansville, N. Y., Gun Club; by the Highland Gun Club, Moline, Ill., and by others who presumably desire that their shoots be kept a secret from the public, since they do not manifest the energy necessary to send in a notice of their shoots for publication.

Mr. Paul R. Litzke mentions in the report of the Kansas City shoot that the Indian squad broke 99, 98, 97, 96 and 95 out of 100 targets shot at, in different events. If this state of affairs continues, it will be but a short time before they break them all. On Thursday Powers, Budd and Heikes had an average of .977. Leroy, Parmelee, Merrill and McMurchy had each a fraction over .96 per cent. for the day's shooting. Gilbert was close up with .956. Of the sixty shooters on Thursday, twenty-one shot better than 90 per cent.

The Scranton Gun Club, Scranton, Pa., will hold a Decoration Day tournament at Spencer Range, May 30. There will be ten events, of which Nos. 3 and 7 are at 10 and 15 live birds, entrance \$2.50 and \$3.75 respectively. No. 1 is at 10 targets, 30 cents; Nos. 2, 5, 8 and 9 are at 15 targets, 45 cents; Nos. 4 and 6 are at 20 targets, 65 cents; No. 10 is at 25 targets, 60 cents. Shooting begins at 8:30, rain or shine. Plenty of shelter for all. The grounds are reached by Drinker street car or Throop car. W. A. Wiedebusch, manager.

The Capital City Gun Club held its opening shoot on its new grounds last Saturday. The grounds are situated on the main line of the Baltimore & Ohio R. R., near Hyattsville. They are described as being the finest in the country, the score being shaded by a grove of immense oaks, and the sky for a clear background. The club will hold an all-day tournament at Highlands Saturday, May 28, and many of the best shots in Washington, Baltimore and Virginia have signified their intention of participating.

This week the Owego Gun Club holds its three days' tournament, commencing Wednesday. The Hobart Gun Club, Hobart, Ind., holds its one-day tournament on Tuesday. On the four days beginning with Tuesday, the twenty-second annual tournament of the Nebraska State Sportsmen's Association takes place. The Magastrap Gun Club, Findlay, O., holds its tournament on Wednesday and Thursday. On Thursday the Mechanicsburg Gun Club, Mechanicsburg, O., holds its one-day tournament.

Owing to the debate between the United States and Spain the Portsmouth Gun Club's tournament, fixed for June 15 and 16, is postponed till a later date, as announced in these columns this week by Mr. Elmer E. Shaner, manager Interstate Association.

Mr. A. C. Paterson, the present holder of the Chicago challenge trophy, has accepted Mr. J. H. Amberg's challenge to shoot for said trophy. The event is scheduled to take place at Watson's Park on Friday of this week.

The concluding struggle for the Star cup between Elliott, Riley, Gilbert, Budd and Glover was up to the standard of the best competition, and worthy of the abilities of the expert men who contested for it in the final. The score of one 25 straight, made by Elliott; three 24s, made by Riley, Gilbert and Budd, and 23, made by Glover, indicate an exceedingly close race. J. A. R. Elliott used Blue Ribbon and Leader shells; C. W. Budd used Blue Ribbon and Trap shells, the same load he used in the capture of the Schmelzer trophy on May 12; Fred Gilbert used Du Pont and Leader shells; Sim Glover used Schultze and Trap shells. We have no information concerning J. E. Riley's load.

The Baltimore Shooting Association has begun its summer target season. The targets are thrown so as to make a great variety of flights, both incomers and outgoers, thus giving the shooters a most comprehensive training in shooting at all angles. Six traps are used, three of which are in the field 60yds. from the score, throwing incomers, and three at the 16yd. distance, throwing outgoers.

The matter of treating manufacturers' agents with more consideration in the conditions applied to them at tournaments is receiving some attention, in line with FOREST AND STREAM's editorial on the subject in the issue of May 7. The Hudson River Trap-Shooters' League will throw targets free for manufacturers' agents, and the Sherbrooke Gun Club, of Canada, will throw them at half price for the same gentlemen.

The Bergen County Gun Club, of Hackensack, N. J., will hold on Saturday, May 28, one of its usual cup shoots, this trophy to be an especially fine one. The cup event will take place at 2 o'clock sharp. All shooters are invited to be present, and the club will guarantee a good time. Sweepstake and novelty events before and after. Trains leave foot of Cortlandt street 12 M., 1:10, 2:20, 3:30 P. M. C. O. Gardner, Sec'y.

The programme of the Worcester Sportsmen's Club, to be held on Aug. 3 and 4, has ten target events each day, 10, 15 and 20 targets, regular, unknown and reversed angles, entrance 70 cents, \$1.20, \$1.30, \$2.30 and \$2.40. There is added money and merchandise prizes to the six high guns shooting through the programme. It is open to all. The purses are divided 40, 30, 20 and 10 per cent.

Mr. J. R. Hull, who represents Parker Brothers, is crowding close to the top notchers in his averages. At Haverhill, Mass., recently he broke 101 out of 115 targets, an 88 per cent. gain.

There will be a live-bird shoot at Dupont Park, St. Louis, this week, 50 pigeons, \$50 entrance. Messrs. Kling, Prendergast, Selger and others will compete.

The next regular shoot of the Endeavor Gun Club will be held at Marion, Jersey City, on May 30. Shooting commences at 8 o'clock A. M.

On June 4, beginning at 2 o'clock, the Dunellen Gun Club and the Endeavor Gun Club will shot a ten-men race at Dunellen, N. J.

On Decoration Day, May 30, the New Utrecht Gun Club will hold an all-day shoot at live birds, at the club's grounds at Woodlawn, Brooklyn, N. Y.

The Chicago Athletic Association, one of Chicago's finest organizations, has added trap shooting to its list of wholesome and manly sports.

The programme for the Illinois State shoot will soon be ready for distribution.

BERNARD WATERS.

The Sixth Day of the Kansas City Shoot.

After five days of shooting it is not to be expected that the entries would run very high, as after so much shooting everybody is tired and willing to quit. This seemed to be the case to-day, for while not many participated, the shooting did not progress as fast as usual. Only thirty-eight took part, and of this number but nineteen shot the entire eight events. Heikes did some excellent shooting to-day, which not only landed him on top for the day, but also enabled him to beat all the others out for general average. Then he also had a good piece of luck, as one of his straights netted him first alone. Gilbert is second, Parmelee third, Powers fourth and Hallowell fifth. This was the best so far as the weather was concerned, but there was no sunshine, while in the early part of the day there was considerable wind that made trouble for the target shooters. The entire eight events were disposed of by about 3 o'clock. Each event was at 20 targets, \$2 entrance, \$20 added to each:

Events:	1	2	3	4	5	6	7	8	Shot	at.	Broke.	Av.
Heikes	19	18	19	20	20	18	19	20	160	154	.962

Brown	5	9	17	17	17	17	13	13	140	95	.678	
Fairman	15	15	15	15	15	15	15	15	40	27	.675	

Riley and Rike shot only in one event.

GENERAL AVERAGE.

There is no average money to strive for, though it is nevertheless of interest to know how those who shot all the way through finished; so for this reason the appended table has been compiled. Heikes carried off the honors. Powers was second, Gilbert was third, Parmelee fourth, Fulford fifth, and McMurchy sixth. It will be seen that only fifteen shot through, but it is a difficult matter to induce shooters to stay for six days of shooting, and that too without average money:

	Broke.	Av.		Broke.	Av.
Heikes	.748	.935	Glover	.722	.902
Powers	.744	.930	Linderman	.721	.901
Gilbert	.740	.925	Grimm	.718	.897
Parmelee	.734	.917	Hickman	.717	.896
Fulford	.732	.915	Fanning	.713	.891
McMurchy	.731	.913	Dickey	.701	.876
Leroy	.730	.912	Funk	.687	.858
Budd	.725	.905			

Uxbridge Gun Club.

UXBRIDGE, Mass., May 21.—Nos. 5, 6, 7 and 8 were the medal shoot; 5 and 7, regular; 6 and 8, unknown angles. No. 1 was regular; Nos. 2 and 4, unknown; No. 3, reversed angles:

Targets:	15	10	15	10	15	10	15	Shot			
Events:	1	2	3	4	5	6	7	8	at.	Broke.	Av.

Leominster Gun Club.

LEOMINSTER, Mass., May 21.—The Leominster Gun Club to-day held an all-day tournament on the grounds at Leominster Park. Programme of fifteen events, 200 targets. J. R. Hull, of Parker Bros., with the famous Parker gun, and Hooker, acting as representative for Tom Keller, of the King's Powder Co. and Peters Cartridge Co., were the only ones to shoot the entire programme, and secured fair averages, Hull .825, Hooker .795. Many friends were made for the Parker gun, and Peters Victor shells loaded with King's Smokeless, "the quickest on earth." Other visitors were Hollis and the "Hingham handicapper" from Boston. Rule and Burton, Lowell, Mass.; Snell and Nick, Worcester, Mass.; Bowen and Greener, Marlboro', Mass. Robt. Smith was on hand. All regretted that Tom Keller was unable to be present, as he had intended to be, and would have been had it not been for a telegram calling the "hustler" to New York. The conditions were not good for high scores, as the wind was strong and a bright sun shone. Below are the scores in detail:

Nos. 1, 7, 13, 14 and 15 were regular. Nos. 2, 3, 4, 5 and 12 were unknown angles. No. 6 was five pairs. Nos. 8, 9, 10 and 11 were reverse angles.

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
Targets:	10	10	10	10	10	10	10	10	10	10	10	10	10	10	10
Hull	8	8	7	13	8	7	10	18	20	12	9	16	10	9	7
Hooker	6	9	8	14	9	8	9	18	19	13	9	13	9	8	7
Hollis	9	8	5	12	7	7	8	12	12	11	8	13
Rule	9	8	5	12	7	7	8	12	12	11	8	12
Robt Smith	6	8	7	11	8	6	8	14	12	13	9	15	8	8	...
Stickney	7	7	7	9	7	4	7	15	9	6	6	5
Snell	8	10	10	11	9	8	9	20	13	13	7	16	7
Nick	4	3	2
Rice	7	9	12	7	13	8
Burbank	7	8	6	13	11	6	13	6	8
Andrews	7	6	5	8	4	12

Trap Around Reading.

READING, Pa., May 14.—The South End Gun Club, at its last meeting, decided to hold its next shoot on Decoration Day. At this tournament the second contest will be held for the club medals at 25 birds. A committee was appointed to make arrangements. The medals are now held by John Shaaber and Capt. Wm. Essick.

Boyetown, Pa., May 10.—At the monthly shoot held by the Boyetown Rod and Gun Club to-day Mr. Wm. D. Shealer won the gold medal in the club shoot at 25 targets. Mr. N. D. Benner had won it at the shoot before, in April.

Pottstown, Pa., May 11.—An interesting target tournament was held here to-day under the auspices of the Shuler Shooting Association. A team shoot between two teams, captained by Capt. Wickersham and Lieut. Saylor, was the principal feature. Summary:

First event, teams of five men each, each man shooting at 25 targets:

Lieut. Saylor's Team.	Capt. Wickersham's Team.
Saylor	Wickersham
L H Davis	Grubb
Yerger	Eagle
Stone	Cole
S E Davis	Guest

ARTHUR A. FINK.

Trap at Worcester.

WORCESTER, Mass., May 21.—Trap-shooting is taking in our town. We had a goodly number at our regular club shoot Tuesday, and also at the gun club shoot to-day.

We are looking forward to a return to the good old days when the crowd of shooters was so great at a Worcester Club shoot that many of them went home complaining that they did not get enough shooting.

Following are the scores made at the two clubs this week: Merchandise race, 30 targets, magautrap: Walls 28, Lange 27, Bucklin 25, Fuller 25, Buck 25, Goodell 24, Randall 24, Elmer 24, Tougas 23, Swan 21, Dodge 21, Emory 19.

Parker gun trophy, handicap event, 15 targets from magautrap, with extra allowance of birds added to the scores of some of the shooters: Randall 18, Tougas 15, Bucklin 15, Dodge 15, Walls 14, Fuller 14, Goodell 12, Swan 10.

Worcester Gun Club scores.—Worcester county championship, 5 pairs, magautrap: Walls 9, Bucklin 7, Fuller 7, Goodell 5, Swan 5.

Forehand trophy, 20 targets, magautrap: Bucklin 19, Walls 17, Fuller 16, Swan 10, Dodge 8, Lange 7.

The scores of the Worcester Sportsmen's Club at its shoot, May 17, are as follows:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
Targets:	10	10	10	10	30	Targets:	10	10	10	10	30
Forehand	9	9	10	9	25	Walls	9	10	9	6	25
Snell	7	8	7	8	17	Emory
Rice	6	3	8	5	13	Harris
Buck	8	8	Russell
Hanson	8	4	6	8	23	Bucklin

Nos. 1 and 3 were regular; Nos. 2 and 5, reverse: No. 4, unknown.

A. W. WALLS.

The Voice of the Gun.

To those lucky mortals who love rod and line
The click of the reel is compellingly sweet;
And they say, "Though the voices of nature are fine,
The reel's happy singing can never be beat."

The persons who listen by day or by night
The voices of nature will always enthrall;
But I think, though the click of the reel is all right,
That the voice of the gun is the sweetest of all.

A. L. L.

The Brooklyn Gun Club will hold an all-day shoot on June 16. Besides the magautrap, the club also will then have a set of traps installed to shoot according to the Sergeant system. There will probably be some one-cent target events in the programme.

ON LONG ISLAND.

EMERALD GUN CLUB.

May 17.—The Emerald Gun Club held its club shoot in Brooklyn to-day. The event was at 10 live birds, point system:

Dr Hudson, 29	21221*1121—9	J H Moore, 28	1001201210—6

C. W. BILLINGS.

BROOKLYN GUN CLUB.

May 21.—The attraction at the Brooklyn Gun Club's grounds this afternoon was the monthly contest for the Troisdorf cup. This event produced several ties on 25—highest possible, no less than five men scoring 25 with their respective allowances of misses as breaks. The only shooter who did not use his allowance was Woods, who broke 25 straight, repeating in the first shoot off with 23 out of 25, making an actual 48 out of 50. The four who tied with him were G. Wood, Paterson, Dr. Smith and Moore. In the second shoot-off Paterson fell out, leaving four still in it. Woods and G. Wood were the next to fail, both dropping out in the third shoot-off. Moore and Smith shot off once more, and again tied on highest possible. Being short of shells and time, they agreed to decide it miss-and-out, Smith winning in the second round.

Among those present were Edward Banks, secretary of the American E. C. & Schultze Powder Company, and Harold Money, who is attached to the same company's chemistry department. Another visitor was E. Everett, from the W-A Powder Mills of Lafin & Rand, at Pompton, N. J. Neither of the three above named shot for the Troisdorf cup, the conditions of the cup being "no one connected with any powder firm to be eligible to compete," i. e. "amateurs only."

As usual, Harold Money shot a great gait, and held up his end as his scores show. In Nos. 5, 6 and 7, Money and Everett shot as a team against Banks and Waters. The team scores were as follows: No. 5, Money and Everett 45, Banks and Waters 44. In No. 6 the teams tied on 42 each, shooting off the tie in No. 7, which again resulted in favor of Money and Everett by one target with scores of 42 to 41.

Below are the scores in the unknown angle events:

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7
Targets:	15	15	15	25	25	25	25	Targets:	15	15	15	25	25	25	25
Banks	15	13	13	18	23	23	24	Lane	...	6	7	18

Waters	14	12	14	17	21	19	17	G Wood
De Wolf	12	12	13	13	21	Skidmore	...	9	19	23	18
C F	8	4	9	14	24	6	...	Dr Smith
Woods	12	14	13	20	25	Paterson
Everett	11	11	11	19	21	18	20	Moore

* Cup shoot—Scores given with allowances of misses as breaks.

Five events at pairs from the magautrap were also shot. Nos. 2 and 3 were somewhat novel, the conditions being that the shooter must shoot at the last target first; and as John Wright sprung the two targets at an appreciable interval apart, it was mighty hard shooting. The idea was Remsen's, and he received little sympathy for his failure at his first attempt. In his second attempt he "beat the band." All the other events at pairs were shot regular. Scores were:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
Targets:	20	10	10	20	20	Targets:	20	10	10	20	20
Banks	16	6	5	15	19	Remsen	...	1	6
Everett	9	4	5	12	...	Woods	10	...
Waters	11	4	4	15	...	Osterhout	...	10
Money	18	6	5	15	14						

Troisdorf cup, 25 targets, handicap allowance:

De Wolf	110101100111110111111110—19
G Wood	111110110011111101111111—19
Lane	01010010010010010010111—11

HUDSON GUN CLUB.

Jersey City, N. J., May 22.—The last shoot for the month of May was held by the Hudson Gun Club on their grounds during the last week. The day was exactly the reverse of the previous shoot, and brought out a fair attendance. This was cup day, and there were sixteen entries in the club event, all of which had to break 18 targets before scoring a point, and 6 points were all that could be made at any one shoot. There were three ties of 6 points each for the possession of the cup for the month—Schorty, De Long and Heritage. On the shoot-off Schorty won. Following are the points scored by each member in the four shoots: C. V. L. 0, Schorty 11, Kelly 10, Van Dyne 23, Johns 12, Wright 13, De Long 12, Boek 15, Banta 10, Nagle 12, Hughes 5, Whitley 18, Heritage 12, Goetz 5, Tommy 13, McElroy 6, Wilde 6, Shields 5, O'Brien 0, Ratigan 6, Altz 7, Bothroyd 6, Brewer 10, Doran 0.

The scores were as follows:

Events:	1	2	3	4	5	6	7	8
---------	---	---	---	---	---	---	---	---

Kansas City Shoot.

FIRST DAY, MONDAY, MAY 16.

This day was exclusively devoted to live-bird shooting so far as the programme was concerned at least. There were to be two events, the State team championship and a combination event for the individual State and Interstate championships.

The team race was the first on the programme, and this had the goodly number of ten entries, which is a capital showing and exceeds those of a year ago by two. The conditions of this are four men to a team, all members of the same club, 15 birds per man, 60 to the team, entrance \$20 per team, birds extra. The purse in this event is guaranteed to be \$200, of which \$100 goes to the club that won the medal the previous year, and the balance to the second, third, fourth and fifth, divided 40, 30, 20 and 10 per cent. The winners this year receive nothing but the medal.

The contest was similar in many respects to that of last year, as a dark horse, so to speak, won the trophy, and the winners of last year finished last in the race, as did also those of the year before. But there are other features to mention.

It is rarely the case that four men shoot so nearly equal as did those who composed the St. Louis team. Their form and time were simply superb, and the fact that they did not make a clean score is no fault of the shooters. The two lost birds were dead out of bounds, and that too only by a few feet, which shows that the man behind the gun was pointing it about right, so it is no discredit to Dr. Starkloff and Dr. Smith to have an asterisk appear in their scores. It is rather singular that each of these losses should occur in the 9th round. This score of 53 out of 60 is a new record for the Association, this being the first time so grand a total has been reached since the introduction of ground traps. Previous to this, however, a Kansas City team once killed 59 out of 60 from plunge traps, 21yds. rise, use of one barrel. There is quite a gap between the leaders and the next team. There being no less than three teams tied for second position: Kansas City, Washington Park and Pastime clubs all having scored 53. For third position there were also two teams tied, the Stock Yard and Veteran clubs, having a total of 52. Then comes the O. Ks., whom many had picked as winners. Their showing, however, was a sore disappointment to their numerous admirers. The Belt Line Club, with a score of 46, got a piece of money, as class shooting governed in this event. The Foresters are last with 45; these were the winners last year. The Joplin team was entered, but owing to a wash-out two of their members were unable to reach the city in time to shoot their scores. The two that were present, however, gave a good account of themselves, scoring 29 out of 30. Cox is a one-arm shooter, and even with this handicap he led his team with a straight score.

SECOND DAY, TUESDAY, MAY 17.

There were plenty of entries in the target events, and in all seventy-five shooters participated in these. Of this number, forty shot through the entire events. There were eight 20-bird events on the programme, in which Grimm and Glover made the best averages, finishing with .937. Leroy, McMurchy and J. A. R. Elliott are only a bird behind, their average is .931. Then comes another bunch—Heikes, Dickey, Fulford and Ruble having .913. All told sixteen of those who shot through the events have an average of 90 or better. The Indian squad put up the best squad record, scoring 98 out of 100 in one event, and also killing 50 live birds straight. This is great shooting, though it may be conducive of heart disease to the average amateur.

There were no lucky holes, though there was an opportunity to make a killing in the 6th event, as there were no straights. However, 19s were plentiful.

The weather was again threatening, while there was a gusty wind that was very aggravating at times to the target shooters, and also aided the pigeons somewhat in their flight. There were three live-bird events, two 10 and a 15. These were well patronized, and one of them remained unfinished.

INDIVIDUAL STATE AND INTERSTATE CHAMPIONSHIP.

With forty entries this was quite an event, one that resulted in as pretty a contest as one could wish to witness. With so many entries and such high class of contestants excellent shooting was done. Sedam, Porter and Gilbert have the honor of finishing with a straight, and in the melee between this trio for the possession of the elegant watch charm that went to the winner, that grand old veteran from the Rocky Mountains came out with flying colors, not, however, until he had run up the great total of 42 straight, as it was in this round that Gilbert and Porter both came to grief on very similar birds. The shoot-off was truly an exciting one, as there was a fine lot of birds trapped just about then. Every one of the contestants was shooting in rare time, and it began to look as though they might go on for an indefinite time killing every bird that was trapped. The final came on the 17th bird. Gilbert, who led off, got a good, fast one from No. 5 trap, on which he appeared to be a trifle slow, which proved fatal, as the bird carried both charges out of bounds.

Now Porter drew a similar bird from No. 1 trap, and to the disappointment of his friends this too got away over the wire, only to succumb afterward. It now only remained for Sedam to kill to win. His bird was, like the two previous ones, good and fast, being only stopped by a good second, and then it almost managed to struggle to the wire. This bird came from No. 3 trap, while had it come from either of the end traps it would perhaps have been out by a foot or so. The shoot-off was only for the possession of the interstate trophy, as Jim Porter was the only State shooter to kill straight, so naturally he wins the State championship and the medal that goes with it.

The conditions of this race are 25 live birds, entrance \$12.50, four moneys, 40, 30, 20 and 10 per cent., 30yds. rise. State shooters can compete in both events by paying a double entry fee, their one score counting in both events. There was \$50 added to each purse.

While this is given under the head of the first day, the shoot-off for the trophy did not occur until the second day, as it was impossible to finish the event on Monday.

There was no target programme, but there was a number of events run off, and in all of these Gilbert was to the front; in fact, this was a great day for him, he finishing the day with 100 per cent. In all he shot at 125 targets and 25 live birds, accounting for all of them, thus making a run of 150 straight for the day. The weather was threatening, though there was little wind blowing, so there was little to aid the live birds or make the targets erratic.

GARFIELD GUN CLUB.

The Garfield Gun Club held its regular weekly contest at targets on the club grounds, corner Monroe and Fifty-second streets, to-day, with a fair attendance. The wind blew strong across the traps from the south and made the shooting difficult. As a result the scores are not up to the usual average of the participants. Event No. 1 was 15 targets, known traps, unknown angles; event No. 2 was the trophy event, 25 targets, known traps, unknown angles; event No. 3 was 10 targets, reverse pull; event No. 4 was 15 targets, known traps, unknown angles; event No. 5 was 15 singles, unknown traps and angles, and 5 pairs, one man up, and event No. 5 was 10 pairs:

Events:	1 3 4 5 6	Events:	1 3 4 5 6

CHICAGO ATHLETIC ASSOCIATION.

May 19.—The Chicago Athletic Association, of this city, recently formulated a plan for a shooting contest confined exclusively within its membership. The contest to be at live birds, for a gold medal, and shot on the grounds of Watson's Park. Among

the Association membership are a considerable number of enthusiastic gentlemen, who spend many days in the field during the shooting season. Some are very excellent shots, though their places are not familiar at the State shoots. Many of these gentlemen, while excellent enthusiasts

traps, but enter into the contest full of ambition with a view to

becoming more skilled.

The worthy president of the Association, Mr. D. M. Lord, says that he has not handled a gun in sixteen years, but is now going to commence anew again, and show the other contestants a trick or two before the season is over.

Dr. H. H. Frothingham was a very busy man during the contest, acting in the capacity of captain and manager. There were many in attendance who did not participate in the contest to-day, but are expected to in the next event, which promises to be of fully twenty-five entries.

The conditions governing the trophy are: Shot under American Shooting Association rules, 15 live birds, handicap of distance as well as added dead birds to the weaker shooters. There are to be twelve contests in all, one the third Thursday of each month, the trophy to be awarded to the contestant winning it the greatest number of times.

In the contest D. M. Lord, W. H. Thompson and E. A. Russell were allowed to continue out their scores, alternating with other shooters, to permit of their attending an Association meeting. Mr. Russell scoring a straight with the handicap allowance, the shooters following largely dropped out when their chances to tie with handicap birds were used up, consequently many failed to shoot out their full scores.

The day was cool, with clouded sky and a driving wind from the right quarter. The birds were a very good lot, and flew largely to the left quarter. Many good kills were made of hard birds, as well as easy ones missed.

Mr. William Kent, after killing 12 straight, stood to tie E. Russell, who was the only straight, but his 13th bird had a curve in its flight which was difficult to get on to; this followed by his missing the next two, and he finished in the 13 hole. Mr. Russell got a good race, centering his birds, and won over Edwards by

439

Smith cup. It is expected that this club will be foremost in representation at the Association contest at Peoria in June, and it is expected that they will be represented with several teams in the tournament.

The shooting was very difficult throughout the day, and the elements were such that unusually poor scores were made. Following are scores made in the practice events:

Events:	1	2	3	4	6	7	8	9

CHICAGO ATHLETIC ASSOCIATION.
May 19.—The Chicago Athletic Association, of this city, recently formulated a plan for a shooting contest confined exclusively within its membership. The contest to be at live birds, for a

grounds

the Association membership are a considerable number of enthusiastic gentlemen, who spend many days in the field during the shooting season. Some are very excellent shots, though their names are not familiar at the State shoots. Many of these gentlemen, while equally enthusiastic, are not as experienced at the traps, but enter into the contest full of ambition with a view to becoming more skilled.

The worthy president of the Association, Mr. D. M. Lead, vice-

gun in

Dr. H. H. Frothingham was a very busy man during the contest, acting in the capacity of captain and manager. There were many in attendance who did not participate in the contest to

lay, but are expected to in the next event, which promises to be

the trophy

In the contest D. M. Lord, W. H. Thompson and E. A. Russell were allowed to continue out their scores, alternating with other shooters, to permit the contest to continue. The contest was held for a month, the trophy to be awarded to the contestant winning it the greatest number of times.

attending
it with the
pped out
ed up, so

The day was cool, with clouded sky and a driving wind from the right quarter. The birds were a very good lot, and flew largely to the left quarter. Many good kills were made of hard birds, as well as easy ones missed.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY. }
SIX MONTHS, \$2. }

NEW YORK, SATURDAY, JUNE 4, 1898.

VOL. L.—No. 23.
No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, \$4 per year, \$2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

JUBILEE NUMBER.

THE issue of June 25 will complete the Fiftieth Volume of FOREST AND STREAM; and the event will be fittingly marked by making that a Jubilee Number, filled to overflowing with good things. It will be notable for store of good reading and wealth of illustration. A preliminary notice to the trade has already assured for this special number a wide demand. It will have a large circulation among those who are not regular readers of the paper, and for this reason will have increased attractions for advertisers. Special advertising rates for the Jubilee Number will be sent on application.

BALTIMORE'S DOG PROBLEM.

WITH the coming of warm weather recurs the problem of dealing with the surplus dog supply of towns and cities. The solution of the question has been discovered by New York city, which has intrusted to the Society for the Prevention of Cruelty to Animals the task of enforcing the license law, and collecting and disposing of unlicensed and stray dogs. The Society does the work most admirably, and so quietly and efficiently that the community is thoroughly satisfied and gratified. The experience of municipalities which have enlisted the services of the Society in this work has been uniformly happy, and may well serve as a precedent for others. The work is one which falls within the province of the Society, and wherever a branch of the organization exists it may well be given jurisdiction in the matter.

Baltimore is just now considering a reform in its method of dealing with this dog question. The present system is of a gang or gangs of self-constituted dog catchers, who are stimulated to activity by a reward of twenty-five cents for every dog captured and delivered at the pound. Wherever in force this system has always proved vicious in practice. Voluntary dog catchers are likely to be ruffians and brutes, who fail to distinguish between dog catching and dog stealing; affrays are always imminent between them and outraged owners; personal violence is frequently resorted to, and more than one murder has resulted from a dog catcher's misdirected enthusiasm. That the system does not work more smoothly in Baltimore than elsewhere was illustrated by a case which appeared in one of the police courts of that city last week, when a young woman was brought before the court to answer a charge of assault and battery, the offense having been committed while she was engaged in defending the family dog from seizure by two dog catchers, George Washington and Elijah Toogood, both colored. The defendant, as the testimony showed, had discovered the men making away with the dog, and had fired a gun from an upper window "at an open space to attract a policeman." George and Elijah were unscathed, but as is usually the case, several innocent bystanders suffered; a boy and two women were wounded; and in the case of one of them the justice imposed upon the family dog defender a fine of \$75 and costs. What became of the dog is not reported; he probably went to the pound and contributed his head-money to the enrichment of Washington and Toogood. This case is instructive because it is typical of the system. Under a Society for the Prevention of Cruelty to Animals regime, if there had been necessity of seizing the dog, it would have been taken quietly, decently and without provoking a small riot; the public peace would not have been outraged by a woman shooting at random from an upper window; and Baltimore would have been spared the police court record of a case which reflects extreme discredit upon it as a civilized community.

Manifestly Baltimore should reform its dog license system. Two measures looking to that end are now

before the city council. One proposed ordinance would give the superintendence and execution of the work into the hands of the Society for the Prevention of Cruelty to Animals; the other one would provide two official dog catchers, to be paid salaries, instead of being rewarded so much per head for dogs captured. Manifestly either of the systems would be in the nature of an improvement upon the crude and brutal methods which now prevail with their shotgun accompaniments.

FIELD SPORTS AND WAR.

"A SOUND mind in a sound body" is a maxim which appeals instantly to the favorable consideration of all sensible men. It is so self-evident that the mere statement of it wins one's assent. But, potent as it is in times of peace, in times of war it is a thousandfold more so. The defenders of a nation must needs be physically able and enduring and clear of mind, both for their own preservation as individuals and the preservation of their country. But the physically strong and courageous and sensible are not the product of accident, nor are they peculiar to any special land or climate. The most vigorous men are those who grow and develop according to nature's simple laws, those who breathe fresh air, live in the sunlight, drink pure water, and observe the gospel of cleanliness both in their persons and their lives; and while all can observe the latter conditions, the former are not so easy of attainment by those who toil at the desk or bench for their bread and butter, those who are chained to business. The workers, whether with brain or hand, can set aside but a small portion of their time for the needed recreation; but the benefits accruing from even a short time spent in field or on stream, in the wholesome sports of gun and rod, are incalculably great to those who are the beneficiaries. Such makes all the difference between degeneracy and greater development, for no organism is at a standstill. Man advances or recedes. In engaging with the forces of nature, he develops to the highest capability of his nature.

Week after week, for many years past, the gospel of wholesome recreation has been persistently preached in these columns. The many thousands who have enjoyed the witchery of the waters wherein hide the cunning game fish have found in FOREST AND STREAM a wealth of matter in sympathy with their sport, full of the best literature appertaining to it and related subjects, and also up to date on all technical information. The many thousands of others whose enjoyment was greatest in pursuing the big game of the forests, using the rifle to offset the great size, strength and ferocity of the wild beasts, or those who pursued the gentler sports with dog and gun in pursuit of the game birds, were no less well served with the best that was entertaining and instructive. Thus the thousands who were "chained to business" had the newest and freshest of the world of sport from week to week, keeping their interest alive and their hopes revived for a time when the business chains would be broken—if not entirely, for a time at least sufficient to participate in the delights of the fields and streams. It was the doctrine of making men happier, and physically strong and capable.

In preaching the gospel of wholesome recreation, the forsaking of desk and workshop for the necessary physical and mental recuperation, which can be found nowhere so potent as in nature's own unroofed temples, much more than a passing good was conferred. The camping, the fishing and the shooting, in themselves delectable occupations, were a means of conferring on the community a class of defenders, men with sound minds in sound bodies.

Men who are physically strong and vigorous—these qualities resulting from the freedom, the activity, the self-reliance incident to the pursuit of field sports in time of peace—are palpably a great addition to the nation's strength at all times, but they are of incomparable value in time of war. While there is much in the work of the soldier that is distinctly different from the work of the sportsman, there is hardly anything in the experience of the latter which is not directly of value, by way of preparation, and analogous to the soldier's life. The sportsman whose eye and hand and nerve are trained to the use of a rifle or shotgun makes a more efficient soldier from the very beginning than does the man whose first knowledge of a rifle begins with his enlist-

ment. The man whose courage has been tested against the grizzly bear on its own ground displays greater fortitude in the face of danger than does the recruit who never had occasion or opportunity to face any real danger in his life. The man whose powers of body are developed to the highest degree of activity and endurance from long pursuit in the chase, who is alert, aggressive, self-confident and daring, who has camped in the wilderness, endured heat and cold and depended on his own efforts for subsistence, has already acquired much toward the qualities of the best soldier.

Thus field sports, with their lessons in the use of the gun, in camp life, in horseback riding, in discipline, in dangers, in developing strong, resolute and enduring men physically and mentally, are producing the very best material for the nation's defenders in time of trouble such as this country is now experiencing in the war with Spain.

The Government officials appreciate keenly the importance of physically and mentally able men, and their standards of fitness have these qualities in view, and are rigorously observed. Men who follow confining occupations, and who neither fish, ride, shoot, row, nor walk except from their doors to a street car, are apt to be narrow chested, and constitutionally incapable of any prolonged physical effort, even though they may have determination to go through a conflict, and grit enough to back up their determination.

Let the young and the old fish and shoot, first because in these they have a healthy and innocent means of recreation, and second, because the nation is a gainer in having better citizens, abler defenders, and a wiser people thereby.

THE MINNESOTA INDIAN CASE.

IN our game columns to-day is reported an important decision just rendered by the Supreme Court of Minnesota, defining the rights of reservation Indians as to the export of game contrary to the statute. An Indian woman residing on the White Earth Reservation, and engaged in the business of trading, shipped a consignment of birds to Detroit, Minn., where they were delivered to the express company for exportation out of the State, in violation of the non-export law. The goods were seized by the game warden and confiscated as contraband. The shipper then entered suit to recover, setting up the plea that the game having been killed on the reservation was not subject to control of the statute; and the case was carried to the Supreme Court. The opinion just handed down holds, after an examination of the treaties, that the jurisdiction of the State with respect to game extends over the Indian reservations, although by reason of the peculiar relations held by the Indians as wards of the National Government the State may not with respect to them enforce its laws on the reservations. When game has been shipped from the confines of the reservation, however, it becomes subject to State control, and if held in possession or transported in violation of the statute, it may be confiscated. This is good law and good common sense. The ruling will go far to make more efficient Minnesota's excellent system of game protection. With the market cut off the killing of game by the Indians will materially be reduced. How enormous this destruction is was indicated in a recent report by Rev. J. A. Gilfillan, a missionary among the Chippewas, who gave as his estimate, derived from an experience of years among the Indians, that the tribes in northern Minnesota killed annually an average of 355 moose and 4,700 deer. They hunt, he says, at all seasons, by every method, without regard to law, and not only on the reservations, but over large areas of contiguous territory. The very pith of the Supreme Court decision is just this, that it really has to do not so much with reservation game as with the game of the State at large, for the unlawful destruction of which the reservation game traffic has been a pretext and shield. We may now look for a tightening of the lines of a system which has put Minnesota in the front rank of game protective principles and practices.

We would be glad to have addresses of FOREST AND STREAM readers, whether regular subscribers or news stand purchasers, who, having volunteered, are now in camp, whether in a State camp or at Falls Church, Chickamauga or Tampa.

The Sportsman Tourist.

Hunting in Baffin Land.

THE FOREST AND STREAM has already given the account of that exasperating caribou hunt of mine in the heart of Nugsuak Peninsula, on the west coast of Greenland, in 1896. The direct effect of that experience was to whet my appetite for an ultimate successful hunt, and I was handsomely repaid for all my effort last fall at the head of Frobisher Bay, Baffin Land, just under the Arctic Circle.

We (my party of six and eleven Eskimos) had come up the bay 200 miles from the whaling station, in whaleboats, stopping occasionally for a day to hunt inland, but for the most part were disappointed about the game. Two or three small does were shot, by the Eskimos, I believe, but the herds which the natives had talked so much about had disappeared. As we came through Bear's Sound not a pan of ice was to be seen—hence no walrus. This was another setback, and although eider ducks swarmed in thousands in among the islands we pressed on to the head of the bay, where we were assured the "tookto" (caribou) would be found in numbers.

We reached the head of the bay in ten days, taking advantage of tides and winds, rowing on calm days, which were extremely few, and against contrary winds; rushing through groups of islands where the tide was setting in all directions and seals were continually coming to the surface to be met by a volley or shots from the boats as we sped along. Our larder was kept stocked with a variety of fresh food, ducks, venison, hares, ptarmigans and sea trout.

The tenth day found the expedition camped near the mouth of a large river, named by Hall (the only white man before us to reach the head of the bay) the River Jordan. We pitched the big wall tent and small circular tent in a friendly way alongside of a family of Eskimos who were found residing here for the summer, living as usual in squalor and grease. Their canoes, or kayaks, were down by the river, bottom side up, and resting on piles of stones. Two whaleboats, covered on the bottoms with "ookjuk," or big seal skin, rested beside them. A few dogs in a state of half starvation prowled among the skin tents, watching an opportunity to eat up their master's boots, hung out to dry.

A constant roar from the north came from the falls of the river, which dropped here 15 or 20 ft. In these the seal trout were swarming, large speckled fish, running from 5 to 10 lbs. in weight. We found the natives spearing them when we arrived. But to return to the caribou: After two or three days' desultory hunting Shaw and I started off one morning early with our guns and our pockets full of hard tack. We crossed the river below the falls, getting the Eskimos to ferry us across on the backs of their kayaks, and took a course up the river valley, or rather among the foothills skirting the valley to the north. Let the reader bear in mind that there is absolutely no timber in Baffin Land, the only bush there being the Arctic willow, which confines itself to trailing along on the ground. The character of the country is barren, with some grass near the streams and a patch of winter snow here and there against the northern slopes. Glacial drift is scattered over the valleys, with occasional boulders strewn over the hills; the rock is gneiss.

At six we stopped on the first ridge; we were working away from the valley, and scanned through the telescope the country ahead of us. This is the way reindeer are hunted in Arctic regions. Every well-to-do native is not without a spy-glass of some sort.

There was nothing in sight. The only sound was the strong wind cutting by our faces. We kept on down into one valley, up the next slope, scanning the new sections at the ridge, and so on mile after mile. I was pondering over my usual bad luck with this sport as we started to ascend one of the everlasting ribs of rock, when my companion, who was looking ahead, stopped and fell on his knees. I followed his example. As I did so he pointed in front of us, down a valley. A large male, barren-ground caribou was leisurely cropping the reindeer moss, slowly raising his heavy antlers, now in the velvet, and moving toward us.

I tried to compose myself. Many times hunting in Maine for moose, and in Greenland, I had imagined just such a scene as this, and thought how easy a thing it would be to raise a gun to my shoulder, take a long, steady aim and put a bullet through the heart, lungs or head of the big animal. But now I felt entirely different. There was a lump in my throat, but it was not there from the thought of shedding blood. Every hunter has known some time or other what that feeling is.

We retreated down the hill and skirted it to the north, crawling up another slope in the direction of the game. The wind fortunately was in our favor. At last I reached the top, pulling up among a semi-circle stones as big as bushel baskets, of which I shall speak again later. There I gained enough courage to raise my head and look down the hill. The lump came into my throat again, for there was the big bull scarcely 70 yds. away, looking, I thought, squarely at me. I turned over and lay down on my back. He seemed to my excited brain bigger than the biggest ox I had ever seen.

"You shoot first," said Shaw to me in a low voice, "and I will be ready in case you don't hit."

I turned over and looked again through the boulders. He was now a little nearer if anything, perfectly contented, munching the moss and slowly, very slowly, moving his head, as though his horns weighed heavily upon him.

Resting my Winchester conveniently on the rock in front of me, I sighted long and carefully. I aimed at his heart, and as he raised his head and was square on I fired. The beast dropped in his tracks, while I sat on the ground blinking my eyes at the sight, while Shaw was dancing a can-can around the boulders, his only comment meanwhile being: "Bully shot, old man! bully shot!" And so it was. There was only one hole that we could find where the bullet had pierced the skin. It was back of the neck and just below the burrs

of the horns—some distance, you will note, from the heart—but this time I had been lucky.

We skinned and cut up the animal after taking the principal measurements. His shoulder was 50 in. from the ground, the antlers 42 in. from burr to tip, with 22 points. He was fat, but his skin was not quite prime. The "tudnoo," as the natives call the fat, lay 3 in. thick on his back.

It was then only 9 o'clock in the morning, but hunting further that day was wisely given up. As it was, after skinning and packing the head, skin and the two hams, or 150 lbs., besides the guns, it was evening before we did the ten or twelve miles between us and camp.

One mile from the river we left our burden on a conspicuous boulder, and reaching camp sent the native boys after it. The next day they found the carcass and brought it to their tents, consuming every vestige of it, even to the contents of the stomach, which they consider an especial luxury.

In talking with my head Eskimo about the shot I had made I asked him to explain how there came to be but one bullet hole in the skin. I had firmly believed that the bullet had actually gone through the caribou's mouth and out at the back of his neck. He laughed at this, however, and showed me where the hair had been torn away just in front of the hole. This explained matters. As I had fired the animal was lowering his head to the ground, and the bullet entering the back of the neck had lodged somewhere in his body.

The circle of stones from which I had taken my "pot shot" was, he said, placed there a long, long time ago when the "Innuits" (Eskimos) hunted the caribou with bows and arrows. They were built in the valleys or on slight elevations in the valleys. In these the hunters would take their stand. Others would round up the game and drive it up the valley. The caribou kept to the low land and passed within easy range of the men in ambush behind the boulders. I saw many of these circles in the trip through the bay, and near some of them were holes formed by piling up rocks, into which the natives cached their meat.

Two days later the return journey was begun down the west coast of the bay along the savage, rock-ribbed coast of Meta Incognita. Caribou were more plentiful here, and one of my party had the good luck to run across a polar bear three miles inland up the bed of a small stream. Many wolves were seen on this coast.

After visiting the Boas glacier we headed across the bay and reached the station over familiar ground. The good ship Hope was awaiting our arrival (we were two days late), and the next morning found my party all on board and bound for Sydney, C. B., the railroads and home.

RUSSELL W. PORTER.

The Pearl River Country.

COMPARATIVELY few Northern sportsmen know anything about the splendid fishing and hunting which exists in the southern parts of Mississippi and Louisiana. The last was my third season spent in exploring, hunting and fishing along the line of the Louisville & Nashville Railroad, which penetrates a region which is all divided into rivers, bayous, and bodies of water extending far inland, from the Gulf of Mexico.

The district lying adjacent to Pearl River (which empties into Mississippi Sound, and is the dividing line between Louisiana and Mississippi) is about as fine a winter hunting and fishing ground as I have ever discovered. Thirty miles from New Orleans, La., is Lake Catherine, which is from two to five miles wide, and eight miles long. The waters of this lake seem to be directly connected with those of the Gulf of Mexico by several long arms called "passes," which have tides every twelve hours. These "passes" are wide and deep enough to float an ocean steamer, and contain an immense variety of fish, among them being the tarpon, or "silver king," sheepshead, red fish, mackerel, sardines, flounder, bass, green trout, ocean trout, king fish and over a dozen other varieties.

A number of bayous flow into lakes Catherine and Borgne, and in the winter these bayous are alive with bass. I took fifty-six of these bass in one day, using for bait a small fish called perch by the natives, but which proved to be our little Northern sunfish.

On the 7th of January I was rowing across Lake Catherine at 6 A. M., headed for Bayou Bazhan, famous for its black bass fishing. It was a very beautiful morning, warm enough for me to dispense with a coat. The sky was just glorious, with fleecy clouds extending from north to south, lit up and beautifully colored by the rays of the rising sun. At the mouth of the bayou I met another angler who, like myself, was charmed with weather and scenery. To the eastward the clouds seemed like rose-tinted feathers, while over southwest the forest lined shore of the lake loomed up faintly through the morning mist, growing gradually smaller and dimmer, until the fine shadowy lines faded into the gray light of dawning day. Rowing up the bayou about a mile, I let the boat drift down stream, as the tide was running out, and hooking a small sunfish through the lips, I cast the lure 30 ft. up stream, allowing it to drift gently down toward the boat. Fishing in Southern bayous, for bass, is very different from casting for bass in our Northern lakes and rivers. Southern anglers, at least in Louisiana, use a float attached to line about 4 ft. from the bait, and it is certainly a novel way to fish for bass, as it thrills one to see the float disappear from view, which it does in a hurry when a hungry bass strikes the bait. The morning in question was just right for bass, and I commenced to enjoy good sport from the moment I made my first cast until my bait gave out. After lunch I used "cut bait," removing the skin from dead sunfish, and cutting the fish in strips, which resembled a minnow. The bass ran from 1 to 5 lbs., and proved to be good fighters. The water in all of these bayous is salty, and the fish are finely flavored. I noticed that the bass always bit best when the tide was running out. I fished in Bayou Bazhan six days, and my total catch was 180 bass, the largest one weighing 5 lbs., although I hooked several larger ones, that escaped through the hook breaking.

The tarpon sometimes appear in great numbers in Lake Catherine. Two years ago a number of fishermen

were hauling a seine in this lake, and they caught a school of tarpon, and in a few minutes the net was ruined. When I told the men that a lady had hooked, played and killed a tarpon which weighed 100 lbs., I quickly established a reputation as a good fish liar.

Lake Catherine has many bayous flowing into it, all containing bass, flounder and whitecat, and I caught one fish that no one could name, it being shaped like a trout, having a forked tail, wide head, and a row of yellow spots extending from the head to the middle on both sides of the body. This fish fought long and savagely, and leaped out of the boat before being unhooked, after upsetting the bait pail, and playing havoc generally.

I have just received a letter from a friend who is fishing for bass in the bayous emptying into Lake Borgne, and he writes me that he averaged 100 bass a day for five days. But the Pearl River country beats any place we have yet discovered for really grand hunting and fishing. Up the river, a few miles above the mouth, the waters of the river are clear and full of large bass, while the woods lining the shores are full of deer, bear, turkey, squirrel, coon and rabbit. Honey Island, in Pearl River, is heavily wooded, and fairly alive with game.

A most interesting race of white people live in this Pearl River country; they have no churches, yet every one is thoroughly honest; no door is ever locked, and the latchstring is out to every stranger that happens to wander into the community. The people do very little farming, seemingly existing by hunting and fishing, yet every one looked fat and perfectly happy. In my next letter I will write more about these odd people, and hope to present some pictures taken from life in this region.

The duck shooting is great. Mallard, pintail, red-heads and canvasbacks are the only kind we deign to pull a bead on.

EDWARD G. TAYLOR.

Reminiscences of an Old Sportsman.—XIII.

(Continued from page 425.)

WHEN exploring for new grounds I went to work systematically, and carefully worked out all the covers in the section of country that I was investigating, whether they looked promising or not, for I often found capital shooting in places that did not have the appearance of being suited to the requirements of game of any description, and so often did this occur that I was forced to the conclusion that in reality I knew but little of the laws that govern the actions of birds, and that the thorough knowledge of all these matters that I had taken no little pride in was lamentably deficient, in this respect at least; but I was ever quick to learn in matters of this nature, and I soon found that birds are very like human bipeds in some respects, particularly in their love for the home of their youth, and that the laws that are said to govern them when selecting their haunts cannot be depended upon when put to the test of practical experience, for water and food supply have very little influence with grouse or woodcock, as well as many other birds, when selecting their place of abode. It is true that the birds must eat and have water, and when hungry or thirsty they will resort to the places where these essentials can be found, but that is far from proving that the books are correct in stating that these places are always their regular haunts, for I have certainly found it to be all wrong in numberless instances. Not that there are not many birds that have their homes where water and food abound and they may nearly always be found in the vicinity, but this proves nothing only that it is their home, for there are many other birds that make their homes in places where not a drop of water or any food can be found, and they also may nearly always be found in their chosen haunts. I have known hundreds of such instances, and in many of these places I have repeatedly shot every bird in the cover, only to find upon my next visit to the spot that it was again as abundantly stocked as before. As I have already said, love of the place where they were bred undoubtedly often influences their choice when selecting their home, but there is something else that leads them to such resorts as I have described, but what it is I do not know, although I have puzzled my brains over the matter many times.

I was once shooting with a friend, and we were crossing from one cover to another through a tract from which the wood had been cut the previous winter, and the sprouts had grown some 3 or 4 ft. in height.

As we came to a little knoll I remarked to my companion that I had killed many grouse here, and that it was a sure thing to find one or more here every time I visited the spot. I had scarcely finished speaking when the dog came to a point, and as we advanced a grouse rose and my friend killed it. A week later I was in the vicinity, and out of curiosity I went to the knoll and found another and killed it. A few days after this I met a friend, who told me that on the previous day he had also found one there. Now this place had been a noted place for grouse before the wood had been cut, but what should induce them to visit it when it was almost bare of cover and with no other cover within nearly a half mile of it I cannot tell, for the place was without water, and so far as I could see there was absolutely nothing in the way of food to attract them. How they were able to find the place is also a profound mystery, for so many birds were killed there that there was no possibility that one-fourth of them could have been bred in the vicinity. A friend who sometimes "drops into poetry," or he at least takes plenty of poetic license when the spell comes on, accounts for this mysterious coming of the birds to such places by stating that they possess the power of communicating with each other the same as mortals do, and that directions to the various places of resort, such as I have described, are handed down from generation to generation in the same manner that our own traditions were transmitted before the art of writing was known, and that it was as easy for a bird to find the place described by its parents or friends as it would be for a countryman to find the Astor House when proper direction was given him, although he were a thousand miles distant. I of course

readily assented to this, and asked him to tell me what attraction drew the birds here, but this was asking too much, for after he had looked over the barren spot where we were at the time, even his fertile imagination failed to find a plausible reason, and like myself he gave it up.

With knowledge of this peculiarity of the birds, but with no knowledge that would assist me in readily finding such places, I usually made a thorough exploration of new grounds, often going over them two or three times upon different occasions in order that I might become thoroughly acquainted with them, so that I could avoid the more barren portions, and thus often save valuable time when shooting them.

In this manner I have worked out a very large portion of the covers in the eastern half of Connecticut, as well as many in Rhode Island and a goodly number in Massachusetts, often finding some pleasant valley or beautiful hillside where abundant sport was sure, and in the good old days it was often the case that I was the first to pull trigger in such places, and for many years some of them were never shot over except by myself and friends. I have never thought it incumbent upon the sportsman to give to the public particulars as to the locality of game resorts, but have always believed that his "whole duty to man" in this respect was to share with his chosen companions the good things in this line that might come to him. Fifty years ago shooters were few, and it made little difference whether the game resorts were generally known or not, but for many years it has been altogether different, for hundreds now shoot where one did at that time, and if the sportsman of the pres-

two or three times each season, except that some of the best woodcock covers were shot over several times during the time of flight, and consequently there was always sufficient stock left for breeding, and each year I was sure of plenty of sport; but in late years all good places that are generally known are thoroughly worked out until not a solitary bird is left. More than forty years ago I was the proud possessor of a "happy valley" in the town of Scotland, Conn., and for several years myself and chosen friends enjoyed many glorious days along the little stream and on the adjacent hillsides, always finding an abundance of birds, but one day a couple of shooters followed us, and in a short time the happy valley was desolate. These men had each been shooting with me once, and once only, as, for reasons that were satisfactory to me, I had decided that once was enough. I felt badly to learn that they had found the place, but felt worse when I heard that they boasted of the manner in which they had found it. After this I had an eye open when I was going to a favorite resort, and upon several occasions I have succeeded in outwitting them.

The next season after I lost the happy valley, one of these men followed me in order to play the same trick, but I have always thought that I had more satisfaction out of it than he did. I started very early one morning in October for some favorite cover in the town of Willington, Conn. As we passed his house I saw his team ready, while he and a companion were evidently waiting to follow our lead. Explaining the matter to my friend, we soon settled upon a plan that we thought about the proper thing, so after we had passed through

of wood for the kitchen fire. No sooner did he see me than that armful of wood went flying in every direction, as with a half shout, half bellow, which ended in a convulsive gurgling sound in his throat, he followed the kindling wood and went down all in a heap. Thinking that he was in a fit, I jumped from the wagon and ran to him. Just as I was about to lay hands on him his wife opened the door, and with wide-open eyes gave a half scream of fright, which changed to one of hysterical laughter when she saw me, and then she also went into a fit of screeching and laughing like one possessed. By this time my friend had risen to a sitting posture, where he remained writhing around, holding on to his sides and trying his best to keep up his end of the performance. After matters had quieted down somewhat both of them at once proceeded to give me the returns that I had come for. Sifting the broken sentences and ejaculations as they came from the lips of the merry pair, I found that three days after our squirrel hunt our two followers put in an appearance, and hitching their horse at a barway some little distance below the house they made a break for the red-hot cover that had been marked by them for their own. With heads erect and eager steps they took a beeline across the open pasture for the big woods, and were soon lost to sight in the dense tangle. Some two hours later my friend saw them emerge from the wilderness with heads not quite so erect and steps not quite so elastic. Coming to the house, they asked him if he could tell them where I usually hunted, for they had only found briers and rocks among the fallen trees in place of the cover that they expected to find. With an innocent look and a

GROUP OF LESSER KOODOO.
In the Field Columbian Museum, Chicago.

ent time would keep his favorite cover for his exclusive use he must not whisper even the direction in which it lies. Thirty years ago I often shot with a jolly, good fellow who was a capital companion in the field, a gentleman at all times, a good shot and well up in the science of woodcraft. We were often out together, but I soon learned that it would not do to take him to any game resort that I did not wish the public made acquainted with, for he dearly loved to "fight his battles over again," and in recounting the incidents of the day's sport he would begin at the beginning and minutely describe the route and locality of every good place, giving the landmarks where every bird was found, and as his audience often contained other shooters they of course made a note of all this, and in a short time the good place was good no longer. I well remember how he thus ruined one of the very best of my favorite covers. This was a broad valley of swamp and meadow, where quail abounded, while the well-wooded hillsides that nearly surrounded the valley contained many nooks famous for both grouse and woodcock. I had shot over the grounds for several years, and had often taken friends there; and one unlucky day I took him. The evening after our return I went to the country store and was greatly surprised to find him in the middle of a detailed description of our two days' trip to several shooters, who appeared to be deeply interested, and so plain was his description that every one of them readily found the place, although it was twenty-five miles away. I was there a week later and learned to my sorrow that parties had been over the grounds nearly every day since my previous visit, and soon all that was left me of this once famous game resort was the memory of glorious days of abundant sport. After this he never had opportunity to give away anything in this line that was not already well known to the public.

I have often been followed by parties, who took this method to find good shooting grounds instead of hunting them up for themselves, and in this manner I have occasionally been robbed of my vested rights, obtained by much hard work. These fellows would haunt any good place that they found until they had nearly exterminated the birds and entirely ruined the resort. Now I seldom visited any of my favorite covers more than

an extensive tract of timber known as the "big woods" we turned from our course and drove to the house of a farmer friend who lived a short distance from the very worst tangle of briers, brambles and rocks that can be found in the whole region. I had often visited the place when squirrel hunting, as it was a noted place for them, and many a famous bag of the bushy tails had my farmer friend and I gathered in here. Arriving at the house, we were received with open arms by my friend, who, like his illustrious ancestor the renowned Gen. Putnam, left his plow in the half completed furrow, and before we were fairly ready his trusty gun was over his shoulder and he was ready for the fray. Marching to the woods, we were soon among the squirrels; and in accordance with the well-known rules laid down for such cases we proceeded to load and fire with an abandon that would have stirred the heart of the very prince of squirrel hunters. I had given my farmer friend the points as to the two who had followed us, and in order that they might be led to believe that this was a red-hot corner he suggested that lots of shooting was absolutely indispensable, so we loaded and fired regardless, and to the best of my belief nearly fifty shots were fired before we left the cover. All the shooting, however, was not at random, for we had a goodly bunch of squirrels to show, as well as half a dozen grouse, for there were grouse all along the edge of the big woods in abundance, but the tangle of briers and fallen trees was such that no sane man would seek for sport with the birds in so unpromising a place. Returning to the house, we found dinner awaiting us, after which we bade our friend good-by, and with hearts at rest and love and good will in our bosoms for all the world, our two followers included, we laid our course for our grounds in Willington with no disturbing doubts or fears that the beautiful covers we loved so well would be desecrated by the sacrilegious tread of the robbers who had so persistently followed us, for we had been informed by a passing friend that he had met them several miles south, near a well-known cover. A week later, while on my way to a favorite resort in the town of Ashford, I drove to the house of my squirrel-hunting friend in order to learn if the returns were in from our fusillade of the previous week. When I turned the corner near his house I saw him just going up the steps with an armful

confiding manner that only comes to the gifted ones, he pointed in the direction of the very worst tangle in the whole woods, and assured them that if they would only go far enough in that direction, through the laurel thicket, they would find a woodcock cover that would astonish them, and that there were also lots of partridges there. This put new life into them, and they once more started for the woods with renewed hopes. My friend somehow could not set himself to work, but just stayed about the house, and as an occasional shot gave him some idea of the progress of the two hunters he would hug himself as he mentally pictured the forms of the victims floundering through the tangled laurel thicket or struggling among the cat briers until he had worked himself into quite a state, and as he expressed it had more fun in the old woods in a few hours than in all his life before. It was nearly night when they again showed up, and as they emerged from the forest one of them was so lame that he was using his gun for a crutch and could scarcely hobble along. My friend joined them as they came to their team, when he learned that the lame one had slipped into a cleft of the rock and his shin had come in contact with the sharp edge, which had scraped off a piece of skin about the size of a half dollar, and as this had come to him more than a half mile away his stroll in the gloaming through the old primeval woods had not been so pleasant as the romantic surroundings and balmy air would seem to warrant. His companion was in somewhat better form, and with the exception of a wicked-looking furrow across his cheek, from which the blood was still trickling, and a sort of tired look, he appeared to be all right. My friend omitted the profanity, but described it as something so fearsome that so long as he lived he would on no account pass the unholy spot in the dark. Not the least amusing part of the tale was the telling of it, and it goes without saying that I enjoyed it to the full; but the returns were not all in yet, for my friend could not keep the story, and it soon reached our village, where it was told at the store one evening in the presence of the victims before a jolly crowd, that applauded to the echo, and as the two men slunk away it was the unanimous opinion of the boys that worse could befall a man than scratched cheek or bruised shin.

East African Mammals.

BY D. G. ELLIOT, F.R.S.E.

(Continued from page 424)

LESSER KOODOO (*Strepsiceros imberbis*, Blyth). NATIVE NAME, *Arreh*.

THE lesser koodoo is found at the base of the Golis and in the Ogaden, being plentiful in the valley of the Shebeyleh River.

This beautiful antelope, by far the handsomest of all those to be found in Somaliland, dwells in the thick forest of thorn trees where there is a heavy undergrowth of aloes, bearing red or yellow flowers about 5ft. above the ground. I have seen it quite near the plains, but never in the open. The head and neck are spotted with white, and there are usually eleven to thirteen white stripes around the body. The ears are very large, and the horns of the male rise in a spiral, a miniature imitation of those of the big koodoo. The lesser koodoo is a wary animal, and is very skillful in concealing itself among the bushes, over which it looks for a moment at an intruder upon its haunts, and then goes bounding away over the bushes and intervening objects in the easiest and most graceful manner, more suggestive of flying than any other kind of motion.

Careful stalking and tracking are necessary to enable one to get a favorable shot at one of these animals, and when he has reached a suitable shooting distance one must be quick and not linger upon his aim. This species goes in small herds of from four to six, and it is not often that two bucks are seen together. There is a great difference in the coloring of the sexes, the bucks being blue on head and neck, growing almost black with age, while the does are brown, as are also the young. At all ages the body is decorated with numerous white stripes, which gives it a very beautiful and striking effect. The lesser koodoo is gracefully formed and all its movements are very easy and attractive, while it is a most pleasing sight to witness one, with head and tail erect, flying at full speed over the bushes. Unlike many of the other antelope, the lesser koodoo where once started is rarely seen again, as it generally goes a considerable distance when frightened, and the density of the forest in which it delights affords every means for escape. Frequently a number of does accompany one buck, and I suppose he secures as large a harem as he is able to maintain. The females are without horns, and are smaller and of slighter build than the males. Specimens of this animal are very scarce in collections, in fact I know of no institution save the Field Museum which possesses a full series from babyhood to adult age to represent the species. The skin is not easy to preserve, the hair coming out on the slightest provocation.

WILD ASS (*Equus asinus somalicus*, Sclat). NATIVE NAME, *Gumburi*.

In certain parts of Guban, notably in the sterile district lying near the coast, about twenty miles east of Berbera, the wild ass is not very uncommon. We met with it also in considerable numbers on the high plateau west of Laferug, and also saw some individuals south of the Golis range in the vicinity of "Nasr Hablod," the mountains called "Virgin's Breast," where they were living among the thorn forests with high aloe undergrowth, frequented by the lesser koodoo. In fact, it was on an occasion when I was engaged tracking one of these antelope that I came suddenly upon a little family of wild asses, consisting of a jack, mare and foal. It is a very handsome animal, and although the head is large, it is very well shaped and has none of the heavy appearance so characteristic of the donkey generally. The blue-gray coat, relieved with the white nose and belly, and the striped whitish legs, all combine to present a very handsome animal, and I was most agreeably surprised by the first one we obtained, it had so much more of a game appearance than I had anticipated. The wild ass is an exceedingly wary creature, always on the alert, and it is no easy matter to approach within even long shooting distance of a single animal, much less a number of them together. They go usually either alone or in small parties of two or three individuals. The greatest number I ever met with at one time was eight. They prefer sterile, rocky districts, the ground covered either with sand or broken stones, and when hunting them I often wondered what the animals lived on, grass was so scarce and the blades grew so far apart when a patch was discovered. Wild asses are dependent upon water, and they never go far from places where it may be easily obtained, and their tracks were always visible in the vicinity of pools or other sources of supply, showing they came regularly to drink. In spite of their alertness, swiftness and other game qualities, no one, I should imagine, would shoot a wild ass for sport, it is too much like slaughtering horses, and after killing the first one, if it had not been for scientific purposes, none of my party or myself would have molested them a second time. The flesh of these animals is very good, almost the best we ate in Somaliland, being more tender and having much more flavor than any of the antelope. It does not seem to be a very plentiful species even in the country of its nativity, and I should judge it would not require much persecution to speedily extinguish the race.

THE LION (*Felis leo*, Linn). NATIVE NAME, *Libah*.

The lion is pretty well distributed throughout Somaliland, becoming more plentiful as one penetrates into the interior. It is getting to be rather scarce north of the Golis Range, and we first came upon its track and heard its roar at night at Mandera, near the base of the mountains. The Somali lion is a degenerate descendant of the South African species, much smaller in size as a rule, of a grayish hue, and with little or no mane. Rarely are specimens obtained with even a fairly long mane. Judging from our experience with them, they are most cowardly in disposition, and avoid man's presence whenever possible. Of course, if wounded and surrounded so that escape seems impossible, the Somali lion will show fight, as any other animal will, even a rat, but his principal idea seems to be when followed to put as

much ground between himself and his pursuers as possible.

We did not make it a business to hunt lions, as it wastes too much time, and after seeing a number of skins I decided it would not properly represent the real lion in collections, and so after procuring a specimen or so we paid no attention to them except when they were accidentally met with. At one time we followed one for several hours until sunset compelled us to give the chase up, and although the beast continually took refuge in dense grass and thickets of thorn bushes, he never would remain in them or show fight, and he was only seen once by one of the beaters. We met with lions in the middle of the Haud, many miles from water, and these animals must depend upon the blood of the creatures they kill to quench their thirst. Lions commit great depredations upon the flocks of the natives, and will no doubt make a meal of one of them also if they happen to find him asleep or off his guard in the bush. The Midgans kill many of them with their poisoned arrows, which, although they inflict but slight wounds, bring death in a brief period. Lions are sometimes hunted on horseback by large parties of natives, who bother him to such an extent that he does not know which way to turn, and is killed by their spears and arrows. An unsportsman-like way frequently practiced is to tie a donkey secure close to an ambushade built of logs and thorn bushes and wait for the lion to come and kill the donkey, and then shoot him at close quarters. The lion is attracted by the braying of the captive animal and, as he is very fond of donkey flesh, soon finds the place where he hopes to secure a much desired repast. In the highlands and colder parts of the country, as might be expected, the coat of the lion is thicker and heavier, but although I have handled a considerable number, I have never seen a really fine Somali lion skin, and doubt if the country produces one. Of course, anywhere near the coast it is difficult now to meet with an old lion, they having been mostly all killed, and those obtained are usually young or three-quarters grown, with the cub look still on their faces. Doubtless, to find them at all, one will soon be obliged to penetrate far into the interior, for, like most wild creatures, the lion is rapidly passing away.

[TO BE CONTINUED.]

A Glance at the Sparrows.

STARTING out one April day for a visitation of the pastures and a glance at the arriving birds, I found in my own street a "sapsucker" at work on one of the maples. He had drilled several small holes in the rough bark, which was now darkened by the trickling sap. Inserting his bill and wetting it in the sweetish liquid he snacked his mandibles with evident satisfaction. There used to be controversy as to whether this species really cared for sap or did its boring for grubs under the bark. The question was never debatable after Frank Bolles published the result of his painstaking observation. Sapsucker this beautiful bird is by nature, as by name. In the book he passes as the yellow-bellied woodpecker. Red-throated would better denote his chief distinction from the other wood-drillers. Like them this species wears the red crown, only in both sexes and more extended than in some; but in the adult male the throat is of the same brilliant crimson, and this marking identifies him at once.

Of course I did not get away from the village without the English sparrows offering themselves for observation. These little scamps are quick to recognize modern improvements that offer them housing. One was carrying a load of building materials up under the hood of an electric light suspended at a street corner, and it was not so bad a place for nesting as it might seem. Something like an oven when the sun heats up the iron cone, and not very cool when the light is burning, one would say; but the opening at the top must keep up a constant draft of air, and the protection from cats is complete, and from storms fairly so. The man who puts in the new carbons told me that the lowering of the lamps for that purpose does not break up the nesting. He has found eggs in the nests where the birds were permitted to remain, but they are not encouraged to do so. One of the maples beside the walk carried the dead stub of a large limb, and from the surface seemed to project a bird's head. This proved to be an English sparrow looking out from the mouth of a woodpecker's burrow. I watched a little afterward, to see if they were nesting in this odd place. I could not make out that they were, but one of them could not ask a snigger port in a storm.

The several species of native sparrows have a family likeness so marked as to be rather discouraging to the ornithological student who is trying to distinguish them. With more observation they develop an individuality, by which they are recognized, like our human friends, without an analysis of their points of appearance. The beginner, however, needs to know the characteristic marks which can be seen with an opera glass. He can seldom get near enough to birds for a satisfactory examination with the unaided eye, and he presumably has not the license to kill them for study, which the laws of some States hedge about with regulations which are just about prohibitory. When he sees a bird a little bigger than a canary, of a generally brown or grayish color, he may take it for a sparrow, and look closer for the signs of the species. In a summer walk in my district I expect to see five kinds, and some that nest in Canada are likely to be met with here in the migrating seasons. Two at least besides the English may sometimes be seen in the village. The social sparrow, or "chipping bird," is quite at home among folks, as the name may imply. You will perhaps see him skirmishing for crumbs about the kitchen door, and will know him by his dull reddish crown, with the white stripe beneath, then the clear, black line through the eye, which, when seen from the front, in connection with the bill, also black, seems to divide the head horizontally. The plain ash-colored breast is like that of some other species.

Rather less common in the village is the song sparrow, which I found further out, hopping briskly about shrubs and brush heaps, with tail feathers erected, and its dark brown head feathers also when excited or alarmed, forming the semblance of a crest; meanwhile uttering the single chirp which many kinds of birds use when busied

or disturbed, over and above the series of notes which may be more fairly called songs. This is the singing sparrow par excellence of those most often seen. It comes north with the robin, and the short, sweet song which it pours from the topmost twig of some low tree is one of the most welcome signs of spring. The song sparrow has a streaky front, but three dark spots, one in the breast and one under each side of the bill, stand out conspicuous enough to distinguish the species.

In a stumpy pasture I found the vesper sparrow exactly at home. This is a bird of the fields and of the ground. For ten or fifteen minutes I watched one slowly gliding over the turf hunting insects and worms, several of which it caught and devoured while I gazed. In general appearance the vesper is of a grayer tone than the song sparrow, and it is rather more leisurely in action. It is the most streaked of our sparrows. Fine streaks traverse the head and coarser ones the body. A dark band edged with white crosses the upper part of the wing, and a more conspicuous white stripe crosses lower down. A noticeable feature is a pale line that curves down and back from the mouth and then upward. When the bird flies it proclaims its species by displaying the white outer feathers of the tail. A bit of rusty color on the front of the wing is hardly prominent enough to justify the name bay-winged bunting which some give to this species. Its evening song suggested the appellation vesper, which would apply to some other birds as well—the robin, for example, is a famous vesper singer. Perhaps grassfinch is as good as any of the titles of this sparrow.

On a stump in the same pasture a field sparrow was standing. Throwing back its head it poured out a delicate song running off into the finest trill, suggesting a tiny bell set rapidly jingling and left to stop itself, a song small and clear enough to match "the horns of elfland faintly blowing." The song of the chipping bird is similar, but rather stronger and lower-keyed and lacking the bell-like quality. This is the smallest of our sparrows. It has the plain ash-colored breast of the chipping bird, and about the same reddish crown, but not the black line through the face. Even the bill is not black, but pinkish, and this is one of the distinguishing marks. A reddish tract across the back and shoulders is very noticeable.

Take the field sparrow somewhat enlarged, mark a dark spot on the breast and make the wings distinctly white and black, and you have the appearance of the Canada or tree sparrow, which I saw in these fields about the same time on its way north, together with the white-throat, the latter, however, rather more partial to the woods and shrubs. To one trying to know the birds by name it is an important help that so many are named from their most striking characteristic. The white-throated sparrow is an example. It is the best named and the best marked of them all. The white throat patch is unmistakable. Sometimes it makes the bird look as if it were trying to swallow a wad of cotton. Another distinctive mark is a bit of yellow back of the bill. There are several other sparrows, but I have not yet come upon them in my district. BRISTOL HILL.

Some Man-o'-Warsmen's Pets.

THERE is probably not a man-of-war afloat that does not carry at least one pet of some sort or another. An example of the way the pet business may occasionally be overdone was furnished on a United States gunboat cruising in Mexican waters a few years ago. When the ship dropped her mudhook in the harbor of Acapulco three-quarters of the ship's company forward went ashore and bought paroquets to carry to San Francisco. A paroquet is about as noisy and garrulous a bunch of gorgeous plumage as can be found. These particular paroquets could talk nothing but barbarous pigeon Spanish, but, so far as swearing went, they were most able. The owners of the birds contrived to get on fairly good terms with them, but did not succeed in teaching them English. One of the results of the establishment of friendly relations between the men and the birds was that when all hands were summoned aft to quarters the paroquets got lonesome and set up a whimpering and whining just like that of babies, which they kept going until the men were dismissed from quarters and returned forward.

The Mexican gunboat Zaragossa, a pretty, yacht-like little craft, was in the harbor at the time, and on the day before the departure of the American vessel the Zaragossa's commander, an ex-officer of the British navy, went aboard to make a visit of ceremony, accompanied by his staff officers—for the little Zaragossa is a flagship. The men on the United States cruiser were drawn up at quarters as the Mexican officers came over the side, and the paroquets up forward were, as usual, crying over their temporary desertion by the tars.

When the Mexican officers got over the gangway and started to address the American skipper in Spanish, there was a sudden hush among all the paroquets. The birds were apparently cocking their ears at the sound of their own language. They listened respectfully, without letting out a word. Then the American skipper, who was a man with a big voice, started to reply to the Mexican officers. This started the uproar among the paroquets again. The skipper had barely gotten out half a dozen words before the birds, in a shrill, broken chorus, began to lay him out. They exhausted the whole Greaser language of vituperation and scorn, and then began all over again. They heaped disgrace upon the skipper and denounced him in every set term known to distempered Mexican fishermen. The skipper smiled at first—a continuance of his conversation was impossible on account of the noise—but when the thing continued for a matter of five minutes or so he began to get purple in the face. He took the Mexican naval officers aft and entertained them in his cabin, and as he went aft the birds up forward hurled a parting volley of denunciation after him. The men were dismissed from quarters, and then succeeded in quieting the birds, but it was too late. The Mexican officers had no sooner departed than all hands were whistled to quarters and the executive officer's order that every one of the profane paroquets should be taken ashore by its owner forthwith.

When the cruiser Olympia arrived on the China station

a few years ago, one of the marines brought aboard a Japanese goat, an animal about the size of a big St. Bernard dog and capable of strong friendships and equally strong dislikes. This especial Japanese goat had probably suffered deeply from disappointments in early life, for he was surly to the last degree. The marines took him in hand, and by careful and persuasive methods brought him around to the point where he would endure the petting of men in the marines' uniform, but he would have none of the blue jackets. He butted them about impartially, and as he seemed quite impervious to the clubbing of belaying pins and marlinspikes, he always had the better of it in these encounters, and the men with the bell-bottomed trousers learned to sheer off when they made out the big goat patrolling the main deck. They tired of thus bolting for it after a while, and at a secret indignation meeting it was resolved, not to make a howl to the commanding officer, nor to slit the goat's weazand, but to retaliate. So one of the blue jackets went ashore and got another Japanese goat of about the same proportions as the one the marines had trained. In the course of a week or so the tars had their goat trained so that he would ram the first sea soldier he saw, top sergeant or buck private, and the marines began to limp around feeling of themselves. The blue jackets and marines combined to keep the two goats apart, for their belligerence was great.

One afternoon, however, after knock-off had been piped and all hands were laid out on corking mats, the blue jackets' goat evaded the watchfulness of his caretakers and made for the marines' goat on the after part of the spar deck. The combat was fierce and protracted. A dozen of the men tried to pry the two goats loose, but it was no use. The goats plainly meant to make a finish of it. The contest was about equal at first, but after a while the blue jackets' goat showed that he was the better stayer of the two. He wound the fight up by penning the marines' goat at the gangway. Then he took half a dozen backward steps and made for the beaten goat head downward with all his force, butting the sea-soldiers' rammer straight off the gangway into the sea. The marines' animal swam for it and made the beach. Then a truce was patched up, the beaten goat was brought back, the two pets were trained to endure each other, and to refrain from butting any members of the crew, and the goats are now sworn pals and stand monthly muster side by side, with their ship's cap-ribbons around their necks.

An old quartermaster on the cruiser *Alert* picked up a cub panther at one of the South American ports on the west coast a few years back. The animal was a pretty little chap and perfectly amenable to persuasion, although as he grew larger he would occasionally let out a snarl when the blue jackets offended his dignity that revealed his latent nature. His owner kept the cub's claws carefully cut, and he thought that he was in a fair way to achieve the domestication of a wild animal. The skipper had in a corner of his cabin three Peruvian fox terrier pups, that he was carrying to San Francisco for shipment to his children in the East. One morning, when all hands were at 9 o'clock quarters—the ship was at sea—the commanding officer, standing at the break of the poop to get the reports of the division officers, heard smothered yelping in his after cabin, and went aft to see what it meant.

The young panther was standing over three dead Peruvian fox terriers with blazing eyes and ruffled fur, and he jumped at the skipper as soon as he saw him. The skipper shook off the beast after he had been clawed and bitten. By this time a Great Dane dog and a mastiff, hearing the racket from their dozing mats forward, were in the cabin. The dogs had previously got along admirably with the panther, but they no sooner made their appearance in the cabin than the thoroughly aroused young brute seemed to be atop of both of them at once. The panther hung on to the mastiff's throat until the great dog rolled over dead, and he kept up such an incessant fiddling with his hind feet while he was thus cooking the mastiff's hash that the Great Dane could not get at him. The Great Dane finally nosed underneath and caught the panther's throat and shook the life out of him, but not before both of his eyes had been destroyed. The skipper sent the young panther's pelt home to make a muff for his little girl, and the blue jacket would be out of luck who would attempt to install on any vessel commanded by this officer a pet more difficult of repression than a dog or a cat.

There is a gunner's mate on the cruiser *Detroit* who was once a circus roustabout. During the years that he knocked around with various circuses he became a proficient in the art of charming snakes. He has thrown unnumbered scares into his shipmates since he joined the navy. He always carries some sort of snake about with him, and he has been punished by having his liberty restricted times without number for persisting in bringing serpents over the gangway on returning from shore expeditions in foreign ports. He carries a pet adder wound underneath the wide collar of his mustering shirt on some of his shore trips and enjoys himself when he strikes a man verging upon delirium tremens. Not long ago this man returned to his ship from shore liberty just in time to fall into line for monthly muster on a Sunday morning. He did not have time to stow his adder away, and the adder awoke from a doze just at the moment the commanding officer walked down the gunner's mates' line. The blue jackets who stood near describe the skipper's language as having been of the purest Jolly Roger character, and the owner of the adder spent a 10-day term in the brig for disobedience of orders.—*New York Sun*.

Eagle and Deer.

THE illustration of the eagle and deer, which has an interesting resemblance to the Audubon painting, of which an engraving was given in the issue of May 7, is from Mr. Harting's recent work on Falconry. The berkute or bearcoote, the golden eagle, is trained and used by the natives of Tartary and the Kirghis Steppes for hunting foxes, wolves, boars and deer. Mr. Harting quotes this description from Atkinson: "We had not gone far, when several large deer rushed past a jutting point of the reeds and bounded over the plain about 300yds. from us. In an instant the bearcoote was unhooded and his

shackles removed, when he sprang from his perch and soared into the air. I watched him ascend as he wheeled round, and was under the impression that he had not seen the animals; but in this I was mistaken. He had now risen to a considerable height and seemed to poise himself for about a minute. After this he gave two or three flaps with his wings and swooped off in a straight line toward his prey. I could not perceive that his wings moved, but he went at a fearful speed. I gave my horse his head and a touch of the whip; in a few minutes he carried me to the front and I was riding neck and neck with one of the keepers. When we were about 200yds. off the bearcoote struck his prey. The deer gave a bound forward and fell. The bearcoote had struck one talon into his neck, the other into his back, and with his beak was tearing into the animal's liver."

Game Bag and Gun.

A Caribou Hunt in Quebec.

ACTING on the principle that a good story of woods life, even though written in private correspondence, should find its way to the readers of *FOREST AND STREAM*, a New Jersey contributor sends us these extracts from a letter received from a friend in Quebec:

QUEBEC.—Mr. Alling.—Dear Sir: As Clarence could not enjoy a trip to the woods, I must give him a sketch of our experience. My friend Spearing was in town on a curling match, and knowing that he was coming I sent him a postal card to bring his blanket and rifle. We left at 2 P. M. on Jan. 2, and were met at the station by Frank and our little friend, the Indian Volant. The next morning at 8 we were all packed, and started for the camp. As our road has not been used this winter, we had to go a mile past Frank's and take a lumber road, which ran back till it struck near our road a little beyond the Rimouski, the first river we pass going in, there to abandon the horses and send them back, strap on our snowshoes, and start on a six-mile tramp over 3 to 4 ft.

GOLDEN EAGLE AND ROE DEER.

of snow, carrying our packs. I can tell you, mine was not a very heavy one. Not having had snowshoes on for a couple of years, we found it heavy work, and were glad when we came in sight of the White House, with any amount of growing pains in our hips.

Frank had got there first and shoveled the snow from the stovepipe and started a fire, so we prepared some beef tea and sundries that soon made an improvement in our condition. On the road in we crossed some caribou and deer tracks, so Spearing and Volant spent an hour or more after them, but decided to turn back to camp, lest it should prove too long a tramp for the first day, as far fields look green even in winter. We decided to start on Saturday morning at 8 and go back to the Tauridiff, a walk of eight miles, and as the track had not been broken it was heavy walking. On the portage from Long Lake Frank and I, who were valiantly protecting the rear and making use of the first men's tracks, found a cache of caribou meat, so I chopped off 4 or 5 lbs. and took it with us as evidence that there was game around, and lest we might not get any more. It made a good bouillon for Sunday.

We met a one-armed hunter, who was the owner of the venison we had borrowed, and he laughed when we asked him if he knew it. He had shot two a few days before, one out of a herd of nine on the Cassette above the Two Islands, and one on Long, and his dog had frightened four off the Tauridiff just before we arrived. Volant had shot two out of four on the Tauridiff the week we started, and Paul was after four others. There were tracks in all directions, and on the banks of the Tauridiff there had been a herd of about thirty browsing for some days the week previous to our visit, when they started southward, which was the direction most of the tracks were in; in fact, had we been a week earlier we might have shot a dozen, but we wasted time covering so much ground instead of marking the tracks nearer the camp. Had I been in better condition I ought to have followed some fresh tracks that crossed our road on the

first Tauridiff. We sent the two men back to take after them, and they soon came up, but followed awkwardly and started them without getting a shot, and once frightened there is no use following that day, as they travel many miles before stopping. After another day on the Tauridiff we returned to camp through a heavy snowstorm, the snow falling so fast as to cover the tracks of those who were an acre ahead. And how the wind whistled. It was quite dark when we got to camp, with its welcome shelter and warm beds—that is, comparatively warm. We were somewhat alarmed during the evening by hearing what sounded like shouts from the lake, and as Johnson and the one-armed hunter had promised to come over from Lake de Baies, we were afraid they were lost on the lake. So we put all our lights in the window and went down to the shore and fired guns, but after waiting some time concluded that it was owls.

The next day we started about 7, Spearing and Volant going east from the camp to cross East Lake and to Twenty-four Acre Lake, Frank and I taking the portage track from the camp. I had sworn a big swear that if I found a track I would stick to it all day, as it was the first time I had left camp to look up a track. About five minutes from camp I found two fresh tracks going in the direction of the Little Bay on the Cassette near the river. Following them carefully, I found they had crossed the end of the bay and into the woods toward the river. Fearing to be seen on the ice, I hurried back to the portage and down to the river, hoping to get a view of them, but not finding any tracks went back again and struck into the woods in line with where I supposed they might be. Soon I picked up their tracks and followed them back and forth till I found they must be but a few minutes old, when I missed Frank, and going a little to one side I saw him crouched near the shore, and he showed me the track where one of them had gone off up the lake, stopping several times to look round when only 50yds. off. Instead of going back and following the track I had been on, as a sagacious hunter ought to have done, we started up the lake and found that the caribou had entered the woods about half a mile up; so we started in after it, in and out, up and down, afraid to snap a twig with our snowshoes, till about a mile up it came out on the lake, and in about ten minutes

we got a glimpse of it on the north shore and followed till we had got up to opposite the islands, where it again entered the woods. I decided to find which way the tracks turned, and then come out and take the lake again, as I expected it would cross the bay at the beds. Frank waited till he thought I had returned to the lake and gained the point, when he advanced through the woods. I had just hurried through a drift to get a view of the bay, when I saw a perfect tornado of snow as the frightened animal launched from the woods with a 15 ft. jump and went away at an angle up the lake. I hurriedly examined and sighted my rifle and dropped on my knee, and the first good view I got was through my back peep sight as through a telescope. I pressed the trigger and had the satisfaction of seeing the game finish its leap by diving head down into the snow and water, which is always on top of the ice. It was so dead that it did not fall, but stood still with its nostrils in the water. The ball had severed the spinal column, cutting clean through the marrow. You should have seen Frank as he rushed out and took in the scene. We lost no time dressing the meat and setting it in shape to freeze, then returned to camp, taking the main lake; time, three and a quarter hours. We had been there but twenty minutes when Spearing returned and was surprised to see a fresh heart on a stick outside the camp. They had traveled from the time they left camp till then, following the tracks of two caribou, till coming to the portage they had found my snowshoe tracks, when Volant observed "A good chance for Mr. Sampson," and they returned to camp to find us looking up boards to make a sleigh.

When it was told that I had followed only one track up the lake, and that they had followed two, we decided that the other caribou must be there still—that is, the one I followed before seeing Frank. Volant immediately started back and found that the other one had followed up in my track for some distance and then had taken to the woods and back round by the rear of the camp, where he followed it, but it had gone off back to East Lake.

We got supper, a real good one, and then started to make a sleigh. I took the shelves from the kitchen to make the runners, and Volant cut a couple of white birches, which he split and chopped into two lathes about 9 ft. long by $3\frac{1}{2}$ in., and bent to suit the runners. We soon had a very fair sleigh by connecting them with bars driven into auger holes.

The next morning it was decided that Frank and Volant should take the guns and make a try down the portage to look up tracks, while Spearing and I should go up for our deer, about two miles. We found it no easy task to haul it back to the portage. About 10 A. M. we suddenly decided to go home. Leaving the deer on the ice, we returned to camp, and making up small packs each went back to the lake, where we found Frank and Volant, who reported no luck. Judge of our surprise when Volant told us to go on, he intended bringing out the caribou himself. We found at the station that it weighed 170 lbs., and he weighed 120. Bring it out he did, up hill and down dale, till he struck the lumber road, where it lay till a horse was sent back for it. It was a long, heavy tramp coming out, after having the tramp up the lake, as it is over twelve miles by the lumber road to Frank's, and as we did not find the horses there we had to continue on. Spearing and Frank got home about 7 P. M. I was later coming down than they, and when at about 6 o'clock I heard voices off in the woods, I knew there was a lumber camp there. I very sagaciously turned on the road and crossed over to it, and found the men just gathered in from the woods. As I appeared at the door and saluted in French, a clever-looking man appeared from the back and took my snowshoes and rifle and bade me welcome, at the same time removing my wet clothing and cap, and making a place on the drying rods hung them near the stove. He invited me to a special seat, and ordered the cook to set up rations of strong tea, pork and beans, camp-made bread, etc. Perhaps it was not welcome when used with the sauce I had picked up in my eight-mile walk. Then he made up his bunk and invited me to lie there till the horse should come up. Now it requires contrast to enable one to appreciate comfort, and I had had experience that made me fully appreciate the comforts at that camp, with its kindly occupants.

After the men, twenty-eight in number, had finished their supper, a signal was given by the foreman, and all hands knelt while prayers were recited, all joining in the responses. After this each one was at liberty. Some played games, cards, etc.; others repaired harness, made axe handles or spun yarns. About 9 P. M. the horse arrived with the caribou. Before starting the foreman dressed me in his warm, dry overcoat, as I had only a summer coat on, and away we went on a cold, windy drive, and got to Frank's all right, had supper and to bed till 12:30, when we drove down to the station and got the 6 A. M. train, and home in good order. Now talk about sentiment, really the lumber camp experience was very pleasant, with its kindly, disinterested attentions, and will always make a pleasant memory. About thirty of my friends had a share of the delicious venison, and I wish I could have sent you a steak; it was equal to small trout. I am having the head mounted and the skin dressed to make a hunting jacket, and I hope some day to have the pleasure of wearing it in your company.

R. SAMPSON.

Duck Shooting above Niagara Falls.

Editor Forest and Stream:

I received a letter recently from Mr. James Savage, of Buffalo, containing two photographs of a duck shooting party on Niagara River, within three-fourths of a mile above the falls and a quarter of a mile from the American shore.

After asking a number of questions on natural history subjects about which he was desirous of obtaining information, Mr. S. said:

"But I must stop plying you with questions, and tell you about my February duck shooting trip. Ed, R. went down to the falls on Friday night to be sure about the arrangements. He learned that another party intended to shoot from the blind we expected to use, so he and Neilson slept in the boathouse and were off long before daylight the next morning.

"My train was an hour late, and I did not get there until 8 o'clock. I found the boathouse near the entrance to the power canal and a note on the door telling me to shoot my gun off and Neilson would come in for me. It was snowing hard, and as I stood on the pier at the entrance to the canal I was undecided whether I wanted to venture out or not. But presently I saw the flash of guns away out in the river, and after listening to the banging for a few minutes I thought I'd try it. My signal was answered and in half an hour Neilson reached shore and was ready to take me out. I had every confidence in his knowledge of the river and ability as a boatman, or I should not have gone. We rowed straight out from the canal 500 or 600 ft., and then headed down stream straight for the falls. I shall not attempt to describe my feelings as we shot down a couple of short stretches of rapids. Presently we swung off into an eddy, and a pull of 100 yds. brought us over to where Ed was waiting in the blind.

"While Ed and Neilson were disposing of the boat, a flock of fifteen or twenty ducks flew by at 25 yds. I picked up Ed's gun and pulled, but the blamed thing would not go off. It was a hammerless and was at safe; and when I got fixed the ducks were out of range.

"When I became thoroughly acquainted with the conditions and realized that I had taken greater risks hundreds of times in more familiar surroundings, I fully enjoyed the novelty of the situation in spite of the disagreeable weather.

"From the maps I estimated by scaling that our blind was from 1,000 ft. to a quarter of a mile from the American shore, and less than 4,500 ft. from the brink of the American Falls; Neilson said he thought it a little over half a mile from the falls.

"We were on the lower edge of a field of anchored ice. The water here is only 3 or 4 ft. deep. The ice serves as a dam, diverting the water in swift currents to either side, and giving us an area of still water below.

"I had my camera, but did not get very good results, as pictures were over exposed. Wanted to get pictures of ducks coming in, but whenever that happened I

somehow forgot about the camera and picked up my gun. It was a poor day for ducks; we got only eight. There were hundreds about, but they would not decoy. The day before Neilson had got fourteen, and another man shot thirty-three alone. Neilson is a great boatman, and is said to have landed on Goat Island on one occasion years ago."

I was invited to be one of this duck shooting party, but politely asked to be excused.

Some thirty odd years ago, when I was in the wool business, a man on Grand Island wrote me that he would like to have me come up and buy his wool. He said that I could row across from Tonawanda in a small boat. I kindly wrote him that if he waited for me to row across Niagara River to buy his wool he would never sell it. A few days after he brought it to me and I bought it.

Last June, in company with Mr. Savage and another party, I rowed a boat across from La. Salle to the lower end of Buckhorn Island, two miles above the falls, and found it no more dangerous than on the Erie Canal.

J. L. DAVISON.

LOCKPORT, N. Y.

In Chickamauga Gulch.

CHATTANOOGA, Tenn.—It was on an October afternoon that we left Chattanooga, on the Cincinnati Southern Railway, for Daisy, Tenn., whence we made our way up Waldens Ridge, and after traversing about two miles of rough mountain road we reached the home of an old friend of mine, J. N. Milsaps. After greetings Mr. Milsaps, better known to the neighbors as "Pap," pulled down his eye-glasses, saying: "Well, George, come right in. I know what you have come for," and he added, addressing his wife, "mamma, George has not had any supper; see if you can get something for him." After a few minutes she announced supper, and we sat down to venison, corn bread and coffee, and you can imagine how good that tasted to two hungry men. During the meal I inquired after the health of the old lady, and this was her response: "Well, you know all the gals got married, and the work is too much for me, and I am gittin' old." After supper Mr. Milsaps said: "George, I am afraid I can't go; my rheumatism has made me so stiff I can't hardly get about. But I insisted that we would not have any luck unless he went, so he finally consented. By this time it was getting near time to retire, so calling for his Bible, the old man read a chapter and then we all knelt in prayer, after which we retired. At 4 o'clock we were called to breakfast, and immediately after breakfast all were anxious to get off.

We put off to what is known as Chickamauga Gulch, about eight miles north. Not a sign of anything alive did we see until about 1 o'clock, when we started up a flock of wild turkeys; I judge there were about thirty; but the dogs having frightened them, we failed to get a shot. We were hungry, tired, mad, and ten miles from home. "Daddy, I am hungry." "Well, Snyder lives two miles from here, and we will go and see if we can get something to eat. We found a dinner which tasted good to men who had not had a bite since 4 o'clock that morning. This is what we had: A pot full of turnips and greens, fat meat and corn bread baked in an old-fashioned Dutch oven, sweet potatoes and coffee, which was good enough for any lot of hunters. I offered to pay for what we had eaten, but Mrs. Snyder refused to accept anything, and became offended because we wanted to pay for what we had eaten. I, of course, apologized and was told that one must not offer to pay for what is eaten, if you want to keep the people in favor with you, so I gave each of the children twenty-five cents, and it was worth a dollar to see them; I guess it was the first money they had ever had of their own.

By this time we were ready to start on our bear hunt, and this is where the fun comes in. Mr. Snyder said to Mr. M.: "We uns will take that old dog and go down in the gulch, and maybe we can start a bear. George, you and Mr. B. go down the gulch." Not a half hour had passed when the dog struck the trail of I know not what, but I thought it must be something more than a deer in such a place; the laurel and wild ivy was so thick that a deer could not run, and if it did it would soon break its neck. After a while I came to some flat rock on the bank of the creek, and the dog was not more than 200 yds. in front of me yelping at every jump. I saw on this flat rock two long flat tracks that made me think hard. The first sound of anything for one hour and a half was at last the report of Mr. B.'s gun. I answered, and when I got to him it was down in the gulch where you had to look straight up to see the sky. "George, we must get out of this place before dark." So we then pushed ahead to meet Daddy. The dog lost the trail, and I was glad that he did; the bluff was so rough that we could not travel fast. After a while we heard the report of Daddy's gun, and presently we came to him and found that he had killed a bear. He took us to it, lying on the bank of a small creek in a deep gulch. Now the tug of war was how to get the bear out, for all of us were almost tired out, and it was four miles to where we got dinner, and twelve miles from home.

How the bear was killed may be told in the old man's own words: "You know I told you I would go and try if I could get one of the turkeys that we had seen? I got to the spot and sat down, had just picked a leaf to make a turkey call, and had given one yelp, when I heard something coming to my right. I was afraid to move for fear it would turn it, and I would fail to get a shot at it. I held the fire until he got in front of me, when I sprang to my feet. Being so excited I pulled the trigger of my rifle barrel, then I thought of my shotgun barrel loaded with large shot, and as he started to change his direction I fired at his left side, and I think he must have turned fully two somersaults. He got up and I put the dog after him, and he finally dropped here where you see him. But boys, there is a storm coming up and we must get out of here."

So we dressed the bear, leaving the skin on the carcass, and got a pole, and it required the combined effort of all three of us to carry the game. The hill was three-fourths of a mile to the top from where we were; night had overtaken us, and the rain had commenced to fall. After a long, tiresome tramp we reached the house, and had hardly gotten in when it began to pour in perfect torrents. We found that the people had no meat in the

house, but we supplied that want in a very few minutes with a portion of the bear; this the good lady cooked for us. After the meal we retired for the night, but I was so worn out that I could not eat any supper, neither did I sleep any that night.

The next morning we arranged with Snyder to haul our meat twelve miles to the railroad for one-fourth of the bear. We gave Mr. Milsaps one-quarter of the meat, and after two hard days' work reached home with one-fourth of a bear each, and having had a large time.

GEORGE W. MCCORKLE.

High Island.

JAN. 9 found the following jolly party of sportsmen ready for a trip to the gulf coast of Texas: Mayor J. A. Woodson, L. W. Cherry, John M. Pemberton, J. W. Irwin, Nat. Williams, George M. Heard, J. W. Blackwood, James Keatts, Dr. J. H. Lenow, Dr. G. M. D. Cantrell, Col. Ben. W. Johnson, June Ingram (the champion tarpon catcher), and Nick Trulock. They were joined by Messrs. Ward, Clark and Taylor, of Hope.

At Lake Charles, La., some of our party would have been glad to stop off, as the duck shooting near this point is very good; but the desire to get among those millions of ducks and geese and snipe on the coast was too strong and we concluded to go on. Arriving at Beaumont we found a special waiting to take us to High Island, forty-five miles distant. Our trip over was specially enjoyable. As we approached the gulf we saw thousands of ducks along the railroad, and every man in the party was anxious for a try at them. The distance prevented us reaching them that day, but we paid them our compliments later on. We arrived at High Island at noon, where the manager of the Sea View Hotel met us at the depot. The hotel stands on an island in this great salt marsh, 45 ft. above the sea level, and is a very popular summer resort, kept open in winter for sportsmen.

After dinner we divided up and started out for the first taste of shooting. Some went in wagons, others horseback, and the remaining few put in the afternoon shooting snipe within 200 yds. of the hotel. Here Pemberton, Keatts and I took saddle horses and started off down the beach to Mud Lake, a distance of four miles. En route we met riding along the beach four market shooters; one among them had tied to his saddle something like a hundred ducks, the result of about four hours' shooting that morning down the marsh some eight miles. We reached Mud Lake in about an hour's ride, passing thousands of snow geese and brant and geese feeding in the open marsh.

We found Mud Lake a big open body of water which was covered with ducks of many varieties, but our only shooting was had by stirring them up and catching one now and then as they flew around, so that our bag that evening amounted to less than twenty-five ducks. Being fair shots we wanted to get into that market hunters' country, and upon our arrival at the hotel that night engaged a guide to take us down early the next morning. The remainder of the party came in with more or less success. No big bags, however.

The next morning bright and early (4 A. M.) found Pemberton, Keatts and the guide in the saddle and Nat. Williams and the writer in a buckboard bound for the market hunters' paradise. All went well with Nat. and myself as we drove along the beautiful beach; but when it came time to drive in to the marsh with the buckboard, we could not make it. The guide directed us as best he could to some open holes, and he and Pemberton and Keatts rode off in the darkness. Nat. and I started in, working our way into the marsh, but soon found the market hunter in ahead of us; and we had to make the best of it and take such shooting as came our way. This was not satisfactory, and we could see the ducks flock after flock go to the decoys of the market hunter, as they passed over the open water holes we were trying to find before daylight. Away off in the distance we could hear the steady firing of our companions and we knew that they were having better shooting further down.

After bagging a few ducks we wearily dragged ourselves to our decoys and back to the buckboard to await the return of the party. After an hour or two they came with fine strings of ducks hung to their saddles, and we rode home to dinner.

I had inquired of the guides about the mallards, and was told that they had left that country six weeks before, but I thought the ducks I had seen from the train were mallards, and I was anxious to go after them. I soon learned that they were in White's pasture, seven miles back from the coast; and after much effort I engaged a guide to take us to the ground. The next morning by daylight Pemberton, Keatts and myself, with our coats holding ten decoys each, were off for some mallard shooting. After a hard, muddy ride we crossed the creek running out of Mud Lake and into the fresh-water marsh beyond, and soon mallards begun getting up everywhere out of the high grass and sailed away without a shot.

As soon as it was daylight we could see them pitching into the fresh-water ponds scattered over the vast marsh. Riding up to one of these ponds, not over 50 ft. square, it seemed to me that 10,000 mallards and sprigs would take wing. In fact, the sky was filled with flying mallards; but we found them going further back all the time. Not a shot had been fired as yet, but we came at last to a place that we thought would do, and after placing our decoys and making the best blinds we could, we began shooting, and by the use of my duck call and the decoys we had some excellent shooting at this place and bagged some thirty-eight big, fat mallards.

We were elated to find a country that was undisturbed by the market hunters, for they did not know there were any mallards in that section.

We rode home and arranged to try it the next morning, dividing our party up; but a norther came on that night and the birds were scarcer and would not decoy nor come to the call readily, so that we contented ourselves with twenty-one more green heads. When too late we learned that the tank where the cattle drank was the objective point of this great flight of mallards, where they were wont to rest and play in mid-day.

On our way to the hotel that morning we found that

the snipe had come in by the thousands, and as we were riding along they would get up in singles, pairs and half dozens, and sometimes whole flocks circled around us. As we had nothing but duck shells, they were allowed to go unharmed, although some of our party, who had enjoyed that kind of sport that morning near the hotel, bagged 130 snipe in a few hours. On our arriving at the hotel the threatening weather of the past few days terminated in a downpour of rain and we concluded to return home. We left that evening at 6 o'clock, arriving at Little Rock the next evening.

The shooting at Port Arthur is much the same as at High Island, except you go over to Johnson's bayou, where you charter a boat to take your party across the Sabine Lake, taking along rations, blankets and wading pants, when the shooting is done at the open places in the salt marsh.

While we did not kill many ducks, we enjoyed fair sport at ducks, geese, brant and snipe, a few curlew and a very enjoyable trip.

JOS. W. IRWIN.

LITTLE ROCK, Arkansas.

CHICAGO AND THE WEST.

Mr. S. F. Fullerton, State agent for Minnesota, is this week having fun with County Attorney Bell, the Roseau county lawyer, who has been charged with buying Minnesota moose, causing them to be entered at the customs office on the Canadian line as meat shipped from Manitoba, and so claiming exemption from the Minnesota law. The indictment is expected to hold water.

Mr. De Weese, of Cañon City, Colo., one of the best posted sportsmen of this country on Alaska game, and possessor of one of the finest collections of trophies known in the West, started last week for another trip to Alaska in search of further sport and additional trophies from the land of big heads and big frosts.

It is a trifle early to speak of chicken country, but next fall there will be plenty who will wish to learn of some, so I shall ask attention to the region about Eau Claire, Wis., as a shooting ground. The sportsmen of that city do not go to Dakota to find prairie chickens, and need usually to drive only a dozen miles or so out into the rolling farm country to get fair shooting. All that part of the State is farming country, but it also carries bits of timber, and swamp, and slough now and then, so that the birds manage to hold on.

This same region about Eau Claire is one which may very well be kept in mind as a partridge ground next fall. In the old slashings about that town, anywhere from five to twenty miles out, the ruffed grouse are yet numerous. Bags of ten to twenty-five are not extraordinary, and a dozen to a day's shoot would attract no special attention. Quail are also to be found even so high up in the State as this point, though the supply varies with the severity of the winters. This year there are a great many quail in that region.

Mr. G. F. Winslow, of Eau Claire, tells me of one style of sport once practiced by himself which I think may be classed as somewhat unusual. He was far up in the pine country of upper Wisconsin when he learned of the superintendent of one of the big lumber concerns that there were a great many partridges in the country about. The timber and underbrush together made it impossible to use either dog or gun to any advantage, so Mr. Winslow began to think the information of little benefit to him, until he was told to take the locomotive and one of the flat cars used in logging operations, and make a run out along the logging railroad. He had never before gone shooting with a railroad train for a vehicle and a right of way for grounds, but adopted the suggestion and pulled out one morning. Every few hundred yards a covey of partridges would be put up and marked down in the timber not far away. Then the locomotive was stopped, and the shooter leisurely took dog and gun and went after the game. When the cover got too thick, or the birds were not located satisfactorily, the engine was started up again and they went in search of a new flock of birds. Thus some twenty miles or so of road was covered, and a splendid bag of grouse secured. A man on foot would have no show with the game. I have often heard of sportsmen out in Iowa, in the old days, shooting prairie chickens from railroad trains in motion, but these were the regular trains of the railroad, and were not run for the pleasure of the shooters, and did not stop to gather up the game when killed. I believe Mr. Winslow is the first sportsman I ever heard of who has been favored with a whole railroad for shooting purposes, and that in a region where the railroad was practically a necessity for the sport.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Some New Hampshire Notes.

DUNBARTON, N. H., May 23.—My foxhound during the spring and summer gives a good deal of his time to woodchuck hunting, with an occasional fox chase just to keep his hand in. A few days since I found him barking at a woodchuck in a pine tree. The tree was about a foot in diameter, with branches growing close to the ground. The chuck was up some 20ft. and well out toward the end of a limb. I have heard of woodchucks being found up a tree, but always in a tree which was leaning at quite an angle. The woodchuck I speak of was in a tree growing perfectly straight.

One afternoon last week I heard my dog chasing a fox, and he drove him out into a large field in front of my house. The fox ran back and forth in the field for some time, the dog at times being within 6ft. of him. It was a large dog fox and he seemed to be doing his best to get away. My hound is rather small and not considered fast, but at times it looked as though he would catch that fox. Finally the fox jumped over a stone wall into some birches and that was the last I saw of him.

There seems to be a fair number of grouse and woodcock. I have seen quite a number of the latter, and one day last week I nearly stepped upon a grouse sitting on a nest of thirteen eggs.

The brook trout fishing about here is, of course, nothing as compared with twenty years ago, but is a wonder there are any trout at all, considering how persistently

every brook is fished. The law prohibits taking trout less than 5in. in length, yet a good many trout under that size are caught. When a trout of 3 or 4in. gets well hooked it will almost invariably kill him, and many fishermen do not consider it any benefit to put back a dead fish. About once a week I catch a few trout. Not many, but enough for breakfast. Last night after sunset I went to a brook near my house and caught five from ¼ to ½lb. each, and felt I had enough.

In years past I have caught some large strings of trout and made big bags of game, but as the years go on I find I am as well satisfied with a dozen fair trout or half a dozen grouse as the result of a day's trip.

C. M. STARK.

The Minnesota Indian Case.

CHICAGO, Ill., May 27.—Mention was made last fall in these columns of a very interesting case, at that time in process of litigation in the State of Minnesota, in which the special rights of the Indian to sell game was contested by the State Fish and Game Commission. At that time the confident belief of Executive Agent Fullerton and his attorney, Hon. T. E. Brynes, was that they would win in the upper court, to which they were taking the case. They did win. The Supreme Court of Minnesota on the 23d of May handed down a decision which covers the situation in a way most satisfactory to the State Commission. The decision is a heavy blow to the game sellers of Minnesota. The court holds that an Indian has no more right to break the game laws than any other man. He can kill for his own use, but can not dispose of game on any basis different from that which obtains for other men. After this the white man who has illegal game in his possession cannot expect to be excused by the plea that he bought his game of an Indian.

The case in question is entitled "Julia Selkirk, appellant, vs. P. O. Stephens et al., respondents." Stephens was the warden who seized the game from Julia Selkirk, the latter being a licensed trader on the White Earth Reservation.

Under date of May 25 Mr. Fullerton is so good as to send me a copy of the above decision in full, and on this he makes the following comment.

E. HOUGH.

"No other decision ever handed down by any court in the State of Minnesota will bear as much fruit as this decision will bear in regard to the preservation of game. It will do more good than a hundred wardens that we might appoint, and while it is in line with what the Game and Fish Commission of Minnesota have always contended, still we have been fought step by step even by the judges on the district bench.

"This decision places the Indian not above the white man, as some people would have him placed, but on a level, and accords him the same privileges that the white man enjoys in this State. The readers of FOREST AND STREAM who do not reside in Minnesota cannot fully appreciate what this decision means to us.

"We have many reservations in the very heart of our best game country, and unscrupulous white traders, with the assistance of squaw men, hire the Indians regularly to slaughter all the game they can. They do not confine themselves to killing it on the reservations, but they always store it away, and when game brings a big price in the Eastern markets they then ship it out as Indian game, and snap their fingers at us and say we cannot touch it.

"This has been their policy up to two years ago, when the commission decided to seize it. This case that has been decided was somewhat in the nature of a test case, and if they had recovered they would have gotten a good many thousand dollars from the State for game we have seized. I send you a copy of the decision, which covers the ground of our contention.

"We feel that great credit is due our attorney, Mr. T. E. Brynes, of Minneapolis, because he had against him Mr. Countryman, of St. Paul, one of the best legal minds in the State, and the game dealers have no cause to complain that their case was not fought for everything that was in it.

"Step by step we are getting things in shape in Minnesota, and with the few amendments that the conference at Chicago made last winter, we will have the best game laws of any State in the Union."

"S. F. FULLERTON."

The text of the decision reads:

STATE OF MINNESOTA.

Supreme Court, April Term, A.D. 1898.

Julia Selkirk, Appellant, vs. P. O. Stephens et al., Respondents. The plaintiff is an Indian and a licensed trader on White Earth Reservation. She purchased on the reservation a quantity of game killed thereon by tribal Indians, and transported it by wagon off the reservation to the nearest railway station and there delivered it to a carrier to be shipped out of the State. It was seized and confiscated while in possession of the carrier by the defendants, acting as game warden and game and fish commissioners of the State. Held that the defendants' acts were legal. Order affirmed.

OPINION.

The material facts alleged in the complaint are:

The plaintiff is an Indian and an actual inhabitant of White Earth Indian Reservation, situated within the limits of this State, and a trader thereon under a license from the United States. Prior to Nov. 19, 1896, as such trader she purchased upon the reservation from Indians residing thereon, and who were members of the tribes located thereon, a quantity of game birds, which were killed thereon by such Indians, consisting of prairie chickens and partridges of the value of \$485. On the day named the plaintiff attempted to ship the birds out of the State, and did transport them from the reservation by wagon to Detroit, Minnesota, the nearest railway station, and there delivered them to the express company for carriage out of the State to Eastern States, to be there sold by her agents for her account. After the birds had been delivered to the express company, and while in its possession and in process of shipment out of the State, the defendant, as game warden of the State, acting under the authority of his co-defendants, who constitute the Board of Game and Fish Commissioners of the State of Minnesota, seized the birds and delivered them to the board, and thereupon the defendants, claiming to act as

such officers, sold the birds and paid the proceeds thereof into the treasury of the State. The defendants interposed a general demurrer to the complaint, which was sustained, and the plaintiff appealed from the order sustaining it.

At the time of this attempted shipment of the birds out of the State the statute of the State for the preservation of game contained with other provisions the following:

"No person at any time shall catch, take or kill, or have in possession or under control, any of the birds, animals or fish caught, taken or killed in this State—with intent to ship the same beyond the limits of this State, or with intent to allow or aid in their shipment out of this State, or shall ship or intentionally allow or aid in their shipment out of this State."—G. S., 1894, S. 2,170.

"It shall be the duty of all members of the Board of Game and Fish Commissioners, all game wardens, sheriffs and their deputies, constables and police officers of this State, at any and all times, to seize and take possession of any and all birds, animals or fish which have been caught, taken or killed at a time, in a manner, or for a purpose, or had in possession or under control, or have been shipped contrary to any provision of this act. Such seizure may be made with or without a warrant."—G. S., 1894, S. 2,177.

This statute makes it unlawful to ship game out of the State at any time, and authorizes its seizure and confiscation if the statute is violated.

The statute is constitutional. State vs. Northern Pacific Ex. Co., 58 Minn., 403. Greer vs. Conn., 161 U. S., 519.

It necessarily follows that the seizure in question was lawful, and that the complaint does not state the facts constituting a cause of action, unless the fact that the game was killed on the reservation by Indians exempts it from seizure at a place within the State and off the reservation, while it is in possession of a carrier for shipment out of the State. The question for our decision is not, whether our game laws may be enforced against Indians so that they may be prosecuted and personally punished for its violation on the reservation. Were this the question, it would have to be answered in favor of the Indians, for this court in the case of State vs. Campbell, 53 Minn., 354, rightly held that tribal Indians on this reservation are not subject to the criminal laws of the State. But the sole question here is the legal status of game found off the reservation and in the hands of the carrier for shipment out of the State, which was killed on the reservation by Indians. The answer to this question involves a determination of the extent of the jurisdiction of the State over this reservation.

The White Earth Reservation is not unceded Indian country. It was such prior to 1855, but by an act of Congress approved Dec. 19, 1854, 10 U. S., 598, the President of the United States was authorized to enter into negotiations with the Chippewa Indians for the extinguishment of their title to all lands owned and claimed by them in the territory of Minnesota; the treatise so to be made to contain a provision that:

"The laws of the United States and the Territory of Minnesota shall be extended over the Chippewa Territory of Minnesota whenever the same may be ceded, and that the same shall cease to be 'Indian country' except that the land reserved to said Indians, or other property owned by them, shall be exempt from taxation and execution, and that the act passed June 30, 1834, 'To regulate trade and intercourse with the Indian tribes,' etc., be inoperative over the said ceded territory, except the 20th section, which prohibits the introduction and sale of spirituous liquors to Indians."

Such a treaty was made Feb. 22, 1855, and proclaimed April 7, 1855, whereby the Indians ceded to the United States all right, title and interest of whatsoever nature, which they had in and to a large tract of land therein described, and which included all of the land now known as White Earth Reservation.—Rev. Ind. Treaties (1873), 263.

This treaty reserved a number of tracts of land which were set apart for the homes of the Indians, but there was no reservation of the right of the Indians to hunt and fish on and over the ceded territory. None of these reservations included any lands within the limits of White Earth Reservation. A portion of the land now included in the last named reservation was set apart for the future home of the Indians by treaty of May 7, 1864, proclaimed March 20, 1865, and by treaty of March 19, 1867, proclaimed April 18, 1867, there was set apart for the use of the Indians, in order to provide them with a suitable farming region, thirty-six townships of land, to include White Earth Lake and Rice Lake.—Rev. Indian Treaties, 259 and 271.

Under the provisions of the treaty of 1867, what has since been known as White Earth Reservation was established. The legal effect of the treaty of Feb. 22, 1855, was that the lands now embraced within the limits of White Earth Reservation became public lands of the United States, and that every right of the Indians therein became absolutely extinguished. The laws of the then Territory of Minnesota became operative over the whole territorial limits of the present reservation. When the Territory of Minnesota became a State in 1858, the jurisdiction of the State was just as complete and absolute over the other part of the State, except as to the sale of spirituous liquors to the Indians. The State has never ceded or relinquished any part of this jurisdiction.

Such jurisdiction was modified, by the subsequent setting apart the reservation for the use of the tribal Indians, under the control of the general Government, to the extent only that the State cannot tax the property of the Indians, nor interfere with the control of such Indians while on this reservation, or punish them for acts committed thereon in violation of the laws. This limitation of the power of the State does not arise from the fact that the laws of the State are not operative upon this reservation, but it grows out of the personal relations of such Indians to the general Government. They are its wards and under its guardianship and control, and the State may not interfere with or impair the efficacy of such guardianship. Subject to this limitation all of the general laws of the State, including its game laws, are in force in every part of White Earth Reservation. A white man may be punished by the State for a crime committed

thereon, but a tribal Indian may not be.—State vs. Campbell, supra.

After the Indian title to the land within this reservation was extinguished, and before it was set apart for the Indians in 1867, the State owned the game thereon in trust for the whole people of the State, with the right and duty to make and enforce such laws as it deemed necessary for its protection and beneficial use. The State has never parted with the ownership and trust. It is therefore not true as a legal proposition, whatever may be the case ethically, that the Indians own the game on this reservation, for it belongs to the State, and its game laws are operative upon this reservation. But its remedies for enforcing them are imperfect in that it cannot punish Indians for violating such laws on the reservation. A white man on the reservation may be so punished.

It is unnecessary to, and we do not decide whether the State may or may not interfere with game which is unlawfully in the possession of Indians on the reservation. But we do hold that when, as in this case, game is once off this reservation and in the possession of any person or corporation in violation of the law, it may be seized and confiscated by its proper officers, without reference to where or by whom it was killed.

It is immaterial whether the shipment of the game in question commenced on the reservation or off it, and at Detroit, for if it commenced on the reservation no question of interstate commerce can arise, for the reservation is a part of the State, and it has jurisdiction over it, except as we have stated.

Order affirmed.—START, C. J.

Sportsmen and Spotsmen.

Editor Forest and Stream:

I am greatly interested in the subject of game protection, and therefore read everything pertaining thereto, which from time to time appears in your most excellent paper.

It seems to me that there are a great many self-styled sportsmen who are eternally howling for game protection, and are at the same time violating the simplest laws of the principle every time the chance presents itself. We hear much about market shooters, but we naturally expect nothing from them voluntarily, the only way to stop their work of slaughter is by the strong arm of the law. But from the man who is supposed to be shooting for pleasure we have a right to expect moderation; and if he has the instincts of a sportsman he will invariably know where to stop.

Your true sportsman is born, not made. If he be fortunate enough to be rich, "more power to him," as he can then give a wider scope to his inclinations, and none of us will gainsay his right; and on the other hand, if he is poor, or in moderate circumstances, he will prove his devotion to rod or gun by self-denials in other directions, in order to enjoy his favorite outing.

Now I may be all wrong, but I have no use for the fellow who employs a retinue of serving people to do all the hard work (which to me is the source of much enjoyment), and himself sits at his ease in a blind, or at a crossing, to have his game driven or decoyed up where he can easily slaughter it. Speaking of decoys, I never see one that it does not cause me to feel a strange antipathy to such things. Why do we not pass laws prohibiting or at least regulating their use, on the same lines as laws regulating certain kinds of fishing tackle? It is not lawful to hound or hunt deer with a jack light in some sections; why then is it right to decoy ducks and geese? I'll guarantee that you can get more keen delight by bagging your game by stealth and strategy than to have it coaxed up where you can easily pick it off.

The way to protect game is to protect it. Stop the traffic, the game hog (rich or poor), the pot hunter and market shooter, by drastic measures, for education to a higher moral plane takes too long. I believe the later day game hog is more responsible than any other one cause for our fast disappearing native game. I never could understand the creed of this individual. Is it a reckless, wanton desire to kill? a thirst for gore? or merely an ungovernable greed?

Thinking of these things makes me turn back the pages—I shall not say how many years—to a bleak November day, with a feeling of sleet or snow in the air. A certain boy was lending his puny assistance to two men in the not unpleasant task of husking the golden ears of corn which had been cut and shucked in the creek bottom land. Ever and anon the boy cast a wistful glance in the direction of the creek and marsh land from which would occasionally come floating the far-away honk of the noble wild goose. The boy was so constituted that he could only withstand that challenge for a certain length of time. He finally maneuvered out of range of the aforesaid men, then scooted for the house, purloined the old single-barrel muzzleloader, whose prescription was "a handful of powder, a wad of old newspaper, tamped until the ramrod bounded out of the muzzle, a handful of No. 4 shot, with more newspaper"—no scientific load this, but it usually got there. How carefully and stealthfully the boy picked his way through the alders and tall reeds, and how studiously he kept his small person concealed therein. And how his heart thumped against the roof of his mouth when a dark shadow sped rapidly athwart his vision. Ah! what a thrill when he raised his gun to pay a salute to a low flying squad. Knowing nothing about holding ahead theoretically, but instinctively grasping the principle, when he pulls trigger he scores a miss, but causes a few downy feathers to float gracefully down to the water, encouragingly. Was that boy a born sportsman? I am of the opinion that he was. And what would that boy not give now to live that afternoon over again, to be as he then was, as nature made him, there along that creek bottom in the marsh? But the wildfowl no longer haunt that spot as they were wont to do in those times. What has become of them? Has the boy and his prototype decimated their numbers? Or is the horde of unthinking sportsmen with their decoys and murderous breech-loaders, and a desire to blow about their great bags on their return to town, responsible? This is something for us seriously to reflect on. I am afraid it is too late to do much else.

PEN FEATHER.

PITTSBURG, Pa.

Sea and River Fishing.

Fishing Up and Down the Potomac.

The Richland Seine.

WE had last season, on several occasions, made a tentative engagement to attend a hauling of the second herring seine on the Potomac, but after the fly-fishing began be begrudged the holiday.

Early this month, however, we found the long-looked-for opportunity, and taking an afternoon train for Wide Water, nearly fifty miles down the Virginia shore, reached there while the net was still two hours of landing.

We walked up the beach after supper to the fishing shore. Two turnstile horse powers with four horses in each were hauling in the quarter lines, and when they were in a crew of fifty men gathered about the net, slowly hauling at both ends and laying the "in" upon the sandy beach. When the net had been shortened to twenty fathoms the lead line was brought under to shore, and the remaining net cupped by the crew raising the cork and lead lines waist high, and slowly shortened to 50ft., inclosing a struggling mass of herring, shad, etc.; those on the surface kept up a spattering fusillade that can be heard several rods in the quiet night, and sprinkled muddy water and fish scales on everything for several yards about.

To one who had not seen large seines operated, 35,000 fish seemed something tremendous, and it was almost as much of a surprise to find the catch a disappointment to those most interested, who saw in it such serious signs of falling off as to indicate the threatened close of the season. The morning haul had been between 50,000 and 60,000.

To the outer edge of the net a rude fish scow was dragged and the cork line hung over pegs on the gunwale. We were carried out to the scow on the shoulders of stout fishermen to get a closer view of the proceedings. Four men stepped into the net with two nets on hoops holding near a bushel each, and the fish were dipped and emptied into the deep boxes of the scow, of which there were two with a well between. In each box stood two men with small dip nets, with which they skillfully scooped up shad or other stray fish and placed them in baskets. When the scow was filled to the depth of a foot or more, and in danger of grounding in the shallow water, it was pushed off to the landing above and another brought in its place.

The dim moonlight struggling through the hazy clouds, the lanterns on the beach, or torches of waste net dipped in tar, the crowd of idlers lounging about the sands, attracted by a curiosity like our own, the chaffing of the crew, the shouts of orders or inquiry, the singing of the net crew, the bewildering collection of fish such as we had never seen, all served to form a weird picture never to be forgotten. The net crew has been spoken of. All assist at the haul, but so soon as the net is in the little army divides into squads, and one company becomes the fish crew to dispose of the catch, another takes its place in the sheds, where the fish are stored, or takes care of the horses, and another, the net crew, must at once secure the miles of net and rope upon the beach and carry it out to the seine boat and coil it down ready for next day's paying out. This, to those engaged in it, is a simple routine matter, but to the uninitiated it is a complex problem, so intricate in its disposition as to take rank with an engineering feat.

The peg-board of a life saving line simplifies the matter, but here are miles of net, and cork, and rope, and quarter lines, and buoys, and brails, piled in methodical confusion, that must drop of its own weight into the water without an instant's hitch or delay.

We had a beautiful illustration with this one of the popular idea that fly-fishing is purely a matter of skill in which luck has no chance to enter. We only had an hour at the pond, as we had accepted an invitation from the proprietor of the net to dine on a freshly-caught shad—planked. One of us had had his turn at casting, for we were alone in the boat, and the other made only a cast or two and found that the long winter and a steam-heated room had shrunk the tip and loosened it from the ferule, but it did not drop out. The extra tip was in the case at the landing 100yds. away, and it was time we were going back. It was awkward, but passing the rod back the tip was forced into the ferule hard, and a dozen casts made, when again the ominous click. With a promise to reel up after one more effort, the rod was again passed behind and again the tip pushed home, when suddenly there was a boil at the sunken fly; hastily catching up the rod a little twitch seemed to fetch up against a log, but there was a rush and the fight was on. Drawing in the line too quickly, the leader knot was drawn through the tip-eye and would not go back. The fish took refuge under the boat, and the muddy water was an advantage, as he did not see much of us. The rod pointed back to the man with the paddle, who made frantic efforts to get the leader knot out, and the tip under his manipulation looked like a letter S. The bass settled the matter by rushing out, and for some minutes he played a fair game, with the end of the rod under water most of the time. He finally came near enough to net, and the hook was in his cheek. One might imagine we would sometimes boast of the skillful performance at least when we are alone, but we don't; it is only given as another proof of there being no such thing as awkwardness and luck in fly-fishing. Only science and skill can get a fish with a fly. But the chance to get planked shad, and such planked shad, was luck, and we took a short cut through the May woods to the house of our host. A yacht was down from Washington with a party of friends, but they were picnicking at a spring on the beach, and had already eaten their shad planked on the sand, and were lying about in the shade smoking and enjoying the soft air and blue sky which had been altogether too scarce this spring.

Plank shad, so well known all along the Potomac shores, may not be a familiar expression to all your readers, and a brief description is hazarded. A freshly caught shad is split down the back and nailed flesh side out to a stout oaken plank, which is first heated, and to hold

sufficient heat to help cook the under side a plank of a couple of inches in thickness is generally used. This is tilted up near a mass of live coals, and the fish kept constantly basted with Worcestershire sauce and drawn butter until it is thoroughly browned, and served hot. It is a toothsome dish, and no one in this country has ever been heard to say it was not good. Indeed it would hardly be safe. It has but one fault—bones.

The Chippewas and half-breeds of Canada cook trout in a somewhat similar manner; the split fish is skewered with peeled twigs like kite sticks to hold it stiff. It is then stuck on a stout stick, which is thrust into the ground near the open fire, the stick permitting its easy turning to brown both sides; but the trout cooked so is a very dry dish as compared with the shad.

After dinner and our smoke, we accept an invitation to accompany the seine boat to see the laying out of the net. Our host, who had not made the trip in years, but contented himself with watching the operation from his house on the hill, went with us for good company's sake.

The boat, rudely constructed, has banks for two dozen rowers, and looks much like the pictures of the ancient galleys.

When the last fish scow has been towed to the landing it is already late, and to give the crews any chance for sleep before the next tide the catch must be quickly disposed of and lights out. At the landing is a string of wagons from the country, some from forty miles inland, who have come for their winter's supply of "Potomac Robins." They pay as highly for them as they could buy them for in the market, but they get their fish alive and in town they would be iced and stale. When the wagons are loaded and gone the balance are scaled, a three-minute operation, hardly understood by the novice without explanation. Two men are still in each box of the scow with their short-handled nets and long rubber boots. Two others come down from the fish-house with a bushel basket, which they fill with clean sand from the beach and scatter over six or seven thousand fish in one of the boxes. The shad have already gone to the ice-box, and only herring are left. These are stirred with the nets and trampled with the soft boots, which never break a fish. Then come two men with a tub having a pole through it. This they dip full of water and splash over the herring in one corner of the boat, and as they dash the water on the men in the boat stir rapidly with their nets, and in this way rinse off the sand, which with practically all the scales passes through the false bottom of the scow to the well in the center, to be afterward pumped or scooped out. The few fish in the corner which have been rinsed are dipped into the tub and carried up to the fish vats, where other men salt them down. The boatmen stir up more fish and push another tubful to the handy corner where the carriers may splash them; in an incredibly short time the fish are all in vats and hidden under salt. In this one fish-house are nearly half a million herring, corned or salted, and they have the reputation among their consumers of being "equaled by few and excelled by none."

The next morning the net was out long before we were, and the brail nearly in by breakfast time, but we had plenty of time to wade out to the fish boats and watch the details of the landing to better advantage than in the semi-darkness of the evening before.

There were great silver eels squirming among the herring, but no lampers, as it is yet early for these. Sometimes as the season closes a few are taken. The fishermen amused themselves and us by picking up the wriggling eels and laying them on their backs in trenches in the damp sand, drawn with the finger, where the eel lay as still as if dead. They invariably, religiously as it were, made a cross at the head of the trench, as if the sign was a necessary part of the performance. We saw the experiment repeated with half a dozen of the largest, with always the same result. It may be the sudden chill of the damp sand to the dorsal nerves, but it was suggestive of the old mountebank's trick of hypnotizing a chicken with a chalk line.

There were many odd creatures in the net—silver gar and pickerel, perch, yellow and white; catfish and sliders, or smooth pond turtle, vicariously diamond backs; and the odd soon interested us, and always the crew, more than the herring, for these are treasure trove.

After the landing we took our fly rods for a mile stroll through the woods to the Richland Mill Dam, to see if the bass were up, and caught three, though the water was far from clear.

The spawning was over, and there is no close season for the ponds, but we were afraid the young bass needed their care, and returned them to the water after petting the largest, something over 2lbs.

The great net was coiled or laid in the stern in a pile 30ft. long and 10 deep. The selection of the time for the laying of the net is a delicate matter of judgment and requires long study and experience with wind and tide. It is laid at last of flood and far up the river, so that the first of ebb brings it down and opposite the landing. If not calculated well, and the tide carries it below, it is called a runaway haul, and means much additional work, danger, and loss. They have not had one this season here. The superintendent, who has been at the business for twenty-six years, seems to decide by instinct rather than by the many signs we do not recognize, and does his work so nearly mechanically as to have the appearance that it would do itself if he should happen to be asleep.

The boat is rowed up the shore for a couple of miles past the famous duck blind, where our host entertains our sporting Presidents. The channel of the river is narrow and close to the Maryland shore, and all this broad middle ground is shoal water, where the paddle wheels dare not come and the ducks are undisturbed; besides, the proprietor feeds them throughout the season, and has long had one of the most famous shooting grounds on the river.

Just before we reach the blind comes out from the shore a rowboat with a great coil of rope in the stern. Coming close, it fastens to our net line and shoots back to shore, the line paying out as they go. Here the line is secured, to be hauled down by horses later, when the net is out and the tide starts it down the river. Now they fasten it, and as the end is reached out goes the rope from our boat. Then the great mast of a brail drops, staggers and stands upright, and the net is spinning out over a 20ft. roller on the stern. Coil after coil, and roll after roll, and layer after layer; will it never stop? And

here is the first quarter line with its attendant buoy, and then the second, and here another skiff takes its stand to watch the net and keep off small craft and follow it in. And so we go in a great five-mile circuit, and bring the end around to the horses below, and the haul has begun, and we have seen three in twenty-four hours, and more since in our dreams.

HENRY TALBOTT.

Fresh-Water Angling.

No. VIII.—Pike-perch and other Perch.

BY FRED MATHER.

THERE are two species of fish which are so closely related that when of small size they are not clearly distinguished by anglers. This is bad enough, but the fact that their common names are hopelessly mixed is worse. The fish are of the perch tribe, having a spiny dorsal fin, but their habits are those of the pike, and therefore naturalists call them "pike-perch," and years ago the genus was called *Lucioperca*, as a Latinization of pike-perch. Later it was changed to *Stizostedion*. There is such a variety of common names that by giving them all, or as many as I know, the fish intended will be made clear, beginning with the species which grows largest.

Wall-eyed Pike; Yellow Pike.

By these names the larger fish is known in parts of the State of New York. In the eastern portion, and in the markets of New York city, it is called the wall-eyed pike, from its great, staring, glassy eye. It is also known as "glass eye" in some places, but in the Susquehanna and parts of the South it is by some strange freak of nomenclature called "salmon." Think of a salmon having the sharp spines of a perch! I dislike to record the above fact, but it is a fact. True, some fishermen qualify the name by calling it jack salmon, but that is not much better, for there is nothing about the fish that is like a salmon. Science has recognized the large, glassy eye in calling this species *S. vitreum*. Another confusion of names occurs on the great lakes, where it is simply "pike," while the true pike is known as a "pickrel." "Pike-perch" is a book name, never used by fishermen nor marketmen, but all the other names given are used by these men, and in addition I have heard it called "blue pike" in Ohio, and I read that it is known in Canada as "dory," while in some parts of the South it is called "okow" and "blowfish."

This is a fine game fish, but is little known as such to our American anglers. It is a bold biter and is a fighter. My first one was taken near Cobourg, on the Canadian side of Lake Ontario, and it was a surprise. The late W. Morton Locke* and I had crossed the lake from Charlotte in the little steamer Norseman, and had a fine lot of trout from the streams about Peterborough, and had just missed the Norseman on returning. That was her first Canadian landing coming from Charlotte, and her last on return, therefore we could not overhaul her by rail. There we were with about 20lbs. of trout which had been put up at the last moment for friends, and no steamer for forty-eight hours, and the certainty that the trout would be spoiled.

"What do you say?" asked Mort.

"If we take rail around by Niagara Falls the trout will be spoiled, and it will cost as much as to wait here and eat a part of them. Come on, let's find a hotel and make the best of it."

"Look at that steamer smoking away not ten miles off, and that durned teamster who promised that he would get us here in time to catch the boat is away off in the hills. We can't swim to the steamer, and we can't catch the teamster and lick him. The only reasonable thing is to do what you suggest, and then to fish in the lake until the Norseman comes back."

We turned in our trout to the hotel, without other stipulation than that they were of no use to us, but were too good to waste. The landlord saw the situation, and being an angler himself, he introduced us to several local anglers, who were not satisfied with eating our trout, but arranged an elaborate entertainment for us, which comes up vividly in these days of talk of an Anglo-American alliance and of the frequent quotation that "Blood is thicker than water."

Fighting a Wall-eye.

Passing the convivial dinner and the breakfast, we went out on Lake Ontario in two boats to troll for pike, i. e. what I and other American anglers call "pike," *Esox lucius*, and Mr. J. Romaine and a boatman took Mort. Locke in charge, and Mr. George Kilgore and boatman took me in.

These men knew where pike were likely to be found, and after a row of half an hour they decided that it was time to begin fishing. As we had only brought trout rods, our new friends fitted us out. They were new friends, because we never knew them before, but were readers of FOREST AND STREAM, and saw my name on grip sack and introduced themselves before the landlord had a chance to make us acquainted. We had rods of ash and lancewood, about 8ft. long, multiplying reels holding some 60 or 70yds. of good linen line, a foot of gimp on a 3-0 sproat hook, a minnow hooked through the lips, and an ounce tracing sinker about 4ft. above the hook. The water was said to be about 30ft. deep, and the boatmen rowed slowly. The other boat took three pike before we got a strike, and then Kilgore brought a pike of about 10lbs. to gaff, the biggest one yet, and all was quiet for about half an hour, and I began to think that I was a Jonah, when away went my reel; it fairly hummed, and I checked it as far as I dared. When it came time to reel in a little there was a struggle that bent the rod, and Romaine shouted from the other boat: "You've got a 40lb. pike or a wall-eye."

The fight was a good one, and it was give and take for some time, how long I don't know, for I was never cold-blooded enough to hold a watch in such a fight or any other, and measure enjoyment by chronometer; I hate mathematics and all things like statistics; in fact anything which is measured, weighed or counted, but after a

while the fish made a rush which meant that it must have line or tackle would be smashed, and line it had. The size of the spool was diminishing, and it looked as if the fish was going to take the last foot off the reel and still have vitality enough to break something.

I stood in the stern of the boat and contested every inch of line that I estimated the capacity of the rod to resist. Kilgore quietly remarked: "If that is a pike it is a 40-pounder," but he offered no advice. Romaine stopped his boat and Locke and he reeled in their lines to watch the fight. Never before had I met such a fish, and seldom had I perspired as I did then. To use more force meant to smash my tackle and lose the fish; to use less would give the enemy time to gain wind to continue the fight. The strain on the rod was regulated by the drag on the reel, aided by a human thumb, which was needed as an auxiliary. Once the fish was brought into sight, but indistinctly; it made a demand for more line and got it. Then the stiff rod asserted itself and the fish was brought near enough to enable the boatman to say: "It's a wall-eye, and the biggest one ever I see," when the gamy fish made another requisition for line, and the requisition was honored to the extent of 20yds.

After this the rod asserted itself and the brave fish, which had fought so hard for its life, was brought alongside the boat and gaffed. It was a wall-eye of something over 14lbs.; I have not the exact number of ounces, and am not sure that I would give them if they were in my note book.

The Name.

The wall-eye, and Goode says: "If it must be used, 'wall-eye' is, of course, to be preferred to the misleading 'wall-eyed pike.' To me it seems a most repulsive and undesirable name, but others find it appropriate." With Dr. Goode I agree that the name "pike" should be dropped, but do not find "wall-eye" repulsive. "Pike-perch" is bookish and not in use, and when that angling millennium shall come when each fish shall have a distinctive name, and only one, what better name than "wall-eye" can we call this great gamy perch?

The Sauger.

This is a smaller brother of the wall-eye, and is much like it in appearance and habits. The other fish has been taken of 40lbs. weight, while the limit of this species is somewhere about 3lbs. When a wall-eye of similar size is taken few can distinguish them, yet it is not difficult if you know. The larger species has an eye larger in proportion, but as this is comparative one must have both species present to be able to decide, and the first or spiny dorsal fin is plain, except a black spot at its posterior and the pectorals are unspotted.

The sauger has the first dorsal fin spotted, with rows of black spots on the membrane, and without the black blotch at the end; the pectorals are also spotted.

A Serious Blunder.

In that grand work entitled "The Fisheries Industries of the United States, prepared through the Co-operation of the Commissioner of Fisheries and the Superintendent of the Tenth Census by George Brown Goode * * * and a staff of associates," filling seven great quarto volumes, published by the Government in 1884, and intended to convey all the fish lore of the United States up to date, there is a serious blunder in the plate representing these two fishes, which, if it has escaped observation, I have not seen it commented on. It is in the volume of plates, Section I, pl. 169, where the printer not only transposed the names of the two species, putting the name "Wall-eyed Pike or Dory" under the sauger, but under the wall-eye put the legend, "Sauger or Land Pike." Now the fact is that this fish is somewhere called a "sand pike," and in the manuscript of some writers the capitals S and L are not to be distinguished. While I have the honor of being one of the twenty "Associate Editors," I did not write up this fish nor see proofs of the plates.

In his excellent book, "American Fishes," 1888, p. 13, Prof. Goode repeats this error. I say this entirely in the interest of truth. Mr. Goode, who died a few years ago, was one of my warmest friends. As assistant secretary of the Smithsonian Institution and curator of the National Museum, he worked his life away. Few men die from overwork except brain workers, who neglect exercise, and yet he was physically active. He probably dictated his work and ordered a small cut made from the larger work, and so it happened. He knew the difference between these fishes; so did Dr. Bean and others of the staff, but the error was made by the printer, and it may work confusion because it has the stamp of authority.

As a Game and Food Fish.

The wall-eye is well worth the attention of the angler and the fishculturist; the sauger is not worth thought from the fish breeder, for it is a voracious fish, which is inferior to its big brother for the table, and its smaller size makes it of smaller account to the angler.

The wall-eye is one of the best of American game fishes, coming next after the salmon, the trout, and the black bass. All human judgment is fallable; therefore, when I class this fish as a better fighter, pound for pound, than any of the pike family, be it pike, pickrel or mascalonge, it is only the opinion of one man, based entirely on his personal experiences.

There is on this continent a wealth of game fishes whose fighting qualities are yet to be discovered, because we have followed beaten tracks, largely laid down by English anglers, from whom we first got our angling literature, and the anglers of Great Britain are the only ones in all Europe who have elevated angling to the level of other field sports. English, Irish and Scotch anglers were the first to discover that fighting a fish was, next to fighting a man, the grandest thing ever put in this world to fight. But all this is a digression caused by the war with Spain, which is on now and which I hope to take part in. To fight a stubborn game fish is to make a man's pulse beat high, and to make his nerves tingle, but when the battalion charges, that is ecstasy!

The Yellow Perch.

Here is a fish which Walton loved, and in the waters of

Britain, where the black bass is not yet common, it ranks next to the pike as a game fish. There it is simply called perch, for they have no other. The fish sharps have figured out a few differences between this fish in the old world and in the new, and while Schrank called ours *Perca Americana*, I am glad to see that Goode, in his "American Fishes," before mentioned, follows the European name of *P. fluvialis*, or perch of the streams, and furthermore the yellow perch has the right of the line, being found on page 1.

In America the yellow perch is rather neglected by anglers who fish for trout, the pikes and black bass, but we boys! Why it was our kind of fishes, not only for sport, but for the table. The flesh of this fish, like that of the wall-eye, is firm and flaky, and when not taken from weedy ponds is not muddy. In boyhood days the "muddy" or "weedy" taste of some fresh-water fishes was not noticed. Many years' residence near salt water has taught me to pass by most fresh-water fishes in the market, but the fishes of the great lakes are free from all that vile flavor which is found even in brook trout from weedy ponds in midsummer.

Range and Names.

This beautiful fish has an American range which includes all the streams of the Atlantic slope from Labrador to Georgia. It is not found in the Lower Mississippi, now on the Pacific slope. Jordan, who will not admit the identity of the American and the European species, says: "It occurs in some tributaries of the Ohio in the northern parts of Ohio and Indiana, and of the Mississippi in Wisconsin and Minnesota." In the great lakes and their tributaries it is common.

In the North and East it is called yellow perch, from its prominent ground color, but in Virginia and the South the black bars on the side claim attention and it is variously known as "barred perch," "ringed perch" and "raccoon perch."

In the North, outside of that species of darter known as "log perch," which is the only one of its tribe which the angler is liable to take, we only know two "perches," the yellow and the white; other percoid fishes are "bass," as "white bass," rock bass," etc. In the South these are all called "perch," with some specific designation, and our "sunfish" becomes "sun-perch," and often the obsolete English "pearch" is heard.

Angling for Yellow Perch.

As boy and man there has been no fish so frequently hooked as this one. From boyhood days when with an alder pole, a linen line, a Limerick hook which to-day I would think many sizes too large, and a worm, I watched a cork go down and snatched a perch over my head to see it flop in the grass behind to the time when this really game fish was taken on a light rod, either with fly or minnow, the yellow perch has been a favorite.

I have taken it when fishing for pike or pickrel through the ice, and always took them home to mother, for she often said: "Now Fred, if you get a few perch while fishing for pickrel, don't give them away, for they are the best fish you get in winter." I think my tendencies to shoot, fish, and to love the woods came from the maternal side, for father would occasionally shoot snipe and meadowlarks in his younger years, but frowned on my doing either that or rabbit trapping. Mother encouraged it in a way, by advising me that if I did go fishing to bring home certain small specimens, "pan fish" we called them; or it was a request like this: "Fred, if you go shooting next Saturday with Port Tyler, you may give him any ducks that you get, but bring home enough rail or other small birds to go around." With such encouragement my "hookey" days from school were condoned, and I was the sort of boy to take advantage of it. That same good mother said to me in 1862, when I told her that I had enlisted: "My boy, I am glad you have. I would never have asked you to do it." And she sat down.

To get real sport from the yellow perch needs a light rod, not over 50z., a click reel below the hand, and a hook not larger than No. 2, preferably a Pennell Limerick with turn-down eye for minnow or worm, but a smaller hook, say No. 4, is better. Boys are apt to select large hooks, and I remember that in boyhood days a Limerick from 2-0 to 4-0 was thought to be the right size, for we wanted hooks that were strong, yet I do not recall that one ever broke. To-day I would consider such hooks fit to hold a 10lb. fish. A small hook is an easier mouthful than a large one, and will be more satisfactory when taking small fish. With the tackle mentioned the yellow perch gives good sport, as it has a chance to fight for its life. If a float is used let it be a light one, and so placed that it will not come to the tip when reeling in; about 6ft. from the hook will do. It should be large enough to prevent your live minnow, if you use one, from dragging it under.

Fly-fishing for Perch.

This is the way in which the perch can afford the most sport. It prefers bright flies as a rule, and the red ibis is usually successful, but the coachman, professor, queen of the water, and other showy combinations are attractive to the perch.

Ozonia Park.

POTSDAM, N. Y., May 23.—FOREST AND STREAM for May 21 contains an interesting account of game preserves in this region, written by a brother of Assemblyman Ives. It alludes to Ozonia Park as containing an ideal lake, but as having only a few hundred acres of hunting ground.

Allow me to state that the park alone contains 1,682 acres, the larger part of which consists of virgin forest. Besides this I own 1,400 acres joining it upon the west from which some timber has been taken, and I control 1,800 acres of similar forest on the eastern side, making in all nearly 5,000 acres abounding in ponds and streams.

Guests at Fernwood Hall have access to this entire tract, as well as to the bass fishing of Lake Ozonia, which is three miles in length.

FREDERIC M. HEATH.

* "Men I Have Fished With," No. 37, FOREST AND STREAM, April 3, 1897, but not in the sketches in book.

Days on the St. Lawrence.—II.

From unpublished manuscript of S. H. Hammond, author of "Wild Northern Scenes." By courtesy of Mr. Hammond Van Vechten.

In the preceding chapter I endeavored to describe to you, my excellent friend, sunrise out here upon the St. Lawrence, a phenomenon that never occurs in the city. True, you have succession of day and night, darkness and daylight, evening and morning, midnight and noonday; but sunrise never happens in a city. You never see the day god gather up his reins and bound into his chariot of fire. You never see him leap into the sky from his couch beyond the mountains or behind the hills, or away down in the depths of ocean, or under the broad waters of the great lakes. You may see him, to be sure, moving lazily in mid heaven, blazing down upon piled up bricks and mortar, upon glowing sidewalks, sending his searching rays along glimmering streets. You see him only in dull, heavy, burning monotony, dimmed in glory, robbed of brightness, by the smoke and haze and dust, and a thousand villainous exhalations that go up from your aggregation of factories, workshops, furnaces, and all the contrivances through which human labor gathers its pittance of daily bread. You feel his blistering heart and pant beneath the blaze of his everlasting furnace, but you never see him rise in his majesty. No! No! There is no sunrise in a city.

Well, I saw the sun rise. I watched, and admired, and shouted, and hurrahed, and sang as of old, when the darkness and the night shadows vanished away, and brightness and glory were over all the earth again. But even here in the country, on the banks, and on waters of the St. Lawrence, the heat of the morning became oppressive. The sun marched up into the heavens, and blazed away, sending his burning rays through a moveless atmosphere down upon the parched earth. Every living thing sought a refuge from the fierceness of his glare. The birds ceased their melody, and flew away into the forest depths; cattle gathered under the shadows of the trees; sheep huddled along the fences, and the pigs wallowed in the tepid mire. Who were we (I mean my boatman and myself) that we, alone of all the world, should brave the power of the sun, as he careered in his might across the sky? We gathered in our lines and went ashore.

Toward midday, great ogre looking clouds came looming up in somber majesty into the sky, rising higher and blacker, till the sun, gathering the dark and ragged thunderheads like a mantle around him, hid himself in their gloomy folds. Anon the low growl of the thunder came booming over the water; faint flashes of lightning glanced across the face of the clouds. Blacker and blacker grew the heavens. A long line of storm reached all across the west, rising higher and higher, rolling up like the outer curtain that hides the stage of some vast theater. Louder and louder rolled the thunder, and fiercer flashed the lightning until, with a rush and a roar, the wind and the rain, the lightning and the thunder, in one wild uproar were upon us. Hurrah! for the strife of the elements! Hurrah! for the whirl and crash, the hissing and plashing of the storm, the tug of the wind, the glare of the lightning, the loud explosion, the sudden boom of heaven's artillery and its deep, jarring roll across the sky. For an hour the rain poured, the wind blew, the lightning flashed, and the thunder roared, as the rain, and the wind, and the lightning, and the thunder can pour and blow and flash and roar in these watery regions. And then clouds passed on, calmness succeeded the tempest, the sun looked out with a mild radiance, the bow of promise spanned with a circle of glory the retiring storm; the odors of forest and field filled the air, and freshness and beauty lighted up the face of all things again. The foam vanished from the crest of the waves, the billows that rolled in from the broad lake beat with a sullen sound against the shore as the storm passed away, and subsided to stillness, at last in the calmness that followed the warring elements.

Three miles below Cape Vincent is Carlton Island, containing some twelve hundred acres, off the south side of which is the best still fishing for bass in this region. At the head of the island are the ruins of an ancient fortification, built by the French long ago, when all this portion of the country was a wilderness; when the savage tribes lorded it over a territory reaching from the Hudson River to the limitless North and West; long before Wolfe purchased the splendid victory of Quebec at the cost of his own life, or Montcalm atoned for his defeat by his death on the Heights of Abraham. I call these ruins ancient. They are so only by comparison. In this country there is nothing ancient, save the mountains, the forests, the prairies, the lakes, and the rivers. These have been here from the beginning of time, are primeval things, lying back of civilization; but the results of human labor, ruined though they be, though desolation, decay, and forgetfulness have swept over them, yet they are not ancient, but modern, belonging almost to the era in which we live. And still this fort has already dropped out of history, leaving no record of its origin, by whom it was erected, or by whom commanded. All we know is, that it was a French fortification, built when all above Montreal and west of the Hudson was one vast wilderness, and was abandoned before the conquest of Canada by the English. The ditches and walls, with a few isolated chimneys, laid in stone and cement, from which everything of wood has long since rotted away, standing in solitary desolation, defying time and decay; a great well some 20 ft. in diameter and 60 in depth, excavated in the solid rock, are all that remain of the "old fort" on Carlton Island. Connected with this old well superstition has invented many a legend; some of horror, which speak of dead men's bones that lie away down in its depths, beneath the old logs and timber with which it is partly filled, and some of treasures hidden in its waters from the greed of men who carried it by storm a century or more ago. All over the site of the "old fort" are lilac, rose, currant and gooseberry bushes, cherry and plum trees, and various kinds of vegetables, now become wild and indigenous, growing spontaneously, without care or cultivation, the originals of which, like the hand that planted them, have been dust for more than a hundred years. Old buttons, occasionally an old coin, buckles of silver and of steel, pieces of swords, pistol barrels, leaden bullets and iron balls, all oxidized and eaten with rust, have been picked up by

the careful searchers after relics. Off a little way to the north is the old burying ground, with a few broken fragments of what once were tombstones, but voiceless, bearing no inscriptions, calling no names, telling no history, save that human dust is reposing beneath them, and that human affections and human hopes, ambition, pride, glory, sleep quietly in that deserted city of the dead.

The site of the "old fort" remains untouched, while all around it are cultivated fields, rich pastures, beautiful meadows, and waving grain, leaving the dead things of savage and bloody times, and the fields that bloom around them, to preach their living sermon of the glory of peace, and the superiority of the plowshare and the pruning hook over the battle axe and the sword.

I found, in the old graveyard, a fragment of blue limestone, such as underlies the island, as large perhaps as a sheet of foolscap, which had doubtless once stood at the head of one of these forgotten graves. The inscription was wholly illegible save the word "Pierre." Time had eaten away all else, leaving even this much difficult to decipher. "And who was Pierre?" I inquired of the "dull, cold marble," and of the spirits of the dead men, if they hovered around where the dust which they once inhabited reposed. "Who was this Pierre, whose name alone, of all those who slumber here, has been preserved? Was he of a proud lineage, a scion of a noble house, a man linked by the ties of affection to loving hearts? Was he the pride of a father, the idol of a mother, the hope of a wife? Or was he of the baser sort, fit food for the wars, whose proper element was strife, and whose normal destiny was to die and be forgotten, above whose grave few tears were shed, and by whose death no hopes were shattered, no affections crushed, no home made desolate?" To these inquiries no answer was given. The grave retained its secret. No voice responded from the oblivion that had settled down upon that desolate graveyard, and the silence that reigns there to-day will brood over it forever. The plowshare will pass heedlessly over these graves and the bones of these "dead men" will fatten the soil for the harvest. "Pierre" was faintly legible upon that fragment of stone, and it remains, in mockery of human research, all of history that is extant connected with the dust reposing beneath it. *Sic transit*, and so forth.

CHICAGO AND THE WEST.

The Fishing Season.

CHICAGO, Ill., May 25.—To-day is the opening season on bass in the State of Wisconsin, and thus one of the most popular fishing regions of this part of the West is made available for the angling fraternity, who have been looking longingly at their rods, and waiting for a chance at the Wisconsin bass. The closed season for bass in Wisconsin is March 1 to May 25, yet, in all probability, this does not entirely cover the spawning season of that fish. I have seen bass on the spawning beds in lakes of upper Wisconsin in the latter part of July. In ordinary seasons, however, the greater part of the spawning run is over by June 1, and that date is commonly accepted by the craft as one at which it is proper to begin fishing for bass.

Wisconsin does not protect any fish under its present law excepting bass and trout, that is to say, it allows fishing with hook and line in the inland waters at all seasons of the year, excepting for these two varieties of fish during their closed seasons. This law permits the use of spears on certain coarse fish in the daytime. It does not say anything about a close season for muscallonge or pickerel. I have heard several gentlemen speak of a supposed closed season on "lunge or pickerel" in the State of Wisconsin, but none such exists under the present law. It has been quite lawful to angle for a muscallonge or pickerel at any time during the spring.

I have not heard this week of any additional muscallonge news from Wisconsin, though reports come of three nice muscallonge, one of 25 lbs. weight, taken last week at St. Clair, Mich., one of which was sent to the well-known Chicago angler, Mr. J. Frank Lawrence. I have earlier spoken of the fact that the muscallonge were beginning to rise well in the waters of the Manitowish chain. I should think it entirely safe, as an angling proposition, to start for that country now. Both bass and muscallonge should give good sport for the next three weeks at least, and longer if the season should prove cool, and not speedily run into hot weather. The month of June is, of course, the peer of all angling months in this part of the country. With the hot season of July and August comes that mysterious "bloom" upon the water which was for so many years advanced, at least in this part of the world, as the reason why the muscallonge would not rise. It is curious how information sometimes goes in waves. I must confess that in my own ignorance I blindly accepted the "bloom" theory until last year, when I first began to get track of the fact that the muscallonge sheds its teeth in the summer season, and hence has small heart for the tempting but hard-shelled spoon. This season I have heard two or three Wisconsin anglers speak in a matter-of-fact way of the dullness of the muscallonge when it is shedding its teeth. It is fair to suppose, therefore, that the dental operations of the muscallonge are known to a portion of the public, and perhaps may have been known for many years, although I never happened to stumble across the fact myself until last year. I have heard dozens or scores of railroad men, resort keepers, anglers and guides give the advice never to go after muscallonge during the summer, "because then, you know, the bloom is on the water, and they won't bite." I have seen the bloom rubbed off a good many things in my life, but I never saw any attempt to rub it off the Wisconsin lakes until the recent advices in FOREST AND STREAM, which indicate that it is not a case of "bloom," but of teeth. How sharper than a serpent's tooth it is to have a toothless "lunge!"

Bass Grounds.

Mr. D. J. Hotchkiss, of Fox Lake, Wis., writes me very cheerfully in regard to the bass fishing in Fox Lake. It should be borne in mind that this water is not the Illinois Fox Lake, of which we hear so much, but the Upper Fox Lake, which I take to be a better and less

overrun sporting ground, although there is very good fishing at times to be found in the Illinois Fox Lake and adjacent waters. Mr. Hotchkiss says:

"We want the members of FOREST AND STREAM family to become better acquainted with our place here, and believe we have as fine fishing grounds as any in the State. The lake is full of black bass, large and small mouth both, and they are ready for business now. I hope you can be able to get away for a day or so, and come up. I will be pleased to show you some good bass grounds, and guarantee that the bass are at home. We farmers don't understand catching them very well, but one who knows how can have a picnic, and I will take great pleasure in assisting any member of the family to some good fishing any time they come up.

"If any of the folks want to get out away from the city and lay around in the shade on the lake shore, swing in hammocks, and enjoy cottage life or hotel accommodations at moderate rates, that's our long suit, and we can fix 'em out in good shape."

The above writer is a newspaper man himself, and hence can do no wrong. I think this country is very well worth bearing in mind, both for angling and shooting. Some Milwaukee gentlemen, who have a shooting box there, nearly always meet with good luck with the wildfowl in season. There are squirrels and grouse in season, and undoubtedly bass, and very big bass, because Mr. Hotchkiss sends pictures showing strings of bass some of which are nearly large enough to take a yearling colt for bait. The gentlemen of this favored locality, who can go out fishing without the necessity of railroad and sleeping car tickets, are among the lucky ones of the earth, but as they are willing to share their luck generously with all the members of the goodly FOREST AND STREAM family, I presume the next best thing is to secure the aforesaid tickets, and go up to assist in subjugating the bass before they become dangerous to bathing parties and other live stock.

Some time ago a gentleman wrote me regarding the splendid bass fishing on the Wolf River, near Gill's Landing. I presume that for minnow fishing for big bass and well-eyed pike there are few better localities than this. All of that chain of waters is fed by the inland sea of Winnebago Lake. The latter water has been much fished, but the fight of protection has been most bitterly waged there by the energetic warden, Capt. Johnson, and his men. Stories of the many arrests and encounters have often appeared in the columns of FOREST AND STREAM, but the net result of all this is a series of streams well stocked with bass.

The Northern Fox River, above Princeton, Wis., is a good bass stream, and above all a fine stream for fly-fishing for bass. There is without doubt a difference between streams in the matter of sport with the fly on black bass. The angler who wets a fly for bass in the Northern Fox this year will be a lucky one.

Puckaway Lake, Wis., is the location of the Neepeenauk Club, of Chicago, a very good body of sportsmen, whose chief interest in the club preserves lies in the duck shooting. Yet this club is much patronized by the members in the summer months, and the fishing in the river adjoining is said to be fine. Mr. Oswald von Lengerke, of Von Lengerke & Antoine, this city, will go up on Saturday next for a few days' fishing at this club. He anticipates fine fly-fishing for bass, and I hope his dreams may come true, for we have few lines of sport in this part of the West offering keener pleasure than that of black bass fishing with the fly, when the bass are really rising. A few years ago we had a great run of bait casting in Chicago, and indeed the fancy for that sort of sport has not much abated, but we begin to hear of more men who go after black bass with the fly-rod. I have often proved, to my own satisfaction, that the fly-rod will kill about all the bass one cares for in almost any water where the bass will rise to any bait, although, of course, if one wished to make a very heavy catch, he would prefer the bait rod.

Speaking of fly-fishing waters for bass reminds me to say that Chicago anglers this summer should not forget the stretch of water in the Illinois Fox River, about three miles from Elgin. Here there may usually be found in the average stage of water at the latter part of June a stretch of river a couple of miles long where one can wade and take the bass on the fly. Sometimes the bass work in very shallow water in shore, hunting among the rocks for crawfish and helgramites. The water is usually clear, and it takes a long line to kill one's fish, but if one gets the knack of it he can have great sport here when the bass are working in the shallows. Mr. Elmer Wilkinson, of this city, who has been going to this place for some years, tells me that he sometimes has splendid sport there. This is very accessible from Chicago, and the fly-fisher of this city who makes this trip will find many skillful lovers of the fly-rod in the pleasant city of Elgin.

Mr. Otto L. Tosetti and party will leave next Saturday for Little Trout Lake, Wis., on an extended trip for bass and muscallonge. Mr. Tosetti is an angler of wide experience in this country and in Europe.

Mr. J. M. Oliver, a well-known attorney of Chicago, would rather go fishing than practice the most gilt-edged sort of law. Mr. Oliver will go to the Nepigon River this summer, to extend his already wide acquaintance with the Lake Superior country. He fished the Two Hearts when they were wilder than they are to-day, and has attended the obsequies of many a lusty trout in his day. This week Mr. Oliver got the fishing fever very badly, and concluded that he could not be happy without catching some small-mouth, black mottled, red-eyed bass. Some of his friends are to start next Saturday for Kabekona Camp, in Minnesota, and Mr. Oliver will in all probability accompany them, although he is disposed to think the bass fishing will be better a little later. Mr. McCartney, proprietor of Kabekona Camp, is now absent at that point, and is expected back next Sunday. We shall then hear how matters piscatorial are doing in that neck of woods.

Minnesota Fishing.

The bass season appears to be a red hot one out in Minnesota this spring. I see reports of very fine catches in Lake Harriet, Lake Sarah, Lake Waconia and other well-known waters. The bass are reported to be rising better than is usually the case at so early a date. I note

one catch of 61lbs. of bass by Mr. Burgess, of Minneapolis, in one day; a very nice string, surely.

Indiana Bass.

A season or so ago I found occasion to make mention of a new and rather interesting angling country around Westville, Ind., where there are several little lakes and two or three streams up around the head of the Calumet River, where the finest sort of bass fishing may be had by those who know the country. In the course of my story about the head of the mysterious Calumet River, I mentioned the strong tip given me by a friend on the lakes near Wolcotteville, Ind. This chain of lakes is quite distinct from the series of waters about Westville, being indeed something like 100 miles further on east and northeast, but in the neighborhood of Wolcotteville, I have very often heard, there are some of the finest bass waters in the State of Indiana. This week a friend came into the office of FOREST AND STREAM and offered still further confirmation of this line of advice. He says the region is all right for fine bass fishing, and thinks that any angler would do well to bear the locality in mind for this summer. Personally I have never fished this region myself, but I believe it all that is claimed for it. It is mostly big-mouthed fishing.

A Great Take of Muscallunge.

While I was at Eau Claire, Wis., a week or so ago, I ran across a lot of mighty nice men, who know what good fishing is when they see it, and who often see it. One of these gentlemen, Mr. G. F. Winslow, pulled a photograph on me which was calculated to take away the breath. It showed a row of muscallunge hanging on a pole, twenty-seven 'lunge in all, weighing 274lbs., the largest going 25lbs. These fish were all singularly symmetrical and shapely, and of such extraordinary size that they made a most remarkable showing, it being further added that the feat of a good fish photograph had here been accomplished, so that the fish showed impressively as they must have looked in life. This great take of great fish was made by Messrs. Eugene Shaw, G. F. Winslow, A. A. Cutter and Chas. Newell, all of Eau Claire. They caught them in a water which I think no one has seen much mentioned in the columns of any sporting paper, but which none the less must be a most fruitful one. This little known spot is in what is called the Little Falls Pond, at the "Flambeau Farm," on the Chippewa River. This is some thirty miles' drive from Chippewa Falls, over a logging road not exactly boulevarded, but a look at the row of muscallunge would cause one to forget such a prospect, indeed to exult in it. In these days it is not easy to get thirty miles away from a railroad in our part of the West, and even if one does go so far for his fishing he sometimes misses it. But here is the secret of this fish picture. The Little Falls Pond is the back water above the great dam across the Chippewa, which has been put in by one of the great lumber concerns. It is, of course, known that the Chippewa, that black and forbidding stream which has really the purest waters that flow into the Mississippi, is one of the two muscallunge rivers of Wisconsin. How the fish get over the big dam deponent saith not, but it is certain that at certain times, when the dam is pulled open and the flood let down—the head being lowered some 15ft. at times—the great submerged country back in the forest comes into view, and the actual channel of the river becomes traceable. About 75,000,000ft. of logs is the ordinary size of this drive.

The gentlemen above mentioned arrived at just the proper time, having advice from the company that at such time the flood would be let off. They fished along the deep channel, where the fish seemed to have been living, and from which they did not move very far. They found one deep place near the mouth of a smaller stream, and here was where they got the raw material for their photograph. They were in about a day and a half in all, taking the twenty-seven 'lunge, but the actual string does not measure the sport they had. Their fishing was in timber country, along stumps and snags, and the way the big fish smashed up their tackle was a caution. They say that they lost more than they took, and festooned the snags with their last spoon hook. In such conditions they never could tell how big the fish were which they had on, but they say that of all the 'lunge they saw these were the brightest, the gamiest and the hardest fighting. Every fish would go out two and three times at least, and they worked harder than the average large fish on the rod.

This choice bit of anglerdom I offer as a special tidbit to those who like to go on strange journeys and try new waters. If the spot be approached at the right time of the logging operations, the sport is sure to be superb. This is a muscallunge pocket which I do not think is apt to be exhausted very soon, but which has temptation in its description.

Yet another good 'lunge region, also on the Wisconsin Central line, is the Mason Lake chain near Fifield, Wis.—something of a lake country, for there is 300 miles of shore line. My Eau Claire friends told me they always found that point good for 'lunge and bass. Above Eau Claire, up the Chippewa, the lakes which are strung on that thread are all muscallunge waters, and are known by men who live near them, and should be known by men who would like to live there, but cannot take up a permanent residence.

Eau Claire Trouting.

There is something suggestively fascinating in the Eau Claire, the "clear water" of the first voyageurs. It has a troutful sound withal, nor did it belie its title in the old days, when it was guiltless of logs and full of trout. To-day the Eau Claire, big stream as it is, has trout in it, though it does not offer trout fishing to any sporting degree. It is only at certain seasons, when the water is of the right temperature, that trout are seen in the main river, but in the many creeks which run down out of the hills into the Eau Claire there are trout to-day, much harried by all sorts and conditions of anglers as they are. The Eau Claire flows into the Chippewa within the city limits of the city of Eau Claire, yet it is a singular fact, noted by the local anglers, that the Chippewa tributaries do not carry trout to any great extent, whereas the Eau Claire waters all have trout. So much

for a name. Otter Creek, Rock Creek and Pine Creek are all streams adjacent to Eau Claire, and they can all show trout, sometimes very large ones. Seven-Mile Creek is another of these short hill streams, its mouth being, as indicated, nine miles from the city of Eau Claire. Beaver Creek, being further away, eighteen miles, and harder to get at, usually offers better sport to those who get to it. Opposite the mouth of the Beaver is that of the Eighteen-Mile Creek, whose conditions are practically the same. All these short rivers are spring-fed streams. Elk Creek, some twelve to fifteen miles from Eau Claire, is a fine bold stream which has never been logged, and which is perhaps the favorite of all the many trout streams of this interesting country. I learned of some very nice catches of trout in Elk Creek this spring. In all of these streams about Eau Claire the farmer boys catch trout right along, and not a day passes but good strings of them are brought in and offered for sale about the business part of town.

It may be amusing to speak of a trout trip in which three men caught only two trout, but I must tell of that experience, which was actually had at Eau Claire by Messrs. Chas. L. Smith, R. E. Rust and myself. These gentlemen wished to show me a day on one of their streams, and very kindly set all things in train for the enterprise. We drove out some eight or nine miles to Otter Creek, which is known to have some good trout in it, though with the reputation of a ticklish water to angle over. We ran out in the middle of the day, and the weather was fair and warm. I saw a very nice little trout river when my friends took me down the steep banks to the deep fringe of alders. The stream was flat, with sandy bottom and nice pools and bends, but the heavy brush made fly-casting impossible. The bottom was a bit soft in spots also, and all in all it was quickly evident that he who took trout in that stream must be a good one. It was very hard to make any good approach, and the path along the bank proved what might be expected in the way of education for the fish. We made the best of it and put on a goodly worm, since to cast a fly or float it or get it into the water was a physical impossibility. I floated a long line with a long worm down over a nice reach, and I had a strike. "This is going to be easy," I thought, and visions of fried trout at the Galloway Hotel came over my soul. I was not very particular whether I caught that trout or not, so I went on down stream. There was where I made a mistake. I ought to have stayed right there till I caught that trout. In the next bend I came to a fine lot of logs and brush lying in the water, with the alders meeting across the stream above it. I shortened line and poked the patient worm down stream the best I could, meantime standing in full sight myself. There was a double flash and a rush, and I was at once fast to my first trout, a lively fellow about 8in. long, and one of the lightest colored trout I ever caught. Him I put in my basket and went on rejoicing in what I was going to do to those fish before night. I met Mr. Smith, and he told me he had taken a trout too, so we both concluded we would get a few, though only with hard fishing. It did indeed prove hard fishing, and we had to admit that the trout were too smooth for us that day. We worked hard for over a mile of water, and though we saw a few more trout, never another did either of us catch. Then we met Mr. Rust, who had been working equally hard below us, and he reported still worse luck, inasmuch as he had not taken even a single fish. Thereupon we voted it a *nolle prosequi* and went home. But on our way in we saw a sight worth the trip. There is an old picture book mill dam across the Otter Creek, with a story book mill alongside, the same located in a narrow, rocky dell, which would be worth cultivating by an artist. Above this narrow, rocky defile of the waters stretched back a broad pond of deep black water, with sharp cut rocky banks reaching high up above. In this pool a great many trout are planted each year, and here there are undoubtedly some very large trout. A few days before our trip a man had taken here on minnow bait a trout which weighed 3½lbs. Every once in a while such a stray trout is taken, but the pond has a weird reputation. In the evening the trout can be seen leaping in numbers, but they will not connect with any known sort of fly, being of the shrewd, shrewdest. Mr. Rust says that he has often seen them so rising, but never knew any one to take one on the fly. He announced his determination of putting in a boat on this pond, and trying for these big trout, until he compassed their undoing. I hope he may succeed in getting revenge upon the fish of the Otter, for surely we owe them a grudge for the cavalierly way in which they used us.

Fly-Casting Contests.

On June 4 some of the members of the Chicago Fly-Casting Club will make their last preparations for the tournament at Grand Rapids, Mich., the week ensuing. The Grand Rapids enthusiasts are expecting a good attendance and a good time.

Dipping Bass.

Eight men were arrested last week at Eureka, Wis., for using dip nets in taking bass. The men were fishing below the mouth of the fishway in the dam, and were doing a land office business, taking black bass and white bass. In consequence of the facility of these operations, peddlers were hawking good white bass in the streets of Berlin and Ripon at a cent apiece. This is cheaper than one can go out and catch them for himself, it is true, but after the fines have been collected from the above violators of the law it is likely that the price of fish may go up.

The War and the Trade.

Here in the big city of Chicago we would almost forget there was a war waging in any part of the world in which we are interested, were it not for the papers and the crowded bulletin boards. The many thousands who have gone from this city with the volunteers are not missed—grim commentary on the heartlessness of war and of life. In the stores where sporting goods are sold the trade is not so much affected as one would naturally suppose. At Spalding's, Von Lengerke & Antoine's, Fisk's, Van Uxem's and other houses where inquiry was made, the report seems pretty unanimous

that local trade in fishing tackle and kindred goods has not been seriously affected. My friend, Mr. Hirth, at Spalding's, goes so far as to say that he has a much better counter trade than at this time last year. In guns the sporting trade here is dead, whether retail or mail order trade. The country trade, or mail order business, has fallen off sharply, and dealers here infer that in smaller communities the hand of the war is heavier, so that persons are not caring so much for sport. When we stop to think that in the Civil War many hundreds of thousands of the finest men of the country were killed, and that the world has gone right on without them, that the country has apparently never missed them, but has grown just as well, and when we think also that in this war, if fortune do not bring a merciful end to it at some early day, very many more men will die and not be missed, we have great occasion to hope that the trouble may soon end, and not put this hard tax on human nature, accusing it of heartlessness in that it forgets. If humanity could not forget, it could not live.

Along the Illinois River.

That consistent enthusiast on angling and fish protection, Mr. Geo. E. Cole, of Chicago, has just returned from a trip along the Illinois River, where he went as guest of Superintendent Bartlett, of the Illinois State Fish Commission. Mr. Cole says that the water was too high for good fishing, though he had a very enjoyable time. He speaks in the most enthusiastic terms of the condition of protective matters, not only in regard to sporting fishes, but also the food fishes, and says that never in the history of this State has the situation been so good or the work so well done. Dr. Bartlett has the work of the State fish boat handsomely systematized, and the crew is trained to a high degree of efficiency, so that the game fish are quickly handled for shipment, and the food fish placed in the waters of the main stream along which the work is carried on.

Fish at Omaha Exposition.

Fish Commissioner May, of Omaha, thinks that the State exhibit of Nebraska, at the Trans-Mississippi Exposition, will compare very favorably with that at the World's Fair. The exhibit is now in process of installation, and promises to be a feature of the big show.

The Banks of the Wabash.

The members of the Terre Haute Fishing Club, of Indiana, are this week fixing up their property on the Wabash River, and getting ready for a busy season. The formal opening will be June 5, at which time a good party will be on hand.

The Iowa River.

The Iowa River, as well as the Cedar, the Skunk and the Des Moines, all of which flow southeasterly into the Mississippi outlet, has in its time afforded great sport to anglers for bass, crappie and pike. In later years it has been over-fished by all sorts of appliances, like many other Iowa streams, and the supply of fish life has been much cut down. Fish protection has never until very recently been regarded with much favor by the Iowa Legislatures, and probably it has never been so well pushed as under the administration of Commissioner Delevan, handicapped as he is by lack of appropriations. Appeal has been made to the commissioner to do all he can for the Iowa River, and he has agreed to do so. I am sure I wish he could restore some of the above-named rivers of Iowa to a part of their former fruitfulness, for naturally they are great streams, as I can testify of my own experience.

At Fox Lake.

Mr. Oscar Blomgren, of this city, is just back from a little trip to Fox Lake, Ill., where he says the fishing for bass, wall-eyed pike and pickerel is now very good.

At Koshkonong Lake.

Messrs. John Campbell and V. L. Cunningham, of this city, are back from a fishing visit to Lake Koshkonong, Wis. They were at the Blackhawk Club, and had very good sport, taking thirty-six black bass from 1½ to 4lbs. weight in their two days' angling.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Tomcod at St. Michaels.

In the summer months St. Michaels has a large number of Eskimo visitors. These natives come from the far north in their walrus skin boats, with their families and dogs, to trade with the companies. Every evening the women of the party will be found sitting on the rocks fishing for tomcod, which abound in the bay. Their method of fishing is very peculiar and amusing. At the end of a long pole is a fish line, at the end of the line is a piece of wire bent in three sides of a square and suspended to the line with the points down. At each of the points of this three-square is a small one, making four baits to the fish line. Having adjusted the bait, the disciple of Izaak Walton throws the line into the water, the bait being almost immediately taken, and then the rod is quickly drawn over the shoulder with a violent jerk, and the fish are thrown off on the rocks. No fisherman ever looks behind, or gets up to remove a fish. The hook is merely a piece of bent wire, and the fish three or four at a time jump at the bait and hold it tight enough to be drawn ashore, but are seldom impaled on the hook. Behind those fishing congregate a number of Indian and Eskimo children, who collect the fish as they are thrown off, and place them in a basket. There may be a hundred people fishing at the same time, and each fisherman will catch a pail full of fish in fifteen minutes. To stand at a distance and see the rods passing up and down to the water and then back to the land, and innumerable fish wriggling on the rocks, is amusing.—*Alaska Miner*.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Trout Fishing in Nova Scotia.

IN Nova Scotia trout fishing can be had from early May to late in September. The first month and the last are the best months to fish. In May a party has the chance of being first in the water. In September the fish are getting ready to spawn, and from the 1st to the 20th of the month they will be found in the runs between the lakes making their way up-stream, and if good fortune should lead the fisherman to a spot where a running stream comes into still water, or lakes, over a sandy bottom, it will take two men to fish, one to throw the fly and the other to take the fish off the hook. In early May the voracious midge is not prepared for visitors, but later in the month and in June the shade of Izaak Walton would lose blood. However, the druggist in Nova Scotia has a remedy, and its repeated application will spoil the sport of the flies, save appearances, and prevent very bad language.

It is hardly necessary for the tourist to ask for definite information. The fisherman need only look at any country map, select his stream and follow it up. If he is a novice he will be satisfied with what he gets. If he brings experience his own good judgment will lead him aright. Only do not depend on lake fishing, strike out for running water.

Through the middle of Western Nova Scotia, and running east and west, is the divide between the Bay of Fundy and the Atlantic Ocean, and fifteen miles south of Annapolis town, at Milford, a canoe will be waterborne to the Atlantic at Liverpool. This trip gives over sixty miles straightaway lake and stream fishing, and on branches east and west as many more miles.

A few miles east are the headwaters of the Port Medway, and next the La Have, both with quite as extensive fishing as the Liverpool River and larger trout. The head waters of the Annapolis River and all the streams running into the main river afford good fishing, especially the upper waters of the Nictaux.

In every town in Nova Scotia the month of May causes a trout fever that nothing will alleviate with those who like the sport but the swish of the flies through the air, that tremble on the water, the click of the reel, and then, well, you want a frying pan, a sizzle, a smell of cooking trout, and satisfy your palate and the regions below. This will temporarily abate the fever, for a trout out of water and into the pan is worth a thousand that reach the cooking stove. If a tourist to Nova Scotia has a touch of this fever he will find in every town some one to sympathize with him. It is hardly necessary to ask what to bring. A rod and flies, a rubber mackintosh and blankets. Wear heavy flannel underclothing, woolen clothing and old clothes. With two sets of each and old laced boots to match, getting wet or wading knee deep all day will do no harm if a change to dry things is made at once on returning to camp or hotel in the evening.

Other things wanted can be found in Nova Scotia, that is, provisions, boats, canoes and men to assist or go with you. Professional guides or Adirondack factotums are not always to hand. It is better to take the level of the people as you find them, and I speak as a Nova Scotian; if it is not satisfactory, it lies at the doors of your own bad luck.

The usual length of a fishing trip in Nova Scotia is four to seven days, that is to say, a trip to the woods. Within reach of every town is a day's fishing, and 1lb. trout can be had.

The following are trips in which the writer has participated: Sept. 10, two hours' fishing, two rods, eight dozen $\frac{3}{4}$ lb. to 1lb. trout. Same time and place, following year, three rods, twenty-five dozen. May, 1898, five days' trip, three days' fishing, 11 A. M. to 3 P. M. each day, two rods, twenty-five dozen; and as many more trout could have been caught. One-half of these fish were 1lb. trout. The largest weighed 1 $\frac{3}{4}$ lbs.

The trout in Western Nova Scotia are not large, going occasionally to 3lb. fish, but they are gamy. They often jump clear of the water, taking the flies on the down turn to their native element. A 1 $\frac{1}{2}$ lb. trout taken in heavy running water will give an experienced fisherman all the sport he wants, particularly if it is two at a time. For early spring and September fishing my choice of time of day to fish is 11 A. M. to 2 P. M. In summer months early in the morning, as soon as the mist is off the water and resting through mid-day, begin the evening fishing after 4 P. M. Take things easy and enjoy life in the woods. Very good roads run in all directions, and carriage hire is not expensive. By road one can generally get within a mile or two of the fishing ground, out of sight perhaps of civilization, but in a country of clear skies, a land filled with running water and magnificent lakes, an atmosphere that carries with it always a touch of ozone and a smell of the sea. Today what Longfellow said of the Acadians is applicable in its fullest measure, "There the richest was poor and the poorest lived in abundance." F. C. WHITMAN.

ANAPOLIS, Nova Scotia, May, 1898.

New Jersey Coast Fishing.

ASBURY PARK, N. J., May 28.—Kingfish have reached our waters and have been taken pretty freely in the nets the past two weeks. The first to be taken on the hook fell to the lot of Dr. G. B. Herbert, at Manasquan Inlet, one evening this week, he took seven in one tide. It is a peculiar fact that at that point both bass and kingfish are each year at least two weeks earlier than at any other point along our coast; why this is so has long been a puzzle to the wisecracks of the fraternity. If there is any superiority in the fishing grounds, that fact has still to become apparent. As with many another of nature's problems, the solution seems difficult. If there is any salt-water fish, inches and ounces considered, which is more supremely game than the kingfish, I wot not of him. Sprightly as thought, he strikes the hook sharply and is gone before the angler, unless thoroughly alert, realizes what has happened. The kingfish is always a bottom feeder and is accustomed to wrenching loose mussels and other crustaceans from their moorings; its bite is entirely different from that of all other species, and which can best perhaps be described as a nervous wrench. I am fully convinced that the fish turns on its

side when taking the bait, as its peculiarly formed mouth would indicate that position to be the natural one. While the Chestertown hook is a good one, still I consider the turned down eye sproat, 2-0 size, the acme of perfection. While they will at times take a variety of bait, still the shedder crab and blood worm are prime favorites, and can always be relied on.

Bluefish are fairly abundant, and the off shore boats are taking them freely; none as yet have been taken from the beach, however. The indications all point to a first-class season for salt-water anglers.

May 28.—The first bass of the season taken along the coast fell to the rod of Robert Large at Deal Beach this morning, weight 13 $\frac{1}{2}$ lbs., together with two kingfish. This fairly opens the season, and from now on rods will be busy. LEONARD HULIT.

Fishing in the Peninsular State.

GRAND RAPIDS, Mich.—These are days that give untold joy to the festive piscator in the seasonable pursuit of the wily trout. Ever since the first gleam of daylight ushered in the flowery month of May—yea, perhaps ever since that sweet little flower of the cedar forests and swamps, the trailing arbutus, poked its fragrant blossom above the disappearing snow—the streams of northern Michigan have been the Mecca of the devotee of the rod.

The rippling, clear, cold waters of these streams, the dancing flies and the fun incident thereto have always been sufficient to lull the sensibilities regarding game and fish laws, benumbed fingers and freezing noses and ears. It is the same now, and will be forever.

I have been the victim—the self-immolated victim—upon all these sharp points, and I have never kicked nor confessed, and I am not going to do it now at this late day. Only everything else being equal I would a little rather do the sinning when it is a little more comfortable than on some occasions that memory recalls. I start comfortably, and how and the way I do it is to get ready with as little fuss as possible. I usually am going to look up some "stumpage" way off in Manistee county, or in Wexford or Kalkaska, or any old county up there, where there is plenty of said stumpage and likewise plenty of trout streams.

The Flint & Pere Marquette Railroad is one of the fish lines to take, and I always take it. Friend Moeller, the man who knows all about that country, sometimes takes a day off and goes too, but since he has lately been promoted to the responsible and onerous duties of general passenger agent of that line, it is probable that his days off will not be many, for if there ever was an official who filled his position to the fullest he is the man. To use the classic and beautiful (though perhaps devoid of nickel-plate polish) of the untutored Governor of the State in speaking of a friend whom he had appointed to office: "He knowed his duty and done it noble."

The road runs, as you will see upon consulting a map—it will not be necessary to take a railroad map, for every railroad gets out a map to suit itself, and generally winds around to include every place of importance, or if it is a trunk line that wants to make a strong point as to its directness between the principal cities which are its termini, it just draws a straight line across and puts down the places to conform, without regard to geographical results. After leaving Saginaw the road passes through Midland, Gladwin, Clare, Osceola, Wexford, Lake, Mason, Manistee and Benzie counties, and if you can't find good fishing in these counties, and plenty of it, it would not be worth while fooling away any more time this month anyway; but you can find it and not half try, and when the summer heaves in sight and the great large July days have arrived, why the black bass just simply have their national conventions up there, and full delegations are present from all the back counties.

I have wondered often why that chap named this the Wolverine State. He did not know even a little bit. He might have known that such an ugly beast as the wolverine would be exterminated and then people would be guessing what sort of animal it was; or perhaps they wouldn't know it was an animal. There is only one in existence in this State, and that is stuffed and is in the reading room of the Bancroft House, Saginaw, E. S. Mr. Lyon don't own it, and Miller says he don't, and further says that wolverine meat has net been on the menu of that hotel in thirty-five or forty years, if it ever was. He further says that he never saw a live one, and if they were as mean and vicious as they are reported to be, he is glad of it, and rejoices that the species has ceased to keep folks awake nights. So if they had just thought a minute before naming this the Wolverine State, and given the claims of trout and black bass an inning, why there would have been some sense in it, and people even unto the children of the fortieth generation would have caught on. However, we have to stand all sorts of hardships and injustice in this life, but we've got the fishing just the same, also laws for the protection of the fish, and a game warden who with his deputies are a terror to evildoers. By the way, I wish now that Osborne has got things in pretty good shape in abolishing illegal fishing and shooting he would take a hand with the black flies and mosquitoes. Up to this time the fish have had all the protection—and that's all right too—but the poor fisherman has been utterly neglected. Now then, dear Mr. Osborne, get after the bugs with as little delay as possible.

It has been thought that the Spanish war would interfere with the fishing up here this season, but upon looking over the lists of officers, privates, volunteers, naval reserves, staff officers and other more or less military people thus far published I do not find that the numbers of fishermen will be depleted so as to be seriously felt.

I have personally met about all of them too, and they have either gone, are going or have been and got back.

The fishing has been pretty good, about a fair average. The weather has not been. I never saw so many kinds of weather in a week in my life, not even in Michigan.

The Little Manistee has been a favorite spot, and I don't know why it should not be. It comes pretty near being an ideal stream; the fish are well behaved, come of good families, raise large ones, and as a general thing

give the boys a fair show for their investment. The streams around Traverse City have afforded and are now affording good fishing, and the same may be said of the streams in Kalkaska county.

If the signs continue favorable and the Government can get along without me in the Navy Department I will make one more expedition and give FOREST AND STREAM the result. KEUKA.

The Maine Season.

UPPER DAM, Me., May 27.—Fishing is holding out most remarkably well in the whole Rangeley section. At Haines' Landing the excellent fishing has continued. At the Oquossoc Angling Association camps there are a number of the members, including E. L. Pickard, Mr. C. S. Roberts, with his wife and other ladies. They are making a good fishing record. Allerton Lodge has a party of seven or eight guests, including the well-known Haskell party: Mr. E. B. Haskell, senior partner of the Boston Herald Company; Col. H. T. Rockwell, Mr. Priest and others. Ex-Mayor Edwin U. Curtis is not a member of the party this year, though he has been with the others a great many years. Reports of good fishing come from their camp. Mr. Harry Haskell and Mrs. Haskell are also at the association's camps. At the Birches fishing is good. The guests brought in over thirty trout on Wednesday; a number of 4 and 4 $\frac{1}{2}$ lbs. The salmon are just beginning to "take hold" in Rangeley Lake. One of 8 and another of 8 $\frac{1}{2}$ lbs. were taken there early in the week. The Phinney party, stopping at the Upper Dam, are reported to be having great luck. Three gentlemen—two in one boat and one in the other—made a remarkable catch in Upper Richardson Lake Thursday morning. The one fisherman struck a trout. While playing him one of the men in the other boat had a strike, evidently a large fish. His friend in the same boat was earnestly watching the process of capture, with his line just over the edge of the boat. As the partly exhausted trout came up toward the net, the line over the boat was seized with a vicious snap. Three big trout were on it at once. All three were landed after individual fights of over twenty minutes. The fish weighed 7 $\frac{1}{4}$, 7 and 6lbs. respectively, all perfect *Salmo fontinalis*. The Phinney party includes H. A. Phinney, Harry H. Baldwin, James Gormley, Warren Page and William T. Wilkinson.

Mr. L. O. Crane writes from Round Mountain Lake of good fishing; better than already noted. "The trout are coming up to the fly in fine style."

Among the Boston fishing items may be mentioned the departure of the C. F. Porter and Crawford party for Moosehead, eight or nine of them, by special car over the Boston & Maine and Maine Central railways. Mr. Walter L. Hill, secretary and treasurer of the recent remarkably successful sportsmen's show, will leave for Moosehead this evening. He expects to be accompanied by a couple of fishing friends, Messrs. Kirk and Murphy. SPECIAL.

Trout at Canadensis.

SCRANTON, Pa., May 25.—In your issue of May 21 I saw mentioned my name as one who had caught an even basket of trout at Canadensis. As every fisherman is somewhat inclined to stretch the size of his fish and his catch, it pleases me to have your paper vindicate the story. In return for the same I ask through your columns to return my thanks, and also, if you will allow the space, to express not only admiration for Canadensis, its woodland scenery and splendid fishing, but also a few words for Spruce Cabin Inn, on Broadhead Creek. There you will find assembled men of congenial manners, rich men and men of moderate means, made equal as God intended them, for there is something about fishing that makes men like brothers. The streams abound with trout, and the waters are so broad that you have ample room to practice with your rod and line, dry-fly, wet-fly and bait-casting, and meet with good results. I prophesy good fishing at Canadensis all the month of June, for the wet spring so far has prevented many from trying their luck, waiting till the streams subside and sunny weather to prevail.

PRESTON PARTON.

The Backbone of a Rod.

BALTIMORE, Md., May 27.—Editor *Forest and Stream*: After fifty years' trout fishing, I desire to indorse Brother Mather in what he says about rods, reels, flies and hooks, in your issue of the 28th instant. I do not know so much about bait-fishing, but I am sure he knows what he is talking of upon that kind of fishing. I will bear him out on "backbone," necessary both in casting and hooking your trout. I do not want any carriage whip in mine, nor do I want any "double action" in my rod, which would wrap the casting line (leader) around my head. I congratulate the FOREST AND STREAM in having a common sense contributor on the subject of fishing tackle, as also on all subjects of the angle. I hope our younger generation will benefit by Brother Mather's advice. E. S. Y.

"The Game Laws in Brief."

THE new edition of "The Game Laws in Brief" is now ready. It gives the laws as revised to date, and is complete, accurate and convenient of reference as always. The Brief is finding constantly growing support and confidence, and has long been established as the accepted authority in its peculiarly useful field.

A New Tarpon Record.

MR. EDWARD VOM HOFE, of this city, tells us that a message received on May 27 from Mr. R. T. Halloway, of Kentucky, advised that Mr. Halloway was on that date leaving Punta Rassa, Fla., after having made the score of 101 tarpon for the season of 1898.

Fresh-Water Pearls in the United States.

[Read by George F. Kunz before the Fisheries Congress at Tampa, Fla.]

THE gathering of pearls from the fresh-water shells of North America, although a matter of comparatively recent date among the present inhabitants, really goes back very far into the unrecorded past, and early attracted notice among the first European explorers. In the prehistoric period, the Mound Builders, of the Mississippi Valley gathered immense quantities of these pearls, as it is amply shown by the stores of them found on the "hearths" of a number of mounds, especially in Ohio by the recent explorations of Prof. F. W. Putman and Mr. W. K. Moorehead. By age, burial, and in some cases funeral or sacrificial fires, these pearls have lost their luster and beauty; but they were evidently highly prized by these ancient people, and gathered by the hundred thousand. The finding of two bushels in a single series of mounds is an evidence of their abundance.

The first explorers who traveled among the Indian tribes speak frequently of the number and beauty of the pearls in possession of the natives. Especially marked are these accounts in connection with the great expedition of De Soto, from Florida through the present Gulf States to the Mississippi, in 1540-41. Garcillasso de la Vega and other narrators give most minute accounts of pearls as worn by the Indians; and from the accounts given by them to De Soto at various times, and as taken by themselves from burial places of native chieftains, it is quite evident that perhaps all of these referred to were not fresh-water pearls, but marine. De Soto's narratives, which were undoubtedly of the former, seem exaggerated, but the recent finds referred to substantiate them. The process is described, moreover, of gathering the shells and opening them by heat, which was shown to De Soto, at his request, by a friendly chief. In the same way, several early English travelers, from New England to Florida, refer to the Indians as having pearls, undoubtedly from the fresh-water *Unionidae*.

No particular attention, however, was given to the subject until about forty years ago. The natives had been dispossessed, and the white race, occupied with other interests and necessities, took little note of the hosts of fresh-water shells inhabiting the streams and lakes, and did not suspect their power of producing pearls. In the rivers of Saxony and Bohemia, indeed, and those of Scotland and Ireland, and the lakes of Finland, such pearls have long been known and valued, although the Unio life is far less abundant than in our great river systems of America; but not until the middle of the present century was any search begun or any important discovery made.

This was all changed, however, by the first great pearl excitement in 1857, when large and valuable Unio pearls were first obtained in New Jersey. First, a pearl of fine luster, weighing 93 grains, was found at Notch Brook, near Paterson. It became known as the "Queen Pearl," and was sold by Tiffany & Co. to the Empress Eugénie, of France, for \$2,500. It is to-day worth four times that amount. (See Colored Plate No. 8, "Gems and Precious Stones of North America.") The news of this sale created such an excitement that search for pearls was started throughout the country. The Unios at Notch Brook and elsewhere were gathered by the million and destroyed, often with little or no result. A large round pearl, weighing 400 grains, which would doubtless have been one of the finest pearls of modern times, was ruined by boiling to open the shell.

Within one year pearls were sent to the New York market from nearly every State—in 1857 fully \$15,000 worth; in 1858 it fell off to some \$2,000; in 1859, about \$2,000; in 1860, about \$1,500; in 1860-63, only \$1,500. The excitement thus abated until about 1868, when there was a slight revival of interest, and many fine pearls were obtained from Little Miami River, O.

Some of the finest American pearls that were next found came from near Waynesville, O., \$30,000 worth being collected in that vicinity during the pearl excitement of 1876. Since 1880 pearls have come from comparatively new districts further West and South, the supply from which is apparently on the increase. At first few were found, or, rather, few were looked for west of Ohio; but gradually the line extended, and Kentucky, Tennessee and Texas became the principal pearl-producing States, and some pearls were sent North from Florida.

A few years later the interest extended to the Northwestern States. During the summer of 1889 a quantity of magnificently colored pearls were found in the creeks and rivers of Wisconsin, in Beloit, Rock county; Brodhead and Albany, Green county; Gratiot and Darling-ton, La Fayette county; Boscobel and Potosi, Grant county; Prairie du Chien and Lynxville, Crawford county. Of these pearls more than \$10,000 worth were sent to New York within three months, including a single pearl worth more than \$500; and some among them were equal to any ever found for beauty and coloring. The colors were principally purplish red, copper red and dark pink. Within the past eight years over \$200,000 worth of pearls have been sold from this district.

These discoveries led to immense activity in pearl hunting through all the streams of the region; and in three or four seasons the shells were almost exterminated. In 1890 it extended through other portions of Wisconsin, especially Calumet and Manitowoc counties, and appeared also in Illinois along the Mackinaw River and its tributary creeks, in McLean, Tazewell and Woodford counties.

In 1889 the exhibit of American pearls received an award of a gold medal, and the collaborator a silver medal for the literature. At the Columbian Exposition at Chicago in 1893 large and beautiful exhibits of pearls, of great variety of tints, set in the finest jewelry in the Manufacturers' building, and were a notable feature in the Wisconsin State building and the Maine building.

The Northwestern pearl excitement subsided in a few seasons, as the others had done in turn before, by the exhaustion of the mussel beds and the consequent cessation of product. About every ten years or so a new

wave of interest arises in connection with fresh discoveries at some point where the shells have lain long undisturbed; it again absorbs the attention and excites the imagination of the community around, and spreads to other parts of the country; a fresh campaign of ignorant extermination is carried on for several summers, then the yield is exhausted, and there is nothing more but to leave nature to recuperate, if possible, and slowly restore, in limited amount, the abundant life that has been destroyed.

During the past season of 1897 the pearl fever has broken out in a new locality, attracted attention and awakened similar activity in various parts of the country. This time the scene of discovery and excitement were the hitherto undisturbed streams and bayous of Arkansas. These waters teem with Unios, and pearls have at times been found by the rural population for years past; but there has been, usually, no knowledge of their nature or their value. They have been simply regarded as "pretty stones," and used as playthings by the children—like the first South African diamond, that attracted the notice of a trader, in 1866, as he saw it in the hands of the children of his Boer host at the Voal River. Several valuable pearls, however, were this year found by persons from St. Louis and Memphis, who at once sent them to those cities and ascertained their reality and value. The same parties then searched for more, and took steps to lease the land where pearls were found abundant. Ere long the facts became known, and a wild excitement set in and spread through large portions of Arkansas, extending into Missouri, Kansas and the territory of the Choctaw Nation. The first important discoveries were on small lakes or bayous formed by affluents of the White River and its branches; then on the Arkansas, the Onachita and the Black Cache and St. Francis rivers, thus affecting almost all sections of the State. In one district an entire lake was leased, guarded and fenced for the pearl contents of it alone.

The newspaper press took up the subject and published highly sensational accounts of the treasures to be had in what was largely proclaimed as "the Arkansas Klondike." These articles were copied all over the country, and led to a great amount of pearl hunting in many of the States, both East and West. Iowa, Tennessee, Georgia, New York and Connecticut were all more or less stirred up to activity. The former pearl region of Tennessee was less affected than a new section in the eastern part of the State, along Clinch River, where great crowds have been searching for pearls, and large quantities were obtained. The Georgia interest has been chief along the Oostenaula, near and above Rome. The New York activity has been in the northwestern angle of the State, along Grass River, in St. Lawrence county. Connecticut has yielded some good results to the searchers on the Mystic and Shepang rivers—at almost opposite ends of the State.

Reason for the Pearl Investigation.

In view of the great interest and possible importance of the pearl, the discoveries from time to time made in various parts of the United States, and particularly in the Mississippi Valley, of pearls yielded by the fresh-water bivalve shells (*Unionidae*), so abundant in many of our inland waters, that I was invited, in 1894, to undertake systematic inquiry for the United States Commission of Fish and Fisheries to ascertain, as far as possible, the facts relating to the occurrence and distribution of the pearl-bearing species, and the extent and conduct of the pearl industry as thus far developed. The value and elegance of many of these pearls, especially as shown in the exhibits made at the Columbian Exposition in 1893; the popular excitements, or "pearl fevers," at times arising in districts where a few pearls have been found, and characterized by wholesale and reckless destruction of the shells over large areas; the total lack of system in the search for pearls, as contrasted with the methods that have been developed on a smaller, but far more profitable, scale in Europe—all seemed to call for a careful investigation by the Commission, with a view to better knowledge and wiser direction in the matter of inland American pearl fisheries. Undoubtedly for a considerable period after the first explorations the pearl resources of North America seem to have attracted little attention. The Indian race was contending with the whites for the possession of the country; it was a time of uncertainty and strife for both races; and not until the great waterways of the Mississippi Valley had been won by the whites, the region occupied and settled communities established, do we again begin to find any indications of the search for fresh-water pearls. For some two centuries the Unios lived and multiplied in the rivers and streams unmolested by either the native tribes that had used them for food, or the pioneers of the new race that had not yet learned of their high treasures of pearl.

It is with some surprise that one notes that so few American conchologists have paid attention to our native pearls. It is probably accounted for by the fact that the pearls are contained in old, distorted and diseased shells, which are not so desirable for collections as the finer specimens. Collectors who have opened many thousands of Unios have never observed a pearl of value. Pearls are usually found either by farmers, who devoted their spare time to this industry, and if no result is obtained suffer no loss, or by persons in country villages who are without regular occupations, but are ever seeking means for rapid increase of fortune. Multitudes of shells that do not contain pearls are destroyed in the search.

Habitat of the Fresh-Water Mussels.

From the many inquiries sent out, the general indications from these data are quite plain, to the effect that the shells are chiefly found in rather rapid streams, in which bottom would naturally be sandy or gravelly, and the water clear. Other species, however, occur on muddy or clayey bottoms, where the current is slower. The references to rock bottom do not concern so much the immediate surface where the shells are found as the underlying bed on which the softer materials rest. In the matter of depth, also, the large preponderance of answers in favor of shallow streams may mean not so much that the Unios greatly prefer shallow water as that they are more readily found and gathered there. The frequent allusions to hard or calcareous water tend to

confirm the general impression that streams of this kind are favorable to the development of molluscan shells, both in size and abundance, but the greater abundance of calcareous matter in the water tends to induce the prolific secretion of the pearls.

A Florida writer states that the best Unio growth is found in lakes with outlets, the water pure and fresh; but adds that it is sometimes sulphurous. A Texas pearler (Colorado, Concho, San Saba and Llano rivers) refers to the water as becoming slightly alkaline in dry times; and another Texas pearler (Colorado and Llano) makes a similar statement. A New York pearler (De Grasse River and Plum Brook) mentions the water as brown or black—the clear, brown water of the hemlock districts, familiar in northern New York.

The general conclusions most clearly brought out may, perhaps, be summed up as follows: The shells are most abundant in swift and clear water where the bottom is sandy or gravelly, and the country rock calcareous. While still numerous in many streams, they have greatly diminished within a few years past wherever the pearl-hunting enterprise has extended, and are at some points nearly exterminated. The pearls found are few, and those of marketable value represent the destruction of thousands of shells for every one obtained. No use is made of this often beautiful material, which is simply thrown away and lost; although for buttons or ornamental articles it would be admirable. The methods of gathering the shells and extracting the pearls are the simplest and most primitive, and the activity of a few seasons generally exhausts the beds.

This state of affairs is one that calls loudly for reform. The wealth of Unios that filled our rivers and streams is being rapidly destroyed by ignorant and wasteful methods of pearl hunting; and either some form of protection is important, or if that be not possible, a wide diffusion of information as to better methods, and particularly the introduction of tools used in Germany for opening Unios far enough to see if there are any pearls to be obtained without destroying the animal, which may then be returned to the water.

Pearl Hunting as a Profession.

As to the principal occupations of the pearl hunters, or pearlers, as they are called, this was answered by 64 papers. Of these, 13 say merely that their occupations are various, or that people of all callings are included. The remaining 51 papers state more or less definitely as follows: Farmers and farm hands, 23; laborers, 12; fishermen, 8; and as making pearl hunting a regular business, 7. Three papers speak of loafers; and 1 or 2 of each specifies as follows: Stockmen, hunters, trappers, tradesmen, roustabouts, boys and negroes; and the Maryland paper, oystermen. The term "laborers" as used in these answers probably means, in most cases, farm laborers, as stated in a few instances; and the indication is that two-thirds of the pearl hunting is done by agricultural people who search the streams when not otherwise occupied—"in off times," as 2 or 3 of the writers say. Fishermen are naturally much in preponderance, who gather the shells for bait.

Methods of Extracting Pearls.

The inquiry as to the mode of extracting the pearls, when found, received 72 answers. A large proportion of these are general, merely saying "by hand," "with the fingers," etc.; but about one-third give more or less description of the process. When the shell has been opened, the pearls, if loose and near the edge, may be readily seen, and sometimes even drop out. These are, of course, easily taken with the thumb and finger, or, if small, with tweezers or on the point of a knife. If more imbedded in the mantle and gills, they are detected by feeling for them, passing or rubbing the thumb or finger along and around each valve and about the region of the hinge. The pearls may then be pressed or squeezed out "like the seed of a cherry," but if attached to the shell, must be removed with a pair of nippers. Care is required in opening not to scratch or injure the pearl. A very few describe different methods. Thus one Arkansas pearler speaks of breaking the shells, and a Florida pearler tells of piling the mussels in a dry place to decay, the Oriental method of opening the true pearl oyster, and finding the pearls in the emptied shells later. This method is evidently only practicable where little or no pearl hunting is generally carried on, and the pile of shells would not be liable to inspection and search by other parties than the original gatherers.

Treatment of Pearls when Found.

Concerning the treatment of pearls when found, definite answers were received to 52 papers, which in some respects show considerable diversity of usage. The pearls are first thoroughly washed to remove all adhering animal matter; and 2 papers speak of using alcohol to complete the cleansing. After this the essential point in keeping or carrying them is to prevent injury to the surface from friction; and the majority of those who describe what is done tell of wrapping in cotton (14), or soft paper (7), cloth, flannel or silk; several speak of drying them, or keeping them dry, but others would keep them in a liquid, 6 specifying a bottle of water and 1 sweet oil or coal oil; several speak of putting them into a bottle, but with no accounts of its contents, or whether even dry, though Indiana No. 1 mentions cotton in a bottle; and hence, in cases just referred to, it is impossible to judge what is the probable meaning. Two papers mention keeping pearls in starch, and 1 "in Irish potato." The effect of sunlight is curiously alluded to by 2 papers, the former stating that the pearls should be kept from it, and the latter that they should be kept in it.

Six Tennessee papers make interesting reference to "peeling" dull and unpromising pearls, merely by saying that this is sometimes done "with a sharp knife," and a nice pearl is obtained thereby. Alcohol, whiting, chamois, leather, etc., are mentioned as employed to produce a good surface of luster. Two other papers allude to polishing or cleaning pearls, 1 specifying that it is done "with Irish potato." Two papers say nothing under this head of treatment, save that there is no way to improve nature.

Destruction of the Mollusk.

As to what use, if any, or disposal is made of the

shells after being examined for pearls and the animals destroyed, they give a painful record of the utter waste of an enormous amount of material useful and beautiful for many purposes in the arts. The question is answered in 74 papers with a melancholy uniformity. In only 12 of them is there any suggestion of utilization of the shells, and in only 1 of the use of the animals other than as fish bait, manure, or food for hogs; 26 of the answers say simply that there is no use made of them, or that they are "wasted" or "thrown away;" 9 say that they are thrown into the water, and 6 add that the fish eat them, and also the muskrats and tortoises; 7 speak of their being used for fish bait; 6 for feeding hogs; and 2 for manure; several merely say that they are left on the banks or shoals for rats, minks and crows to dispose of.

An Iowa pearler states that the shells are utilized for button making, and that some people use the animal for making soup. The actual use of the shells for buttons is also referred to by 2 pearlers, and their possible value for that purpose is noted in four other papers, though they are not so used as yet. One says that few are polished for ornamental purposes, and another makes a similar statement, adding that they are also used for paving garden walks, and burned for lime. This latter use, for lime, is referred to also by 3 Tennessee papers as actual or possible; and 1 says that they might be "ground to cement;" and 1 Wisconsin writer notes that some are ground up for the poultry.

As a Product for Food.

There would seem to be a strong presumption that the ancient people, and of the United States, must have used the Unios quite largely for food, as we know that the later Indian tribes did, as will be referred to later on. They naturally were thus led to the finding of pearls, and accumulated large stores of them in the course of time. The ancient tribes of Brazil have left shell heaps along rivers tributary to the Amazon, composed of fresh-water shells of that region (Hyria and Castilia); and though no such stores of pearls have been found, yet the shells themselves have been much employed as ornaments among these people.

When it is remembered that the tribes of both North and South America made large use of the river mussels as an article of food, it seems extraordinary that only one instance of any attempt so to utilize them should appear in these accounts, although Canadian lumbermen catch them by allowing bushes to drag after their rafts in shallow streams, using the mollusk for food. They could perhaps often save life, if explorers or hunters knew of their existence; while the shells so capable of being wrought and polished into an immense variety of beautiful objects of ornamental art should command a remunerative price, instead of being thrown away and wasted.

Utilization of Unio Shells for Buttons.

Several references, from time to time, have been made to the valuable possibilities of the abundant shells of the Unios for various purposes of manufacture, and some few instances noted of their being polished as ornaments or cut into buttons. It is highly interesting to learn that this latter use has at last attracted attention, and is developing into an important industry. A correspondent of the St. Paul (Minn.) Dispatch, under date of Nov. 13, 1897, gives an extended account of the shell button manufacture at Muscatine, Ia., where already a number of factories are in operation. No dates are specified; but the statement is made that it was begun within a few years past by Mr. Bepples, a German, who recognized the possibilities of such an industry, and established a factory at Muscatine, soon employing 200 operatives, besides a number of outside people, gathering shells from the Mississippi River at that point. The enterprise proved profitable, even under an unfavorable tariff, and several other factories were established; but since the recent protective legislation has gone into effect the business is increasing largely. Eleven or twelve factories are now in operation, running 300 saws and employing 1,500 people. One of these was working on double time to fill orders for 20,000 gross of buttons for the "holiday trade" of 1897. The business is already an important element in the prosperity of the town; and as the supply of shells is enormous, it is expected to increase in extent. Other works exist also in Iowa, at Davenport and Saluba, and at Cedar Rapids on the Cedar River. There are also Eastern factories referred to that cut the shells into "blanks," i. e., unfinished discs, and send them to Muscatine to be polished and perforated.

The shells have been gathered by men and boys wading in the shallow water, and working from boats in the deeper parts, with rakes provided with a wire net or basket. Now, however, steam dredging is to be employed. One such boat has been built, and another is under construction. The dredge will take up a ton of shells in an hour, and the steam will be used to cook the animals and clean the shells—a process now slowly conducted in small furnaces. As the gathering cannot be carried on in winter when the river is frozen, prices rise in autumn. Several species are capable of being used, of which two are particularly mentioned; these are "nigger-head" shells, which have risen with the approach of winter from 35 cents a hundred to 70 cents, and "sand" shells have advanced correspondingly from \$1 to \$2 per hundred.

Present Abundance of the Fresh-Water Mussels.

Out of 83 papers which respond to this inquiry, 7 describe the shells at present very abundant; 36 as plentiful; 25 as scarce; and 3 as absolutely exterminated; while 28 papers refer to the fact of diminished and diminishing numbers within a few years past, some of them with great emphasis. The papers Tennessee Nos. 7, 32, 33 estimate the present numbers as reduced to one-tenth of what they were ten years ago, and in all the same general fact is stated of former abundance and present rarity, and attributed to the pearl hunting destruction of a few years past. Several papers say that the shells are now scarce in small streams and shallower parts of large ones, while still abundant in deeper water and where the currents are strong.

Natural Enemies.

The responses to Question 7, in 84 papers, are varied

and interesting, and in some respects quite contradictory. The chief natural enemy of the Unios appears to be the muskrat; 65 papers refer to it, 26 reporting large destruction from this cause, 38 in some degree, and 1 denying it.

Hogs come next, and are referred to in 47 papers. Of these, 7 hold them responsible for large destruction, 35 for some or a little, and 5 asserting that there is none. Of other animals, raccoons are stated in 13 papers to destroy some shells, mink in 5, mud turtles in 3, crayfish in 2, aquatic birds in 2, and cattle, by trampling, in 3. All the animal depredators deal only, or chiefly, with the Unios that are either young, small-sized or soft shelled, and hence not largely pearl bearing. The only exception to this general rule is the statement in 1 paper that many pearls have been found where shells had been taken ashore by muskrats and left to open in the sun.

Injuries due to Physical Causes.

With regard to physical causes of injury, the most serious, no doubt, is found in freshets. Of 31 papers that refer to these, 17 report great destruction thereby; 13 say "some" or "a little," and 1 denies that there is any. Some papers say that their injury is small, and that they only shift the beds and redistribute them; but a number describe the burying of beds by the washing down and caving in of the beds in flood time, or the stranding of great quantities of young shells to perish when the water subsides. Two papers that do not mention freshets should doubtless be included here, however, as they speak of destruction caused to the shells by "covering with mud" and by "change of bars." On the other hand, low water and droughts are reported as seriously harmful in 5 papers, and drift ice in 3; 2 papers allude to disease as a cause of injury, and 3 to boring parasites.

Extermination of the Mollusks.

Question 28, as to exhaustion of the mussel beds, its causes and its rapidity, has called forth a very suggestive body of replies in 57 papers. The remaining third makes no response, or none that is at all definite. Nine papers report extermination of the shells, either actual or imminent, within a very few years past; 20 speak of rapid diminution in their numbers; 16 of decrease as noticed, and progress; 8 are uncertain, or report little or no change; 6 describe them as abundant, or "inexhaustible;" and 4 refer to partial recovery, or replenishment after reduction. In 45 out of 59 papers, therefore, or approximately three-fourths, the process of exhaustion is recorded at times already complete. Of these, 26 state the cause as pearl hunting, mainly or wholly, and to refer to other agencies—1 or 2 each to low or high water, deposits of sand, or mud, ice, boats, hogs and rats. Of 7 answers from Wisconsin, where so many pearls of remarkable beauty were found in the early 90s, 5 report the shells as nearly or entirely exhausted, and 2 refer to rapid reduction due to careless and ignorant persons taking the small and young shells as well as those more likely to contain pearls. A Tennessee paper alludes to the same reckless habit, and estimates the shells remaining as about 5 per cent. only of the number in former years. The destruction of young shells is also mentioned in Indiana. In New York it is stated that a good pearl fisher can "clean out" a bed of 500 shells in a day. The Ohio paper speaks of hundreds being opened daily. In Iowa 1 states that the river will be exhausted in two years. Of those that speak of little change, several remark that much is not known or done in regard to pearls in their localities. Of the 4 that allude to recovery, Tennessee says that the beds are cleared out about every two years and renewed in four; 1 says that they exhaust yearly and re-bed in one or two years; another states that the shells return every year, but in less numbers; and Texas reports that many beds that have been worked out are recovering, through the growth of the young shells that were left unmolested.

Sept. 8.—Manitoba Field Trials Club trials. William C. Lee, Sec'y, Winnipeg, Man.

Dick.

HE was a dog, black as Erebus, a Great Dane I think he was, though of that I am not sure. My first impression of him was not favorable; tugging violently at the end of a chain he was standing almost erect, his forepaws frantically fighting the air, and with a most unpleasant expression of yearning ferocity about his widely distended jaws.

My friend Tom, however, who was in quest of a water dog, did not share my apprehension. He spoke to him soothingly, and boldly walking up to the terrible animal, was presently, to my amazement, quietly patting him on the head, while he arranged with his owner the terms of purchase.

Thanks to my intimacy with his new master, I soon came to know Dick better, and the better I knew him the more admirable traits did I discover in his character; for dogs have characters oftentimes nobler and stronger than such as belong to some men.

The only really ugly thing about him was his face, and that was terrible, while his enormous size and powerful build served to make his ugliness very impressive, though strange to say, on closer acquaintance, I was convinced that his countenance, homely as it was, was good.

Like most men possessed of great strength, his disposition was contrary to appearances, temperate and mild. Tom's little boy could pull his tail, slap him with all the might of his baby hands, make faces at him, and even apply to him all the strange and abusive epithets of his infantile vocabulary without moving him to the least display of irritation or displeasure; but if any one threatened harm to the child, his fierce indignation would have become a parent. Sometimes his solicitude for the

welfare of his protégé—for such the baby soon became—was carried to extremes.

To children, in their ignorance, wanton destruction is sometimes very pleasing. One spring day the gardener had set out a beautiful bed of hyacinths; scarcely had he finished when the enterprising youngster, clad in nice, white clothes, toddled into the midst of the flowers, and plumping himself down in the nice soft loam, began to work havoc. This proceeding the gardener would fain have stopped summarily; but Dick with an ominous growl sprang between the irate horticulturist and the gleeful infant and would permit of no interference with the joys of his charge, until an authority that he recognized as supreme, to wit, his mistress, intervened.

It was amazing how rapidly he acquired a knowledge of who belonged upon the premises and who did not; and also the exact extent of the territory over which it was his proud duty to stand guard.

The boys from the butcher's or the baker's, or the boy with the milk pail, he would suffer to come in about their respective errands; but only when they carried a basket or a pail, or some other ostensible token of their mission. At other times he was prone to active suspicion, and once when the butcher boy came without his basket, but with a bill—receipted at that—the boy's prudence incited by the dog sent him hastily up a convenient tree, where he remained for nearly half an hour before his predicament was discovered and his release effected. By judicious treatment, nevertheless, the boys after a while persuaded him into a kindlier recognition of them.

There was one class of individuals for whom he had no toleration whatever. Whether they offended his sense of sight or of scent, or his predilections for gentility, he could not endure tramps.

One of those pleasant Sundays that it was my frequent privilege to spend with my friends, on our return from church, we found the dog cavorting about the place most joyously. There was something that he would toss high in the air, then with a leap he would catch it in his jaws and away he would go circling about at full speed, waving it about exultantly as he ran. Our curiosity was immediately aroused to find out what this new toy was with which he played with such gusto. After some effort and much strategy he was at last induced to surrender his trophy to his master. It proved to be a circular bit of cloth of ripe age and exhausted color. From the freshly indented aspect of its jagged edges and its general contour, it was evident that it had recently been detached with some violence from that part of a masculine garb in which fullness is most usually found. Exactly how or whence it came into Dick's possession we never knew. Its owner never came back after his property—possibly because he had so abruptly preceded it.

On a place in the outskirts of a suburban community the presence of such a guardian was a great protection to his mistress and a great comfort to his master. The confidence reposed in him was well deserved. It happened one day when there was no man about the place who belonged there, Tom, of course, being in the city and the hired man off on some errand, that Mrs. B. was in the kitchen. Ladies sometimes like to visit their kitchens for purposes of investigation, instruction or experiment. The only lady I ever knew who never did was one whose husband had married his cook. At any rate Mrs. B. was in the kitchen, while Dick was lazily napping before the range. Answering herself a peremptory knock on the door, she opened it, to be confronted by a tramp of evil aspect, who demanded something to eat, at the same time trying to force his way into the house, and adding: "I don't want none of your slops nor stale bread neither; but the best you've got, see!" An indignant and peremptory growl was the unexpected answer, and one glimpse of Dick's face looming over the lady's shoulder as he reared up in a frantic endeavor to pass her in the narrow passage instantly appeased the hobo's appetite. "I don't want nuthin'—only for God's sake don't let him at me," he yelled, as he fled in terror—never to return.

Many characteristics had he that were very human-like. Once we were out walking with him when he espied upon the other side of a low picket fence, which fronted the street, a fine Newfoundland dog, of a size about equal to his own. What incivilities occasioned it I do not know; but presently they were rushing up and down the length of the fence—one on one side and the other on the other—most vociferously abusing each other, and hurling all manner of defiance back and forth through the pickets. Of course it is not given to me to accurately translate their conversation; but in substance Dick was saying, "You big, black lump, if you were only out here in the street I would not leave one bone of your miserable frame attached to another. You braggart, you coward, you—you paltrone, if it were not for this fence behind which you sneak, how I would do you up." The other dog, as he dashed back and forth, kept responding in the same strain, and with equal emphasis. My translation gives but a weak idea of their horrible language toward each other. Nevertheless it did seem to me that if they were in earnest it was a very easy thing for either of them to have leaped over the little fence that separated them, or there was a hole in the barrier between them big enough for both to have passed through at once had they seen fit to do so. I really feared that one or the other would take the opportunity, and said so to Tom. He smiled at my fears, seized Dick by the collar and brought him to the hole in the fence. The Newfoundland came up voluntarily on the other side—their fierce animosity seemed to have vanished; and as they wagged their tails, and licked each other's noses, they seemed to me to be saying, each to the other: "Why, you are a very nice gentlemanly dog after all. I am glad to see you, sir." How often since have political orators reminded me of these dogs.

One flaw in our hero's character was his weakness for an unworthy friend, a dog that by reason of his mendacious depravity we called Jacob. Had our dog's name been Othello, Jacob would have been dubbed Iago.

He was about half Dick's size, a mongrel with a depraved cast of countenance that did not belie his character. He seemed to delight in leading his noble associate aside from the paths of virtue, and then from a safe distance he would contemplate with ill-concealed glee

the punishment for wrongdoing administered to his victim.

We caught him at it several times. During one of our Sunday afternoon walks the two dogs were some distance ahead of us trotting along together, when Jacob turned out of the road and disappeared through a hedge that grew beside it, Dick, of course, following close at his heels, too far off to hear, or at all events oblivious of his master's whistle. When we arrived at the point of their departure there was no sign of them; but shortly there arose from some nearby barnyard a terrible commotion of cackling, squawking and screeching. Then we saw Jacob quietly steal across the road somewhat ahead of us, settle himself upon his haunches and complacently watch for developments. Immediately we heard some profanely emphatic language, accompanied by the sound of a whip, and Dick's voice raised in remonstrance, and looking up a crossroad to which we were come we saw our culprit run forth from a gate closely pursued by two men armed with whips. There and then it cost Tom two dollars to settle for slaughtered chickens.

If, during that entire performance, Jacob did not look on with keen malicious delight and satisfaction, a dog's face has no expression.

A more glaring example of his duplicity was on another occasion, when he deliberately and persistently provoked a high minded and well-bred setter that he met in the road to threaten him, whereupon with a plaintive voice he called for Dick, and when the great, friendly brute came rushing to his rescue, the villain settled himself into a comfortable position and licked his chops in anticipation of a rare treat. But this time Tom was too near by, and the wicked one, for once, got his just deserts.

I really did not blame Dick very much because of his fondness for his rascally friend, for he was as politely clever as he was perfidious. He was one of those subtle villains who charm us despite our knowledge of their true character. When a heavy truck run over him and thus brought his career to an abrupt though perhaps timely close, I could not but sympathize with our dog in his evident affliction and distress.

But all too soon there came evils from which no dog, however faithful, could protect my friend's family. An unfortunate accident, followed by a long, critical illness, changed his mistress from a strong, happy, active woman into a helplessly crippled invalid. So the pleasant home over which he had stood guard so loyally was given up, and Dick, rather than that he should suffer the confinement of the city, passed to a kindly owner in a different locality.

A year or two later I had occasion to be in the neighborhood of his new home, and as I stood at the wayside talking with a man, a carriage came up the road with a great dog bounding beside it. It was Dick. He knew me at once, and rushing up, greeted me with a delight manifest and effusive, entirely forgetting in his demonstrative greeting the mud covered condition of his huge paws. Then with a wistful backward glance, and a farewell bark, he bounded off to overtake his convey, and as he disappeared around a turn in the road I saw my last of Dick.

EDMUND R. TERRY.

American Dachshund Club.

THE American Dachshund Club held its eighth meeting for the election of officers, etc., May 19, at the home of Mr. Arthur Froembling. As the president, Mr. Louis Boening, had been called South to the war, Mr. J. R. Walker presided. The minutes of the last meeting were read and accepted, as was also the financial report. Communications from outside members were read, after which the following officers were elected for the ensuing year. Mr. Arthur Froembling, President; Mr. Albert Nelson, Vice-President; Mr. James R. Walker, Secretary and Treasurer; Dr. C. Motschenbacher, delegate to the American Kennel Club. As stated above, Mr. Boening has been called away, which necessarily kept him off of the new board. The club hopes, however, to be able to elect him again at some future meeting.

JAMES R. WALKER, Sec'y and Treas.

CHICAGO, Ill., May 24.

Yachting.

Fixtures.

JUNE.

- Baltimore, Rear-Com. cup, Chesapeake Bay.
- Corinthian San Francisco, cruise, Petaluma.
- Queen City, 22ft. K class, Dodd cup, Toronto.
- Royal St. Lawrence, all classes, Dorval.
- Chicago, Siren-Vanenna matches, Chicago.
- Canarsie annual, Jamaica Bay.
- Corinthian Fleet, annual, New Rochelle, L. I. Sound.
- South Boston, handicap, Boston Harbor.
- Taunton, club, Taunton, Mass.
- American, cruise, Newburyport, Mass.
- Norwalk, club, Norwalk, L. I. Sound.
- Royal Canadian, first and 22ft. K classes, Toronto.
- Baltimore, Vice-Com. cup, Chesapeake Bay.
- Queen City, 19 and 16ft. classes, World cup, Toronto.
- East Gloucester, cruise, Gloucester, Mass.
- Cor. Philadelphia, annual, Essington, Delaware River.
- Cape Cod, club, Provincetown, Mass.
- Miramichi, Fraser cup, Newcastle, N. B.
- Winthrop, water sports, Winthrop, Boston Harbor.
- Massachusetts, open, Nahant, Massachusetts Bay.
- South Boston, cruise, Boston Harbor.
- Burgess, open, Massachusetts Bay.
- Winthrop, cruise, Boston Harbor.
- Jubilee, second championship, Massachusetts Bay.
- Wollaston, cup, Boston Harbor.
- Beverly, first Corinthian, Buzzard's Bay.
- Royal St. Lawrence, 20, 18 and 15ft. classes, Dorval.
- Larchmont, spring, Long Island Sound.
- Baltimore, McAllister cup, Chesapeake Bay.
- Corinthian Marblehead, club, Massachusetts Bay.
- South Boston, cruise, Boston Harbor.
- Burgess, cruise, Massachusetts Bay.
- Queen City, 22ft. K class, Toronto.
- Winthrop, cruise, Boston Harbor.
- Columbia, Chicago to Michigan City, Lake Michigan.
- Corinthian San Francisco, cruise, McNears.
- Seawanhaka, knockabout cruise, Oyster Bay to New London and return.
- Beverly, second Corinthian, Buzzard's Bay.
- Baltimore, Rear-Com. cup, Chesapeake Bay.
- Douglaston, annual, Long Island Sound.
- American, skiff classes, Newburyport.
- Quincy, handicap, Boston Harbor.
- Dorchester, open, Boston Harbor.

- Burgess, first championship, Massachusetts Bay.
- Royal Canadian, 27-22 and skiff classes, Toronto.
- Chicago, Siren-Vanenna, final match, Chicago.
- Stamford, annual, Long Island Sound.
- Cape Cod, club, Provincetown.
- Mosquito Fleet, open, Boston Harbor.
- Seawanhaka, annual, Long Island Sound.
- Newport, ladies' cruise, Narragansett Bay.
- Taunton, ladies' day, Taunton, Mass.
- Wollaston, moonlight sail, Boston Harbor.
- Sea Cliff, annual, Long Island Sound.
- Chicago, Chicago to Kenosha Lake, Michigan.

JULY.

- Chicago, Kenosha to Milwaukee, Lake Michigan.
- Miramichi, cruise.
- Royal Canadian, Queen's cup, Toronto.
- American, moonlight sail, Newburyport, Mass.
- Royal St. Lawrence, morning and afternoon races, Dorval.
- Royal St. Lawrence, 20 and 18ft. classes, Dorval.
- New Rochelle, annual, Long Island Sound.
- Corinthian Marblehead, club, Massachusetts Bay.
- Queen City, 19ft. class, Toronto.
- Jeffries, open, Boston Harbor.
- Beverly, third Corinthian, Buzzard's Bay.
- Milwaukee, centennial regatta, Lake Michigan.
- Corinthian San Francisco, cruise, Martinez-Vallejo.
- American, cruise, Squam.
- Lake Michigan Y. A., annual, Milwaukee

- American, cruise to Plum Island.
- Baltimore, Rear-Com. cup, Chesapeake Bay.
- Queen City, 22ft. K class, Toronto.
- Newport, ladies' day, Narragansett Bay.
- Miramichi, Gould cup, Newcastle.
- Taunton, ladies' day, Taunton, Mass.

OCTOBER.

- Miramichi, Watt cup, Chatham.

THE usual Decoration Day events by which the yachting season is now opened were of less than ordinary interest this year, a fact that may be accounted for almost as much by the extraordinary weather as by the war. The latter has had a decided effect upon the steam yacht fleet, as many yachts have been purchased by the Government, while others will not fit out, but the laying up of the larger yachts, steam and sail, is likely to react favorably rather than otherwise in increasing the interest in racing and the smaller classes. Here, however, the weather comes in, and the fitting-out season has been marked by six weeks of steady rain, during which time it was impossible to scrape, paint or varnish, while the few yachts in commission found the weather most unpleasant for cruising.

The triple holiday, from Saturday noon to Tuesday morning, was celebrated by yachtsmen in all parts of the country, most of the clubs opened their summer stations with appropriate ceremonies, the yachts in commission were under way, and a number of local races were held.

With the coming of real summer weather much will be done to remedy the enforced delay of the wet spring; and though the opening of the season will be late, there is good reason to anticipate a fair amount of sport by mid-summer.

Seawanhaka Cor. Y. C.

OYSTER BAY—LONG ISLAND SOUNE.

Saturday, May 29.

THE Seawanhaka-Corinthian Y. C. opened the season on Saturday at its Oyster Bay station, the colors being hoisted in the morning, and the first of the knockabout races being sailed in the afternoon, in a light N.E. breeze. The times were:

	Finish.	Elapsed.
Lady Blanch, C. K. G. Billings	2 50 00	5 42 00
Bee, Nelson Burr	5 34 11	3 44 11
Tosto, John C. Scott	5 36 46	3 46 46
Taifer, George Bullock	5 39 06	3 49 06
Francis, G. Milne	5 45 15	3 55 15
Midge, F. W. Boyer	5 47 00	3 57 00
Nakade, F. D. Sherman	5 49 38	3 59 38
Stella, J. Sherman Hoyt	5 54 01	4 04 01

The May meeting of the club was held in the evening. On Monday another race of the knockabouts was sailed, for the Robert Center memorial prizes. The course was a triangle in Oyster Bay, three rounds making eleven miles; the wind being light N.W. The times were. Start, one gun, 2:50:

	Start.	Finish.
Gloria, J. R. Maxwell, Jr.	2 50 00	5 28 40
Nakade, F. D. Glennon	2 50 00	5 28 21
LadyBlanch, C. K. G. Billings	2 50 00	5 42 00
Dipper, Austin Iselin	2 50 00	5 43 08
Bee, Nelson Burr	2 50 00	5 26 20
Santa, Daniel Bacon	2 50 00	5 40 06
Stella, J. S. Hoyt	2 50 00	5 27 45
Francis, George Milne	2 50 00	Withdrew.
Midge, T. W. Beyer	2 50 00	5 43 35
Taife, George Bullock	2 50 00	5 40 45
Tosto, Lloyd M. Scott	2 50 00	5 27 47

After the race the helmsman of Bee, C. W. Wetmore, gave notice that the yacht had disqualified herself, the prizes thus going to Stella and Tosto.

Winthrop Y. C. Club Race.

WINTHROP—BOSTON HARBOR.

Saturday, May 28.

THE Winthrop Y. C. sailed its first club race May 28 over course No. 2 in a moderate N. E. wind, with heavy fog at times. The race is the first under the new rule of the Massachusetts Y. R. A., abolishing time allowance. The times were:

	Elapsed.
Nettie, Walter Burgess	1 17 23
Harriet, L. N. Harrington	1 19 58
Alert, J. O'Connell	1 22 28
Alma, Charles Haney	1 30 10
Myrtle, W. McCluskey	1 30 48

Nettie wins. The judges were: A. T. Bliss. M. Randall and W. J. Kelleg. The judges were: A. J. Bliss. M. R. Randall and W. J. Kelley.

Corinthian Y. C. of Philadelphia.

ESSINGTON—DELAWARE RIVER.

Saturday, May 21.

THE Corinthian Y. C. opened the season on the Delaware River on May 21 with the first race of its one-design fleet, for a cup presented by Com. Van Rensselaer. The six yachts of the new class started as follows:

The Kid, Capt. G. Herbert Millet, W. Barklie Henry and a professional; Fareda, Com. Van Rensselaer, Mrs. Van Rensselaer, C. H. Grant and a professional; Fly, Capt. C. H. Brock, Dr. R. G. Woods, Miss May Fell and Alf. Johnson, a professional; Grilse, Capt. Edward Toland, Robert Toland and E. W. Clark, Jr.; Menlo, Capt. John W. Brock, George Barrie, Jr., and Charles Tanger, professional; Spider, Capt. Parker R. Freeman, Henry S. Jeanes and J. I. Inglis.

The course was from off the club wharf at Essington, around the red spar buoy W.S.W. of Chester Island, on the port hand; thence to the southward and eastward of Chester Island, to red spar buoy S.E. of Chester Island on port hand; thence to black and red spar buoy W. of Little Tincum Island, passing on starboard hand; to finish, six miles.

The wind was strong from N.E., the first leg free. Fly fouled both markboats, but continued the race. Fareda took the lead, under whole sail, and held it to Little Tincum Island, but on the wind The Kid, with a single reef, passed her. The times were:

Start, one-gun, 2:50:00:

	Finish.	Elapsed.
The Kid	5 00 32	2 10 32
Fareda	5 02 23	2 12 23
Fly	5 03 55	2 13 55
Grilse	5 12 41	2 22 41
Menlo	5 14 46	2 24 46
Spider	5 18 03	2 28 03

Fly was disqualified.

Messrs. A. D. F. Bancroft and I. W. Jeannes managed the race.

The club's fixtures are as follows:

Saturday, June 11, annual race for all classes.

Monday, Aug. 22 to Aug. 26, knockabout class match with Seawanhaka-Corinthian Y. C. at Oyster Bay, Long Island, N. Y.

Monday, Sept. 5, autumn race for all classes.

Saturdays, June 4 to Oct. 31, 25ft. class races, 20ft. class races, 15ft. class races.

A yacht whose official measurement has not been filed with the Race Committee prior to the start of a race shall not be eligible to compete. All yachts in the 30ft. class and under must have measurer's certificate for 1898.

Corinthian Knockabout Class—Rules, races and events.

The races appointed for the Corinthian knockabout class shall be open to yachts built according to the plans and specifications prepared by Mr. W. B. Stearns, of Marblehead, Mass., and approved by the Race Committee of the club, and shall be sailed under the following:

Helmsmen shall be amateurs. One member of the crew may be a professional. The total number of crew shall be limited to three. One lady may be carried in addition to the crew.

No doors, bulkheads or other permanent fittings or fixtures shall be removed.

Ice boxes and galley stoves and fittings shall not be deemed to fall within the inhibition of this rule.

The start shall be a "one gun" flying start, with a preparatory signal, given five minutes before the starting signal.

Entries for races in writing shall not be required, but any yacht which shall have crossed the starting line within ten minutes after the starting signal of any race shall be deemed to have entered in such race.

The Race Committee may, however, in its discretion, by giving notice in advance, extend the period for crossing the line within the meaning of the rule.

The spinaker boom, when used in carrying sail, shall not be lashed to the forestay or stemhead.

The Race Committee may, in its discretion, restrict the hauling out of yachts in preparation for races should it deem such restriction necessary to the fairness or success of the races.

The racing rules of the club, so far as inconsistent with these special rules, are hereby suspended, but otherwise shall govern.

All the races in the knockabout class, except interclub matches and the annual race, unless otherwise agreed by the contestants themselves, shall start and finish off the club house at Essington, and shall be sailed over Course No. 4—from the starting line around the red star buoy No. 38, west southwest of Chester Island, passing it on the port hand; thence keeping to the southward and eastward of Chester Island, to red spar buoy southeast of Chester Island, passing on the port hand; thence to black and red spar buoy west of Little Tincum Island, passing on the starboard hand; thence to finish line.

There will be three series of races, to be known as the First Saturday Series, the Second Saturday Series and Third Saturday Series. First, second and third prizes shall be awarded at the conclusion of each such series.

A first, and whenever there are more than two contestants, a second prize shall also be awarded in each race of each series.

First Saturday Series—Saturdays, June 4, 18, 25; July 2, 9, 16, 23. Preparatory signal at 2:30 o'clock P. M. Starting signal, 2:35 o'clock P. M.

Second Saturday Series—Saturdays, July 30; Aug. 6, 13; Sept. 3, 10, 17. Preparatory signal at 2:30 o'clock P. M. Starting signal, 2:35 o'clock P. M.

Third Saturday Series—Saturdays, Sept. 24; Oct. 1, 8, 15, 22, 29. Preparatory signal at 2:30 o'clock P. M. Starting signal, 2:35 o'clock P. M.

Series shall be decided by the aggregate number of points obtained by the contestants in all the races of the series in which they may have sailed. The yacht obtaining the highest number of points shall receive the first prize; the yacht obtaining the second highest number the second prize, and the yacht obtaining the third highest number the third prize. A yacht shall be credited with as many points in each race as the number of yachts she defeats, with one point added as a premium for entry. A yacht which fails to finish shall receive no credit for her entry, but she shall be counted in assigning points

to her competitors. Each yacht carrying a lady in excess of the number of the crew allowed shall be allowed one second per mile of the course sailed, to be deducted from her actual time.

A special prize shall be awarded to the yacht winning the greatest number of races during the season.

Unless otherwise agreed between the contesting clubs, these matches shall be sailed by an equal number of boats representing each club, and shall be decided by the aggregate of the points won. Points shall be calculated as provided for the series races, except that there shall be no credit for entry and that each yacht shall be credited only with a number of points equal to the number of yachts of the opposing club which she may have beaten.

If it should be desired by yacht owners, the Race Committee will arrange, toward the end of the season, a series of races with helmsmen, changed from the boats to which they have been accustomed, and also a handicap series based on performance during the previous races.

The Race Committee will also be glad at any time to manage sweepstake races at the request of two or more owners desiring to sail such races.

The Waikaki's Cruise.

THE naphtha yacht Waikaki, H. C. Roome, New York Y. C., of New York, has reached Chicago with her owner and his wife on board, after a remarkably interesting cruise, of which the following details are given by the Chicago Inter-Ocean:

Waikaki left New York Nov. 1, 1897; taking the inland water route to Beaufort, N. C., calling at Philadelphia, Baltimore and Norfolk, and passing through the various sounds on the coast of North Carolina. From Beaufort she ventured out on the stormy Atlantic and coasted along as far as Savannah, taking in Charleston on her way. At Savannah she again sought the peaceful waters of sounds along the coast of Georgia and Northern Florida. On reaching Jacksonville, Fla., she again darted out on the broad Atlantic, touching on her southward course at St. Augustine. Then came again tide-water ways, the Halifax River, Mosquito Lagoon, the Indian River, and so on through Lake Worth and Biscayne Bay, with their connecting canals, calling on the way at all the famous East Coast winter resorts, New Smyrna, Daytona, Rockledge, Palm Beach and Miami. From the last named place the tiny cruiser again valiantly braved old ocean's mighty waves and sailed along the crescent chain of tropic keys that sweep around the tail of the United States; then dashed over to Cape Sable and along the Gulf coast of Florida with its myriad of Lilliputian islands, and so on to Pensacola and New Orleans. Then came the long course of the Mississippi to the Illinois River, then the passage of the latter to La Salle, the transfer at that place to the canal, and the trip down the canal to Chicago. Here she will stay till May 26, when the voyage will pass down the Great Lakes and the St. Lawrence through its maze of islands and out into the Gulf of St. Lawrence and past steeped Montreal and hoary Quebec, and so on along to the rockbound coast of Labrador and the shores of Newfoundland, Nova Scotia, and New Brunswick. Then she will turn south across the Bay of Fundy, with its mighty tide, and come back to the familiar shores of Maine and so on home to New York, making a trip of about nine months' duration.

These modern argonauts have already come some 4,300 miles on their trip and have still 5,500 miles of waterways to traverse before New York is reached. The object of the trip, aside from the pleasure, is a most worthy one, and decidedly patriotic, for that object is to show the owners of yachts of light draft what can be done and how much of enjoyment may be had in cruising along the shores and through the inland waters of their own country. As will be seen by what has been said of this trip of the Waikaki so far, such cruises can be so arranged as to bring the voyager in the winter season into the semi-tropic lands of Florida and the Gulf coast. As winter fades into spring the voyager is again approaching the Northern States, and when the dog days are reached he is coasting along the shores of Labrador.

The Waikaki is 54ft. long, has 9ft. beam, and draws 3ft. 8in. She is provided with a Globe multiple cylinder gasoline engine of twenty-eight actual horse power, and has a speed of ten knots. She can carry a month's supply of provisions and water, and gasoline for a 600-mile trip. The Waikaki passed through the Mackinaw Straits on May 30.

Elreba.

THE steel steam yacht designed by J. F. Tams, of Tams & Lemoine, and built by Lewis Nixon, was successfully launched at the Crescent shipyard, Elizabeth, N. J., on May 25. The yacht, whose ownership has been very successfully concealed, is intended for cruising, and has been designed for that end, with the expectation that she will make about 12 knots in regular service under natural draft. From her appearance in launching trim she promises to make a very shipshape craft, with good freeboard and handsome shear. She is 150ft. over all, 125ft. l.w.l., 21ft. 6in. beam, 11ft. 9in. depth, and 8ft. 6in. draft. The engines, built by J. W. Sullivan, are of the four-cylinder triple expansion type, 12, 18 and two 20in. by 15in. Two Almy boilers are used. The hull has been built under special inspection and survey for the highest classification in the American Lloyds, the scantling is ample, and the builders have done excellent work.

The owner's and guests' quarters are aft; the owner's room, 13ft. long, extending half way across the ship just abaft the engine space, with dressing-room and bathroom adjoining, and a smaller stateroom 8ft. long. There are five other staterooms and an after-cabin or library, abaft which is another toilet room. The officers and crew are berthed forward, and special care has been taken to provide ample room and ventilation in this part of the ship.

In the forward deck house are the dining room, pantry and galley; the deck of this house is carried out to the rail, making a large sun deck, and the bridge is raised

so as to permit an unobstructed view from it. The after deck house is arranged as a sitting room, with piano. The yacht is schooner rigged. As she left the ways she was christened Elreba by Miss Violet Cruger, step-daughter of the designer.

Harlem Y. C. Annual Regatta.

CITY ISLAND—LONG ISLAND SOUND.

Monday, May 30.

THE first of the annual regattas, that of the Harlem Y. C., was sailed on May 30. The weather was better than on most of the preceding days of the month, as it did not rain, and in the afternoon the sun came out brightly. The courses were from off Belden's Point, City Island. For the larger sloops and catboats, around Matinick Point Buoy and red spar buoy off Parsonage Point, twenty nautical miles. Twenty-five foot classes, Matinick Point and black spar buoy off Delancey Point; distance, eighteen nautical miles. Other classes, around Old Hen buoy and Delancey Point, thirteen miles.

At the start the wind was light from the S., but it finally settled down to a fresh westerly breeze. The fleet was started in divisions, under the Y. R. A. rules, the start being timed:

Americus	1 01 10	Mystic	1 06 15
Winona	1 01 12	Falka	1 06 30
Jennie C	1 01 20	Lizzie V.	1 06 33
Norman	1 01 30	Jessie	1 07 15
Oriole	1 01 32	Delphine	1 08 40
Cognette	1 01 35	Reliance	1 12 16
Zetes	1 01 45	Water Lily	1 12 40
Allegro	1 01 45	Pontiac	1 13 10
Just Right	1 01 54	Eleanor	1 13 16
Lauretta	1 02 00	Mary B.	1 14 09
Naiad	1 02 16	Lady Emma	1 14 50
Gracie	1 02 18	Petrel	1 15 00
Mohican	1 02 35	Nimrod	1 15 00
Mary S	1 02 37	Albatross	1 15 00
Lotta	1 02 45	Ruth	1 15 00
E. Z Sloat	1 03 30	Regina	1 15 52
Shippan	1 04 22	Lark	1 16 14
Swastika	1 04 44	Gull	1 16 50
Win or Lose	1 05 32	Laura Lee	1 17 45
Ann	1 06 04	Mistral	1 18 10

Petrel, Nimrod, Albatross, Ruth and Mistral handicapped.

The finish was timed:

Regina	4 50 30	Lark	5 18 05
Pontiac	4 52 20	Laura Lee	5 23 25
Delphine	4 57 00	Nimrod	5 26 45
Zetes	5 00 20	Norman	5 29 20
E. Z Sloat	5 00 35	Swastika	5 31 24
Lizzie V.	5 03 45	Jessie	5 33 50
Reliance	5 04 40	Mohican	5 38 50
Americus	5 06 58	Oriole	5 39 00
Gull	5 10 00	Just Right	5 39 01
Jennie C	5 12 00	Falka	5 39 30
Win or Lose	5 12 10	Lauretta	5 44 58
Shippan	5 12 50	Mary S	5 47 10
Mystic	5 14 42	Water Lily	6 04 30
Allegro	5 17 25	Ruth	6 08 15

The official times were:

Cabin Sloops, 43ft. Class.			
	Length.	Elapsed.	Corrected.

Just Right, P. Miller	23.80	4 37 07	4 24 10
Cabin Cats, 20ft. Class.			
Swastika, W. F. Buggie	20.00	4 26 50	4 26 50
Open Cats, 20ft. Class.			
Gull, J. F. Proctor	20.00	3 53 10	3 53 10
Regina, W. Scardefield	19.30	3 34 38	3 32 53
Open Cats, 15ft. Class.			
Lark, C. G. Davis	12.50	4 01 51	4 01 50
Laura Lee, —	12.50	4 05 40	4 05 40

The winners were Pontiac, Reliance, Water Lily, Mystic, Lizzie V., Delphine, Win or Lose, E. Z. Sloat, Zetes, Swastika, Regina and Lark.

The steamer Glen Island carried a large number of members and guests over the course without danger from mines or torpedoes.

Oceanic Y. C. Annual Regatta.

COMMUNIPAW—NEW YORK BAY.

Monday May, 30.

THE Oceanic Y. C. sailed its twenty-ninth annual regatta on May 30 over courses on New York Bay off Communipaw, the times being:

Open Jib and Mainsail.			
	Length.	Elapsed.	Corrected.
Pauline, I. Ellis	20.06	2 30 05	
Jack, W. S. Bishop	22.00	2 45 03	
Open Cat-rigged, over 20ft.			
Eureka, Capt. Dunham	22.00	2 45 00	
Aurora, R. Hawthorne	22.06	Did not finish.	
Open Cat-rigged, under 20ft.			
Chic, J. Watson	16.10	1 28 05	
Bel, Rigmaiden & Pray	15.07	2 13 00	
Sailing Skiffs.			
Mary E., Rigmaiden & Pray	15.06	2 08 35	
Nellie V., F. Van Winkle	15.06	2 09 25	
Just Look, R. Peterson	16.00	2 10 45	
Willie B., M. Bradley	16.00	2 11 55	

New Rochelle Y. C. Opening Race.

NEW ROCHELLE—LONG ISLAND SOUND.
Saturday, May 28.

THE New Rochelle Y. C. opened its season with a special race on May 28, open to yachts of all regularly organized yacht clubs, with prizes for the 30ft. and 25ft. classes of cabin cats, the 25ft. and 20ft. open cats, and the new 21ft. knockabouts. Club course No. 2 was sailed three times, 12¾ miles, naut. The wind was S.E., moderate. The start was made at 3:12 P. M. The sloop J. F. Carroll entered in the 30ft. sloop class, and sailed alone, as did the cabin cat Lizzie V. Two of the Seawanhaka knockabouts, Dipper and Senta, were present, with a new knockabout by Huntington, also the Boston boat Mongoose, one of the fastest of the racing knockabouts of last year. She very naturally, with the aid of Mr. Hazen Morse at the stick, defeated the new one-design boats. The times were:

Sloops, 30ft. Class.			
	Length.	Elapsed.	Corrected.
J. F. Carroll, H. Piepgras	30.00	1 36 32	1 36 32
Cabin Catboats, 30ft. Class.			
Lizzie V., W. P. Vreeland	29.96	1 30 48	1 30 48
Cabin Catboats, 25ft. Class.			
Win or Lose, J. S. Appleby	23.85	1 37 47	1 37 47
Harrietta III., A. Jacob	21.90	1 45 08	1 43 04
Open Catboats, 20ft. Class.			
Minnetonka, A. B. Alley	19.90	1 48 19	1 48 19
Lark, W. Hoey, Jr.	19.65	1 52 39	1 52 13
Open Catboats, 15ft. Class.			
Sora, Charles G. Davis	15.00	2 07 49	2 07 49
Cora, T. J. S. Flint	12.68
Special Knockabout Class.			
Mongoose, Simeon Ford	1 32 23
Senta, Daniel Bacon	1 44 35
Dipper, Arthur Iselin	1 46 19
Nonny, L. Dunham	1 53 02

The winners were: J. F. Carroll and Lizzie V., sail over; Win or Lose, Minnetonka, Lark and Mongoose. Lark is a small racing catboat, but 12ft. long, designed and built by C. G. Davis. The Regatta Committee included Messrs. Tower, Meyrowitz, Lippencott, Rough and Weston.

Indian Harbor Y. C. Special Race.

GREENWICH, CONN.—LONG ISLAND SOUND.
Monday, May 30

THE Indian Harbor Y. C. celebrated Decoration Day by the formal opening of the club station at Greenwich in the morning, followed by a special race for the one-design dory class in the afternoon. Provision was made for a knockabout race also, but no starters appeared. The race was started at 2:30 over a triangle of 1½ miles, sailed twice; the wind was S.W. at the start, but shifted to N.W. in the middle of the race. The times were:

	Finish.	Elapsed.
Prize, Com. H. E. Janes	3 45 30	1 03 30
Ketch II., L. C. Ketchum	3 46 03	1 06 03
Sweinet Pup, F. S. Doremus	3 48 57	1 08 57
No Name, H. E. Doremus	3 50 06	1 10 06
Fern, W. B. Greeley	3 51 18	1 11 18
Harry, T. De W. Scoble	3 51 26	1 11 26
Pargy, J. H. Downing	3 53 38	1 13 38
Yellow Pup, C. S. Somerville	3 57 15	1 17 15
Tender, T. H. Dayton	Capsized.
Bass, W. Fischer	Withdraw.

After the finish an extra race was sailed between Sweinet Pup, Yellow Pup and an unnamed boat, the former winning.

Queen City Y. C.

TORONTO—LAKE ONTARIO.
Saturday, May 21.

THE Queen City Y. C., of Toronto, opened its season on May 21 with a cruising race from Toronto to Port Credit. The wind was variable and at times very light, but a close race was made, five out of the seven starters finishing well together. The race was a sealed handicap, but the winner had no need of her allowance. Gway is a very peculiar and original craft, a proa designed by her owner, Robert Tyson, an old canoe sailor. She has a main hull similar to a canoe, to which is connected a smaller balancing hull. She was sailed by Mr. Tyson alone. The times were:

	Elapsed.	Corrected.
Gway, Robert Tyson	3 09 15	2 59 15
Widgeon, Mr. Tenny	3 10 45	3 05 15
Clock, Mr. Foy	3 14 45	3 07 15
Fanita, Mr. McGill	3 10 30	3 07 30
Enid, Com. Martin	3 11 45	3 11 45
Winona, Mr. Brown	3 30 15	2 23 15
Una	Did not finish.

The Corinthian Fleet, of New Rochelle, will go into commission on June 4 at 4 P. M., at the club house, Harrison Island. Com. Swett has appointed E. Hanford Sturgess fleet captain; F. Sargent Grant fleet surgeon, and Chas. S. Lane, D.D., fleet chaplain.

Rifle Range and Gallery.

Revolver at Louisville.

LOUISVILLE, Ky.—On Thursday evening, May 19, the Louisville Revolver Club met at the Armory for its regular weekly shoot, which resulted in exceptionally good scores being made in the 10yd. distance. Since the 1st Regiment left for Lexington, Ky., to mobilize, the Armory has been closed most of the time, which is detrimental to the interest of the club's team in practicing for the coming Louisville-Brooklyn revolver match. Gov. Bradley commissioned Col. H. S. Cohn to muster in a company of State guards at the Armory last Tuesday evening, and Col. Castleman, of the 1st Regiment, and Mayor Weaver, of our city, issued orders not to allow the Armory to be used for the purpose, and the large building was closed tight. That is the state of things at the present time. We hope for an early adjustment of matters, so we can get the required practice.

We were honored with the presence of R. T. Chapman, a friend and sportsman, formerly of Tennessee, who acted as scorer during the evening.

Now that the races are over attention will be given to shooting. At the Kentucky Shotgun Club grounds will be several very pretty contests among the members, including the ladies, this week. Shooting two days at live birds will be the main attraction, while other events will occur each afternoon. Parker's new trap and pigeon guns are used mostly. They have a new gun out. It is a plain black barrel that is hard, tough and thoroughly reliable, and suitable for shooting nitro powders. It is similar to the Whitworth fluid-pressed steel and called the Titanic steel, and is a beauty. I will send you scores of this week's trap-shooting for your next issue. Below are the scores of the last shoot of Revolver Club in full:

Ten yards, 2in. bullseye counts 10:	
Gilbert	9 10 10 10 10 8 10 10 10—97
Dye	10 10 10 10 10 10 10 9 8 7—94

Board	8 10 9 8 10 10 9 10 8 10—92
Dr Meder	10 9 7 8 9 9 8 8 7 8—83
Witherspoon	10 6 7 8 6 7 10 9 4 7—74

A Lesson in Rifle Practice.

A TEXAS military company was out on the range recently practicing at rifle shooting. The lieutenant in command suddenly became exasperated at the poor shooting, and seizing a gun from one of the privates cried sharply: "I'll show you fellows how to shoot!"

Taking a long aim, and a strong aim, and an aim all together, he fired and missed. Coolly turning to the private who owned the gun, he said: "That's the way you shoot!" He again loaded the weapon and missed. Turning to the second man in the ranks, he remarked: "That's the way you shoot!" In this way he missed about a dozen times, illustrating to each soldier his personal incapacity, and finally he accidentally hit the target. "And that," he ejaculated, handing the gun back to the private, "is the way 1 shoot!"—Los Angeles Times.

Trap-Shooting.

Fixtures.

June 2.—Peekskill, N. Y.—Trophy shoot, Hudson River Trap-Shooters' League, on the grounds of Peekskill Gun Club. J. B. Rogers, Manager.

June 1-3.—Springfield, O.—Open-to-all tournament of Ohio Trap-Shooters' League.

June 2-3.—Alton, Ill.—Second annual bluerock tournament of Piasa Gun Club. F. C. Riehl, Sec'y.

June 3-5.—Green Bay, Wis.—Green Bay Gun Club's second annual tournament.

June 6-7.—Grand Rapids, Mich.—Valley City Gun Club's tournament. C. F. Rood, Sec'y.

June 7-8.—Willmar, Minn.—Willmar Gun Club's third annual amateur tournament. Lewis Johnson, Sec'y.

June 7-8.—Indianapolis, Ind.—Annual tournament of the Indiana Trap-Shooters' League, of Indiana, on the grounds of the Limited Gun Club.

June 7-11.—Peoria, Ill.—Annual tournament and convention of Illinois State Sportsmen's Association.

June 8.—Butler, Pa.—Butler Gun Club's tournament. E. E. Gumpfer, Sec'y.

June 8-10.—Parkersburg, W. Va.—Second annual tournament of the West Virginia State Sportsmen's Association. Address all communications to Ed O. Bower, Sec'y, Sistersville, W. Va.

June 14-15.—Stillwater, Minn.—Tournament of the Stillwater Gun Club.

June 14-15.—Grafton, N. D.—Tournament and meeting of North Dakota S. S. Association.

June 14-16.—Le Mars, Ia.—Le Mars Sportsmen and Shooting Association's tournament. E. Miller, Sec'y.

June 14-16.—Ottawa, Kans.—Annual tournament of the Kansas State Sportsmen's Association. W. L. Beardsley, Sec'y-Treas.

—, Portsmouth, Va.—Tournament of the Interstate Association, under the auspices of the Portsmouth Gun Club. W. N. White, Sec'y.

June 15-17.—Cleveland, O.—Fifth annual tournament of the Cleveland Target Co. Bluerocks thrown free of charge. Professionals and manufacturers' agents barred from programme events.

June 16-17.—Dayton, O.—Dayton Gun Club's amateur tournament.

June 20-24.—Rochester, N. Y.—Annual tournament of the New York State Association, under the auspices of the Rochester Rod and Gun Club. Live birds and targets.

June 21-23.—Sioux City, Ia.—Fourth annual amateur tournament of the Soo Gun Club. Three sets of traps. E. R. Chapman, Sec'y.

June 25.—Long Branch, N. J.—Opening shoot of Hollywood grounds. Live-bird shooting every Saturday afterward.

June 27-July 3.—Milwaukee, Wis.—Tournament of Milwaukee Gun Club, carnival week. Live birds and targets. \$1,000 added money.

June 30.—Auburn, Me.—First annual tournament of the Auburn Gun Club. L. A. Barker, Sec'y.

June 30-July 1.—Milwaukee, Wis.—National Gun Club's tournament.

July 1.—Sherbrooke, Canada.—Grand annual tournament. Targets. Regular sweeps, variety and merchandise. C. H. Foss, Sec'y.

July 4.—Centredale, R. I.—Fourth of July shoot of the Centredale Gun Club. N. F. Reiner, Sec'y.

July 4-6.—Newport News, Va.—First annual tournament of the Chesapeake Gun Club. Geo. B. James, Sec'y.

July 6-7.—Meadville, Pa.—Tournament of the Interstate Association, under the auspices of the Meadville Gun Club. Chas. Stein, Sec'y.

July 7-9.—Denver, Colo.—First annual tournament of the Overland Association. Open to all. Inanimate targets. Added money. John W. Kane, Manager.

July 15.—Poughkeepsie, N. Y.—Trophy shoot, Hudson River Trap-Shooters' League, on the grounds of the Poughkeepsie Gun Club. J. B. Rogers, Manager.

July 14-15.—Bedford, Ind.—Tournament of Bedford Rod and Gun Club.

July 19-21.—Palmyra, Mo.—Eight annual tournament of the Missouri Amateur Shooting Association, under the management of the Palmyra Gun Club. Targets and live birds. Added money announced later. W. N. Bates, Sec'y.

July 26.—Brooklyn, N. Y.—Tournament and clam bake of the Hell Gate Gun Club.

July 26-28.—Little Rock, Ark.—Eighth annual tournament of the Arkansas State Sportsmen's Association. Paul R. Litzke, Sec'y.

July 27-28.—Meriden, Conn.—Tournament of the Interstate Association, under the auspices of the Parker Gun Club. C. S. Howard, Sec'y.

July 29-31.—Milwaukee, Wis.—Milwaukee Gun Club's tournament. S. M. Du Val, Sec'y.

Aug. 3-4.—Worcester, Mass.—Tournament of the Worcester Sportsmen's Club. Targets.

Aug. 11.—Marlborough, N. Y.—Trophy shoot, Hudson River Trap-Shooters' League, on grounds of Marlborough Gun Club. J. B. Rogers, Manager.

Aug. 17-18.—Waterville, Me.—Tournament of the Interstate Association, under the auspices of the Waterville Gun Club. E. T. Wyman, Sec'y.

Aug. 17-18.—Warsaw, Ind.—Lake City Gun Club's tournament. J. S. Campfield, Sec'y.

Aug. 24.—Warwick, N. Y.—Special shoot, Hudson River Trap-Shooters' League, on grounds of Warwick Gun Club. J. B. Rogers, Manager.

Aug. 24-25.—Minneapolis, Minn.—Tournament of the Minneapolis Gun Club. G. J. McGraw, Sec'y.

Aug. 24-27.—Omaha, Neb.—Indian tournament, on grounds of Omaha Gun Club; three days targets; one targets and live birds.

Sept. 7-8.—Kingston, N. Y.—Tournament of Hudson River League, on grounds of Kingston Gun Club.

Sept. 7-8.—Haverhill, Mass.—Tournament of the Interstate Association, under the auspices of the Haverhill Gun Club. Geo. F. Stevens, Sec'y.

Oct. 4-6.—Newburgh, N. Y.—West Newburgh Gun and Rifle Association's fall tournament.

Oct. 12-13.—Greensburg, Ind.—Greensburg Gun Club's tournament. W. Woodfill, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 345 Broadway, New York.

The Illinois State Sportsmen's Association has issued the programme of its twenty-fourth annual tournament, to be held at Lake View Park, Peoria, Ill., June 7 to 11. The first event is the board of trade diamond badge, emblematic of the individual championship of the State at live birds, the winner of the badge this year to receive next year's entries for the same prize. Conditions: 10 live birds, \$10. The diamond badge is valued at \$500. The second prize is a solid gold watch, a Parker hammerless gun and \$60 in cash. Third prize is a bicycle and \$50. Fourth is \$40 and a steel boat. Fifth one dozen decoys. The second event is the L. C. Smith cup, emblematic of the individual State championship at inanimate targets, the winner of the cup to receive 60 per cent. and the club of which he is a member to receive 40 per cent. of the entries of next year's target event. Conditions: 20 targets, \$5. In this event also there are cash and merchandise prizes to a fifth place. The third event is the club team championship, fixed to take place on June 10, open to teams of four men from any club members of the State Association. Each club is entitled to two teams, no man being allowed to shoot in more than one team. Four purses, cash and merchandise prizes, \$12.50 added money to each of the four moneys. Entrance \$5 per team. Immediately following the State events there will be special shoots, the first of which is at 15 live birds, \$10, four moneys, 40, 30, 20 and 10 per cent. Other events are as follows: No. 1, 7 live birds, \$5, three moneys; Nos. 2 and 4, 10 live birds, \$7, four moneys; No. 3, live birds, miss-and-out, \$5; No. 5, 15 targets, \$1.50, known traps, unknown angles, four moneys; Nos. 6 to 11 are the same as No. 5. Upon the completion of these events they will again be repeated. G. F. Simmons, secretary, 502 S. Adams street, Peoria, Ill.

The Kansas City Star cup became the absolute property of Mr. J. A. R. Elliott in the final contest for it at Kansas City on May 20. He made a most vigorous and persistent competition for it after it was contested for in Kansas City in May 23, 1896. J. E. Riley and H. J. Whittier tied on 25 in that contest, they being the only ones out of a field of fifty-three to score that number of birds. Still they were closely pressed, as there were five 24s and ten 23s. Riley defeated Whittier in shooting off the tie. About six months after that event, Elliott defeated Riley for the cup at Kansas City by a score of 92 to 81, 6 of his birds falling dead out of bounds. In the open contest at Kansas City the following year, in a field of sixty-three, four killed 25 straight, namely, Glover, Herman, Lamb and Crabill. In the shoot-off at 51 birds Glover won. Aug. 14, 1897, Elliott defeated Glover for it at Rochester by a score of 92 to 84, and he gathered the cup back to its home. Fred Gilbert then took a fancy to it, so he meandered to Kansas City, produced a score of 95 to 94 as evidence of title and calmly returned to Iowa, presumably with the resolution to annex it permanently, for on Dec. 7, at Chicago, he defeated Elliott by a score of 97 to 87, with 2 birds dead out of bounds. However, Elliott had different views on the subject, as shown by his victory over Gilbert at Chicago on April 26, where he took the cup from Gilbert by a score of 90 to 86. He defended it successfully from Heikes at Kansas City on May 6 by a score 94 to 93, a very close race. In the open contest Charlie Budd won it, and in about twenty-four hours thereafter Elliott, by defeating Riley, Gilbert, Budd and Glover, took possession of it as a part of his personal belongings, as related last week.

The programme of the second grand tournament of the West Virginia State Sportsmen's Association, to be held at Parkersburg, W. Va., June 8-10, under the auspices of the Mountain State Gun Club, can now be obtained of the secretary, Mr. Ed O. Bower, Sistersville, W. Va. The programme for each of the three days is the same, namely, ten events, 15 bluerocks, \$1.50 entrance, \$5 added to the purse, making a total of \$150 added money for the three days. In addition to the regular events, there will be two State events shot off at some convenient time in the progress of the tournament. The first is the grand merchandise event, 25 bluerocks, entrance \$5. The other is the individual championship, 50 bluerocks, entrance \$1.50. These are open only to members of the State Association. Magautrap will be used. Lunch will be served each day. Shooting commences at 9 o'clock. Money divided 30, 25, 20, 15 and 10 per cent. The merchandise prize list provides six prizes, each for ties from 1 to 5 inclusive, and six for the high guns shooting the full programme. There is an L. C. Smith ejector, a Remington gun, a Parker hammerless, an Ithaca hammerless, and a Winchester repeater, a gun for each class of ties.

Mr. N. F. Reiner, secretary of the Centredale, R. I., Gun Club, of whom programmes can be obtained, writes us as follows: "The Centredale Gun Club will hold a shoot on July 4. There will be ten 15-bird events, entrance 55 cents to each event; that is, 30 cents for birds and 25 cents sweepstakes. The club will add \$25; \$20 to be given to the five high guns as follows: \$6, \$5, \$4, \$3, and \$2; and \$5 as follows: \$3 to the shooter making the longest run out of the 150 birds, and \$2 to second run. All sweepstakes are optional, but in order to compete for the purse all events must be shot. As this shoot is rather an experiment, it is hoped that shooters in our neighboring as well as our own State will turn out in good numbers and help make our first undertaking a grand success. Lunch will be served at grounds. Shooting commences at 10:30 A. M."

Tom Keller, the urbane hustler of the King's Smokeless Powder Co. and Peters Cartridge Co., takes the opportunity between whiles to shoot at the traps, and when he shoots seriously he shoots well. In the 10-men team match between the Bound Brook Gun Club and the Dunellen Gun Club at Dunellen, May 21, the Dunellen Gun Club won by 24, thus scoring a second victory. Keller distinguished himself by breaking 24 out of 25. He made a run of 46 before missing, then broke the remaining three of the 50, putting up the crackerjack score of 49 out of 50, thus almost making his talents as a shooter equal his talents as a salesman. It is hardly necessary to add that he used King's Smokeless and Victor shells.

An effort is being made by trap-shooters of Plainfield, Bound Brook, Dunellen and Somerville, N. J., and vicinity, to organize a Central New Jersey Trap-Shooters' League, for the furtherance of trap-shooting interests. It is said that the Climax Gun Club, the Independent Gun Club, the Dunellen Gun Club, the Bound Brook Gun Club and the Somerset Gun Club have signified that they will join such an organization. Such an organization would go far toward infusing greater interest in a section which abounds with a multitude of trap-shooters. Club contests and shoots would stimulate greater emulation and broaden the competition.

The programme of the second annual tournament of the Indiana Trap-Shooters' League, to be held under the auspices of the Limited Gun Club, of Indianapolis, June 7 and 8, is out. It is an amateur tournament, limited to residents of Indiana. Shooters who desire to shoot for targets only are welcome to do so. All shooting will be at unknown angles, rapid-fire system. It will be class shooting, five moneys, 24, 22, 20, 18 and 16 per cent. Ten per cent. of the net purses will be reserved for the five high guns shooting through the programme, and divided into five moneys, as above. There are eleven events on the first day's programme, of which six are at 15 targets, five at 20, entrance \$1.50 and \$2. There are eight events for the second day, each 20 targets, \$2. The two-men team race, 40 targets, \$8 team entrance, is also scheduled for this day. John M. Lilly, secretary, Limited Gun Club, 960 N. Delaware street, Indianapolis, will be pleased to give further information to those who desire it.

The Hell Gate Gun Club will hold a tournament on targets July 26. A clam bake will be added for the benefit of all who have an appetite regardless of high or low averages in the competition. The main event will be at 20 targets, merchandise prizes. In this event only holders of tickets will be allowed to compete. Tickets are \$3. They entitle the holders to lunch, clam bake and free entry in the merchandise event. There are also about five other events on the programme. Entrance 50 cents to \$1.

The programme of the Elkwood Park shooting season is an elaborate one. There is sweepstake shooting every Friday, handicapped and cup events every Saturday, and target events every Wednesday throughout the year. The New York & Long Branch R. R. and the Southern R. R. of New Jersey pass the gates. The managers, Messrs. Daly and Chanfrau, Long Branch, N. J., on request will give all necessary information.

For the purpose of observing averages which are averages; and shooting which is shooting, our readers should not fail to note the doings of the trap-shooters at Omaha last week, as set forth in Mr. Paul Litzke's full report in these columns. As at the Missouri State shoot the previous week, Heikes was again at the head in general averages. He scored .964.

It seems that Mr. Elmer E. Shaner, of Pittsburg, at such times as he is not in other places managing great shoots in different States, can cut some pretty capers in the way of target smashing when he chooses to perform at the traps. On the grounds of the Greenfield Gun Club a few days since he had the highest average, breaking 115 out of 120 targets, or a fraction better than a 95 per cent. gait.

At Norristown, Pa., the Penn Gun Club defeated the Shuler Gun Club, of Pottstown, by a score of 230 to 201. This was the second contest of a series of three for the championship of Montgomery county. Each team had twelve men and each man shot at 25 targets.

In our trap columns Mr. T. H. Keller, secretary of the New Jersey State Sportsmen's Association, announces the postponement of the meeting called for June 2 to June 17. Notice to this effect has been sent to all the clubs which are members of the Association.

Under date of May 23, Mr. Geo. B. James, secretary, writes us that the first annual tournament of the Chesapeake Gun Club will be held on July 4, 5 and 6, at Newport News, Va. Programmes will be furnished by him to those who apply for them.

Owing to Monday of this week being Decoration Day, a national holiday, the pressure of matter on all the departments of FOREST AND STREAM on Tuesday, press day, crowded over a number of club shoot reports till next week.

BERNARD WATERS.

Nebraska State Shoot.

OMAHA, Neb., May 27.—A thousand dollars added money should have brought a larger attendance than that which participated in the twenty-second annual tournament of the Nebraska State Sportsmen's Association. Most of those who were present came from a distance, therefore there were few State and local shooters participating. Just why this should be the case is not plain to me, as formerly this amount of added money invariably drew from sixty to a hundred shooters. This tournament was conducted on exactly the same lines as the one held at Hot Springs last February. It should have been graced with a larger attendance, especially in this section, where there are so many good amateur shots and so many gun clubs. Here, as in the shoot mentioned above, the paid representative and the amateur who shot a 90 per cent. gait were taxed 50 cents additional in every event, which went to form a fund to be divided among all the amateurs who shot through and who failed to get any part of the high gun money. This should have drawn a host of this class, as there are many crack amateur shots in this neck of woods. As it is, those who did come and stayed through cut up a very nice sum. Some attribute the lack of attendance to the amount of shooting the programme called for—200 shots a day—while some again to the fact that this was an open to all shoot, and that the amateur did not care to shy his castor into the same ring with the paid expert on equal footing. But whether these theories are correct I am at a loss to say, as these shoots have proved a success on former occasions. Only the week previous, the Kansas City shoot, conducted on almost the same lines, with the exception that there was no fund created there to be divided among the amateurs who shot through, was one of the most successful held in recent years.

The Nebraska State shoots have been open affairs for years and have always been successful. This was a success also, but it deserved better support. However, I am informed by Mr. Geo. Rogers, of Lincoln, at which place the next annual meeting and tournament will be held, that he purposes to conduct this shoot on different principles. Special efforts will be made to bring out the State shooters in force.

PARK AND SURROUNDINGS.

The shooting grounds are very accessible, being just across the Missouri River, directly opposite the city in Iowa, and reached by an electric line which runs cars about every ten minutes. They are not a half mile from the very heart of the city. The arrangements at the park are capital, and the background good, especially for target shooting, there being no trees near by to obstruct the view.

There are two sets of target traps arranged on the Sergeant system, and a set of live-bird traps, where the underground system of trapping is used. With this arrangement, birds were trapped at the rate of 125 per hour. The traps are so arranged as to permit the shooting of targets and pigeons at the same time without interfering with each other. There is also a good-sized club house, which will accommodate about fifty people, a cashier's office, plank walks, shelter at the score; in fact, everything that is essential to the comfort of the shooter. The ground-keeper lives on the place, and shooting can be had there at any time every day in the year.

The tournament was admirably handled, and reflects great credit on the executive abilities of Messrs. Loomis, Read and Parmelee, who were the promoters of the shoot.

There was one feature in the cashier department which is deserving of mention. This was the system used in paying the shooters off. Each contestant at the close of the shoot was handed the amount due him in a little envelope, on the face of which were printed the number of events and spaces to fill out the number scored in each event, as well as the amount due. This furnished the shooter a statement of what he won and also did much to obviate mistakes. It would be well for other tournament managers to adopt this plan.

CONTESTANTS.

The list of contestants is as follows: C. C. Evans and J. G. Hillberry, Beaver Crossing, George Nicholi, Curtis C. E. Latshaw, G. L. Carter, George Rogers, Ray Welch, H. H. Harley and F. Moore, Lincoln; S. L. Cable and John Shaw, Murray; J. W. Den and Fred Boehner, Arapahoe, Neb.; W. T. Den, the oldest trap-shooter in the State, Brownville; J. Terryberry, Louisville; Gus Siever, Grand Island; F. Miller, Berwyn; M. T. Miller, York; Fred Echtenkamp and D. C. Weber, Arlington; G. A. Schroeder and G. B. Spiece, Columbus; Ted Ackerman, Stanton; W. S. Duer, Hastings; C. D. Hagerman, Wymore; C. D. Linderman, Adams; O. F. Harlan, Cook; Dr. J. B. Hungate, Weeping Water; J. F. Beard, Herman; all of Nebraska. C. R. Andrews, Hillsdale, Ia.; G. E. Hughes, Fonda, Ia.; G. M. Higgins, Kingsley, Ia.; Geo. Peterson, Coon Rapids, Ia.; Tom Graham, Rosedale, Mich.; John Ruble, Chicago; E. D. Rike, Dayton, O.; Richard Merrill, Milwaukee; C. M. Powers, Decatur, Ill.; L. Harrison, Minneapolis, Minn.; Emil Werk, Cincinnati.

The trade was represented by J. J. Hollowell, Bridgeport, Conn.; U. M. C. Co.; C. W. Budd, Des Moines, Ia.; Parker Bros. and Hazard Powder; C. M. Grimm, Clear Lake, and Fred Gilbert, Spirit Lake, Ia., both shooting Du Pont powder; E. D. Fulford, Utica, N. Y.; Col. A. G. Courtney, Syracuse, N. Y.; and B. Leroy Woodward, Campello, Mass., representing Remington Arms Co.; Sim Glover, Rochester, N. Y., shooting Schultz powder; R. O. Heikes, Dayton, O., and J. A. R. Elliott, Kansas City, Mo., Winchester Arms Co. and Hazard Powder; J. S. Fanning, Batavia, N. Y., Gold Dust Powder Co.; O. R. Dickey,

Boston, Mass., Parker Bros. and E. C. Powder, also Fred Quimby, New York city, general agent of the Schultze and E. C. Powder Co.

GENERAL AVERAGES

In this respect Heikes is again in the van, closely followed by Powers, Gilbert, Grimm and Parmelee in the order named. These are the ones who won the high gun money, \$50 being set aside for this purpose, divided equally, so it netted each \$10. Then there was the fund created by that 50 cents additional tax; to be divided among the amateurs who shot through. There were thirteen of this number, but one—Powers—got a part of the high gun money and was thereby debarred from sharing in this division. The total sum thus accumulated amounted to \$304, which, divided among twelve, netted each \$25.30, quite a neat, tidy sum to be paid for one's staying qualities.

Shot	at.	Broke.	Av.	Shot	at.	Broke.	Av.
Heikes	760	733	.964	Glover	760	685	.900
Powers	760	728	.967	Ruble	760	682	.896
Gilbert	760	727	.956	Hughes	760	679	.894
Grimm	760	718	.944	Hallowell	760	676	.890
Parmelee	760	717	.943	Loomis	760	673	.885
Budd	760	716	.942	Duer	760	672	.884
Leroy	760	712	.928	Graham	760	672	.884
Elliot	760	709	.932	Linderman	760	657	.864
Merrill	760	699	.919	Miller	760	654	.860

Fanning	760	695	.914	Hagerman	760	627	.822
Rike	760	687	.903	Plumber	760	614	.807
Dickey	760	685	.900				

In consequence of Monday of this week being a holiday, the remainder of the foregoing report was received too late for publication in this issue, and will be given next week.

New York's State Shoot.

NEW YORK, May 28.—Editor Forest and Stream: With the New York State shoot only a little more than three weeks hence, I, like probably many others who are interested in trap-shooting in the State of New York, began to look around your columns to find out what the Rochester boys were doing in regard to making ready for the annual meeting of the State Association in their city on June 20-24 next. Not that I was in the least afraid that they had been idle in the matter, for everybody in the State who shoots at the traps knows just what hustlers they are. I refer particularly to my old friend W. C. Hadley, President E. C. Meyers, Secretary Griffiths, John Borst, etc.

It was therefore with great pleasure that I noted in your last issue that Mr. Hadley had come to the front and told us what we might expect; and had also called attention to the proposed amended constitution and by-laws, which were given in your issue of May 21, and which are to be acted upon at the annual meeting on the evening of June 20. Having looked over the constitution carefully, with a view to passing upon it as intelligently as possible at the above meeting, I find only one or two points; minor ones perhaps, on which I scarcely feel like voting "aye," unless they are altered somewhat from their present form.

THE NAME INAPPROPRIATE.

First—I should like a name more in accordance with the real, not ideal, objects of the Association. I fully understand that many, who have been members of the Association years before I ever broke a target at the traps, prefer to keep the old name intact on sentimental grounds, but it seems to me that we shall be in danger of making ourselves a laughing stock if we take the old troublesome-to-write name, and never do anything more than hold an annual trap-shooting tournament every year. And as a matter of fact, that's all we will do, and it's more than some States can do anyway!

Second—I don't like Section 3 of Article IV., which says that "Each club shall be entitled to representation by five delegates." Then Section 4 of the same article says: "No delegate shall represent more than one club." Take these two sections together and look what a cinch on the convention they give to the nearby clubs! I belong to a club that will probably be represented at the shoot by two or three members at the most. Rochester is a long way from New York, and business is too dull to admit of several who would otherwise attend being on hand at the meeting. Again, I belong to another club that will in all likelihood have no other representative on hand at the meeting save myself. Yet it pays its dues and should be entitled to representation just as much as a club that is situated geographically more favorably for representation at the annual meeting. Suppose I represent this club; that leaves two representatives at the most to represent the other, and that gives these two clubs only three votes against ten for two other clubs that are within a Sabbath day's journey of Rochester. In my opinion, and mind it is only my opinion that I am quoting, for I have not spoken to anybody about this point, the sections should read respectively: "Each club shall be entitled to five votes on each motion or resolution at all meetings of the Association, the votes to be cast by one person, who shall be a delegate from such club." And: "Any club in good standing may be represented at all meetings of the Association by proxy."

PLANS FOR THE TOURNAMENT.

The brief review of the programme for the tournament given by Mr. Hadley promises a good shoot, and there should be a good entry list, both in the open events and in those for members of the State Association only. As noted, there will be two magautraps for open events, the "under 85 per cent. man" being protected from the expert classes.

The handicap in the State events is something that has been tried before, viz., known experts to get into first or second moneys or to be out of the division of the purse. It is a hard game, but it won't affect very many shooters, and may bring in a few more lambs for the "unknown experts" to shear.

There is really only one thing certain in trap-shooting, and that is that the lamb who monkeys with the wolves in any way, shape or form, save under a handicap allowance of extra targets or misses as breaks, will get shorn sooner or later. Generally sooner.

EDWARD BANKS.

Fort Smith Gun Club.

FORT SMITH, Ark., May 24.—The regular shoot of the Fort Smith Gun Club took place at the Fair grounds on May 21. The wind blew quartering across the grounds, making some of the targets quite erratic. The attendance was light, several members being out of town.

The shooting of Mr. Walter Boyd was one of the pleasant surprises of the season. He has been going along for several seasons at about a 50 to 70 per cent. gait, and has always been considered erratic in his shooting, though one of the most enthusiastic of the local shooters. He has always complained that his gun did not suit him, and finally borrowed one from Echols, and then the transformation came. Out of 115 birds shot at with the new gun he broke 101, or an average of about 88 per cent. On last Saturday he broke his first 25 straight, and followed it up with 22 out of the next 25, making 47 out of the 50, the best run and the best average for any member this season. It is to be hoped that he will continue his excellent work, and that the balance of the club will see to it that he has company. It is hard work to learn to shoot bluebirds well, and Walter deserves his success.

Mr. Joe Matthews has just returned from the Kansas City shoot, and though he did not get there in time to participate in the pig \$1,000 added money live-bird event, his train being laid out twelve hours, he took part in all the target events for two days and several of the smaller live-bird sweeps. In all these he acquitted himself very creditably, considering that he was at the disadvantage of having been up all night on the train and had no shells with him and had to shoot anything he could get, and indeed if it had not been for the kindness of Rolla Heikes, the blonde giant from Dayton, he would hardly have gotten any shells at all. Joe was wonderfully pleased with the working of the magautrap, and says the club here must have one right away.

Following are the scores:

Shot	at.	Broke.	Av.	Shot	at.	Broke.	Av.
A W Boyd	50	47	.940	Torreyson	50	36	.720
Echols	50	39	.780	C H Boyd	50	31	.620
Baptist	50	38	.760	Payne	50	26	.520

SECRETARY.

Pioneer Gun Club's Shoot.

POTTSVILLE, Pa., May 23.—The Pioneer Gun Club, of this place, held a shoot at bluebirds here to-day. The scores: F. L. Cooch 6, F. C. Palmer 20, Hope S. Hoover 17, Gus Koskop 20, F. L. Portz, Jr. 13. Second event: H. S. Hoover 16, F. L. Portz, Jr., 9, F. C. Palmer 16, F. L. Cooch 4.

IN NEW JERSEY.

TRAP AT MATAWAN.

MATAWAN, N. J., May 25.—A very enjoyable shoot was held at Matawan to-day. Nos. 1 and 2 were at 4 birds, \$3 entrance, two high guns. Nos. 3 and 4 were at 6 birds, two moneys; 60 and 40 per cent. The birds were good. A fair wind blew from left to right; weather unpleasant.

BOILING SPRINGS GUN CLUB.

Rutherford, N. J., May 25.—The weather was cloudy, with a tinge of mist in the atmosphere. There was no wind to divert the flights of the targets, though the shooting was extremely difficult, owing to the flights and the variety of the angles. Neither Banks nor Huck were feeling well, the latter in particular complaining of an illness from which he was suffering during several previous days.

The main event was the E. C. cup, which, owing to the large handicap allowance, was won by Waters, neither Morley nor Banks shooting up to their best form, so that the win may be ascribed more to luck than to skill. The conditions were 15 targets, expert rules, and 5 pairs, no contestant with a handicap to be allowed a greater score than 23 if the scratch man did not break more than that number. The scores as follows:

Banks, 0	1111111110011	10 11 00 11 11	—13
Morley, 1	11111111101101	11 10 11 10 11—22	—23
Huck, 4	11110011011111	00 10 10 10 11—17	—41
Waters, 6	11011011101111	10 11 11 10 11—20	—623
Jersey, 8	010000100101001	11 11 10 11 01—13	—821

Morley and Waters shoot their tie off in the following sweep: Morley 1011101101110 11 10 11 10 01—18—1—19 Waters 111001100011010 10 11 10 11 10—15—6—21 Banks 001011001110011 11 11 10 10 11—16 Huck 1111100111110 11 01 01 11 01—19 Jersey 01000010100100 01 10 10 10 01—9

In the following sweeps Nos. 6 and 7 were under the following conditions: Each contestant fired the first two shots from 21yds., going back 1yd. after every two shots, use of both barrels. No. 2 was at 5 pairs. The Sergeant system was used.

Events:	1	2	3	5	6	7	8	9
Targets:	15	*	15	25	10	25	25	
Banks	15	8	13	20	7	4	23	20
Morley	12	8	14	20	8	5	22	19
Waters	9	7	12	16	6	6	22	22
Huck	12	5	9	22				
Tinney	7	5	7	12	3	3		

Hell Gate Gun Club.

NEW YORK, May 25.—The score of yesterday's shoot of the Hell Gate Gun Club is given below.

At our last meeting we decided to hold a clay-bird tournament connected with a clam bake at Dexter Park on July 26. The main event that day will be at 20 targets for merchandise prizes. Tickets will be \$3, entitling holders to lunch, clam bake and free entry in the merchandise event. Only holders of tickets are allowed to enter this event. About five other events are on the programme. Entrance from 50 cents to \$1.

Lake Superior Gun Club.

WEST SUPERIOR, Wis., May 23.—The Lake Superior Gun Club, of Superior, Wis., was incorporated under the laws of the State of Wisconsin, March 18, 1898. The club now has some eighty-one members in good standing, and more names are being submitted almost daily. We are now making preparations for a grand shoot on July 4, and expect to hold our first tournament some time during the early part of August, at which time we expect to have some good cash prizes hung up for competition. Following is the score made at the shoot held on the grounds or the club during the afternoon of Saturday, May 21, over the magautrap:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	10	10	15	10	10	10	10	10	10	10
Delaware	9	14	7	9	8					7
Fulton	9	13	6	8	8					9
Kennedy	9	11								8
Dixie	8	9	7	7	9	6				5
Hogan	6	5	7	7	4	7	9	4	5	6
Beherns		8	13							8
Miller		5	9							6
Leader		6	10	8	6	6	7	6		5
Yale		6	7							5
Shaver		12								7
Tracey										4

After the above shoot took place Mr. Beherns and Mr. Fulton tried conclusions for the Pattison challenge badge. This was a shoot for 25 targets, and resulted in a score of 22 to 21 in favor of Mr. Fulton. The next regular shoot of the club will be held Wednesday. Visiting lovers of trap-shooting are cordially invited to participate with us.

W. J. PIERCE, Sec'y.

Capital City Gun Club.

WASHINGTON, D. C., May 21.—The first shoot of the Capital City Gun Club was a most enjoyable one. There was a good attendance. The grounds were finely equipped for the shooting, and are beautifully situated. The scores were as follows:

Events:	1	2	3	5	Events:	1	2	3	5
Targets:	15	15	15	15	Targets:	15	15	15	15
Holmead	10			9	Benton				8
Mason	10	10	8	6	Steno				7
Cromwell	4		5		McLeod				9
Mattingly	14		12	8	Nutting				12
Wagner		12		12	McKelden				11
Green		9			Reisinger				13
Steubner		12			Stone				12

No. 4 was a team race, chosen respectively by Messrs. Wagner and Mattingly, each man shooting at 15 targets. The scores were: Wagner's team. 1101011111111—12 Mattingly's team. 0111011111111—13 McKelden 11111110111011—13 Nutting 0111011111111—13 McLeod 01011000101001—7 Mason 01010010101001—10 Reisinger 11111110110111—13 Holmead 1101111010001—10 Steubner 1110111011111—13—60 Stone 11000010101011—8—51

Missouri State Shoot.

KANSAS CITY, Mo., May 22.—The twenty-first annual tournament of the Missouri State Fish and Game Protective Association was even a greater success than its predecessors, which is saying a great deal, as within recent years this tournament has always been a feature in Western trap matters. This goes to demonstrate what united and concerted action will accomplish. Here in Kansas City they have what is known as the Federation of Gun Clubs, to which all the local clubs are affiliated, so that when a tournament is undertaken everybody lends a helping hand, and there can be but one result. However, much of the success is due to the untiring efforts of Mr. G. M. Walden, who as chief executive of the Association worked indefatigably to bring about the success; he was ably assisted by Messrs. J. W. McCurdy and W. S. Hallowell. The trio composed the executive committee, and under their fostering care the programme was carried out to the letter, while nothing was left undone that would add to the pleasure and comfort of the participants. Everybody went away pleased, and many a deserved compliment was showered on the committee by the visiting shooters, all of whom were united in their praise of the success of the shoot. There is another factor that did much to contribute to the success of the tournament, and that is the amount of interest taken by the Star, one of the local daily papers. Mr. James Whitfield, the sporting editor of it, is thoroughly conversant with the sport and has done much to maintain the interest in it. His articles on the subject are always ably written, and he did much to keep the tournament before the public. All these factors combined made the tournament a brilliant success, notwithstanding a week of the most adverse weather. Kansas City has set a pace in tournament matters that it will be hard to surpass.

ANNUAL MEETING.

The annual meeting of the Association was held in the parlor of the Midland Hotel, Mr. G. M. Walden presiding. At roll call all the clubs composing the Association were represented. The following clubs were admitted to membership: Veteran Gun Club, Kansas City; Joplin Gun Club, Joplin; Independence Gun Club, Independence, and the St. Louis Trap-Shooters' League, St. Louis. St. Louis was selected for holding the next annual meeting and tournament. The following officers were then elected: Mr. P. M. Kling, St. Louis, President; Mr. G. M. Walden, Kansas City, Vice-President; Mr. H. B. Collins, St. Louis, Recording Secretary; Mr. W. R. Nold, St. Louis, Corresponding Secretary; Dr. Max C. Starkloff, St. Louis, Treasurer. A communication from Judge Lee Chrisman, wherein he offered to donate a medal to be given to the shooter from Jackson county making the best average in the target events, was read and the donation accepted. The secretary was instructed to thank the Judge in behalf of the Association.

GROUND.

Here in Kansas City there is an established shooting grounds, which is known as Washington Park, about seven miles from the city, though quite accessible, being reached by cable and electric line in about forty minutes' ride. Here there were two sets of live-bird traps and two magatrap in position. These traps were so arranged as to not interfere with one another, so it was possible to shoot live birds and targets at the same time. The magatrap are set on a high ridge that overlooks the live-bird grounds, though off to the right. One set of live-bird traps was directly in front of the club house, and they were fitted up with the underground system of trapping. Here the main events were decided, while on the other set only sweeps were shot. These were located some distance from the club house, and one had to cross a little stream to reach them. These grounds were dubbed the Philippine Islands. Mr. W. V. Reiger as usual was referee in the important pigeon events, and gave universal satisfaction. The target traps were in charge of Paul North, and he kept them moving at a lively clip. There were ample buildings for the protection of all, and the comfort of the shooters was well looked after.

THE TRADE.

The following trade representatives were present during the shoot: Harry Marlin, Marlin Arms Co., New Haven, Conn.; John J. Hallowell, U. M. C. Co., Bridgeport, Conn.; J. A. R. Elliott and R. O. Heikes, of Dayton, O., Winchester Arms Co. and Hazard Powder Co.; O. R. Dickey, Boston, Mass., and S. A. Tucker, Davenport, Ia., Parker Bros., Meriden, Conn.; W. Fred Quimby, New York, E. C. & Schultze Powder Co.; Paul North, Cleveland, O., Cleveland Target Co.; A. G. Courtney, Syracuse, N. Y.; E. D. Fulford, Utica, N. Y., and B. Leroy Woodward, Campello, Mass., Remington Arms Co. and U. M. C. Co.; Harvey McMurchy, Syracuse, N. Y., Hunter Arms Co.; Herbert Taylor, St. Louis, Mo., and Fred Gilbert, Spirit Lake, Ia., Du Pont Powder Co.; C. W. Budd, Des Moines, Ia., Hazard Powder Co.; J. S. Fanning, Batavia, N. Y., Gold Dust Powder Co.; Sim Glover, Rochester, N. Y., Schultze Powder.

AMATEURS.

W. H. Koolher, Leavenworth, Kan.; C. D. Linderman, Adams, Neb.; Capt. J. S. Sedam, Denver, Colo.; A. D. Mermod, Canon City, Colo.; C. L. Funk and J. T. West, Pueblo, Colo.; A. A. Glade, Grand Island, Neb.; J. W. Den and Fred Beohner, Arapahoe, Neb.; W. T. Den, Brownville, Neb.; T. P. Laffin and W. A. Porter, Rock Island, Ill.; C. E. Latshaw and F. Moore, Lincoln, Neb.; W. S. Allen, Raymore, Mo.; T. J. Graham, Rosedale, Mich.; E. E. Baker, Kewanee, Ill.; J. P. Matthews, Fort Smith, Ark.; H. E. Bonebrake and G. W. Bellamy, El Reno, Oklahoma; Lou Erhardt, Dr. Jones and T. J. Lytle, Atchison, Kan.; Richard Merrill, Milwaukee, Wis.; E. D. Rike, Dayton, O.; A. H. Barlow and G. W. Stevenson, Waterville, Kan.; F. E. Ruggles, Jewel City, Kan.; L. C. Tolson and C. B. Eaton, Fayette, Mo.; W. H. Herr, Concordia, Kan.; F. H. Snow, A. W. and J. C. Lucas, Mendon, Mo.; W. A. Smith, Greenwood, Mo.; A. M. Bernhardt, Hastings, Neb.; Dr. C. B. Clapp, Moberly, Mo.; W. H. Allen, Pleasant Hill, Mo.; Frank Hodges and W. L. Lemon, Olathe, Kan.; John Ruble, Chicago, Ill.; G. W. Clay, Austerlitz, Ky.; Hood Waters, Seattle, Wash.; F. S. Parmelee, Omaha, Neb.; F. N. and C. B. Cockrell and Dr. Redman, Platt City, Mo.; A. P. Bigelow, Ogden, Utah; P. M. Kling, Dr. J. W. Smith, Dr. Max C. Starkloff, Ed Pendergast and H. B. Collins, St. Louis, Mo.; C. M. Powers, Decatur, Ill.; C. M. Grimm, Clear Lake, Ia.; L. Harrison, Minneapolis, Minn.; G. W. Sergeant, W. B. Patten and W. E. Morgan, Joplin, Mo.; Taylor Cox, Carl Junction, Mo.; C. M. Sumner, Galena, Kan.; Harry Davis, Richmond, Mo.; J. R. Wilmot, Lexington, Mo.; P. Mellinger, Wichita, Kan.; C. F. Reust, Frankfort, Kan.; F. M. and W. A. Johnson, Union, Oklahoma.

The following are the scores made in the live-bird sweeps during the week:

Events:	1	2	3	4	5	6	7	8	9	10

MISSOURI MENTIONS.

During the five days of target shooting there were 187 straight scores of 20 made, but only six of these occurred so as to enable the performer to scoop first money alone.

The Indian squad, composed of Powers, Merrill, Gilbert, Grimm and Budd, won a host of admirers by their fine shooting and gentlemanly demeanor. Ninety-nine out of 100 on targets; 74 out of 75 and 50 straight on live birds were their best performances.

Few shooters have such rapid strides as Fred Beohner. A year ago he could scarcely shoot into money, but this time he was very much in evidence; he made several straight scores on targets, and shot well to the front on live birds. To tell his friends that he also ran and ran hard is but recording the facts.

One shooter remarked after he had made a poor score that he shot like a Spaniard.

Rejuvenated Charley Budd set a hot pace on several occasions. He made the longest run on targets—84 straight—and killed 40 pigeons straight to win the Star cup. From the scores he shot here and at Des Moines one is led to surmise that his second time on earth is to be permanent.

Everybody has his hard luck story, but Roll Heikes can tell one that is no fable. It will be noticed that he scored 24 in the Star cup race, with his last bird dead out of bounds. This bird was knocked down to all appearances dead, but the boy who went to retrieve it approached it rather carelessly, and by a final effort it got out of bounds.

Frank J. Smith won the season baseball ticket for making the lowest score in the 20-bird event on Saturday, and this was not very low either, as he scored 15 and was just out of money.

Frank Parmelee shot pigeons remarkably well all through this tournament, there being but two losses scored against him out of 140 birds shot at. Unfortunately one of these losses occurred in the main event, otherwise there might have been trouble, as Frank has always been Elliott's Jonah.

J. B. Porter won the individual State championship, and also the medal offered by the O. K. Gun Club to the Kansas City shooter making the best average in all the live-bird events. He lost only 7 birds out of 175, scoring straight in both the individual and interstate races, as well as in the Star cup event.

Chris Gottlieb's showing was a disappointment to his numerous friends. However, he was by no means fit and well for a contest of this nature. He managed to run a straight in the Star trophy race, but was unable to stay in the shoot-off.

The St. Louis delegation, composed of Dr. Starkloff, P. M. Kling, Dr. Smith, H. B. Collins, Ed Pendergast and Herbert Taylor, created a most favorable impression, and made a host of friends. Their great shooting in the team race won them additional respect.

Harry Marlin, of the Marlin Arms Co., was present for a day, showing off his new Marlin take-down repeating gun.

Judge Lee Chrisman donated a medal, which was to go the Jackson county shooter making the best average on targets. Ed Hickman won this handsily, with a good margin to spare. This was rather a surprising, though popular, win. Ed has always been a good live-bird shot, but has only recently turned his attention to targets. He shot a great clip, and for several days stood an excellent chance to head the general average; as it is he is not very far from the top. A fraction over 89 per cent. is good shooting on 800 targets.

All the members of the St. Louis team that put up so capital a score in the team race shot Smith guns, Du Pont powder and U. M. C. shells.

It is quite a feather in Jim Riley's cap to shoot out Fred Gilbert and Charley Budd for second money in the final shoot for the Star cup. But then he is no novice at the game, and is likely to duplicate this at any time. Riley was a prominent shot before Fred Gilbert was on the shooting map.

Saturday was evidently Jim Elliott's day, as he scored every bird he shot at—45 all told.

The following are the guns and loads used by those who shot off for the final possession of the Star cup: J. A. R. Elliott, Winchester gun, Hazard powder, Leader shells; Fred Gilbert, Smith gun, Du Pont powder, Leader shells; Charley Budd, Parker gun, Hazard powder, Trap shells; Sim Glover, Parker gun, Schultze powder and Trap shells.

Altogether there were 42,110 targets thrown during the shoot, and 6,605 pigeons trapped.

In transcribing the scores and averages made Saturday, the sixth day of the Kansas City, it is probable that I overlooked Leroy in placing the names in the order of merit, as I do not see his name in the list. His score for the eight events is as follows:

Leroy	16	17	18	19	18	19	16	19	160	142	.887
-------	----	----	----	----	----	----	----	----	-----	-----	------

PAUL R. LITZKE.

Boston Gun Club.

WELLINGTON, Mass., May 25.—Despite a miserable day on May 25, the Boston Gun Club held its fifth prize shoot at Wellington. A half dozen enthusiasts, upon whom the moist weather conditions had no effect, came out at the usual time and shot the usual events. It poured steadily, a penetrating, soaking rain that knew not when to stop. The first three events were conducted from one trap, one man up, allowing of a relay system for both shooters and trappers, but after the arrival of second train the regular five trap arrangement was used, and to good advantage, for the shooting was up to the average and continued until the 5 o'clock train.

Results as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14
Targets:	5	10	10	3p	10	10	10	10	10	5p	10	5	5	15
Miskay, 19	3	8	10	5	9	9	10	6	8	9	5	5	13	
Benton, 14	3	5	1	2	4	6	4	3	4					
Allison, 19	4	9	8	5										
Horace, 18	5	5	7	6	10	5	7	8	8	9	8	3	13	
Sheffield, 16														
Bacon, 16														
Poor, 16														

Events 1, 2, 3 and 8, unknown angles; 5, 7, 11 and 14, known; 4 and 10, pairs; 6 and 9, reverse pull; 12, unknown traps; 13, same, 2lyds. rise.

Prize match, 30 targets, 10 known, 10 unknown, 10 reverse; distance handicap:

Sheffield, 16	1011111111	9	0110111110	7	1111111101	9	25

BOSTON.

Limited Gun Club.

INDIANAPOLIS, Ind., May 25.—We would consider it a special favor if you would publish the following notice of our tournament in your paper:

The second annual tournament of the Indiana Trap-Shooters' League will take place in Indianapolis, June 7 and 8. This tournament will be under the auspices of the Limited Gun Club. This shoot will be strictly a "Hoosier" affair, as none but residents of this State will be allowed to contest for prizes. However, non-resident shooters are cordially invited to attend, and they will be welcome to shoot for the price of targets only.

JOHN M. LILLY, Sec'y.

A Western Shooting Association.

BRIEF hint was earlier made in the shooting columns of FOREST AND STREAM and other sportsmen's papers of a possible Western shooting organization with big headquarters at Chicago in the form of permanent grounds and buildings, which should serve as meeting grounds and shooting grounds for local or larger events of the gun of whatever nature, it being considered that Chicago is not at present properly equipped for handling any event of extreme size in trap-shooting form. A quiet movement on the above lines was made and members of clubs in this and other cities were approached for their views. The project, as understood to be advanced, was to secure a large tract of ground, perhaps forty acres or so, adjacent to Chicago, and there to erect fine buildings and install a complete and modern trap-shooting equipment. The buildings were to include gun rooms, assembly rooms, reading rooms, etc., and the whole enterprise was to assume a large as well as elaborate scale. It was the intention to make the enterprise a stock company, the different clubs in Chicago being asked to subscribe to shares of the stock, this same proposal to be made to such clubs of this State and other States as would care to go into the matter, the expense presumably to be borne by assessments in case of deficit, but the grounds to be made public for Western shooting matters. This enterprise, naturally a large one, carried with it certain difficulties, one of which was the securing of proper grounds. Matters were at one time so far along that an agent was commissioned to look into property out to the south of the city, in the neighborhood of Cheltenham Beach. The tract there examined was found to be too expensive and was abandoned. It is alleged that when Col. Du Pont was here last winter he expressed a willingness to go into this matter and to furnish any funds immediately necessary. Since that time members of Chicago clubs have been asked for opinions upon the subject, and questioned as to their willingness to take stock in such an enterprise. Of course the opinions of different men would be different, and it would naturally seem impossible to secure the individual expression of preference of every shooter in Chicago. Yet wider would be the range of possibilities when the matter comes to the choice of the clubs in the State of Illinois, and still broader when the limits of this State are passed and all the many minds of the Western shooters considered. It is therefore manifestly impossible to claim any adequate covering of the matter in the popular opinion, but from a few men met this week the following expressions of opinion were obtained for the FOREST AND STREAM:

Mr. G. C. Lamphere, secretary of the Calumet Heights Club, said: "I do not think a common shooting ground for all our clubs would be a good thing. We are all right now, and are carrying about all the expense we can afford in the individual clubs. As it is, we can run our own little club matters privately and have a pleasant time than we could if we were a part of a larger body. Under such circumstances we would be under greater expense, or would be under temptation to undergo greater expense than we could naturally afford, and I think this would discourage the younger shooters or those who shoot just once in a while in an amateur way at the clubs. If we could not afford to have both, I should say our present club arrangements would be much better. As it is, we go out each week, many with ladies, and spend a pleasant time at the club, having many sorts of sport beside shooting at the trap. It would cost us more to depart from this form of pleasure. I do not think it would be a good thing for our club."

Mr. John T. Glover, ex-president of Eureka Club, said: "I should consider such a movement a detriment to the smaller clubs. It would possibly tend to throw the management into the hands of a few, and it would necessarily hurt our club system, under which the small individual clubs manage their own affairs to suit themselves and have things about the way they personally prefer."

Mr. Abe Klineham, of Garden City Club, said: "This same sort of thing was tried here a number of years ago, and it fell through. I don't think it can succeed. A majority of the clubs would sooner or later prefer to manage their own concerns on their own private grounds."

Mr. A. P. Harper, of Calumet Heights Club, said: "I should be disposed to think this a very poor time to undertake any such enterprise here in Chicago. Our shooting is falling off now because times are uncertain and hard. I think it would be best to shoot as we do now, on our own grounds and in our own way."

Mr. W. P. Mussey, of Audubon Club, said: "I can see no possible advantage in any such proposition as this."

Mr. W. L. Shepard, of Audubon Club, thinks that many clubs outside of Chicago would take stock in this enterprise, and that it would be a good thing for shooting interests. He would like to see the Chicago clubs join such a movement.

Mr. E. S. Rice, general agent of the Du Pont Powder, says that his company stands ready to take a large block of stock in such a company should it be formed. He thinks it would give the shooters of the West a great meeting place and afford Chicago a fine shooting park, with ample accommodations for any sort of event, big or little.

Mr. F. H. Lord, president of Eureka Club, said: "I have heard that there was talk of such a proposition among the membership of the Chicago Athletic Association. I understood there would be a sort of athletic track also, so that all sorts of sports could be given a chance, besides merely trap-shooting—track athletics and the like. I should think the proposed grounds would be a good thing, especially in case of a very large trap event. I did not hear much of this matter and am disposed to think that nothing is apt to come of it for a while at least."

John Watson declined to be quoted upon the subject. E. HOUGH.

Pawtuxet Gun Club.

PAWTUXET, R. I., May 21.—One of the most successful features of the Pawtuxet Gun Club's shoot last season was the two series of shoots called the fishermen's and hunters' handicaps. A continuation of that success greeted the commencement of a series to-day, in which, from the nature of the prizes, the name fishermen's handicap was given. The day was a good one, and the attendance at the club grounds, off Fair street, Pawtuxet, was of great size. This shoot was the first of this series of eight. The handicap is given in extra birds, running in order from 2 to 8, the scratch men shooting at 25 birds.

William Mooney was the successful contestant, breaking 25 out of a total of 29. When 25 birds each had been disposed of, Mooney and Robert Root were tied for first place, each with a score of 22. As Root was a scratch man, his opponent was allowed 4 birds, 3 of which he broke, thus winning the first shoot of the series.

The score:

R C Root	5	5	5	4	3	—22
W Richards	2	5	3	4	5	—19
Cranston	4	5	4	3	5	—

WESTERN TRAPS.

OPENING OF A SPORTSMEN'S RENDEZVOUS.

CHICAGO, Ill., May 28.—A good many years ago, down in Santo Domingo, there grew a most uncommon big mahogany tree. The size of this tree marked it for the axe of commerce, and in time it was cut down, half floated and half dragged to the landing where the boats lay. It was taken across the seas to London, and offered for sale, but no one would pay the price which was asked. It came back to New York, still in the hands of the lumber merchants. Then it was offered for sale in Chicago, still uncut and crude. This was after the time that Billy Mussey's big billiard hall burned out, last winter. The firm of outfitters who had the contract for the refitting of this hall, with its billiard tables, saw in this giant log the opportunity of a lifetime, both for themselves and their customer. They bought the great log, sawed it, cut it, trimmed it, planed it, carved it, polished it, and out of that one log they built forty of the most magnificent billiard tables the world ever saw. More than that, they framed a desk and counter and a lot of other things of the same piece of timber. Two great rooms, open as a glade in a forest, without a post or pillar to break the view, with a floor space of 167x43ft. each, are furnished with the product of this one vast tree, which has thus found its final resting place. More beautiful mahogany one will not find.

The opening of Billy Mussey's place to-night may be fairly called the event of the week in sporting circles here. The craft of the gun and rod has been homeless in this city ever since the fire. To-night they turned out in force, sportsmen of many creeds, and flocked into the old assembly place. Rather, one should say, the new assembly place, and fair and fine as was the old place, this one proves to be so much better that no comparison is left possible. It is no mere boast for M. Mussey to say that he has the largest and most elegant billiard rooms in the world, and the shooters of Chicago will merely add that they have the finest meeting place on earth. To-night some 1,500 or 2,000 in all probability passed in and through the new quarters. The tables were open, but the crowd made playing well nigh impossible for most of the time.

Mr. Mussey's hall is rebuilt on the old ground, at 106 Madison street, but in this case the building was erected with the distinct purpose of making it a billiard palace, the floors, walls, windows and all being arranged with that idea. Thus the windows are the largest sheets of glass ever fitted with the purpose of raising and lowering by sash weights, running in size up the great display windows of the street stores. The ceiling is free of apparent support, being made with a series of shallow arches in the modern fireproof style. The floors—for the establishment has now three floors instead of two—are denuded by the use of twenty tons of mineral wool and twenty tons of cinders, so that no jar, noise or vibration of any kind may be transferred from one story to another. This care was the more especially necessary because Billy has added to his floors of billiard tables the largest and best fitted bowling alley in Chicago or America, and the only bowling alley in the country which is located on the top floor and not in a stuffy basement. The bowling floor will have seven alleys in all, two being reserved for the use of ladies, cut off from the rest of the floor by a separate entrance and hall. There will be lockers for the rolling stock of the experts—for the bowling crank must have his own set of balls, just as the billiard player must have his own cue. An amphitheater, with large capacity, is another feature. The bowling apartments officially opened with the largest bowling tournament ever held in this city, that of the associated bowling league, six clubs in all.

Above the bowling floor are the quarters of the Chicago Press Club, also rich and nicely fitted, with ample room for the high intellectual pressure which will be continuous in that vicinity. This body of newspaper men is probably the most democratic gathering on earth, but they have brains to burn. The Press Club makes a very fit summit for this unique resort, of which we are all proud as Mr. Mussey dare be. The general public has given Billy friendly advice as to how he should fix up the place, and the result is very satisfactory to all.

To-night the two main rooms, those of the second and third floors of the building, were a blaze of electric lights, and the plan of decoration was discovered to be a singularly happy one, the interior lending itself handsomely to the scheme of broad and striking effect. The color plot is of dark green, dark red and ivory, with reliefs continuing that effect. The dado is about 4ft. in height, and is of dark green buckram, woven purposely for the place. Above this the wall is covered with dark Pompeian red buckram, also woven in a vast continuous roll for the interior of this hall. This red wall covering (there is no plaster at all left exposed) runs clear to the ceiling, which is finished in ivory color, with suitable scrolls, capitals, etc., picked out in gilt and green. The panels bear the initial "M." This letter I think is put on by Billy as a faint assertion of his own rights in the joint. The view down the long and wide interior was to-night seen to be a striking one, free of all tawdriness and yet bold and strong.

In the fire of last winter Mr. Mussey suffered the loss of many paintings and works of art, but he has luckily begun the work of replacing them, and the walls show many paintings of great value. The Chicago angling artist, Elmer Wilkinson, has contributed several fine angling and shooting pieces, executed with the love and faithfulness of the outdoor man for outdoor themes. The subjects show a familiarity with the best known angling and shooting grounds of this vicinity, and serve very well to adorn a place of such associations as this revived and expanded and embellished place of clean amusements. Two Rocky Mountain scenes, painted by the once famous Chicago artist Elkins, are also to be mentioned. Of course the chief interest attaching to the new resort from the FOREST AND STREAM view lies in the fact that it always has been and will henceforth still more be the acknowledged meeting place of Chicago and Western shooters and anglers. I need only add that the historic safe will be there at all times, ready for business.

DECORATION DAY.

The greater part of the trap-shooting of Chicago is done on Saturdays as a usual thing, the national holidays of course coming in for full celebration. Decoration Day, the 30th day of May, is a shooting holiday to great extent, but falling upon Monday this year as it does will hardly meet such general favor in that regard as it would if it came at the end instead of the beginning of the week. As it is, a great many clubs all over the West will hold club tournaments next Monday. Calumet Heights follows its custom and opens the season with festivities, many ladies in attendance. Garfield and Eureka are shooting to-day. In many parts of the West, as I observe in the announcements, there will be club shoots and tournaments of greater or less size, as in Detroit, Milwaukee, Louisville, and in many Illinois towns. The Belvidere Gun Club, of Illinois, a very strong shooting organization, will have a big tournament and contest for their diamond badge. They expect many outside shooters. At Winona, Minn., the gun club will hold its annual tournament, and many shooters are expected from adjacent towns, such as Wabasha, Eau Claire, etc. These are but a few out of the many shoots which occur over this part of the world on Monday, and those who are not shooting on that day will be fishing. It is to be feared that the original purpose of this holiday is in danger of being forgotten to a certain extent, but the day in itself is always a marked one on the calendar of the trap-shooters.

THE ILLINOIS STATE.

Secretary Simmons, of the Illinois State Sportsmen's Association, has been a busy man for weeks, and this is his busiest time. A goodly delegation is hoped from this city for Peoria, though everybody knows the vicissitudes of such things—a large number promise and a portion forget to perform. We ought to send down at least two or three dozen cracks from Chicago, remembering always that loyalty is owed the Association even though it be more than forty miles from Chicago to Peoria. Without doubt the clubs of lower Illinois will be out in record-breaking extent. The usual programme of good things is outlined, and there will be a red-hot shoot in the city which was one of the early homes of target shooting and has always been the abiding place of a great number of fine shots and fine fellows. The board of directors has met and decided upon the schedule, prizes, trophies, etc., and soon all will be in readiness for the assembling of the clans. The open shoot will draw all the boys of the circuit and will be a warm occasion.

THE OLD GUARD.

Great interest was taken here in the big shoot at Kansas City, with its spectacular winning of the Star cup by Mr. Elliott. This week we have the advance rumors of the engagement at Omaha, and it seems that the Iowa boy, Fred Gilbert, keeps up his wonderful gait, smashing things with the regularity of a clock with shotgun attachment. Budd has come to vigorous life again, and Heikes is doing business at the old stand, with Jim Elliott and Frank Parmelee in touching distance. The Old Guard neither dies nor surrenders. It is a strange and eventful life which these men of the Old Guard have lived, in spite of its apparent monotony of target grinding. These are men of astonishing physical

constitution, whose like is not to be found in any other line of sport.

CRAWFORDSVILLE.

A two days' tournament was planned by the club of Crawfordville, Ind., last week, but bad weather cut it down to one day. Following were the scores shot off:

Birds:	15	20	15	20	15	20	15	20
Lockwood	12	18	14	15	13	19	12	16
Gentle	14	16	10	15	13	15	12	16
Griffith	13	17	13	16	15	16	14	17
Parlington	14	18	14	16	12	17	12	12
Tripp	14	18	15	18	14	15	9	17
Stipp	12	19	13	20	14	19	9	15
Dietrich	13	19	13	17	19	14	11	17
Parry	12	19	14	13	15	17	12	17
Stone	13	19	13	18	9	18	12	14
Bindley	12	13	14	14	13	12	12	13
Chamness	13	16	11	18	11	19	9	...

Slow	15	19	12	14	12	17	12	16
Lacey	13
Hildback

EAU CLAIRE TEAMS.

A little team race was shot last week on Eau Claire grounds, between Messrs. R. E. Rust and C. W. Churchill on one side and J. M. Charles and D. R. Scammon on the other, at 15 birds per man. The first mentioned team won, the scores being: Rust 12, Churchill 13, against Charles 14, Scammon 10.

MINNEAPOLIS CLUB SHOOT.

At last week's meet of the Minneapolis Gun Club, of Minnesota, the following scores were made: Thompson 12, French 13, Club badge, 10 singles and 5 pairs; Eastman 8, Warren 11, Baker 7, Biffon 15, Neely 16, Nelson 8, Shattuck 13, Stone 11, Ensign 12, Johnson 13, McQueen 14, Paegel 7, Mrs. Shattuck 18, Parker 12, Prescott 7, Remington 15, Mrs. Johnson 9, Andy 9, Van 2, Harrison 8, Novotny 10, Holt 14, Ramaley 10, O'Brien 8, Hoffman 14, Mead 12, Smith 5, Holton 17.

Mrs. Shattuck won the senior badge, Neely won the junior badge and Mrs. Johnson won the amateur badge. Schlitz diamond badge, 25 singles, unknown angles: Thompson 21, French 23, Eastman 15, Parker 18, Ensign 18, Holt 15, Ramaley 22, Mrs. Johnson 10, Johnson 12, Baker 8, Biffon 8, Shattuck 14, Andy 14, Warren 16, Remington 20, Neely 19, Paegel 11, Stone 17, Mrs. Shattuck 17, Harrison 9, McQueen 20, Nelson 15, Novotny 15, O'Brien 15, Hoy 9, Hoffman 16, Mead 17.

French won the badge. Val Blatz diamond badge, 15 singles, known angles: Thompson 10, Eastman 9, Parker 12, Ensign 11, Holt 13, Ramaley 13, Mrs. Johnson 9, Johnson 9, Biffon 11, Shattuck 10, Remington 5, Neely 13, Paegel 5, Stone 13, Mrs. Shattuck 11, McQueen 11, Nelson 8, O'Brien 11, Hoffman 11, Smith 4, Vanness 2, Wild Rice 6, Mead 14, Frank 6, Patten 10, Hoff 10, Bryan 9, Stone 8, Parker 7. Stone won the badge.

MILWAUKEE.

At the club meet of the Milwaukee Gun Club this week the following scores were made among others: Okershauser 13, J. Wulf 15, E. Fricker 18, J. Haertle 18, J. Farber 14, S. M. Duval 13, A. Klapinski 15.

The following scores at 30 targets were made: O. Okershauser 20, E. Fricker 23, J. E. Farber 24, J. Haertle 24, S. M. Duval 14, A. Klapinski 18, W. Abels 22.

At their regular weekly shoot the members of the Jolly Gun Club, of Milwaukee, last Monday made the following records: At 30 targets, known angles: John Gerber 23, John Meunier 26, W. Deckert 25, J. Haertle 24, Albert Fiebrantz 24, John Fiebrantz 22, F. Fox 9, J. Martin 25, J. Ellis 19, P. Weber 22, S. Meunier 23, C. Fiebrantz 25, R. Reifensuhl 21, J. Sauberlich 19.

At 25 targets, unknown angles: Himmelsstein 20, Oechsle 15, Ruggaber 16, Horlick 15, Casper 10, Jones 7, Harlem 11, Jackson 11.

MONTANA FIFTH ANNUAL.

The fifth annual tournament of the Montana State Sportsmen's Association, May 21-23, was not very large, but the shooting was spirited and was well sustained by those in attendance, who were of the staying sort. The two cities of Butte and Anaconda contributed most of the entries. Messrs. J. F. Cowan, F. Nichols, F. A. Anderson, Thos. Knight, C. H. Smith, Dan Jaeger, W. M. Schultz, V. A. Walker, A. D. Christianson, P. E. McGowan, J. M. Spargo, P. Jones and C. E. Ruger turned out for Butte, and Anaconda, which lies adjacent to the city of Butte, sent over the following good talent: Messrs. C. A. Tuttle, H. H. Nell, M. B. Brownlee, D. D. Twohy, L. C. Dennison, Geo. S. Bartlett. Messrs. P. J. Holahan and C. W. Whitlaw came over from Wallace, Idaho, and Mr. J. M. Alderson came from Salt Lake City.

The chief interest in the State events centered around the individual championship cup, at 50 targets, known traps and angles, which was won last year by C. H. Smith, of Butte. This was won by Dan Jaeger, also of Butte, with a score of 43. The team shoots also were well contested and interesting.

At the convention on the evening of May 21, the city of Butte was chosen for the next meeting place. The following officers were elected: President, J. M. Steward, Butte; Vice-President, E. J. Fiske, Helena; Secretary and Treasurer, C. H. Smith, Butte; Directors: John F. Cowan, Butte; Sam T. Kennett, Helena; C. A. Tuttle, Anaconda.

A committee composed of C. H. Smith and W. M. Schultz, of Butte, and M. B. Brownlee, of Anaconda, were appointed to draft a new set of by-laws and shooting rules for the Association and report at the next annual meeting. M. B. Brownlee presented the Association with a handsome gold medal, to be subject to challenge by any member of the Association under rules to be formulated by a committee to be appointed by the president. C. H. Smith, A. D. Christianson and Dan Jaeger were appointed as the committee.

Following are the scores of the first day:								
Targets:	15	20	20	25	20	Targets:	15	20
Schultz	12	18	14	22	18	Jones	12	15
McGowan	15	13	15	21	15	Twohy	12	16
Smith	14	16	17	24	...	Bartlett	12	16
Anderson	14	15	18	22	15	Holohan	11	14
Cowan	13	14	18	20	19	Nicholls	11	16
Nell	13	12	13	18	11	Christianson	9	14
Brownlee	12	12	12	15	13	Knight	8	14
Whitlaw	12	14	13	20	12	Tuttle	8	14
Walker	12	15	12	20	17	Dennison	7	12
Jaeger

Fourth event, three-man championship cup shoot, at 25 single bluebirds per man, known traps and angles: Butte team No. 1—Cowan 21, Schultz 22, Smith 24; total 67. Anaconda team No. 1—Tuttle 20, Twohy 21, Bartlett 21; total 62. Butte team No. 2—Nichols 18, McGowan 20, Knight 16; total 54. Anaconda team No. 2—Brownlee 18, Nell 16, Dennison 20; total 54. Butte team No. 3—Jaeger 14, F. A. Anderson 18, C. E. Ruger 18; total 50. Butte team No. 4—Christianson 12, Walker 20, Jones 18; total 50.

Cowan, Schultz and Smith won, 67 out of 75. Sixth event, two-man team shoot, at 20 single bluebirds per man: Smith 18, Schultz 18; total 36. Holohan 17, Whitlaw 17; total 34. Cowan 16, Jaeger 16; total 32. Rockefeller 14, Bartlett 17; total 31. Jones 14, McGowan 16; total 30. Knight 14, Nichols 13; total 27. F. A. Anderson 13, J. M. Anderson 14; total 27. Tuttle 14, Twohy 13; total 27. Nell 15, Brownlee 11; total 26. Christianson 14, Walker 11; total 25.

Smith and Schultz won, 36 out of 40. Seventh event, individual bluebird championship cup shoot, at 50 single bluebirds, known traps and angles: Jaeger 43, Knight 42, Christianson 42, Nichols 41, Smith 40, Schultz 39, Rockefeller 39, Walker 39, Twohy 38, Bartlett 37, Tuttle 33, Nell 33, Spargo 26. Jaeger won the cup, and 60 per cent. of the entrance money went to C. H. Smith, who won the cup last year. Jaeger won championship. Schultz won high average for the day, Cowan and Jaeger second.

Following outsiders did not compete in State events: M. B. Brownlee, D. D. Twohy, G. S. Bartlett, L. C. Dennison, C. A. Tuttle and H. H. Nell, of Anaconda; P. J. Holahan and Charles Whitlaw, of Wallace, Idaho, and J. M. Anderson, of Salt Lake.

SECOND DAY.

Following are the scores in the open sweeps, second day:								
Targets:	20	20	25	20	20	Targets:	20	20
Schultz	18	16	Jaeger	15	13
Christianson	18	18	22	18	...	McGowan	14	17
Knight	18	15	17	17	...	Tuttle	15	13
Walker	17	17	22	16	12	Anderson	14	13
Nell	17	16	16	Holohan	12	14
Cowan	16	14	17	22	18	Brownlee	11	13
Nicholls	16	Ballinger	5	9
Smith	16	14	19	23	16	Spargo

Whitlaw	16	16	18	20	16	17	Cunningham	13	...
Bartlett	Trudgeon	11	...
Jones	Steward	10	...
Twohy	Miller	14	...

Event No. 11, two-men team shoot, entrance \$5 per team, \$20 added money, partners to be drawn by lot from among the shooters: Jaeger 16, Bartlett 16—32. Anderson 19, Holohan 12—31. Nichols 16, Jones 14—30. Nell 16, Smith 13—29. Schultz 12, Cowan 16—28. McGowan 14, Christianson 14—28. Knight 14, Tuttle 13—27. Ballinger 9, Brownlee 11—20.

Event No. 11½, for gold challenge medal, presented by W. H. Brownlee, of Anaconda, at 25 birds. The medal was won by Nichols, of Butte, with a score of 23. Tuttle 22, Twohy 22, Bartlett 21, Jaeger 20, Smith 20, Christenson 19, Knight 19, Cowan 18, Nell 18, Trudgeon 18, Walker 17, Schultz 17, Spargo 13, Jones 12, Brownlee 10.

Event No. 14, Butte Rod and Gun Club medal shoot, at 40 birds, four different styles, entrance \$5. Medal won by J. F. Cowan, of Butte, with a score of 33. Tuttle 31, McGowan 31, Christianson 30, Jaeger 30, Schultz 30, Brownlee 24, Nichols 24, Twohy 28, Smith 27, Knight 27, Walker 25, Bartlett 24, Spargo 24.

Total of birds broken: First, J. F. Cowan, 192; second, C. H. Smith, 187; third, A. D. Christianson, 185; fourth, Dan Jaeger, 184; fifth, W. M. Schultz, 182; sixth, C. A. Tuttle, 181; seventh, Thomas Knight and P. E. McGowan, 180; eighth, C. Whitlaw and J. M. Anderson, 179; ninth, A. Walker, 175; tenth, G. S. Bartlett, 174.

Live-bird events occupied the third and concluding day. E. Hough.

1206 BOYCE BUILDING, Chicago.

Audubon Gun Club.

BUFFALO, N. Y., May 21.—The scores of the Audubon Gun Club, made to-day, are subjoined. H. D. Kirkover won the Class A badge; J. T. O'Brien the badge for Class B; J. J. Reid the badge for Class C:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6

New Jersey State Sportsmen's Association.

PLAINFIELD, N. J., May 26.—As there seems to be considerable diversity of opinion as to the advisability or otherwise of carrying on the New Jersey State Sportsmen's Association as at present constituted, it has been deemed wise to postpone the meeting called for Thursday next, June 2, until Friday, June 17, in order that each club may instruct its delegates upon that point.

You will note that the object before this meeting is of the greatest importance to the future of trap-shooting in the State of New Jersey; it is hoped therefore that you will do all in your power to make that meeting a representative one.

The meeting is called for Friday, June 17, at 2 P. M., in the rooms of the Sportsmen's Association, 377 Broadway, which have been courteously loaned for that purpose.

T. H. KELLER, Sec'y.

Answers to Correspondents.

No notice taken of anonymous communications.

C. D., Prince Edward Island.—A friend showed me a very peculiar brant, which he shot here. Size and shape the same as our common brant. The color on the head, neck and breast, which is black on our brant, is a light bronze or cream color, as is also the topsides of the wings. All the rest of the body, including tail, is a brilliant white. The bill and feet are brown, or very much the color of those of the black duck. This brant came alone to the rig of live decoys, and gave the usual brant call several times before coming in. We would like to know if there is a species of brant answering the above description, or is it a freak? Ans. If the bill and feet were pink we should say that you had secured a specimen of the lesser snow goose, which sometimes has head, neck and upper breast rusty or gold color. We presume this is what it was. Of course it may have been an albino brant, but this is not likely. The range of the snow goose is western. It is not common on the North Atlantic coast.

W. C. H., Saginaw, Mich.—I killed a bird this spring which belongs to the plover family, and cannot identify it, and would be pleased to have you give me its name. I saw quite a number of them sitting on logs near the river bank. Description as follows: About size of killdeer; bill black; feet dark orange; breast white; throat black; tail feathers dark brown tipped with white; patch of white on back between wings; top of head speckled; wings mottled with brown and black. Ans. Perhaps a golden plover; the feet would have told if you had described them. Did it have a hind toe? the golden plover has none.

PUBLISHERS' DEPARTMENT.

Advertising and Fishing.

From "Profitable Advertising."

THERE are certain natural and necessary limitations in advertising which must not be overlooked by any one who expects to achieve success. The Dead Sea would be a profitless fishing ground despite the attractiveness of its waters. And there's many a pond and pool which one would think should teem with fish, but which would never reward the most patient fisherman with more than a nibble from a minnow or shy bite from a bull-head. The man who would catch fish must go where the fish are. He must know the haunts and habits of the fish he seeks, and he must bait his hook to suit the taste of his game. The advertiser who is a fisher of men must be just as intelligent and practical a fisherman.

"Keeping everlastingly at it brings success" only when these natural and necessary limitations are observed. Keeping everlastingly at it would bring utter failure to the fisherman in a fishless pond. A man might mine the granite hills of Massachusetts a lifetime, and all he'd have to show for his labor would be a hole in the ground and a corresponding hole in his pocket. Keeping everlastingly at it in mining demands a gold-producing country in which to mine, if success is attained.

A Valuable Publication.

PENNSYLVANIA RAILROAD 1898 SUMMER EXCURSION ROUTE BOOK.

ON June 1 the Passenger Department of the Pennsylvania Railroad Company will issue the 1898 edition of its Summer Excursion Route Book. This work is designed to provide the public with short descriptive notes of the principal summer resorts of Eastern America, with the routes for reaching them, and the rates of fare. There are over four hundred resorts in the book to which rates are quoted, and over fifteen hundred routes or combinations of routes. It is compiled with the utmost care, and altogether is the most complete and comprehensive handbook of summer travel ever offered to the public.

It is bound in a handsome and striking cover, in colors, and contains several maps, presenting the exact routes over which tickets are sold. It is also profusely illustrated with fine half-tone cuts of scenery at the various resorts and along the lines of the Pennsylvania Railroad.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY. }
SIX MONTHS, \$2. }

NEW YORK, SATURDAY, JUNE 11, 1898.

VOL. L.—No. 24
{ No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, \$4 per year, \$2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

It may be probably concluded that Moses, who I told you before writ the book of Job, and the prophet Amos, who was a shepherd, were both anglers; for you shall in all the Old Testament find fish-hooks, I think, but twice mentioned: namely, by meek Moses, the friend of God, and by the humble prophet Amos. Concerning which last, namely the prophet Amos, I shall make but this observation: that he that shall read the humble, lowly, plain style of that prophet, and compare it with the high, glorious, eloquent style of the prophet Isaiah (though they both be equally true), may easily believe Amos to be, not only a shepherd, but a good-natured plain fisherman. Which I do the rather believe, by comparing the affectionate, loving, lowly, humble epistles of St. Peter, St. James, and St. John, whom we know were all fishers, with the glorious language and high metaphors of St. Paul, whom we may believe was not.

Izaak Walton.

JUBILEE NUMBER.

THE issue of June 25 will complete the Fiftieth Volume of FOREST AND STREAM; and the event will be fittingly marked by making that a Jubilee Number, filled to overflowing with good things. It will be notable for store of good reading and wealth of illustration. A preliminary notice to the trade has already assured for this special number a wide demand. It will have a large circulation among those who are not regular readers of the paper, and for this reason will have increased attractions for advertisers. Special advertising rates for the Jubilee Number will be sent on application.

SNAP SHOTS.

The efforts made by the Chicago Audubon Society to put an end to the wholesale trapping of song birds near that city seem to have met with success. For some time the Society has been collecting evidence against the live bird dealers, and last week Game Warden Loveday, accompanied by one of the directors of the Society, visited one of the bird stores and there seized all the native birds that were to be seen, and took them into court. The seizure is of special interest because it appears to have been made under that provision of the law which forbids possession, a point which judges have often ignored to the great injury of the cause of protection, since it is most difficult to obtain actual evidence of capture, though often easy to find game illegally in possession. The case against the bird man came up on Friday, June 3, and the live bird dealers were well represented in court. The claim was made that many of the seized birds, well known as Illinois species, had been captured in various other States, in some of which these species are not known to occur; but the judge, after hearing both sides and consulting the decisions on the points in question, turned over the seized birds to the game warden. This decision, in favor of the Audubon Society, will no doubt encourage it to further efforts in behalf of its laudable objects.

During the recent Canadian negotiations at Washington regarding the Bering Sea pelagic sealing, the fact was developed that the industry has so fallen off that at present only two Canadian vessels are engaged in it; and Canada, relieved of the responsibility of indemnifying a large fleet of sealers, is now willing to assent to a prohibition of the practice altogether. A protocol was signed which formally agreed to the subjects, to be submitted to an international commission looking to the suppression of pelagic sealing. In other words, this is an abuse which has wrought its own cure. The drain

year after year upon the Bering Sea seal supply has been so tremendous and so persistent that the stock has been exhausted, and the industry has become unprofitable. And how much old-fashioned human nature there is in the present amiable willingness on the part of the Canadian sealers to give over a pursuit which no longer pays.

Every recurring fishing season demonstrates anew the foolishness of investing in department-store tackle. It is only the greenhorns and gudgeons who are taken in by the specious bargain advertisements and the deceptive talk of the ignorant salesmen in these dry goods establishments. Poor tools in any trade, occupation or sport are an abomination, and most emphatically is this true of angling. It is a good rule to get the best you can afford of rods and lines and other equipments; and if limitation of means compels you to make choice of cheap goods, remember that in dealing with regularly established angling outfitters better service can be had for the same expenditure of money than at irresponsible department stores. The department stores are necessarily irresponsible as to tackle; their stock is put in as one line among a hundred, where cheapness of first cost is the most essential factor in the business, and its selling is intrusted to clerks whose absolute ignorance alone absolves them from the charge of downright dishonesty in their misrepresentations as to the character and quality of goods. Confidence in the staying power of one's rod is an essential factor of pleasure in fishing, and such confidence one may feel only after having tested the rod by experience, or by reason of faith in maker and seller—the confidence which attaches to the products of those houses whose names are as household words with readers of FOREST AND STREAM.

Among the curious conditions growing out of the war may be noted one by which salmon in Canadian streams are destined this summer to fall victims to the Spanish fleet. The tackle dealers report that there is an unusual movement toward the salmon rivers, the new recruits being of anglers who in ordinary seasons indulge in salt-water fishing at the various coast resorts where they accompany their families. This year, however, the women are in such dread of visitation by the Spaniards that they refuse to go to the seashore; and the men, while scouting the notion that Spanish ships will venture within a thousand miles of our northern coast, yet gratefully enough seize the opportunity to get some salmon fishing.

Wheeling and fishing are alike in this, that each pursuit, practiced in different ways, may be made to yield its pleasures diverse in character. There are riders who ride for speed, and there are fishermen who fish for count. The scorcher answers to the score fisherman. The satisfaction found by the one is similar in kind to that found by the other. With scorcher and score fisherman alike it is the prodigiousness of the performance that tells. In securing the gratification thus afforded, each misses some of those saner and more substantial pleasures he might find if he rode or fished in another way. The scorcher has the exhilaration and exultation of speed, but one whose back is bent, head bowed over the handle bars and gaze fixed on the ground has no eye for the things about him. He is the jockey on the race course intent on crossing the line in the lead, not the pleasure driver on country roads. Your humped scorcher might scorch his thousand miles and never catch the inspiration of bursting bud, of the flush of the clouds at sunset, of the beauty line of the curving river, of the note of the wild bird singing by the roadside. No more shall such reward be his whose angling soul is intent only upon the dozen and the score, the ounce and the pound achievement of his day on the water.

Scorcher and score fisher are alike in this also that they are eager to attract attention to themselves. The scorcher rejoices in making a spectacle of himself; and if there were none to behold the score of the count fisherman, nor any to be astonished at the telling of it, he who makes it would be robbed of a large share of his satisfaction in the feat.

Aside, however, from the admiration or envy thus sought to be aroused in other people, both scorcher and score fisher are regardless of the rest of the world; each alike is indifferent to the rights of others. In his mad rush the scorcher imperils the security of other wheel-

men and of pedestrians alike; for man, woman or child who gets in his way he has as little heed as a wildcat locomotive. If the spirit of the count fisherman be less rude in expression it is of the same essence, and lodges in a breast devoid of consideration for other anglers who may come after him.

The old song "Some Love to Roam," quoted by Mr. Fred Mather in his "Men I Have Fished With," has been called for so often that to-day we print the words and music. The name of the author is unknown to us.

The value of Walton's Angler as an investment was illustrated at the recent Ashburnham library sale in England. For the first five editions of the Angler in the original state, Lord Ashburnham some years since paid \$300. For the same books at the sale the price brought was \$4,000.

New York once had a fish commissioner who took it upon himself to instruct the game protector in this city that the law forbidding the sale of reed birds was not to be enforced. In presumptuousness this action is outdone by Governor Voorhees, of New Jersey, who advises certain farmers that they require no change of the law forbidding the snaring of rabbits, since, if they violate the statute and are fined therefor, the Governor, "exercising my authority, would at once remit any fines so imposed. I believe," he adds, "if this were generally known, the farmers would remain content with the law as it is." We should think as much. If a law which does not suit may be broken with impunity, he would be an unreasonable farmer, or man in any other occupation, who could object to it. What Governor Voorhees preaches here is simple anarchy. The merits of the rabbit killing law itself are of little moment contrasted with the more vital question whether the executive may proclaim lawlessness. A game statute differs from no other in the obligation of respect it lays upon the good citizen. If a given law, whether applying to rabbits or what not, is unwise or unreasonable, the only proper remedy is found in repeal. A State Governor who withholds approval of a repealing act on the declared principle that repeal is unnecessary, because he will protect violators of the statute, is unworthy to hold the office.

The United States Supreme Court has just decided four cases in interstate commerce which have a relation to the importation and sale of game from other States. Two of the cases had to do with the Iowa and South Carolina liquor laws and the other two with the New Hampshire and Pennsylvania oleomargarin laws. The point involved in all the cases was whether an article imported into a State, in the course of interstate commerce, becomes subject to the State law the moment it crosses the State line, or whether the jurisdiction of Congress as regulating interstate commerce extends to the article until it reaches the consignee. The court held that the imported articles are not subject to the State liquor or oleomargarin statutes until they have reached the consignee; but that immediately thereupon the State law prevails, and the article may not be sold, given away, nor transported contrary to statute. The decision is a most important one in its bearing on game protection. The principle has already been firmly established by the Supreme Court that a State may forbid the export of its own game; this new decision sets at rest the question whether the State may also forbid traffic in game brought in from another State, without regard to its sale in original packages. The Supreme Court has thus overruled a recent Pennsylvania court ruling that in the original package imported game was not subject to the law of the Commonwealth. With these important principles so clearly defined by the court of last resort in this country, we now require only statutes based upon them to restrict the sale of game.

It is one of the disappointments of an outing to travel far into the wilderness to pitch one's tent on a favorite camping ground only to find that another has come in ahead and pre-empted the site. The woods, it may be true, are free to all; and the mere occupancy of a spot even for season after season gives no title; and yet one comes to feel a spirit of proprietorship and to resent intrusion as trespass. One particular ground is endeared to the memory; one feels at home there; and if one be robbed of it by another the chagrin is hardly different from that resentment which is engendered by invasion of actual legal rights.

The Sportsman Tourist.

Lex Talionis.

Say the finny folk who glide in the stream,
"We could be happy the whole day long
Were it not that in sun or in shadow we dream
Of pinions that hover to do us wrong!"

Say the people whose pathways are through the sky,
"We could sing our songs, we could brood our nests,
Were it not we have seen our fellows lie
With a strange red plume on their silent breasts!"

The fowler mused, as he bagged the game,
"How careless and free were man's estate
Were it not for the fear he scarce can name—
Were it not for the arrows of lurking Fate!"

EDITH M. THOMAS.

Rival Fisher Folk.

THERE is in my neighborhood an inlet fed by tide and stream which on entering the broader meadows widens to a lake. This possesses all the features or qualities characteristic of both fresh and salt water—the overhanging trees, the grasses of the margin, the very contours of the stones which line the shores, suggest a lake where no restless ocean has rubbed to sand and gravel the pebbles. Also, the jagged rocks lying about have an irregular and untidy appearance which tells of fresh water. Here the incoming tide from the sea meets and mingles with the contents of a small stream.

"A loose, thin, tremulous, pulseless vein,
Rapid, and vivid, and dumb as a dream."

Indications are not wanting, however, of the moon-slave's presence. There is high-water mark, above which all is dry and clean, though the intervening span to low water is slimy, muddy and weedstrewn.

To the margin of this lake resort many wild creatures of earth and air, for by that natural law which gathers the eagles together the spot has become a famous feeding place. Fish of many kinds—usually rather small—abound in this miniature sea. Fish of a hybrid character come from the ocean, languidly condescending to fresh water; many more from mountain streams come to find strength and comfort in the brackish current of this aqueous half-way house. And here a watchful lover of nature finds many illustrations of nature's ways, not all of which, I fear, would increase our respect for her magnanimity or for that maternal loving kindness ascribed as a motive for her doings. Here can one see the larger fish cheerily devouring the smaller ones, while crabs, eels and other denizens of this debatable land foregather, fight or fraternize, as the cases may be. Yet, spite of all the disaster wrought by such fratricidal warfare, so prolific are the waters, so abundant are their occupants, that man himself is frequently induced to take a hand in these predatory pastimes—with the odds all in his favor.

Several fishermen who live by their calling have for years patrolled this lake in a miniature navy, of their own construction, and almost as primitive as the bits of bark on which bushy-tailed squirrels cross a river. So near to nature is all that takes place in this unsophisticated spot. At night these harvesters of their watery fields proceed with bright lanterns fastened to their prows—the unwonted brilliance proving as fatal to fish of the sillier sort as is the traditional candle to the traditional moth. And, as though this were not enough, they pursue with Indian spears the wiser fish swimming unscathed, through higher knowledge. Moreover, at every coign of vantage lurk the lobster pot and the eel snare, or any contrivances which can betray piscatory confidence or entrap the unwary. But among the scientific fishers of the "wee salt lake," as our Scottish neighbors call this expansion of the inlet, are some of modest pretensions, whose "catch" goeth not to market. There is indeed a familiar tradition which describes a monstrous cat dwelling upon a pile of rock near the hut of a lone fisherman, whose sufferance she earned by service as a rat-detective; and many and many are the fantastic tales told of Mother Cotton's prowess as a fisher. (This was after the first fluffy white litter had conferred the prænomen Mother.) An occasional check from a bellicose crab gave a comedy element to these recitals.

Long surviving Mistress Cotton and other rivals, the chief fishers of this saline pool are the birds, which here have a curious custom of hunting in couples. Especially have I noticed one royal kingfisher, of strident vociferation and stately swoop, who with his mate—a feathered image of himself—takes possession of the lake by day. Establishing themselves on opposite sides of the inlet, the pair fly diagonally across every portion of its surface that can contain a prey, frequently meeting, but never flying together. I have often been compelled to admire the thoroughness with which their work is done, the skill with which each avoids the fowler's eye (that "mark, to do them wrong"), while leaving no part of this happy hunting ground unvisited. For years the twain have held these waters. Noting the tufted head, the sharp cry, suggestive of war-whoop, and the darting precision of flight, one might almost fancy them a heritage from the long-forgotten aborigines. In color and markings of their plumage part and parcel are they of the woods whose dead branches are their perch. Whose umbrageous leafiness form their bower and nesting-place. But alas, the bane of aught that succeeds in life is imitation. A pair of herons, having observed, no doubt, the success attending a systematic prosecution of business, have come to the abode and adopted the tactics of the kingfishers, who could they be heard might claim that the herons had stolen their war-cry. The newcomer, when engaged in his nefarious poaching (this is the kingfisher's view of the matter), utters a hoarse croak, on the strength of which he is derisively named by the children. Qwawk. There is in his shambling flight and awkwardly stealthy, almost feline, movements an irresistibly comical caricature of the nobler bird. The heron contents himself with lurking among the small stones which line the shore, and which he singularly resembles both in form

and color, so much so indeed that it is difficult to distinguish him even at a short distance, especially as his hours for fishing is the twilight. So persistently does he skulk in penumbra, disguising himself among similarly tinted rocks, that one quite naturally imputes to him a lack of the courage so readily conceded to the kingfisher, who, however, beyond the fact that there is something of contemptuous negation in his pose, ignores totally the larger bird, his rival. It should be mentioned that our king among the fishes earns his regalia not only by his daring and enterprise, but by a mastery of strategy worthy of Bruce's hay cart, since, according to those who with blazing lanterns prowl along the lake in search of dazzled eels, this ingeniously voracious bird has on more than one occasion darted along the pathway of concentrated light, emerging with wriggling prey and screech of triumph.

While we meditate upon that scheme of nature which secures a survival of the fittest by surrendering the weak to the strong, we are made aware of a sudden silence—a silence that seems to proclaim the approach of some portentous new element. The "quawk" is inaudible as his dingy body among dingier rocks is invisible. The kingfisher and his mate have fled noiselessly to the pine thicket that woos them to dark and fragrant safety. Looking up, we behold a vast eagle floating majestically against the wind, with motionless wings, with that magic volition which poets have noted in the thundercloud. He poises, circles, is gone ere bleating lamb can be folded, or fluttering feathers gathered in. And now the trembling denizens of "wee salt lake" can resume their own predatory operations. "Old Uncas!" exclaims a native fisherman, who also has been startled by this apparition and the stage-wait produced by its presence among the members of the warring underworld. "Yes, that's old Uncas. I reckon he likes to stir up the small fry onct an' awhile, tho' 't 'pears to-day he ain't hungry." "But his name?" I ask. "Oh, everybody hereabouts calls him that, an' has called him so long's I kin remember. Fact is, no one knows whether Uncasville's called after him or he's called after Uncasville." "Why," I exclaim, in astonishment, "how 'old must he be then?" "Nobody here 's old enough to remember," and, as I watch the retreating figure in the sky, I mentally ejaculate, "Old Survival!"

S. R. ELLIOTT.

Katahdin and Big Fish Lake Regions

THE Bangor & Aroostook Railroad has opened one of the choicest regions in Maine. Nowhere in the Maine woods is there such a combination of magnificent scenery with good hunting and fishing. The Katahdin and Machias sections abound in game, and good deer shooting is found anywhere along the line of the road after it enters the forest. The game has not been driven away yet, as the railroad has only been in operation a short time. The scene rapidly changes after leaving Oldtown. Farms give place to patches of woodland, and then a dense forest hems in the track on both sides. Many miles of woods are traversed before the train arrives at Norcross, the first station of any importance. The sportsman is now within striking distance of excellent hunting and fishing. Norcross is the best place to outfit for Katahdin and the West Branch. Hunt's Camp on the Sordahunk Stream, thirty miles from Norcross, is a good central location, with good trout fishing in the nearby ponds.

This is the most beautiful region in Maine, and second to none for moose and deer. Dacey, Rock, Foss and Noton and Lost ponds furnish good fly-fishing in August, when there is practically no angling in the Big Fish Lake section. The trout run from 8 to 12 in. in length, seldom larger; they make up in numbers what they lack in size. A Norcross guide claims to have taken some large square-tails out of Slaughter Pond.

Over toward Saddleback Mountain, at the foot of the horse race, the Penobscot widens into a beautiful lake called Sordahunk Dead Water. Follow up the trout brook that comes in on the left and you will soon arrive at Trapper Pond. This lovely trout pond has few visitors. The West Branch of the Penobscot swarms with little salmon and chubs. These pests of the angler will play havoc with his flies and balk him in his attempts to fasten to any of the large trout that haunt Ripogenus Gorge and Eddy. From Sordahunk stream it is a twenty-mile tramp through the forest to reach the Nesowadnehunk lakes. Very few sportsmen had worked their way in here previous to the season of 1895. September is the best month for camping out in this beautiful region; plenty of blankets are required, as sometimes ice puts in an appearance. A camp on the lake furnishes shelter to that class of sportsmen who are not hardy enough for wood life. In the early part of September bright flashes of color light up the somber recesses of the forest, by the middle of the month the autumn colors are in their prime, all the little ponds that mirror Katahdin are looking their loveliest. Foxes are working their way in from the edge of the woods; these pests are no doubt responsible for the scarcity of grouse. The sportsman is not apt to bother with small game in a section that abounds with deer.

It is an unwritten law of the woods that a little deer meat is allowed in camp during the close season, provided the wardens know nothing about it. The temptation to shoot a bull moose in the latter part of this month is very great, as the calling season is rapidly passing away. Bull moose are getting scarce, and if the sportsmen's and guides' associations don't do something more than invite hunters to come up here and destroy them, they will soon be a thing of the past.

About sixteen miles of wood road connects Nesowadnehunk with Grand Lake, on the east branch. The sportsman can make a trip from here to Webster Lake through Chamberlain and Eagle lakes to the eastern extremity of Churchill Lake, then work his way down through the Masungan lakes to the Machias section, then north over a three-mile carry to Clayton Pond and Big Fish Lake. I would not advise the sportsman to undertake this trip unless he is fond of roughing it, and has plenty of time at his disposal. Otherwise I would advise him to take a buckboard to Crystal Station on the Bangor & Aroostook Railroad, and so on north to Ashland,

ARTIST.

His Vacation.

"HAD your vacation, Ned?"

"No, I'm going up in New Hampshire later on my annual hunting trip. You've been away, haven't you?"

"Yes, I had two weeks at Cottage City, but it was so blasted hot and there was so much going on that I didn't get much rest. Deuced lot of fun though, and I met some jolly girls. Say, old man, you better stop making a hermit of yourself and go down with me next year?"

The speaker, a dapper young man with a slight mustache and a high collar, that made it difficult for him to turn his head, tipped his chair back against the wall and exhaled cigarette smoke through his nostrils. There was no reply, and he cast his eyes indifferently about the room. On one wall a pair of antlers served as a rest for an old muzzle-loading rifle. Hanging from the prongs were a cartridge belt, a well-worn corduroy hunting jacket, and a double-visored canvas shooting cap. A brace of revolvers hung on either side. There were hunting pictures elsewhere. A foxskin rug lay on the floor before a low, broad window seat, upon which a sturdily built, ruddy-faced young fellow, in a dressing gown, lounged as he pulled at a long, black pipe or watched smoke rings rise into the air and break.

Presently the young man on the window seat straightened up and looked at his caller.

"I say, Gus," he finally said somewhat earnestly, "don't talk that sort of stuff to me. I wouldn't trade my two weeks among the mountains for a whole summer of the kind of torture you call fun. What's it all amount to, that everlasting sitting on the piazza, lolling on the sand and dressing for supper; with an evening on the wharf with some girl you've only known a few hours, gazing at the stars, or the red and green lights on the boats in the harbor? I call it wasting life when one considers the vigor and the exhilaration of healthy excitement and plenty of exercise in the clear October air! You say you're tired, and way down in your heart you know you're disgusted too. Try as you will to make yourself believe you've had a good time and you can't. Isn't that so?"

"How do I kill time up there? Don't I find it dull? Don't the people make me tired? Why, man, there's no time to kill. The days are not half long enough, and when night comes you've only been able to do half that you wished. After supper's over, you light your pipe and pull your chair up with the farmer's family close to a blazing fireplace. Your host may tell stories, but you're content to do nothing but gaze into the flames that are struggling upward. How good the pipe tastes? How contented you feel as you go over the day's experiences! How restful it seems to be away from the endless noise, the everlasting prattle of uninteresting people! The hearts of your hosts beat warmly for you. The words they speak are kindly, sincere ones. You feel their interest and sympathy. What a pleasure it is to meet unaffected, sincere people! Your rough hunting togs are so comfortable. You are supremely happy. The world with its confusion and struggle is forgotten. Almost before you know it your pipe has burnt out and a feeling of pleasant drowsiness steals over you. You rouse yourself with an effort, pick up the little lamp that is waiting on the table, and make your way upstairs to the tiny bedroom with its slanting walls. The window is open. Darkness and stillness seem to creep in through it. No sound is heard save, perhaps, the distant barking of some house dog out for a frolic. Your night's rest is as peaceful as the night is quiet.

"The rising sun streaming in at the window wakes you. You rise full of life. After a wholesome breakfast you spend the day with your dogs in the field, stopping during the noon hours on some sunny hillside to eat the lunch which you have brought, and then to rest and smoke. You can feel your flesh tingling with vigor! You feel like a man, you think like a man. By George, you are a man!"

"But the ending of the day is what I look forward to. As the sun gets low I make my way to a lake that nestles among the mountains. The farmer's son is waiting for me. We unhitch the boat and row leisurely toward the point where the river empties in. Hardly a ripple breaks the placid water, which mirrors the dark woods on the shore beyond and the blue sky above. The sun's slanting rays make the foliage golden green and the tree trunks vibrate with color. Ah! It is the time to be out!"

"We make our way slowly up the river a short distance, put out the decoys and push the boat inside the 'blind.' Sere, brown bushes spread away in every direction, amid which wild celery grows in great quantities. The sun is a ball of fire on the western horizon. The little pools of water on the dotting feeding grounds here and there glow with its crimson. A lank, ungainly heron flies lazily by, casting a suspicious eye at the decoys, sitting stiffly on the water a short distance from us. There is a low whistling in the reeds close at hand. The dry seed-pods on the bushes rattle faintly in the cool, crisp evening breeze. Pickerel are breaking among the lily pads, sending little circles of water rushing toward the shore. A muskrat sticks his nose up close to the boat and sinks with a splash. We wait quietly, buttoning our hunting jackets close to the throat as the air becomes more chill. The sun drops out of sight beyond the distant mountains with a parting beam.

"We scan the horizon eagerly. Presently a dark spot flecks the clear sky at the southwest. By jove! The sight brings us to our feet with a thrill of expectation. On comes the speck like the wind, straight for us, growing larger every moment until it evolves itself into a flock of ducks. The evening flight has begun. They come down on the wind to our left, swing, and a moment later are hovering a few feet above the decoys. Our guns flash twice simultaneously. Heavy splashes in the water are followed by a convulsive fluttering. There is hardly time to load before there is a swishing of air overhead, and a second flock passes us before we have time to shoot. The birds are suspicious and make a long circle, but we finally get in a shot at long range and down a couple. The air is full of ducks almost before we know it; shooting past us like rockets, darting here and there, hovering over the decoys. We load and fire with nervous haste. Time passes quickly. By Jove,

it is sport! Suddenly it is dark. We try to see the sights on the guns, but cannot.

"The air is full of dark, indistinct forms rushing here and there. The sound of wings is like the wind sighing through the forest. Presently all is still. From distant parts of the marsh occasionally a hoarse quacking and a great splashing and fluttering comes to our ears. The sport is over. We gather up the birds and row down the river. We are tired, but how good we feel! Presently the boat grates upon the shore. Twenty ducks is a good load for two men, but how light they are! A short walk along the dark road brings us in sight of the farm house, with its warm, welcome light gleaming forth into the night. As we push open the door the smell of good things smoking on the table makes our appetite ravenous. Glad shouts of welcome greet us. Ah!"—

The speaker bent forward, his eyes half closed, a look of peace upon his face, his mind far away. After a time he straightened up and glanced at his companion. His cigarette had gone out. His eyes rested on the trophies which hung from the antlers, and in them there was a new, strange light.

HERBERT L. JILLSON.

Natural History.

Nest-Building Fishes.

SOME time ago I read an interesting paper by Mr. G. F. Holder on nest-building fishes, in which he compares them to the birds, calling them the birds of the sea. And truly when their curious nest-building methods and the diversity and brilliancy of their colors is considered, the comparison is very applicable. It occurred to me, as few of your readers know how easily these peculiarities can be observed and studied, to describe for the benefit of those interested a very pretty and simple experiment which it is possible for anyone to try.

All that is necessary for the experiment is a glass jar or fish globe to hold not less than a gallon of water, a bunch of aquatic weeds, and a pair of those interesting little fishes, the two-spined or four-spined sticklebacks. These may generally be bought at any of the dealers in goldfish and aquariums, or the sticklebacks may be found almost anywhere near the sea coast in brackish water, and are easily caught with a small ring net. The fishes are very small, seldom exceeding 3 in. in length. They should be obtained and placed in the aquarium early in the spring and should be male and female. The sexes being easily determined, as the male, especially near the breeding season, is much more brilliant in color.

The sticklebacks are nest builders, and the process by which they construct the curious little nest is very interesting to watch. They gather together small pieces of broken plants and first form a kind of platform with them among the weeds; this they continue to build until it is as large as and about the shape of a pigeon's egg. They fasten the bits of material together with a mucous secretion, which exudes from a pore in their body in the form of a fine silken thread; this they pass in and out and through the material, thus holding it in a firm, compact mass. The fish then forces his way through the nest, turning himself round and round until a hole is bored large enough to suit him. Into this he drives the female, and the eggs, which are about the size of a small pin's head, are deposited.

The male always builds the nest and takes entire charge of the eggs, and watches them with the greatest care and evident anxiety, until the little fishes appear. This watchful care is very necessary in natural surroundings, for the eggs are dainty morsels for any other stickleback or other fish that can get at them.

The little fellow is extremely pugnacious at this time, and will fight any living thing that attempts to approach the nest; even his mate is chased away if she comes near it.

If another male be introduced about this time, the actions of the owner of the nest become especially interesting. The rapidity with which he darts at and strikes his enemy is truly wonderful, as is also the remarkable manner in which he changes to every conceivable color; and during the excitement the metallic luster of his body is very beautiful.

As they are the most voracious of cannibals, the young must be removed from the vessel as soon as the eggs are hatched, or the old ones will soon begin to devour them. Some of the observers of the habits of this little fish claim that the young ones are guarded by the parent until large enough to care for themselves; but in every case where I have left them together, the young fish have always been eaten by the parents.

T. C. SHEPHERD.

The Boston Mountain Sheep.

It will be recalled that there was shown at the Boston Sportsmen's Exposition a mountain ram which was badly crippled, and that Dr. Heber Bishop announced his intention of performing upon it the operation of tenotomy. The result of the operation has just been communicated to us by Dr. Bishop, from whose letter we quote: "We were assisted by Dr. C. H. Foster, an ardent sportsman, and an orthopedic surgeon of considerable repute in Massachusetts, also by Drs. Tuttle and Marcey. We chloroformed the animal, as you know we cannot administer ether to any animal that is unable to vomit, as the ether makes them sick.

"We started in to perform the operation of 'tenotomy,' that is, cutting the tendons, in the hopes that if that was done and the leg straightened and put in splints, we could make a good job of it. We had previously gotten the splints ready, and had a padded stall for the ram, and slings to suspend him. On cutting down to the tendons we found that the trouble was due to ankylosis of the carpal bones of the forward feet (ankylosis means joining together of solid bony tissues of one or more bones, which in the natural state should be separate and independent). We found ankylosis of the scaffold, semilunar and cuneiform bones of the forward feet. These are the bones which join on to the radius, which is the bone corresponding to the one running from the elbow to the wrist in the human anatomy.

"With this condition of affairs, of course, it was impossible to produce any beneficial results, and we discontinued the operation, dressed the wound that we had made, and left him in the care of Dr. Furguson's veterinary hospital. For some reason or other that we have not determined, the ram took a chill the next morning and died very suddenly, probably from the shock of the operation, a circumstance that we did not regret very much, seeing that we could not improve his condition. Undoubtedly had the deformity been due to contracted tendons, the operation would have been a complete success, and the subsequent care of the animal would have prevented any unfavorable termination.

"The deformity was probably due to an injury received in jumping when the animal was young; ankylosis might have been produced in this way.

"HEBER BISHOP."

Camp-Fire Flickerings.

"That reminds me."

ONE day last fall I was hunting up the river at a place called Grave's Station, and as usual captured nothing but some wet feet and a hard cold. After hitching up I bade farewell to my host and set out for a long, cold drive home through the woods.

The horse was a nervous one, but quite speedy, and we were about half way home when it began to grow dark.

Suddenly a partridge, which had been feeding in the road ahead of the horse, flew up and lit on the rail fence bordering the road and stood clucking at us. I stopped the horse at once and promptly reached in the bottom for my gun, when there appeared just ahead a party of three young ladies out for a drive.

Knowing that the human voice frightens wild game, and thus not daring to speak, I held up one hand while groping in the bottom of the buggy with the other. Finally I secured the gun, which I drew carefully forth, and upon the sight of which the poor girls, already half frightened by my strange actions, thought that their time must have come, for two of them grew white and wilted, and the other, of a more daring disposition, grabbed the whip, shut her teeth with a snap, and with a crack like a dynamite firecracker came by me with a rush which simultaneously took away my breath and the rear wheel of my buggy.

This started my horse, and if I didn't have a three-ring circus with one acrobat for ten minutes, no man ever did. I never inquired the health of the girls who fainted, but between corporal injuries inflicted by being thrown through a picket fence a mile further on and certain moral and pecuniary afflictions caused by the actions of the horse, I am in a position to state that even when the kinks in my backbone are unraveled, I will nevermore shoot any game from a buggy.

FREDERICK W. FASSETT.

Game Bag and Gun.

CHICAGO AND THE WEST.

Warden wins First Round.

CHICAGO, Ill., June 3.—As duly mentioned at the time in these columns, Warden Loveday, of Chicago, last January seized seven barrels of grouse and quail in transit from H. Clay Merritt, of Kewanee, Ill., to New York market. Warden Loveday sold these birds at auction, and placed 700 plunks of the realm in his pocket by that transaction. Not content with that, he brought suit against Merritt for \$50,000. The latter retaliated by suing Warden Loveday to recover the proceeds of this confiscated game. This suit was brought before Judge Chetlain, of Chicago. Warden Loveday refused to surrender any part of the money. The case was dismissed. On May 19 a motion to reinstate the case came up and was overruled. Day before yesterday a motion to set aside the order of May 19 was offered and again overruled. This means a victory for Warden Loveday in the first trial court. Meantime he is going right along with the prosecution of the big case at Kewanee. He charges Merritt with violating the law 13,054 times. Should the latter be fined even the lowest amount for each of the offenses charges, the old offender would be forced to go out of the business in which he has grown wealthy. Warden Loveday brings his suit through State's Attorney Graves, and this time the suit will be prosecuted criminally, as it should have been in the first place, instead of making an unsuccessful attempt to seize the game.

Trapping Illinois Song Birds.

A couple of weeks ago, as a party of us were out on a bicycle ride, in the suburbs of the city, we came across a boy who was engaged in trapping the wild canaries, "yellow birds" or hemp birds, which at that place were numerous. He had a little wooden bird cage with a swinging trap door on top, and in the cage was a decoy bird, which he said he had owned and used for three years in his trapping work. At the time when we saw him he had four wild birds, which he had just taken in this trap, and these poor creatures were beating their wings and thrusting their heads out through the bars of the cage. We offered to buy all the birds of this boy, intending to set them free, but he refused to part with his decoy bird, without which his operations would not be successful. Finally suspecting our intention, he moved away, but not until he had given us the address of 4719 South Halstead street. Whether this address is correct or not I cannot say, but it is worth while for our game warden to look it up. The boy's name we could not learn. In the course of our trip about the edge of the city we saw several of these young trappers out around the groves and hedges. It seems that they have the best luck in the early hours of the morning.

At the time of noting this instance of trapping song

birds I did not know that there was a regular business made of this sort of thing, and that a regular market for these birds stimulated the trappers in their efforts. It seems, however, that the Audubon Society, of this city, has followed up investigations on this head, and has discovered a regular industry of startling proportions. Acting on the initiatory of this society, Warden Harry W. Loveday last Friday arrested Louis Grebasch, of 123 Dearborn avenue. Here he seized a great number of birds: robins, larks, yellow birds, goldfinches, bobolinks, etc. It was the intention of the holder of these birds to prepare them for millinery purposes, but Justice Underwood thwarted this commercial design by ordering the birds all set free. This was on yesterday, and to-day the city of Chicago is richer by some scores of melody-creating innocents. One of the results of this trial has been to bring to light the extent of the operations of the above dealer and others in the same business. It is to be hoped that the vocation will receive such a blow as to render it impossible. I would like to state for Warden Loveday's benefit that we saw our young bird trappers near the intersection of Garfield boulevard and Western avenue, at the southwestern edge of Chicago, and near what is known as the old Gage farm.

Baby Bears in the Blackfoot Country.

Mr. Sam Somers, of Kipp, Mont., writes me to make the following commercial proposition:

"A friend of mine," he says, "captured two cubs, silver tips, and also killed two large silver tip bears, and I thought I would drop you a line to see if you should wish to buy any of them, especially the cubs. Kindly let me know if you will want them and your price."

Just at present, I regret to say, I have about all the live stock I can take care of, although I should like very much to have a grizzly or two about the house. If Mr. Somers will write to Mr. Blackburn, superintendent of the National Zoological Gardens at Washington D. C., he may be able to find a home for his young grizzlies. They have more room for bears there than I have, and can take care of them better. I should not want to take a bear for bringing up unless I felt that I could devote the proper attention to his education, and the time of a newspaper man is necessarily limited.

These same bears, by the way, are mentioned at greater length by another friend who lives in the Blackfoot country, Mr. J. W. Schultz, also of Kipp. The latter writes concerning them:

"When the stage rolled in from St. Mary's the other day, the way bill read, in part: 'One box of bears; one sack of bear skins,' and sure enough there were two little grizzlies confined in an old beer case, and the sack contained the skin of their mother, a beautiful silver tip, but not large, as it measures but 6 ft. The little bears are blackish brown in color, and one has a ruff of white almost encircling the neck; the other has a little white at the fore point of the shoulders only. Both are males, and both are quite savage, bawling and striking at every one who comes near them. Their mother was killed, and they were captured by a prospector at the Narrows, upper St. Mary's Lake. The 30-30 Winchester did it, and the bear never knew what struck her.

"A foolish bull elk strolled down from the mountains the other day, and was grazing around near the agency stockade, when the Indians spied him and promptly exterminated the poor brute by means of the lariat and a butcher knife."

Sportsmen at the Front.

Among others of my friends who have been called out to go to the front with militia regiments are Mr. O. C. Guessaz, of San Antonio, Texas, and Mr. C. S. McChesney, of Troy, N. Y., both of whom are now in camp with their respective regiments. Mr. Guessaz goes as quartermaster, and I am sure he will take care of his family, if there are any supplies obtainable by fair means or foul. Mr. McChesney promised to write me a sheep story about his trip in Montana last winter, but I reckon I shall have to wait now until after we have annexed Spain.

Colorado without Game Law.

On May 28 Judge Harris, of Colorado Springs, Colo., handed down an opinion which knocks out the Colorado game law. Judge Harris declares this law null and void, on the ground that three subject matters are treated in the law, whereas the Colorado constitution provides that but one subject can be treated in a statute. This, then, is progress. What would the early settlers of Colorado have said if objection had been made to their hanging a horse thief on the ground that they had not got him classified correctly? The law to-day is a great and wondrous science, which should be approached with reverence.

A number of sportsmen in Colorado are inaugurating a movement to place the fish commission on a strictly non-partisan basis. They will ask for three commissioners, to be appointed from different political parties, and to serve two, four and six years respectively, without remuneration. It is stated by the Denver press that such a movement may take definite form in the framing of a bill for the Legislature.

Kansas Game.

In many Kansas counties local protective associations have been formed this season which offer rewards of \$25 or more for information leading to the conviction of any person violating the game laws. This work, if followed up in every county containing game, would double the shooting for the sportsmen of that State.

They Cry to Go.

The despatches of to-day state that when Rear-Admiral Sampson called for a dozen volunteers to sail the Merrimac in and sink her across the narrow channel of Santiago, "more than 4,000 men volunteered." They all wanted to go. This seems to be a habit in the United States army and navy. I recall that when I was out in the Yellowstone Park in the winter of 1895 Capt. Anderson was about to send a small detail of men on snowshoes down to the lower end of the park, to bring in the heads of the buffalo that had been slaughtered by a poacher who had just been captured. Late at night there

came to his quarters a private, whose name I regret to have forgotten, and who actually shed tears when he learned that he could not get a chance to join the inglorious enterprise of walking 100 miles in the winter on skis, and working like a packhorse. It wasn't much of a chance, but it was, according to the notion of this private, better than lying in barracks. They all seem to be that way, crying to go. If the young kinglet of Spain reads *FOREST AND STREAM*, as I hope he does, for it is the next best thing, I should like to advise him, in the language of Chicago, that he is up against it bad.

A Governor's Good Example.

May 28.—Gov. John R. Tanner, of Illinois, has been a busy man for the past few weeks, while the volunteer troops have been encamped at Springfield, but now that all the regiments have started for the front and have left him a little more leisure, he has taken temporary leave of the State capital and started for Idaho on a trout fishing trip of a couple of weeks or so. He goes in company with Messrs. J. W. Gates, I. L. Ellwood and John A. Drake, of this city, and the party will be joined at Cheyenne by Mr. T. S. Wood. The destination is Weiser, Idaho, whence the party will take horse for a long journey to the fork of the Snake, where they will camp. This gubernatorial example is not so unworthy of imitation, showing as it does that this country does not stop all the clocks because there is a little war on hand. Gov. Tanner says he will be back in time for all the duties of his office, and meantime will be better off for a little fishing trip.

Mongolian Pheasants.

CHICAGO, Ill., May 28.—The State pheasantry of Ohio, at Van Wert, under the charge of A. J. Hazlett, will, according to all indications, turn out at least 4,000 young pheasants this year. Some 6,000 birds are expected to hatch, and the per cent. of survival is about two-thirds.

At Centralia, Wis., Mr. Geo. N. Wood has received fifty-five eggs of ring-neck pheasants, which eggs are now under hens for hatching, and from which a nice return is hoped. It is the intention to stock the region about Centralia.

Mr. J. S. Swan, State Commissioner of Fish, Forestry and Game for Colorado, is much interested in the question of Mongolian pheasants, and has asked the gun clubs of the State to assist him with funds so that he can purchase a stock of the birds in Oregon and plant them in the proper parts of Colorado. Commissioner Swan has very satisfactory replies to his inquiries in Oregon as to stock.

Indiana Geese.

It is not common for us to hear of very many wild geese in this part of the country nowadays, but Mr. C. H. Ames, a Boston gentleman, who has been about this city for a few weeks on a visit, and who took a short snipe trip down along the old Kankakee marsh, which he knew well very many years ago, but had not seen for some time, was so lucky as to discover the roosting place of several flocks of Canada geese, which came in every night. I speak of his being lucky, but this has nothing to do with his getting a shot at the geese, for it was after the law was up on wildfowl. He tells me that these geese came in always quite late, and alighted out in the center of the marsh, where they would be most secure from molestation. Even thus they were not able to outwit the native hunters, who cared nothing for the game laws, and every now and then got a few of these big and unusual visitors. The method was to take live geese decoys and go out before night into the marsh at the place where the geese came in, here building a blind and putting out the decoys. The geese came in low and late at night, and hearing the honking of the tame decoys, would make for the spot where the canny native lay hid. In this way, Mr. Ames says, a very great many of the geese have been killed. There were several hundred that roosted on the marsh earlier in the spring.

Mr. Ames used to live out in Illinois some twenty years or more ago, and he says that he is eager to hear once more that wild and strange sound once so common to his youth, the booming of the prairie chickens in the spring. I fancy he was too late in the spring and too late in the century. He had not shot a gun for twelve years, he says, having been drawn aside from the gun to the rod in later years, yet he found he could shoot, killed his first three jacksnipe straight, and did his share in the nice bag of snipe and rail which he got in the marsh country of the Kankakee. But he did not hear any chicken boom.

Illicit Minnesota Moose Meat.

I have recently made mention of Attorney Bell, of Roseau county, Minn., the gentleman who is alleged to have bought moose meat in Minnesota and entered it at the custom house as Manitoba moose. It seems Mr. Bell has had his trial and is not yet discharged, but has ample time to meditate over what will perhaps happen to him in the sweet by and by. Mr. S. F. Fullerton, the State executive agent who got Mr. Bell into the toils, has the following to say about the case:

"I have just returned from a trip up to Roseau county, where we indicted County Attorney Bell, of Roseau county, for having moose meat in his possession, and also for giving advice to the butchers to sell it.

"Mr. Bell's attorney demurred to the indictment and Judge Ives, of Crookston, took the matter under advisement until the next term of court, which gives Mr. Bell a whole year in which to appreciate being indicted for violating the game laws. I hope there is no other county in any State in the Union like Roseau county, or at least a county that has such an attorney. A man who takes the oath of office to prosecute law-breakers and then goes out and violates the law himself, and advises others to do likewise, in my judgment, is not fit to hold a public office.

"What do the readers of *FOREST AND STREAM* think of such a man?"

Mr. Fullerton goes on to add other news, and I trust he will pardon me for taking it from his personal letter, coming as it does from so interesting a country:

"We are just distributing our fish," he says, "and have been successful beyond our fondest expectations. The

Some Love to Roam.

fish are going out in splendid shape, and I am satisfied good results will follow in the increased supply of food and game fish in the different waters of the State.

"The prospects never looked better for our chickens than they do this spring. Our feathered game have all wintered in splendid shape, and if we have no extraordinary heavy rains we will give you the best chicken shooting in Minnesota this fall that you could get in any State in the Union.

"My friend, Mr. Howard Eaton, of Medora, N. D., has made me a present of one of the finest elk heads you ever saw. When you come to Minnesota to pay us a visit you must not fail to call and see it. I should like to send *FOREST AND STREAM* a cut of it. It is almost a perfect head.

"I have not yet wet a line after fish, except one day in Wisconsin for trout, where I went with Dr. Arnold and State Land Commissioner Flynn. The lion's share, as usual, fell to the doctor's unerring skill as a trout fisher. The figures were 80, 60 and 55 nice trout, your humble servant getting the lowest number, but I managed to have as good a time as the balance."

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

A Little Story of Luck.

IRONTON, O., May 28.—I have been reading your paper so long I feel that I must continue to do so. I have lost my health and cannot go on my usual hunting trips, hence I greatly appreciate the regular weekly visits of the *FOREST AND STREAM*.

I must tell you of a little luck (as Mr. Hough puts it, "*FOREST AND STREAM* luck"). Last November I felt that I must go out for a day or two anyhow, so I made arrangements with Jean, my brother-in-law, to go out to our old camp ground. We got there all in good shape; but oh, how weak I was! Jean went ahead and I followed on as best I could. After a tedious climb I got up on top of the ridge and sat down on a fallen tree to rest. I looked long and eagerly for some sign of game, and finally saw something moving in the brush. A second glance showed it to be a wild turkey. It was only an instant more until the faithful gun came up and a dead turkey lay at my feet, and I a proud, sick man. It was

the only game sighted that afternoon. Lucky, wasn't I, to get run up on by a wild turkey in a country where the birds are scarce. The next morning we killed a few squirrels, and I had to come home. I love to read over my old *FOREST AND STREAM*, and hope you will live long and be prosperous.

JAMES DUPUY.

Wild Turkeys for California.

REDLANDS, Cal., May 25.—Since the breaking out of the war sporting matters have been on the wane. Many of our shooters have gone to apply their marksmanship to the best of all purposes, the defense of our country. Such as have been left, however, have kept the ball rolling.

Elsie Boger recently returned from the mountains with a very important capture, a large mountain lion. The lion has eaten one house cat, besides almost everything else at Boger's place.

J. M. Whittemore and J. L. Brown rode over to "The Wash" on Sunday last. They killed about thirty rabbits.

W. D. Andreas writes me from Grapeland that the trouting is poor in that section. The largest taken by him would hardly reach the 6in. limit. He says there are lots of red-horse and other suckers of fine size. He also mentions seeing the hides of three grizzlies taken by a Mr. Turk, of his place, recently.

Mr. L. G. Haight, of the big fruit company of that name, has set on foot a movement to stock the timbers of Mill Creek Cañon with wild turkeys. It is proposed to buy the birds from parties in the Middle West and liberate them in the mountains here. Can any of the readers of *FOREST AND STREAM* tell me if this has been tried before, and with what success? The matter has been left largely to me; hence any advice that the editor or any reader could give would be thankfully received.

REELFOOT.

[The birds should do well provided there is a sufficient food supply for them.]

A Good Shot in Korea.

SEATTLE, Wash.—I quote the following extract from a letter received from a friend residing near Pyengyang, Korea; are you able to recognize the species of the bird mentioned?

roe. To fol-low the stag to his slip-per-y crag, And to chase the bound-ing roe. ho! ho! ho! ho! ho! ho! ho!

go. To the dark-some glade, in the-for-est shade, Oh! mer-ri-ly forth we go. ho! ho! ho! ho! ho! ho! ho!

[illegible]

love to roam o'er the dark sea foam, Where the shrill winds whistle free; But a cho-sen band in a moun-tain land, and a

life in the woods for me. And a life in the woods for me, And a life in the woods for me.

"In the Heart of the Tiger Fields of Korea, March 14, 1898.—This is a great place for tigers, not little ones, but great big boys, the size of a cow. Since the camp (mining) opened, two men have been killed by them near our camp, and on one of the mountains near, they say, you can find them whenever you are looking for trouble. I have been interrupted by the servants asking me to shoot some big white birds, the like of which I have never seen. They have an enormous curved bill like a curlew, funny red markings on the head, and are pink and white on the body, with long legs to complete the picture. There were two of them, and my first shot with No. 2 and BBs at 75yds. only took out a few feathers. Then I went after them with my shotgun and rifle (.44) besides. I finally found one in a tree, which I could not get up to under cover, and so with a crowd of Koreans looking on, I took my first shot with a rifle at 100yds. By some terrible fluke, I hit the bird the first shot, so my reputation among the natives is made here, but it gave me the fever, and I intend to go out to-night at 6 o'clock on a hill near camp, to see if I can get a whirl at a deer."

R. M. P.

[We imagine from the description that these birds were ibises, perhaps *Pseudo tantalus rhodinopterus*, a form allied to our wood ibis (*Tantalus loculator*), of the South. The first named species is well known, having been long regarded as a sacred bird of the ancient Egyptians, though now the naked-headed *Ibis religiosa* is identified as that bird.]

New Jersey Rabbits.

At the last session of the Legislature a few farmers went to Trenton and asked for the passage of a law by which they would be permitted to trap rabbits at all times of the year. It is true that the vast majority of farmers objected to any such provision; among those who protested were the farmers of Bergen county, ninety-five per cent. of whom signed a remonstrance, but their voices were not listened to. The Legislature decided that rabbits were a nuisance and that one man who objected to them or who wanted to make money by taking them in traps should have the right to trap all the rabbits in his neighborhood no matter what might be the wishes of his neighbors. The Legislature embodied a clause permitting the trapping of rabbits in the general game bill and this bill was passed. Now the farmers who want the right to trap rabbits are demanding of Governor Voorhees that he sign the bill. So far Mr. Voorhees has

declined to do anything of the kind, and the only reason so far given is that he does not propose to take away from the persons who bought ring-necked pheasants the right to kill these birds. The State Board purchased large number of these birds both last year and this year, and it was with a view to permitting them to propagate that the Legislature enacted a law prohibiting their killing for two years. A few wealthy residents of New York who occasionally come to New Jersey to sleep have purchased ring-necked pheasants, and Mr. Voorhees thinks these men should have the right to kill these birds whenever they feel so inclined, no matter what policy might be indicated by the desires of the hundreds of people who own ring-necked pheasants. Consequently the Governor has apparently determined not to sign the general game act. In arriving at this conclusion he ran up against the few farmers who wanted to trap rabbits at all times. The Populist Senator from Hunterdon county strongly urged the Governor to sign the measure and to him the Governor has made the following reply:

"I know that the popular feeling among the farmers is very strongly in favor of that portion which permits the killing of rabbits when found damaging their fruit trees, but in order that they may have that right there seems to me to be no necessity for the enactment of a new law. All they need to have is the assurance from me that if any of the game wardens attempt to impose fines for violation of the game laws in this respect, in such instances, I, exercising my authority, would at once remit any fines so imposed. I believe if this were generally known the farmers would remain content with the law as it is."

This is going several jumps further than any Governor has ever indulged in for the purpose of arrogating power to himself. "Exercising my authority" has reference to the constitution, which gives the Governor the right to suspend the collection of fines and forfeitures. But the constitution does not give the Governor the right to remit any fines, that power being plainly vested in the Court of Pardons. The sop thrown to the farmers is ridiculous. The game laws provide imprisonment when the fines are not paid, and all the suspensions for the remission of fines would amount to nothing against a sentence of imprisonment. The Governor might, of course, bring the matter before the Court of Pardons, which meets three times a year, but before that could be done it is likely that the defendant would have paid the penalty of the law.—*Paterson (N. J.) Chronicle*.

Massachusetts Game Notes.

DANVERS, Mass., June 4.—We have had almost an incessant rain for the last month, and I am afraid it will kill off the young game birds. Last year we had the same rainy season, and partridges were very scarce.

I have heard of one good brood, and young woodcock having been seen half grown.

I have heard of but a very small number of quail whistling, and I think the winter killed off many. Saw a flock of beach birds a few days ago. Snipe were scarce with us this spring.

J. W. BABBITT

Not Discouraged.

A DUFFER of a sportsman went out partridge shooting, accompanied by an Irish keeper, who was good-natured enough to make all kinds of excuses for his patron's bad shots. At last the shooter, made reckless by ill success, perceived a covey of birds quietly feeding on the other side of a hedge, and resolved to have a slap at them on the ground. He fired, but to his mortification they all flew away untouched. "Oh, faith," cried Pat, joyfully, "Begorra, sor, you made them lave that, anyway."—*Household Words.*

Where Ducks Breed.

THE delta of the Yukon is one of the three duck-breeding grounds of the North American Continent. Millions of ducks find their way here, and hatch out their young free from molestation. For scores of miles the tundra is covered with duck eggs, and in the fall the ducks migrate to the south by millions.—*Alaska Miner.*

Sea and River Fishing.

Running Down a Bass.

THE largest bass that the writer ever caught from fresh water weighed 5lbs. and 11oz. The circumstances attending its capture were undoubtedly novel. It was caught in the Tennessee River in the spring of '95.

A party of four of us were spending the day fishing below one of the dams built out and extending nearly across the river, for the purpose of throwing the water to one side, making a boat channel over the shoals. We had but indifferent success, and only continued fishing for the reason that we desired to put in a full day of recreation. In the afternoon I had the boatman row me to a small island, or "towhead" as they are locally called, and let him return with the boat for the use of my companions.

We were using minnow bait, and I had so little expectation of success that I carried only the bait on my hook.

I cast down current from the lower point of the island, intending to set the drag on my reel and leave it to do my fishing, while I lay in the shade enjoying my pipe and the scenery. In attempting to reel off some slack I fouled the line in some way, and giving it an impatient jerk succeeded in setting the reel hard and fast in an ugly snarl.

Chiding myself in the mild language used by all anglers, I was about to begin to unravel the tangle, when by a sudden stiffening of my rod I was made aware of the fact that I was fast to something game and heavy. The strike had not attracted my attention, so unexpected was it, and so engaged had I been with the tangle. Knowing that my reel was "out of commission" I tried a strong pull in hopes of landing my fish, but saw at once that such tactics would not do.

What I was fast to was a heavy, hard fighting fish. His first rush would have carried away my tackle had I not eased the strain by wading out in the water on the shallow point ankle deep, giving him all the spring of my rod I dared. He ended the rush with a spring in the air fully 3ft. high, giving me a good view of his magnificent proportions, and the opportunity to know that I was fast to one of the finest bass it had ever been my good fortune to see, with apparently no possible chance of landing him.

I might have known unsatisfied longings before, but a clear reel and free line seemed the only things desired now to complete my earthly happiness. When the bass struck the water he started a rush up stream almost parallel with the right hand bank of the island. Desiring to enjoy his company as long as possible and unable to give him line, I started on a run up the bank in pursuit. He drew strongly away from the bank as he ran, but giving him the entire weight of my rod he held his course. There was only about 60ft. of clear bank on this side of the island, and we made the run quickly.

Reaching the end of this clear beach I came to a point where the bank was steep and thick bushes grew to the water's edge.

As I checked up the line tightened, and the bass broke water again. The taut line and a lucky pull turned him over, and with a rush he started back down the course we had run over on our trip up. Determined to stay with him as long as possible, I drew him hard toward the shore and raced him for the point.

I won by a fin, and running out on the point began a fight to turn him round the point and take him up the other side. It was a hard fight, and I expected every moment that tackle would part or rod break, but all held and at last I turned him, and up the other bank of the island we went with a 20lb. strain on my rod arm, caused by the current against his side as he ran quartering, added to his own fighting weight. The course was longer on this side—fully rooff.—but we covered it apparently as quickly as we had the shorter one on the other side.

I had no idea of ever being the happy possessor of the glorious fish I was fast to, feeling sure that my tackle could not long stand the strain of the "right about faces," or the pull around the point.

Then, did everything hold until the run was well out of the fish, the fight was not over, for I had no gaff or landing net. With feet braced and my rod tip striking the water, we fought out the turn at the end of this run

and back we went again. I beat him to the point, and standing well out gave him a strong swing and brought him round without a pause, and up the other side we raced. The sun was hot on that bare point, and by the time we ended this heat I was somewhat blown. When the line tightened up the bass sounded and sulked, and although I should not have allowed it in a fight where I was not handicapped, I gladly gave him a moment's rest, while I recovered my breath and wiped the perspiration from my eyes. When ready for the next heat I swung my rod over and drew him strongly back down the course, and fortunately for me he was headed right and off we went again. The turn was made safely at the point, and again at the upper end of the other side of the course, and again we went up and back, around the point and up and back again at a pace I felt could not last much longer on my side. And now I began to turn and swing my fish with less strain and in less fear of broken tackle. I was fast learning the art of playing a fish with all the slack in knee action; but devoutly hoped I'd never have to practice it again in such hot weather and under such a hot sun.

After about ten or twelve heats had been run I began to wonder, between gasps for breath, if it was not possible that I might devise some way of landing the bass, provided he did not entirely exhaust and pull me in before he reached the landing stage. Dripping with perspiration, panting like a lizard, and with arms all but powerless from the continued strain, I raced up and down, round and round, until, as appeared later, I had worn a well beaten path over every foot of the course traveled. I became so exhausted that I thought each round must be the last I could possibly go.

Money, honors, or fame could not have kept me going. Only what I was after, the finest bass I'd ever hooked, could have gotten the last few heats out of my tired frame.

I finally noticed that when we swung around the point we struck shoal water, and as the bass began to tire he showed a disposition to drag over this shoal and muddy the water, and as the water grew muddy he passed through it more slowly, and finally began to pause and show a disposition to sulk there. Taking advantage of this tendency, I began to shorten my runs, turning him back as soon as I could after crossing the point, and taking him back and forth over the point as often as I could, and a little closer in each time.

Finally I stood on the point swinging him back and forth across the shoal until the water was quite muddy on the point, raising my rod higher and higher each swing, until I had him close in to the shore.

Then dropping on one knee in the water's edge, I swung my rod back over my shoulder, bringing the line within reach of my hand, and taking a good, firm hold of it, just as the game old fellow tilted over on one side from exhaustion, I made one more run straight back, and before he could gather for another struggle had ignominiously dragged him 15 ft. out on the bank—and he was my fish.

LEWIS HOPKINS.

Days on the St. Lawrence.—III.

From unpublished manuscript of S. H. Hammond, author of "Wild Northern Scenes." By courtesy of Mr. Hammond Van Vechten.

WE rowed to Carlton Island after the shower had passed away, and it was something to glory in, the refreshing coolness, the balmy breath of the wind, that swept over the water in the afternoon. We anchored outside the little bay fronting the "old fort" opposite the lower point, in the south channel. The bass congregate about the ledges some twenty rods from the shore, where the water suddenly deepens from 15 to 30 or 60 ft., and a busy time we had with them for an hour or more. It will not do, my excellent friend, to lift a 4 or 5 lb. bass bodily from the water into your boat while lying at anchor. Much less can you safely calculate upon lifting a 10 lb. pickerel right up into the air, trusting to the strength of hook, line and rod for the issue. Such feats have been accomplished, but they require a degree of experience, a nicety of calculation, which your neophyte can scarcely be presumed to possess, and it is asking too much, in a common way, of your tackle to stand such a strain. If you start your bass or pickerel right, and can make him perform a sort of parabolic curve, as the mathematicians say, one end of which terminates in your boat, all well—but if it falls short, or goes beyond that, your fish is certainly gone, and with him in all probability your hook and a considerable portion of your line. Better play him with your reel a little, give him head, and use a landing net. There is plenty of time and room on the St. Lawrence. There is no need of being in a hurry. Better do things in a legitimate and scientific way than reduce the noble art of angling to a mere contest of animal strength. Besides, unpleasant accidents sometimes occur. On this subject I can speak feelingly, and from experience. The first bass I hooked this afternoon, while riding at anchor, was a 5-pounder. I started him beautifully, lifted him clear of the water, on a curve that I calculated would land him at my feet. But I was never more mistaken in my life. The fish came like a catapult square against my head, jamming my hat down over my eyes, and laying me over backward from the seat into the bottom of the boat. The bass glanced off into the water on the other side, and the last I saw of him he was going toward Lake Ontario with my hook in his jaw, and some dozen feet of my line attached. If he meets with no accident, and keeps up the steam with the same pressure as when he started, he will be at Lewiston by 12 o'clock to-night, making the whole distance in about seven hours. So you will perceive that I lost my fish, my hook and a portion of my line by this vulgar mode of proceeding, besides getting a severe "punch in the head" and being laughed at into the bargain.

We had fine sport with the bass—caught all we desired, and ceased only because—but let me tell you how it was. I had put on a fresh minnow, lively as a cricket, removed the buoy and sinker from the line, and let it float away down the current. "There," said I, "one more cast for a 10 lb. pickerel or a 20 lb. muscalunge." Well, I sat patiently, unreeling slowly, as the current drifted the bait down stream, maybe 150 ft. I noticed after a little that

the line seemed to be moving across the channel toward the opposite shore, as if something bound in that direction had it in tow. So I reeled in until the line became taut, when I found there was something mighty strong and obstinate, though not very active, at the other end. I reeled in, but it was simply a dead pull, a holding back like a mule on the one hand, and a mere effort of strength on the other. There was skiving here and there, no running this way and that, but simply and only resistance, inertia, and unwillingness to move my way. "Why," said I, "I am fast to a sunken log that is loose in the water, and I am towing it this way," and I kept on reeling deliberately, expecting every moment that my line would part. After a while I got sight of a white thing away off in the clear water, wriggling and twisting like a gigantic angleworm, tying itself into a hard knot, rolling together into great kinks, and then unwinding again, coming sometimes one end foremost and sometimes the other, and sometimes in a coil, in a way that showed it to be anything but dead. "Boatman!" I exclaimed, "look there! I've hooked an alligator, or an anaconda, or a boa-constrictor, or the sea serpent, or a brother to the silver lake snake, or the dev—" "A monstrous eel, by thunder!" shouted the boatman. "My eye!" he exclaimed, "but he's a whopper! Handle him carefully! Tow him this way! Gently now!—There!—Here she goes!"—and he lifted an eel into the boat that, on my veracity as a fisherman, was less than 50 ft. long. Truly he was a patriarch of his tribe. But I am against eels in a general way. I do not like eels. They are too near akin to snakes, and they go wriggling and twisting, and writhing and squirming about in a way not at all like the gymnastics, the free ground and lofty tumbling of trout or bass. This was the first and only eel I had ever taken, and by my consent it shall be the last. "Take the hook from his jaw and toss him overboard," said I. "Why," replied the boatman, "he's among the best fish of the St. Lawrence." "Pshaw!" I exclaimed, "eat such an animal as that! A rattlesnake might make a passable meal for a hungry man, but such a wriggling, slimy serpent as that! Get out!" I shouted, as he writhed and twisted himself my way. "Get out, you vile beast! Heave him overboard! Cut his acquaintance! Let him slide, as Banks said of the Union," and the boatman, making a lever of his oar, hove him into the river. "There," said I, "having come down from muscalunge and bass to the level of eels, we had better hoist anchor and go home." So we took in the anchor and headed our little craft toward Cape Vincent.

I said you have no such thing as sunrise in the city, and I now say you have no sunset. True, the sun even of the city goes down out of the sky and darkness follows, but it is a simple change from the glare and blaze and heat of the burning sunlight to the stagnant, somber, smothered swelter of a cheerless night. No brightness and glory light up the glowing west. No floating clouds radiant with silver, rimmed and circled with gold, hover above the horizon. No minarets and towers of light flash up from beyond the old woods, the hills, or the shoreless waters. No mantle of woven sunbeams lingers on the mountain peaks, in beautiful contrast with the gathering twilight of the valleys. No bright stars steal silently out into the sky, to sparkle and glow through all the night, holding their quiet watch during the still hours. No pleasant breeze comes dancing over the fields, bearing the odors of flowers, the freshness of the forest, and the fragrance of new-mown hay. You have day and night, sunlight and darkness, but the glorious sunrise and the more glorious sunset you do not have.

Angling in Canada.

QUEBEC, June 4.—Mr. Waggoner, of the New York Sun; Mr. J. W. Burdick, of Albany, general passenger agent of the Delaware and Hudson Railway, and Dr. W. H. Drummond, of Montreal, author of "The Habitant," have returned from a delightful outing among the trout lakes of the upper St. Maurice region, and report splendid sport, including a number of 4 and 5 lb. fish. Mr. W. H. Parker, of Lac a la Pêche, was in town to-day from the St. Maurice on his way to Lake St. John for ouananiche, where he expects to get about the earliest fishing of the year in the Grande Décharge. As a rule this fishing only opens about the 12th or 15th of June, but as the season is fully ten days earlier than usual all over Canada, there is little doubt that the fresh-water salmon in the Discharge is now on the lookout for insect food upon the surface of the water. The water of the lake has fallen considerably, and the fish have left the mouths of the Ouitchouan and Metabetchouan rivers, where, up to about a week ago, very large catches have been made ever since the ice left the surface of the lake. Mr. F. G. Gregory, of Syracuse, accompanied by Messrs. T. D. Wilken, A. T. Brown and L. C. Smith, returned from a most successful fishing expedition to the Triton Tract on Wednesday night. They spent a delightful holiday at Lac des Passes, where Mr. Gregory has a private camp. Their fly-fishing on this beautiful lake yielded them trout in abundance up to between 4 and 5 lbs. apiece. Mr. A. N. Cheney fished there with them for a few days, accompanied by his party of friends, Mr. Goddard, Mr. Hewitt and Mr. Walter Witherbee. Then they visited Lake Batiscan. The 9 lb. trout caught in this lake a year ago has not yet been duplicated there this season, but the party took some that were rather over 6 lbs. in weight, and a number of fish up to 4 lbs. took the fly greedily in the Lightning River, the outlet of Batiscan Lake, and in the lower waters of the Moise. The upper waters of this river, where Mr. Cheney had such a phenomenal take last autumn, were not visited by him on this trip. Mr. Cheney returned here last night, and left a few hours afterward for the Restigouche, accompanied by Mr. Burdick. They will fish for salmon at Runnymede.

The annual meeting of the Triton Club was held in the Chateau Frontenac here on Wednesday night, when Mr. Gregory, of Syracuse, was re-elected president. The whole of the membership shares of this club—150 in number—have now been taken up. Dr. Porter and friends returned last night from Kiskisink, delighted with the sport yielded so far this season upon their club limits. They found medium size fish quite plentiful.

Mr. Foland, of Philadelphia; Andrew Allan and Chas.

Hope, of Montreal, and Veasey Boswell and Edson Fitch, of Quebec, left on Thursday night on board the steamer Lord Stanley for their salmon pools on the Moise. This valuable property has been divided into shares of \$5,000 each. The Trinity River has been leased for this season by Mr. Morton Paton, of New York.

A splendid specimen of *fontinalis* weighing 5¾ lbs., and caught in the Montmorency River, was brought to town a few days ago. Dr. Ievers has been re-elected president. W. W. Henry, U. S. Consul, has been re-elected president of the Montmorency Fish and Game Club, and president of the St. Bernard Club.

Dr. Webb and Mr. Vanderbilt passed through Levis, opposite Quebec, this morning, en route for the Restigouche Salmon Club's headquarters at Metapedia. Mr. Harry Hollins and other friends preceded them by a day or two, and within the next few days all the salmon fishermen are expected to be upon their waters. The run of salmon on the north shore is already quite large, and the prospects are that the season will be a much better one than last year's.

Several members of the St. Marguerite Salmon Club, including Mr. John P. Elton, of Waterbury, Conn., will go down to their pools next week.

E. T. D. CHAMBERS.

Several Kinds of Men in a Boat.

A SAGE once wisely remarked that to know a man you must fish with him out of the same boat. And no doubt many can look back upon fishing jaunts and safely say that there is much truth in the wise man's statement. Fishing, like politics, sometimes makes strange bed-fellows.

Take the fisherman, for instance, who hurries not to turn out at daylight, but calmly sleeps on and awakes at his usual hour. He steps outside his cabin, breathes in the ozone already tempered by the morning sun, gazes with glowing countenance upon the rippling surface of the lake, and scans the wood-crested line of shore, finding pleasure and natural beauty everywhere and in everything. He expatiates upon the loveliness of all nature, and quaffs the air and absorbs the scenery as if imbibing so much champagne. His breakfast finished, he smokes his cigar and enjoys it like one to whom the weed has long been denied. He takes his seat in the boat, after first methodically placing his rod and impedimenta safely under the seat, and we are swiftly propelled through the dancing water by the brawny arms of the oarsman.

The cry of a distant loon awakens a flood of memories in our friend, of former trips on Maine and Adirondack waters. The same old mocking, maniacal laugh that repeatedly has broken the forest stillness of the placid, moonlit lakes in times that are past.

Here comes a school of hurrying, scurrying minnows, chased by a hungry bass. They dart here and there, to the right and left and up in the air, anywhere out of the reach of the voracious fish, whose fin cuts the water like a knife as he snaps them up under full headway. This sets our friend unconsciously fumbling with his fly-book.

As we bowl along he discourses upon the habits of the bass and trout, compares their methods of striking and fighting, and gives what might be termed a lucid dissertation on game fish and their habits.

We are nearing the chosen ground and preparation for casting begins. Before our friend settles upon his cast of flies he gives calm and weighty consideration as to the wind, brightness of the day, state of the water, etc., and only selects his flies when he comes to the conclusion as to their perfect adaptation to all the circumstances and surroundings. He is in no hurry, although the surface at no great distance from the boat shows good-sized ripples now and then where a bass has come to the surface to suck down a struggling fly.

His deliberateness would prove exasperating to an impetuous novice were he to witness such methods. The leader, after patiently soaking, he tests again and again, examines the knots critically, sees that there is no give to the jointure made by gut and line, carefully smooths out his flies, and then with a practical turn of his wrist and sweep of his forearm sends the flies floating out through the crisp air to alight temptingly upon the water. A rise, a strike and a miss. He recovers his line, but does not cast again hurriedly over the spot where the fish went down. No. He takes the line in his left hand, carefully examines the flies as he dries them one by one on the flannel folds of his coat until they are fluffy and natural looking once more.

Again he casts with the same method and deliberation, and this time sets the hook. From the start the fish seems to have it all his own way, so slight and delicate is the strain that is put upon him. The bass dashes here and there, to the right and to the left, now deep down toward the bottom in search of some friendly snag or jutting rock, now again up into the air glistening in the morning sun like a miniature silvery meteor. And all this time our angler quietly and deliberately meets every turn of the gamy fish, passing comments on every move that the fish makes, and his reasons for making it as well.

It is a bass that will go but perhaps a little over 2 lbs., but he is handling it on a 50z. rod, and with such care and delicacy that a full quarter of an hour goes before he brings it to net. And as he holds it up to view he notes its beautiful color, markings and outlines, and calls attention to the difference between this small-mouthed bass and his cousin, the lazy, big-mouthed variety, all of which to the novice seems out of place and not to be classed as legitimate fishing. A waste of time, with the fish underlying the water around the boat and hungry for the flies. Why does he not loosen the fly from its jaw, set it on the string and again get down to business? But he counts this as being a great part of the fishing; in fact, with him the actual playing and landing of the fish are mere incidents of and by no means all of the fishing. In due course he dislodges the fly, strings the fish, lights a fresh cigar, scans the scenery as he complacently rings the air with smoke, and catechises the boatman on the varying depths of the lake, nature of the bottom, spring holes, etc., and when he thinks his flies are sufficiently sun-dried he casts again; and so it goes.

When dinner time comes, as the guide prepares the

fish for the pan, our fisherman, industrious and capable, soon has a model camp-fire going and the coffee kettle steaming. To see him enjoying that dinner of fried fish and hear him praising it above the efforts of a \$10,000 chef, is something to be experienced to be appreciated.

The dinner over he lends a ready hand in clearing up the debris, lights his cigar and saunters through the shady woods, at peace with all the world. He finds pleasure in and imparts information concerning every creeping plant and wild flower.

A ground sparrow flies up in the cool, shady distance. He marks the spot, a tiny mound, walks toward it and stooping down from under an overhanging clod of earth, discloses the nest and eggs of the fleeing bird, meanwhile reading a short lecture on sparrow ornithology.

The moss-covered rocks and trees afford him a subject to which he does full justice. And so the sultry hours of the day pass swiftly away in the cool restful woods with our companion quietly discoursing in a sort of soliloquy, imparting information and giving pleasure at every step.

At the suggestion of the boatman we try the bass again, as the afternoon fishing should now be at its best. The morning's experience is duplicated and the setting sun sees us quietly drifting toward home, casting as we go, and now and then landing a bass.

Our friend seems more interested in the gorgeous sunset, its resulting lights and shades along the shore, and the cloud effects upon the waters, than he does in his rod and line. The occasional leap of a bass from out the molten surface, scattering a golden spray as he falls back into the water, brings out exclamations of delight. As the shades of evening begin to fall and the call of the whip-poor-will is heard overhead, we reach the landing. Our trip is over. "Not a very big string," says our companion, as the struggling bass are lifted from the water. But what a delightful, a perfect day we have had. The fishing could not have been better to the reasonable man, or the surroundings more pleasant. He sums it up when he says that all the fun in fishing is not solely in the catching of the fish.

And now comes another fisherman, one of a party of four off for a Decoration Day fish.

The first preparation he makes toward the trip is the purchase of a fair-sized pocket-flask and an extra quart bottle of liquid bait, the others doing likewise. Rods and lines are looked after and deficiencies replenished, of course; but then they are mere necessary evils for the trip.

The longed-for afternoon of May 29 arrives and the train carries them along to the far-away lake. Securing seats in the smoker, before the first card is dealt number one insists that the crowd shall sample his brand of whisky, and around goes the bottle. It is a matter of two or three hours' ride before their destination is reached, and because of frequent passings of the various bottles after, between and during the deals, the boys are now flushed and somewhat hilarious. But they are out for a good time, and Decoration Day comes but once a year.

Arrived at their sleeping quarters out come the cards and the game goes on and keeps going until the crow of the cock, accompanied by the first rays of light in the far east, warn them of the coming day.

In due course they have eaten an unrelished and hurried breakfast, and pairing off a couple of oarsmen pilot them out on the lake. I do not get out upon the water until later, but when my guide has rowed me near enough I realize that they are well located, and that the bass are striking. The bleared eyes and bedraggled looks of the fishermen tell their own story. Everything seems to go wrong, and the oarsmen are in constant demand undoing back lashings, knots, snarls and proving themselves good Samaritans in a hundred ways to the befuddled boys. The fish are voracious and quickly take their proffered minnows, and at each strike the fun begins. A fish at one end of the line and a fool at the other was never better illustrated. The way those bass were yanked and hauled and the contortions through which the rods were put was a sight to see. And half the time they did not seem to know whether they were fast to a fish or to the boat's keel.

Under the warming influence of the sun first one and then another got drowsy, and it was not long before they were all lying in the bottom of the boats sound asleep. The oarsmen rowed them into a shady nook along the shore and they slept on.

And when the evening train carried these chaps home they had but few fish to show. But they all voted that they had had a roaring good time and never enjoyed a fishing trip more in their lives.

Then there is the fisherman who lives in a very halo of profanity. He is an uncomfortable companion to have in a boat. He curses his rod, his line, his reel, his hooks, his flies and even curses the bait. He curses his luck, he curses the fish if he makes a sturdy fight, and yet curses him if he does not fight. He curses the fish when he strikes him and again when he breaks loose. He curses the sun because it's too hot, and curses because there's either too much wind or no wind at all. Like the Abbot in Ingoldsby:

He cursed him with flies, he cursed him with bait;
From the scales on his tail to the crown of his pate;
He cursed him in sleeping, that every night
He should dream of a muscalonge and wake in a fright;
He cursed him in eating, he cursed him in drinking,
He cursed him in striking, in biting, in gorging;
He cursed him in running, in jumping, in sulking;
He cursed him in swimming, in diving, in sounding;
He cursed him in living, he cursed him in dying!
Never was heard such a terrible curse!
But what gave rise to little surprise,
Not a fish seemed one penny the worse!

This fellow in a boat even for a day becomes tiresome, in fact decidedly unpleasant.

Again there is the nervous, impatient angler. Five minutes of unproductive casting over a likely pool, without an attempt to change his flies, decides him to move

on "where there are some fish." His constant order to the oarsman is to move the boat to the next pool.

He finds fault with everything, and every time he loses a fish through careless or unskillful handling he blames his rod, line, hooks, in fact everything but himself.

Nothing suits him and he succeeds in not only making himself miserable, but those in the boat with him as well.

And here is our kind friend who prides himself on the smallness of his fishing paraphernalia and ridicules the "junk" a fisherman takes into the boat with him. What's the use of it? A rod, line, reel and hook are all a fellow wants. He breaks his leader before he has been fishing fifteen minutes, and levies on your supply, which have cost you a dollar each. He next snags and loses his hook and again calls on you. He strikes a good, heavy fish and in no uncertain tones calls for your landing net. The string by which he secures his fish to the side of the boat comes out of your "junk." He thinks a spoon for a change would prove a killer, and selects one out of your stock. Finally he breaks his rod clean off at the second joint. It's an unsplieable break and without qualm or hesitancy he borrows your pet reserve rod.

The air-cushion seat, out of which you take so much comfort, and at which he laughed in the early morn as an effeminate piece of rubbish and truck, he borrows of you early in the afternoon "just to try it and see how it goes," and the consequent change and relief from the hard board seat is so pleasant that it soothes and quiets his memory into forgetfulness, and you find yourself doubling up your jacket on your seat to reduce the hardness until such times as his memory may return and get into working order.

Then there is our wise and knowing friend who knows more about the lake and stream in five minutes than is known to our guide, who has paddled in it almost from the hour of his birth.

He will tell the guide where to go to get on sandy bottom, he will mark out the most likely place for a spring hole where the trout should be, he'll point to the distant shore and offhand select the most likely spot to camp and dine. He even essays to correct the guide's style of rowing, and succeeds generally in creating no end of argument and ruffling the temper of the guide to its limit.

Then there is the expert who essays to be a critic, and while doing little himself in the way of correct or scientific fishing, criticises your every move and action. When Dame Fortune proves fickle and you lose the fish you have been playing, he then, like Mack Tapley, "comes out strong." Many are the good and valid reasons given you for the mishap and you are informed of them with a positiveness that can leave no doubt as to where the fault rests. Our critical friend quickly tries one's patience and temper sadly, and soon tempts a fellow to invite him to go to Hades, and you fall into temptation—and then comparative quiet reigns for the rest of the day. Nor yet are they all included in the above, in the experience of my readers undoubtedly "there are others."

CHARLES CRISTADORO.

Boston and Maine.

BOSTON, June 3.—H. L. Buss, of the Chamber of Commerce, is at home again from a very enjoyable and fairly successful fishing trip to the St. Croix waters in Maine. In the party were also H. L. Pike and daughter, of Medford, and D. J. Puffer, wife and daughter, of Boston. They had pretty good fishing, landing a good many trout and several salmon. Mr. Buss is much pleased with landlocked salmon fishing, though, as is almost always the case, he lost his biggest salmon, his majesty having leaped entirely out of the water several times, and at last succeeded in breaking the hook. Mr. Frank Wise, also of the Chamber of Commerce, returned Tuesday from his fishing trip to Nova Scotia. He was accompanied by Mr. Charlie Boss, of Connecticut. These gentlemen have camped and fished together for several seasons. This time they went to Tusket River. Their route was from Boston to Yarmouth by boat, thence to Brazil Station by train, and thence to Tusket River, at the point they proposed to fish, some twelve miles by buckboard. All of the buckboard road is hard and smooth, except a mile or two, and the ride a very enjoyable one. They took all the trout they wanted, finding them to come to the fly freely. In swift water the trout were particularly lively; ranging in weight from $\frac{1}{4}$ to $1\frac{1}{2}$ lbs. They "camped out" for several nights, for the pleasure of it, the weather being fine, though rather warm.

The success of the Allerton Lodge fishing party, Lake Mooselucmagantic, has been something remarkable, and adds another triumph to the Rangeley system as king of the trout waters of the world. Mooselucmagantic Lake is certainly the leader of that system this year in the magnitude of the catches recorded. The Allerton Lodge party took in all 183 fish, the united weight of which was 354 lbs. This was done in eight days' fishing by a party of eight sportsmen. All the party claim that they did not fish very hard, though spending some time on the water. No very large fish were taken, though several weighed from $3\frac{1}{2}$ to $5\frac{1}{2}$ lbs. The fish were all trout with the exception of four salmon; one of $4\frac{1}{2}$ lbs. and the others of 2 and $2\frac{1}{2}$ lbs. This year the party included Col. E. B. Haskell, Col. H. T. Rockwell, John E. Hall, H. A. Priest, D. F. Appel, G. W. Russel, John A. Lowell and F. L. Felton. Messrs. Haskell, Rockwell, Priest and Lowell have visited the same location for several years, but have rarely found the fishing quite equal to this year. Mr. Haskell, who has been visiting the Rangeleys annually for many years, believes that the fishermen are now reaping the results of the many acres of new feeding grounds the flowage of the lakes has made for the trout. Others claim that, under restocking, the fishing in the Rangeley system is annually growing better. It is certain that more fishermen are visiting these lakes, and that the strings last year were large, and this year larger.

Mr. and Mrs. B. D. Sweet, of Boston, are at the Rangeleys for a few weeks. Mrs. Sweet has had the

good fortune to land a salmon weighing $8\frac{1}{2}$ lbs.—a good one for those waters. Late reports say that the salmon fishing is better in Rangeley Lake, and that the promises are as good as last year, when a great many were taken.

Mr. W. F. Sturtevant, of Springfield, Mass., who has been fishing the Rangeley waters for some days, as has been his custom for many seasons, had a very novel experience at Rangeley Lake the other day. While trolling for a 15 lb. salmon, with his guide, Will Huntoon, they sighted a deer swimming across the lake. Giving chase they soon overtook it, when the guide, seizing it by the ears, soon had it in the boat. Pulling for camp with their prize, they landed him on the grounds of the Rangeley Lake House, where all the guests, as well as employees, had a good look at the beautiful creature. When all had admired his catch to their satisfaction, Mr. Sturtevant told the guide to let him go. With a few most graceful bounds the deer was quickly in the grove near the hotel.

June 6.—Fishing at Moosehead is reported to be holding out better than ever. The rainy weather is believed to be favorable, though not so pleasing to the fishermen. Mr. Frank S. Harrison returned Friday from a month of excellent fishing at Moosehead. He was located a part of the time at Capen's Deer Island. He brought out two beautiful fish, which he showed in Appleton & Bassett's window Saturday. The pair, weighing 4 lbs. each, were a brook trout and a landlocked salmon. The trout was a good one for Moosehead, and the salmon shows that the restocking done there is bearing fruit. Mr. Harrison also took a lake trout of 20 lbs. weight.

Mr. Thomas Baxter, one of the "high divers" at the recent Boston Sportsmen's Exhibition, is a great lover of the trout rod. He has started for Machias waters with his old guide, Scott. He will camp out most of the time, visiting a number of trout waters in the wilderness.

Mr. A. S. Woodworth, with Mr. Kidder and a couple of New York friends, is absent at the Rangeleys for his spring fishing trip. They will visit Billy Soule's and other noted points. Mr. and Mrs. L. O. Crane have left Round Mountain Lake for the Upper Dam, where they hope to take one of those big trout for which that locality is noted. At Round Mountain they had all the fly-fishing for small trout they could ask for. Mr. Crane speaks in the highest terms of the fly-fishing at that point, and says that it is improving.

Mr. W. C. Hemmenway reports some good brook fishing at Nashua, N. H. He went out the other day, with his little boy of eight years, to a brook not over two miles from the city, and took twenty-seven trout, nineteen of which he returned to the water again. The boy caught two, at which he was greatly delighted. Mr. Hemmenway says that the brooks in that section afford particularly good fishing this year, the continued rains having kept the water high and given the trout a chance to run up from the larger waters. He believes that he could take a larger string by fishing some of the streams through the meadows in that vicinity.

Mr. E. C. Stevens is back from his first pickerel fishing trip to Lake Dunmore, Salisbury, Vt., this season. He was accompanied by Mr. N. M. Markwell and a friend from New York. They found the water high and the weather cold, hence their success was not great, though they took two pickerel of 8 and $8\frac{1}{2}$ lbs. weight, and a lake trout of 4 lbs. It seems that Lake Dunmore is particularly noted for the large pickerel it affords.

Continued good reports of the fishing at the Rangeleys are coming. At the Upper Dam fly-fishing is beginning in good earnest. T. B. Stewart, there for his fifteenth season, has taken several good ones on the fly. Mr. Charles Davis, of New York, has taken on the fly a trout of 4 lbs. Mr. Freeland Howe, of Norway, Me., has just taken a fine salmon of 6 lbs. Warren Page, of Salem, Mass., took a string of trout the other day weighing respectively $7\frac{1}{2}$, 4 and 3 lbs., with several of 2 lbs. weight. The catch of Mr. Phinney, already noted in the FOREST AND STREAM, in part, proves to have been the most remarkable on record at the Upper Dam. Mr. Phinney's first catch was three trout of 7, $6\frac{1}{2}$ and $5\frac{1}{2}$ lbs. weight. The next day Messrs. Phinney and Gormley took four trout weighing $7\frac{1}{4}$, 6, 6 and 4 lbs. Mr. A. E. Lincoln, of Boston, has taken two trout of $7\frac{1}{4}$ and $5\frac{1}{4}$ lbs. Prof. J. F. Moody took a trout of 4 lbs., one of 3 lbs. and one of $2\frac{1}{2}$ lbs., and fishing from the same boat Miss Madie Moody took one of 3 lbs., all in a few hours' fishing. The next day he made a record of twenty-seven trout, the largest $2\frac{1}{2}$ lbs.; returning more than a quarter of the number to the water.

At Rangeley Lake the salmon fishing is reported good. Mr. W. F. Sturtevant has taken a 9 lb. salmon, and Mrs. Sturtevant one of 8 lbs. Mrs. Sturtevant has also recently taken a trout of $5\frac{1}{2}$ lbs. Mr. E. C. Astby has taken two salmon of $7\frac{1}{2}$ and $4\frac{1}{2}$ lbs. weight; G. C. Graves, a $4\frac{1}{2}$ lb. salmon; F. A. Field, a $5\frac{1}{2}$ lb. salmon; O. I. Wellman, two $4\frac{1}{2}$ lb. salmon; A. S. Woodworth, a $6\frac{1}{2}$ lb. and a 3 lb. trout; J. B. Smith, a 7 lb. salmon and a $4\frac{1}{2}$ lb. trout; W. C. Miller, a 7 lb. salmon; B. D. Sweet, a $4\frac{1}{2}$ lb. salmon.

At Newfound Lake the fishing has continued good, though the season is nearly over. Walter Merrill, of East Hebron, has taken the largest trout of the week, weighing 12 lbs. He is closely followed by J. W. Slaven, of Boston, with one of $11\frac{1}{4}$ lbs. Charles E. Rounds, of Bristol, has landed a trout of 5 lbs. and one of 4 lbs. Elwyn Robie has taken one of 5 lbs. A party of Massachusetts anglers took home eight good fish Thursday. John F. Maynard and B. G. Coburn, a couple of local anglers of Plymouth, took over 100 trout in one day from Orange Hill Brook the other day. The brook is in Hebron.

SPECIAL.

"Forest and Stream" Information Bureau.

WE shall be glad to supply information relative to desirable shooting and fishing resorts; and readers of FOREST AND STREAM may consider themselves always at liberty to apply to us for such aid as we can give in directing to regions worth visiting.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

CHICAGO AND THE WEST.

Minnesota Fish Laws.

June 4.—A little bit of official correspondence has just come under my notice, in which the State Fish and Game Commission of Minnesota goes after Mr. H. G. McCartney, proprietor of Kabekona Camp, on Woman Lake, Minn. President Timberlake, of the Minnesota Commission, addresses Mr. McCartney the following letter, which at least shows that the commission is good and alive to what is going on, though perhaps there may be some misapprehension of unintentional nature in some regards:

"St. Paul, Minn., June 2.—H. G. McCartney, Esq., 125 Michigan Avenue, Chicago, Ill.—Dear Sir: The attention of this commission has been called to the fishing point near Leech Lake, in Cass county in this State, known as 'Kabekona Camp,' where it is said little attention is paid to the laws of this State regulating the taking of fish. We are informed that fish are taken there by the different guests of this camp in large quantities, and very few of them are utilized; further, that the catch of different parties is away in excess of that allowed by law each day. It is more than probable that these violations of the law are through ignorance on the part of the gentlemen who use this privilege. I have before me a prospectus of this place wherein is printed as an evidence of the remarkably good fishing there, that two gentlemen from New York and Boston caught 313 bass in one day. The law of this State permits only the taking of fifty fish each day by one person. Furthermore, we are informed that attempts have been made to ship fish out of the State from this point. This is also contrary to the law.

"I hand you herewith a copy of the game and fish laws of this State, and would suggest that in order to save trouble or annoyance to the guests of this camp, that information in regard to the laws be generally distributed. Yours very truly,

W. S. TIMBERLAKE, Pres't."

To this letter Mr. McCartney has made the following reply:

"Chicago, June 4.—Mr. W. S. Timberlake, President Game and Fish Commission, St. Paul, Minn.—Dear Sir: Your letter of the 2d inst. in regard to Kabekona Camp just received. In answer I wish first to show my position in this matter. I have been, and am now, one of the strongest believers of game and fish protection. At the time I opened this place I had cards printed giving the game and fish law as given in book enclosed with your letter to me. Also a personal request to all guests to return to the water all fish that they could not use, or that could not be used by the camp. This card you will find posted on the door of every room at the camp. Now, as to the result: With a list of 125 visitors last year, I had no trouble to enforce this rule, and if I had found any one who did not wish to respect my wishes in this matter, he would have been given to understand that his patronage was not wanted in the future. Take the catch of Mr. Raisbeck and Mr. Hefron, which you mention as having seen in my folder. Out of the 313 bass caught, only six were killed, and they were not wasted, for they were used at the camp. You very much mistake these gentlemen if you for a moment believe they would be guilty of such a wanton destruction of fish. Mr. W. W. Leonard, 1102 Lumber Exchange Building, Minneapolis, who knows both these gentlemen, knows the above to be the facts and will gladly say so if you call to see him or write him. Then again, I will enclose one of my folders, and mark note at the end of page 3. Perhaps you have overlooked it, or perhaps you did not believe the man who wrote it. Should the latter be the case, you are much mistaken. If you will stop to think that a fishing resort without fish would be a failure, you can at once see that it is to our interest to keep the fishing as good as it is now, and for as long a time as possible.

"As to shipping fish out of the State, your law allows fifty fish to be taken by any one person, if he has caught them for his own use and accompanies them. This has been the only way fish have been sent, and the only way they will be sent from this camp. You will notice in Section 29 that the law says 'the killing' of more than fifty fish in one day by one person. I admit the catching of more than fifty fish by guests, but not the killing, and as long as I can control this camp no such thing will be permitted, and if done, will not be repeated the second time by the same person. Your information of this camp and its policy has been furnished you by some one who either does not know the facts, or knowing them mistakes them, wishing in this way to make trouble.

"Hoping this will place myself and the Kabekona Camp in the right with you, and that I may hear from you again in this matter, I remain yours truly,

H. G. McCARTNEY."

I do not know what construction the Minnesota Commission intends to place upon the term "taking" of fish, but I do know, and I am sure that Mr. Timberlake will be glad to hear it, that Mr. McCartney always has and always will live up to what the commission decides is the law. When Mr. McCartney first started his camp out in Minnesota, it was largely for his own personal pleasure, he being free of need to make it earn expenses. He came into the FOREST AND STREAM office, and we both agreed upon the wisdom of establishing the custom among the guests of returning to the water all the fish not capable of use at the camp or legitimate carriage to the home of the angler. This was spoken of as the only sportsmanlike and the only wise thing to do, for the remembrance of the wilful waste along the early Wisconsin muscallunge waters was ever present. There is not and never will be any fish "graveyard" around Kabekona Camp, and the chief interest taken in that resort lies in the fact that the distinct effort at that place, far beyond the average custom in such places, has been to live up to the law, and not to ask for customers who wish to break the law. Last summer one of the guests killed two fawns illegally, and he received such a talking to about it that he will accept the invitation never to come there again. This season I know that Mr. McCartney has told more than one intending guest here not to carry a rifle into camp at all, as he does not want any shooting or preparations for shooting. You can not get up a

secret summer deer shining party at that camp as you can at many others in the pine wood country. Mr. McCartney freely admits the number of fish taken, but does not think the fishing was thus injured, since probably 90 per cent. of the fish were returned and are alive to-day. All this is of interest in that it goes to add a word of commendation to an enterprise which has been conceived on sportsmanlike lines, and I do not think there will ever be any quarrel between the owner of this place and the Minnesota State Commission, because they both want to observe the law and preserve the fish and game, and this without reservation or pretense. I personally know Mr. McCartney is all right on this matter, and will guarantee him to the commission. If the laws are broken after he knows the ruling of the law, it will never be by his connivance or consent. I have rather taken interest in this camp because it is run most strictly in this regard. The hogs and the destroyers are not wanted there, and are asked not to come again. Under the care of the State Commission and of the owner of the resort, I hope that it will be many a year before the great angling resources in this last great muscallunge country are exhausted. It is to be hoped that every resort, in Minnesota or Wisconsin, will follow the example set at Kabekona, and have the surplus fish returned to the water and never wasted. If the commission sets the limit for "taking" at fifty fish, the limit of fifty fish will be tacked on the Kabekona doors and Kabekona creed. Mr. McCartney thinks that a fish is not "taken" when it is left alive in the water.

Wisconsin Bass are Biting.

Bass fishing in the lakes of the Oconomowoc group, Wis., has been unusually good for the past week or more. Dr. Morgan, with his friends, E. Holstein and Wallace Kellogg, on May 29 landed a pike weighing 26lbs. Mr. W. O. Holstein, with two friends, E. E. Olson and John Gallagher, caught sixty-three pickerel in Okauchee Lake, and in the same water twenty-five good bass were taken by Messrs. Harry Brown, William Nash and Ed. Butcher. Messrs. Joseph Toussaint and John Schleuter, of Watertown, caught a good string of bass on May 26 in Lac La Belle. Messrs. James Newbaum and Henry Meyer caught forty-three bass last Thursday in Oconomowoc Lake. Messrs. August Zinn and Bradley Young caught fifty bass on the same day in Lake Okauchee. Messrs. F. H. Hill and Hiram Parker, of Chicago, caught forty-two bass last Thursday in Oconomowoc Lake. In Beaver Lake Mr. C. G. Fox, of Milwaukee, caught fourteen bass during the afternoon of last Thursday. In Pine Lake, on the same day, Mr. Henry Tornow, of Milwaukee, caught thirty-one bass. A great many small-mouth bass were included in the above fine catches.

On May 29 Messrs. O. Hartwright and Fred Peters, of Chicago, took twenty-five bass and pickerel on Nashotah Lake, Wis.

Personal advices from Fox Lake, Wis., state that the fishing there is better than it has been for a number of years. The black bass are taking the frog in great shape. Dr. Hitchcock took ten nice bass, by bait casting, last Wednesday afternoon.

The angling about Lake Winnebago, Wis., is now in full progress, and reports come that not for many years have so many bass and pike been taken. These are big waters and it requires, of course, an expert knowledge of the feeding grounds in the lake to meet the best success. I remember that once in fishing Winnebago Lake myself, we had to feel around nearly all day before we finally located the bass, but when we did so the sport was very pretty.

Lake Geneva, Wis., comes forward with a pretty good fish for the beginning of the season. Mr. Charles Lull, of Milwaukee, on May 30 caught a great northern pike in that lake whose weight was 22lbs. The fish measured 3ft. 5in. in length. All the lakes above mentioned, with exception of Winnebago Lake, are located in the lower part of the State of Wisconsin, on about the same latitude as the celebrated Waukesha county chain of lakes. There is no lovelier country out of doors than that lying about these waters, and the latter are fished persistently season after season by the thousands of summer people who flock thither from the cities. Yet the bass fishing is still good at times, and nearly every year we hear of one or two of these big pike being taken here or there in some one of the scattered but not yet exhausted waters of this pleasant region.

Wisconsin Muscallunge.

Mr. Fay L. Buck, of Manitowish, Wis., writes me that the muscallunge have begun taking the spoon in good shape in the Manitowish and Turtle Lake chains. Beginning May 25, Mr. Cathcart, of Sidell, Ill., in four days' fishing, took fifteen muscallunge, the largest weighing 9lbs. In one day he caught forty-five black bass averaging 2¾lbs. in weight. Mr. Harvey Prest, of the Milwaukee Normal School, with a party of three friends, caught twenty muscallunge in four days, the largest fish weighing 23lbs. They caught wall-eyed pike in any number, and took twenty bass, the largest of which weighed 4¾lbs. Mr. Ericsson, of Milwaukee, caught a muscallunge weighing 26lbs., and twenty muscallunge have been reported whose weight ran over 10 and 12lbs. These fish were taken by guests of the resorts of George W. Buck and son, on the Turtle and Manitowish waters. From all the above it may be seen that the fishing season is now on in full force for Wisconsin, and no one need delay his fishing trip any longer.

Illinois Fishing.

In the lakes of the Fox Lake system, in upper Illinois, both bass and pickerel have been biting in great shape for the past week. In Sand Lake a 12lb. pike was taken and several pike running over 10lbs. In Fourth Lake one bass was taken last week whose weight was 5¾lbs. In Slough Lake a 5½lb. bass was taken. Good strings of smaller fish have also been numerous. If you are chained to business, read FOREST AND STREAM, but if you are not, go fishing.

In the Grand Calumet River, on May 30, Messrs. Houston and Ferguson, of the Calumet Heights Club, took several nice pike, the largest weighing 8½lbs.

The Largest Wisconsin Trout.

Mr. Edwin F. Daniels, president of the Tolleston Club, of Chicago, writes me a personal letter and raises my biggest Wisconsin trout 8oz. He will allow me to use his letter, which reads:

"I notice that in a late issue of FOREST AND STREAM you mention a Mr. Merryman as having caught a 5lb. rainbow trout in Iron River, and you add that it is the largest trout you have heard of having been taken in that vicinity.

"I joined the Gaylord Club something like two years ago, but had my first experience there about the 1st of May. We were a little early; the fish were not rising very well to the fly. On the first day of our arrival, which was Saturday, April 30, one of our party, Mr. R. A. Shailer, caught in Trout Lake (the location of which I believe you are familiar with) a rainbow trout which tipped the scales at 5lbs. 8 oz. strong. We were all incredulous when the weight was first announced and we did not fully accept it until it had been proven by three different scales. This being a little bit better in weight than the one you mention, I thought I would call your attention to it.

"I saw on the register of the club that you had been a visitor there in the not very distant past. One memorandum showed that on a certain day you had caught a number of bass (I will not expose you by giving the number) in Moon Lake. Your notation also stated that it was 'fun, fast and furious.'"

I remember my trip to the Gaylord Club very well, and my recollection is that I caught twenty-five bass in the course of my fishing one afternoon on Moon Lake. That was the time the two Indians thought my fly-rod would break if I caught a big bass, yet it did not, and the bass were more eager to strike at the fly at that place than I think I have ever seen them in my experience. They were plunging and splashing around at the edge of the lily pads in perfect schools. It is great fun to catch big bass on a little rod.

Michigan Bass.

Early advices state that Paw Paw Lake, a famous bass water of the lower part of the southern peninsula of Michigan, is going to be exceptionally good this season, and all those who go below the head of Lake Michigan for their bass fishing will do well to keep this water in mind. I should be very much obliged if Michigan readers of FOREST AND STREAM would give me reports of angling waters in that State, where I have not traveled nearly so much as I should have liked. It is a wonderful angling country.

Tarpon Club of Texas.

There was organized at Dallas, Texas, on June 1 the Tarpon Club, of Tarpon, Texas. A contract has been given for a club house, which will be built on the Gulf coast, near Rockport, Texas. This magnificent sporting mansion will be thrown open next September. Membership of the club will number 300, 100 of whom are Texas residents. Dispatches to the daily press state that the wealth of the membership of the Tarpon Club reaches into the hundreds of millions. Among the members are President McKinley, ex-President Grover Cleveland, United States Senator M. A. Hanna, of Ohio; Senator Matthew Stanley Quay, of Pennsylvania; Richard C. Kerens, of St. Louis, and others of equal distinction. The Board of Directors chosen here to-day for the first year is composed of the following fishermen: E. H. R. Green, of Texas; Banker Van Blarcom, of St. Louis; State Senator E. H. Houston, of San Antonio; ex-Mayor W. C. Connor, of Dallas.

It would appear that the tarpon fishing of Aransas Pass, Texas, which has been so often mentioned in these columns as the best found anywhere in the country, has at last attained the social recognition which it deserves.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Fishing in Northern New York.

ESSEX, N. Y., May 28.—*Editor Forest and Stream:* The summer angling season in the deep water portion of Lake Champlain, around Westport and Essex and northward, is just beginning. A few wall-eyed pike and pickerel have been caught in rooff. of water off Split Rock, and small catches of perch are commonly reported. These perch run large, and a little later when they begin biting freely they will furnish lots of fun to ordinary anglers, and possibly a thrill or two to the expert.

Old Joe Gardiner, a local celebrity at Whallon's Bay, who moved to Vermont a year or two ago, reported the fishing in Little Otter Creek good a week ago.

The creeks warm up sooner than the deep waters of the lake, and the earliest fishing is generally in or about the mouths of these streams.

In the Eastern Adirondacks there were some good catches of trout the first week of the season, but the frequent rains have hurt the fishing since then. The Giant's Washbowl, two miles from the head of Keene Valley, which was stocked by guides six or eight years ago, has produced some remarkably fine trout this spring. Scarcely more than a stone's throw away, but 1,000ft. nearer the sea level, is Chapel Pond, from which good trout are also taken.

While in Keene Valley the other day, I heard that early in the season some California trout were seen on a spawning bed in Beede Brook, near its juncture with the Au Sable River. These trout averaged 1½lbs. in weight. The local fishermen knew of their presence, but no one could catch them, as they refused the various kinds of bait offered, and fortunately no one knew of the one infallible way of taking spawning fish.

Finally a young man, ignorant of the fact that he was breaking the law, shot four of the trout. His innocence of evil intent was conclusively shown by the fact that he exhibited the fish afterward, and boasted of the manner in which he had killed them. When he was told that he was liable to a heavy fine he was very much taken aback. The number of persons he had told made it certain that the news of his exploit would reach the ears of Game Constable Fletcher Beede, and with native shrewdness he did the best thing that could be done

under the circumstances and went and informed on himself, and in this way succeeded in very materially reducing his fine.

The Newcomb correspondent of the Essex County Republican, who signs herself "Kate," writes under date of May 2: "Fishing is excellent, ducks plenty, venison. Call and see us." The game constable is likely to be the first caller on this invitation. The lady has a good thing in illegal game, but she has the feminine failing and can't keep her secret. J. B. B.

Fresh-Water Pearls in the United States.

[Read by George F. Kneib before the Fisheries Congress at Tampa, Fla.]
(Concluded from page 454.)

Natural and Artificial Replenishment of the Fresh-Water Mussels.

The inquiry as to whether the exhausted beds recover, and in what time, is closely connected with the preceding one. It is unanswered in 22 of the papers, and 7 others report no knowledge or opinion on the subject. Sixty-four replies are given, of which several are indefinite or conjectural. Out of about 60 papers, therefore—or about two-thirds of the whole—the following data are taken: Sixteen report the belief that the beds are replenished from year to year; 4 in one or two years; 3 in two or three years; and 4 in four years; 4 name periods between four and eight years, and 6 between six and twelve years, and 1 gives twenty years, 1 twenty-five, and 2 estimate the recovery as requiring a century or more; 3 papers say that many years are necessary; 5 say "a few," or "soon;" 2 report no exhaustion as noticed; and 6 report no recovery; 4 papers are indefinite or uncertain; 2 of the papers that give estimated date for recovery do so with an expression of doubt ("if at all," "if ever") as to whether it really occurs. The Tennessee paper before referred to says that the shells return each year, but in less numbers. As it is customary, more or less, to leave the young and small shells, the question resolves itself largely into two, viz., how far have they been carefully spared, and how long does it take them to retain their growth? This probably differs in different species, as it is estimated in some of the answers, and it may also be influenced by various external conditions. The Tennessee paper estimates the recovery as slow from the fact, previously brought out very markedly, that the young shells are those that are most exposed to all natural enemies and accidents. The New York paper, which thinks that there is no recovery, states that few young shells are found. A Texas pearly says that the young shells are found in two years, but contain no pearls. One (mentioned under the last head) says that many beds are recovering by the growth of the young that were left before. On the other hand, in Indiana one states that when a bed has been worked out plenty are found the next season; and an Iowa pearly reports young shells abundant everywhere. One Tennessee answer gives a very fair average statement to the effect that the beds recover every season, and would perhaps recover entirely in a few years if not molested.

National and State Protection.

The concluding inquiry, as to whether State protection of the beds is desirable or necessary, is answered with more or less definiteness in 73 papers; and as might be expected on such a subject, with much diversity; 46 of the responses see no need or advantage from protection, and 23 favor it; 1 or 2 fail to understand the purpose of the question clearly; and some hold that while not necessary now, it may be so in the future; 2 or 3 say that it would be difficult or impracticable. A few of the answers may be referred to more particularly. Of those that do not favor protection, 2 (Michigan and New York No. 1) think it not worth while or desirable to preserve the Unios, the latter curiously remarking that "the water would be purer without them;" and one Tennessee fisherman seems to hold a similar view, saying that protection is not desirable, though it is necessary to the preservation of the shells. Tennessee No. 74, failing to appreciate the question involved, opposes protection "because pearls bring in a great deal of money, and the mussels are of no use;" 2 or 3 think that the shells are inexhaustible and in no danger of extinction. One of those that favor the suggestion, Indiana No. 2, says that it would be well if no shells were taken for five years. The Ohio paper advocates it "if the mussels are to be preserved." A Tennessee paper alludes to the value of the shells for pearl buttons as a reason for protection; Tennessee Nos. 32 and 33 advocate a limitation as to not opening young shells.

The whole question is curiously suggestive of the similar conditions in respect to forestry and lumbering—the apparently inexhaustible natural supply; the reckless prodigality and waste of such resources by man; the rapid diminution and impending extinction, which it would require years of labor to restore; the foresight and remonstrance of the few, and the indifference or opposition of the many, as to any limitation or protection designed to preserve the natural resources; and the ease with which they could be preserved by a few simple and intelligent modes of management, once established and made familiar to the people; and the pressing importance of some such action in place of the *post nos silvium* at present prevailing.

Approximate Yield of Pearls.

Only a few approximate figures can be given. The total production of pearls may be summed up as follows: First, 1856 excitement, \$50,000, worth to-day at least four times that amount; second, 1868 excitement, \$50,000 worth; third, 1889 Wisconsin excitement, perhaps \$300,000 worth; the Tennessee fisheries, \$100,000; Kentucky, \$10,000; Texas, \$20,000; Arkansas, \$35,000 single pearls found in the past year, selling for over \$1,000, many over \$100 and \$200.

The great importance and value of a rural population obtaining ready money so easily as by pearling cannot be overestimated, and is a great boon to the pearl-ers in

the payment of taxes, interest, and for such things as only money will buy; therefore the protection of the pearling interests is one of great importance, as it opens up a new, and if properly regulated an industry in which the product can always be sold for spot cash.

To conclude, it is interesting to note a few of the Fraudulent and Accidental Intermixtures with Pearls.

In the small lots and packages of pearls that are sent to commercial centers for purchase or valuation and sale, quite a variety of foreign objects are found, some of which have evidently been introduced with fraudulent intent, while others have gotten among the pearls accidentally. Among the former are regular artificial pearls, i. e., hollow beads of thin glass, filled with wax or other composition; also ground pieces of pearly shell or attached pearls that have been cut from the valve and rounded and polished on the defective side.

Frequently the round, hard lens of a fish's eye. In the second class may be mentioned natural growths found in the shell, resembling brown pearls translucent, and consisting not of nacre, but of concholine—the material of the hinge and ligament. These are sometimes handsome and lustrous; and occasionally iridescent, but of course are not pearls, and have no commercial value.

A third class, of doubtful character, consists of metallic objects that sometimes strongly resemble pearls, and may have been introduced either by intention or accident. Such are small shot and steel spheres from "ball bearings;" these, when bright, look much like the darker and lighter gray pearls respectively, and are frequently encountered.

New Jersey Coast Fishing.

ASBURY PARK, N. J., June 4.—The developments of a week have been of a most pleasant nature as regards coast fishing. Bass and kingfish have been taken in abundance at all the favorite points except Asbury Park pier. While usually that is a most fruitful spot, strange to say not a single bass has been caught there, and but few kingfish have been taken. At Deal Beach, Belmar, Avon and Manasquan the catches have been good, and the fish all fine in size and condition. The largest, 18lbs., fell to the rod of Mr. Robotham at Belmar. Weakfish too have come into the surf, which is a most remarkable fact, as it is a most unusual occurrence at this season of the year. The continued east winds have made the influence of the Gulf Stream felt along the coast, and that fact no doubt accounts for the presence of weakfish and bluefish, as several of both species have been taken from the beach and piers the last few days.

Barneget has been fairly alive with bluefish, but they have dropped out to sea again, only temporarily it is to be hoped. Never have prospects for a fine season been more promising, and as long as the pound net business can be kept in abeyance the condition will continue.

I repeat what I have often said before, that at most points along the coast the procuring of bait is a most uncertain matter. This I do in the face of a howl, which has been raised against such expressions. I think I can appreciate the disappointment of the angler who, having traveled a long distance, reaches his destination to find confronting him the situation, no bait to be had. As a pointer I will repeat that at Asbury Park, Avon and Belmar bait is usually plentiful and to be had at reasonable prices; while the Shrewsbury, Deal Beach, Barneget and Manasquan are ever sources of disappointment to the man who unwisely depends on procuring his bait at his destination. LEONARD HULIT.

Chicago Fly-Casting Club.

CHICAGO, Ill., June 4.—*Editor Forest and Stream:* This is the score of our third contest for the season, held to-day:

	Long distance and acc'y, fly, feet.	Distance and acc'y, Per cent.	Accuracy and del'cy, Per cent.	Bait-casting, Per cent.
I. H. Bellows.....	110	91 2-3	92 1-3	79 2-5
L. I. Blackman	71 2-5
C. F. Brown	87 3-5
F. B. Davidson.....	73 2-3	..	87 1-2	97
B. W. Goodsell	103	86	88	79 3-5
H. Greenwood	80
H. G. Hascal	97	79 2-3	..	84 2-5
N. C. Heston	80 1-3	89 5-6	92
E. R. Letterman	75 1-3	..	91
G. A. Murrell	83	78 1-3	89	91 4-5
H. A. Newkirk	84 2-3	86 1-2	92
F. N. Peet	111	88	93 1-2	82 4-5
E. A. Renwick	88	83	86 1-6	70 2-5
J. M. Rogers	77 3-5
G. W. Salter	85 1-5
A. C. Smith	94 3-5
E. H. Strong	84 1-5
G. W. Strell	73	73 1-3	..	83
J. E. Strong	90	86 2-3	84 2-3	81 1-5

Holders of Medals.—Long distance fly, F. N. Peet; distance and accuracy, F. B. Davidson; accuracy and delicacy, F. N. Peet; bait casting, F. B. Davidson. G. A. MURRELL, Sec'y.

Lake Champlain Fishing.

ESSEX, N. Y., June 4.—*Editor Forest and Stream:* The perch have begun biting well in Lake Champlain. Yesterday Will Fisher caught eighty-six from Mother's Rock in a little over half a day. According to the almanac sign it was a perch day, but Fisher never found this out till he had gotten home and had advice on the subject. If he had known beforehand that the signs were so propitious he would have taken along more bait and caught more fish. As it was his bait ran out while there was plenty of daylight left, and the perch were still hungry.

I asked him what the almanac sign for good fishing was, but Fisher couldn't say. All he knew was that people who consulted the almanac told him that yesterday and to-day were marked as good fishing days.

Either the news of Fisher's catch or the forecast of the almanac reached the ears of the fishermen in this part of the world to-day, for driving over to the "Burgh" this afternoon I met first one double-seated wagon with five men in it and five long cane poles projecting behind, and then four more buggies with two men and two poles to each. The perch are in for it. If they know anything about signs they will strike out for deep water.

J. B. B.

A Big Adirondack Lake Trout.

JOHNSTOWN, N. Y., May 28.—*Editor Forest and Stream:* I inclose clipping from our local paper of yesterday, which reads: "Col. John J. Yost and Warren Miller returned last evening from a several days' stay at Piseco Lake, bringing with them something over 100lbs. of trout. Many of the old fishermen of this vicinity, who were inclined to be skeptical concerning the reported catch of a salmon trout weighing 26lbs. by Messrs. Yost and Miller, can now satisfy themselves of the accuracy of the story published to that effect in the Republican several days since, by visiting Quackenbush's market on West State street, where the big catch is now on exhibition. This is the largest salmon trout taken from Piseco in over fifteen years. It measures 40in. in length, 23in. in girth and weighs 26¾lbs. The trout was caught by Col. Yost, assisted by Mr. Miller, both of whom had quite a struggle in landing the big fellow. The fishing season at Piseco opens very promising this year, and although it is not expected that many such catches as the Johnstownians made will be reported, yet all who have been there this year report good luck."

The account is correct in every way. I saw the fish weighed and measured and will vouch for it. We get a good many large trout, but this is the largest for twenty years. Piseco Lake is in Hamilton county, near Lake Pleasant. C. M. R.

"Fishing Up and Down the Potomac."

AN unfortunate transposition of type marred the paper with this title last week; and as Mr. Talbott's chapters will bear reading more than once, we trust that readers will review this one, and do the author and themselves the justice of following the paragraphs as he wrote them. The six paragraphs beginning "When the last fish scow had been towed," and ending "the largest, something over 2lbs.," should follow the seventh paragraph from the beginning, i. e., after the line "water without an instant's hitch or delay."

Weakfish in Princess Bay.

WEAKFISHING is reported good in Princess Bay, Staten Island, the fish running 80 and 90 to a boat. One specimen taken the other day tipped the scales at 5¾lbs.

The Kennel.

Sept. 8.—Manitoba Field Trials Club trials. William C. Lee, Sec'y, Winnipeg, Man.

Some Gordons.

SAN FRANCISCO, May 21.—A visit this afternoon to our annual dog show naturally suggests dogs; in fact, I am full of dog. The music of 500 or 600 dogs all going at once in protest, voicing their disgust at their confinement, and being objects of rivalry, becomes monotonous, and makes a dog show really a penance that only one's love of dogs can endure; but the conditions and object being unexplained to the dogs themselves, they can't see why they should be chained up for a week and decorated with ribbons, and they take no pride in the fact that the color may be blue.

A dog show always ends in dissatisfaction with those owners who do not get the first prizes, and they animadvert on the awards of the judges. Nine out of every ten go home mad, swearing that the judges are chumps. The office is as thankless as that of an umpire of a baseball game or prize fight. The judges in the present case were two gentlemen imported from the East, and seemed conscientious and disinterested in their awards, yet every exhibitor who did not get a prize is bound to express a contempt for their decisions, especially ladies exhibiting their pet pugs, Japanese spaniels and Skye terriers. One lady I saw in tears, and heard her declare she would never again exhibit her dear little Fido. One little dog weighing not over a couple of pounds had suspended in his cage what purported to do duty as his chain, consisting of a zin. manila rope with a collar about 4in. in circumference, and on the cage a sign marked "Dangerous," while the poor little beast slept innocent of the fun his implied ferocity was causing. The size of the rope and the size of the dog were too ridiculous. The rope would hold an elephant.

As I sit here smoking my after-dinner pipe, my mind wanders off to my dog days, when I took pride in my dogs and spent money on them galore.

Horace Smith, the dog man and sportsman, well known to the earlier readers of the FOREST AND STREAM, supplied me my hunting dogs. He imported for me several brace of Gordon setters direct from the Duke of Gordon's kennels, and they were beauties. Their fame was widespread, especially in the army, where most of their descendants were distributed among officer friends, where a ready market was found for the asking. I gave to Gen. Crook a pup which accompanied him through his campaigns in Arizona until the heat was too much for such heavily coated dogs, and it died, greatly to the General's grief. When he came out of Arizona I gave him another, and the General's wife declared that he applied for a post in a cooler climate on account of the dog.

Only one of the many I raised disgraced his noble blood. He was a beauty, but proved to be gun shy, and after repeated unsuccessful attempts to break him of it I gave him to a market shooter, who declared he could bring him out all right. A few days later I met the man and asked how he got on with the dog. Pointing to his face, showing sundry unhealed scratches, he remarked: "That dog was the very devil himself." He then went on to describe his experience with him: "One day I took him out, and the first time I fired at a quail he made a dash for home and never stopped until reaching it, and diving under the house, could not get him out for four days, and then only because he was nearly dead with starvation. The next time I took him out I fastened a stout cord to his collar and the other end around my body. Climbing a steep hill, I put up a bevy of quail and fired. The dog gave a yelp and sprang down the hill, up-

setting me and dragging me after him through the brush for a hundred feet, until the cord broke and I recovered my feet, with the stock of my gun broken, my clothes torn nearly off, and my face scratched as you see. I could not shoot a dog, as I was tempted to do, and gave him to a farmer's boy." This was the only degenerate Gordon I ever owned.

Horace Smith also imported for Harry Babcock, of this city, one or two brace, and we two maintained "high hook" on Gordons until the breed ran out, and at the show to-day I saw but two or three very inferior descendants of the noble house of Gordons, in my estimation the most aristocratic and gentlemanly of all dogs, next to which come the Laveracks, of which there was a fine exhibit at the show.

I have had great experience in raising dogs, generally for the benefit of my neighbors, as I never sold a dog. It is astonishing what a lively demand there is by people who do not have the trouble of raising them, nor of paying for them. As I say, I have had great success in raising and giving them away, but not much in breaking them; that is a labor of love and a trial of patience—a trade I may say, and the dog breaker earns his money.

If there is anything that tries one's temper it is to be out with a half-broken dog. A friend, who prided himself on the acquirement of a perfectly broken \$100 dog, insisted on my taking him out. I did not like the look of the animal, but to please my friend, did so. The first quail fell in the underbrush, and away dashed the dog. I waited for his return with the quail. He returned after a long time without the bird. I tried to send him in again, but he simply lay down and looked at me. I shot a second bird, and away he dashed, absenting himself as before. Having marked down the bird, I determined to see what the trouble was, and pushed my way through the bushes and came upon the gentleman just finishing eating the second quail. I tied him to a tree and subsequently did my own retrieving.

When I returned the dog I asked my friend what he had fed him on. "Oh!" said he, "nothing unusual; now and then a chicken that had died of the pip." It is needless to say I did not borrow that dog again. A fair-minded dog would at least have divided with me.

Dog stealers have enjoyed a period of very lucrative business, stealing dogs to supply the demand for Alaska. Verdant miners have brought them up by the hundreds with a vague idea of using them as sledge dogs, for which purpose, of course, they are perfectly useless, as the Alaska sledge dog is a specially bred animal, heavily coated and inured to cold and snow, living on dried fish. Whereas the ordinary dog starves on such a diet, and his feet freeze. The only use they can be put to is to feed their owners when rations give out. They tell a story of the value of meat in Dawson last winter, when a miner who had struck it rich made overtures to the belle of the camp, throwing himself and a big bag of gold dust at her feet, both of which she refused scornfully with an intimation that she had a better offer from Five Shooter Bill, who had coupled his offer with a guarantee of 40lbs. of dog meat as her bridal dot. It is needless to say dog meat won.

PODGERS.

Continental Field Trials Club.

THE affairs of the Continental Field Trials Club have at last been straightened out and the indebtedness, which resulted from the last trials at New Albany, has been wiped out by contributions from almost all the members (a few have "cold feet") and a number of sportsmen interested in the good cause, who came generously to the aid of the club, and who have now joined as members, thus strengthening it to such a degree that the successful running of trials in the future is assured.

Mr. Hobart Ames is the new president of the club, and Mr. Meares will assume the duties of the secretaryship as soon as Mr. Bell has settled up all the affairs of the club, which is now only a question of a few days.

The intention is to run trials at Lexington, N. C., about three weeks after the Eastern meeting at Newton. The programme will consist of a Derby, an all-age stake and a free-for-all sweepstake. Further notice as to entry fees, closing of entries, exact date of trials, etc., will be published later.

There is talk of holding a member's stake also, to precede the open events. The new members are Mr. Hobart Ames, Mr. Meares, Dr. Brown, Messrs. Lorillard, Jr., Sturges, Phelps, Baker, Crocker and a number of others who have expressed a wish to join.

It is reported that the hotel and livery accommodations at Lexington are very good, and rates reasonable; that ample grounds can be secured, that the citizens of the town are enthusiastic about having a club run their trials at Lexington again on what is canine historic ground, and that everything possible will be done by them to make the meeting pleasant to everybody attending it.

Canoëing.

Eastern Division Meet.

TYNG'S ISLAND.

THE Eastern Division of the American Canoe Association held its annual meeting May 28, 29, 30, at Tyng's Island. The races on Monday resulted as follows:

Paddling, Single Blade.—R. W. Bowie, Lawrence Canoe Club, first; G. R. Heckle, Wawbewawa Canoe Club, Newton, second.

Tandem, Single Blade.—G. R. Heckle and John B. May, Wawbewawa, first; R. W. Bowie and Fred T. Harrison, Lawrence Canoe Club, second; L. W. Chandler and W. J. Osgood, Wawbewawa, third.

Club Fours, Single Blade.—Fowle, Dimick, Crosby and Brown, Innitou Canoe Club, Woburn, first; Osgood, May, Wells and Drake, Wawbewawa, second.

Club Fours, Double Blade.—Apollonio, Fowler, Crosby and Brown, Innitou Canoe Club, Woburn, first; Drake, Osgood, Adams and Heckle, Wawbewawa, second.

War Canoes.—Wawbewawa, first (crew, Burrage, stroke; Osgood, Bancroft, May, Heckle, Bosson, Chandler; Adams, and Drake, captain); Innitou, second (crew, Brown, stroke; Wells, Crosby, F. Fowle, W. Fowle, Apollonio, captain; Hovey, Wade and Dimick); Lawrence

Canoe Club, third (crew, Harrison, stroke; Butler, Vieter, Bowie, Poor, Adams, Hall, Clay, Wallace, captain).

Tandem, Double Blade.—R. J. Bowie and F. T. Harrison, Lawrence, first; E. R. Adams and J. B. May, Wawbewawa, second.

Hurry Scurry.—W. J. Osgood, first; J. B. May, second.

Hand Paddling.—E. R. Adams, first.

Nachting.

Fixtures.

JUNE.

- 9-11. Chicago, Siren-Vanenna matches, Chicago.
11. Canarsie annual, Jamaica Bay.

27. Baltimore, Withers cup, Chesapeake Bay.
29. New Jersey Ath., club, Newark Bay.
30. Taunton, ladies' day, Taunton, Mass.
31. American, moonlight sail, Newburyport, Mass.

OUR readers will remember that last fall we published a long and exhaustive paper on the construction of the yacht Defender and the use of aluminum, written by Richmond Pearson Hobson, Assistant Naval Constructor, U. S. N. Mr. Hobson was detailed by the Government to the Herreshoff works during the construction of Defender, to examine and report on her construction, which mission he executed most satisfactorily. For some time past he has been stationed at Annapolis in charge of a post-graduate course in naval architecture. At his special request he was recently detailed to duty with Admiral Sampson's fleet off Santiago, taking with him three of his cadet pupils, their object being to study the warship in actual service.

The question of effectually closing the harbor of Santiago being under discussion, Mr. Hobson suggested the sinking of a vessel directly in the narrowest part of the passage, and on the plan being approved its execution was entrusted to him.

Under his direction the big steel collier Merrimac was stripped of all useful movables and fitted with a series of torpedoes along the starboard side, and toward dawn on Friday morning she started into the harbor. On board with Mr. Hobson, who was in sole command, were six volunteers from the fleet and one stowaway; two machinists, a water tender and four seamen. The vessel ran in under heavy fire from the forts and Spanish ships until the desired position was reached, when her engines were stopped, she was sheered across the channel, anchors dropped at stem and stern, her sea valves smashed and the torpedoes exploded. The party took refuge in a dinghy or on a life raft, but the fire was so hot that they were unable to force their way out of the harbor, and finally rowed in and surrendered to the Spanish. Their bravery met with instant recognition from Admiral Cervera, who sent a flag of truce to Admiral Sampson, stating that they were prisoners of war and would be exchanged as such. While full details are still lacking, it would appear that the scheme so carefully laid out by Mr. Hobson had fully succeeded so far as the sinking of the Merrimac and the closing of the channel are concerned.

Mr. Hobson graduated at the head of his class at Annapolis at the age of eighteen, just ten years ago; after a course of study in Paris he was appointed Assistant Naval Constructor, and had already made a name for himself by his scientific work before he became famous by this bold exploit.

FROM the list of fixtures which we published last week, and which, by the way, is even yet by no means complete, many of the smaller inland clubs representing a large amount of racing being absent, it appears that there will still be some racing this season, in spite of the war. It is likely to be unusually late, however, on account of the prolonged wet weather of the spring, and the earlier races will probably amount to very little.

UNDER the new appropriation the following steam yachts have been recommended for purchase by the Naval Auxiliary Board: Shearwater, Henry Wolcott; Sylvia, Edward M. Brown, formerly commodore of the New York Y. C.; Eugenia, owned by J. G. Cassatt, of Philadelphia; Stranger, Mrs. Mary Lewis, daughter of the late Moses Taylor; Vidette, M. C. D. Borden; Rival, Gen. C. C. Dodge; Neaera, Charles A. Gould; Cosette, Charles A. Tatum; Althea, T. Edwin Ward, and Lagonda, S. H. Austin, Jr.

Comanche, H. M. Hanna, has arrived at Portsmouth,

FRENCH ONE-DESIGN CLASS. DESIGN BY MR. GUEDON.

N. H., from the lakes, and is being fitted out, having been purchased by the Government.
Elfreda, W. Seward Webb, was last week reported a total loss in the Gulf of St. Lawrence, but the report was incorrect. She, with the Enquirer, of Buffalo, and Inca, of Boston, has been purchased by the Government.
Sultana, J. R. Drexel, has been offered to the Government as a gift, but she is not available at present, being laid up at a Mediterranean port.

The New Raceabouts.

THE following description of the new additions to the Boston raceabout fleet is from the Boston Globe:
The three Herreshoff boats in the 21ft. raceabout class are for W. O. Gay, ex-Com. William P. Fowle, of the Corinthian, and S. V. R. Thayer, who last year raced the Herreshoff 30-footer Asahi in the Y. R. A. races. The first two boats are keels, and the third is a centerboard. The arrival of Jilt, Mr. Gay's boat, has already been told in these columns. Mr. Fowle's boat, Sintram, is now at Marblehead, and Mr. Thayer's boat is nearly ready for delivery. With three new Herreshoffs in the fleet the Boston-designed boats will be given a hustle.
The Sintram is the boat mentioned in these columns a fortnight ago. She was sailed around the Cape from Bristol by her owner, accompanied by Arthur Foss, and had a slow but by no means uninteresting voyage. The wind was light most of the way and the boat had but one chance to show her speed. That was on the run to Marblehead from the whistling buoy off Highland Light. The run was made in a freshening southeasterly breeze, in which a spinnaker was carried, and the distance was covered in five and one-quarter hours, or a speed of nearly seven knots, which isn't at all bad for a small-sailed 21-footer.

The yacht left Bristol Friday forenoon, and after a stop at Newport went on to Vineyard Haven, where Friday night was spent. Saturday, Saturday night and Sunday forenoon were spent in beating up the Cape against a light northeasterly wind, but when Highland Light was passed the wind went more to the southward, and a quick run home was the result.
Mr. Fowle can as yet form little opinion of the boat's abilities, except that she is well balanced and handles easily. He has strong hopes of her, though, in light to moderate airs, but doubts if she does as well as the deeper bodied in a strong breeze. Like Jilt she is only about 5ft. draft, while Cock Robin and last year's boats draw 6.

That there will be plenty of sport in this raceabout class no one can doubt. There will be, in addition to the three Herreshoff boats just named, four new Purdon designs for Messrs. Adams, Webb, Brewster and Bremer; four Crowninshield designs for Messrs. Turner, Irving, Lambert and Cole, and possibly others from other hands. Hazard and Cockatoo of last year's fleet will be given 600ft. of sail and put in the racing, and Gosling is also likely to be seen, and possibly Sally III.

The fourth Crowninshield order, which is now building by Graves at Marblehead, has been "unknown" heretofore, but is now acknowledged to be for John F. Cole, of Somerville, a prominent member of the Corinthian Y. C., and who is well known in the racing contingent with the big cape cat Susie. It is said that Johnnie Dunlop will have the stick on the Cole boat.

This gives a fleet of over a dozen boats, and all in the hands of owners who enjoy racing. Greatly to the regret of yachtsmen who admire the old champion, Cock Robin will not be raced. Mr. Eaton will give her 600ft. of sail, but will use her for pleasure sailing only. Her new rig is ready for her at Stearns'.

The Defense of the Seawanhaka Cup.

THE Montreal correspondent of the Boston Globe writes as follows of the yachting prospects on Lake St. Louis:
"Matters have been moving along very slowly in yachting circles here, and for the first time in years no races or cruises took place on the Queen's Birthday. The fact is that only a very few of the boats of the Royal St. Lawrence Y. C. are in commission, and that it is not by any means certain when they will be all out. None of the new racers are out yet, but then the men at the boat building shed of the St. Lawrence Yacht Company have been pretty busy. They had the knockabouts to build, and the racers and the majority of the boats that compose the regular fleet to get out.
"Several of last year's racers will again take part in the preliminary and the regular trial races, while the international winner of last year, Glencairn II., is already in the water. There will, however, be only three, or at

the most four, new boats to compete in the trials this year. Mr. H. Montagu Allan is not going to do anything more about his proposed offer to build a boat, probably because Com. Jarvis, of Toronto, who built the coffin-shaped Bonshaw last year, has declared himself unable to give the time necessary to superintend the building, and to design and sail her. He stated last year that he would not go in again for international races, but for a while this spring there was hope that he would take hold of Mr. Allan's boat.
"There is no reason to think that the war will in any way interfere with the international races. The committee of the Royal St. Lawrence Y. C. has received definite assurance from the Seawanhaka C. Y. C. that as far as the international races go they will be contested, war or no war, and no doubt our boats will be ready in ample time.
"The boat least advanced is that being built for Lord Strathcona, the honorary commodore of the club, and the one nearest ready is the one being built for the brokers' syndicate. Both these have been designed by Mr. Duggan himself. The third one is from the design of Mr. Huntley Drummond, son of Senator Drummond, who is known as the sugar king of Canada. Mr. Drummond has always had an aptitude for designing, and he has a great deal of faith in his boat, which is fairly well advanced."

Atlantic Y. C.

SEA GATE—NEW YORK BAY.
Saturday, June 4.

THE first of the Atlantic Y. C. races for the smaller classes was sailed on June 4 in a stiff N.E. breeze and heavy sea outside the Narrows, the course being from off the club station to a mark off Fort Hamilton, then into Gravesend Bay to a mark off Bensonhurst, and home, three rounds making ten miles. Only four yachts started, the knockabout Mongoose sailing alone. She started at 3:05 and the cats at 3:10. The rounds were timed:
First Round.—Mongoose, 3:42:10; Ethel, 3:49:15; Qui Vive, 3:46:14; Drift, 3:50:34.
Second Round.—Mongoose, 4:15:23; Qui Vive, 4:19:35; Ethel, 4:25:28; Drift, 4:27:42.
The times were:

Special 21ft. R. L. Knockabouts.			
	Length.	Elapsed.	Corrected.
Mongoose, Simeon Ford	1 44 55
Class T, Series C, Mainsail Yachts.			
Ethel, E. J. Bergen	21.71	1 51 12
Qui Vive, George Freeth	24.90	1 42 23
Drift, W. T. Bernard	23.65	1 54 13

The winners were Mongoose (sail over) and Qui Vive.

A French One-Design Class.

THE accompanying design, for which we are indebted to Le Yacht, is the work of M. Guedon, the French designer, and falls within the regulations of the Societe du Monotype d'Arcachon. The dimensions are:
Over all 24ft. 9 in.
L.W.L. 20ft. 10 in.
Beam 7ft. 1 in.
Draft, hull only 1ft. 7½ in.
Draft, extreme 6ft.
Sail area 400sq. ft.
The design is excellently adapted for American waters.

South Boston Y. C. Annual Regatta.

CITY POINT—BOSTON HARBOR.
Monday, May 30.

THE South Boston Y. C. celebrated Decoration Day by its annual open regatta, with a fleet of 30 starters. The wind was variable, a reefing breeze from the west at the start, falling lighter and then freshening to a good sailing breeze. Having no competitor, the new Crowninshield raceabout Dafela went in with the 21ft. cabin class, taking second place. Katydid, a new yawl of 16ft. 10in. l.w.l., sailed in the 15ft. class, at seven-eighths of her measurement. Tacoma was disqualified for cutting a buoy. The times were:

Class B, 30ft. Cabin Yachts.			
	Finish.	Elapsed.	
Ashumet, C. F. Bache	4 08 17	1 38 17
Elfreda, Paul N. Johnson	4 09 39	1 39 39
Emma C., Peter A. Coupal	4 12 16	1 42 16
Raynard, M. F. Plant	4 15 47	1 45 37
Class D, 25ft. Cabin.			
Thordis, T. B. Wales	4 12 47	1 37 47
Nettie, Walter Burgess	4 15 47	1 40 00
Eleanor, D. B. Clapp	4 15 46	1 40 46
Little Peter, Henry Moebis	4 16 29	1 41 29
Red Skin, J. L. and L. H. Sturdivant	Withdraw.	
Toodles, Wm. O. Johnson	Withdraw.	
Class L, 21ft. Open Yachts.			
Tacoma, Prior	4 24 25	1 39 25
Al-Anka, C. H. Crane	4 24 38	1 39 38
Al-Anka protested Tacoma.			
Class S, 21ft. Cabin.			
Privateer, A. E. Chaff	4 27 27	1 37 27
Dafela, knockabout, W. Turner	4 31 34	1 41 34
Harriet, L. T. Harrington	4 34 25	1 44 25
Omeene, W. P. Parker	4 38 50	1 45 50
Edith, A. L. Lincoln	4 46 02	1 56 02
Class T, 18ft.			
Duchess, C. D. Moar	4 26 22	1 31 22
Circe, F. L. Pigeon	4 32 48	1 37 48
Vamoose, R. M. Bonner	4 33 20	1 38 20
Zoe, James McCarthy	4 34 38	1 39 38
Midget, N. C. Robinson	Withdraw.	
Perhaps, J. E. Robinson	Withdraw.	
Alpine, C. J. Blethen	Withdraw.	
Class X, 15ft.			
Vitesse, C. D. Mower	3 59 48	0 59 48
Katydid, J. F. Small et al	4 00 16	1 00 16
Ray, S. A. Freeman	4 01 18	1 01 18
Glide, G. E. Silsbee	4 01 45	1 01 45
Nome, H. B. Faxon	4 04 10	1 04 10

The judges were Arthur Fuller, James Bertram, Thomas Christian, W. H. Godfrey, John F. Benjamin and Frank Williams. The race was sailed without time allowance.

Burgess Y. C.

MARBLEHEAD—MASSACHUSETTS BAY.
Monday, May 30.

THE Burgess Y. C. sailed its sixteenth regatta on May 30 in a variable wind, from S.W. to N.W. In the first-class handicap and the special knockabout classes the yachts sailed the wrong courses and the results as shown are not counted. The times were:

First Class. Start 2:25.			
	Length.	Finish.	Elapsed.
Dove	5 53 50	1 23 50
Dora	4 02 33	1 37 33
First Handicap. Start 2:10.			
Wanaissa	3 50 20	1 40 20
Brinda	3 50 46	1 40 46
Sea Witch	4 24 38	2 14 38
Second Handicap. Start 2:10.			
Alert	4 06 22	1 56 22
Bee	4 15 42	2 05 42
Emma	Withdraw.	
Special Class. Start 2:30.			
Nameless	4 17 50	1 47 50
Dory	4 18 47	1 48 47
No Name	4 22 00	1 52 00
Special Knockabouts. Start 2:25.			
First	3 52 28	1 27 28
Second	4 00 03	1 38 00
Second Class. Start 2:20.			
Pointer	5 12 50	2 52 50
Bugaboo	5 14 15	2 54 15

Plymouth Y. C. Regatta.

PLYMOUTH, MASS.
Monday, May 30.

THE regatta of the Plymouth Y. C. on May 30 was sailed in a light and variable wind, the times being:

Fourth Class.		Elapsed.
Bobolink, I. B. Goodspeed	1 44 18
Maud, W. N. Mayers	2 02 27
Amie, M. S. Weston	2 03 31
Ideal, C. F. Bradford	2 05 55
Pyxie, E. B. Atwood	2 11 16
Trouble, T. S. Diman	2 15 58
Dolphin, N. Morton	2 17 48
Wild Fawn, W. T. Eldridge, did not finish.		
Sixth Class.		
Frolic, J. C. Dawes	2 16 45
Veritas, Alex. Holmes	2 18 44
Kittiwake, H. M. Jones	2 22 25
Scrap, A. Holmes	2 27 06
Olympia, T. W. Steele, did not finish.		

Report of the Seawanhaka Special Committee on Measurement Rules.

YOUR committee has given to the matter of yacht measurement, committed to it for consideration and amendment, very earnest attention and much discussion; which has not resulted in any lowered appreciation of the present rule; or of its fitness to meet the requirements of the time when it was devised, or of the value and fitness of the factors in it for continued use in the future. It is quite evident, however, that these alone are no longer sufficient; that other means than those formerly used to gain advantage in speed are now recognized as being effective to that end; that these pertain to the employment of crude quantities rather than to refinement of form, the latter being chiefly involved as a means to their use. By these quantities, which give advantage, and which in some cases may better be referred to as features (being neither restricted by the present rules nor put as factors into the measurement formula), a most unfortunate condition is brought about that is inimical to yacht racing and to yacht building; and that cannot fail to continue so as long as the rules remain unamended.

Two things would appear to be quite evident, and the conclusion would appear to be unavoidable even without that experience which has in this matter supplied the proof; first, that any feature of advantage to speed and which is not in any way restricted, or its use equitably charged for in the rules, will have to be employed by the zealous racing man, whether it is in accordance with his desire and convenience or not; and second, that any moderate use of an untaxed advantage in one vessel will only be successful until it is succeeded by a less moderate use of the untaxed feature in another vessel.

To encourage the production and racing of yachts, several things appear to be necessary. Such elements and features as have been clearly recognized as yielding advantage in speed should have an equitable charge put upon their use, otherwise no vessel can be built with any expectation of more than very temporary success. Such features as are appreciated as giving advantage in speed under ordinary racing conditions, but which unfit a yacht to meet the ordinary requirements of yachtsmen, should either exclude the yacht from class racing altogether, or otherwise the objectionable features should be so sufficiently taxed as to enable the more desirable and more wholesome vessels to compete with them on hopeful and equitable terms.

There cannot be a more hopeless condition for successful yacht racing than that such vessels as the average yachtsman would choose for his uses should be incapable of engaging in races with a share of success; or that, if successful at the outset, this period should be cut short by a more extended use of some feature of advantage, recognized as such, but not charged for in the rules.

Before presenting more formally the conclusions and recommendations of your committee, it may be well to repeat here in detail some of the statements made last year by individual members of this committee, and by others who were consulted, to a committee of this club which asked for opinions on this question. The remarks which follow are therefore quoted:

A. CARY SMITH.

"Racing qualities should be mainly considered, but no vessel should be encouraged that cannot keep the sea.

"Experience has demonstrated that for large boats the deep centerboard is best, while for small boats, say under 60ft., the keel has been the most successful. I would therefore ignore the difference between the types. The man who first devised a fin keel unconsciously struck a deadly blow at yachting. The fin keel type is under a great strain every time one is put on a dock. The past season has shown, in the smaller classes at least, that good racing can be had when all the boats in a class are of one model."

W. P. STEPHENS.

"Bear in mind the axiom that there is no such thing as absolute speed in yacht racing, but only relative speed, under the standard of sizes established by the rules.

"The object of measurement legislation is the production, not of the fastest yacht without regard to other considerations, but of the fastest under certain restrictions. The speed would soon be judged by the rule alone, and by no other standard; and yachts would be considered fast or slow according to their showing in the races. I should define a 'wholesome type' as one that, with a high degree of speed, combined as well a reasonable amount of internal space and head room, moderate instead of extreme draft and sail area, and freedom from the freak features of form and keel contour seen in the latest yachts."

G. H. DUGGAN.

"I do feel very strongly that, if racing is to prosper with us, the type of boat that is most successful therein must at least be of a kind suitable for ordinary cruising and sailing purposes; and if it were possible to make the most successful racer the most successful cruising boat, racing would receive a tremendous impetus."

JOHN HYSLOP.

"An ideal state of racing would be that in which the different features which designers seek to incorporate in their productions had their different values so justly appraised that, however different might be the vessels and their proportions, a winning vessel should be such by only a narrow margin; and where the result of the contest might leave, as a subject for interested and active discussion, the respective merits of the yachts, and the question as to which might be expected to win the next race. Such was the state of the matter when racing was most prosperous. The use of outside lead or its equivalent may be said, more markedly than anything else, to have introduced a change; to have made the success of the new yacht more pronounced than in those of former times, and to have made the successful period of shorter duration. It has incidentally increased draft inconveniently, and it has given a strength of inducement not before existing to lightness of construction.

"It has made of the centerboard yacht a keel boat with a centerboard, and of the fin-keel yacht a canoe with a fin,

"The old relation between the draft of the vessel and her displacement has been disturbed, and length of lever has been substituted for the latter, so that disparity between draft used and bulk in the body of the boat is in the latest production the most extreme. Power is to be had for nothing; it is not yoked to any economic degree of work; and while a positive limit to draft, where it has been adopted, fixes the degree of extension in this direction, it fails to give an assurance that can confidently be relied upon for an association with such draft as is taken, of a corresponding displacement and of roominess in the body of the vessel. This, it seems to me, should, in the interests of yachting and in its equities, be made the office of a good rule to put beyond peradventure. An assurance needs to be given to the owner who would build that, if his ideas are reasonable, he may have built, and may race with a prospect of success, and of some continuity of that success, a vessel of adaptations to his wants and convenience; and that while he may have to meet in competition yachts having extreme features and possessing perhaps little claim to be considered as homes afloat, the rules of measurement will do him justice; will in fact put the different craft into proper relations to each other, and will make it practicable for each man to have his way without injury to the other. It may be noted here that any failure to properly tax a feature of advantage to speed really compels its use, and if the feature is an objectionable one the result is a discouragement to yacht racing, and an inducement to keep out of it. It would be futile to attempt to unite in one vessel, and in the same degree, the features and qualities that constitute the prime racer and the best cruiser, but on such waters as Long Island Sound, and in ordinary summer weather, it is practicable to have many of the comforts of a home afloat on vessels of first-class racing capabilities. Many that have earned the best reputation in this regard will readily present themselves to the memory of any yachtsman, and just as easily others will occur to the memory which are entirely unfitted for either yachtsmen or crew to live aboard for twenty-four hours. It is quite unfair, and it is detrimental to yachting interests, that these should be in racing classed on equal terms with the first to which I have referred."

One other quotation of individual opinion may here be made, as its purpose, if not its method, meets with the hearty approval of your committee:

"The sternpost must be straight and the rudder hung on it. Experience teaches us that a vessel, to steer in rough water, must have the extreme draft at heel of sternpost, so that the rudder may be always in solid water."

These statements of opinion, all of which in their essence are fully concurred in by your committee, will have prepared you for the conclusions and the practical recommendations to which they lead. In reference to the last quotation, it may be said that the advent of the balanced rudder, or its equivalent, is a natural and necessary accompaniment of the fin type; but it is only a part of an evil principle which may take other forms, all of them embraced in the desire to diminish frictional surface by reducing the extent of lateral plane. An extreme rake given to a sternpost and to the rudder hung upon it is scarcely less bad in a vessel of considerable body, and under trying conditions, than would be a balanced rudder. With an obligation under the rules to have in racing vessels a specified, reasonable proportion of lateral plane in which the rudder would be included, evils of the character referred to would meet correction. It is recommended that this should be done.

It is recommended that cognizance shall be taken in the rules, and in the measurement formula to be used, of the relation which beam and draft, taken together, bear to a linear measurement derived from the area of the submerged midship section, namely the square root of it. It is found that in yachts of fairly good displacement, in reference to the sum of the two dimensions which have been named, that three and one-third times the square root of midship section immersed is about equal to the beam plus draft, and this proportion applies equally well to a good type of vessel, whether she be a keel or centerboard. Volunteer, Titania, Sea Fox and Minerva are instances of this; all of them would escape any addition to their measurement under the rules to be proposed, while Vigilant would be somewhat penalized, and Colonia very slightly so; but Emerald as she was before alteration would have received considerable allowance from the latter, and the alteration made to her might have been rendered needless under such a rule.

The formula would be:

$$R. M. = \frac{L.W.L. + \sqrt{S.A. + 2(B. + D.)} - 6\frac{1}{2}\sqrt{M.S.}}{2}$$

It is also recommended that the submerged profile of a yacht, the vertical longitudinal section inclusive of the rudder, shall not without penalty fall below 65 per cent. of a parallelogram, to include the ends of the L.W.L. and the draft of the vessel.

It is further recommended that if centerboards are weighted to a greater extent than is needed to sink them, their draft shall be added to that of the vessel. Your committee would also advise that cabin yachts shall be very carefully and strictly defined, so as to protect those which are veritably such, and that cabin yachts of 25ft. R. L. and over shall fall under the operation of the rules to be proposed; also that the requirement for things to be kept on board cabin yachts, when they are measured and when they are raced, which now apply to galley furnishings and to some other things, shall be extended to include all cabin and galley fixtures and fittings, and furniture ordinarily carried, also skylights, latches, doors, floors, bulkheads, and at least one anchor such as is used in ordinary service, with a suitable cable.

In regard to the correction of the evil of too light construction, there would appear to be no simple or very practicable way of dealing with the matter. The method which would perhaps have greatest claim to exactness and equity, and be as practicable as any, would be to put the proportion of ballast weight to total displacement as a decimal into the upper line of the formula, and let it substitute the divisor 2, now below the line; this your committee merely suggests, but does not recommend for immediate action,

When the Seawanhaka-Corinthian Y. C., many years ago, introduced sail area as a factor into its rule, it took a decided step in advance of anything that had before that been done in yachting, in recognizing that not merely the length of waterline or the size of the yacht should be used in gauging her speed, but that a new and very distinct element, representative of the driving force to be associated with length, should enter into the formula. The example then set has since been approved and very generally followed by yacht clubs everywhere; the changes that have since come about, and the new necessities that have arisen, are not in any degree a product of the rule, but in its present form it fails to meet them; various attempts have been made to this end, both here and elsewhere, but the devices appear inadequate, they are certainly ill-adapted and unfit to meet requirements here, to check the forms and features which are objectionable, and to protect and foster those which would meet popular requirements and favor.

In some of our classes, notably the schooner classes, and generally the larger classes, centerboards are a necessity; while in smaller craft the keel would have advantages, and would be in many cases preferred.

It appears extremely doubtful if any rule which included beam as a separate and distinct factor, or which unduly discriminated against draft, would meet with acceptance, and it appears to be nothing less than a truism that to assign to either of these distinct and separate values, or values relatively each to the other, is in the absence of more accurate knowledge wholly unwarranted; and a mischievous curb upon freedom of design and upon the development of form.

In the experience of the last few years we have found two kinds of cabin boats, differing much from each other, but both lacking in roominess and in the essentials of cruising yachts. One of these is a canoe bodied vessel, kept upright by a weighted lever, and the other a wide and shallow-bodied boat of light displacement, and carrying a large sail plan. Such a boat is formidable as a competitor in light weather, smooth water racing; but unsafe, unmanageable and unsatisfactory under trying conditions. To put yacht racing on a healthy and hopeful basis, it seems to be nothing less than necessary that the really good yacht should be freed from the need to meet such racing machines as have been referred to on any other than fair and equated terms, as otherwise good yachts will not be built, or if built their owners will be utterly discouraged from entering them in races.

The rule which has been devised, and which is now submitted to you, is believed to operate equally well for the just correction of the features which have been alluded to, whether present in the fin-keel type or in the wide and shallow section, and to be equally applicable in all classes to which it may be applied. It has its basis of warrant in the economic principle of equal opportunity for equal work done, it requires no help from arbitrary assumptions of value in beam and draft individually or relatively, which may be approximately right or wholly wrong. When applied to any list of yachts, it is merely corrective of their present measurements to the extent of a difference, if any, between two factors. It insists on an equality of opportunity for equal bodies to use equal levers, and for unequal bodies to carry levers proportionate in length to their relative bulks. Whatever the form, its requirements are not to be evaded, but having been met, the designer is free to put his own estimate on the respective values of his dimensions, and to dispose of his bulk as he may think best.

Inasmuch as the area of midship section, taken in connection with length, bears in all fast yachts only a very slightly varying relation to the displacement, the area of midship section, or the square root of it, may be said to represent displacement, and it furnishes the most simple mode of representing it. The use of displacement alone, however, without some limitation of the dimensions which can be associated with it, gives no assurance of a desirable and equitable result.

The practical carrying out of the rule recommended would require some such provision as this:

Before an entry can be accepted the owner shall supply to the race committee of the club, or to the measurer, a drawing showing the midship section (the largest cross section) of the yacht, extending from top of planksheer to the under side of the keel; and the point on the yacht at which the section is taken shall be indicated by a plain mark, the lower edge of which shall be 3in. over the waterline, as shown on the drawing, and vertical to it, and that the area of the midship section shall be stated upon the drawing furnished.

The correctness of the figures so given to be at any time subject to the protest of a competitor, and in such case to be verified by the measurer.

A similar requirement would have to be made in regard to the lateral plane, to read about as follows: Every yacht must have a lateral plane, which, including the rudder, shall be not less than .65 of the circumscribing parallelogram; such parallelogram shall be taken so as to include both ends of the L.W.L., and with draft taken to the depth of the largest cross section, or to any point of greater depth if found forward of that, plus one-third of any greater draft further aft than midship section. Any yacht having a coefficient of lateral plane of less than .65 shall have her sailing length increased by the number of decimals which her coefficient has when subtracted from .65, and the remainder divided by 5. This would be followed by a requirement for a drawing, etc., as in the other case.

In respect to the proposition which has been made for the non-removal of cabin furniture, skylights, etc., it is perhaps sufficient to say that if removal is done by all it is a trouble and affliction to all, and is no special gain to any; if done by one, it becomes a hardship or a necessity for the rest, and if done by none, there is a common relief and benefit to all contestants, and an added inducement to race.

In conclusion, it may be well to call to mind the high favor with which one-design classes have recently been received. Their success may justly be regarded as a strong and general protest against extreme features, and against the inequalities and uncertainties of racing under present conditions. They give evidence of the satisfaction with which such limitations would be received as would bring about racing under more even and wholesome conditions,

To initiate and give effect to such conditions would at the present time be a service to yachting, such perhaps as it never more needed; and it would be one in which the Seavanhaka-Corinthian Y. C. might find much satisfaction, and earn the gratitude of the yachting community. All of which is most respectfully submitted.

(Signed)

JOHN HYSLOP, Chairman.
A. CARY SMITH.
W. P. STEPHENS.

NEW YORK, May 28.

At the meeting on May 29, at which the report was submitted, the following resolution was adopted:

"Resolved, that the report of the Special Committee on Measurement be received and ordered printed and distributed among the members of the club, and that the thanks of this club be extended to the committee for their conscientious and valuable work; and

"Further resolved that this club recommend to the Yacht Racing Union of North America the adoption of the formula, or rule of measurement, proposed in the said report, and that the chairman of the Race Committee be and he hereby is directed to lay the said report and recommendation at his earliest opportunity before the Union or its council for their consideration."

The Yorkshire One-Design Class.

A NEW one-design class has recently been established on the northeast coast of England, in the vicinity of Hull, the Royal Yorkshire Y. C. being the leader, with ten boats; the Pirate Y. C., of Hornsea, having nine; and the Yorkshire-Corinthian Y. C., of Bridlington, seven. As shown by the accompanying cuts, from the Yachting Monthly, the design is very peculiar for these fin de siècle days, the waterlines of the fore body being very full, and those of the afterbody very fine. The design is by Mr. J. S. Helyer, manager of Field & Co., Limited, Ichen Ferry, who have built the boats. The dimensions are 25ft. over all, 18ft. l.w.l., 6ft. 10in. in beam, and 3ft. 4in. draft. The boats have an open cockpit amidships; the keel is of English elm, sided 3in.; the stem and sternpost, also of English oak, are sided 2 1/4 and moulded 3in.; the transom of English elm, 1in. thick; the frames of American elm, spaced 8in., with grown oak floors sided 1in., the planking being of 7/8in. redwood. The shelf is of pitch pine, 2x1 1/4in.; deck beams of English oak, with white spruce at the ends; deck 3/4in., canvased; bulwarks teak, 2in. high forward and 1in. aft, 1in. thick. The rig includes a gunter mainsail, leg-o'-mutton, and a roller jib, both of cotton duck, the area being 320sq.ft. The outfit includes one anchor and 20 fathoms of cable. All ironwork is galvanized, and the fastenings are of copper. The total ballast is 24cwt., of which 17cwt. is on the keel. The cost, f. o. b. at Southampton, is £80, or \$400. The rules of the class are as follows:

Yorkshire One-Design Class.

1. The class shall be called the Yorkshire one-design class.
2. Each boat shall have a registered representative on the committee, to whom all club notices shall be given, and failing his ability to attend, he shall have power to depute a recognized co-owner to represent him at such meeting, and that such owners shall constitute the committee of the class. Four to form a quorum.
3. There shall be elected at the annual meeting an honorary secretary, who shall also act as treasurer.
4. Election of members shall be in the hands of the committee. Candidates for membership shall be proposed by a member and seconded by another member, notice being given in writing a week previous to the election. Such election to be by ballot. Such candidate must be or become owner, or part owner, of one of the class boats.
5. The annual subscription shall be 10s., to become due on the 1st of January of each year, and if not paid before the first day of June the names of those in arrears shall be liable to be erased from the list of members.
6. In all cases of voting there shall be only one vote per boat, and no alteration or addition to these rules shall be made without two-thirds majority of those present with power to vote.
7. If a new boat is proposed to be built, the honorary secretary will supply all particulars and requirements as to builders, sailmakers, etc. Any new boat must be built according to such particulars and requirements from the existing plans and specifications in all respects, and subject to the approval of the committee of the class.
8. A special general meeting shall be summoned by the honorary secretary on requisition of six members.
9. Owners must enter their boats for regattas and club matches in accordance with the regulations of the various clubs, and whenever racing, the rules of that particular club must be strictly adhered to.
10. That the class do not recognize more than three joint owners per boat.
11. When practicable, two or more boats of the class shall be built at a time, and their ownership determined by lot.

Sailing By-Laws.

1. The number on each boat shall be limited to four when class racing, but no paid hands shall be allowed. Each boat must be steered by a member of the class.
2. The boats, masts, spars, sails, etc., shall be exactly alike, both as to size, material and construction, and no alteration of any kind shall be permitted unless with the sanction of the committee. Only one suit of new sails shall be allowed for each boat per annum.
3. The boats must race with all fittings mentioned in the original specifications on board, including anchor, chain and life buoy, but no shifting ballast of any kind will be allowed.
4. Correct number of boat, leaving out the number 3 on account of its similarity to the figure 8, must be fixed in suitable sized figures in peak of lug, so arranged that when the sail is set the figures will be upright.
5. If at any race an accident might occur which might endanger the lives of those on board a racing boat, all boats shall render assistance, and the race may be declared null and void if the committee decide that any boat has lost a prize by doing so.
6. That any dispute in respect of any race or racing regulation shall be decided by a temporary committee,

YORKSHIRE ONE-DESIGN CLASS, 1898

consisting of three members of the class, who shall have no interest in any of the boats concerned in the dispute, and to be named by the committee, and that their decision shall be final.

"Instead of a Preface."

THE almanac of yacht racing in the Solent classes, mentioned elsewhere, has no preface this year, but the author-editor, "Thalassa," under the heading "Instead of a Preface," sets forth some new ideas on the measurement question, as follows:

This is the seventh annual almanac for the Solent racing, and a preface not being required this year, I take the opportunity to ventilate a new racing rule which would produce a better type of small yacht than the Solent raters under the existing Y. R. A. rule, whether in its present form or with added coefficients.

My proposal is that the sail which a racing yacht may carry shall not exceed the amount given by the follow-

ing equation, where S represents the yacht's sail area, D her displacement, and C a constant to be settled after careful examination. When S is rendered in square feet and D in English tons of 2,240lbs. each, C may, I think, be fixed at 18 for the Solent classes.

$$\sqrt{S} = C \sqrt{D}$$

Any proviso or rule embodying displacement has been objected to by many yachtsmen on the score of the difficulty in weighing yachts, but the Y. R. A. having adopted weighing to settle a certain class of disputes concerning boats of 36 rating and under, has, by this very fact, conclusively shown that weighing is regarded as practicable for such boats.

If yachts raced under the above proviso, which represents the modulus or efficiency of any sailing vessel, the rating rule for purposes of classification and time allowance might simply be $R. 9 (L. + B.)$, where R. is the linear rating (in meters, feet or any other measure), L. is length of hull on waterline, and B. is extreme beam.

We would be glad to see Thalassa carry this idea a little further, if possible, and formulate a measurement rule of general application on this basis, of S and D as the main factors, dimensions being ignored as far as is possible.

YACHTING NEWS NOTES.

The new year book of the Yacht Racing Association of Massachusetts is an improvement even on the handsome book of 1897, and is in every way a credit to the Association. The cover is of green canvas, with an artistic design embossed in black on the front. The book contains the rules of the Association, by-laws, etc., list of associated clubs and delegates, club burgees, tables of distances, Government regulations, chart of Boston Harbor, and other useful miscellaneous matter. The frontispiece is a reproduction of Mr. Stebbins' photo of the Association rendezvous of last year, and many other reproductions of Mr. Stebbins' yacht portraits are scattered through the book. Mr. N. B. Stone, of the executive committee, contributes two very convenient cross tables of sailing distances, on the Atlantic Coast from Halifax to Panama, and on the Massachusetts coast from Provincetown to Newburyport. The book is published by A. T. Bliss, 111 Milk street, Boston, the energetic secretary of the Association, who has expended a great deal of labor in its compilation. No better evidence could be given of the prosperity and stability of the Association than a book of this kind; and in looking it over one finds it difficult to realize that the Association is barely two years old, having been organized on March 19, 1896.

The annual dinner of the Southern Y. C. of New Orleans took place on May 21 at the West End Hotel, the menu having a decidedly nautical and patriotic flavor. The club will celebrate its golden jubilee next year.

Capt. George W. Beebe, the Sandy Hook pilot, has recently compiled a very comprehensive and useful guide to the waters of New York Harbor, containing tide tables, table of currents for the North and East rivers, sunrise and sunset table, table of pilotage fees, list of fog signal stations, compass bearings and distances about the harbor, names of steamship lines and agents, location of all piers about New York, Brooklyn, Staten Island, Bayonne, etc., and charts of the North and East rivers, Kill von Kull, etc. The book was compiled solely for the use of the pilots, and is not for sale, but is so practical and useful that it would probably meet with a ready sale to yachtsmen and others.

One of the notable features of the Larchmont Y. C. is its library, which, according to the annual report recently issued, now contains 3,230 volumes, an increase of 512 volumes during the past

year. The club has been doubly fortunate in that the first library committee and its successors have shown excellent judgment in planning the establishment of the collection, and that the members of the club have been most liberal in their support of the project. The collection, which is now valued at \$16,000, bears evidence to the good judgment and artistic taste of the committees. The shelves, of a total length of 600ft., have been covered with French Levant morocco, probably the best material known for the purpose. Uniform bindings have been adopted for the various standard publications; sets of transactions, Government publications, etc., have been completed, and many standard literary works have been acquired. The club has now a very handsome new book plate. The report includes the names of books and donors within the year.

The Corinthian Y. C. of San Francisco, whose club station is at Tiburon, Marin county, Cal., has arranged its usual extended programme of week-end cruises for the fleet, beginning with an opening day on April 30 and squadron cruise on May 1, and ending on Oct. 23. On June 18-19 the fleet cruises to McNears and return; on July 2, 3 and 4 to Martinez, through Montezuma Slough to Vallejo; on July 16-17 to the Marin Islands. The summer cruise starts on July 30 and ends on Aug. 7; on Aug. 13-14 the fleet visits Port Richmond; on the 27th and 28th, Petaluma Drawbridge. The Pacific Interclub Y. A. regatta falls on Sept. 9, and the small yacht regatta two days later; then on Sept. 17-18 the fleet cruises to Vallejo. On Oct. 1-2 comes a cruise to McNears, with a clam chowder. On the 15th and 16th a cruise to El Campo, with Corinthian games and small yacht regatta on the second day. Oct. 22 is celebrated as closing day, with a final cruise on the 23d. The club may fairly claim the honor of having one of the handsomest burgees afloat, a blue field, with broad white stripe, red triangle next the fly, with white star.

The handy little guide and handbook of the Solent racing, edited by Thalassa, is ready for 1898, with the usual amount of information as to the Solent clubs, the Solent Classes Racing Association, the local one-design classes, tides, etc., with charts of all the club courses.

We have received from the publisher, L. Upcott Gill, London, a new work by A. Ansted, "A Dictionary of Sea Terms, for the Use of Yachtsmen, Amateur Boatmen and Beginners." The book contains a very large number of sea terms, relating to yachts and small craft as well as mercantile vessels; the definitions are clear and sufficiently ample, and there are numerous illustrations. The book will prove useful to all interested in yachts, boats and vessels generally.

We have received the year book of the Royal Verbano Y. C., of Lake Maggiore, Italy. The club is under the patronage of his royal highness King Humbert. The book contains a list of members and yachts, and the programme of races for 1898, from June until September. The club races under the rule of the Union of French yachts.

The May number of the Yachting Monthly opens with a story of some rough cruising in a canoe on the Severn and Bristol Channel at Easter, including a wreck. Four excellent views of the "bore" on the Severn are given. There are the usual number of interesting articles on yachting on the northeast coast, yachting in New Zealand, yachting on the Norfolk Broads, etc. The folding plates show two designs in the 42ft. L. R. designing competition. The first prize design, by Ernest H. Dashwood, shows a handsome racing yacht of strong S section and bulbed keel. The other design, by Peter Knox, is of a roomier boat, with less hollow to the sections. Both are well worked out. In addition to the many smaller illustrations of yachting scenes in all parts are four large plates, a fine picture of Satanita, one of a racing yacht in Sydney Harbor, a very good picture of a Dutch "boeier" or yacht, and a spirited view of Molesey Lock, on the Upper Thames, crowded with punts, canoes and launches. Among the smaller cuts are two views of the auxiliary Valhalla, under steam and under sail. Notice is given that in the future the designing competitions will be held quarterly instead of monthly.

Com. Jarvis, Royal Canadian Y. C., has purchased the cutter Winnetta, and has renamed her Merrythought. She will be completely refitted above deck, with new sails.

Vreda, cutter, imported in 1889 from Scotland, the first of the 20-raters under the then new "rating rule," has been sold by A. B. Boswell to Mr. Peuchen, of Toronto.

The announcement of the abandonment by the Larchmont Y. C. of all its races for the season on account of the war has been countermanded, and the club will hold its usual races. The following committees have been appointed: Regatta—John F. Lovejoy, chairman; Henry C. Winttingham and Howard W. Coates, House—Augustin Monroe, chairman; Edward J. Greacen, the commodore, ex-officio; William B. Jenkins and the treasurer, ex-officio. Library—Frank D. Shaw, chairman; William G. Scott, Randolph Hurry and Lieut. Henry Morrell. Art—Horatio R. Harper, chairman; Theodore D. Rich and Edward F. Caldwell. Golf—Frederic W. Flint, chairman; Charles A. Singer, George E. Ide, Oswald Sanderson, Roger Lamson and Frank A. Moore, secretary. Fleet surgeon—Charles F. Roberts, M.D. John Hyslop will still continue in the office of measurer.

Nydia, steam yacht, now owned by I. E. Emerson, of Baltimore, has been cut apart and lengthened 20ft. at that city. She was designed in 1890 by H. J. Gielow, and built by H. C. Winttingham, at Bay Ridge.

A special meeting of the Kingston Y. C. was held on June 2, at which it was decided to hold the Lake Yacht Racing Association regatta at Kingston on July 22, 23, 25 and 26. The prizes will reach \$1,000.

The steam yacht designed by Gardner & Cox for George Weld, Esq., of Boston, was launched at Roach's yard, Chester, Pa., on June 4, being named Malay. She is 155ft. over all, 20ft. beam and 10ft. 6in. depth, with engines 10, 16 and 25 by 16in. and two Almy boilers. She is expected to show 15 knots. Another similar craft is still on the stocks in the same yard.

The Corinthian Fleet, of New Rochelle, opened the season on June 4, at its station, Harrison Island, Echo Bay, with the usual ceremonies. The annual regatta, scheduled for June 11, will be postponed to a later date, so few racing yachts being ready; in its place a special race will be sailed open to 25ft. class, 20ft. class open sloops, 21ft. class knockabouts, and special dory class. The knockabouts will sail for the Dewar cup, which must be won twice before becoming the permanent property of the winner. Entries close on Thursday with Oscar H. Chellborg, 1 Broadway.

In consequence of the mining of Boston Harbor, the Massachusetts Y. C. will this year abandon its course off Nahant, and sail its annual regatta, on June 17, over inside courses, off City Point.

A private match has been arranged between the open 21-footer Celia, W. S. Gould, and the knockabout Mongoose, Simeon Ford, for \$50 per side. It will be sailed off the American Y. C. house, Milton Point, on June 11. Mr. Hagen Morse sailing Mongoose, and Mr. E. Burton Hart, Jr., sailing Celia.

Philadelphia Trap-Shooters' League.

THE monthly tournament of the Philadelphia Trap-Shooters' League was held under the auspices of the Independent Gun Club, on the grounds of the Florists' Gun Club, at Wissinoming, Pa., on June 4. There were fifteen events on the programme, of which eleven were in 10 targets, three at 15 and one at 20, which was made into two 10-target events; the money was divided 50, 30 and 20 in events of less than 12 entries, 40, 30, 20 and 10 in events of twelve or more entries. Targets were 1½ cents, and included in the entrance. A magautrap and five expert traps were used. The added money amounted to \$11.

Great interest centered in the team race, which was won by the Independents with a very good score. The Keller medal was also keenly contested for, and was finally won by Mr. H. Ridge.

There was a lot of excellent shooting done in the different events.

The general average in the events from Nos. 5 to 13 inclusive was won by Messrs. Wolstencroft, Beveridge and Ridge, the former finishing with a neat 97 per cent., while Messrs. Beveridge and Ridge tied on 93, all an excellent showing. Wolstencroft and Ridge shot Schultz in a leader shell. Beveridge shot E. C. in a smokeless shell.

The weather was pleasant and favorable for good shooting. Although the sun was obscured by summer clouds, the light was good. The shoot progressed most pleasantly from start to finish.

The next tournament of the League will be held under the auspices of the Wayne Gun Club, on the first Saturday in July.

Mr. J. K. Starr, of Philadelphia, attended to the entries of the cashier's department in his well known skillful and satisfactory manner.

The scores:

Forest Gun Club, 222.

Trap Around Reading.

READING, Pa., May 28.—The members of the South End Gun Club held a practice shoot preparatory to their Decoration Day tournament, which is scheduled for the 30th. The events were all at bluerocks thrown by the magautrap. Each event was at 10 targets per man. Summary:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6
Targets:	10	10	10	10	10	10	Targets:	10	10	10	10	10	10
F Yost	8	10	8	10	6	*3	Eshelman	8	8	..	9	9	9
Capt Essick	8	8	..	6	5	3	Downs	6	5	..	6	5	7
Miles	4	..	7	8	4	4	Gerhart	9	8	..	4

* Denotes only shot at 4; ran out of shells.

After the above scores were shot Mr. M. R. Eshelman and W. W. Essick shot a match at 10 targets, Eshelman winning by hitting 8 to Essick's 1. Essick then shot out the whole 25 and broke 11.

Pottstown, Pa., May 28.—The Shuler Shooting Association's team was to-day defeated by the team representing the Hill School Gun Club by the score of 73 to 61. The teams consisted each of four men, who shot at 25 targets. Sweepstakes followed. Score:

Hill School Gun Club—Vadeburg 16, Fox 15, French 20, Brown 22—73.
Shuler Shooting Association—Saylor 16, L. H. Davis 12, Grubb 14, Capt. Wickersham 19—61.

Norristown, Pa., May 28.—The Penn Gun Club held a shoot here to-day. T. V. Smith won the gold medal. Each man shot at 25 bluerocks. Scores: Smith 23, Dick 19, Rimer 18, Glisson 16, Derr 18, Bossler 16, Cassel 20, Gross.

The first of a series of three matches between the Penn Gun Club and West Chester Gun Club opens here Monday, May 30, for the intercounty championship.

Pottsville, Pa., May 27.—A big bluerock shooting tournament took place at Minersville, near here, to-day for the championship of the Schuylkill County League of Game and Fish Protective Association. F. C. Palmer, of Pottsville, won the gold medal. Each man shot at 25 bluerocks. Scores: F. Coleman 20, S. Adams 10, Cockhill 8, Pfeiffer 8, T. Davis 10, J. Tracy 14, D. Leimuger 14, D. Walker 15, L. A. Miller 10, Ed Green 20, W. J. Beck 16, D. Reid 15, J. W. Storr 19, F. C. Palmer 23, W. Halderman 12, W. Cookson 12, R. Weir 17, Ed Clouser 12, W. Wilcox 9, Lin Doudon 11, H. S. Hoover 17, F. Lawrence 17, J. Partis 10, E. Moore 7, E. G. Hoover 17, H. I. Hunsberger 14, W. J. Lawrence 11, J. Brown 14, H. Smith 13, T. James 20, H. Neuser 15, H. Diebert 12, M. Beddow 16, Ed Lloyd 11, D. Wise 19. In all thirty-five members participated in the shoot.

Reading, Pa., May 30.—An interesting event to sportsmen in this vicinity was the annual Memorial Day tournament of the South End Gun Club, held to-day on their fine shooting grounds along the river. A high wind swept across the traps during the latter part of the afternoon and made shooting difficult. All the events were shot over the magautrap, which worked finely. The principal event for the club members was the club shoot for the three gold class medals. All members were classed according to their previous records. Men having averages of 76 to 100 per cent. were put in Class A; those from 56 to 76 per cent. shot in Class B, and all under 55 per cent. in Class C. Mr. R. Eshelman took the Class A medal, breaking 24 out of 25. James Gicker won Class B medal after a tie shoot-off with James Kelly, each of whom broke 21 in the race. Class C medal was taken by Joseph Grossman. The medal or club event resulted as follows:

Class A: Eshelman 24, G. Miller 22, F. Yost 22, Gerhart 19, G. Jonhue 21, Shaaber 18, Yeager 16, Essick 14, Ball 14, Rhoads 13. Class B: Gicker 21, Kelly 21, Miles 17, Heil 17, Shultz 15, Farr 15, Texter 11. Shoot-off, 10 targets: Gicker 9, Kelly 5. Class C: Grossman 14, Downs 10.

The crowd that watched the events consisted of about 500 people, who applauded the winners, especially the winner in Class B shoot, after Mr. Gicker's fine race in the shoot-off. The scores of the open events follow:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
Targets:	10	25	10	15	10	10	15	10	10	10	15	10	10	10	6
Matz	5	19	7	12
G Miller	8	22	10	13	7	..	11	9	10

WESTERN TRAPS.

PATERSON-AMBERG FOR CHALLENGE TROPHY.

CHICAGO, Ill., May 27.—To-day, A. C. Paterson, holder of the Chicago challenge trophy, retained title to same at the close of his race with Mr. J. H. Amberg, who was the first and accepted challenger under the revised rules. Mr. Amberg had his handicap established by the trustees before his last appearance at the Watson traps, day before yesterday, when he fell so low as to score only 2 out of 10 birds. It was not to be expected that he would soon repeat so discouraging a performance as that, so that many thought he was favored enough by the allowance of 3 birds and a place at 25yds. Mr. Paterson was put at 30yds.

A small crowd gathered to see the race. It was a good shooting day, bright, with a stiffish and puffy wind coming in to the score from the right hand. The birds were varied in flights and speed, some very fast ones going out, with others not so strong. Mr. Amberg caught a left-quarterer with his first bird and did not trouble it much. He also missed his 2d, which came in and passed out to the right untouched. His 7th also got away unhurt to any extent, and thus Paterson was let in even with him. Mr. Amberg missed his 10th, a left-quarterer, and Paterson thus drew one bird ahead. The latter, however, lost his 12th dead out, and so the men were again tied. Mr. Amberg lost his 14th, very hard hit and dead out of bounds, and the big man again was one ahead. Mr. Amberg again failed to stop his 16th, and Patti's stock went sharply up. The latter ran on to his 20th without missing, and so did Mr. Amberg, but Patti could not claim the 20th, so there was only one bird between them. Mr. Amberg lost his 24th dead out, and the score, without his handicap birds being shot, stood: Amberg 18, Paterson 23. Mr. Amberg killed his allowance birds straight, making his score 21 to Paterson's 23.

Mr. Paterson shot a very deliberate, cool and workmanlike race, and left a very favorable impression as to his ability to keep in touch with the trophy under any ordinary conditions. He really knocked down 24 out of his 25 birds, his 12th bird falling within bounds, but being chased out by the dog. His 19th was a fine quick stop. His 20th bird showed the only loose work of his string. It was low and fast, and was overshot. His 22d was a lightning starter, but was grassed nicely with the first. It was openly declared about the grounds that if Patti keeps up this sort of gait the shooters will have another hard one to account for at the live-bird traps. In this race, as in his previous competitions for this trophy, for which he has now shot four times, one race being the Cunningham tie, Mr. Paterson used his "B. O. E." Remington, Leader shells, 3/4drs. Du Pont and 1/4oz. No. 7 chilled.

Mr. Amberg was clearly not in his average form as he shot to-day, having one of those off streaks which may come to any shooter, though he says he never felt better in his life, and has no reason to advance for his poor score. Part of the time he was sharp and snappy in style, but he had bad luck with incomers, on which his station at 28yds. was of no benefit to him. His 21st bird was not hit very full, but dropped in bounds and was retrieved by the dog. His 23d was flagged, but sprang fast and was nicely stopped. On his 24th an odd instance of evening up of luck occurred, the dog chasing out for him, as it had for his opponent, a bird which had fallen in bounds and appeared safe. Mr. Amberg shot an L. C. Smith gun, U. M. C. Smokeless cases, 44grs. Du Pont and 1/4oz. 7s.

A Paterson, 30 2 2 2 2 1 2 1 2 1 2 1 * 1 1 2 2 2 1 2 0 1 1 2 2 1 —23

Mr. H. B. Foss, who was present at the race, is first in with his challenge, and will be the next contestant. The race will not be shot until after the Illinois State shoot, but Patti says it will have to be on a Friday, as the other races have been. He says there are thirteen pigeons on the badge, and he shoots on Fridays to complete the hoodoo!

SPEAKING OF WOLF SHOTS.

Speaking of wolf shoots, how about Omaha this week? With some twenty-nine or thirty men in the moneys and only three or four out of the entire entry back of place, where was the especially brilliant chance to make a fortune? I am not a professional trap shot, but if I were I would have to be paid pretty well before I would go against the push which was smashing things at Omaha. Fulford, Glover, Leroy, Heikes and Dickey only break 99 out of 100! Fred Gilbert only gets 198 out of 200 targets shot at; Parmelee 195, Powers, Fulford and Heikes 194! It is enough to throw a new one into a trance. Such shooting is a grand exhibition of sporting equipment, the guns and ammunition must be perfect, but old Mr. Amateur, you better sit on the fence when those white men come along, and take it out looking at the exhibition, unless your wife's folks have got money.

WHERE IS THE FORFEIT MONEY?

I observe this week in the columns of the daily press the following challenge from Capt. A. H. Bogardus: "I hereby challenge any two officers of the Spanish kingdom, either in the army or navy, to a duel with Winchester at 100yds. Both of my adversaries to be stationed in front, and the firing to commence at the signal of a pistol shot." That's all right, Bogie, and I don't doubt you would get them both. But where's the forfeit money?

FROM SANTONE.

Mr. A. W. Adams, of Chicago, who is recently back from his winter trip to San Antonio, Tex., reports things running along pretty well down in that favored land. Oscar Guessaz has not yet gone to either Klondike or Mexico, but may go to Mexico soon. Joe George, which was postmaster, is out of office and will be in New York city the first part of the month of June, where he will be engaged in settling up a family estate. Mr. George will be of independent means henceforth, but will still choose old San Antonio as his home. He who lives three years in the far Southwest never again comes back to the North to stay.

ALPINE, OF CHICAGO.

Alpine Gun Club, of Chicago, is doing considerable practice work at Watson's this spring, and though some of the shooters are not yet to be classed as experts, they are plucky and improving. They were shooting yesterday at the park, and their scores show elsewhere with those of other participants in live-bird sweeps.

A POSSIBILITY.

There are rumors of a pigeon match, at 100 birds, between Mr. Wm. Johnson, otherwise known as Bill Johnson, a former treasurer of Cook county, and Col. C. E. Felton or Abner Price. Mr. Johnson has made the challenge open to either of the above named gentlemen, whose experience dates well back into trap-shooting in Chicago, as does his own. At present the only trouble is between Col. Felton and Mr. Price, who have fallen over each other in their eagerness to get to shoot the race with Mr. Johnson. Yet the latter is no sinecure, so to speak, to have on one's hands in a pigeon race, and it may after all prove to be a version of the old song which runneth, "Mr. Johnsing, turn me loose!"

May 27.—The meeting of the Audubon Gun Club this afternoon did not show a quorum, only six members being present. No delegates for the Peoria convention could therefore be elected. The meeting was adjourned till Tuesday, June 1.

NOTES FROM MANY TOWNS.

June 2.—Among scores of the Wisconsin Gun Club, of Milwaukee, at their last club shoot were the following: At 25 bluerocks, unknown angles: Paul 17, J. Meunier 21, Westfahl 15, Klabunde 16, Frank 19, Fisher 16, Savage 11, Albert 16, Rohn 13, Skidmore 18, Horlick 18, Hayes 15, Rogers 14.

At the last regular shoot of the Cleveland Gun Club, of Ohio, a good attendance turned out. The main event was the handicap at 30 targets. Redwing, at scratch, lost 10 out of his string of 30. Scores:

The West Side Gun Club, of Saginaw, Mich., last Monday held the first shoot of their season. There were three contests, of unique interest each. The first was for a prize of a bull pup, the second was the regular medal shoot, and the third was for a prize of additional live stock, a nice fat pig. Following are the scores:

Targets:	25	25	25	25	25	25	25	25	25
Nougle	10	13	10	Happy	10	17	19		
Messner	21	21	22	Frcuchtel	19		13

Reports from Mason City, Ia., May 31, state that Charlie Grimm ran straight in six events at 15 targets in the annual northern Iowa shoot. Open event winners were:

First event: First money, Clark, of Nora Spring.
Second event: First money, Konvalinka, of Mason City.
Third event: First money, Konvalinka, of Mason City.
Fourth event: First money, Pettit, of Osage.
Fifth event: First money, Kibbey, of Marshalltown.
Sixth event: Divided between Long, Woodbury and G. E. T.
Seventh event: First money, G. E. T., of Williamsburg.
Eighth event: First money, Smith, of Mason City.
Ninth event: First money, Clark, of Nora Springs.
Tenth event: First money, Damitt, of Osage.
Eleventh event: First money, Kibbey, of Marshalltown.
Twelfth event: First money, Steegy, of Waterloo.

Under the management of W. W. Carney, an interesting open tournament took place at Leavenworth, Kan., May 30. Among other outsiders were Lou Erhardt, of Atchison, and Chris Gottlieb, of Kansas City. Eight events were shot, and average money was won, first by Gottlieb, second by Erhardt, third by Cornett, of Kansas City, and fourth by Davis, of Platte City. Records were:

Event No. 1, 15 targets, ten entries: Jap first money, second divided between Cockrill, Cornett and Gottlieb.
Event No. 2, 15 targets, ten entries: Gottlieb first money, Japp second, Cockrill third.
Event No. 3, 20 targets, ten entries: Erhart first money, Cornett and Gottlieb second, and Cockrill and Lane divided third money.
Event No. 5, 15 targets, thirteen entries: Cockrill and Erhart tied for first, Brownie, Redmond and Hittie tied for second, and Japp and Gottlieb tied for third.
Event No. 6, 20 targets, fourteen entries: Brownie, Erhart and Cornett tied for first money, Gottlieb and Jack tied for second, and Davis, Branhull and Sweet tied for third.
Event No. 7, 15 targets, sixteen entries: Gottlieb first, Sweet and Jap second, and McGee, Cornett and Sexton third.
Event No. 8 was the big event of the day. Seven teams participated, 15 triplets, or 45 targets, to each man. Barnett and Davis pulled down first money, Gottlieb and Erhart second, and Goff and Cockrill and Jap and Sexton tied for third money. In the shoot-off Goff and Cockrill won.

The Northern Iowa shoot at Mason City, Iowa, closed June 1, after a fine day for shooting, the weather being favorable for the good runs which showed. Long, of Mason City, was high gun on the two days' shoot, 303 out of 360 possible. "G. E. T." was second, 301 broke. Dr. Kibbey, the red hot Marshalltown shot, fell off a little, scoring 280, and Woodbury, of Mason City, came next, 267. The steady-shooting Mortensen, of Britt, Iowa, shows in the first hole in many of the day's events, in which winners were as follows:

First—Divided between Konvalinka and Long. Second—Divided between Steege and Mortensen. Third—G. E. T. Fourth—Divided between Steege, Mortensen and G. E. T. Fifth—Divided between Konvalinka, Mortensen and G. E. T. Sixth—Divided between Mortensen, Long, Dimmick, Clark and Woodbury. Seventh—Clark. Eighth—Smith. Ninth—Divided between Long and Mortensen. Tenth—Divided between Smith, Woodbury and Mortensen. Eleventh—Divided between Mortensen and Clark. Twelfth—Divided between Mortensen, Long and G. E. T.

At Du Pont Park, St. Louis, a rattling shoot was in progress May 29 and 30. On the first day a stiff event was shot off for a valuable gun, at 25 targets, conditions, Winston's handicap. Score:

G Prendergast	100101100101010111101101000	—15
Straw	101111101111111010101111111	—25

S Thompson, 27	20222010212021121010002201	
Kessler, 28	0201212211*01202111021202	
Powers, 30	112121122112111111212122	
Starkloff, 30	1121122222112222022121222	

Other sweeps, some of them miss-and-out, were shot during the rest of the day.

The Pastime Gun Club, of Kansas City, held its regular Washington Park shoot May 28, at 25 live birds, and J. B. Porter won the medal with 25 straight. In the Metropolitan Target Club medal contest Gottlieb won with 48 out of 50. Faxon won the Western Target Club medal, 21 out of 25.

In the live-bird sweeps of the Milwaukee Gun Club, of Milwaukee, Wis., May 29, the following scores were made at 10 live birds:

No Good	1212102**	—7	Klapinski	1212111120	—8
Thomas	1211111112	—10	No Good	101112*112	—8

Pierce	4			5			6	8	6		
Behrens	5	6	7	8			8	1			
Folkers						2	3	5			
Tracy							8				
Fulton								10	7	5	8

On May 28 the Glenville Gun Club, of Cleveland, O., met a keen wind and consequently low scores were made, as shown below:

Events:	1	2	3	4	5	Total.
Targets:	10	10	15	20	20	75
Tebeau	8	9	12	18	10	57
Fellows	6	6	10	15	15	62
Telinde	10	10	12	16	18	66
James	8	8	13	17	14	60
Jenkins	9	10	12	17	19	67
Carraher	8					8
Grant	9	9	13	15	17	63
Evans	10	10	12	17	15	64
Sterling			15	14	16	45
Hopkins			12	14	14	40

At Belvidere, Ill., May 31, Vance won the club medal. The rest of the day was spent enjoyably at sweeps.

The third and deciding contest in the Pek

pie, John Watson, Al. L. Smith, Henry Levy and S. E. Kimbal. The Lake County Gun Club will be represented by Al. L. Smith, Nic Ford, A. Marquart, Nic Lewis, F. M. Spreyne and Henry Koehler.

The captain of Garfield Gun Club has been unable to ascertain the members who contemplate attending the State shoot, and it is very probable that the team will not be chosen until the week of the contest. It is probable that the first team will consist of R. Kuss, T. P. Hicks, E. S. Graham and Dr. S. Shaw. Others eligible are Fehrmann, Sam Young, Harry Wiley, M. J. Eich, C. Steiger, C. P. Richards, Silas Palmer, F. Baird, W. A. Jones, Dr. J. W. Meek and J. Workman.

EUREKA GUN CLUB.

The Eureka Gun Club, of Chicago, held its regular weekly target contest to-day, May 28. The attendance was only fair, which was probably due to the weather, which threatened rain. The sky was overcast, and a strong wind blew from the right quarter. The flight of the targets was, however, quite uniform, and some good scores were made in the sweeps.

The trophy contest was at 25 targets, known traps, unknown angles, classified:

Class A.	
E M Steck1111111111110111011101-22
Hollister111111111111011101110111-21

A C Paterson11110110111110110111111-20

Class B.	
R B Carson1001111011111111011111-21
V Cunnyngnam0111110110001011111101-17

Class C.	
A C Borroff111011011101101100001001-15
P C P Bradley0111111101111101101111-21

W. D. Stannard won Class A by a toss-up; R. B. Carson won Class B; A. C. Borroff won Class C.

GARFIELD GUN CLUB.

Garfield Gun Club held its regular weekly target contest on the club grounds, and it was well attended, considering the day. Following are detailed scores of the medal contest, at 25 targets, known traps, unknown angles, classified:

Class A.	
Shaw1111111100111011111111-22

R. Kuss won Class A; F. S. Baird won Class B; Mr. Eaton won Class C.

CALUMET HEIGHTS CLUB.

May 31.—The Calumet Heights Gun Club held a two-days' shoot on the club grounds, at Grand Calumet Heights, Ind. The opening of the club's season commenced with Decoration Day, and continues until Thanksgiving. The attendance on that occasion numbered seventy-two, comprising members and their families.

The day was a most perfect one, with a bright, warm sun, accompanied by a strong, cool wind blowing from Lake Michigan, which bounds the club's ground on the north. The woods about the club house are at this season fresh with foliage and flowers. The ladies spent their time gathering flowers, which they carried to their city homes.

Nearly 300 live birds were trapped and over 2,000 targets thrown during the two days.

The following are of the first day's scores. At 10 live birds, \$3, 32yds. rise, 2 moneys:

No. 1.		No. 2.	
G H Knowles202210222-8		
G C Lamphere222111111-10	101011222-8	
P D Norcom210101010-6	122201010-7	
J S Houston202020020-5	220202020-6	
Geo E Marshall1121001121-8	2101110112-8	
J A Morgan1001101100-5		
H A Ferguson0020112022-6	212221222-10	
S Lowenstein220020020-4	220020020-4	

No. 1 was live bird trophy contest, and was won by G. C. Lamphere.

No. 3, miss-and-out, \$1, birds extra:	
G C Lamphere1111111111111121-16
Geo E Marshall112111221211120
H A Ferguson12220 w
J S Houston222222210 w
P D Norcom10 w
S Lowenstein002022201 w

The excellent shooting of Mr. Lamphere won him out after killing 17 straight, and using his second barrel only once.

The club since its infancy has been using five wire-pull traps, but this year leased a magautrap, which was operated throughout the contest for the first time, which accounts for the seemingly poor shooting, as shown by the scores. The following are scores in practice events:

Events:		Events:	
Targets:	1 2 3 4 5 6	Targets:	1 2 3 4 5 6
G Lamphere9 16 .. 9 11 10	R Tuttle7
J Houston9 15 6 8 6 7	A Harlan4 12 9 ..
P Norcom9 9 5 7 9 8	H Ferguson5 6 ..
C Chamberlain0 5	J A Morgan5 ..

Nos. 1, 2, 3, 4 and 5 were singles; No. 6 was 5 singles and 5 pairs.

The second day opened with more live-bird shooting, and continued until the supply was exhausted. Scores:

Cunyngham102212202101112-12	A Harlan111202201101 w-9
A Paterson212102111201211-13	K Marks00012122121 w-9

No. 2, miss-and-out, \$1:					
V Cunnynggham0	-0	S Booth0	-0

All of the foregoing events were shot from the magautrap. Nos. 1, 3, 4, 6 and 7 were singles; No. 2 at 10 pairs.

EUREKA CLUB.

June 4.—The Eureka Gun Club, of Chicago, held its regular weekly shoot to-day. The weather was perfect, with but light wind, and the scores were consequently fair. The regular set of five traps was used, also the magautrap. A good attendance turned out, twenty-two in all in the medal contest. Badges were issued by the secretary for the members attending the State shoot at Peoria next week. One of the practice shoots to-day was under same conditions as the Smith cup race of the annual State tournament. Scores:

GARFIELD CLUB.

Fifteen members of Garfield Club appeared for the regular medal contest to-day at the club grounds, Fifty-second and Monroe streets. The conditions were favorable for good shooting, but for some reason the boys did not make any very high scores, 21 being high in the medal race, this by Mr. M. J. Eich. A very enjoyable afternoon was passed none the less. Garfield Club will send a goodly delegation to the State shoot at Peoria. Following are the scores of the day:

Events:		Events:

A. C. PATERSON.

Warwick Gun Club.

WARWICK, N. Y., May 31.—Inclosed find scores of the shooting done on the Warwick Gun Club grounds May 30. The weather was fine, and a large number of visitors were present. The live birds were a good, fair lot. The shooting was not up to the club standard because the rainy weather we have had has kept the boys from practicing. No. 10 was at 5 pairs; No. 11 was expert; No. 12 was walking:

JOHN B. ROGERS, Pres.

Piasa Gun Club's Tournament.

ALTON, Ill., June 3.—The second annual tournament of the Piasa Gun Club, held here this week, proved a magnificent exhibition of good marksmanship, and was a thorough success, although the attendance was not so large as was hoped. It proved that the experts, coming in a body, frightened off the amateurs to some extent, but while this cut the attendance it emphasized the work of those who went through the regular programme. Mr. John Parker, of Detroit, who was to manage the shoot, was kept home by illness in his family, and the conduct devolved on the local club members; everything, however, proving highly satisfactory.

The regular programme had ten 19-bird events for each day, making 380 altogether. The feature of the occasion was the shooting of the so-called Indians, who went into the game for all there was in it, and scored some phenomenal runs. Budd and Crosby tied for high average, dropping but 19 birds in all. Herschy came next with 359 kills, and other high averages were: Powers 355, Elliott 346, Winbiger 340, Seely 327, Howell 306, Riehl 301. The scores are appended.

In sweepstakes after the regular events the shooting was no less spirited, but the local men improved their gait decidedly, and so made up what they had lost in former competition with the experts:

Powers19 17 18 19 19 17 17 18 17 18
Crosby18 17 18 16 18 19 17 19 18 18

Herschy18 17 19 18 18 18 16 17 17 18
Budd17 19 16 16 19 18 17 ..
Elliott16 17 18 16 18 17 17 18 17 17
Griffith16

Nebraska State Shoot.

FIRST DAY, TUESDAY, MAY 24.

The weather here to-day is in marked contrast to that experienced at Kansas City last week. The sun is shining bright and there is just enough wind to make it pleasant. Altogether it is a capital day for shooting, with all conditions favorable to good scores. The attendance is not large, only forty shooters participating, though of this number twenty-nine shot through.

The best shooting of the day was done by Powers and Heikes; each lost but 7 birds. Budd and Parmelee come next with 10 misses chalked up against them. Powers and Budd each made five straight to-day, while Budd made a run of 97, and Powers one of 84. Thirteen of the twenty-nine shooters who shot through all the events made an average of over 90 per cent. With such favorable conditions and everything working smoothly the programme was shot out by 3 o'clock. The programme consisted of ten 20-target events, and the score shows that there were no lucky holes to drop into. The best purse of the day was cut up by Powers and Fanning, who were the only ones to go straight in No. 3. Fanning shot in the last squad, and up to that time it looked as though Powers would get it alone.

WEDNESDAY, SECOND DAY.

The principal feature of to-day's shooting is the extraordinary high averages put up by most of the participants. Probably in this respect it excels all other tournaments, as it is seldom that seven men will reach or excel 95 per cent. on the same day. Leroy, Gilbert and Powers have an average of .975, Heikes .970, Budd .965, Grimm .960, and Elliott .950. There was always an abundance of straights made, and in this respect Powers and Gilbert lead with six each to their credit, Leroy having five. It seemed to make very little difference what hole one shot into, as on several occasions straight scores paid no better than 17 or 18. Powers made the best run of the day, 87 straight, which remained unfinished. The weather is again propitious, though a trifle warm. Forty-six participated to-day, and of this number thirty-one shot through. J. W. Den, M. Miller and Jake Crabill shot in but one event. The programme consisted of ten 20-target events. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	at.	Broke.	Av.
Leroy	20	19	19	20	20	19	20	19	19	20	200	195	.975
Gilbert	20	19	20	20	19	18	20	20	20		200	195	.975
Powers	19	19	20	20	19	18	20	20	20		200	195	.975
Heikes	19	19	19	20	20	19	20	19	20		200	194	.970
Budd	19	18	20	20	18	19	19	20	20		200	193	.965
Grimm	19	20	17	20	19	20	19	20	18		200	192	.960
Elliott	17	20	18	20	20	19	19	20	18		200	190	.950
Dickey	20	17	19	18	19	19	19	18	20		200	189	.945

THURSDAY, THIRD DAY.

High averages and long runs are what characterized the shooting. Never in all my experience have I seen anything to equal it. Gilbert by some kind of hard luck actually managed to miss two targets, and could only finish with 99 per cent. However, this is fortunately high, though for quite a while it looked as if Parmelee would tie this. He lost three targets in the last two events and had to be content with an average of .975. Heikes, Powers and Fulford have .970, Leroy .965, and Jim Elliott .960. These are the seven high ones, and ordinarily such shooting would carry off the honors at nine tournaments of ten. Parmelee made one run of 123; Powers one of 96, and Elliott one of 94, which remained unfinished. Once a squad composed of Fulford, Glover, Leroy, Heikes and Dickey scored 98 out of 100, all going straight but Dickey; and again later on this same squad scored 99, Dickey this time again being the offender. However, he hit this target hard, and quite a number say he broke it. Be this as it may, the returns show that 99 were actually scored by this squad, a record never surpassed. The loss occurred along toward the end, and was Dickey's 16th target. Twenty-eight men shot through to-day, and thirty-nine participated altogether, Peterson, Beard and Bill shooting in but one event. The day dawned bright and clear, but by noon the sky became overcast, and several heavy showers fell during the shooting. At times the wind blew quite hard. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	at.	Broke.	Av.
Gilbert	20	20	20	20	19	20	19	20	20		200	198	.990
Parmelee	20	19	20	19	20	20	20	19	18		200	195	.975

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR, 10 CTS. A COPY. }
SIX MONTHS, \$2. }

NEW YORK, SATURDAY, JUNE 18, 1898.

VOL. L.—No. 25
No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, \$4 per year, \$2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

Jubilee Number.

THE issue of next week, June 25, will complete the Fiftieth Volume of FOREST AND STREAM; and the event will be fittingly marked by making that a Jubilee Number, filled to overflowing with good things. It will be notable for store of good reading and wealth of illustration.

HUNTERS RED AND WHITE.

THE Indian was the first hunter of this land—the primitive American hunter of whom much has been written. But between that hunter and the sportsman of to-day there exists this wide difference—that the pursuit of the one was the business of his life, that of the other his pleasure. The one devoted to it all his time, all his thought, all his strength; the other—except where his opportunities have been exceptional or his experiences long—gives to its practice a few days in the year, and though he may spend on it much thought, yet this thought is not a study of practical methods combined with actual work in the field. Instead, it is reminiscent or anticipatory. In other words, instead of practical study it is day dreaming.

As an inevitable consequence of his surroundings, the Indian became a most skilful hunter. His powers of observation were most highly trained, he had infinite patience; time was of no importance to him, so long as he gained his object. His continual observation of the creatures that he pursued and his continued practice enabled him to live and to live well wherever game existed.

When the Indian slew he cared for the meat that he secured, not for the methods by which it was obtained. He felt a keen excitement in the chase, but this was caused by the doubt whether he and his family should eat or should starve, not merely whether he should succeed in making the careful stalk and in aiming true his shaft. He cared for the result, no matter how obtained. The means were nothing to him.

The primitive Indian hunter was the prototype of some white gunners of to-day. He was a true market hunter, and like the market hunter he made a business of the chase. Like the Indian, the market hunter cares chiefly for results, and like him, by continued practice, he attains a high degree of skill. It is here that, his training and his traditions being widely different from the Indian's, he has a special feeling of exultation when he has done a good piece of work. Yet after all the size of his bag measures his success, and while he enjoys his shooting, he also thinks, when he counts up his birds at night, of the dollars and cents that they will bring to his pocket.

There are many men who sell their birds, and yet who feel nothing of this lust for gain which is gratified by the market gunner's successful day afield. Such men may be in circumstances where funds with which to buy ammunition are so scarce that without the money brought in by the sale of their birds they could not shoot at all. We conceive that among such men there may be as true sportsmen as ever fired a gun or handled a rod. We have known many such men, whom to know was a pleasure, and with whom to shoot was a liberal education.

Sport, as we define it to-day, is purely artificial, a product of the civilization which makes most men money getters for eleven months out of the twelve, and which makes them eager for the twelfth to escape confinement and to revert to natural conditions. The pursuing of wild creatures, which was the natural man's livelihood—his work, just as ours is hoeing corn or keeping books, or working up law cases or making sales—has become the play of the artificial man, who lives in stone or brick dwellings, and carries on the continual grind which civil-

ization enforces. This play has taken a hundred forms, and about each have grown up artificial ideals and fashions which constitute sport in the best acceptance of the term as we know it to-day.

In the sports of the field the governing principle is consideration for others; not only for our fellow men, but for the creatures whose death we are trying to compass. To take no unfair advantage of any living thing is a good code for the sportsman of to-day.

THE ILLINOIS ASSOCIATION.

THE special work assumed by the Illinois State Sportsmen's Association, the methods employed and their results furnish an interesting chapter in current history making by sportsmen's organizations.

The Association has undertaken to secure such modification of the laws that these may embody the sentiment of the members; and to provide for the laws' enforcement by a more adequate warden system than the one now in operation. To achieve these results the promoters set about the task in a methodical and systematic way, which was manifestly wisely conceived and put in operation. Prior to the winter meeting in February circulars had been submitted to the constituent clubs for their views on proposed amendments; and at that meeting the sense of the Association thus ascertained was expressed in a platform substantially as follows:

1. Dates for the open season. Ducks, geese, snipe and waterfowl, Sept. 1 to April 15; grouse and prairie chickens, Sept. 1 to Nov. 1; quail, Oct. 15 to Dec. 15; woodcock, Sept. 1 to Dec. 15; squirrels, Sept. 1 to Dec. 15; deer, wild turkeys and Mongolian pheasants, protected till 1910; doves, Sept. 1 to Dec. 15.
2. State game wardens should be paid a stated salary.
3. It would be well to have a State fund for the payment of wardens and propagation and preservation of game.
4. A fund for the payment of wardens for the protection of game, should be derived from a shooting license of \$1 for residents, and \$5 for non-residents.
5. A limit should be placed on the number of birds one person may kill in a day, i. e. thirty-five head of any one kind of game in any one day.
6. The law should prohibit entirely the sale of game, excepting during the period between the fifth day after the opening of the open season and the fifth day before the closing season.
7. The law should prohibit entirely the cold storage of game for commercial purposes in any store house of temperature less than 32 degrees.
8. The prohibiting of the cold storage of game and the sale of any game, from any State, at any period other than the time mentioned would make it unprofitable for dealers and market hunters alike to handle game, and thus take away the incentive to violate the game law.
9. There should be one State warden with a deputy for each county.
10. No hook and line fishing within 400ft. of any dam from April 1 to July 1.

These provisions having been adopted as the legislation desired by the Association, the Law Committee was entrusted with the duty of drafting a bill embodying the recommendations for action by the Legislature; and the Finance Committee undertook to provide the sinews of war. That the bill might be "pushed in all lawful and necessary ways," each individual sportsman in the State of Illinois was called upon to contribute his dollar. The secretary of each local club was appointed chairman of a sub-committee on finance, and was asked to collect a dollar from each member of his club. "We set the amount," the committee reports, "which should be asked of each sportsman at one dollar, no more, no less, believing that if a man cares anything at all for any game law he ought to care for it one dollar's worth." Something over 3,000 letters and subscription slips, covering the individual membership of clubs and deputy game wardens, have been sent out; and the returns, as reported to the date of the meeting at Peoria last week, have been by no means encouraging. The expenses of the canvas to that date were \$68.50, and the receipts \$144, leaving a net fund of \$75.44. Some surprise was expressed by the Peoria convention delegates at the meager character of the returns, and several theories were broached to account for it; by some that the proposed measures were not acceptable to all of those who had

been asked to contribute to the promoting of them; and by others that, as one delegate put it: "There has been a general feeling that it was not going to amount to anything. They were throwing away a dollar where it would do no good. But if a little evidence could be given that this money would be expended in a way that would at least indicate that some benefits would be received, a very large contribution could be gotten from the members of the Association."

The Finance Committee, on the contrary, declare that in spite of the reluctance of contributions "so firm is our belief still in the character of our sportsmen that we are not yet ready to consider our work done, but only commenced"; and by vote of the convention the committee was continued until the next annual meeting.

The financial factor in voluntary game protective enterprises is likely to prove the weak point. It is a most important and essential factor too. Funds to carry out the will of the Illinois Association must be forthcoming if the expression of that will is to amount to anything more than words. This has been the experience of kindred organizations elsewhere. Conventions have been held, game legislation has been agreed upon, and there the effort has ceased, because to carry it on has meant financial expenditure, for which the association had made no provision, and which the individual committeemen have not been willing to contribute to the cause in addition to their time. Human nature has so developed in the course of the thousands of years during which mankind has been pursuing the beasts of the field and the fowls of the air and the fishes of the deep, that men will talk enthusiastically and with earnest conviction who will not put their hands down into their pockets for a contribution to the cause. The history of game protective associations in this country is too largely a record of talk with nothing to show for it. In Illinois just at this juncture there appears to be an excellent opportunity for actually accomplishing something. If the Peoria platform truly embodies the conviction of the sportsmen of the State, the opportunity should not be lost by reason of lack of funds. That the proposed measures do represent the views of the men who have been asked to support them may reasonably be assumed from the systematic and comprehensive character of the discussion which led to their adoption. The Illinois State Sportsmen's Association probably represents the sportsmen of the State as truly as it is possible for any such organization to be representative. If then the Association fails of any effective accomplishment it is the failure of the sportsmen of the State.

An abundant but neglected food supply is found in the edible mushrooms. The mushroom may be a distinctly acceptable addition to camp food if one knows the edible varieties well, and certainly enough to make use of them. Campers who are fond of mushrooms as procured in the market at home often spend weeks in the woods in blissful obliviousness of the fact that right to hand is a natural supply to be had day after day for the gathering. Many people again who would avail themselves of such a desirable addition to the woods menu fear to hazard eating mushrooms because they cannot certainly distinguish between the edible and the poisonous. For the benefit of the camp cook we give to-day the useful report on the edible mushrooms prepared by the Agricultural Experiment Station of Cornell University, and kindly supplied to the FOREST AND STREAM by the courtesy of Prof. Roberts.

The admirable illustrations make easy and certain the identification of the mushrooms good for food, and if these mushroom notes shall be included in one's camp kit they will add materially to the gastronomic enrichment of the summer outing.

The prevailing tone of the field writing of the day is not optimistic; we are accustomed to read more of the lessening store of game and fish than of the increase; but surely the glad spirit of spring, which makes the poets sing, was upon this writer when he wrote: "Things are looking fine down at the lake, and I think we enjoy it more, and the fish run larger and bite sharper, than ever before; the trailing arbutus grew larger and was more abundant this spring; the partridges are more numerous and drum more loudly; we have the best trout fishing in the county we have had in a long time; and all the sportsmen are happy."

The Sportsman Tourist.

Skagway.

[Special correspondence of Forest and Stream.]

THE other day I met a man that I had known as the proprietor of a successful hotel in Skagway. I asked him about conditions in Skagway at the present time, and he told me that for the time being at least the boom was over, and that the City of Seattle, which I had seen in February loaded down to the gunwales with 650 passengers, had only carried six on her last trip.

"As the best way of getting clear of my interests there," he said, "I have put my hotel up for a raffle—\$5 a throw. I made my money out of it two or three times over, and now I shall be glad to get anything for it I can."

He estimated that upward of 50,000 men had crossed White and Chilcoot passes since last fall, and that but for the war the number would have been two or three times as large.

Skagway has seen its best days, but undoubtedly there will be another minor rush in July, when the first steamer from St. Michael's brings out her quota of the vast amount of gold which has accumulated in the Klondike since navigation closed in the Yukon last fall.

In February Skagway was by all odds the most important city in Alaska, and one of the busiest places on the Pacific Coast. It was the center of a population of 30,000 souls, and as a result of its superior docking facilities it transacted most of the shipping business for its sister city of Dyea, and thus controlled the trade of both White and Chilcoot passes.

It was a boom town, and city lots that a few months before had never felt a white man's foot commanded fabulous prices. Opportunities for speculation were manifold. A commercial traveler named Drake, who was only in town twenty-four hours over steamers, met an acquaintance who had some lots to sell for \$450 apiece. Shortly after a second acquaintance who had come up on the same steamer told Drake that he had bought lots in the neighborhood mentioned for \$700.

"Pshaw!" said Drake, "you're paying too much. I can get you lots every bit as good for \$600." The man asked to see them, and Drake hunted up the owner of the property and inquired if he had any of "those \$600 lots" left. There was still one to be had, and a bargain was concluded on the spot. Later, over a bottle of wine, the former owner handed to Drake the hundred and fifty that he had so easily earned.

The height of the boom, however, was already in sight, and it was predicted that Skagway would soon be like many other mining and coast towns where "a few years ago land cost \$1,000 a foot, and now you can buy the town for \$1,000."

In February, when the great rush of 1898 was just beginning, Skagway had four long ocean piers at which steamers of any draft can unload, and probably 200 hotels, saloons, gambling houses and similar places of entertainment or resort. The gambling business had been very much overdone, and the competition was so great that there was no money in it. Gamblers were leaving by every steamer, only to be replaced by others coming in. Only one building in town, the Burkhardt Hotel, was painted. This hotel accommodates 175 guests, yet it has no private rooms. The guests sleep in bunks around the walls, one over the other, like the berths in steamers or sleeping cars.

It has one ear mark of civilization, however, in that guests are not required to furnish their own bedding, as they are in Dawson and in fact at all intermediate points.

In February hold-ups in the streets were frequent, and "Denver Soapy" Smith, direct from Spokane, where he had been run out by Joe Warren, chief of police, was conducting his "sure thing" games, aided by an army of cappers and confidence men.

Thimble rigging is one of the sure thing games. Howard P. Curtis, a young New Yorker fresh from Wall Street, opened the eyes of one of Soapy's lieutenants at this game. The man was playing for his cappers and trying to interest the crowd when Curtis, who is tall of body and long limbed as well, sauntered up to the group. He made sure that the fellow was not palming the pea, and watching his opportunity when the man made a clumsy play for the benefit of one of his accomplices, Curtis reached over the heads of the inner circle with his long arm and lifted the thimble from the pea, at the same time laying down a \$20 gold piece. The shell man paid the bet, and Curtis pocketed the money and walked away.

"Here, young man, hold on," shouted the gambler. "Come back and try your luck some more."

"No, thank you," drawled Curtis, "I've business up the trail."

The "Pack Train," "Nugget" and other gambling saloons ran every known game of chance, and were crowded nightly. Many a poor fellow will never see the Klondike as a direct result of running afoul these places. Dance halls were common, and about one saloon in three had out the sign, "Dance to-night." Many of the gamblers and confidence men proposed going down to Dawson when the river opened. There are gold pieces for them there where there are cents in Skagway. The Canadian Mounted Police were counting on a great rush of this class when traveling opened, and they were quietly at work taking snap-shot photographs on the streets of the gentlemen with records, so that they will know them again when they see them in their especial bailiwick.

The attractions of Juneau are set forth in a trade circular, which among other things says:

"Juneau has two breweries and Methodist, Graeco-Russian and Presbyterian churches."

The combination of beer and religion did not strike the promulgators of the circular as incongruous, and no more did the fact that they were advertising an illegal industry. Liquor is not allowed in the territory of Alaska, but the law is so at variance with popular sentiment that no very serious effort is made to stop the traffic. Skagway also has two breweries. The Smith & Matlock Brewery, it is said, turns out more whisky than beer. It is sold at \$6 per gallon, and guaranteed to contain snakes.

The government of Skagway is chiefly in the hands of

John U. Smith, the Federal commissioner, whose residence is at Dyea. He is land officer, judge in all minor civil or criminal proceedings, and mayor and board of aldermen combined. Besides Smith there is a United States deputy marshal, appointed by Marshal Schoup, of Sitka, and revenue and custom officers.

The climate of Skagway is very similar to that of New York city, except that it is very much more windy. It is March there the year round, 15 to 25 above zero is the ordinary winter cold. The lowest point touched by the thermometer up to February was 10 above zero. At that time there was very little snow on the streets. This comparatively mild temperature is due to the proximity of the warm Japan current—a current which gives Sitka the same mean annual temperature as Washington, D. C. A few miles inland the thermometer takes a tremendous drop, and after the height of land is crossed at a distance of fifteen miles from salt water Arctic weather prevails.

Last August, when Skagway had a population of three or four thousand men, and when ocean steamships were arriving and departing daily, involving a shipping business equal to that of a place half a dozen times its size, and transportation and other business enterprises of considerable magnitude were developing on all sides, the infant city was unprovided with a post office or any official means for mailing or receiving letters. Instead the service was carried on by saloons as an accommodation, or by private parties for what they could make out of it. Post boxes were common bearing such signs as this:

"Leave a nickel with each and I will mail them.

E. Ward."

"Drop a nickel in the slot, and we'll do the rest.

Benham and Jones, etc."

The natural result of this condition of affairs was that a great many letters were lost or went astray; and there were men on the trail who had not received a single letter up to the time of embarking for Dawson, though their friends had written repeatedly.

The post-office at Skagway at the present time is a rather primitive affair, but business is conducted with a fair amount of expedition and accuracy. It is safe to say that there is not a post-office building in the United States of twice the size where an equal volume of business was transacted last winter. The postmaster found it a difficult matter to keep on hand a sufficient supply of stamps to meet the demand, and after the arrival of the mail steamer it required a good many hours to deliver the letters to the long line of expectant recipients, each one of whom had requests to make for friends, sometimes to the number of a hundred or more.

The Dawson mail goes in by way of Skagway. It is in the hands of the Canadian Government exclusively, the United States paying \$250 a trip for matter bearing our postage stamps.

Last winter it was carried across White Pass as far as Lake Bennett on the backs of horses, or drawn on sleds. After that it was turned over to half-breed Indians in charge of dog teams for its 600 mile journey down the frozen surface of the river. A corporal or other officer of the Canadian Mounted Police accompanied these teams.

The service as far as Tagish Post was very regular, but beyond that point it was a farce, and up to the first of March no mail whatever was delivered in Dawson City, and it had had no communication with the outside world since the last boats went down the river in October. At the police posts at the Big and Little Salmon rivers in January there was an accumulation of 1,600 lbs. of ½ oz. letters—more than 50,000 letters—waiting to be sent through to Dawson. Parties coming out on the ice who expected important letters in this mail were refused them on the ground that it would "take a week to go through the mail" and find the letters.

There has been no difficulty in sending letters out from Dawson at any time during the winter, for while there was no official service, scarcely a week has passed without one or more parties of miners coming out. In most cases these parties have carried letters free of charge, though after the first rush abated the old price of a dollar a letter was in some cases demanded and received.

The Canadian Government was unable to carry out its contract owing to the great scarcity of food at the upper posts on the river, and the necessity of first replenishing the supply. Several large scows carrying provisions had been lost in an ice jam above the Little Salmon, and for a time the Governor of the Provisional District of the Yukon and his party of mounted police and dog drivers had to rely for food upon the generosity of the little settlement of miners who had gone into winter quarters near by. Late in January, by indefatigable efforts, Governor Walsh succeeded in putting the food question upon a satisfactory basis, having incidentally repaid the miners double for the supplies they had advanced, and he then at once took up the other matter, and got a part of the mail through to Dawson about March 1.

Adventures in the Yukon.

The seven months which I spent in Alaska and British North-west Territory were full of incident and excitement, and I look back upon this period now with pleasure, despite the fact that it was a time of unremitting labor and no little degree of hardship and danger. Our party of five landed at Skagway at the entrance to White Pass Aug. 20, 1897. Two months later two of us embarked from Lake Bennett for the descent of the Yukon. We had experiences with shipwreck, ice jams, rapids and robbers, and were obliged to hustle once in a while to escape being gathered to our forefathers by drowning, cold or starvation.

It would be hard for the city man with his familiar round of comforts and cares to put himself in our place and realize the compensations which come to men in situations like ours—the freedom from responsibility and the perfect sense of being one's own master, the charm of days and nights close to old Mother Earth, basking in her sunshine or buoyant at breasting her storms, with the game of existence reduced to its simplest terms in the assurance that as long as we have food we hold trumps. It is so much better to have tired muscles than tired nerves. With sound sleep and an appetite and digestion capable of everything and satisfied with anything, it is keen pleasure just to live. One rises in the morning eager for work, and if there be a spice of danger in it so much the better. There is zest and vim

to the simplest occupation, and worry such as the city man feels is an unknown quantity. Much of the sympathy expressed for the heathen in his blindness, it seems to me, is wasted. The heathen can give the white man cards and spades in the matter of contentment and the philosophy of living. Give him a little bacon grease and flour and tea, and he is happy as a king; you can't make the Yukon article worry even if he is reduced to the extremity of filling his belly with the inner bark of pine trees.

It is not my purpose to hold up the Indian as an example unreservedly, but only to point out the advantages of a temporary return to barbarism as an antidote to our overwrought twentieth century civilization.

Explanatory.

The sixteenth day of last September, when after the hardest kind of work we had only succeeded in advancing our supplies to a point between the second and third bridges over the Skagway River, or less than half the distance across the White Pass, our party held a council of war to decide the best course of action to pursue. It was perfectly evident that sufficient supplies for the entire party could not by any possibility be carried across the remaining distance to Lake Bennett in season for the trip down the Yukon, but as the latter part of the trail was much easier than that on the ocean side of the summit, including as it did twelve miles of water, where our folding canvas boats could be used to save the horses and expedite the carriage of our goods, it was thought possible that supplies might be gotten over for three men. The remaining two members of the party were to give their assistance, and in return were promised a share in any claims which might be located previous to the opening of navigation in the spring. Personally, I thought the chances of any one getting through to the mining country at that time very small, and I was well content to be one of the two who were to remain behind.

With this understanding I returned to the chain of lakes in the summit of White Pass where I had for two weeks carried on a freighting business for the benefit of my party, boating supplies across for persons who agreed in exchange to do a certain amount of packing for us, or making any bargain that I thought would hasten our progress.

My first work after returning was at the most distant of the three lakes, and it was nearly a week before I came back to Summit Lake, the first of the chain, to which point our horses had been making daily trips. To my surprise the cache there included my personal outfit and that of one other man. I hurried in to camp five miles below in the timber, traveling a good part of the distance after dark. There I found that the plan, as I understood it, had been completely changed, and that two men, including myself, were to be sent down the river. I was very much averse to accepting the changed terms, but in the end I consented to go on condition that I be given the privilege of selecting my companion, and also with the distinct understanding that if the expedition failed to reach Dawson I should not be expected to winter in the country. Under no circumstances would I have assumed an obligation to remain in the interior under conditions that would have forced me to be inactive. And so it happened that Donald McKercher and I were selected for the dash through to Dawson at a time when the Yukon was already blocked by ice at its mouth and the shortest days of the year close at hand, the daylight lasting less than half as long as at the season when trips are generally made.

The Skagway Trail.

The trail across White Pass last fall was more of a theory than a condition. At the time of our arrival not half a dozen parties in all had succeeded in crossing to Lake Bennett, and one of these was lost seven days trying to find the lake. The first five miles of the trail was all that could be desired. After that it degenerated from bad to worse, till finally, as Nessmuk expresses it, it ran up a tree and ended in a knot hole.

Miles of the trail was a river of mud. An old story given a local application is of a man who saw a stranger up to his neck in the mud and asked if he was in need of assistance. "No, thank you," the man in the mud is said to have replied, "I have a good horse under me."

In August and September horses died by the wholesale. It was said that when winter came a man could walk the entire forty-five miles of the trail on the bodies of dead horses, and in places they lay eight or ten in one spot, looking as though they had been killed in battle. Many of the mud holes on the trail were impassable till they had been corduroyed with the bodies of dead horses, and it did not take long for the living horses to learn the trick of using the others for stepping stones.

One party of twelve men who landed at the same time we did lost fifty horses and spent \$15,000, and after all only succeeded in getting across the pass supplies for five months, and started so late in the season that they were frozen in before reaching Dawson. No one crossed White Pass in season except at a sacrifice of some kind.

Horses and men were alike overworked. It was a never-ceasing battle with implacable nature from daylight till dark, and long after, weekdays and Sundays. Most men worked far beyond their strength, and that they did not die on the trail like the horses is due to the purpose which animated them. You can't kill a man by work while he has hope.

Our boys more than held their own with the procession. Our horses were kept in good condition largely owing to Herrington's judgment, and with McKercher to lead and Sheriff to "chase horses" behind, and Baskerville somewhere in the middle to boss the job and do the cussing, our pack train soon won the reputation of being one of the fastest and best on the trail. McKercher and Sheriff developed into good packers, and to see them throw the diamond one would have thought they had been at it all their lives. One of our chief aims was to keep our horses' backs in good shape, and in this we succeeded admirably. Many parties were ignorant of the first rudiments of packing, and lost horses as a direct result of clumsy hitches, which permitted the load to sway and rub the animals' backs.

The sores once started got no chance to heal, and rapidly grew to frightful proportions. Often one could smell a pack train approaching long before it was visible to the eye, and when the poor creatures were unloaded the sight revealed was sickening and repulsive to the last degree. In that wild rush the kindlier feelings were put aside for the time being, and the ignorance and brutality that caused the suffering excused. Men had no pity on themselves—why should they spare the dumb brutes?

At the inner end of the trail horses had no value worth mentioning. A single feed of grain would bring more money in the open market than a horse. Grain was sold and horses thrown in to close the bargain. As a result, starving was scientifically practiced. Horses, that had been fed up to the last were in demand because they were good for a day or two without feed. Death was a mathematical certainty, but by patient and ingenious cruelty much could be accomplished with the horses in the hours that remained. Each hour of life was made to count, and when the end came the horse lay just where he fell, but the goods had been advanced—so many pounds so many miles. Sentiment and the S. P. C. A. didn't count.

I stopped one day to eat a biscuit and get a cup of tea in a tent four miles from the terminus of the trail at Lake Bennett. The owners had two horses that in their critical judgment were "good for one more trip." It would have comforted those horses to know this estimate. They had been worked to the rag end, and had had nothing to eat for several days except a very limited ration of bread. It was cheaper to buy horses good for single trips than to feed them grain or hay.

The horses were packed, and one of the men started off with them. A hundred feet down the trail the wall-eyed Pinto turned and ran back to the little clearing where stood the tent. He had actively rebelled, a most uncommon thing, for at this stage of the game horses' spirits are almost invariably broken and they plod along and accept their task as it is beaten into them. The packer was surprised, and remarked as he rounded up the horse and started him down the trail again that he didn't think Jack had that much life left in him. But old Jack had only just begun. He seemed to have realized that things weren't being conducted just fair and square, and that his master was a dumb, obstinate creature, who was doing all he could to kill a faithful friend. It was like Balaam's ass speaking. The horse showed plainly enough what he meant, and the string to it.

The second time he ran back he put his head in a hole in the cache in front of the camp made by the removal of some rocks, and it took all the men present to get him out and started for Bennett. Just as it seemed that he was safely off, he bolted a third time, and making a circle through the underbrush ran square into the tent, upsetting the stove, which was near the door, and scattering the dinner dishes in all directions.

The ridge pole was knocked out and the tent half came down on his back and the smoke poured out of the stove, and yet he stood perfectly still. He hadn't acted from an ugly motive to create confusion. He simply wanted to show that he was worked too hard and needed rest and food. I wish I could tell that the horse got what he asked for, or that death came then and there as a merciful release, but as a matter of fact old Jack carried his pack to Lake Bennett, and later in the day I saw him plodding along on the return trip.

Rainy weather was the rule in White Pass, but rain never interfered with the occupations of the trail. Men grew accustomed to the wet and mud, and developed into amphibious animals, sleeping at times in the rain, fording streams and wading through the slime of the trail. Horses were continually falling and blocking the trail. When they were driven in mud holes their owners had to jump in and help them on to their feet, making them rise with the packs still on, for it would have taught the horses bad habits to remove the loads when they were down. It was rather unpleasant at first, but after a few mud baths one got used to it, and didn't mind being plastered from head to foot, provided he could still see and breathe. Often you couldn't tell white men from negroes as a result of the mud.

It was a trail that in most places would not permit two horses passing. Sometimes big horses would push by smaller horses, taking the inner side and forcing the smaller ones out of the trail, maybe to death at the foot of a precipice. Each horse and man interfered with every other horse and man, and progress at all times was very tedious. It was no uncommon thing not to get back to camp till the middle of the night, the men hanging on to the horses' tails to keep from going over precipices in the impenetrable gloom of that sodden atmosphere.

We avoided keeping our horses over night on the exposed summit of White Pass, and as long as we fed them both hay and grain they kept in good condition. One little white cow pony died as a result of a fall over a precipice, and we lost another of the horses because his teeth were too long and he couldn't masticate his food properly. We kept the others till the very last, when two more died, largely as a result of a too concentrated diet. We could give them no hay, as owing to the fall floods it was practically impossible to get back to Skagway, our base of supplies. We fed them all the oats they could eat, but they needed bulk as well, and gradually lost strength. There is a cottonwood growth in White Pass, and if I had known what Mr. Grinnell has since told me of the food value of the bark from the smaller limbs I have no doubt we could have saved the horses longer.

At the very last we purchased three more horses, and left these for the benefit of the remaining members of the party. Two of our original six horses still remained, but unfortunately all died, I believe, soon after our departure.

We made our last trip to Lake Bennett in a heavy snowstorm, which made it difficult work to follow the trail. Once we were completely turned around in the blinding storm and on the back track toward our camp when we discovered our mistake. Few pack trains were moving that day, and the trails of such as were filled up almost as soon as made.

Each man carried a pack on his back in addition to the loads on the horses. All had been awake since 3

that morning, with only a few hours' sleep secured after a late return the night before.

At Bennett the loads were unpacked, good-bys said, and the horses returned to the last camping spot in the jack pine woods near Shallow Lake. Sheriff remained to render assistance at the start.

Our four 12ft. folding canvas boats were put together and loaded. Two of these boats were selected as freight boats, and in these were loaded hardware and the bulk of our provisions. Camp outfit, bedding, cooking utensils and supplies for immediate requirements were divided between the other two boats, which were to be the passenger craft. Each freight boat was covered over with a canvas tarpaulin, tacked to the gunwales, to keep waves out, and the passenger boats were decked fore and aft and provided with masts and gaff sails.

The freight boats were attached to the passenger boats by short tow lines.

It was after midnight when our preparations were completed, but the moon was shining brightly and the wind fair, and we decided to start at once. We could not afford to run the risk of delay by head winds.

J. B. BURNHAM.

Mushrooms.

BY GEORGE F. ATKINSON.

These "Studies and Illustrations of Mushrooms" constitute Bulletin 138 of the Cornell University Experiment Station at Ithaca, N. Y., and are reproduced here by the courtesy of Prof. I. P. Roberts, Director of the Station.

In cities and in the larger towns there is a growing number of persons who are able to recognize, with a fair degree of certainty, the plant which is usually understood to bear the name of "the mushroom," and which appears chiefly during late summer and autumn in lawns, pastures, and similar open places in fields.

A. AGARICUS CAMPESTRIS.

View of under side, showing stem, annulus, gills and margin of pileus.

This plant sometimes occurs in great abundance, and the eagerness with which it is sought by those who know its value as a food or relish testifies to its importance as an article of diet.

If the worth of mushrooms as food was properly appreciated, even by the inhabitants of small villages and of the country, the ability to recognize several of the common species would not be difficult to acquire by those who would give an amount of attention to the

lawns, pastures, and similar open places. The third one is a deadly poisonous one, and is here illustrated and described, not only because a majority of the fatalities from "mushroom-eating" are probably chargeable to its seductive appearance and virulent properties, but also because it is perhaps sometimes mistaken by the novice for the common mushroom.

The Common Mushroom.

(*Agaricus campestris*, L.)

Figure A is from a photograph of a specimen of the common mushroom (or pratelle) which has been pulled and is lying on the table. The parts are easily recognized and named. The stem (sometimes called the stipe) is cylindrical, or tapers a little toward the lower end. Near its upper end is a sort of a collar, usually termed a "ring" (or technically an *annulus*), which encircles it. This ring is very delicate in this plant, is white like the stem, of a very thin, satiny texture, and more or less ragged on the edge.

The more or less circular expanded disk into which the stem fits is called the "cap" (technically the *pileus*, which is the latin for cap). The upper portion, of which we can only see the margin in this figure, is convex. The surface is usually white, though sometimes brownish, and usually is covered by a thin layer of very delicate threads, while the flesh or inner portion is more compact, and is white also.

On the under side of the cap are numerous thin plates or "gills" (*lamellae*), which radiate from near the stem to the margin of the cap. These are shown in Figure B as fine radiating lines. They do not quite reach the stem, or when they do they are not attached to it. When the plant is very young the gills are first white, but soon become a bright pink color, and in age change to a dark brown. The substance of the stem is less compact at the center, but the stem is not really hollow, though in some instances there are slight indications of it.

The parts of the common mushroom, then, are cap (*pileus*), gills (*lamellae*), stem (*stipe*), ring (*annulus*). We must bear in mind, however, that there are many other plants which possess just the same parts, but that they can be distinguished by the color, form, texture, etc., of the parts.

At certain points on the strands the mycelium (or strand of minute whitish threads) grows to form these rounded bodies known as buttons. At first they are of the size of pin heads, and soon increase to the size of bird shot, then peas, when a minute stem begins to appear with the button growing on its free end. This increase in size as well as the increase in the length of the stem lifts its head and the upper part of the stem from the ground, and it rapidly expands into the mature mushroom. If we split several of these buttons of different sizes down through the cap and the stem, we shall see the curious way in which the gills and the ring are formed. The photograph shown in Figure C represents five of these stages. In the smaller ones the

subject equal to that which they bestow upon some other natural objects.

One reason why so little is known even of the common species is because in many neighborhoods there is no one who can recognize several of them, and thus impart the information concerning the kinds, and their prominent characters, to others. A slight degree of interest in these objects, with some observation as to form, the parts and the color of these fungi, with some one to whom the determination of the plant might be referred for a few times, would at length enable many persons to recognize a number of the commoner species, just as they come to recognize the more common birds.

young gills in the sections resemble two eyelets. These have been covered over on the outside by the mycelium growing downward from the cap, and upward from the stem, the ends of the thread interlacing to form a veil which extends all around the stem, covering the constricted portion at the junction of the stem with the button. If we cut across the button at this point the gills would show as a ring with the veil outside.

As the plant grows all these parts increase in size, the gills extending downward by the growth of the mycelium in radiating lines to form the plates. As the cap expands the veil is stretched and a cavity appears between the free edges of the gills and the veil. If we now look at Figure D, which is from a photograph of the under side of two nearly mature plants, we can see the

portion of the gill is termed the *trama*. Just outside of this, on either side, is a layer several cells deep of short cells termed the *hymenium*. From the cells of the hymenium are borne the club-shaped bodies which stand closely parallel in a layer on each surface of the gill. Each one of these club-shaped cells is termed a *basidium* (the latin work for club). Each basidium bears at its free extremity two slender processes which lend to the basidium a forked appearance. Each one of these processes is termed a *sterigma* (plural, sterigmata). Each sterigma bears a spore, which is a nearly rounded or oval body, so that each basidium in the common mushroom (*Agaricus campestris*) bears two sterigmata and two spores, while in a majority of the members of the group the basidia bear four sterigmata and four spores.

lives here for several months, or in some cases for years, before developing the fruiting portion which is the "mushroom." This first appears as a minute rounded mass on the strands of mycelium. It grows in size to form a "button" with a stem. The young gills are formed by the mycelium growing downward in radiating ridges from the under side of the margin of the button, the gills at first being covered by a delicate veil of interlacing threads. As the pileus expands it bursts through the sod, ruptures the veil, when the characters of the fully formed mushroom appear.

Lepiota naucina, Fr.

The next mushroom, or toadstool, described here is one which occurs during the same season as the *Agari-*

C. *AGARICUS CAMPESTRIS*.

D. *AGARICUS CAMPESTRIS*.

Nearly mature plants, showing veil still stretched across the gill cavity.

veil stretched over the gills from the margin of the pileus to the stem. Here we can see how delicate the texture of the veil is and how easily it is torn. During these stages the gills are pink in color except in the very youngest, when they are white, unless by some accident the plant becomes old before the veil breaks. The cap now expands more and more, and the veil is ruptured as shown in Figure E. The fragments of the veil are shown clinging partly to the stem and partly to the margin of the pileus, where the dripping tender fibrils lend a weird aspect to the specter-like plant as it lifts its head from the sod at night.

Because of the very delicate and fragile character of the veil, it does not in many cases remain clinging to the stem as a complete ring, and it is also in some cases quite evanescent.

Sometimes the fibrils on the surface of the pileus are drawn into triangular patches which point outward, as shown in Fig. F. This gives a scaly appearance to the surface of the pileus. While in the ordinary form of this mushroom the surface of the cap is white, often the

At maturity these spores easily fall away from these little forked processes (sterigmata) and give a dark brown coating to the objects on which they fall. The spores are purple brown in color, and as they mature their number on the surface of the gills accounts for the dark brown color of the latter. One can obtain what is sometimes called a "spore-print" of the under surface of the mushroom, or arrangement of the gills, by cutting off the stem and placing the pileus on white paper for a few hours. It should be placed where there are no drafts of air and covered with a bell jar or other closely fitting vessel to avoid the shifting currents of air, since the spores are so light they would not fall perpendicularly, but drift and thus confuse the print.

Brief Description of *Agaricus campestris*.

The common mushroom (*Agaricus campestris*) grows in lawns, pastures and similar places. It averages 5 to 8 cm. (2 to 3 in.) in height, the pileus being 5 to 12 cm. in diameter.

Pileus.—The cap or pileus is convex or more or less

campestris (common mushroom), and in similar localities, i. e. in lawns, pastures, etc. It is known as *Lepiota naucina*, the short stemmed parasol, or smooth *Lepiota*. Because of this similar seasonal and local occurrence it might at first be taken for the *Agaricus campestris*, especially since the plant is about the same size, is usually white or light tan, and possesses an annulus. The gills, however, are white from the youngest stages to maturity, only becoming pinkish when very old, and drying a light brown or dirty pink.

A photograph of this plant as it occurs in lawns is represented in Fig. G. On looking at the gills of a freshly growing plant one would readily distinguish it from *Agaricus campestris*, because of their white color. The spores of this plant are white. The color of the spores is one of the most constant characters which the members of the mushroom family possess, and in studying these plants some of the spores should be caught on white paper for the purpose of determining their color. Fig. H represents four different sizes and stages of this *Lepiota*. In the plant at the left the veil

E. *AGARICUS CAMPESTRIS*.

F. *AGARICUS CAMPESTRIS*.

Plant showing loose fibrils on surface of pileus drawn into triangular scales.

fibrils on the surface are brownish. In one form of the plant the triangular scales are dark brown, and give it a quite different aspect. This dark scaly form sometimes appears early in the spring.

If we note the position of the gills carefully, as we can by referring to the photograph (represented in Fig. B) of the under side of the pileus, it will be seen that they do not quite reach the stem and are rounded at the inner end. They are thus only attached by their upper edges to the surface of the pileus. Between the longer ones are shorter ones which reach, some only a little distance from the margin of the pileus, while others reach half or two-thirds the way to the stem. The space is thus used to good purpose, and the entire under surface of the pileus is crowded with these gills or lamellæ.

The surface of these gills forms what is termed the fruiting surface of the mushroom, or *hymenium*. The structure of the gill is quite specialized, and here we find parts which are characteristic of the great group of plants to which the mushroom belongs. If we cut very thin slices or sections across a few of the gills, and mount them in water under a thin cover glass for examination with the microscope, we shall see revealed these peculiarities. Through the center of the gills the mycelium continues down from that of the pileus. This middle

expanded, the surface being nearly smooth, or more or less silky hairy, these fibrils sometimes being collected into triangular scales. The color of the surface is usually white, but varies to light brown, while the flesh is white.

Gills.—When the plant is very young the gills are first white, but soon become pink, and later purple brown or dark brown from the numerous purple colored spores on the surface. The gills are free from the stem, and rounded on their inner ends.

Veil and Annulus.—The veil is thin, white, silky and very frail. As the pileus expands the veil is stretched and finally torn, when it clings as a thin collar or ring (annulus) around the stem, or fragments dangle from the margin of the pileus. As the plant becomes old, the annulus shrivels up and becomes inconspicuous.

Stem or Stipe.—The stem is white, nearly cylindrical, or slightly tapering at the lower end. It varies from 3 to 8 cm. long and 1 to 2 cm. in diameter. The flesh is solid, though less firm at the center.

Growth of the Mushroom.

The mycelium in the form of delicate threads or stouter strands (called spawn) lives in the soil, absorbing in solution certain of the substances of decaying vegetable matter, which it appropriates for growth and increase. It

still covers the gills. In the next one it has broken away from the margin of the pileus and forms a collar around the stem. In the third the pileus is still more expanded. We see here that the gills are free from the stem. The general characters, then, with the exception of the color of the spores, are the same as those of the *Agaricus campestris*.

This distinguishing feature, the different color of the spores, is regarded as such an important one that it is used to separate genera, and so this plant is placed in the genus* *Lepiota* instead of in *Agaricus*, though all the other generic characters are identical.

A few specific points might be described more in detail. The pileus is usually quite smooth, though in some specimens the surface shows numerous very fine cracks, which give it a granular appearance. The pileus is usually very symmetrical, rounded when young and strongly convex when mature. The flesh is soft and white, but remains much firmer in age, and when picked, than does that of *Agaricus campestris*.

The veil is also firmer than in the case of *Agaricus campestris*. It separates cleanly from the margin of the pileus, as well as from the stem, so that it forms a per-

*Subgenus according to some.

fect collar or ring, which in some cases may be moved on the stem. The lines of separation and the firm veil are clearly shown in the plant at the left hand in Fig. H. In old specimens the ring sometimes is torn, and may disappear.

The stem is nearly cylindrical, 5 to 10 cm. (2 to 4 in.) long and $\frac{3}{4}$ to $1\frac{1}{2}$ cm. in diameter, and is slightly enlarged or bulbous below. It is nearly hollow, though this cylindrical space is usually stuffed with loose cottony threads.

The *Lepiota naucina* is an edible species, and is valued

especially the latter. It usually occurs in woods, while the two other plants here described occur in open places. The *amanita phalloides* sometimes occurs in borders of lawns near woods. I have this year in the early part of September found four or five specimens of this deadly *amanita* in the border of one of the lawns on the campus of Cornell University.

One form of the plant is represented from a photograph in Fig. I. It is pure white and possesses an annulus or collar, but what is most important the base of the stem rests in a cup-like envelope called the volva.*

Plants natural size in lawn.

as highly as the *Agaricus campestris* by many who have eaten it.

Like the *Agaricus campestris* it is also an European species, though the descriptions in European botanical works are quite meager, and much confusion exists in reference to the shape of the spores. The spores of the European specimens are usually described as "round," though Mr. Massee in his *British Fungus Flora* describes them as subrotund. This confusion regarding the shape of the spores has led to the belief on the part of some in America that our plant is different from the European one, for the spores in our plant are elliptical or oval, not

In this specimen the margin of the volva is cleft into three parts which are somewhat spreading. This specimen was collected in a beech woods along a damp ravine in the month of July. The veil has separated by an even line from the margin of the pileus and hangs as an annulus in the form of a broad collar from near the upper end of the stem.

The pileus in this form is smooth, viscid to the touch, and pure white, as is also the annulus, stem and volva, though the latter is soiled by particles of earth. The stem is nearly cylindrical, tapering slightly from the bulbous base. It is hollow, or stuffed with cottony

rotund. For this reason the plant in America has been called *Lepiota naucinoides*. After careful study and observation of our plant, and by comparison with illustrations and descriptions of the European species, the conclusion is irresistible that the two are identical. In order to have our plant compared with the European one the writer sent some specimens to Mr. George Massee, of the Kew Herbarium, London, England. The director of the Herbarium has kindly replied that our plant is "*Lepiota naucina*, typical."

Amanita phalloides, Fr.

(The deadly *amanita*.)

The third and last plant described here is one of the "deadly" *amanitas*, the *Amanita phalloides*. It is mentioned here not only because it is probably responsible for a majority of the deaths from eating mushrooms, but because by the novice it might well be taken for either the *Agaricus campestris* or *Lepiota naucina*,

mycelial threads. The gills are usually pure white, even in age, and are nearly free from the stem. When decaying the plant emits a very disagreeable odor.

Because this plant is sometimes found in lawns and in fields bordering on the woods great care should be exercised in the collection of the *Agaricus campestris*, and especially of the *Lepiota naucina*, to be certain that a volva is not present on the lower end of the stem. Until one is certain he knows the plant he is collecting, the plants should not be picked by simply taking hold of the pileus, but the stem should be carefully dug up. In the case of some plants of *Amanita phalloides* which I found in a lawn the stem was about 7 cm. (nearly 3 in.) deep in the ground, so that by simply picking the plant by the cap, the most important character, the volva, would be lost, and by a novice the plant might be taken for the *Lepiota naucina*. Some of the specimens of

* Popularly termed the "poison-cup," "death-cup," etc.

Amanita phalloides which I have collected this summer might even be taken by a novice for the *Agaricus campestris* if the volva were not obtained. In some of the young specimens the gills were decidedly pink, so much so that several persons who saw the plants remarked on the pink color of the gills, and they were not aware of the significance of this fact. It should be stated, however, that the pink color of the gills in these young specimens of *Amanita phalloides* is not nearly so deep as the pink color of the gills of *Agaricus campestris*.

A pure white plant very closely related to this white form of *Amanita phalloides*, which occurs in the spring or early summer, is considered by some to be a distinct species, called *Amanita verna*. These pure white forms of some *amanitas*, because of their deadly poisonous property, are sometimes called the "destroying angel."

Shortly after the pileus of these plants breaks through the volva, and the stem is elongating, they are very sensitive to the directive influence which the earth, or gravity, exerts on the growth of many plants. One of the reasons why the plant grows in an upright position is that this influence directs it away from the earth. This is easily observed in placing young and rapidly growing specimens in a horizontal position. In a few hours the stem end near the pileus begins to turn upward. A specimen used for illustration was lying on its side for only about one or two hours, and the stimulus which it received in this position during the short period caused it to turn after it had been stood upright again. A view of the under side of this plant is shown in Fig. J.

Other forms of the *Amanita phalloides* occur in which the pileus is yellow, or greenish, instead of white, and sometimes bits of the volva remain adherent to the surface of the pileus in the form of whitish patches. There are other species of the genus *Amanita* which cannot be discussed in this bulletin, but will be illustrated in a future one.

Those who are not familiar with the three plants here illustrated, and who desire to be able to recognize them, are advised to search the pastures, etc., for the *Agaricus campestris* and *Lepiota naucina*, and also the damp woods for the *Amanita phalloides*, and to compare the plants found there with these descriptions. In this way familiarity with the species may be acquired which will

LEPIOTA NAUCINA.
View of gills on under surface of pileus.

serve as a means of determining them in the future. The two former species often occur in such abundance during the autumn that baskets full of them can easily be gathered.

Those who wish to preserve these plants in the herbarium, or for future determination if there is not an opportunity to determine them in the fresh state, should dry them carefully after first taking full notes on form, color, size, texture, position, etc., of the various parts of the plant. Full directions for taking careful notes or for drying cannot be given here, but may be attempted at some future time. The *Agaricus campestris* and *Lepiota naucina* can be dried in the sun, and may be kept in boxes. Or when moistened again a little by dew, may be pressed lightly between sheets of absorbent paper, and then glued to herbarium sheets or folded in paper packets. Specimens of *Amanita phalloides* contain proportionately more water and consequently shrivel more in drying. They are apt to decay before they can be dried in the sun, except in very bright weather. Artificial heat can be used, but this causes the plants to shrivel still more unless the process of drying is very slowly accomplished. In this case they should be placed over the source of heat where currents of warm air are rising and then dried very slowly. In the case of the large and watery ones some cut the plants down into two halves through the stem, then cut out the inner fleshy part of the pileus and stem, and then placing the inner faces on an herbarium sheet, dry under pressure by hot driers which should be changed frequently. This process preserves well the external form and characters where properly done. If this rule is followed other plants should be preserved whole. In order to have a record of the characters, however, careful notes on all the characters should be taken while the plants are fresh, since so many of the important ones are evanescent and disappear in drying. The notes can be supplemented by pencil sketches or even by photographs if the collector so desires. A spore print should also be preserved for a record of the color of the spores, since one cannot use the color of the gills in all cases to determine that of the spores, and a few spores under the microscope do not in many cases give the tint which a mass of spores show, and which is very important to know. Some liquid fixative like gum-arabic should be spread on the portion of the white paper covered by the pileus previous to taking the spore print so that the spores will adhere well to the paper; or they may be later fixed by using material like Rou-

get's fixative with an atomizer, though with this latter treatment the figure of the print is apt to be disturbed somewhat.

In the preparation of mushrooms for the table, information may be obtained from other sources if it is not already at hand, since we cannot here enter into a discussion of the culinary treatment. But as a matter of course all wormy and very old specimens should be discarded.

In communities where there is a desire to become acquainted with the common fleshy fungi, those interested might combine to form a "mycological club." A number of persons thus associated together might pur-

White form, showing pileus, stipe, annulus and volva.

chase a small reference library to be kept in a club room, at a trifling cost to each member. Here specimens could be brought, the literature and illustrations compared, and an exchange of opinions between the members on the various plants would assist in a more ready determination of the plant, and in the acquisition of useful information as to occurrence, habits of growth, etc. Some few in such a community would become more expert than others, and could at length be regarded as "specialists" to whom more doubtful matters could be referred, or who themselves in doubtful cases

could consult by correspondence with some one possessing greater opportunity at some botanical center. Such a club would undoubtedly become interested in other nature subjects which would afford both pleasure and profit.

Mud Turtles and Terrapin.

FOX LAKE, Wis.—There was quite a trade here this spring in mud turtles; every fisherman and market shooter was catching them. I asked a dealer where he shipped them to. He said down South. I wonder if they ain't sent back as terrapin? W. E. W.

Natural History.

Notes on the Badger.

ONE of the most interesting and at the same time one of the least known of our animals is the badger. It is not precisely nocturnal in its habits, though no doubt spending a good part of the day in sleep, but much of its life is passed under ground. It is small, and is so admirably protected by its color that it is but seldom seen except by accident. Some of its habits are no longer secrets to us, but on the other hand we know almost nothing about its breeding or its ways in winter.

Most people who have traveled much over the plains have seen badgers, and have had some experience of their digging powers, of their pluck in defending themselves, and of the difficulties of seeing them when they do not wish to be seen. Many a man too has had reason to curse the badger, when his horse on stepping into one of its holes fell, throwing the rider heavily on the hard prairie.

A badger has little to fear from an ordinary dog. The latter may escape the badger's fierce jaws by superior activity, but, do the best he may, the dog can get hold of nothing save mouthfuls of hair or loose skin, and after a day of worrying the badger, though he may be weary, will be unhurt. On the other hand if the badger should close his jaws on the dog the latter will not easily get away from him.

I used to believe that the badger could be killed by a sharp rap on the end of the nose, and for several years I lived in the faith that I had killed a number of badgers by that means. One day, however, after having struck one on the nose, and seen him roll over on his back and claw the air in apparent death agony, I stopped near him for some purpose, and a few moments later saw the badger struggle to his feet and stagger off, improving as he went, until he trotted along apparently none the worse for his period of unconsciousness.

Often one sees a badger being tormented by a coyote in the manner spoken of in the recently published "Trail and Camp-Fire." The sight is an odd one, and I never quite understood the coyote's motive. The suggestion made by the writer just referred to is plausible, and may very likely be correct.

One bright, warm day last autumn I left the ranch house and started to walk down toward the lake. I took with me a rifle, for there was a possibility that I might see a coyote or a badger or a duck or possibly even an antelope. A few hundred yards below the house, where the fence ends, I turned to cross the brook, passing over a patch of ground where many tall thistles stood. As I was about to step out from among the thistles I saw on the other side of the brook a badger smelling among some ground squirrel holes, and stood still to watch him.

He waddled clumsily from one hole to another, sniffing at each, and now and then with his claws scraping away a little of the soft dirt at the mouth of one of the holes. Nothing seemed especially to interest him, however, and he came on toward the brook and went down into its bed. As he passed out of sight, I stepped forward nearly to where the bank broke off. In two or three minutes the badger's head appeared over the edge of the bank. He paused a moment to look at me, and then seeing nothing to alarm him clambered up, and coming two or three feet nearer to me sat on his haunches and looked first at me and then all about him; not trusting to his eyes alone, but turning up his nose and wrinkling it and sniffing in all directions. He held his arms down by his side, much as a prairie dog often does when sitting erect. Lowering himself to the ground, he walked forward again until he was within 10 ft. of me, and to leeward, so that he must have scented me. Here he again sat on his haunches, but this time with his forepaws resting on the ground, and sniffed the breeze. Still he gave no sign of being alarmed, but started on again, passing three or four feet from me, walking here and there and examining the ground passed over. His gait was a brisk walk, not a trot. His body, or rather the end of the long fringe of hair at his sides, was perhaps 2 in. above the ground.

After he had passed me a little way I followed him slowly, moving only when his tail was toward me and his head down. He hunted along until he came to an open grassy flat, from which the house was in plain sight. Here he stopped, raised his head high, and for a long time looked toward the house, as if to see whether there was anything dangerous in that direction. Perhaps he was looking for the dog. Then he lowered himself quite flat to the ground and crept swiftly across the short grass of the open to a hillside beyond it, on which were many large stones and occasional clumps of sage brush. When he had reached this place the badger seemed to think that caution was no longer needed. He trotted briskly for a few steps, and then raising his tail straight up in the air began to gallop about, as if entirely gay and free from care. He was now perhaps 75 yds. from me, too far to be seen with great distinctness, so I turned and went on my way.

Not very long ago I came upon an article in the San Francisco Chronicle about a tame badger, which is well worth reproducing. It reads:

The particular badger whose friendship I once enjoyed was a full-grown specimen of the California badger, which does not materially differ from the European variety, although it is rather more carnivorous. Even in their wild state these creatures are exceedingly clever, and association with civilization had so broadened this fellow's intellect that he was occasionally rather more clever than was convenient. His cunning, his propensities for almost human mischief and teasing, together with his enormous strength, made him rather formidable when, as sometimes happened, he succeeded in entering the house.

He soon learned to stand up on his brief hindlegs and reach a latch of the door that led from the house to the inclosed porch that was his home, and for a while he reveled in destruction. Once, during the temporary absence of the ruler of the kitchen, he pushed the heavy kitchen range out into the middle of the floor. Large bureaus, heavy trunks, beds, were mere featherweights

to this 2 ft. long Sampson, and he delighted to shove them about. He would insinuate his nose or one paw between a trunk and the wall against which it stood and carefully work his way behind the trunk. Then he would brace himself against the wall and push. If the floor was uncarpeted a tiny crack between the boards afforded his sharp hind claws sufficient hold from which to push, and a carpet was his keenest delight.

This fellow slept in a sort of kennel, on the porch, and he was as particular about airing his bed as any fine lady could be. On sunshiny mornings he would drag the old blanket that formed his couch out from the kennel, and standing up on his hindlegs and using his foreclaws and teeth in a truly wonderful fashion he would throw this blanket over the rail of the porch, which he could just reach. He never failed to do this on pleasant days, but he had never been taught the trick. It had always from the first been his custom to drag his bedding forth, but his mistress used to pick it up and spread it on the rail, until one day she found him doing it himself. Doubtless the imitative instinct, which was very strong in him, accounts in a great measure for this trick, but the fact that he never did it on rainy days lends a curious air of reasoning to the performance.

There were times when none of us deemed it wise to approach him; none, that is, save the mistress of the household, who, when it was reported to her that the badger was "in a tantrum," would calmly proceed to administer maternal chastisement with the palm of her hand. He always seemed very much depressed by this experience, and after a season of chastened quiet would come to her with an expression of contrition, putting up his nose and begging to be reinstated in favor. It is not possible that the punishment ever hurt him, but he always grunted hard while it was being administered and seemed much mortified.

Audubon and Bachman, in "The Quadrupeds of America," and Dr. Coues, in his "Fur-bearing Animals," give much interesting information about this species. Few of your correspondents have much to say about it, yet the species is well worth studying.

American Museum of Natural History.

THE annual report of the president of the American Museum of Natural History for the year 1897 has just been issued and is an interesting volume of 125 pages, illustrated by a number of full-page plates and a map. The report shows marked progress in the museum as a whole, and very great additions to the collections in many departments. The accessions in the department of vertebrate paleontology are very large, and the manner in which portions of the collections in this branch have been put on exhibition deserves the greatest praise. Much has been done also in adding to and arranging for exhibition the collections in the department of anthropology, which is largely under the guidance of Dr. Franz Boas. Great accessions have been made to the department of entomology and to the library.

A very important branch of the museum's work comes under the head of the department of public instruction. This consists of series of lectures to the teachers of the public schools and to members of the museum, of the Columbia University course and of the Board of Education lectures, together with those given by the New York Botanical Society, Linnæan Society and Entomological Society.

The list of accessions to the collections and the library of the museum is a long one. The plates which illustrate the report are chiefly photographs of restorations of fossil forms now on exhibition in the museum, and of scenes taken in the West, where fossils were being collected. The frontispiece is a perspective view of the south front of the museum facing on Seventy-seventh street. There is a colored map, showing the field of proposed operations of the Jesup North Pacific expedition for five years.

The Vanishing Hippopotamus.

THE last hippopotamus has been slaughtered in Natal. All the larger and more curious creatures are disappearing so fast that this will be a monotonous world, at any rate for naturalists, in another century. Not so long ago the hippopotamus haunted the rivers of Cape Colony and Natal, and "lake cow bacon," as the salted layer of fat underlying the hide is called, was a favorite dish; but now this huge creature has disappeared from both countries. The hunter has been its enemy for many a century, but the rifle is a far more deadly weapon than the assegai. The animal has an appetite proportionate to its bulk, and can accommodate a good deal of vegetable produce. Besides this it is a wasteful feeder, trampling down and tearing up much more than it consumes, and it prefers cultivated plants to wild vegetation. That has proved its doom in Natal. One herd was left at Seacow Lake, a coast lagoon near Durban, and was protected by the Government. It consisted of parents and a family of five. Unfortunately these, like young people all the world over, loved "sweeties," and made nocturnal raids on the neighboring sugar-cane plantations. The owners petitioned the Government, a warrant of execution was granted, and the parental bull, who must have been nearly fifty years old, was the last to fall, and will henceforth be only an "exhibit" in the Durban Museum.

The hunter of the hippopotamus is not without excuse. The flesh, especially the young calf, is more than palatable. The feet of the young calf are said to make an excellent stew, and the skin to be better than conger eel as a substitute for turtle in soup. The thick, tough hide is useful for many purposes, among others for correction, since it makes formidable whips. Hippopotamus ivory at one time found a place in the mouth of man, being much used for artificial teeth, so that the lake cow was worth capturing. That no doubt has helped in accelerating its departure from a world where for a long time it had managed to maintain existence. It lived on the Lower Nile in the days of the Pharaohs. A fresco in the old temple of Edfu shows that it was then harpooned by the natives much as it is now by the Sudanese. Herodotus describes it; probably it is the behemoth of the Book of Job, so that the animal must then have been fairly common. Roman crowds stared at it in the days of the Empire.

Then came a long interval, and it was not till 1850 that London received the first which had again visited Europe. Before the Christian era it haunted the Nile even below the First Cataract; it is now not found north of Dongola, between the Second and the Third, and is comparatively rare till above Khartum. As Mr. Lydekker tells us, at the present day it is practically restricted to the African rivers and lakes between the seventeenth parallel of north latitude and the twenty-fifth of south latitude. But its range in prehistoric times was far more extensive.—*London Standard*.

Game Bag and Gun.

"The Game Laws in Brief."

THE new edition of "The Game Laws in Brief" is now ready. It gives the laws as revised to date, and is complete, accurate and convenient of reference as always. The Brief is finding constantly growing support and confidence, and has long been established as the accepted authority in its peculiarly useful field.

Chamois and Stag Hunting in Austria.

THE Scotch deer stalker would be almost as much at sea when visiting for the first time an Austrian chamois or red deer preserve as the jaeger of the latter country would be when first turned loose on a Scotch so-called "forest," where trees are conspicuous by their absence; if he were told to stalk yonder band of deer, lying out in the center of an open sketch of moor, far from covert. Both men would have to learn the niceties of sport peculiar to the respective localities before they could hope to succeed. Confining myself to the experiences of the visitor to Austria, a few words concerning the entourage of the continental preserves will fitly introduce him to his new ground.

The landed aristocracy of Austro-Hungary have from time immemorial been keen stalkers, and the stag was the most prized game that roamed the great forest which—until quite recent times, when deforestation has made dangerous inroads—dotted the northern slopes of the main chain of the glacier mantled Eastern Alps. Until the year 1848 the poacher, when detected, fared ill indeed, while the peasant dwelling in serf-life dependency upon his lord's broad acres dared not put up even fences to keep out of his wheat and turnips the deer and wild boar, which, as we know, grew in those days to a lustier size than at present. Antlers were the most valued token of friendship, and Lord Barton was by no means the first sportsman who had a great head, such as was his celebrated 20-pointer of 1893, cast in solid silver, more than one ancient head receiving that honor in life size. And the well-known instance of a king giving a battalion of the tallest grenadiers in his army for a single famous red deer head of 66 points, or of another royal antler fancier offering in vain a sum corresponding to \$25,000 for a many tined trophy of the stag, need hardly be repeated to show to what extremes went antler worship in bygone centuries.

Times have changed since then; the great magnate of Austro-Hungary no longer holds feudal sway over his peasants, and his rights and privileges are but a shadow of what they were fifty years ago. Deer preserving, except in the Carpathians, where individual estates are of enormous size, some exceeding 500 square miles, is a costly pleasure. Where the presence of beech and oak mast, and the grasses springing from a naturally rich soil, do not provide the deer with sufficient food to their taste, they will enter wheat and maize fields and do a lot of damage, which the owner of the deer must make good, if the trespassers are to escape with life and limb. When I say that deer preserving is also an expensive luxury in Austria proper, I do not mean to say that things have come quite to the same pass they have reached in the case of Scotch deer forests, where the net cost of every pair of antlers must be put at from \$250 to \$500. With the exception perhaps of a dozen families with princely incomes, the Austrian aristocracy is not as rich as the nobility or landed gentry of Great Britain, for intermarriages with commoners who have amassed great wealth in trade or business are frowned upon, as is, alas, all connection with trade or manufacture. As the necessities as well as the luxuries of life are cheaper and of a simpler description in Austria than they are in Scotland, I think it can safely be said that a third, or very little more, of the sum named would cover the cost of a stag to a stranger leasing an Austrian forest, while to the sportsman shooting his own preserve the cost would certainly not exceed \$50 per head.

In Hungary the chief aim is to stock the forest with the heaviest stags bearing the finest antlers. This, from the rich nature of the soil, is easier or achievement in that country than anywhere in Europe. In Austria proper, on the other hand, less attention is paid to the size of the deer than the number of tines, and as mountain chains traverse all the Austrian provinces situated south of the Danube, people seek to combine deer preserving with chamois preserving. The latter game, pet of the romancer, is of course a much harder beast than the stag, and can withstand cold and the vicissitudes of very hard winters infinitely better than can their antlered kinsmen, who frequent the forest below. The timber line usually marks the boundary line between the crags and cliffs forming the chamois' breezy sanctuary and the playground of the red deer in the tangled and rarely-disturbed woods just below.

In such a preserve judicious management on the part of the owner is usually rewarded with a good head of game, and as the Austrians do not look on such preserving from a pecuniary aspect, as a possible source of income, good shoots are rarely leased except owing to some exceptional cause. If they are leased at all, then they are never let for less than five, usually for not less than ten years; indeed, separate communes having shooting rights are prohibited by law to lease them for less than five years. To the owner of a good preserve, the

idea of letting his forest to a man he did not know personally, or about whose character as a sportsman he had not made the strictest inquiries—quite as searching ones as were the stranger a suitor for his daughter's hand—would be repugnant, and seem unsportsmanlike. I have heard some very unkind things said about the shopkeeper's way in which Scotch forests are let for a single season to outsiders—strangers—whose bank account is the only qualification inquired into.

The shooting lodges in Austria are as a rule, very plainly furnished huts, with no pretension whatever to the luxury people expect in Scotch lodges. Hard wooden chairs, the simplest beds, and uncarpeted floor, would make many a head keeper's cottage on a Scotch moor seem almost a palace in comparison. Austrian sportsmen are a hardy race, and take pride in putting up with as little as possible in the way of comfort, when they are on the mountains. From that veteran stalker, the Emperor of Austria, down to the young cadet of old name, but small fortune, eager to try his powers in outwitting the wary chamois, or listen for the first time to the roar of the stag's challenge as it echoes through the silent forest, the hardships of sport attract rather than repel. If these shooting chalets lack comfort, and the cuisine be of the plainest, the walls of every room, nay, the very outside of the dwelling will be adorned with trophies such as never fall to the share of the ordinary sportsman. Antlers of 18, 20 and 22 tines, and of such great size as to resemble those of the giant of the deer species, the wapiti of North America, are the trophies carried by deer whose weight is quite double that of a good Scotch stag, for in Austro-Hungary numbers of stags of 560lbs. (clean) are shot every season.

If the pleasures of the table and the ordinary comforts of life are eschewed by the Austrian sportsman, much greater care is devoted by him to the good condition of the deer than his British brother of the craft vouchsafes to his Scotch deer. Ample stores of good hay, and what is of vital importance in furthering the growth of antlers, a sufficiency of horn-producing nutriment, such as chestnuts, maize, etc., is provided for the deer, while shelter sheds distributed over the preserve, where in some seasons snow to a depth of 3 or 4ft. may lie for months at a time, afford them protection against the inclemencies of a sub-arctic winter. It must not be imagined that this winter feeding reduces the innate wildness of these deer, for only in exceptional cases can the hardest of the keepers, prepared to brave the deep snow in the isolated glens and corries where the shelter sheds are erected, ever get near the shy denizens of these upland forests. In very bad winters, when the store of hay is insufficient, serious losses cannot be avoided, and one sees on such occasions pitiable pictures of distress. I well remember one winter, that "terror" in Europe of 1874-5, I was out with a party rescuing snowed-in deer. The party consisted of men who were the pick of the sturdy mountainers, such as it would be difficult to match in any part of the world, and they did heroic work. The deer we found were standing about in the deep, soft snow, and were so near complete exhaustion that they allowed us to approach them quite close, and after a few feeble attempts to escape would greedily take the hay, with loads of which each man was supplied. It had taken us two days of hard wading to get to the worst place from the last supply of hay, and finding many more deer assembled there than we expected, and could feed, the men carried the weakest hinds on their backs for many hours through snow that reached up to their thighs; the two most powerful in the lot actually each shouldered a two-year-old stag, a truly wonderful feat under the circumstances.

While chamois can be stalked from July to December (though it is by no means an easy sport when snow mantles the slopes to any depth), the stag can only be hunted in the dense woods to which he loves to retire after he has shed the velvet, and where he lays up a goodly stock of fat, when the instincts of mating-time cause him to give vent to the challenging roar, and thereby betray his whereabouts to his human foes. At the beginning of the season when the stag is roaming excitedly through the forest on the lookout for hinds, those skilled in "calling"—imitating the sounds made by the stags and the hinds—will make use of this lure, but for the rest of the season, when the stag is more surfeited with the joys of love-making, the more deadly call to use is that of the male. Under favorable circumstances the victim will, on hearing the challenge, come rushing toward his imaginary foe, at others he will do so more carefully, stealthily stealing through the forest. Again at other times the most skillful imitation will be left disregarded, or at best will be answered only by a grunt, which, if audible to the caller, is sufficient to enable the stalker to direct his approach. Under all circumstances the scent must be well guarded, for though the stag is himself at this season, careless and unmindful of danger, he is generally surrounded by hinds, who are at that period doubly keen watchers.

Unfortunately for the sportsman these faithful watchers, numbering from two to eight head, are not always collected in one spot round the stag, but are often distributed over a considerable expanse of ground, considering the density of the timber. Let the stalker be never so careful, and manage his approach never so noiselessly, his efforts will assuredly fail if the ring is a wide one. Ambushing himself behind some bushes, he must resort to the "call"—generally by the aid of a large-mouthed sea shell, by which he can imitate the deep belching roar of the stag. If the stag has any fight left in him, and the hinds do not take the alarm, success may even then reward the skillful caller. The condition of the weather has much to do with this kind of sport, for in dull or rainy weather the stags will call much less frequently and respond more tardily than on crisp, bright autumn mornings, following frosty nights. The shooting is generally done at close ranges, for not only does the wooded character of the uplands prevent long shots, but most shots are obtained at dawn or at dusk. Of the two, the former is the best calling time, for by being out early you can arrive in the vicinity of the deer under cover of darkness. Stags are far more likely to call at night than during full daylight.

Chamois shooting, perhaps a more fascinating sport even, is conducted either by stalking or driving. The former has about it many of the features of Scotch deer

stalking, with the difference that the ground as a rule is far more precipitous, and requires not only stout legs, sound lungs, but also a clear head. For these reasons it is a kind of sport in which only younger men can shine. Of all mountain sport, it is the one which tests the sportsman's endurance most, though not his qualities as a shot, for as a rule the stalker can take his time and get in his shot under conditions favorable to success. Different is this in chamois driving, when the fleet little beasts come tearing down impossible-looking declivities amid a rattle of stones, and dash past the sportsman with a fleetness that tests his marksmanship quite as much as it does his coolness; for, as the shooting of does is avoided as much as possible, and is considered unsportsmanlike, and as the sexes resemble each other in build and in the shape of their horns, it takes steady nerves and long practice to excel in this branch of chamois hunting.

W. R. GILBERT.

Game Protection in Illinois.

At the Peoria meeting of the Illinois State Sportsmen's Association last week Game Warden Loveday summarized his work for the year in the following synopsis:

The number of arrests so far reported throughout the State for violation of the game laws, 603. That is not all the arrests that have been made, and I am sorry to say a great many deputies have not reported at all, although I know arrests have been made. The number of convictions, 548. There are only two cases now pending in court. Fifty-three cases were dismissed or non-suited wherein the evidence was not sufficient, or extreme poverty prevailed, chiefly among the poor miners during the strike. All of these cases were thoroughly investigated and your warden has used his very best and humane judgment. Thirteen of the convicted were committed to jail; the others paid fines or gave bonds from \$5 to \$130. The State has been defeated in only three cases that came to trial by jury, and only prejudice against any law was the cause of defeat.

The convictions were: 171 for shooting game out of season; 105 for shooting and trapping plumage birds; 28 for shooting after sunset and before sunrise; 11 for shooting from sink boxes, sail boats and steam boats; 223 for having in possession and offering for sale.

Game seized on sight in Chicago from June 1 to Oct. 1: 3,206 prairie chickens, 1,852 partridges, 715 quail, 429 ducks, 53 woodcock; total, 6,255.

Game seized on sight in Chicago, from Nov. 1 to June 1: 1,110 prairie chickens, 713 partridges, 9,159 quail, 742 ducks, 62 woodcock, 211 squirrels, 13 venison; total, 12,010. Total game seized, 18,265.

In Chicago, during the hot weather, 1,680 of the above number of birds came into market in a worthless condition; 1,450 of them being prairie chickens killed in the months of August and September.

It is probable that several thousand more birds could be added to this list which have been confiscated by my deputies in other counties, which were disposed of within the counties in which they were found in accordance with the law, and it has been impossible for me to get any kind of a report from them for reasons hereinafter mentioned.

It is very funny to some, perhaps, that I should pay out expense and get no salary. The expenses of this work are railroad travel, transportation for deputies in emergency case, board for same, attorney's fees outside of State's attorneys, stationery, postage, stenographer and typewriter, telegrams, salary to deport deputies, express and freight, cold storage and cartage, livery, personal expenses while traveling. All together this makes \$3,036.22 that I have paid out of nothing. The freight and express I paid at the end of the road. I made that arrangement with the express companies in order to get their good will. I paid all the express charges up to the time of seizing.

There are now 176 deputies in the State, good, bad and indifferent. I am of the opinion that if I had only 15 to 18 such men as I could choose out of the 176 under pay and under command, whom I could send from place to place when needed, I could do more good work than with this number under existing circumstances, for the reason as it appears they seem to be afraid to make arrests among their own townspeople, or people whom they know, whereas a deputy at large would know nobody, and consequently show no favors and do his best to hold his job. On account of the vigorous warfare that we have kept up in the past year against the violators of the law, I sincerely believe there will not be one in ten as many violations in the year to come. There are but few counties in the State which have not had one example or more, and the country press has kindly heralded the names of the offenders, which of itself is enough to keep many from running the risk of being published. But at the same time the work must be kept up in order to protect the game we have left. I am very doubtful if in the year to come there will be revenue from suits and seizures to pay the expenses. It is to be hoped that our next Legislature will take action on this matter.

I attribute the reason that I have not received a full return from the deputies to the fact that when I first took the office I did not know whence I was to get the money that was necessary to carry on the work that I was so anxious to do, consequently in appointing deputies I assessed them one-quarter of their earnings. I soon found out that this would not work; but that a deputy earned every cent he got and more too, and I have notified them to that effect. But in traveling around I found a number of cases wherein the deputy had not reported, and the more honest ones gave that as their reason.

The office of game warden of this State, in order to keep an accurate account of everything in detail, requires one clerk and one stenographer. The correspondence at times is very large. One hundred and three letters have been written from this office in a single day; 3,981 letters in the twelve months; 3,719 have been received. A great many of these letters have been written to make inquiries regarding fish, but nevertheless had to be answered to refer them to the proper parties from whom to get the information required.

It is necessary for the game warden to be continually traveling, and while away a responsible man should

be left for office duty. In the year I have traveled 210 days, and covered 17,890 miles.

I find by my intercourse with the sportsmen of our State that they are universally in favor of licensing the shooters at the rate of \$1 to \$2 per annum for residents of the State, and \$5 for non-residents. The Northern States have adopted this course successfully. In this way the burden of tax comes only on those who participate in the sport. If such a bill can be passed by our next Legislature, I am sure it will meet the approval of all true sportsmen. The money so raised can be set apart for the protection of game, and there will not only be enough to protect the game we have, but enough to establish a State pheasantry for the propagation of other birds that can be introduced into our State from other countries. The State of Ohio has established a pheasantry at Van Wert, and last year raised 4,000 Mongolian pheasants, besides distributing 2,000 eggs to the farmers. There are other birds that will do well in this climate, such as the caccubis chukar partridge, the sand grouse, and the black partridge of India, that can be brought to this country without trouble.

Gentlemen, that is a synopsis of what I have done. There is a great deal I have not done, because I could not be everywhere at one time. Many people have written me very angry letters because I have not visited them, but I could not do it. It was impossible, and those people are to blame. They generally think of this too late. In the height of shooting in August they were complaining to me. If they go out on the 15th of August and find nothing, it is the game warden's fault.

I am willing to appoint deputies at any time. I have dropped a good many and there are many more to drop, and I would like to appoint a great many more good ones in their places. A great many counties in this State have merely one. That is not enough. I was told when I was here at the last convention, by the game warden, Mr. Pool, that there were no violations going on here. I did not believe him. I do not believe him yet. I think if I had looked around myself I would have found a few violating the law. I have very good reasons for thinking so. A game dealer in Chicago, who is always trying to make a little fun and annoy me, showed me a letter from Peoria in the latter end of February. He would not let me see the signature. The letter proposed the sale of 100 dozen quail, No. 1 quail, asking for the best price he could give. I saw another letter from Peoria asking what he could do in eight dozen quail. If you had a good man down here, I think probably you could have caught some of these fellows. One hundred dozen quail for sale must have been known by some of your people. I watched for that 100 dozen, but I do not think they came to Chicago. If they did, they beat me. Probably they went to New York. On account of my work in Chicago I feel sure that tons of game have gone to New York from Chicago.

Question.—What would you suggest in a case of that kind?

Mr. Loveday.—I would suggest that they choose a good man for the game warden; a man who will work and has not too much money.

Mr. Richards.—Mr. President, we have heard from Mr. Loveday something that I guess none of us have known before about his work, and his report is a splendid one, and I now move that this convention give him a vote of thanks for the good work that he has done.

Seconded and carried unanimously.

Ontario's National Park.

THE Ontario Government, realizing the importance of introducing some method for the preservation of fish and game, and at the same time desiring to conduct on a vast scale experimental work in forestry, set aside in 1893 the tract of land in the District of Nipissing lying between Georgian Bay and the River Ottawa, which is now known as the Algonquin National Park of Ontario. This region of primeval forest, lake and stream contains about a million acres of land and water, within which lie the fountain-heads of the rivers Muskoka, Madawaska, Petawawa, Bonnechere and Amable du Fond. There is probably not to be found elsewhere a tract of country which in the same limited space gives rise to so many important streams, and it is fortunate that this tract exists not only in a state practically unimpaired so far as the maintenance of these streams is concerned, but also in a condition which enables it to be set aside as a reservation of the kind proposed at a minimum of expense and trouble. The larger lakes within this area are situated directly upon the several water systems of which they respectively form part, and there is scarcely a lake of any size which is not connected by stream or portage with some leading chain of waters, the consequence of which is that the whole territory within the park is easily accessible by canoe.

The largest and most important sheet of water is the Great Opeongo, which lies in four townships at the southeast of the park, and which has an extreme length of nearly twenty miles.

The other principal lakes are: McDougal, Shirley on the Madawaska, Cedar Lake, Trout Lake, Misty Lake, McIntosh Lakes on the Petawawa, Island, Canoe Lake, Smoke Lake, on the North or Muskoka River; Tea Lake, Manitow Lake on the Amable du Fond, and besides these are several chains of small lakes, such as Two Rivers, Cache, Source, and Rock lakes.

In fact, the whole region is one of a multiplicity of creeks and streams, forming in their natural progress diminutive lakes and ponds, many of them surrounded by the overarching forest being extremely beautiful. A region so wooded and watered, and so remote from all civilizing influences, cannot but be the home of a vast variety of birds, game and fur-bearing animal and fish.

Here the moose, a short time ago so nearly extinct, roam and browse in large numbers; here the red deer in vast herds graze in open meadows or quench their thirst at every running brook and stream; here the industrious beaver, the most intelligent of all animals, fells his trees and builds his dams with impunity; here the bear pushes his black hulk through the undergrowth in search of ripe nuts or berries; here, in fact, may be said to be the center from which now spreads out in all directions the moose, deer and other fur-bearing animals, such as the marten, mink, otter and beaver. In addition to the game, which

is now strictly protected, and which no one is allowed to take either by trap or gun, the lakes and streams abound with the red and gray trout, pickerel and pike, as well as the more common chub, catfish and perch. Herring and whitefish are also abundant in the larger lakes, such as McDougal, Shirley and Great Opeongo.

The woods are also well stocked with partridges, and ducks are being encouraged by the planting of wild rice in many of the lakes.

By applying for a permit to the Commissioner of Crown Lands at Toronto, any one may take fish within the limits of the park, but no one is allowed to carry firearms.

The headquarters of the park superintendent and rangers is at Cache Lake, Algonquin P. O., Ont., on the line of the Ottawa, Arnprior & Parry Sound Railway, and all necessary information as to routes may be had there from the superintendent, or from the ranger in charge.

During the last year many good portage roads have been cut through the park; new shelter huts for the accommodation of the rangers and the traveling public generally have been built at convenient points; and a new map of the park showing the canoe routes and positions of the shelter huts has been recently issued by the Ontario Government.

The park may be approached from any one of its four sides, but the recent opening of the Ottawa, Arnprior & Parry Sound road, which runs directly through the lower end of the region, makes the whole area easily accessible to the outside world.

Grand Rapids' Great Week.

Michigan Fish and Game Protective League.

GRAND RAPIDS, Mich., June 8.—A called meeting of the Michigan Fish and Game Protective League assembled at the spacious and elegant rooms of the Military Club to-night. President A. L. Lakey, of Kalamazoo, was in the chair and presided with dignity and efficiency. Secretary C. E. Brewster, of Grand Rapids, read the call, stating that the purpose was to formally take up for ratification or rejection the resolutions passed at the Interstate Wardens' convention held at Chicago last February. The following sportsmen among others were present: D. G. Henry, president Grand Rapids Game, Fish and Dog Protective Association; Fred J. Adams, vice-president Grand Rapids Game, Fish and Dog Protective Association; John Waddell, president West Michigan Fly-Casting Association; Col. E. Crofton Fox, W. D. Frost, P. H. O'Brien, George H. Davidson, president Pottawatamie Club; James Bayne, president Grand Rapids Gun Club; Eber Rice, Harry Ketcham, C. L. Lockwood, G. P. A. G. R. & I. R. R.; Harry Widdicombe, S. L. King, Judge E. A. Burlingame, Judge H. D. Jewell. Besides the above there were present Messrs. F. N. Peet, R. W. Goodsell, H. G. Hascall, Ashley C. Smith, Itha H. Bellows and L. I. Blackman, of Chicago, attending the fly-casting tournament this week.

The secretary read Sec. 1 of the interstate resolutions, prohibiting wildfowl shooting between Jan. 1 and Sept. 1. Mr. Davidson moved to amend to Jan. 31 to Sept. 1, explaining that he thought this would appease the Detroit element, who might otherwise fight. Messrs. Brewster, Fox and Waddell said they thought it best not to go to work and tear to pieces these interstate resolutions. Mr. Davidson's amendment was lost. Sec. 1 was ratified.

Sec. 2, on a non-resident license of \$25 on deer, \$1 for resident license, was ratified.

Sec. 3, declaring all game the property of the State, no individual to hold property in such game, was ratified.

Sec. 4, declaring that it shall be unlawful to ship into any State game prohibited of shipment in such State, was ratified.

Sec. 5, on deer shooting season, tentatively Nov. 1 to Nov. 20, with five days to dispose of game on hand, was on motion passed over, pending report of the Interstate Committee appointed on same, which has not yet come in.

Sec. 6, recommending Jackson's Hole region be made part of the National Park, was passed over, as not under natural jurisdiction.

Sec. 7, demanding all packages of game to be labeled, and establishing penalties for false label, was ratified.

Sec. 8, making wardens agents of other State wardens, to seize game for the latter and account for same, was ratified.

Sec. 9, abolishing cold storage, ratified.

Game for Non-Residents.

President Lakey said that it was obvious that these resolutions hardly interfered with the Michigan law, which was already good on game. Mr. Waddell said that it was seen some time ago that the Michigan law was in advance of almost all of them, and our ideas found weight in the Chicago convention. Discussion arose over the question of a non-resident carrying any game out of the State with him. Mr. Brewster thought that any man who paid \$25 deer license ought to be allowed to take some venison home with him. Mr. C. L. Lockwood, general passenger agent of the G. R. & I. Railway, on call, stated that in the past many more deer hunters came into Michigan. His road fitted up cars for them. He saw long ago that so many hunters would clean out the game before long unless restricted. Now not so many come under the license law, but he thought if they could take something, some sort of trophy, home with them, more hunters would again come. Mr. Davidson was yet more positive, and he moved to adopt a resolution allowing a non-resident license payer to take home all the game he legally killed. Mr. Rice moved to amend by substituting "one deer, if legally killed." The resolution so amended was carried.

Secretary Brewster pointed out many bad faults in the Michigan fish law. It had three exactly contradictory clauses on spearing. It was weak on the sale of trout, which sale should be forbidden. It should be amended by a section on fishways and on pollution of streams, and it should have a close season on bass and muscallunge. On motion of Mr. Eber Rice the chair was requested to

appoint a committee of three, to report a fish bill at the annual meeting of the association in January next. The chair appointed Judge Vance, of Port Huron; State Warden Chase S. Osborne, of Sault Ste. Marie, and Col. E. Crofton Fox, of Grand Rapids.

The next annual meeting of this highly practical body of protective workers will be held at Lansing, the third week of January. Only the briefest report is admissible in the press of other matters this week, but the inevitable impression gathered at this meeting is that the head association of Michigan protective interests is entirely sincere, strictly unselfish, and extremely practical. Keep your eye on Michigan. There will be no State further in the van of protection. No State has to-day a body of more disinterested and thinking sportsmen, or one with a clearer or more practical view on protection. The Interstate Wardens' convention at Chicago are well reflected in Michigan and at Grand Rapids.

E. HOUGH.

New York State Fish, Game and Forest League.

DURING these days of the establishment of national leagues and national associations for the betterment and enforcement of our game laws, the sportsmen of this State must not overlook the importance of maintaining a strong organization in our own State; for it is through this medium that we must secure proper local legislation and the means of awakening local sentiment in favor of better protection.

Without detracting in any degree from the importance of national organizations, for I believe there is much to be gained by the establishment of just such associations, I cannot but believe that it is the duty of every true sportsman in this State to associate himself and his co-workers with the New York State League.

The League has now a membership of upward of thirty clubs and associations; it should have a representation from every county in the State. It is not necessary that these organizations be large, five to ten earnest workers in any locality may do much good by organizing and bringing themselves in contact with the League.

During the past year the League has been incorporated, a revised constitution has been adopted, and through its Law Committee much valuable aid has been given in securing for us to-day a better game law than we have had for some years.

We trust that before the next annual meeting (Dec. 8) many applications for membership may be received, and that all associations now in existence, and having for their object fish and game protection, will apply for membership, thus giving us a working force sufficient to render our efforts successful. The League was never in better position to do active work, and all that is necessary is hearty support from those interested in the welfare of the fish and game of this great Commonwealth. Application blanks and necessary information can be procured of E. G. Gould, secretary, Seneca Falls, N. Y., and applications may be made at any time by associations having as their object protection of fish or game.

Organizations throughout the State are earnestly solicited to give this matter favorable consideration.

W. S. GAVITT, Pres't.

An Erie Association.

ERIE, Pa., June 8.—The Erie and Fairview Fish and Game Preserve Association has been organized and the membership comprises about 30 of Erie's leading citizens and about the same number of Fairview citizens. The first meeting was held in the office of C. L. Baker, Esq. Dr. Montgomery was chosen temporary chairman, and Chas. Shenk temporary treasurer.

The association has leased several thousand acres of land between the Half-Way House and Walnut Creek. The owners of the land are to be honorary members of the club. The Erie city members will stock the stream with young fish, and pheasants and other game will be located in the woods. The club will not allow any shooting in the woods for three years. A great number of pheasant eggs are now being hatched.

The farmers have consented to enforce the rules and regulations of the club, and warning signs will be posted along the stream and in the woods. In addition to the trout in the stream it is the intention to do some blasting near the mouth of the creek in order to permit bass and other fish to locate in the creek from Lake Erie.

The membership will be limited until after the charter has been obtained. Messrs. C. L. Baker, Clark Olds and Judge Gunnison were appointed a committee to look up the laws governing similar associations and to apply for a charter. Similar associations have been formed in Ohio and West Virginia.

A club house will be built and the members will have a desirable spot to hunt and fish within a few years.

C. B. C.

Concerning Calibers.

FOR deer there is no question but that the .45-85 is the thing. Some of the advocates of the small bores may "pooh-pooh" at this, but I can vouch for one instance where a friend, who was a better shot and a better hunter, but was handicapped with a rifle shooting a small charge, did not get a deer, while I did, only because I could make a long shot. I was amused at an article I read some time since, where some one told of having a small caliber (.22, I think) rifle in camp, and that they would have more readily parted with any of their other rifles than that. Well, it may be so; but I think that individual deserves to be classed and put on the shelf with the other cranks who are always "blowing" about muzzleloaders, and the fine targets they make, etc., etc. What is the use in all these tirades against the modern arm? What is the use in proving that the muzzle-loader will shoot better than a breach-loader? Even if proved, no one will buy a muzzle-loader. Their day is past; it will never return, and much better might its advocates spend their time and talents in giving us pointers on the modern arm than in wasting both in bolstering up an antiquated relic of times gone. Why is it that the manufacturers of our repeating rifles do not pay more attention to the sighting of their guns? It is not because they cannot put good sights on, because there are several styles of fair sights. But some of the repeaters leave the factory with sights that are a dis-

grace. And this is one of the most important items about a rifle.

PRAIRIE DOG.

Colorado Game and Fish Law Held to be Invalid.

COLORADO SPRINGS, Colo., May 28.—Judge Harris, of the District Court, held to-day that the game and fish law enacted in Colorado in 1897 is unconstitutional. Among other things, the law provides that any person having game of certain kinds for sale or serving it at hotels or restaurants is liable to a fine. Under this a number of restaurant keepers in Cripple Creek, who had shipped in game from Utah, were arrested for serving it. Judge Harris holds that "game, fish and forestry" are the names used in the title of the bill and in the subject matter of the law, and that they are three separate matters; that the constitution holds that only one subject can be treated in a statute, and therefore the law is plainly unconstitutional.

Camp-Fire Flickerings.

"That reminds me."

Tone's Partridge Story.

ABOUT a mile from our village lived a noted fox hunter known as Tone by everyone far and near. As a man he was very nearly a perfect specimen, over 6ft. in height, well proportioned, strong as an ox, and as active as a boy; but he never succeeded in turning all this to any account, except that he was a first-class fox hunter. He could do much more work in a day than any one in these parts, but the trouble was that after a good day's work he would spend the next eight or ten days in bragging over it and getting rested; and it was about the same thing in fox hunting. But when it came to telling a fox story, as tales of the sport were called, he could give you every jump of the fox; every bark of the dog; every move of the hunter, and then prove that he alone knew what was what by showing the skin. Many of his fox stories were interesting, and some of them peculiarly so, while each one had at least one touch of the marvelous, and all of them invariably ended alike in the death of the fox. Blank days were indeed blank to him, for he never mentioned them unless closely questioned, and then he would have a reasonable excuse, and tell you that strange dogs got on the trail, and he knew how it would be, so he came home, or perhaps he would look indignant and tell you that the dogs were after the old vixen again, and "you don't suppose I would kill her, do you?"

One story that I have heard him tell many times was a hummer and no mistake. Whether it was true or not I shall leave for the reader to decide, as I have my doubts upon both sides of the question. Perhaps it will be as well if I let Tone tell the story in his own way, as you may be better able to understand it and come to a correct conclusion as to its truthfulness. In order to get him well started it was only necessary for some one who had not heard him tell the story to ask him about it, when he would sit down and fix himself in an easy position and give it in about this style:

"You, see, Squire James wanted to go up to the plantation, so we went. He took his stand at the 'big chestnut,' and I and old Sounder went up alongside the gully to the pot hole, but there wa'n't no fox there; so I started for the thick swamp, and Sounder he swung off to the right over the hill to the hemlocks, but I knewed that he would get to the swamp about as soon as I did if he didn't strike a track, so I kept on; and when I got there I went to the leeward side, and I smelled a fox, so I put for the head. But I wa'n't quick enough, for old Sounder got round sooner than I expected, and as soon as I heard him yep I knowed 'twa'n't no use, so I pulled foot for Squaw Corner; but the old dog drove him so fast that I couldn't get there on time. So I started for the big gully, thinking that he might sheer off that way. But 'twa'n't no use. Old Sounder was right arter him, and he didn't have time to turn, and he steered straight for old Tyott, with the old dog, yow-yow, at every jump right at his tail. I just sot down on a rock and harked to him till he got out of hearing; then I got across the gully and went to the barway and sot down and waited more'n an hour. Bimeby I heard him 'way nor'-west, and I knowed that he'd come back through the dingle, so I started for the p'int as fast as I could leg it, and when I got within about two rod of the edge of the brush more'n twenty pa'tridges jumped all 'round me; and as I was kinder out of wind it partly sca't me, and I ketched my foot in something and most fell down, and I stuck the old gun forward to kinder save myself, and I swan to man if I didn't stick the end of the gun and ramrod square straddle of a pa'tridge's neck; but I didn't fairly know it then, for as I straightened up I seed the fox jump outen the path, and I brought up the old gun, pa'tridge and all, and let go at him, and killed him deader'n hay, with that blamed pa'tridge flutterin' at the end of the gun all the time, and I didn't fairly come to know it till arter the fox was kickin'. If you don't believe it, jest ask Squire James; he was there and seed it, and he'll tell it jest as it is."

This, in substance, was the story told by Tone. Squire James, a reliable and truthful man even when telling a fox story, gave his testimony about like this:

"All I can tell you about it is that Tone and I went up to the plantation, and I sat down by the big chestnut until old Sounder started the fox, and I then got up and listened to the music until he was out of hearing in the direction of Tyott; but I knew that he would probably come back through the dingle, and I started for the point of woods at the lower end of it, and had nearly reached my stand, when I heard some partridges fly, and a moment later I saw Tone about ten rods to my right just as he shot the fox, and there was certainly a partridge hanging by the neck between the muzzle of the gun and the ramrod, and the bird was still warm when I examined it, and it may be that Tone tells it straight. But I don't know, I don't know. Tone tells such awful lies and so many of them that I am 'most afraid there is something wrong about this; but, however he came by the partridge, he never shot it, for if he had I should have heard the gun."

SHADOW.

Sea and River Fishing.

Flow Gently, Sweet Outlet.

Flow gently, sweet outlet, along thy green banks;
Flow gently, I'll sing thee a song of my thanks;
My heart is so full of thy beautiful worth,
I thank the Creator who first gave thee birth.

Flow gently, sweet outlet, through woodland and field;
Flow gently through meadows that wild flowers yield.
My fancy is free as thy soft rippling stream,
And bears me aloft in the arms of my theme.

Flow gently, sweet outlet, so graceful thy form;
Flow gently, unruffled by wind or by storm.
Thy glad, purring music like laughter resounds,
And the roar of thy falls from hillside rebounds.

Flow gently, sweet outlet, low murmuring stream;
Flow gently, I visit thee oft in my dream;
The twinkling of stars on thy bosom I see,
And trees on thy marge make obeisance to thee.

Flow gently, sweet outlet, where blue herons feed;
Flow gently where wild ducks in secrecy breed.
The red antlered deer come no more to thy brink,
Where sleek, lowing kine stoop at evening to drink.

Flow gently, sweet outlet, I love thy deep pools;
Flow gently where fishes lie feeding in schools.
The rod of the angler bends over thy waves,
And the play of the reel the captive will save.

Flow gently, sweet outlet, in far, winding ways;
Flow gently, remindful of fair angling days;
Let fly-fishers cast on thy bright ripples' crests,
And favor them most as thine own honored guests.

Flow gently, sweet outlet, thy loveliness keep;
Flow gently, for never shall memory sleep;
Engraved on the mind of the angler shall be
Undimmed recollections, sweet outlet, of thee.

CANANDAIGUA, N. Y.

DR. C. T. MITCHELL.

Grand Rapids' Great Week.

West Michigan Fly-Casting Association Tournament.

GRAND RAPIDS, Mich., June 8.—This is a great week in Grand Rapids, perhaps as wide in general sporting interest as is apt to be the case in any city of the West for many a day. A trap-shooting tournament, the executive meeting of the State Trap-Shooting League, the meeting of the State Association for Protection of Fish and Game, with a two-days' fly-casting tournament, a general social after the close of such meet, and last a genuine and actual journey of all visitors and their hosts to a dozen different noble trout streams for real experience with the angle on the stream. It will be long before such a programme will be offered the public world of sport again. None but a city like Grand Rapids, with 100,000 of the best sort of inhabitants and a host of royal sportsmen, could offer such a programme, and only this city, with its miles of lovely streets, its fine clubs, its good hotels, its broad-gauged railroads, and its splendid casting grounds made to order at its very door, could carry such a programme to a smooth and happy conclusion. Grand Rapids has proved more than equal to the occasion. This has been as fine a gathering of amateur sportsmen as one would ever see outside the great sportsmen's exhibitions. Not a man of all the visitors can fail to experience surprise and pleasure at his reception, and not one of the many hosts should permit himself to think that a single thing was omitted or slighted to make each and every event of the big week a bright and shining success. The management of the fly-casting tournament deprecated their inexperience, but they need offer no apologies, for no management ever did so well. All the officers deserve praise; the secretary, Mr. Eber Rice, proved a host in himself; the Lakeside Club extended its courtesies also, and everything was commodious and convenient. The only delays arose over the amiable reluctance of the competitors to break away from their friends and get to their places on the platform.

A Happy Spot.

Reed's Lake, which lies in the outskirts of the city, reached by fast trolley in twenty minutes' ride, is a happy spot for a fly-casting tournament. It is a quiet body of water a couple of miles across, with several big streams, a boat house of shells and barges, a number of pavilions, theaters, etc., and around all an envelope of pure fresh green, largely of the foliage of the rock maples, which line the streets of the city. There are several docks running out offering splendid view points for the spectators over what seems like a quiet harbor. Out in this harbor the platform was erected, with room enough about it on every hand so that the buoy-line for measurements could be shifted as the wind suggested, giving the caster the benefit of the wind. Alongside the buoy-line a long floating raft, about 50x10ft. in size, was moored. This allowed the judges and timekeepers to follow the fly along the line at a distance of but a few feet, and was better than any use of the shore could have been, as all crowding by spectators was obviated. Once in a while the weight got too much for the raft and feet got wet, but this was but part of angling, and caused no comment. The experts of the rod all declared that Reed's Lake is the best place in the West for a tournament, far better than the park lakes of Chicago, with their annoying crowds.

The entry to-day ran small, including only Grand Rapids and Chicago men. The Chicago Fly-Casting Club sent over Capt. Fred N. Peet, with a record of 111ft.; B. W. Goodsell, 110ft.; Itha H. Bellows, also an off-time winner, with the younger but efficient enthusiasts, Ashley C. Smith and H. G. Hascall. Mr. L. I. Blackman came over with the jolly party by boat to Grand Haven, but did not enter for contests. The novelty of the tournament brought out large and interested crowds.

At luncheon, at the adjacent hospitable Lakeside Club

to-day, the following were at table: John Waddell, president W. M. Fly-Casting Association; Eber Rice, secretary W. M. Fly-Casting Association; Sherwood Hall, Daniel Tower, W. D. Frost, Judge Burlingame, Chas. E. Brewster, deputy game warden; Frank Rodgers, prosecuting attorney; D. G. Henry, deputy game warden; Horace W. Davis, president Michigan Fish Commission; Col. E. C. Fox, W. A. Tateum, Fred J. Adams, Harvey Carr, Geo. H. Newell, Chas. Withev. I. H. Bellows, Fred N. Peet, B. W. Goodsell, H. G. Haskell, H. Smith, L. I. Blackman, Fred Divine, Utica, N. Y.; Hon. Chase S. Osborne, State game warden.

An hour was passed in fun and story telling.

The Tournament.

FIRST DAY, WEDNESDAY, JUNE 8.

Ample time was offered for the running off of the three events of the day, one of which was finished before noon. No attempt was made to hurry through, and the crowds took eager interest in the practice of the contestants about the docks, more especially the bait-casting of the Chicago Fly-Casting Club men, which seemed a novelty to very many, and was enjoyed and shown by such fine exponents of the art. Twenty rods were in action here and there, and everybody seemed full of enthusiasm and good nature.

For the benefit of other clubs contemplating such work, the rules of the contests are printed as follows:

Rule 1. All persons competing for prizes shall pay an entrance fee as follows: One event, \$2; two events, \$3; three events, \$4; all events, \$6. Entries in each event close thirty minutes before contest commences.

Rule 2. The captain shall be the executive officer of the day, and the secretary-treasurer shall receive all entry fees and issue cards to contestants designating their number in the order of competition. The timekeeper shall start and close all events. He shall signal the judges with a flag and call time to the contestants.

Rule 3. The contest shall be governed by two judges and a referee. In case of disagreement the referee shall decide.

Rule 4. All casting shall be done single-handed only.

Rule 5. Competitors may consult their own wishes in choice of reel and line, but lines must not be knotted or weighted, and bait-casting reels must be free running.

Rule 6. The leader shall be of single gut, and shall not be less than 6 nor more than 9ft. in length. One fly only shall be used, of a size not smaller than No. 12 or larger than No. 6. Hooks shall be broken off at the head.

Rule 7. All ties shall be cast off immediately after the contest.

Rule 8. Contestants or visitors shall not be allowed nearer the judges than 10ft.; and any contestant distracting the attention of the judges, timekeeper or contestant in any manner whatever shall forfeit all rights or claims and be barred from any further part in the contest.

First Event.—Fixed distance and accuracy fly casting at buoys, 50, 55 and 60ft. Rod not to exceed 8½oz. Five casts at each buoy; for each foot or fraction of a foot from buoy a demerit of one shall be scored. One minute allowed to extend line.

Each contestant shall stand upon the platform and make his cast parallel with a buoy line, upon which shall be accurately marked the points of distance from such platform. The length of casts shall be measured from the edge of platform where buoy line is made fast to the spot reached by the fly. No other than fair overhead casting shall be permitted. Should any competitor whip off his fly he shall replace it with another one. No cast shall count when the fly is missing. For the replacing of flies the contestants shall be allowed additional time, not to exceed two minutes. The judges may, in their discretion, allow time for rejoining of a rod, or replacing of a broken section, not to exceed fifteen minutes.

Judges were: Fred J. Adams and D. W. Tower, of Grand Rapids; G. W. Strell, referee; Horace Davis, timekeeper. Seven entries, Bellows, Peet, Goodsell and Hascall, of Chicago; Fox, Waddell and Newell, of Grand Rapids. The big man from Chicago, "Uncle" Goodsell, was a shade too good for the others, and good-humoredly, as always, accepted congratulations on first, with 89.33 per cent. Bellows, of Chicago, took second 88 per cent.; Peet, of Chicago, third, 87 per cent.; but Col. Fox stopped the procession toward Chicago by winning fourth for Grand Rapids, 86.23 per cent. The work was pretty and was intently watched, and though not record breaking, was not amateurish. The weather was favorable, cloudy and calm, coming off bright and hot after threatening rain. No wind interfered.

Second Event.—Accuracy bait-casting at buoys 50, 70, 80, 90 and 100ft. One cast at each buoy, with half ounce rubber frog; for each foot or fraction of a foot frog drops from buoy a demerit of one shall be scored. Free running reel required.

There shall be five 6in. buoys, distant 50, 70, 80, 90 and 100ft. from the edge of the casting platform, and there shall be made one cast at each buoy, the buoy to be designated at the option of the captain, contestant to be allowed one preliminary cast at 50ft. buoy, which he can commence his score with if he so states to the judges, thereupon they shall call "next buoy," and so on until contestant has completed his five casts. If frog falls upon the buoy cast at, it shall be considered perfect; for each foot, or fraction of a foot, from such buoy, a demerit of one shall be made; the sum total of such demerits, divided by five, shall be considered the demerit per cent.; the demerit per cent. deducted from 100 shall be the accuracy per cent. Free running reel only allowed. The general rules for fly-casting, where they do not conflict with these rules, shall apply.

This was left entirely to the Chicago delegation, Messrs. Bellows, Peet, Goodsell, Smith and Hascall, the others not having acquired the art of the free reel to such a point as to care to compete with such cracks. Mr. D. G. Henry, of Grand Rapids, did enter, but only as an accommodation entry, and withdrew after a balk and tangle. Again the powerful and be-whiskered Uncle Goodsell had to doff his cap in acknowledgement, for he won first with something to spare, 93.20 per cent. He made an amusing admission that in his last cast, at the 100ft. buoy, he had not seen his frog from the time it left the rod until it struck the water. Inasmuch as this cast was within 1ft. of the buoy, at 100ft., with no practice shot under the rules, the good luck of it may be seen. In this contest the judges jumped from distance to distance irregularly, the series of Mr. Goodsell's demerits being, at 50ft., 4ft. miss; at 80ft., 10ft.; at 90ft., 14ft.; at 70ft., 5ft.; at 100ft., 1ft. demerit. In style, Goodsell was very cool and deliberate, leaning well forward. All the casting was directly overhead casting. In style, Bellows and Peet both were admirable, but both unlucky, Peet catching two balks just when he did not want them. Smith was second, 90 per cent. He got a bad tangle and had to call time for over ten minutes, and then did not better his gait enough to crowd Goodsell. Smith is very slight, but merry looking, contrasting with the powerful frame of Mr. Goodsell. Bellows was in hard luck to score, but 85.40, for third. Hascall, another slender but gritty one, also showed full knowledge of the art, but the fatal back-lash held him down to 81.40, fourth.

Third Event.—Dry fly-casting for accuracy and delicacy combined at buoys 35, 40 and 45ft. Rod not to exceed 6½oz. Five casts at each buoy; thirty seconds allowed to extend line, each time fly strikes it will be scored. Delicacy of cast will also be scored. One-half ounce allowed for solid reel seat.

There shall be made five casts at each buoy. If the fly falls upon the buoy cast at, the accuracy shall be considered perfect; for each foot, or fraction of a foot, from such buoy a demerit of one shall be made; the sum total of such demerits divided by three shall be considered the demerit per cent., the demerit per cent. deducted from 100 shall be the accuracy per cent. In addition there shall be kept an account of delicacy; 100 per cent. being considered perfect. The delicacy percentage shall be determined by the two judges and the referee, each of whom shall mark the per cent. to which, in his opinion, the contestant is entitled. The sum total of such percentage as so marked, divided by three, shall be the delicacy per cent. The delicacy per cent. and accuracy per cent. shall be added together, and divided by two, and the result shall be the percentage; the contestant having the highest percentage shall be declared the winner. Scoring shall begin the first time fly strikes the water. When contestant has made five casts, judges will announce "next buoy"; contestant must then lift his line, and in not less than one nor more than five dry casts reach the next buoy, scoring to begin the first time fly strikes the water. A like procedure shall be followed. No score shall be counted if fly is lost during the casting. Loose line on platform, or coil of line in hand, is not permitted in this event. All casting shall be done from the reel.

This is a very complex and difficult event to score, but it is an important competition, since it is thought to most nearly bring into play the qualifications of the practical fly-caster in fishing. The judges on accuracy were Messrs. D. W. Tower and Fred Divine, Chase S. Osborne, referee. Messrs. A. Stuart and H. G. Hascall were judges on delicacy. The score of the winner, Mr. Bellows, may be detailed in example. At the 35ft. buoy he fell short of perfect in five casts respectively, 1, 1, 2, 1 and 1ft., or 6ft. total. At the 40ft. buoy he scored 0 ("perfect," or a hit of the buoy), 1, 1, 1, 1, or only 4ft. short of perfect. At the 45ft. buoy he scored 2, 2, 1, 2, 2, or 9ft. short of perfect. His total demerits would therefore be 19ft. This, divided by 3, would give his average demerit, or 6.33 per cent., leaving his record 100 per cent. less 6.33, or 93.66 per cent., so far as his accuracy was concerned. Meantime the delicacy judges were watching his style of laying and lifting his fly. They each set down an arbitrary per cent. of demerit on this, and adding these the total was 27, which, divided by 2, made 13½, or the average of the judges' opinion of his delicacy demerit. From 100 subtract 13½, and you have 86.50, his per cent. in delicacy. Add to this his accuracy per cent., and you have 180.16. Divide this by 2 and you get 90.08, which is his record in the event. It may be seen the judging is not simple. Mr. Peet was second in this event, 83.75, and President Waddell came in for third, 81.33. Goodsell, of Chicago, was fourth, 79.00, his retrieve being too coarse in his anxiety to plug the buoys.

The following tables show the records of the day:

	First. Distance and Accuracy.	Second. Accuracy. Bait and Delicacy.	Third. Dry Fly Accuracy
Itha H. Bellows	88.00	85.40	90.08
Fred N. Peet	87.00	77.00	83.75
B. W. Goodsell	89.33	92.20	79.00
E. Crofton Fox	86.66	78.58
John Waddell	85.33	81.33
Geo. H. Newell	79.66	51.08
Geo. W. Strell	50.08
Ashley C. Smith	90.00
H. G. Hascall	72.66	81.40

THURSDAY, SECOND DAY, JUNE 9.

The weather was cooler, with clouds. It sprinkled rain a dozen times, but mercifully held off. The buoy-line was shifted for the change of the wind, but really a calmer day could hardly have been found. One event was finished before noon, this bringing out eight entries, open only to local competitors.

Fourth Event, Local Amateur.—Fly-casting for accuracy at buoys 30, 35, and 40ft. No limit to rod or line. Five casts at each buoy; one minute allowed to extend line. This is a special event for local amateurs. No one eligible who is not a resident of the State or has ever cast more than 60ft. in any tournament. (See first event for rules.)

Judges were: I. H. Bellows and B. W. Goodsell. (It should be added that Mr. C. E. Brewster was official score-keeper of the meeting.) The work was very pretty and spirited, showing a lot of style. Though comparisons are not easy among such good ones, there was comment upon the elegance of Col. Fox's style of casting, which was very easy and fetching. He did not succeed, however, in collaring either Mr. Waddell or Mr. Davis, who tied on 92.66. Mr. Stuart, a very clever amateur rod maker and fly-caster, was second high, 92.33. Col. Fox scored next, 90.66, and Messrs. Henry and Newell tied for fourth on 89.00. The ties were ordered cast off, and Waddell scored 93.66 to Davis' 91.33. In the tie on fourth Newell scored 92.66 to Henry's 91.00. This under-class division would give Davis nothing for his work, of course, but would put Waddell first alone. At the meeting after the close of the tournament the above ruling was reversed, and the principle of "high rods" adopted. Waddell and Davis under this ruling took first and second, thus giving Stuart third and Fox fourth, shutting out Newell and Henry altogether. The rules are blind on this head. They should state the principle of division to be adopted. Obviously the class-casting is the one naturally to be inferred.

Fifth Event.—Bass fly-casting, distance and accuracy combined, at buoys 35, 45 and 50ft. No limit to rod or line. Thirty seconds allowed to extend line. Five casts at each buoy and five minutes allowed for long distance after making five casts at each buoy. Entry limited to parties who have never cast more than 75ft. in any tournament. No. 6 fly used in this event. (See events No. 1 for accuracy and No. 6 for long distance.)

Judges, Goodsell and Bellows; Strell, referee; Divine, timekeeper.

This event attracted much interest, embracing as it did the long-distance cast, for which a special prize was given. In the accuracy test Col. Fox, of Grand Rapids, was first, 91.66, closely crowded by Mr. Waddell, 91.00. Hascall, the only Chicago rod to enter, was third, 88.66, and also led the running in the long fly, 92ft.; Stuart, fourth, 87.66. It was pretty to see Hascall, who is slight of build, laying out the line foot by foot from his 9½oz. tournament rod, and there was more excitement over this event than any other. Hascall scored along the buoys 87, 87, 85, then he dropped back to 55, 60, 65, and all thought him done. Then he crawled to 75, and with a jump went to 85, then 87, easy as eating peaches. He crawled on to 90, and then to 92ft., with small time to spare and well pumped out.

In this event Mr. Waddell was a dangerous one, laying a tidy line, but his lighter rod would not get him past 73ft. He scored nearly a dozen times within a foot or less of the 70ft. buoy, but got past, for 73ft.

Col. Fox offered a nice type of casting, but his rod

carried him only to 77ft. He was cool and collected, though casting very rapidly. He met some trouble with his line fouling, and lost two flies. He was a bit far back with his tip at times, and again too quick on his back cast, but yet he laid an elegant line, very close to the buoys all the time. He kept around 70, 72, 75 and 76ft. for a long time.

Mr. A. Stuart tried one of his own make of rods. The wind freshened up a bit now, and Mr. Stuart did not go after the long fly very hard, but quit after fouling his line, scoring 65ft. Mr. G. H. Newell, of Grand Rapids, is another amateur rod maker, an old gentleman, slight and nervous, very enthusiastic over fly-casting. He did not try for distance at all. Mr. Jas. Bayne also passed the distance competition, scoring only on accuracy.

Mr. Ashley C. Smith, of Chicago, made a good start in the accuracy event, and at the first buoy was only guilty of seven demerits. He fell off 21 points at the second buoy and 26 at the last, thus spoiling a good score by going to 82 per cent. In the long distance he ran up to 65ft., then 70, 71, 72. He fell back, but gained and scored 73, his top notch. He showed a neat style.

Mr. D. G. Henry, of Grand Rapids, stopped at 85 per cent., and started in on the long distance. Steadily he ran up to 68, 72, 73, 75 and 77ft., but stopped at the latter notch. Full scores are shown in the tables.

Sixth Event.—Long distance fly-casting. No limit to rod or line. Ten minutes allowed to extend line to greatest possible distance. Each contestant shall stand on the platform and make his casts parallel with a long line upon which shall be accurately marked the points of distance from such platform.

Fox and Adams, judges; Strell, referee; Rice, score keeper.

Only four entered for this, it being conceded to the Chicago cracks, Goodsell, Bellows, Peet and Hascall. Goodsell took his time in his work, and was cool and regular. He changed rods once, but with either kept well between the 75 and 90ft. buoys. He then crawled to 91½, and at last to 94½, which he could not pass. Goodsell has cast 110ft. with the same rod he used to-day. He thought the light air coming in across the lake was enough to prevent the coveted full extension of the leader at the crucial moment.

Hascall came again gamely, and crawled up 85, 88, 88, 90. It began to rain a little now, but the wind kept down. Hascall removed his reel part of the time to rest his wrist, Capt. Peet handling his stock for him. It seemed, however, that Hascall could not equal his score in the preceding event. He retired with 91½.

Peet has a record of 111ft. in Chicago records, and it was hoped would beat 100ft. here. The puzzling state of the rain-laden air bothered him, and he had trouble over the 90ft. buoy. Then he ran to 95, fell back and rallied again. He kept his tip up well, and did not get rattled. At last he rolled out 98ft., and could not pass that.

Bellows was very cool and deliberate, and he ran to 89 and 90 easily. At the end of six minutes he had touched 94. He then had trouble with weeds fouling his line, but gathered gamely and rolled out 98, tying Peet for first. Both men were pumped out, but were ordered to cast off the tie. In this Bellows scored 96ft., barely beating Peet, who scored 95½. Under the system later adopted by the management, of abolishing classes, this would bring Bellows and Peet in for first and second prizes, Goodsell third, Hascall fourth. The medal and championship honors would thus supposably go to the winner in the tie for first.

Seventh event, local amateur special, long distance fly, for 1 pair waders, special prize. Judges, Adams and Kelsey; Strell, referee; Divine, timekeeper. Five entries: Waddell, Fox, Henry, Newell, Bayne.

Mr. Waddell led up to 71ft. three times. He showed good judgment, but had the fault of carrying his tip too far forward and too low. He scored 72ft. Col. Fox ran nicely and easily up 73, 76, 76½, and at last touched 77½, which was high score. Mr. Henry worked up to 72, tying Waddell, but stopped there. Mr. Newell was nervous and new at this work, but to the delight of all scored 75ft., beating Mr. Bayne by 10ft.

The following table shows the records of the day:

	Fourth. Local Accuracy.	Fifth. Bass Casting. Distance Accuracy. Ft. Per cent.	Sixth. Long Dist. Fly Long Dist. Ft. Ft.	Seventh. Special. Local Dist. Ft.
John Waddell	92.66	73	91.00	72
A. Stuart	92.33	65	87.66	72
D. G. Henry	89.00	77	85.00	75
Geo. H. Newell	89.00	..	83.33	75
Horace Davis	92.66
Harry Ketchum	88.00
E. Rice	84.66
E. Crofton Fox	90.66	77	91.66	77½
H. G. Hascall	88.66	92	88.66	91½
Ashley C. Smith	73	82.00	..
Jas. Bayne	77.00	65
B. W. Goodsell	94½
F. N. Peet	98
I. H. Bellows	98

The winners of the six handsome medals, one of which was offered by the association for each event of the programme, were as follows:

Event No. 1.—Fixed distance and accuracy, fly, B. W. Goodsell, Chicago, 89.33 per cent.

Event No. 2.—Long distance, bait, B. W. Goodsell, Chicago, 93.20 per cent.

Event No. 3.—Dry fly, delicacy and accuracy, fixed distance, Itha H. Bellows, Chicago, 90.08 per cent.

Event No. 4.—Accuracy, fly, fixed distance, local amateur, John Waddell, Grand Rapids, 92.66 per cent. (winner of tie).

Event No. 5.—Bass, fly, long distance and accuracy combined, Col. E. Crofton Fox, Grand Rapids, 91.66 per cent. (H. G. Hascall, Chicago, first in distance, 92ft.)

Event No. 6.—Long distance fly, Itha H. Bellows, Chicago, 98ft. (winner of tie).

Event No. 7.—Local amateur, long distance fly, special event, Col. E. Crofton Fox, Grand Rapids, 77½ft.

The medals are tasteful and neat, the design being that of reel and crossed rods, with landing net, the bar above reading "World's Championship," and the plate below "Grand Rapids, Mich., June 8-9."

A pleasant meeting of hosts and visitors occurred at the Military Club during the evening. The prizes were distributed, and many happy remarks and felicitations followed. The members of the Chicago Fly-Casting Club expressed their thanks for the many courtesies shown them. The Michigan Fish and Game Protective League,

through the State's attorney as presentation speaker, gave a handsome Colt's shotgun to Mr. Fred Adams, of the Press, of Grand Rapids, extending thanks to him for the benefits of his writings on outdoor sports. This gracious act to a good newspaper man was quite unexpected. Fred Divine, of Utica, N. Y., who has been here through the meet, was present this evening. It transpired that the "valuable prizes" offered as consolation prizes are boxes of lead sinkers, the inference appearing to be that these may be useful to those who cannot cast the fly.

The parties as made up for the fishing trips to-morrow were announced, the name of the guest preceding that of the host who is to take him in charge. The names of the railroads and the streams that will be fished are also shown. It should be added that the courteous Grand Rapids men assume all the expense of these trips, which latter will be as follows: Strell and Fox, G. R. & T. R. R., Boardman; Peet and Waddell, C. & W. M. R. R., Pere Marquette; Divine and Henry, G. R. & T. R. R., Maple; Hough and Widdicomb, G. R. & T. R. R., Boardman; Hascall and Rogers, G. R. & T. R. R., Middle Branch, Pere Marquette; Smith and Brewster, C. & W. M. R. R., Little Manistee; Blackman and Rice, C. & W. M. R. R., Little Manistee; Porter and Ketcham, C. & W. M. R. R., Sable.

Surely it was a great week at Grand Rapids.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Maine Landlocked Salmon.

IF the readers of FOREST AND STREAM want some fly-fishing for salmon, as fine as can be had in this country, they will take the advice of one who has been there, and go to Grand Lake, or Grand Lake Stream, which is the post-office address, in Washington county, Me.

This place can be reached in two ways; either by going via the Canadian Pacific line to St. Stephen, N. B., thence across the river to Calais, Me., and thence via the St. Croix & Penobscot R. R., from Calais to Princeton, thence small steamer across Long Lake, and stage of about three miles to Grand Lake Stream, and by leaving Boston at 8 A. M. one would arrive in Calais at night and take the train the next morning for Princeton and get into Grand Lake Stream (which is the outlet of Grand Lake) in time for dinner.

This is the way that I went in, but I am inclined to think that a pleasanter way is that which I took coming out, which going in would be via Winn. By leaving Boston at 7 P. M. a sleeper may be taken to Winn, arriving there at 7:23 A. M., get breakfast there; or leaving Boston at 8 A. M. Winn is reached at 5:25 P. M.; remain there over night at Col. Gates' Hotel, where a fine supper and bed can be obtained, much better than usually found in the woods. Early in the morning have the Colonel hitch up one of his good teams for an eighteen mile drive to Duck Lake. This is over a good turnpike road, smooth enough for wheeling, so that it is a pleasure rather than a discomfort.

It would be advisable to have your guide (and I know of no better one than Ross Yates, whose post-office address is Grand Lake Stream, Me., and who, if he could not go, can be depended on to recommend the next best man, either Abram McArthur, Will Gollin, Illsley Beach or Frank Bagley, in the order named) meet you at Duck Lake with his canoe to take the "sport" after he has had his dinner at Gowell's, at Duck Lake, which is reached about noon, for a canoe trip for the rest of the way (eleven miles) to Grand Lake, the distance being one mile across Duck Lake, thence one-half mile through a short stream connecting Duck Lake with Junior Lake, which is a distance of six miles across to Junior Lake Stream, which is three miles long, and empties into Grand Lake.

I found a very nice place to stop at Grand Lake was Frank Ball's, where one will find a good bed and Mrs. Ball a good cook, and Frank Ball an entertaining fellow, he having charge of the club house at this place. One will find here plenty of comfort, and if a bath is needed it can be taken in the lake, as porcelain tubs are not provided.

In case there are ladies in the party, it might be advisable to make headquarters at W. O. Shaw's, Dobsis Lake, which is reached by stage drive of eighteen miles from Winn to Bottle Lake, thence by canoe trip of ten miles from Bottle Lake to Dobsis Lake. At W. O. Shaw's, whose post-office address is South Springfield, Me., one finds more in the way of luxuries, nice beds and a good table, etc., and it is an ideal place to stop.

It is only a short canoe trip from Dobsis to Grand Lake, so that a fisherman can start out in the morning and in one hour be at Grand Lake, and on the best fishing grounds.

The more I travel about (and I have visited nearly all the fishing waters of Maine) the more impressed I am with the advancement made by the guides. Fifteen years ago, while to be sure you could get a good guide if you were lucky enough to strike the right man, it was very apt to be the case that you would get a mighty poor one; but the increased travel creating a demand for first-class work has stimulated the guides to educate themselves for the proper performance of their duties, and they are now as intelligent and trustworthy and companionable a set of men as one can find in the length and breadth of our great country. This fact alone added much to the pleasure of my recent trip to Grand Lake, and in justice to Ross Yates, who did me such good service, I cannot help saying that he is one of the best men I have ever met in his line of work, and could net a salmon quicker than any man I ever saw. We landed a number and did not miss a single one.

My companion and I arrived at Grand Lake Stream Saturday noon, May 21, had a very nice dinner at Tom Calligan's, it being necessary to stop with a private family, as there is no regular hotel in the place, and Mr. Calligan is a gentleman of the first water, besides being the town treasurer, and nothing was too good for us. We had the front chamber, which, unlike most spare rooms in the country, was full of fresh sleeping air, and he and his charming daughters did everything they could to make our stay a pleasant one.

We fished a little during the afternoon, but with not much luck, as there was hardly a ripple on the surface of the lake and the sun was hot enough to boil the fish

while we were getting them into the landing net.

Just before sundown a little breeze came up, and my companion, Walter S., landed two salmon weighing about 2½ lbs. each and a good-sized brook trout, while I struck one salmon and two togue.

Speaking of togue, I was surprised to find that they could develop such fighting qualities as was shown by those which we caught in Grand Lake, and although they did not come out of the water at all we found that when we got on to a good-sized one he would carry off the line about as fast as we could reel it in, and really put up quite an interesting fight. We also found them very nice eating, as their flesh was not at all muddy, being very sweet and equal if not superior to the salmon. fish we paddled to the shore and had the guides get us up about 9 o'clock, and after we had landed two good-sized fish we paddled to the shore and had the guides get us up one of their famous dinners. The noon hour being very warm we chatted and slept until about 3 o'clock, then took to the canoe and started for The Birches, kept by Mr. Frank Ball, at the head of the lake.

Fishing along the shore, I had just landed a 2 lb. salmon, when I noticed quite a commotion near the canoe of Walter S. and his guide McArthur, and we lay by to watch as pretty a fight as we ever saw. Two salmon had struck at once, one taking the live bait and the other a brown hackle, and they made the water fairly boil. It is a pretty good trick to handle a 4 lb. salmon on a light fly-rod, but when a man has two on his hands and they are pulling in opposite directions it is not to be wondered at that before he succeeded in landing the fish one of them had broken the leader which held the fly. Of course, it was "the larger one of the two," and the guide backed him up in it, but as the one which he landed weighed a trifle over 4 lbs. we felt very well satisfied.

We had not gone 100 yds. from this place when I had a strike which fairly made my hair stand on end. On the first send-off this noble fellow showed his silver sides several times, and one leap must have been at least 3 ft. clear of the water, and how he did make the old reel sing! I brought him in seven different times before he gave up the fight, and it was as lively work as I have ever had. He tipped the scales to a good 5 lbs., and was as handsomely marked as any fish I have ever seen, his belly being of pure silver; and the stripe spots and markings of his back were as black as the proverbial ace of spades.

We reached Ball's camp about 7:30 P. M., and Mrs. Ball soon had a fine supper ready for us, which we thoroughly enjoyed, and soon after tumbled into bed.

We were up again at 5 in the morning, for unfortunately for us we did not know about the route via Winn, and so had to go back to Calligan's to get our city togs and get back again in season to make Winn in time to take the train.

On the way down we landed four salmon, three togue and a brook trout which weighed 3¾ lbs. and was beautifully marked.

All the fish in these waters are particularly bright in color, which is explained by the fact that you can see the bottom of the lake in 20 ft. of water, and it is cold and clear in all parts, the shores and bottom being covered with rocks and boulders, so that there is no part of it which is at all muddy.

I am told that this is one of the best deer countries in the State, and the guides have no hesitation whatever in saying that they will guarantee any man a deer inside of five days, and two standing shots at not more than 50 yds.

Moose, caribou and bear they do not brag about, as these are not often seen, but deer are very numerous, and almost any one can get all the law allows.

Fly-fishing started in probably by the first day of June and will last a good three weeks, and I know of no better place in the State of Maine for the greatest sport ever known, fly-fishing for salmon.

Although we did not have any trouble in bringing out our fish, yet perhaps a word of caution might not be amiss, as the seizures of boxes of fish have begun, owing to their not being properly transported.

The law allows each person to bring out 25 lbs. of fish, which must be properly tagged and accompanied by the owner, and for the benefit of those who may wish to ship fish, and do not wish to have the boxes opened when they are legally shipped, it is well to inform them that there is a tag that they can have affixed to the box that will insure the box against the raids of the wardens. This tag is one which bears the signature of a registered guide, the name of the party owning the fish, the number of pounds of the specified kind of fish that was legally caught at a certain place and packed by the guide. If these cards are affixed it will save a great deal of inconvenience, as it does the fish no good to be disturbed after they are once packed in ice. Thus the responsibility is thrown upon the guide.

H. B. C.

Connecticut Fish Commission.

HARTFORD, Conn., June 8.—*Editor Forest and Stream:* I send you a brief outline of our work for this season. We have in the State retaining ponds 9,600,000 shad fry. We shall keep the fish in the ponds until about Oct. 15, when they will be liberated. The young shad at that time will be 3 to 5 in. long; in fact a strong swimming fish, ready to go to sea. We are feeding for distribution the coming fall: 600,000 brook trout, 75,000 lake trout, 25,000 rainbow trout, 10,000 landlocked salmon, and 100,000 Atlantic salmon. We are not putting out any fish fry this year. The planting of trout fry is a waste of time, money and good material.

We now have in our pools brook trout (last winter's hatch) measuring 2¼ in. long, lake trout 3½ in. long, and by October next the brook trout will be 5 to 7 in. long, and the lake trout 6 to 9 in. Stocking with fish of this size means something. We already have filed over 700 applications (orders) for trout eight to ten months old. At our nursery pools we are using 700 gallons of spring water per minute. We are able to produce a trout with this flow of water that is symmetrical, and one that looks like a trout—no "pot-bellied" thing.

Briefly stated, we are trying to stock our streams, lakes and ponds with fish, and in our opinion we are on the right track. We are trying to do our work without any great flourish of trumpets.

A. C. COLLINS.

Fishing on the St. Lawrence.

IN pursuit of health and my favorite pastime, circumstances induced me three seasons ago to stop at Mr. D. I. Dawson's, at Marysville, Wolfe Island, the first and largest of the Thousand Islands of the St. Lawrence River. I enjoyed so much real pleasure, gained health and had such good success in fishing, that I have looked forward each season since then with considerable impatience for the time to come when I could turn my face northward and revisit my old haunts, to be again upon the bosom of that clear and noble river, and fill my lungs to their full with the purest of pure air. My first visit convinced me that it was the center, from its location and topography, of the best bass fishing on the river. Since then I have had no occasion to alter this conviction, but many to make it still stronger. I do not wish to be selfish, and therefore will tell my brother anglers how to get there, with the hope that they will enjoy it as much as I have; giving at the same time a general outline of the island, a general location of the fishing grounds, and the distances to them from my starting point, at Marysville. Leaving New York State either at Cape Vincent or Clayton, you go by boat to Kingston, Ontario, thence by ferry three miles and you are at Marysville, Wolfe Island.

Wolfe Island is famous for its beauty and fertility, and may well be called the prince of the far-famed Thousand Islands. Lying at the southwest extremity of the River St. Lawrence, and at the foot of Lake Ontario, bounded on the north for miles by a beautiful bay called Kingston harbor, it divides the St. Lawrence at its origin. The lake has two branches, called the north and south channels, both navigable for the largest class of vessels. The south channel, however, being the deepest, is the main channel, and forms the boundary line between Canada and the United States. The island is twenty-one miles long, and its width ranges from one to seven miles, with an area of 30,000 acres of fertile land, occupied and cultivated, and there is a population of about 2,500. The coast line is quite irregular, indented with beautiful and picturesque bays and inlets, giving many a thought "to him who in the love of nature holds communion with her visible form." The shores at intervals are rock-bound, furnishing ample protection against the wash of the surf, while at other points they are composed of sand and fine gravel, thus giving the whole coast line a distinctive, clear and attractive appearance; while the waters surrounding it are as clear as crystal, and teeming with fish.

Marysville, the principal village of the island, is situated four miles by land from the head of the island, and opposite Kingston, the limestone city of Canada, and distant from that city three miles. It has two hotels and two commodious summer resorts, one known as Hitchcock's, at the western extremity of the village, and Dawson's Villa St. Lawrence, at the eastern end. It was at the latter that I stopped, and all the distances hereafter given as to the fishing grounds are taken from there.

The Fishing Grounds.

Rowing due north for about a mile, you come abreast of Murphy's Point, from which, running nearly westerly, but separating gradually from the point, are two reefs. Between these and beyond the outmost one good fishing is almost sure to be found; the bass run a good size and are gamy. Should the wind be to the northward or northeast, it is well to cross the river due north two miles, and there will be found generally, between the two small islands and the mainland, several good grounds, or after trying there you can drop down the river, keeping near the shore, for a mile or two, with good prospects of success. This trip can be accomplished between breakfast and dinner, or dinner and supper.

Another trip, occupying about the same time, is to row to Garden Island, directly west of Murphy's Point, and fish around the breakwater. Large catches are often made here. Beware of sunken logs and other obstructions, or good-bye to your hooks and leaders. A clearing ring is an absolute necessity here. If the fish fail to bite, proceed westerly, keeping on the north side of the island, and when near its head you will come to a reef, which, owing to the clearness of the water, you can easily see, and oftentimes also the bass below you. This is another ground on either side of the reef. You then can go around the head of the island, fishing between the reefs, and then cross to Mill Point, where many large bass are frequently caught. From thence easterly to where you started from, trolling all the way, with good prospects of picking up more than one as you go.

For longer expeditions occupying most of the day, going westerly you come to Simcoe, an island three miles long (containing 1,000 acres), and three miles from the village. There is good fishing on all sides of the island. Snake Island, north of Simcoe, and five miles in a direct line, is noted for its fishing grounds and the size of the bass. It has a lighthouse on it. Horseshoe Island, south of the upper part of Simcoe, and five miles from the village, furnishes a number of good grounds all around it, and especially when the wind is favorable on its lake side.

Still going westerly you come to Reid's Bay, six miles by water and four by land. This is a very popular spot, and deservedly so. The bass take the fly here eagerly from the opening of the season and continue to do so longer than at any other place that I know of on the river. Though till about the end of the first week in July they will take the fly among the reefs down to near the village. Nine miles in a direct northwest line are the Brothers, at the entrance of the Bay of Quinte. I have never fished there, but have been told that the fishing there is good. In September, after the weeds die down, some parts of the Bay of Quinte are famous for their muskalonge fishing.

Going easterly from our village and rounding Murphy's Point there are three or four good grounds, till you reach Knapp's Point, which is three miles distant. Off from the lighthouse below the point is a good ground. Continuing you come to Boxton Harbor, which is five miles. This harbor is quite celebrated for its muskalonge, pickerel and bass fishing. Another mile, six in all, brings us to Oak Point, another good fishing ground, and at times especially so.

There is still another trip which will sometimes pay you for making it. And that is to pass through the canal at the end of the village; and at the end of four miles you will reach the main or south channel of the river, where I have found excellent fishing (the fish all large), in front of, above or below Mud Island.

From the number of grounds which I have mentioned, and all of which can be reached and returned from between breakfast and supper, I think that you will agree with my opinion that this is the best center of fishing on the St. Lawrence. The bass as a rule run above the medium size and weight. They are the gamiest that I have ever handled, and I have brought many a one in different parts of this county to net. You can obtain excellent boatmen here at a moderate outlay. My experience has been that they are capital and experienced men, intelligent, honest, willing and obliging; ever watchful for your interest and success.

Rod and Tackle.

I would advise you to take at least two rods. Three would not be out of the way—one for bass fishing and a stronger one for trolling—I prefer a steel rod (Bristol, not telescopic, Henshall's design) for this reason: A large bass, after playing for some time, will sometimes appear to be coming in all, and then unexpectedly will suddenly turn tail up and plunge downward, bringing your rod in spite of you sharply on the gunwale of the boat; should the rod be a split bamboo, it is broken close to the ferule at the second joint from the tip. I have had this mishap happen and have seen it happen to others. Use a silk line, black or dark colored—150 ft. will be enough—three-ply good English gut leaders from 3 to 6 ft. long; hooks snelled on good gut (single or double). At a rule the hooks used are too large, and I therefore advise nothing larger than a No. 2 or smaller than No. 4 sprout hook, or other brands of the same size. I believe that from its shape the sprout is the nearest to perfection of any. The point of entrance is passable to the point of resistance, and therefore the harder the line is held the deeper the point of the hook enters the fish's mouth, and the better the chance of netting him. You will certainly want a clearing ring, with at least 60 ft. of strong linen line. There are other fish beside the bass—occasionally the muskalonge, pickerel, and plenty of yellow perch of large size and good for the pan.

But fishing is not the only thing that affords pleasure or recreation here. The scenery on the island and river is rivaled nowhere. The ever varying tints of the quietly moving water, the lights and shades, the clear blue dome above you, and the gorgeous colors as the sun sinks out of sight into the bosom of the lake all appeal to the inner soul of mortals. The geologist and the paleontologist can here revel among the rocks and fossils of the older Silurian formation; the botanist finds new flora; the cyclist has but to cross the ferry to Kingston to find good roads and pleasant scenes, and the photographer will soon be wondering not where to expose, but which of the many gems he sees he shall take. Should the fisherman's outfit include a camera, he will never forgive himself if he leaves behind a bichromate ray filter. He will need it to properly render the magnificent cloud effects and sunsets. Even the sleepy one, much to his own surprise, finds himself up before breakfast breathing in the purest of heaven's air with deep enjoyment.

JOHN H. JANEWAY.

Arkansas Pickerel.

LITTLE ROCK, Ark., May 23.—*Editor Forest and Stream:* I have been reading Mr. Mather's article on pike in this week's paper, and am knocked off the Christmas tree by part of it. He says the pickerel does not exist west of the Alleghanies. Then what have I been catching all these years? We have a little creek pike that sometimes gets to be a foot long, and which seems to be the brook pickerel he mentions. But in the lakes and bayous we have another pike. He grows to be 24 to 26 in. long, and he is marked all over with the net marks just as the picture is. In the absence of a specimen I cannot say whether the fins and jaws are exactly like the picture of the pickerel or not, but the net marks are there. And he is there too, by a large majority, in all of our lakes and bayous. I have never found him in White, or Cache, or Ouachita rivers, or any of the clear running streams, but I have seen him in a bayou 50 yds. from Cache River. The average size of this pike is 20 or 22 in., but occasionally we find a larger one. I have never seen one over 3 or 4 lbs. in weight, as they are long and slender. The habits are the same as described by Mr. Mather. I have often seen them in the clear water take the minnow and hold it and then turn it round before swallowing it. In fishing for them we recognize the fact that we have to give them time to do that. We surely have either the pickerel as described by Mr. Mather, or we have another species, for every angler in this country will tell you that the creek pike and the lake pike are not the same, the creek pike lacking the net marks of the lake pike, and being a baby anyhow.

J. M. ROSE.

[Arkansas is known to have two pickerel—one called the "little pickerel," which is green or grayish in color and usually with marks like worm tracks on the sides, but sometimes these markings are in the form of curved streaks, sometimes forming bars, or they may be like network, or entirely wanting. The other is the common Eastern pickerel, chain pickerel, green pike, or jack. The "little pickerel" does not usually exceed 1 ft. in length, while the Eastern pickerel grows more than twice as large. The "little pickerel" is found in the Mississippi Valley, south to Arkansas and Mississippi. The Eastern pickerel occurs in Mammoth Springs and other tributaries of White River, in Arkansas. Its complete range includes waters from Maine to Florida, Louisiana, Arkansas and Tennessee. The range of the chain pickerel was formerly believed to be limited to the east of the Alleghanies.]

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

New England Fishing.

BOSTON, June 10.—The interest in New England fishing does not subside in the least, though it is getting to be exactly in the midst of the worst time of all the year for mosquitoes and black flies. From the 10th of June to the 4th of July these insect pests are at their worst in northern and eastern New England. On the 4th of July last year they had about all disappeared at the Rangeleys, and were very nearly done at Moosehead and in Aroostook county.

Messrs. W. J. Leckie, G. W. Brown, Hall and another friend are out from a successful trout fishing trip to some lakes and ponds not far from the west branch of the Penobscot. They have built a camp in that vicinity and speak very highly of the fishing. They took this year all the trout they wanted. Still Mr. Leckie thinks that next year he will go later in June, and endure the black flies. Mr. G. N. Smalley is out from a very pleasant fishing trip to the Rangeleys. His fishing friend, C. Z. Bassett, of Appleton & Bassett, was prevented from accompanying by the illness of R. O. Harding, head salesman of that house. Mr. Harding is reported to be on the mend. Mr. Smalley took some trout on the fly in the neighborhood of Billy Soule's, as he almost always does.

The fishing at Lake Auburn, Me., has not been especially satisfactory, according to reports, though Mr. Haskell, the champion fisherman of those waters, has taken salmon of 7, 8 and 10 lbs. Commissioner Stanley himself is reported there, though with what success it is not mentioned.

The Megantic Club must be prospering. Mr. L. Dana Chapman, corresponding secretary, has just returned from his spring trip, and is out with a handsome year book, in which the illustrations are especially fine. The club's full limit of membership, 300, is full. It controls 250 square miles of territory, three lakes, twenty ponds, six rivers, eight streams, and eight bogs. It has, besides its general club house, twenty-three public and fourteen private camps. Mr. Chapman says that fishing is good. He took several salmon and plenty of trout. He is particularly pleased with the growth the salmon are making. One has been taken of 26 $\frac{1}{4}$ in. in length this spring, though the stocking has been done but a few years. From Big Island Pond thirty salmon were taken in three days, from 19 in. in length to the above large one. As the fish were not killed, they were measured instead of being weighed.

The salmon fishermen are getting ready, some of them having already gone, in fact. The Barnes party, including Mr. C. B. Barnes, Miss Barnes, Mr. Lyman Nickols and others, are at Grand Cascapadia. Miss Barnes made a most remarkable record the first day, if the report is correct. She took five salmon, the average weight of which was 35 lbs. Mr. C. Watson, Mr. Crocker, Mr. Minot and Mr. Moses Williams are going to the southwest branch of Miramichi for salmon fishing. Messrs. Olmsted, Cias, Parlin and Talbot are taking the June fishing at the St. John, Gaspé, this year, while Mr. John Fottler and party will be there in July.

SPECIAL.

Maine and Canada.

BOSTON, June 13.—Fishing at Moosehead Lake, Me., has more than continued good. Sportsmen lately returned speak in the highest terms of the fly-fishing. Mr. Walter L. Hill has returned from his annual fishing trip to that "inland sea," where he has been for several days, in company with Messrs. Murphy and Kirk. They took a good many brook trout on the fly up to 3 lbs., and a good share of lakers trolling. Mr. Hill got hold of "The Father of Lakers," he thinks, and had him at the end of the line for over half an hour. Obstinate the big fish clung to the bottom with great persistence. Once or twice he was brought up in sight, through sheer power of the rod. Three feet long, if he was an inch, and thick enough to weigh 30 lbs.! But he went to the bottom again with mighty thuds of the big jaws. At last the line came up with a jerk. The big fish was free, the hook having been torn out or jerked out.

The fishermen at Kineo have had the pleasure of a novel sight. A young cow moose has been seen in that vicinity for some time. The other day she came down to the lake and out into it. Immediately she was surrounded by guides and sportsmen, in boats and canoes, quickly improvised. Very skillfully she managed to elude the most expert of the guides, who tried to seize her by the ears as she swam. Mr. Dennen shouted for the pursuers to desist, as the moose might be drowned. As soon as the boats parted the moose swam for the shore, landing near the hotel, jumped the wire fence into the garden, then out again, disappearing in the woods with a few bounds, such as only a frightened moose can make.

Messrs. Eugene Lynch and M. H. Curley, of Boston, are at the Upper Dam, Me., for a few weeks' fishing. Fly-fishing is reported good. Mr. Lynch caught two trout on the fly there the other day, both of 5 lbs. weight. Mr. L. O. Crane, with Mrs. Crane, at the same place, considers it one of the most remarkable fishing locations in the world. He has landed some big trout on the fly. Mr. Charles Davis, of New York, has just taken ten trout, fly-casting, the largest weighing 5 lbs. C. H. Barker, of Lynn, Mass., has taken a 5 lb. trout from the Lower Pool, on the fly, and three others, the largest weighing 6 lbs. Mr. E. Bartlett, of North Oxford, Mass., has taken a trout of 6 lbs. weight, and one of 4 $\frac{1}{2}$ lbs.

At Bemis the fishing is reported good. Master George Storer is the champion boy fisherman of the season. Only ten years of age, he has landed three trout of 3 $\frac{1}{2}$ lbs. weight each. H. H. Bates and V. W. Bates, of New Haven, Conn., have taken ten good trout, the largest weighing 5 lbs. In a few hours, G. H. Johnson and George Stanley, of Canton, Me., took three trout, the other day, of 3 $\frac{3}{4}$, 3 $\frac{1}{2}$ and 3 $\frac{1}{4}$ lbs. W. D. Abbot, of Boston, and Freeland Abbot, of Houghtons, Me., in one day's fishing took seven trout, some of them up to 4 lbs. weight. Mr. C. E. Guild and D. E. Adams, of Boston, are at Bemis; their second fishing trip this season. Again they have had excellent luck, taking before breakfast one morning four trout, from 1 $\frac{1}{2}$ to 5 lbs. weight, with a number of others, which they returned to the water. T.

J. Scannell, of Portland, Me., has taken three trout, including one of 3 $\frac{3}{4}$ lbs. R. E. Swain, West Leeds, Me.; E. Stanley, Roxbury, and R. W. Trask, Byron, have taken twenty trout in one day's fishing, the largest weighing 6 lbs.

At Rangeley Lake the fishing is good, with a good many salmon being taken. Among the recent catches may be noted the following: H. O. Higgins, 3 $\frac{1}{2}$ lb. trout; C. W. Varney, 5 $\frac{1}{2}$ lb. salmon; W. C. Downes, 3 $\frac{3}{4}$ lb. trout; W. B. Damon, 7 lb. salmon; Mrs. W. F. Sturtevant, 7 lb. salmon and 3 $\frac{1}{2}$ lb. trout; Francis Henwood, 5 lb. and 3 lb. trout; C. P. Lamb, 4 lb. trout; W. F. Sturtevant, 5 lb. trout; A. B. Gilman, 5 lb. salmon; S. O. Lunt, 9 and 4 lb. salmon; A. I. Bill, 6 lb. trout; Mrs. W. M. Breed, 4 $\frac{1}{2}$ lb. salmon; C. F. Pierce, 4 $\frac{1}{2}$ lb. salmon; L. O. Crane, 3 $\frac{1}{4}$ lb. trout.

Reports just received from the American Consul, Gaspé, P. Q., say that a great many salmon of unusually large size are being taken at Gaspé Bay. Over \$4,000 worth had been shipped from that point up to Friday. So great a run of salmon in the bay promises good fishing in the rivers above. Mr. John Fottler, Jr., is anxious to be off for his river, the St. John, Gaspé, his tackle having been ready for some time. The Olmsted and Sias party got away Saturday, and they expect great sport, during the rest of June, on that river.

SPECIAL.

Still Another Style of Minnow Casting.

Editor Forest and Stream:

With thousands of others, I have counted myself extremely fortunate in having a seat among the scholars in Mr. Mather's primary class in bass fishing, and only wish that the lessons had been more extended. It must be something more than twenty-five years ago that I made my first foray against this gamy representative of the finny tribe, and every year since I have met him in some of his favorite haunts. The result has been that the more protracted and diversified the acquaintance, the less I seem to know about him.

Some of us had been hoping that Mr. Mather would say a word or two regarding a style of fishing quite popular in our Western waters (at least in this locality), a style that is a variation on the method of minnow casting usually laid down in the books. The rod used is from 9 to 10 $\frac{1}{2}$ ft. in length, with a stiffish tip and considerable backbone, practically a heavy fly-rod, the reel being located below the hand, as in fly-fishing. The reel is whatever style the fancy of the fisherman prefers—single action, multiplying or automatic. In casting the minnow is not brought up to the tip of the rod, but is cast almost the same as the fly, except that when the back cast is made the minnow is allowed just to touch the water. This relieves the strain on the rod, whose elasticity, assisted by the wrist of the angler, lands the minnow on the desired spot, in the forward cast. "Shooting the line" is practiced in this style of casting to fully as great an extent as in fly-fishing.

It may be added that this style of handling a minnow seems to prove particularly desirable in stream fishing for bass, in water where, for any reason, the use of the fly is not practicable. In delicacy and accuracy it is far ahead of casting from the tip of the rod, although it may not be able to compete with the latter in distance. In "our" method the minnow is placed just where it is wanted, a decided advantage in our rocky, rapid streams that in the autumn especially are clear and shallow. Here the bass lie close, and the difference of a foot in the planting of the minnow is often the difference between fish and no fish, or rather between rise and no rise. In saving of time, casting the minnow with a long line has the decided preference; you do not have to reel up after every cast, and you cover the water more thoroughly because you begin with a short cast and lengthen it gradually as you proceed. This kind of fishing, it is needless to add, has no use for either "bob or sinker," and for that reason you get the utmost possible play of your minnow, which is always hooked up through the lower jaw and out through the nostril, never through or under the back fin. A minnow hooked in the latter way would go through the air broadside, just as he would be dragged through the water after he had struck it. Once fastened to the further end of 25 yds. of F or G braided silk, tapered with a 6 ft. leader, a 2 lb. bass is worth more than he will ever be again, alive or dead. Meantime you are standing in water anywhere from knee to waist deep; such streams will not tolerate a boat.

Both Dr. Henshall and Mr. Mather have decided that the big-mouth bass is as gamy as his small-mouthed cousin, and it might not be in good taste to question that decision. If it were not for that fact, I should like to direct the attention of the readers of our paper to the pictures of the two fish published recently in connection with Mr. Mather's articles, and to ask them to compare the frontal outlines. If I dared, I would say that, compared with the small-mouth, the other is a soft fish, so far as his flesh is concerned, and that his nerves and muscles have a corresponding lack of tonicity. That he is a surface feeder, and as such he affects shallow water, where he stews and simmers in warm weather, and where, because he is a surface feeder, he is more timid and more easily frightened. That when he is hooked, he usually opens his jaws to their widest capacity, and goes into a state of collapse, in which he flounders rather than fights. That I have never known him to inhabit a rocky, rapid stream, the kind in which the brook trout and the small-mouth bass do most delight. But, of course, all this would be heresy, and therefore I do not say it.

In his paper published under date of May 14 Mr. Mather says: "All talk about fish biting at certain times of the moon, clear or cloudy days, east wind or other wind * * * is sheer nonsense." Doubtless the proposition is true enough so far as it pertains to deep water fishing, but in the streams and shallower lakes it will possibly bear modification. When our bass streams are clear it is little or no use to try to fish them on a bright day, unless the angler has more skill than the ordinary mortal. Some sort of wind is usually better than no wind, but (in the fall particularly, and in the month of May in this latitude) a south or southwest wind

makes all the difference between poor and good bass fishing. If Mr. Mather means that we are to go ahead and take the poor with the good, that is quite in accordance with the true piscatorial spirit, but if he means that we are not to choose our weather when we can, and that intelligent choice does not make a very decided difference in the net results, then we shall have to ask him to write a postscript to his admirable papers.

JAY BEEBE.

TOLEDO, O., June 2.

Oneida Lake Fishing.

SYRACUSE, N. Y., June 8.—There is now reason for hoping that such protection will hereafter be given to Oneida Lake as will effectually preserve it from the depredations of men who for years have cast seines in almost every part of it, to supply various markets with fish. This lake is thirty miles in length and of varying width, and is widely known as the best fish-breeding water in central New York. It is situated northeast of Syracuse, its nearest shore being twelve miles from the city. With the seine removed, it would at once become a paradise for anglers and a supply reservoir of great value. The act passed by the Legislature last winter which offers a bounty for the capture of nets is likely to effect the best results throughout the State, and particularly in central New York, where there are so many lakes and rivers. Henry Loftie, of Syracuse, is the father of this law, and already his expectations as to what it would probably accomplish are being in good degree realized.

Mr. Loftie also mainly deserves the credit for the establishment of a hatchery at Constantia, on the north shore of Oneida Lake. He pushed the project for several

The Constantia Hatchery.

years, and expended considerable money in travel and invitations to both State and national officials to visit the locality and examine its advantages. The Fish Commission at last acted wisely, and last year established a hatchery costing some \$4,000 and embracing seven acres of land. There were hatched last year 165,000,000 pike, the fry being widely distributed. Ponds are also being built for hatching bass and for increasing the age of pike before distribution. This may be regarded as being of equal importance with any hatchery which the State possesses, and ought to be the means of vastly increasing the food fish product. It is under the superintendence of Mr. Hill, whose home is at Clayton.

The public applauds every practical effort which is made for the increase of fish food which is made accessible to the angler and protected from the pirate. All the people pay the cost of propagating and protecting fish food, so that there is no justification for permitting the few—and those, generally speaking, non-taxpayers—to rob the many with the use of nets. By the bounty law every citizen is constituted a fish protector, with good pay for his services if he chooses to exert himself in the work of annihilating nets.

Accompanying this is a view of the hatchery above referred to and from which so much is expected.

Fishing Near New York.

INNER ISLAND, Long Beach, L. I., June 13.—Weakfish have come into the bay in large numbers, and there has been no lack of sport for those who have the necessary tackle and bait. Mr. Nemphries and his eleven-year-old son caught twenty-six, the boy catching nine of them. George Kessler caught fifty-three. The bay is full of crabs and other food for the fish, and good fishing may be anticipated.

Blackfish are plentiful, and an occasional kingfish or sheepshead is caught. The best fishing is off Long Beach, either to the Fishing Banks or the wreck of the Iberia; but fishermen who do not care to go out of the inlet have had good sport in the holes and deep channels of the bay at Wreck Lead and Nick's Beach.

G.

Mr. Beard's Yellowtail Record.

SANTA CATALINA ISLAND, June 7.—*Editor Forest and Stream:* I owe my good friend, Mr. Beard, an apology for inadvertently using his fish and the wrong fisherman in my article on the yellowtail. It struck me at the time that the name did not exactly fit the fish, but it was the only fish picture available, so I used it; and am very glad to know that it was a catch of a brother sportsman who is a champion of champions in the yellowtail field. This is the fish which, not excepting the salmon, has no peer when taken in shallow water with the lightest tackle. Mr. Beard's record is still quoted on the island and his memory is still green in the hearts of all rod and reel fishermen.

SENOR X.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Mr. Holder's Tuna.

CHARLES FREDERICK HOLDER, author and writer, broke what is believed to be the world's record for the hardest fighting big game fish on rod and reel on June 1, at Santa Catalina Island, Cal. He took a 183lb. leaping tuna on a light rod, with 21-strand cuttyhunk line and Vom Hofe reel. The fish struck at 6:30 A. M. and was brought to gaff at 10:30 A. M., during which time it towed the heavy boat with oars backing water over eight miles, most of the distance in a heavy sea, and part of the distance against it. The last rush of the fish was a run of four miles.

This is believed to be the record catch for hard fighting game fish, as a 150lb. leaping tuna could tow two tarpons of equal size. In other words, the tuna is the most powerful and active game fish that swims. The fish measured 6ft. 2in. in length, and had a girth of 45in. The fisherman was followed by launches in which were a number of New York and St. Louis anglers, and the catch created great excitement. S.

Greenwood Lake Big Bass.

THE next to the largest black bass ever caught in Greenwood Lake was caught on Wednesday last by Tom Garrison, who was out fishing with a party from New York. The fish was a perfect specimen, beautifully marked. It was 24in. long, with a girth measurement of 18in., and weighed 9lbs. 6oz. The party were using trolling minnow perch bait 4½in. long, and were down by the big island among the stumps.

The largest black bass caught in the lake was captured by Sloan, and weighed 9lbs. 13oz. Another large specimen was caught by Pinkey Sterns. It weighed 8lbs. 4oz., and what will hereafter be the fourth largest was caught in the upper end of the lake by L. F. La Roche, treasurer of the Greenwood Lake Fish and Game Protective Club. It weighed 7lbs. 14oz.

Ordeal by Dog.

A RECENT French judgment may be cited as an illustration of Arab manners and Gallic astuteness. An Arab was traveling through the interior with his wife; he was on donkeyback and she was afoot. By came a rich Arab on horseback and offered her a lift behind him. She accepted, and presently in the course of the journey confided that she was unhappily married. Her companion proposed a plan by which she might elope with him, and she agreed to it readily. Accordingly when they came to a branch road they increased their pace and paid no heed to the protestations of the husband, who was soon left behind. He succeeded in tracking them to the horseman's village, only to find that precautions had been taken against his arrival, for everybody asserted that they had known the runaway pair for many years as man and wife and that the real husband must be an impudent impostor.

The unfortunate man had recourse to the French, who were at first puzzled how to act in the face of a village's unanimous testimony. At last a happy thought occurred to the judge. He placed the real husband's dogs in one room, those of the other man in another, and confronted the woman with both. Arab dogs are very faithful to their own households and very fierce to all strangers; so though she did her utmost to irritate her own dogs they could not be restrained from fawning on her, and though she lavished every blandishment toward the dogs of her new home they barked and showed their teeth with ever-increasing fury. The judge thereupon ordered her to be given back to her husband, and he placarded the village with the following notice: "The testimony of one dog is here more to be believed than that of ten Arabs." As a dog is one of the Arab's worst terms of opprobrium, this notice was deemed a worse punishment than fines or imprisonment.—*Tunis Correspondence London Morning Post.*

Anne of Abbotsford.

ANNE OF ABBOTSFORD, black, white and tan English setter bitch, owned by Mr. Edward A. Burdett, of Troy, N. Y., was whelped Oct. 4, 1893. She is by Gladstone's Boy (3429, A), out of Bohemian Girl (8281, A), both of which are famous in the annals of the great trials as performers of rare excellence, and winners. Anne was bred by the late J. Shelly Hudson. Her most distinguished performance was at Morris, Man., last season, where she won the champion stake in a trial on chickens. She showed extraordinary range and finding ability. The portrait is from the photograph of a painting by the renowned artist, Mr. Edm. H. Osthaus.

POINTS AND FLUSHES.

In our business columns the Manitoba Field Trials Club sets forth the programme of its forthcoming field trials, the twelfth. They will commence on Wednesday, Sept. 7, and will be run on the old grounds at Morris, Man. There will be three stakes, a Derby, an all-age and an amateur. In the former two the prizes are very liberal, considering that the total fee for starting is but \$15. Having so bravely and so successfully met its financial obligations under so many difficulties, the club is deserving of extra consideration in the way of support from field trial patrons. The field trials of this club are one of the most enjoyable of the season. For further particulars see our business columns. William C. Lee is the honorary secretary, Winnipeg, Man.

Entries for the International Field Trials Club's Derby, to be held at Chatham, Ont., Nov. 15, close July 1. First forfeit, \$2.50; second, same; \$5 additional to start. W. B. Wells, honorary secretary, Chatham, Ont.

Cup Challengers Up to Date.

THE past week has produced two important items of news in connection with international racing and the America Cup. The first of these is the failure of Mr. Ernest Terah Hooley, the great English yachtsman. Mr. Hooley, whose liabilities run up to enormous figures in dollars or pounds, it makes no difference which, is noted in yachting circles as the owner of the racing cutter Britannia, which defeated the American yacht Navahoe and Vigilant, and also of the fine steam yacht Verena, of 316 tons. The second item is still more important, another prominent British yachtsman, Sir Thomas Lipton, has arrived in New York, and promises to issue in a very short time a challenge to the New York Y. C. for the America Cup.

The first of these gentlemen is a stock broker and a promoter of companies of all kinds, who has rolled up an immense fortune in a few years. He has made a specialty of bicycle manufacturing companies and pneumatic tire patents, as well as a largely advertised proprietary article. In this latter enterprise he was associated with another prominent yachtsman, J. L. Johnston. Sir Thomas Lipton has also made a great deal of money in tea, and received his title as a reward for giving some of it—the money, not the tea—to charitable purposes at the time of the Queen's Jubilee. He does not own a yacht, and Lloyds gives no indication that he has ever owned one; but this in no way disqualifies him for membership in a class of yachtsmen which, thanks to the daily papers, is becoming more and more prominent every year.

We have no objection whatever to self-made men, provided the making is well done; but we have no use whatever for the self-made yachtsman, who, without previous experience, or the most elementary knowledge of yacht racing and the ethics and usages of the sport, performs the feat by the simple acts of drawing a check to a broker or designer for a yacht, and announcing that he will challenge for the great yachting trophy of the world.

The doubtful honor of founding this class of *fin de siècle* yachtsmen can freely be accorded to a certain noble earl who, retiring in a pet from politics, astonished his friends by rushing suddenly into yachting at a much later age than that at which men are wont to take up new sports. We believe that we are doing him ample justice when we say that he has devoted himself to the sport with energy and enthusiasm, and has mastered fairly well some of its more mechanical details. Beyond this, he has shown an utter and extended ignorance of yachting customs and rules, and of the underlying principles of fair sport; and after in the beginning compromising his friends, he has ended by insulting his opponents. Following him as an aspirant for international honors, Mr. Charles Day Rose will be remembered, a gentleman who, after devoting years to the turf, suddenly turned to yachting. The steps of his brief career were rapid, but hardly brilliant: the purchase of an outclassed five-rater, then of one of the unsuccessful big cutters, a challenge for the America Cup, cabled after dinner and withdrawn with the sober deliberation of the following morning, followed by the building of several yachts, which raced with little success under his colors.

After these come others who hardly go so far as to make a pretense of being yachtsmen: Sir George Newnes, the wealthy publisher, ignorant of yachting and owning no yacht, but aspiring to challenge for the America Cup; Mr. J. L. Johnston, already mentioned, who purchased Britannia at a high figure from the Prince of Wales, apparently just as he had previously purchased an ancient bedstead on which the Pretender once slept. It is stated that Mr. Johnston bought Britannia in the belief that she was a steam yacht, and color is given to the story by the fact that shortly after he sold her to his associate, Mr. Hooley, and bought the steam yacht White Ladye. Now comes Sir Thomas Lipton, unknown to Lloyds and to British yacht clubs, but blithely talking of a challenge, as though he could buy a knowledge of yachting as he would a design or a yacht.

It is a fact that international racing for the America Cup is barred to all save men of exceptional wealth, or to syndicates, from which defend us! In this country there are no men who possess, at the same time the means and the inclination to build a racing 90-footer. It is true that Mr. W. K. Vanderbilt did build and run Defender in the last contest for the Cup, bearing practically all of the expense, but this was purely a matter of 'abstract patriotism'; apart from the generous financial aid he has extended in this and similar cases, Mr. Vanderbilt has no interest in yacht racing, and has never owned a sailing yacht. In Great Britain there are none among the true yachtsmen and devoted patrons of the sport who both can and will build a 90ft. challenger; and all the proposals made of late years have been based either on ignorance of the magnitude of the task or on a desire to secure free advertising for business purposes.

In these days, when fortunes boldly spent in placarding the virtues of some nostrum or alleged panacea bring back a return a hundred-fold, the America Cup is certain to be a shining mark. With a positive assurance of success, as either challenger or defender of the Cup, the fortunate owner of a brand of whisky, beer or cigars, pink pills, magnetic liver-pad, or "penny-dreadful" periodical, could well afford to build a racing 90-footer that would outdo Defender and Valkyrie III. in cost. Even though he did stop short of the extreme of parading his wares on the sails, the value of such an advertisement would be incalculable.

It is men of this class who are to be feared in international yachting, as events plainly show; the men of true yachting and sporting spirit, who have graduated from the smaller classes after years of practical experience, being barred by the excessive outlay and the absence of any financial return, thus leaving the field free to those who can enter it purely as a promising business venture.

Certainly no one imagines that the modern daily journal is run upon purely philanthropic and eleemosynary principles, for the free distribution of advertising in the interests of wealthy but deserving promoters and pillists; on the other hand, the highest possible value is placed upon each square inch of space. Let one of this gentry come forward, however, with the unsupported statement that he proposes to challenge for the America Cup, or that he has offered a preposterous figure for some famous yacht, and the astute and business-like editor throws open column after column, with bold headlines, portrait of the challenger and of his yacht, not yet designed; list of clubs he is going to join, and details without end as to the source of his wealth and origin of his title.

A contest for the America Cup was never more needed on this side of the water than at the present time, when yachting in all save the small classes is in a state of utter stagnation, with no relief in sight. We would ask nothing better for yachting to-day than that the two disgraceful episodes of the new Deed of Gift and its sequel, the deal with Lord Dunraven, and his subsequent conduct, could be forgotten on both sides, and matters restored to the condition of 1885-6 and 7, when true yachtsmen and sailormen, like Sir Richard Sutton, Lt. Henn and the Royal Clyde representatives, sailed for the Cup and took their defeat like men.

Apart from other difficulties, however, there is no hope whatever of a renewal of racing in yachts of 90ft. l.w.l., or of anywhere near that size. Even with the certainty of winning, there are very few real yachtsmen to-day who can individually bear the expense of outbuilding Defender and sailing a series of trial and international races; and when the chances of being again defeated are considered, there is hardly the shadow of an inducement to the British yachtsmen, from whom the initiative must of necessity come, to move for a renewal of international racing.

The largest of the established classes in Great Britain to-day is that of 65ft. linear rating, giving a much larger and faster yacht than the old American 70-footer. Above this class there is no limit of size, save indirectly through the new time scale, and yachts of over 65ft. (80ft., 90ft., 100ft., etc.) make an open class with time allowance. There is no indication just now that a class as large as 65ft. rating could be established and maintained permanently in this country, though it would make an admirable size, and it is an absolute certainty that the 90ft. class can never be restored, save temporarily in some emergency-like the last, and even that is most unlikely.

Corinthian Fleet, Special Regatta.

NEW ROCHELLE—LONG ISLAND SOUND.

Saturday, June 11.

THE annual regatta of the Corinthian fleet of New Rochelle was scheduled for June 11, but as it was manifestly impossible to secure any general turnout of the Sound fleet on that date it was decided to postpone the regatta, and give a special race for such classes as promised a reasonable number of entries. These were the 20ft. class, the 30ft. and 25ft. cabin cat classes, the knockabouts, two classes of open cats, and the new one-design dories. Saturday morning was very unpromising and disagreeable, cloudy, with a close atmosphere and light showers, with a light easterly wind. Though it cleared by noon, there was no wind at 2 P. M. to speak of. Shortly before 3 o'clock, however, a nice S.W. breeze came in, and with a clear sky and bright sunshine the weather was all that could be asked. The 30ft. catboat Kit was present, in the expectation of meeting the new cat building for Mr. C. T. Pierce at City Island, but the latter was still on the ways, her mast having been stepped the same morning, she being over a month behind the promised date of completion, so that Kit had no competitor.

In the 20ft. class were last year's Keneu and Akabo, a new Huntington boat, owned by Mr. Clark A. Miller, quite a different craft from Keneu and Skate. Instead of being circular, as in these two, the fore end is cut off square across on deck, the plank ends finishing on a vertical piece shaped like half of a barrel-head. The counter is quite wide, there is no sheer, and the deck is crowned considerably in the middle, sloping away in all directions. The peculiar appearance of the boat is difficult to describe without pictures.

In the knockabout class was Mongoose, awaiting Indianola, which latter boat was not in sight when the preparatory signal was given at 3 o'clock. Indianola had been delayed from time to time in leaving Boston and on the passage around, making a good part of the trip under jury rudder, and she only arrived at the line, with Mr. F. B. Jones at the stick, after the preparatory had sounded for her class, and in season to round up for the start. She is a new boat, designed by Crowninshield, and built by Eccles, of Nahant, designer and builder of Mongoose. The other knockabouts of the vicinity were racing with the class at Pelham Bay. The starters in the 25ft. class of cats, Win or Lose and Why Not, are old boats, as are Sora and Minnetonka, and well known. Lark, in the 15ft. cat class, was designed and built last winter by her owner and Corinthian skipper, C. G. Davis, who sails her single-handed in the races. She is of the scow type so popular about New Rochelle, with flush deck, like Question. The Huguenot Y. C. was represented by four of its new one-design dories, towed around from the club station by Com. Janes, who sailed one of them in the race. They are very handy little craft, with a picturesque rig; they sail quite fast for such small craft, and make a lively sight.

The race was started off the mouth of Echo Bay, thence to the Hen and Chickens buoy and the Execution buoy, a four-mile triangle, the dories sailing a smaller triangle inside. Owing to the delay in waiting for wind, but two rounds were sailed, the 15ft. cat class sailing but one. The start was made in a lively breeze, the yachts going away well on the reach to first mark. Indianola, though at the line only at the last moment, made a good start inside of Mongoose, to windward. The windward work was all on the second leg, with a reach in. On the wind Mongoose easily passed Indianola, but at the end of the round her balloon jib was allowed to get overboard just as she was in close quarters with Why Not in the jibe at the mark, causing her quite a delay. She won easily from Indianola; it must be said, however, that while Mongoose is in her second season and in good condition, Mr. Hazen Morse, who is sailing her, having handled her for some time, Indianola is entirely new, not yet in form, and unknown to her skipper. The official times were:

Open Sloops—20ft. Class—Start, 3:05.		
	Elapsed.	Corrected.
Akabo, Clark A. Miller	1 33 08
Keneu, Montgomery Clark	1 40 41
Cabin Cats—25ft. Class—Start, 3:10.		
Win or Lose, J. S. Appleby	1 43 40	1 41 36
Why Not, Henry Rohlf	1 50 40	1 50 40
Knockabouts—21ft. Waterline—Start, 3:15.		
Mongoose, Simeon Ford	1 40 09
Indianola, C. R. Alberger	1 44 26
Open Catboats—20ft. Class—Start, 3:25.		
Sora, William Hoey	1 59 52	1 53 22
Minnetonka, A. B. Alley	2 01 51	2 01 51
Open Cats—15ft. Class—Start, 3:25.		
Lark, C. G. Davis	1 08 46
Laura Lee, F. S. Ray	1 16 35
Special Class Dories—Start, 3:20.		
Prize, H. E. Jones	1 22 02
Tern, W. B. Greeley	1 27 45
Harry, T. De Witt Scoville	1 27 58
Ketch II., L. C. Ketchum	1 28 58

Mongoose wins one leg for the Dewar cup, to be won twice; Akabo, Win or Lose, Sora, Lark and Price each win a club prize. The chairman of the Race Committee, W. Irvine Zeraga, was absent, owing to a previous engagement off Guantanamo, his place being taken by J. W. Sparkman. The Race Committee, Messrs. O. H. Chellborg, W. P. Stephens and J. W. Sparkman, started and timed the yachts from Mr. Chellborg's "knockabout destroyer" Ida. The flagship of the Corinthian fleet this year is the historic old cutter Volante, Com. Sweet, designed by Robert Center for Messrs. Hitchcock in 1877. She was under way during the race, the same staunch and comfortable craft as when she was a novelty as one of the first American cutters.

The Steam Yacht American.

WITH a lavish display of bunting, Archibald Watt's steel steam yacht American was successfully launched yesterday afternoon from the yard of the Jonson Engineering and Foundry Works, foot of East 118th street. The element of luck was very much in evidence, for the ways on the port side of the yacht were insecurely braced, and spread as the craft rushed toward her element. For a few minutes the water was full of flying timbers, but fortunately no damage was done.

The unusually flat floor of the yacht and the momentum she had attained carried her quickly out into clear water, although she heeled over considerably before she was completely waterborne.

In addition to this insecure bracing of the ways, there was no line leading from her stern to warp her around when in the stream, and the tugs which were depended upon to check her headway were so tardy that she drifted almost over to the flats on Randall's Island and let go an anchor before they took charge of her and brought her alongside the piles where she was finally made fast.

Nearly one thousand guests of Commodore Watt were in the yard when the signal to wedge up was given, and numerous opinions were advanced as to the merits of the yacht as compared with other pleasure vessels that have been recently launched.

She is an American production throughout, being built of American material, by American workmen and christened with a bottle of American champagne, that rested in voluminous ribbons of red, white and blue.

As she appeared on the cradle the impression created was that of strength and seaworthy qualities rather than speed and the usual sharp rakish lines of the average steam yacht. Her clipper bow, which will be finished with a long bowsprit and jibboom, is almost a straight line, and carried to the turn of the forefoot at an angle of about forty-five degrees. Her entrance is too rounded to admit of great speed, her floors are almost flat at the midship section, and the turn of her bilges are as full as those of the average ocean freight steamer. Her run is somewhat finer than the lines forward of the midship section, and the screws lead from channels under either quarter far enough away from the rudder post to work in solid water. Broad bilge keels extend nearly two-thirds of her length to keep her from rolling in a seaway, and as a whole she will doubtless exhibit great stability.

The yacht is the only pleasure craft flying the American flag that has three square rigged masts, with their accompanying sails for an auxiliary power, and only one other yacht in the world—the Valhalla, now owned by the Count de Castellane—is a full rigged ship. The primary motive power of Mr. Watt's yacht includes two specially designed engines of 1,600 H. P. each, and steam will be supplied from four up-to-date water tube boilers. Her owner expects to develop a speed of fifteen knots with steam alone.

The accommodations are sufficient to satisfy the most fastidious, and the interior arrangements have been carefully planned by Mr. Watt, whose pencil designed the entire craft from keel to truck. She will be decorated and upholstered in the most lavish style, while the comfort of the crew and officers has also been arranged in a satisfactory manner. Above the high bulwarks, which are surrounded by a polished mahogany rail, are two deck houses, the forward one being very large. Its roof forms the bridge deck, from which the vessel will be steered.

Mrs. Watt, wife of the owner, shattered the bottle of champagne across the forefoot of the craft as she began to move toward the water, and at the same instant a military band, which had been stationed near the platform, began to play "My Country, 'Tis of Thee." Hats were waved, and until the craft was brought up by her anchor there were volleys of cheers, and the ladies displayed their enthusiasm by waving handkerchiefs and parasols. A collation was served afterward in the mould loft.

The dimensions of the new yacht are: Length over all, 254ft.; length on water line, 200ft.; moulded beam, 34ft. 6in., and draft, 12ft. 6in.—*New York Herald*, June 9.

The Seawanhaka Knockabout Race.

THE race of the Seawanhaka knockabout class to New London and return promises to be one of the interesting events of the early season. The arrangements are as follows: Prizes—Commodore Rouse has offered the following prizes for this cruise for the Seawanhaka knockabout class: First prize, value \$150; second prize, \$100; third prize (provided 15 or more yachts start), \$50. These three prizes will be awarded according to the cumulative time for all the runs of the cruise: First prizes for daily runs from port to port, each \$40; second prizes for daily runs from port to port (provided 20 or more yachts start), each \$20.

The prizes are now on exhibition at the Oyster Bay club house.

All yachts in the Seawanhaka knockabout class, whether owned by members of the club or others, are eligible to participate in this cruise. While the formal racing for prizes will be confined to this class, all yachts belonging to the club are invited to make the cruise.

Rendezvous.—As directed by the commodore in the accompanying General Order No. 3, the rendezvous will take place at Seawanhaka Harbor, Oyster Bay, on Saturday, June 18, and in the afternoon of that day a race of the series for the Benedict prizes will be sailed.

At the meeting of captains, on the flagship, on Sunday afternoon, details of the runs to New London will be decided upon and the necessary regulations announced.

Subject to change, the following is the probable programme: Monday, June 20—Run from Oyster Bay to Morris Cove, anchoring off the Yale-Corinthian Yacht Club. Tuesday, June 21—Run from Morris Cove to New London. Wednesday and Thursday, June 22 and 23—The squadron will lie at anchor at New London to afford an opportunity of seeing the Yale-Harvard-Cornell boat races. Friday and Saturday, June 24 and 25—Return runs to Oyster Bay.

A tug will accompany the squadron for its protection and to insure prompt arrival at New London.

In view of the value and character of the prizes offered and of the interest attaching to a visit to New London at the time of the college boat races, it is confidently expected that not less than fifteen knockabouts will start. Should there be less than ten, however, the committee reserve the right to modify this programme, as they may think proper. All captains, and especially captains of the knockabouts, intending to participate in the cruise, are requested to notify the secretary of the committee at their earliest convenience.

OLIVER E. CROMWELL, Chairman,
C. W. WETMORE,
W. C. KERR,
D. LE ROY DRESSER,
C. A. SHERMAN, Secretary,
Race Committee.

General Orders No. 3. On Board Flagship Iroquois, S. C. Y. C., Seawanhaka Harbor, June 10, 1898.

I. All knockabouts entered for the racing cruise to New London, and accompanying yachts, will rendezvous at the club anchorage in Seawanhaka Harbor, Oyster Bay, on Saturday, June 18.

II. At five o'clock on Sunday afternoon, June 19, a meeting of captains of knockabouts, and all other yachts intending to accompany the squadron to New London, will be held on board the flagship, when the hour of starting for the run to Morris Cove on Monday, June 20, will be determined.

III. Regulations to govern the daily runs will be announced by the Race Committee.

By order of Commodore ROUSE.
H. L. SATTERLEE, Fleet Captain.

Detroit Y. C.

DETROIT—LAKE ST. CLAIR.

Wednesday June 1.

THE Detroit Y. C. sailed a race of the catboat series on June 1 in a light breeze and rain, the times being:

First Race.			
Boat.	Start.	Finish.	Elapsed.
2. William Moebis	3 51 16	4 33 10	0 41 54
4. A. C. Kramer	3 51 13	4 34 30	0 43 18
3. W. Granger	3 50 15	4 34 26	0 44 11
1. C. F. Crowley	3 51 10	4 35 25	0 44 15
5. C. E. Mussey	3 51 17	Disqualified.	
Second Race.			
4. M. A. Kramer	5 04 56	5 52 00	0 47 04

OSCEOLA, STEAM YACHT. DESIGNED FOR T. L. WATT, ESQ., BY GUSTAV HILLMAN, 1897.

Canarsie Y. C. Pennant Regatta.

CANARSIE—JAMAICA BAY.
Saturday, June 11.

THE Canarsie Y. C. sailed its annual pennant regatta on June 11 on Jamaica Bay, the course being 2½ miles to windward and return, sailed twice, 10 miles. The wind was moderate S.W. The times were:

Cabin Cats.				
	Start.	Finish.	Elapsed.	Corrected.
Kate	3 05 28	5 29 40	2 24 12	2 24 02
Congaree	3 04 48	Did not finish.		
Open Cats—Over 20ft.				
Selfish	3 10 00	5 12 05	2 02 05	2 02 05
Tam o' Shanter	3 07 40	Broke gaff.		
Caddie	3 05 22	5 18 50	2 13 28	2 12 11
Siren	3 04 22	Did not finish.		
Cats Under 20ft.				
So So	3 10 40	Did not finish.		
Lochinvar	3 11 35	5 22 50	2 11 24	2 09 29

Selfish won the pennant for best elapsed time, also first prize. Caddie won second prize in the same class. Kate and Lochinvar each won a first prize.

Taunton Y. C.

TAUNTON, MASS.
Saturday, June 11

THE Taunton Y. C. sailed its first race on June 11, the times being:

	Elapsed.
Household, Warner	1 57 15
Electra, Montgomery	1 57 50
Junior, Hodgman	2 00 10

The Steam Yacht Osceola.

THE steam yacht Osceola was designed for Thomas L. Watt, American Y. C., by Gustav Hillman, and built by the veteran builder, Samuel H. Pine, at the foot of Twenty-fifth street, South Brooklyn, where she was launched last April. She is of wood, 136ft. over all, 115ft. l.w.l., 18ft. beam, 10ft. depth, and 7ft. 6in. draft. Her rig and general arrangement are shown in the accompanying illustrations.

South Boston Y. C. Handicap Race.

SOUTH BOSTON—BOSTON HARBOR.
Saturday, June 11.

THE South Boston Y. C. sailed a very successful handicap race on June 11, with a fleet of 15 yachts in one class. There was a strong S.W. wind, making a lively race. The times were:

	Elapsed.	Corrected.
Tautog, F. E. Borden	1 08 54	1 23 54
Alice, F. H. Cheetam	1 30 46	1 30 46
Quahog, E. W. Rogers	1 31 15	1 31 15
Julia, F. T. Munroe	1 20 56	1 31 56
Ideal, H. B. Bailey	1 21 05	1 32 05
Lois, E. G. Lawton	1 26 36	1 32 36
Marguerite, W. P. Cashman	1 20 46	1 34 46
Reynard, M. F. Plant	1 09 49	1 37 49
Emma C., P. A. Coupal	1 08 53	1 38 53
Empire, F. H. Cobb	1 13 17	1 39 17
Edelweiss, J. T. Ball	1 35 06	1 40 06
Violet, H. F. McKee	1 08 31	1 41 31
Wa Wa, Davis & Wilson	1 15 31	1 44 31
Varuna, C. W. Wadsworth	1 28 59	1 46 59
Jonah, N. B. Stone	1 38 20	1 52 20

The prizes were: Tautog, marine clock; Alice, silver loving cup; Quahog, riding light; Julia, loving cup; Ideal, beer stein; Lois, beer stein; Reynard, pennant; Marguerite, silver service; Emma C., pipe rack; Empire, mask. A dance at the club house followed the race.

Buffalo Y. C.

BUFFALO—LAKE ERIE.
Saturday, June 11.

THE Buffalo Y. C. sailed a race for the 22ft. class on June 11 over a new course, three skippers missing a buoy and being disqualified. The times were:

Beppe	3 01 45	Monsoon	3 06 00
Marie	2 53 18	Nerena	3 25 02
Caprice	3 15 41	Windward	4 23 45

Beppe, Monsoon and Nerena were disqualified for sailing the wrong course. The winners were Marie, Caprice and Windward.

Plymouth Y. C.

PLYMOUTH, MASS.
Saturday, June 11.

THE Plymouth Y. C. sailed its second race on June 11 in a two-reef breeze from S.W. The times were:

Special Class, 18ft.—Start, 3:20.		Elapsed.
Bobolink, L. B. Goodspeed		1 49 32
Amie, M. S. Weston		1 59 19
Maud, W. N. Mayers		2 00 53
Winnetuxet, Potter		2 03 14
Pyxie, E. B. Atwood		2 03 14
Dolphin, N. Morton		2 06 09
Ideal, C. F. Bradford		Withdrew.
Trouble, T. S. Diman		Withdrew.

15ft. Class.		Elapsed.
Olympia, T. W. Steele		2 17 19
Waban, G. W. Shiverick		2 19 07
Scrap, A. Holmes		2 20 19
Vitas, Alex. Holmes		2 21 17
Frolic, J. C. Dawes		2 22 56
Kittewake, H. M. Jones		Withdrew.

Maud carried away her bobstay and bowsprit, but finished the race.

Gilberts Bar Y. C.

WAVELAND, Fla., June 6.—The G. B. Y. C. held their usual monthly regatta Saturday, May 28, in a good breeze. There were five entries, but only two boats finished. Times as follows:

First Class.			Elapsed.	Corrected.
Omega			Did not finish.	
Albatross			Did not finish.	
Joker			Did not finish.	
Britannia			0 39 27	0 38 38
Penguin			0 44 44	0 43 59

Winner, Britannia.
PAUL M. ASTON, Sec'y.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Atlantic Y. C. Ladies' Day.

SEA GATE—NEW YORK BAY.

Saturday, June 11.

THE Atlantic Y. C. sailed its second race, for ladies, on June 11, with eight starters, the courses being off the new club station at Sea Gate. The wind was moderate from S.W.; the times were:

Open Knockabout Class.			
Start.	Elapsed.	Corrected.	
Scrap, R. W. Bainbridge	3 05 50	3 11 55	3 11 55
Impudent, Louis Boury	3 05 30	Disabled.	
Class N, Series B—Sloops, 25 to 30ft.			
Muriel, F. M. Randall	3 14 05	2 11 12	2 11 12
Oriole, C. F. Larzelere	3 10 50	2 16 00	2 11 05
Class C, Series C—Mainsail Yachts, 25 to 30ft.			
Grayling, J. S. de Selding	3 16 10	2 08 53	Not meas.
Dorothy, G. L. Johnstone	3 16 40	1 50 39	Not meas.
Class T, Series C—Mainsail Yachts, 20' to 25ft.			
Qui Vive, Geo. Freeth	3 17 30	1 57 52	1 57 52
Ethel, E. J. Bergen	3 20 20	2 07 45	2 02 24

Impudent parted her throat halyards and withdrew. Oriole is an auxiliary, and towed her screw. She succeeded in beating Muriel, a very fast boat, in Boston waters last year.

Westchester Country Club.

PELHAM PARK—PELHAM BAY.

Saturday, June 11.

THE Westchester Country Club sailed the first race for its new one-design knockabout class on June 11, with six starters. The fleet, of eleven boats, reached City Island the previous evening, after a hard passage around the Cape from Marblehead, some bad weather being encountered, so that they were in poor condition for racing. The course was on Pelham Bay, the wind being moderate from S.W. The start was made at 2:40. The times were:

	Finish.
Dipper, Arthur Iselin	3 31 23
Idle, W. H. Russell	3 31 51
Folly, A. D. Navarro	3 36 25
Philippine, William Laimbeer	3 37 30
Kathama, H. O. Havemeyer, Jr.	3 39 28
Ditto, H. S. Redmond	3 42 28

YACHTING NEWS NOTES.

There is very little now doing at the City Island yards, none of the large yachts being put in commission. At Hawkins' yard Vigilant and Navahoe, Quissetta and Amorita, are still on the ways. Colonia has been launched, and lies dismantled at her moorings. Bedouin is afloat and in commission. Some of the small yachts have been launched from Robertson's yard. At Byles' yard the new racing cabin catboat built for C. T. Pierce, from a design by H. J. Gielow, was launched this week. She is 26ft. l.w.l. and will race in the 30ft. R. M. class of the Sound Y. R. A. Her lines are round and full, and there is no deadwood, the keel having a continuous rocker, but the overhangs are moderate and she is in no sense a modern freak. She has a roomy cabin, with good headroom; the centerboard is of wood, but the rudder is of metal, balanced and placed a couple of feet abaft the end of the l.w.l. She has a fine hollow mast, made by the Spalding St. Lawrence Company. She will be fitted out as quickly as possible, and will race next week. The date of delivery was early in May, but the work has been much delayed. The yawl Aura is out at the same yard for a lead keel.

At Wood's yard the new 30-footer is ready for launching, her mast being stepped and rigging set up; when she goes over she will be practically completed. The 25-footer is decked with 5/8in. matched white pine, covered with light canvas. Her peculiar cabin house is not yet in place, and she will not be finished for some time.

Barracouta, steam yacht, D. P. Reighard, arrived at New York on June 10 from Nassau, N. P., after calling at Norfolk for coal. Barracouta sailed from New York on Feb. 2, with her owner and friends on board, for a winter cruise in the West Indies. On March 28, off San Salvador, her crankshaft broke, and Mr. Reighard and his friends left her, returning home on a fruit steamer. Capt. Harding took the yacht into Nassau under sail, and she has laid there ever since, a new crankshaft being sent from New York and fitted. She brought to New York George Reno and Custo Roque Mara, the latter a Cuban, both said to carry despatches from Cuba to the Government and the Cuban Junta.

Mr. Frank Cowper, well known to our readers as a single-hand cruiser and a writer of interesting cruises, has lately completed a new book, under the title of "Jack-All-Alone: His Cruises." The volume is a collection of stories of various incidents culled from the experiences of the author in his years of single-hand work about the British and French coasts. They are written primarily for the amusement of the reader; it will be remembered that Mr. Cowper is the author of the valuable series of five volumes of "Sailing Tours," in which the English, Scotch and Irish coasts, with part of the French coast, are described with the minuteness and accuracy of the best Government publications, but in these stories he follows a lighter vein of yachting incident and adventure. His devotion to this solitary and independent mode of yachting is apparent all through the book, and he gives very good reasons for his preference. The book is published by L. Upcott Gill, London.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

Fixtures.

June 7-11.—Peoria, Ill.—Annual tournament and convention of Illinois State Sportsmen's Association.
June 8.—Butler, Pa.—Butler Gun Club's tournament. E. E. Gumpfer, Sec'y.
June 8-10.—Parkersburg, W. Va.—Second annual tournament of the West Virginia State Sportsmen's Association. Address all communications to Ed O. Bower, Sec'y, Sistersville, W. Va.
June 14-15.—Stillwater, Minn.—Tournament of the Stillwater Gun Club.
June 14-15.—Grafton, N. D.—Tournament and meeting of North Dakota S. S. Association.

June 14-16.—Le Mars, Ia.—Le Mars Sportsmen and Shooting Association's tournament. E. Miller, Sec'y.

June 14-16.—Ottawa, Kans.—Annual tournament of the Kansas State Sportsmen's Association. W. L. Beardsley, Sec'y-Treas.

—Portsmouth, Va.—Tournament of the Interstate Association, under the auspices of the Portsmouth Gun Club. W. N. White, Sec'y.

June 15-17.—Cleveland, O.—Fifth annual tournament of the Cleveland Target Co. Bluerocks thrown free of charge. Professionals and manufacturers' agents barred from programme events.

June 16.—Brooklyn, N. Y.—All-day shoot of the Brooklyn Gun Club. John Wright, Manager.

June 16.—Springfield, Mass.—Second tournament of Connecticut State League, on Springfield Shooting Club grounds.

June 17.—Wellington, Mass.—Massachusetts State Shooting Association's annual shoot. O. R. Dickey, Sec'y.

June 16-17.—Dayton, O.—Dayton Gun Club's amateur tournament.

June 20-21.—Rochester, N. Y.—Annual tournament of the New York State Association, under the auspices of the Rochester Rod and Gun Club. Live birds and targets.

June 21-23.—Sioux City, Ia.—Fourth annual amateur tournament of the Soo Gun Club. Three sets of traps. E. R. Chapman, Sec'y.

June 23.—Corry, Pa.—No. 2 tournament of the Corry Gun Club. A. P. Pope, Sec'y.

June 25.—Long Branch, N. J.—Opening shoot of Hollywood grounds. Live-bird shooting every Saturday afterward.

June 27-July 3.—Milwaukee, Wis.—Tournament of Milwaukee Gun Club, carnival week. Live birds and targets. \$1,000 added money.

June 30.—Auburn, Me.—First annual tournament of the Auburn Gun Club. L. A. Barker, Sec'y.

June 30-July 1.—Milwaukee, Wis.—National Gun Club's tournament.

July 1.—Sherbrooke, Canada.—Grand annual tournament. Targets, Regular sweeps, variety and merchandise. C. H. Foss, Sec'y.

July 3-4.—Davenport, Ia.—The West End Gun Club's amateur tournament on targets. L. Haneman, Sec'y.

July 4.—Brockton, Mass.—All-day shoot of the Brockton Gun Club. Special prizes.

July 4.—Pawling, N. Y.—All-day shoot of the Pawling Rod and Gun Club, at targets. Morton Haynes, Sec'y.

July 4.—Centredale, R. I.—Fourth of July shoot of the Centre-dale Gun Club. N. F. Reiner, Sec'y.

July 4-6.—Newport News, Va.—First annual tournament of the Chesapeake Gun Club. Geo. B. James, Sec'y.

July 6-7.—Meadville, Pa.—Tournament of the Interstate Association, under the auspices of the Meadville Gun Club. Chas. Stein, Sec'y.

July 7-9.—Denver, Colo.—First annual tournament of the Over-land Association. Open to all. Inanimate targets. Added money. John W. Kane, Manager.

July 13.—Albany, N. Y.—Forester Gun Club's annual tournament; targets. H. H. Valentine, Manager.

July 15.—Poughkeepsie, N. Y.—Trophy shoot, Hudson River Trap-Shooters' League, on the grounds of the Poughkeepsie Gun Club. J. B. Rogers, Manager.

July 14-15.—Bedford, Ind.—Tournament of Bedford Rod and Gun Club.

July 19-21.—Palmyra, Mo.—Eight annual tournament of the Missouri Amateur Shooting Association, under the management of the Palmyra Gun Club. Targets and live birds. Added money announced later. W. N. Bates, Sec'y.

July 23.—Ogden, Ill.—Ogden Gun Club's third annual tournament for amateurs. Wm. McKinley, Sec'y.

July 26.—Brooklyn, N. Y.—Tournament and clam bake of the Hell Gate Gun Club.

July 26-28.—Little Rock, Ark.—Eighth annual tournament of the Arkansas State Sportsmen's Association. Paul R. Litzke, Sec'y.

July 27-28.—Meriden, Conn.—Tournament of the Interstate Association, under the auspices of the Parker Gun Club. C. S. Howard, Sec'y.

July 29-31.—Milwaukee, Wis.—Milwaukee Gun Club's tournament. S. M. Du Val, Sec'y.

Aug. 3-4.—Worcester, Mass.—Tournament of the Worcester Sportsmen's Club. Targets.

Aug. 11.—Marlborough, N. Y.—Trophy shoot, Hudson River Trap-Shooters' League, on grounds of Marlborough Gun Club. J. B. Rogers, Manager.

Aug. 17-18.—Waterville, Me.—Tournament of the Interstate Association, under the auspices of the Waterville Gun Club. E. T. Wyman, Sec'y.

Aug. 17-18.—Warsaw, Ind.—Lake City Gun Club's tournament. J. S. Campfield, Sec'y.

Aug. 24.—Warwick, N. Y.—Special shoot, Hudson River Trap-Shooters' League, on grounds of Warwick Gun Club. J. B. Rogers, Manager.

Aug. 24-25.—Minneapolis, Minn.—Tournament of the Minneapolis Gun Club. G. J. McGraw, Sec'y.

Aug. 24-27.—Omaha, Neb.—Indian tournament, on grounds of Omaha Gun Club; three days targets; one targets and live birds.

Sept. 7-8.—Kingston, N. Y.—Tournament of Hudson River League, on grounds of Kingston Gun Club.

Sept. 7-8.—Haverhill, Mass.—Tournament of the Interstate Association, under the auspices of the Haverhill Gun Club. Geo. F. Stevens, Sec'y.

Oct. 4-6.—Newburgh, N. Y.—West Newburgh Gun and Rifle Association's fall tournament.

Oct. 12-13.—Greensburgh, Ind.—Greensburgh Gun Club's tournament. W. Woodfill, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The programme of the Grand Carnival tournament, fixed for June 30, and July 1 and 2, can be obtained by addressing the secretary, Mr. W. A. Haig, 407 Pabst Building. The first two days have a like programme, eight events, at 20 targets, \$2 entrance, \$25 added to each, moneys divided 30, 25, 20, 15 and 10 per cent. There is also \$100 grand average money, four moneys. The conditions are known traps and known angles. There are three live-bird events on the third day's programme, each to be 26 to 32yds. handicap, money divided 40, 30, 20 and 10 per cent. No. 1 is at 15 birds, \$15 entrance, \$250 added. No. 2 is at 10 birds, \$10 entrance, \$150 added. No. 3 is at 10 birds, \$10 entrance, \$100 added. Total added money, \$1,000. American Association rules govern all events. Shooting begins at 9 o'clock each day. Manufacturers' agents and expert shooters in order to participate in the division of money in target events will have to break not less than 19. Targets 2 cents each. Live birds 20 cents each. Price of each included in entrance in all regular events. All ties to be divided unless otherwise provided. Extra events will be arranged, time permitting. No dropping for place will be tolerated. Ten-gauge guns and black powder are barred. Entrance to live-bird events must be in the hands of the secretary on or before July 1, 1 o'clock P. M., otherwise a penalty of \$2.50 must be paid up to the time the last man fires in the first round. Grounds open for practice on June 29. The National line of care go direct to the National Park Club grounds, Milwaukee.

The programme of the annual tournament of the Sherbrooke Gun Club, Sherbrooke, P. Q., July 1, can be obtained of the secretary, Mr. C. H. Foss. The management extends a cordial invitation to the amateur trap-shooters of Canada and the neighboring States. The Rose system will prevail, 5, 3, 2 and 1 in four money events, 8, 5, 3, 2 and 1 in five moneys. A valuable list of merchandise prizes will be added. Shooting commences at 8:30. Lunch served free to shooters. Guns and ammunition addressed in care of Mr. C. H. Foss will be delivered on the grounds. Targets, 2 cents, deducted before dividing. Shooters may enter for price of targets. There are 15 events on the programme, of which six are at 10 targets, \$1, the last being the merchandise event; targets thrown from two traps, unknown angles, 18yds. rise, entrance 50 cents, re-entry 25 cents; there are six 15 target events, \$1.50, and three 20 target events, two at \$2 and the remaining one, a team match, open to teams of five for eastern townships trophy, held by Sherbrooke, entrance price of targets.

At Hazleton, Pa., on June 8, A. S. Van Wickle was accidentally killed with his own gun at a trap shoot just outside of the limits of the city. The press dispatches explain that he leaned on his gun, which was then accidentally discharged, with the tragic result mentioned. Mr. Van Wickle was one of the millionaire coal operators of the Lehigh Valley. He was president of the Van Wickle Coal Company, president of the Hazleton National Bank, and was a distinguished patron of all healthful amateur sports.

The programme is out for the Interstate Association's trap-shooting tournament given for the Meadville Gun Club, Meadville, Pa., July 6 and 7. There are ten events each day on blue-rocks, six at 15, entrance \$1.50, four at 20, entrance \$2. All purses divided 40, 30, 20 and 10 per cent. All ties divide. Guns and ammunition forwarded to F. G. Prenatt, Meadville, Pa., will be delivered at the shooting grounds. First-class lunch served on the grounds at reasonable prices. Interstate rules will govern all events. Application has been made to secure reduced railroad rates, the results of which will be published later. The grounds of the Meadville Athletic Association are about five minutes' walk from railroad stations and hotels. Street cars bearing the signs "Valonia" or "Alleghany College" go directly to the grounds. Shooting commences at 9 o'clock. The master manager, Mr. Elmer E. Shaner, will have charge of tournament. For further information address Chas. Stein, secretary Meadville Gun Club, Meadville, Pa.

"Billy" Crosby is doing good work out West for the Baker Gun Company, whose gun he is shooting well to the front. His latest achievement is a startler. At the Illinois State shoot at Peoria last week he won the Board of Trade diamond badge, indicative of the live bird championship of the State, with a score of 98 straight. There were 104 entries, each man shooting at 10 birds. Thirty-four men tied on 10 straight. On the shoot-off Crosby ran 88 straight, winning in the 88th round of the ties. He used Winchester factory-loaded ammunition, with 44grs. of E. C. and 1 1/4oz. of 7 1/2. The week previous to the Illinois tournament, he tied with Charley Budd for high average on 95 per cent. at the Piassa Gun Club's shoot at Alton, Ill. Geo. Roll is the man who forced such a long finish to the ties in the diamond badge contest. Roll missed his 88th bird of the tie, thus making an extraordinary run, close up to that of the winner. He used Du Pont powder in a Leader shell.

Under date of June 8, Mr. L. M. Gilbert, 1128 Palmer street, Philadelphia, writes us as follows: "The Hollywood Gun Club opens Wednesday, June 15, with the Hollywood preliminary. Shooting commences at 2 o'clock. Conditions made on the ground. Saturday, June 18, will take place the West End Handicap, 15 birds, entrance \$10, ties at 3 birds; 50 per cent. to winner, 30 per cent. to second and 10 per cent. to third. Sweeps afterward. Shooting commences 11:30 o'clock. Ship guns and cartridges to Hollywood Gun Club, Hollywood, N. J. Shooting every Wednesday at 2 P. M. and Saturday 11:30 o'clock until Labor Day. I expect to furnish first-class birds for all events this season. Mr. Fred Clark will manage the grounds."

The third annual tournament of the Ogden Gun Club, Ogden, Ill., June 23, is for amateurs only. Event A, at 7 blue rocks, 75 cents, is the Gold Dust Powder Company's event. Event B, 7 blue rocks, 75 cents, is the E. C. and Schultze Powder Company's event. Six other events, 10, 15 and 25 targets, \$1, \$1.50 and \$3, complete the forenoon programme. In the afternoon the first event, C, is the King Powder Company's event, 10 blue rocks, \$1. D is the Schultze Powder Company's event, 7 blue rocks, 75 cents. Six more events, 10, 15 and 25 targets, \$1, \$1.50 and \$3, complete the afternoon programme. No bang, no bird. Ten gauge guns and black powder are not barred. Shooting commences at 8:30 o'clock. Wm. McKinley, secretary.

The fourth annual tournament of the Soo Gun Club, of Sioux City, Ia., June 21 to 23, will be on targets, of which there are ten events each day, each event being 15 targets at a uniform entrance fee of \$1.50, excepting No. 7, the Gold Dust Powder event and championship gold medal, on the second day, 75 cents entrance. The grounds will be open for practice on June 20. There are cash prizes for the ten high averages, \$15 to first, \$14 to second, and so on \$1 less to the last. All purses divided 35, 30, 20 and 15 per cent. Professionals and manufacturers' agents are barred. For the five low averages made each day merchandise prizes will be awarded. E. R. Chapman, Secretary.

When such records as 99 and 98 out of 100 can be made by one squad on inanimate targets, it begins to look as if something ought to be done to make shooting harder for the experts. The above feats were performed by the "E. C. and Schultze" squad at the Nebraska State shoot, in events No. 6 and No. 4 respectively; on May 26. The squad was made up as follows: Heikes, Leroy and Dickey, with E. C.; Fulford and Glover, with Schultze. Heikes, Leroy, Glover and Fulford ran straight in both events, but Dickey lost one target in No. 6, and two targets in No. 4.

The act of Jack Parker in giving up his successful summer tournament to insure the success of the Michigan Trap-Shooters' League shoot, to be held at Detroit in August, as mentioned by Mr. Hough in the report of the Grand Rapids tournament, is one of open-handed generosity of great rarity. But then it is just about what Jack Parker would do when any sacrifice was to be made.

High squad scores have come into season, and there is some curiosity manifested as to the conditions under which the high scores were made; that is, to say, whether the targets were thrown with a special view to being broken, or whether they were thrown in the ordinary manner. On this very important point our reports are silent, and on this very point they should be explicitly clear and full.

At the Peoria tournament Mr. Ed Bingham, of Chicago, gathered to himself a win of the Smith cup, one of the valued trophies of the Illinois State Sportsmen's Association, and much desired by the contestants in the Association's competitions for many years. Eddie pins his faith to Leader shells and Hazard or Du Pont powders.

The communication of Mr. W. C. Hadley, concerning the tournament of the New York State Association at Rochester, N. Y., published in another column, sets forth the earnest purpose and painstaking care of the Association in the matter of its forthcoming tournament. A good support should be accorded it.

The squad score record of 124 out of a possible 125, five men, namely, Messrs. F. E. and S. T. Mallory, Leroy, Ed. O. Bower and F. M. Kiser, made at Parkersburg, W. Va., is something extraordinary in the annals of trap-shooting.

Keep in mind that the watch shoot of the Boiling Springs Gun Club takes place on the first and third Wednesdays of each month. The E. C. cup shoot takes place on the second and fourth Wednesdays.

The annual tournament of the Forester Gun Club, Albany, N. Y., will be held on July 13. Magautrap and blue rocks will be used. H. H. Valentine, manager.

Under date of June 6, Mr. L. Haneman, secretary, writes us as follows: "The West End Gun Club, Davenport, Ia., will hold an amateur tournament for targets only on July 3 and 4."

The Brockton Gun Club will give an all-day shoot on July 4 on its grounds at Brockton, Mass.

The South End Gun Club, of Reading, Pa., will hold its annual tournament on targets July 4.

The Elgin National Gun Club will hold a shoot beginning June 25.

Bellows Falls Gun Club.

BELLOWS FALLS, Vt., June 8.—We have organized a gun club here, and now have sixty members, which makes us one of the largest, if not the largest, in the State. We have shoots once a week, and on holidays we make it quite an event. We have built us a nice cottage, with a 12ft. piazza on two sides. We are now preparing for a tournament July 4, and expect to offer some very nice prizes, and as soon as we get out our programmes shall be glad to send you one. Below I give you a list of the officers: President, M. H. Ray; Vice-President, Dr. E. W. Knight; Secretary, C. H. Gibson; Treasurer, E. A. Norwood; First Captain, Dr. M. L. Morrison; Second Captain, C. H. Taggart; Executive Committee: H. D. Aldrich, J. H. Blayley, C. E. Capron. Below I give you the score of our last shoot:

Shot at.	Broke.	Shot at.	Broke.
J R Hull	50	Dr W C Mathew	50
Dr M L Morrison	47	W D Knowlton	50

Illinois State Sportsmen's Association.

The twenty-fourth annual tournament and convention of the Illinois State Sportsmen's Association were held at Peoria, Ill., June 7-11. The tournament was held on the grounds of the Peoria race track, and the convention at Fey's Hotel.

The day opened very warm, without a breeze, and with a scorching sun. There was an unusually large crowd in attendance and the space was adequate for their accommodation and comfort.

The Association has shown a large increase in its membership over last year, and the clubs were well represented by their delegates in the convention.

The business meeting of the Association was held June 7 in the parlors of the Hotel Fey, President H. F. Fahnestock in the chair. The president's address was well received.

There were no proposals for the election of new associations or clubs. The secretary reported that the Association had gotten out a new constitution and by-laws revised up to date, with the exception of the year 1893, which it was impossible to get, as he could find no records of that year. The midwinter convention was quite a success. There were about forty delegates present. The business was taken well in hand and a great deal of work done. The sporting papers assisted us in a great many ways by publishing the minutes of the meeting in full. The collections for the year were \$557.60; the disbursements for the year were \$189.80, leaving a balance in the treasury of \$367.80.

In its report the executive committee touched on the matter of the protection of game, referring to the convention of Feb. 9: "The meeting was a grand success, there being about fifty delegates present, and some good work was done. An outline of a bill for the better protection and preservation of game was adopted, and if our law committee can draft a bill from these outlines that will become a law we are satisfied it will be a great help for the protection and propagation of our game. A legislative committee was appointed to look after the matter, besides various others, one of which was a finance committee to solicit \$1 from each sportsman in the State for the purpose of defraying the expenses of the legislative committee in their work with this bill, and to our surprise we regret very much to say that the sportsmen are not coming forth with their dollars as fast as we would like to see them. We wish to ask every member in the house this evening who has not already done so to assist in the good work. Do not wait to be asked, but appoint yourself a committee of one and gather up all the dollars you can for this purpose and report to the finance committee. The bill is a good one, all things considered, and if passed will make a vast difference in our game in a few years. Our State game warden, Mr. Loveday, we think has been doing good work, judging from the number of prosecutions and convictions he has made during his term of office, and every club should give him all the assistance and support possible. It was clearly shown at the February meeting of sportsmen that the fishing interests of the State are well taken care of, and that this Association is satisfied to leave the fish question entirely in the hands of the Board of Fish Commissioners, and that we tender our thanks to Messrs. Bartlett and Cohen for their assistance and co-operation at the winter meeting of the State sportsmen. In soliciting donations for prizes to be given at our tournament we have experienced much hard work to secure what we did. The merchants, manufacturers and jobbers are being bored to death with this sort of thing. Every club in the country is after them for something. We believe that this Association should get out of this old rut and devise other means for prizes. Let the tournament be held under a more modern system, and instead of the winner of the diamond badge and L. C. Smith cup waiting for a year for their winnings let the purses be divided at the conclusion of the shoot into more moneys, and the winner of the badge to receive in addition more than those who tie with him. We therefore recommend that the board of directors or a committee be appointed by the chairman to devise a different way of conducting this yearly tournament, so that instead of begging prizes the cash division of moneys may be sufficient inducement for all sportsmen to attend."

The executive committee's report was accepted as read.

It was voted that the next regular convention and tournament be held at Peoria, Ill., the date of same to be decided upon by the board of directors, with a view possibly to holding same earlier in the year than the month of June, as has been the custom in the past.

The following officers were elected for the ensuing year: Hon. W. M. Allen, ex-Mayor of Peoria, President; C. E. Felton, of Chicago, Vice-President; Chauncey M. Powers, of Decatur, Second Vice-President; G. F. Simmons, of Peoria, Secretary.

It was voted to pay the secretary the sum of \$50 per year as compensation for services rendered as such officer.

Preceding the convention the regular events took place, and the first to finish was the contest for the Smith cup, at 20 targets, from three unknown traps, \$5.40 entrance, five moneys and merchandise prizes. The money was divided in each of the ties, and the merchandise shot for to a finish. The cup was won by Ed Bingham, of Chicago, in the shoot-off with J. B. Barto, of Chicago, and J. E. Smith, of Cerro Gordo, who were the only three with a straight score.

Following are detailed scores of the contest, which had sixty-two entries:

WEDNESDAY, JUNE 8.

The day opened with a good crowd in attendance, there being fully 300 persons on the grounds, notwithstanding the intense heat of the boiling sun, which continued throughout the day, until 2 o'clock, when it poured rain for an hour, and had a tendency to cool the atmosphere greatly. During the shower all shooting ceased. After the rain the shooting resumed, but little was done with the live birds, as the traps were disarranged some by the rain washing dust and sand into them, and the birds would not get away when the trap was sprung.

The target events continued smoothly. All were at 15 targets, unknown traps and angles, Sergeant system, \$1.50, four moneys. Following are scores of same:

Events:	9	10	11	5	6	7	8	9	10

FRIDAY, FOURTH DAY.

The fourth day opened with a large number of enthusiastic shooters on the grounds at an early hour. Preparatory to the shooting of the team race some sweeps were indulged in. The day was extremely hot until the latter part of the afternoon, when a regular windstorm, accompanied by rain, set in, cooling the atmosphere as well as the ardor of the shooters, who sought safety from the elements under the roof of the pavilion. The tents sustained some damage by being blown down and torn. This is the second similar experience during the week.

The team race started early in the day and continued well into the afternoon. Some good scores were made by the shooters on all of the teams. In the case of the second and third ties the money was divided and the merchandise disposed of by chance. Other ties were shot off.

Following are detailed scores:

Kewanee No. 1.			Eureka No. 1.

Duis	13	12	Kolanczic	10	11	11	11
Ohl	13	13	Stafford	12	13	13	13

The following are scores in an extra event, 10 live birds, 32, two moneys:

Watson	9	Gillispie	9	Levi	8	Amberg	9	Walpert	9	Meidroth	8
Powers	10	Paterson	8	Fargo	7	McQuaid	9	Leisy	9	Fahnstock	10
Johnson	9	Wilson	8								

Extra events, 7 live birds, for price of birds:

Backer	6	Bacon	6	6	6	6	6
Fahnstock	6	7	F Barr	5	7	5	7
Harbaugh	5	3	Leisy	5	3	5	3
Wood	4	4	McRoberts	5	4	5	4

The team race practically ended the fixed events on the programme. The conditions were teams of four men each, 25 targets per man, from three known traps, unknown angles, \$5, three moneys. First place was won by Eureka, of Chicago, and the three lowest won consolation prizes.

Eureka—W. D. Stannard 23, Bingham 22, Marshall 24, Steck 25—94.
Kewanee—Studley 20, Miller 22, Huckins 23, Powers 24—89.
Canton—Bestor 19, Thompson 23, Lemm 22, McQuaid 25—89.
Peoria No. 3—Fahnstock 23, Wood 23, Bordeaux 21, Wamsgang 21—88.

Garfield—Shaw 23, Von Lengerke 19, Eich 23, Kuss 22—87.
Peoria No. 1—Whiting 19, Partman 23, Sammis 23, Barton 21—86.
Dixon No. 2—Throop 21, Bacon 20, Pankhurst 21, Day 22—84.
Dixon No. 1—Kolanczic 22, Morris 17, Smith 23, Dewes 21—83.
Peoria No. 2—Simmons 24, Meidroth 17, Brown 22, Leisey 20—83.
Piper City—Fortier 21, Minor 18, McBarnes 20, Harris 23—82.
Garden City No. 1—Adams 19, Rubie 23, Kleinman 23, Gillispie 16—81.
Social No. 2, of Peoria—Spielman 19, Dick 20, McNeal 24, Bair 18—81.
Alpine—Barto 23, Tony 13, Bacci 15, Simonetti 18—69.
Social No. 1, of Peoria—Ohl 21, Hurd 17, Morrison 15, Fargo 15—68.
Pottsville—Partman 20, Stafford 17, Dodd 17, Keith 21—75.
Eureka No. 2—Paterson 18, Roll 18, Glover 12, Rice 17—65.
Ladd—Fraily 14, Wall 19, Kinder 20, Lechner 11—64.
Garden City No. 2—Smith 16, Levi 20, Dicks 11, Richards 16—63.
A. C. PATERSON.

New York State Association.

PROGRAMME FOR THE TOURNAMENT.

THERE is little cause for wonder at the late arrival of the programme for the coming shoot of the New York State Association at Rochester N. Y., June 20-24, when once a glimpse of that programme has been had. To say that it is an elaborate programme, and one well calculated to draw shooters to Rochester, is not stretching the absolute truth one whit. Infinite care has been bestowed upon its compilation, and the managers of the Rochester Rod and Gun Club are to be congratulated upon the result of their efforts in the line of getting up a programme.

At the annual meeting at Auburn last summer, Mr. Hadley, on behalf of the Rochester boys, promised that they would give the shooters of the State a good time in 1898, and if appearances go for anything Mr. Hadley's promise will be redeemed nobly.

PLENTY OF SHOOTING AND ADDED MONEY.

There is plenty of shooting and added money for the boys to scrap for. The club adds a total of \$725 during the four days; or rather, during the first three actual days of the tournament, for the State shoot does not really commence until June 21, although a series of preliminary sweeps will be shot on Monday, June 20, the traps being ready first thing in the morning.

A careful examination of the programme shows that an expert, who is a member of the State Association, will have a chance to shoot 750 targets during the three days, June 21, 22 and 23, exclusive of the team race, while that event and the Lefever medal race on Friday, June 24, would raise the total to 795 targets.

In the State events, of which there are nine, Nos. 1, 2, 4, 5 and 6 are at 25 targets. In Nos. 1 and 5 the club adds \$50 to each purse, while in Nos. 2, 4 and 6 \$25 is added to each purse. From the purses in these five events 5 per cent. is deducted to form a fund for average money; to this fund the club will add \$25, the total purse so formed being divided into four moneys, class shooting.

State event No. 3 is the annual merchandise race, and the long list of prizes, 92 in number, shows that the Soliciting Committee has worked hard to secure a list lengthy enough to guarantee that almost every shooter gets a prize. Among the list of prizes are seven guns, a camera, sewing machine, and plunder of all kinds.

STATE TROPHY EVENTS.

There are three trophy events, open to members of the State Association only. These events are: No. 7, four men team race, 25 targets per man, \$10 per team. The first prize is a Parker hammerless gun. No. 8 is the Lefever medal contest, 20 targets, \$2 entrance. The medal and 25 per cent. of the purse goes to the winner. The conditions, which have been altered from the old ones of 20 singles and 5 pairs, a truly sporting event, read that the medal goes to the man making the "first best score at 20 single blue rocks." The balance of the purse is divided among the second, third, fourth, fifth and sixth "best scores" respectively. This, we conclude, means high guns. The proportion into which the above balance of the purse is divided is 25, 20, 15, 10 and 5 per cent.

The third trophy event, No. 9, is the Dean Richmond trophy, 20 live birds per man, three men to a team, entrance \$15 per team, birds extra. This event, as well as the Lefever medal, will be shot for on Friday, June 24. The conditions are that each team of three men must be made up of "three members of a club belonging to the Association, such members to be residents of the county in which the club is located."

OPEN SWEEPS FOR BOTH CLASSES.

Two magatrap will be run for open sweeps only. On one set a programme of ten 20 target events per day is arranged, entrance \$2, \$10 added to each purse. At this magatrap anybody can shoot. Another trap will, however, be in position, and will be used for throwing targets in events open only to "amateurs," who average under \$5 per cent. As soon as a shooter averages 85 per cent. or better in any one day on this trap, he is advanced a peg, and goes up to shoot (unless he quits) with the experts at the other magatrap. The amateurs' programme consists of five 20-target events, \$2 entrance, and five 15-target events, \$1.50 entrance. The club adds \$10

Grand Rapids' Great Week.

VALLEY CITY ANNUAL.

GRAND RAPIDS, Mich., June 11.—The fifth annual tournament of the Valley City Gun Club, of Grand Rapids, began at this city Monday June 6, and was one of the features of the Grand Rapids great week of sport. This shoot is one of those under the auspices of the Michigan Trap-Shooters' League. A better meeting place would be difficult to find than this progressive city. The grounds, a quarter of an hour distant by electric car, are very accessible and very pleasant for shooting purposes. They lie on top of a high knoll, near the Country Club, surrounded by open fields. Beyond is a fringe of dark green trees, but this lies below the line of sight and does not interfere with a clear sky background. Here tents and proper stands were erected and a very able set of hustlers installed. The weather was good, but the attendance lighter than was expected and deserved. It was said by several circuit followers that the war is evidently cutting into the trap-shooting now. Among others from out of town were Jack Parker and the Detroit crack, J. A. Marks; Sid, A. Crowell, of Hastings; C. J. De Roo, of Holland; Casper Schilling, of Lansing; C. J. Bonsfield, of Bay City; Ben O. Bush, of Kalamazoo, with others from Zeeland, Jackson, Muskegon, etc. All these were royally entertained by the Valley City men, whose reception committee is composed of David Forbes, John Waddell, Ben O. Bush, C. B. Kelsey, Ralph Widdicombe and C. M. Greenway. The officers of the club are: James Bayne, President; C. B. Kelsey, Vice-President; C. F. Rood, Secretary; W. S. Coleman, Treasurer. The directors are: L. L. Skillman, G. H. Davidson and H. J. Bennett.

STATE LEAGUE ANNUAL MEETING.

The annual meeting of the Michigan Trap-Shooters' League was held Monday evening, at the rooms of the Military Club. President J. A. Marks, of Detroit, was in the chair. Detroit, Grand Rapids, Holland, Lansing, Saginaw, Bay City, Jackson, Sault Ste. Marie, Pontiac and Kalamazoo were represented. The officers of the Association were all present as follows: President, J. A. Marks, of Detroit; Vice-President, A. G. North, of Pontiac; Secretary and Treasurer, W. H. Brady, of Detroit; Directors, F. J. Graham, of Sault Ste. Marie; C. J. Bonfield, of Bay City; C. B. Kelsey, of Grand Rapids; C. J. De Roo, of Holland.

After the formal business had been completed, discussion began on the question of holding a regular big State League shoot annually. It was voted to hold shoot, and the first place was decided to be Detroit, and the date some time in August. At this juncture Jack Parker performed a little act which brought out much applause and put him high in the estimation of those present. It was known that Jack's regular summer shoot was set for August, a tournament which has long been recognized as one of the high-class yearly fixtures. Though aware of the possible financial loss it would entail, Jack Parker arose and said he would waive his own shoot and throw it over to the State shoot, so that the success of the latter might be the more certain. Much commendation met this proposition.

The Michigan League recognizes the growing importance of the amateur-professional question, and took steps to make it to the advantage of the amateur to compete in its events. It will hang up ten to twenty different moneys in the hope of bringing out a big entry, and will give merchandise prizes.

The next regular circuit shoot of the League will be held in July, at Lansing. The annual election of officers resulted as follows: President, William M. Thompson, Jackson; Vice-President, George H. Davidson, Grand Rapids; Secretary and Treasurer, William H. Brady, Detroit; Directors: Caspar Schilling, C. J. De Roo, C. J. Bonsfield and C. B. Kelsey.

JACK PARKER'S STRING.

Jack Parker seemed to have a large-sized string on about everything in sight, and anything that he let get away was purely through a matter of oversight. He won the first average for the first day, and high average for the two days. He won the handsome Bay Co. loving cup trophy, tying Ben Bush on 24 out of 25 and then shooting out the latter. This trophy he has now won three times in succession, and it becomes his property. He has had to shoot at 100 targets to win it, and has scored 95 out of the 100. Jack also won the individual expert championship medal, 25 targets, unknown traps and angles, scoring 21. In the King's Smokeless handicap trophy race he tied Marks, 23 out of 25, but lost in the tie, Marks winning. The semi-expert medal was won by Bauknecht, of Muskegon, and the amateur medal was captured by Lisle, of Grand Rapids. On the morning of the second day the State team shoot was contested, in which were entered two teams from Detroit, two from Grand Rapids and one each from Kalamazoo and Holland. The second Detroit team won, and the first Grand Rapids took second honors. The winning team was composed of Marks, Bortie and Avery. Their score was 58 targets out of 75. The team composed of Davidson, Widdicombe and Holcomb, which took second place, broke 57. The other Detroit team also scored 57. Grand Rapids' second team got 56, Holland 54 and Kalamazoo 53.

The Detroit men, of the River Rouge Gun Club, challenged the Valley City Club, of Grand Rapids, holder of the Shooting and Fishing trophy, for a contest, and as a matter of courtesy this challenge was accepted, though not offered in strictly technical regularity and though it found the local men somewhat crippled. This contest was shot off in spirited fashion Wednesday afternoon and won by Detroit, Marks, of Detroit, finishing the last string of doubles for his team in very brilliant form. The score was: River Rouge 162, Valley City 155.

The following are the scores in the regular schedule, ten events a day:

MONDAY, FIRST DAY.

Events:	1	2	3	4	5	6	7	8	9	10

Belle Meade Gun Club.

NASHVILLE, Tenn., June 7.—Herewith are scores of the shooting that we had at Belle Meade on June 4. We had a fine day, and the birds were extremely fast. Mr. Fallis, of Louisville, carried off the honors of the day, as he won the silver cup which was offered to the winner of the 25-bird race. Mr. Fallis has every reason to be proud of his shooting. This was his third appearance at the trap, and taking that in consideration he is a remarkable shot. There were some other good shots down from Memphis and Kentucky.

Messrs. Poston, Neely and Frank, from Memphis; Messrs. Lyons, Capt. Du Bray and Fallis, from Louisville, Ky.; Messrs. Poston, Frank, Weaver, Neely and Schmidt, from Memphis.

No. 1 was 7 live birds, sweepstake; No. 2 was 10 live birds; No. 3 was miss-and-out; No. 4 was 25 birds; No. 5 was 15 birds; Nos. 6, 7 and 8 were miss-and-outs, re-entry permitted up to 5th birds.

W. R. ELLISTON.

Toronto Junction Gun Club.

TORONTO JUNCTION, June 10.—The Toronto Junction Gun Club held their fourth shoot at bluerocks for the "Strothers cups"

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY.
SIX MONTHS, \$2.

NEW YORK, SATURDAY, JUNE 23, 1898.

VOL. L.—No. 26.
No. 846 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, \$4 per year, \$2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

Our Jubilee Number, 1873—1898.

WITH the present number is completed the Fiftieth Volume of the FOREST AND STREAM. It is a Jubilee Number, with added pages of reading and an art supplement with illustrations. Sketch and story and picture speak for themselves. In generous store, variety, interest and value, they testify to an expansion of resources keeping pace with the years.

The quarter century of FOREST AND STREAM's publication has been a period notable for changes and development of the interests with which it is concerned. The transitions have been both of the material features of field sports and of popular opinion and practice with respect to the rod and the gun. Those years are to be accounted momentous and memorable in the development of this peculiar field which have witnessed changes so tremendous and far-reaching. Briefly noted some of the more important phases of the quarter century have been these:

1. The general diminution of game throughout the continent, and its extinction from vast areas where formerly it was found in an abundance fancied to be inexhaustible. The buffalo, America's largest and most numerous game species, has been obliterated. The elk, the antelope, the deer, the mountain sheep, have been exterminated from wide regions which a quarter century ago were counted desirable hunting grounds. The prairie chicken has been swept away from entire geographical belts. In lesser degree other game has been reduced from abundance of supply to scarcity and rarity.

2. A widely prevailing change of public sentiment respecting game laws and game protection. Communities once fatuously indifferent or hostile to the theory of protection now endorse and support it. The question no longer is whether the game shall be protected, but how best its protection may be assured. We have seen one State after another in the East and in the West adopt stringent game codes and establish efficient systems of public officials charged with the enforcement of the statutes. This practical recognition of the economic value of the fish and game supply, as something to be conserved and wisely administered for the public good, is essentially a growth of the quarter century.

3. The development of fishculture from its experimental and tentative beginnings into an established scientific and practical industry, by which the stock of angling waters has been replenished and maintained, and a national food supply has been provided to the value of millions of dollars.

4. The beginning and development of the private game and fish preserve system. Preserves have been known in America from time immemorial, but as a system widely adopted for insuring good shooting by individuals and associations it belongs to the period under review; and the extent to which it has been developed makes it not the least important and significant manifestation of the quarter century.

5. The perfection of the breechloading shotgun, the magazine sporting rifle, and of all shooting appliances.

6. The invention and general adoption of machine-loaded shells. This is a new age of factory-loaded ammunition.

7. The invention and practical use of nitro powders. If you would reckon the time between 1873 and 1895, picture the woodcock shooter of the former period with his muzzleloading cloud maker, and the gunner of to-day with hammerless breech-loader and smokeless powder.

8. The invention of the artificial flying target and trap, and the marvelous development of trap-shooting.

9. The addition of the camera to the sportsman's outfit, that he may secure by the magic of the sunlight lasting pictures of camp and field and game. We live in an age of progress and invention so rapid and so all embracing that we have actually lost the faculty of appreciating at their true value some of these modern possibilities enjoyed by the outer of to-day. How wonderful, for instance, as in very truth it is, would have been considered in 1873 that triumph of amateur photography which has secured for one of our illustrations to-day the picture of a live mountain goat in his native wilderness.

10. The extension of railroad and steamboat lines, and traveling facilities affording ready access to fishing waters and hunting grounds once so remote and inaccessible as to have been barred from all but the favored few.

11. In general, and more notable than all else, the increased and increasing popularity of the sports of the rod and the gun, and the well nigh universal change of public sentiment respecting them.

It has been the gratifying good fortune of FOREST AND STREAM to see the several interests it undertook to promote grow steadily in popularity and importance. Rational sports with the rod and gun are better appreciated to-day than they were twenty-five years ago. They hold a much larger place in the year's calendar now than then. The development has been not in popularity alone, but in dignity as well. That old-time prejudice against a fisherman as a vagabond and shiftless fellow has long since been dissipated; who should advance it in these days would be pooh-poohed for his foolishness. The once prevalent and mistaken notion that to go shooting was a simple waste of time has been outgrown, let us hope forever. The sound good sense of an annual outing is now given prominent recognition, for we are learning with a more and more appreciative understanding every day that a holiday on the waters or in the woods means health and strength, a cheerful spirit, a clear brain, and a sound heart to do and dare and work and win. We are learning to live as we live, and to get some good out of the natural world, which has ready at hand for us reward and delight if we will but accept the invitation to prove them. This is the doctrine which from the beginning has been proclaimed in these columns, and not only on this first page weekly, but in the several departments, where tens of thousands (literally) have in the experiences there related illustrated, confirmed, and given point to the preaching.

The FOREST AND STREAM was designed in the beginning to be a grown man's paper, adult, rational, poised, contained, dignified. How well in those first years it realized and sustained the character is within the recollection of those readers—and their name is legion—who have known the paper from the start. To be governed by the spirit of the early days has been the motive of those who have been identified with the conduct in later years; theirs has been no other ambition than to carry out the purpose laid down by Charles Hallock when he wrote in the first number: "The object of this journal will be studiously to promote a healthful interest in outdoor recreation and to cultivate a refined taste for natural objects."

In advocating the interests to which it is devoted, in providing a weekly medium for the interchange of experience and opinion and sentiment for the brotherhood of the rod and the gun, of the log cabin, the lean-to and the shelter-tent, in giving substance and character and popularity to the current literature of field sport, in proclaiming in season and "out of season" the doctrines which make up the creed of the American sportsman as the paper knows that creed, the FOREST AND STREAM has been an agency of recognized force. In its columns may be read the story of the field sportsmanship of the continent for a quarter of a century.

In another column is reviewed something of the changes which have come in the West. Hardly less in extent are the transformations which have been wrought in the East. On the Atlantic Coast the development of seaside resorts with shore hotels and cottages has converted scores of once favorite and famous shooting grounds into the arid desolation of board walks, bathing houses and band stands, roller coasters, Ferris wheels and merry-go-rounds. Tracts of swamps and sunk lands once renowned for their woodcock and snipe

have been invaded by the dredgers and ditchers, subjugated by ploughshare and cultivator, and converted into farms and truck patches. Many a famous cover has been robbed of its remoteness and shorn of its wildness and bereft of its game, and to many another still preserving its first estate the game no longer comes.

Of these mutations and diminutions and deprivations has been born the spirit of "save himself who can"; and here and there, by individual or associated enterprise, lands have been acquired to be preserved for exclusive shooting privileges. The preserve system, as has been said, did not originate in this quarter century; there were high-priced shooting points on the Chesapeake and elsewhere in the old days; but in the period from 1873 to the present the rapid decrease of game has given the great impulse to the movement which has made the game preserve as a system continent wide, and has caused to come to pass even while we were foretelling it, such universal adoption of the system that there is to-day more of good shooting and fishing in the preserves than outside of them.

Of the advertisers who first employed FOREST AND STREAM twenty-five years ago, when it was young and small and struggling, many may still be found using its columns, and paying its advertising bills. Some of the best known names of firms dealing in guns, ammunition, fishing tackle, boats and canoes and general sporting goods began to advertise in FOREST AND STREAM very early in its history, and have continued with hardly a break to the present time. Through good report and evil report, in booms and panics, and through business changes, summer and winter alike, these firms have continued to advertise, for no other reason than that it paid them to do so. We need not say that this long connection is a matter of genuine pride. There are also numbers of firms more recently established whose use of the advertising columns of FOREST AND STREAM extends over many years. These firms have proved by their dealings with their customers that they render an honest service for the money which they receive, and we are glad to commend them to our readers. The character of its advertisers has always been a matter of especial pride to this paper, which has invariably felt that it would rather lose than keep an advertiser concerning whose methods or character it was in any doubt.

That its advertisers continue to use the columns of FOREST AND STREAM is not surprising. This is a journal of recreation and it is read by persons who are willing to pay, and to pay liberally, for whatever may contribute to their pleasure. It is, of course, this class that the dealers in sporting goods especially desire to reach, and in no way can they reach so large a proportion of so high a class as through the medium of FOREST AND STREAM.

We cannot speak of the West and its wild game without speaking also of the men, the women and the children who lived and moved over the country and among the game, and who subsisted on it.

Twenty-five years ago these people were so distinctive a feature of the wild West that they could not be passed over. Then they had changed but little from their primitive ways. Life had been made easier for them by their acquaintance with the horse, with iron arrow points, and to some extent with the gun. It had been made harder for them by the introduction of strange new diseases and of liquor, and by the encroachments of the whites on their hunting grounds. Some tribes were irregularly at war with us. Now and then they suffered from such massacres as Dr. Coues tells of on another page, for which they made swift reprisals. When friendly they were a cheerful, generous, hospitable people; when hostile they were terrible in their pertinacity, their craft and the unsparingness of their revenge.

It was the buffalo that gave life to these people. He was their food, their clothing, their shelter. So long as he roamed over the limitless plains, they too might roam, sure that their every want would be supplied. But when the buffalo disappeared the Indian's wandering days were over.

Visitors to the World's Fair in 1893 will remember well the life-sized statuary in staff, of American types. Many of our largest game animals were shown in size of life. There was a cowboy and there was an Indian—by far the most striking of all these wonderfully impressive

figures. Those who knew the Indian in his old wild state and who saw this statue are not likely easily to forget it, for it was full of the thought and the spirit of the great plains, where in the old days the wild Indian hunted free and fought his enemies, and, when too hardly pressed, turned his horse's head and vanished into the unknown wastes of what we once called the Great American Desert. This statue was the most complete materialization of that spirit that we have ever seen. The Indian sat twisted on his horse on one thigh, looking to the right and shading his eyes with his hand, while his fixed steadfast gaze seemed to pierce beyond the limits of the horizon. On his back was his bow, and in his left hand his lance, while his uneasy pony, turning his head in the direction of the rider's gaze, was calling to some companion near or far. No group of statuary that had about it anything of human interest was half so distinctively American as this lonely figure. After looking at it one could close his eyes and carrying back his mind twenty years could see again the solitary vidette on the hilltop, looking for buffalo or sentinelizing the camp.

This group was by Mr. A. P. Proctor, the young sculptor whose name for the past few years has grown so rapidly in public knowledge. He is a Western man, and he naturally seizes Western types, because, after all, the West is nearer nature than we of the East can ever be. One imagined in 1893 that Mr. Proctor would never do another piece of work that would so thrill one as his World's Fair statue of the Indian, but in this number we are permitted to reproduce another Indian group, modeled by him, and now on exhibition in the Paris Salon. Even as seen in this reproduction, it is a superb piece of work, and yet the photograph gives little more than an idea of the statue. It is full of action, and the face and carriage of the man are noble and dignified, while his figure is that of a true Indian. The streaming

war bonnet, the lance and the shield are well subordinated; the restrained action in the horse and the easy unconcern with which the rider sits him form a splendid contrast.

This statue is more elaborate and has more action than the one seen in 1893, and we may imagine that in life size it would give the beholder the same thrill that he felt when looking on the incomparable lonely figure in Jackson's Park, which seemed so wholly apart from anything near at hand, and intent only on the distant rim of the world toward which he was gazing.

To-day the highest ambition of most big-game hunters is gratified by killing a bear, which seems to them the most desirable of all big game. In the old days of buffalo plenty, bears were abundant on the prairie as well as in the mountains. One remembers sitting in the cool of the summer evening on the deck of a Missouri River steamboat as it slowly puffed its way against the current over the shallow bars, and counting at a single view seven grizzly bears scattered over the river bottom, all busily engaged in digging roots. A season earlier, while traveling over the prairie in South Dakota and eastern Montana, groups of five or six bears were often seen. Two or three years later, along the flanks of the Rocky Mountains, the Cheyenne scouts employed by the Government had great sport chasing the bears, which they found digging for camas, when the bulbs were ripe.

In those days bears were common. To-day they are almost the scarcest of our wild game, and besides being so scarce they have been educated up to a high point of cunning and wariness by a continuous pursuit with the trap and with the rifle. The traits of the bear have been well set forth by a number of writers in the recently published "Trail and Camp-Fire," yet we must

not imagine that in these articles the half has been told of the surpassing wisdom of these ungainly brutes. The day has not yet come for writing the full history of Bruin or of Ephraim, but that history must be written soon, if at all. The contributions which we have had to it are of high value.

In Europe scientific forestry had long been practiced, yet in this country twenty-five years ago it was no more than a naked name, and a name but seldom heard. A few persons, more farsighted than their fellows, talked of the dangers which must inevitably follow the wholesale destruction of our woods, but the great public knew little and cared less about this subject.

In the announcement of the purposes of FOREST AND STREAM, which appeared in the first number issued, occur the following sentences:

"For the preservation of our rapidly diminishing forests we shall continually do battle. Our great interests are in jeopardy * * * from the depletion of our timber lands by fire and the axe."

Since that time the public interest in forestry has grown; at first very slowly, yet with a spread that constantly became wider. Within the past year or two in some parts of the country it has become the burning question of the hour. Some of America's best scientific minds have given time and thought to its investigation; it has been debated to and fro in Congress and in the newspapers. To-day it is a live subject, and interests a large number of people.

This is neither the place nor the time to discuss the causes which have led to a general awakening by the American people to the importance of this forest preservation, nor to indicate the part which FOREST AND STREAM has taken in bringing about this awakening. It is enough that the time is coming, and coming soon.

The Sportsman Tourist.

Raspberrying in Danvis.

"WAL, I do' know but what they be pretty tough on ol' folks wi' short laigs an' petticoats," Sam Lovel soliloquized, with unwonted sympathy for his mother-in-law, as he paused at the threshold after climbing the steep back stairs, and looked down at them considering the helpful addition of a hand rail. "Wal, sometime, mebbby," and so giving the matter present dismissal, he entered the kitchen with his carefully borne burden, an improvised basket of birch bark filled with raspberries.

"My sakes alive, where did you git them?" cried Huldah, dropping her sewing upon her lap as he set them on the table before her. "Jest look, Aunt Jerushy. Mother, did you ever see bigger rosbaries?"

Sam, till now having no eyes for any one but his wife, became aware of the dumpy, inert figure of Mrs. Purington sitting in the easiest rocking chair, where the coolest draught of south wind came through the open door.

"Why, mother Purington, you here? Hain't it cur'ous, I was jest a-thinkin' 'baout ye as I come up the steps."

"An' naow I s'pose you're thinkin' the rest on't, 'the devil's allers nighest,' an' so fo'th," she said, in an injured tone, as she hoisted herself ponderously from the chair and waddled over to the table. "Hm-m-m, yes, tol'able decent baries, but they hain't so big as tame rosbaries, the biggest on 'em hain't."

She searched her waist for the longest pin it held and spitted the largest and ripest berry upon it. "Naow that hain't nothin' tu a tame rosbari, tu look at nor tu eat," and she tested the last quality with a critical smack.

"Proper nice they be," said Aunt Jerusha, with hearty approval.

"They'd ortu be, for a man tu spend his time a-pickin' of 'em," said Mrs. Purington, impaling another choice berry and casting a severe glance at Sam and Huldah, who seemed as unconscious as the berry of the thrust.

"I'm dreadful glad you did, Samwel," said Huldah. "Where did you find 'em?"

"Over where we chopped two years ago. I come on tu 'em when I was a-lookin' for the young cattle, an' the' was more'n you can shake a stick at in a fortnit. I jest made me a basket and went at 'em. Antwine's womern's in there with her hull litter, a-pickin' wi' both hands. You women folks got tu hyper 'f you want tu git any for sass an' dryin'."

Huldah held at arm's length the garment she was making, considering its proportions and the question of berry-picking together, yet separately, before she answered:

"Why, I do' know but what we might go to-morrow, the hull toot on us. Don't them sleeves look long, or don't they? We can shet up he haouse an' all go, an' not git no dinner. Come here, Bub!"

"Haow long be you goin' to Bub that boy?" Sam asked impatiently, and then, "Where is Bub anyway?"

"Haow long be you?" Huldah asked, laughing.

If Sam had listened he need not have asked the whereabouts of the child, for his shrill voice could be heard coming from the shop, mingled with the deep tones of Uncle Lisha, and the regular strokes of the hammer on awl and pegs. And now the two entered the kitchen, the child in response to his mother's repeated call, Uncle Lisha to learn the cause of the unusual commotion.

"What's all the haowdelow abaout?" he demanded, regarding the company under his lifted glasses.

"Oh, it's Bub's sleeves an' rosbaryin'," Huldah answered. "Come here, Sammy, an' let mammy see. Wal, there, what it shrinks wi' washin' 'll make it all right," she declared triumphantly, after measuring the sleeve of the check apron by the child's arm.

"I didn't s'pect nothin' but what you'd spilte it," said her mother, in some disappointment.

"An' we're all goin' rosbaryin' tu-morrer," Huldah explained to Uncle Lisha. "Sam says the' is sights. See what he fetched. Hain't them beauties?"

"Not ekal tu tame ones," Mrs. Purington protested, as she speared another fine specimen and conveyed it to her mouth.

"If you'll pick 'em over we'll hev 'em for supper, Aunt Jerushy," said Huldah.

"They'll needs lots o' sugar," said Mrs. Purington; "they're terrible sour."

"An' we've got lots 'at was made a purpose tu sweeten things," her daughter cheerfully declared; "an' as I was a-sayin' we're all a-goin' to-morrer; you an' Aunt Jerushy—an' you'll go, won't ye, mother?"

Mrs. Purington shook her head doubtfully. "I don't b'lieve I feel well enough tu stan' the traipsin' an' the heat an' the muskeeters, an' ju' like as not run on tu a hornet's nest, an' I shouldn't wonder if it up an' thundered by tu-morrer an' give us a soakin' if the lightnin' don't strike us. Sis might go, mebbby."

"Good airth an' seas! Yes, I'll go if I c'n git the wax off'm my fingers so's't the baries won't stick tu 'em. An' mother, she'll go," said Uncle Lisha, "she hain't so temptin' tu muskeeters an' wasps as what you be, Eunice. I do' know 'baout lightnin', but she won't water-soak."

"Mebby Briggses folks an' Hillses would luf tu go," Huldah suggested.

"Wal, if Gran'ther's goin' I don't want tu. The ol' torment!" Mrs. Purington declared.

"Send word you're a-goin' if you don't want him tu," said Sam.

"Me want to go, mammy. Can't me go, mammy?" pleaded the child.

"Of course, mammy's man's goin' tu ta' care of mammy," his mother said, smoothing the curly pate with her fingers and stooping to kiss the upturned earnest face.

Word was sent to the chosen neighbors, and a general movement of the combined force upon the berry patch was planned for the next day.

If these worthy people had deemed themselves such special objects of divine favor that they would be given the weather they prayed for, they could hardly have

suggested to infinite wisdom any improvement on the day, which they thankfully accepted as a happy chance, not as one made to their order.

Not one of Mrs. Purington's thunder heads lifted its pearl and silver dome above the green barriers of the mountains; the only semblance of clouds were snow white shreds, drifting across the blue sky like thistle down, dissolving in the blue expanse, fleeting as their shadows on the green earth beneath. It was a north wind that blew these films of vapor across the azure dome, and it tempered the rays of the July sun to a degree of moderation that tempted forth even Mrs. Purington. Shortness of breath and the presence of her declared enemy, Gran'ther Hill, kept her with the rear of the straggling column, where she claimed the frequent assistance of her daughter Polly and received encouragement from Aunt Jerusha.

Now the company halted beside the little brook that divided the open fields from the frowsy, half-cleared border of the forest like a crinkled silver thread beaded with amber pools and carelessly dropped between pasture and woodland. Its liquid music, ever slightly changing with the rolling of a pebble, the sway of a dipping branch or the movement or stranding of some drifting twig, the plunge of a frog or scurry of a scared trout, chimed with the jangled melody of the bobolinks on one side and the tentative fluting of the hermit thrush on the other, distinctive voices of field and forest.

Some one dipped up a tin pailful of cold water, and Sam was shaping a dipper of birch bark with a cleft stick for a handle, when Mrs. Purington arrived at the brookside with her youthful and aged escorts.

"Dear me, sis! I hev got tu se' daown an' rest me!" she panted, surveying the ground critically, and pointing to a cradle knoll where native wintergreen and foreign herdsgrass crowded each other for supremacy. "Sis, you poke in there, an' see if that hain't a snake a-wigglin' the grass."

"Law sakes, Eunice, the' hain't no snakes 't would hurt ye," Aunt Jerusha, already comfortably seated, said, encouragingly.

"I don't care, it 'd scare me tu death tu see one! It allers did!"

"I don't like snakes nuther, an' I wish't one would git a mou'ful on her," Gran'ther Hill growled grimly, setting his toothless jaws till nose and chin almost met. "By the Lord Harry, the'd be one sick serpent!"

If Mrs. Purington heard him, she affected ignorance of his unpleasant words, as she seated herself upon the knoll when Sis had threshed it with a stick, and fanned herself with her apron, blowing a stertorous counter blast from her puffed lips while she waited her turn at the passing pail and dipper.

"When you kinder come tu think on't," said Joseph, with a view to giving the conversation a more pleasant turn, "it seem's 'ough it was kinder cur'us 'at the' wa'n't no ugly snakes here, that is to say, not rael pizen ugly, I mean. Eels is abaout the wust tu look at, erless 't is mud turkles."

"Mud turkles! You must be a cussed smart boy," said his father, with withering contempt.

"Wal, ye see, I was kinder takin' in all sorts o' rip-tyles," Joseph explained, "crockerdiles, ye know, an' scorpiuns, an' hippy Thomases, an' bats, an', an'— 'Clams an' crows, mebbby," his father suggested, with bitter sarcasm.

"We hed ortu be thankful 'at we live in a free an' enlightened kentry," Solon Briggs remarked, "an' not in metropical desarts, where boar-constructors an' animal condors, an' tigers, an' centerpedes haowl an' roam at large as frequent as they be in a mennygery, only not incarceterated in waggins."

"There's one advantage, you don' hafter pay a quarter tu see 'em," said Sam.

"No quarter give or took an' childern throwed in where there's crockerdyles," said Solon, with unwonted levity.

"There was here oncte Injins an' Tories an' Hessians," said Gran'ther Hill, "an' would be yit if it hedn't ha' b'en for John Stark, an' Ethan Allen, an' Seth Warner, an' Peleg Sunderlan', an' George Washin'ton, an' mongst us."

"Oh, Sam Hill, Ticonderogue an' Bennin't'n's comin'," Joseph groaned under his breath, and then audibly suggested, "It mos' seems 'ough we'd better be a-moggin' if we're a-goin' tu git many baries."

"Oh, say, father, le's set here an' hear Gran'ther tell 'baout fightin'," young Josiah whispered earnestly. "It's lots more fun 'an the plaguey baries."

But the inclination of the majority was adverse, and he unwillingly attached himself to the rear as the party advanced to the berry patch, whither Maria Hill, Jane Briggs and Huldah had already proceeded, and where glimpses of their green and white sunbonnets and their shoulders could be seen as they arose from the thickets of raspberry bushes or emerged from clumps of lusty young saplings.

Many acres were covered by briers and saplings, with which nature was hiding the ghastly wounds inflicted by axe and fire, here and there embroidering the green veil with white splashes of fireweed and pink sprigs of willow herb. Bees fared busily to and from these, and butterflies drifted idly among them like vagrant blossoms.

On the far side the stately wall of virgin forest stood a palisade of gray trunks, coped with deciduous trees and evergreen verdure. The bushy tract was thridded by a labyrinth of cattle paths, along which the party scattered singly and in couples, each engaging according to individual zest in the holiday labor that had brought them there.

Josiah kept close to his grandfather in the hope that the environment might suggest some story of bush-fighting or hunting adventure, and both forgot berry-picking when they flushed a brood of partridges and watched the young birds, no bigger than robins, fluttering away in divers directions, as strong of wing as July woodcock, and then listened while the mother softly sounded her gathering call. Sam was more intent on noting whither the full-fed bees flew than in filling his basket. Uncle Lisha, more industrious, but awkward, wasted much time in comparing the contents of his basket with that of Aunt Jerusha's, till he bethought him of the old trick of boyhood and covered the bottom of his pail with a thick layer of leaves. Solon and

Joseph fraternized on the basis of doing as little as possible. Therefore the burden of the fruit harvest fell upon the womankind, to whose nimble fingers it came more naturally than to the clumsy digits of their lords, which seemed more than ever all thumbs. Even Mrs. Purington's hand flew with swift regularity back and forth between bush and basket freighted with berries that she confessed scarcely inferior to some she had seen in the village garden of a bloomer, and became so interested in securing them that she grew indifferent to attacks of mosquitoes, and lost her fear of wasps and snakes.

Polly Purington and Ruby Hill exchanged girlish confidences, but kept their fingers as busy as their tongues. Huldah, with her boy clinging to her skirt, and the wives of Solon and Joseph close at hand, led the van well up toward the old woods, where the bushes bent lowest with their burden of red, ripe berries.

Suddenly Huldah became aware of the stooping figure of a woman at a little distance, who, becoming erect, disclosed beneath the wide-brimmed straw hat the broad brown face of Ursule Bissette, expressing first surprise, then annoyance quickly unmasked with effusive good humor, as she gave greeting in a deep masculine voice:

"Good mawny, Mees Lovel. Ee naise mawny. a'n't ee? You fan' plenty berree?"

"Good mornin', Ursuly. Yes, we find sights on 'em, an' the further we go the thicker they be."

"Ah, ee a'n't mos' any dees way," pointing toward the woods; and then unaware that Huldah had seen the large nearly filled milk pail before it was hastily hidden behind a thicket, "Me, mah chillen a'n't gat mos' any lee'l one, oup dere, all dis morny. Me try for gat few for sell on de village for bought me clo's for mah chillen, mais, me a'n't gat honly tree, four quart mos'," and she sighed deeply.

"Why, you can get a bushel of 'em down here 'most anywhere," said Huldah, exhibiting her half-filled basket in confirmation. "But I'm goin' up nigher the woods to see what the' is, for I'm coming to-morrer wi' a bigger dish."

"Oh, don' you go no furdur, Mees Lovel," said Ursule, assuming a most horrified expression, "dere was ours up dere, w'at you call—awhh—bear! Oh, hol' hugly! Me hear it gro'l lak t'under! Mah chillen hear it too, if you a'n't b'lieve. Pierre, Matilde, Joe, lee'l Antoine!" she called lustily. "Vien ici, fore bear gat you!"

A girl and three boys varying from ten to fourteen years old appeared from various quarters. Their mother spoke to them rapidly in French and then asked:

"A'n't you hear some bear in de hwood, lee'l whal 'go? Hein?"

The boys nodded a shame-faced assent, poking the mold with their naked toes and casting furtive glances at Huldah, but the girl, older and better trained, answered boldly, looking straight at her mother:

"Yas, hear two bear—mos' see it," and volunteered further additions to the terrors of the place, "an un bete a grandcue. Oh, ee squeal, hugly!"

Ursule turned triumphantly to Huldah. "You see, mah chillen a'n't never tol' lie. You go, bear keel you, prob'ly!"

Huldah regarded her with an amused, half contemptuous smile.

"Oh, I guess the' won't no bears tech us 'f we don't meddle wi' 'em. I'm a-goin' to resk it, anyways. Come, Marier, and Mis' Briggs!"

"Oh, ee heat you lee'l boy, me tol' you. You see, bambye! Me goin'. Come, chillen, 'fore bear ketch you!" and marshalling her brood before her she took a divergent path down the long slope.

"Le's go back," said Maria Hill, who, with Jane Briggs, had heard the conversation. "Don't you see she's gone?"

"Yes, we'd better," Mrs. Briggs urged.

"Sho! Be you goin' to let that critter scare ye to death wi' her bugaboo stories?" said Huldah scornfully. "Couldn't ye see she was lyin', an' her pail more'n half full o' baries? Gone? She jest scooted back up there as soon as she thought she was aout o' sight, but I see her straw hat floppin' along behind the bushes. All she wants is to scare us away from the best pickin'. Come on!"

Thus assured, her companions followed her, though somewhat timidly, Maria declaring, "I can't help feelin' skeery after what she said."

Presently Huldah, leading her boy by the hand, came into the old wood road, its ruts dried into stony beds of dry rivulets and half-healed scars of sled runners showing on the naked roots. Its low border of ferns was overtopped by a hedge of heavy-laden raspberry bushes and blackberry brambles not yet out of bloom that promised an abundant later fruit harvest.

They followed the rough path but a little way before their baskets were filled, and as they halted to rest before returning Huldah spied a broken sled, a forlorn, deserted wreck, with its beam pins on one side broken and one runner sprawled flatwise half buried in dead leaves and overgrown with ferns, and a sapling of two years' growth springing up through the socket that held the roller.

"Wal, there, that's what I call shiftless, whoever left it a-layin' here," she declared, with a slight disgust. "If 'twas Samwel, he ortu be ashamed. None o' the irons saved—wood shoes, though. And the stakes left in tew, good hardhack ones, sound as ever they was."

She drew one from its socket, and was examining it when the attention of all was attracted by an outcry of alarm that suddenly arose just beyond the turn of the road. Then Antoine's children broke into view, running at top speed, the long-legged girl in the lead, the mother crowding the rear at a remarkable pace for one of her build.

"Tryin' another plan to scare us off," Huldah laughed, after the first surprise. But when the girl dashed by pale and gasping, her brothers closely following, catching their breath in broken sobs, and Ursule pounding along at a pace that shook disjointed fragments of prayer from her lips at every step, it was evident that all were impelled by an unfeigned terror.

An instant later its cause appeared in the form of a great gaunt she bear, her beady little eyes twinkling viciously, her white teeth gleaming out of her open jaws and her ragged, faded coat flapping in jerky undulations as she plunged onward at an awkward gallop.

Huldah instinctively drew her boy behind her as she took a step backward, and swung the sled stake above her shoulder, for there was no time nor way for flight. Just as he passed her, little Antoine tripped upon a naked root, and his mother, close at his heels, plunged headlong sprawling over him, raining a shower of red berries far before her.

The bear in hot pursuit was almost upon her prostrate foes, when Huldah, putting every ounce of strength in the blow, brought down the heavy cudgel across the beast's back with such paralyzing effect that the hinder parts crippled down helplessly. Down came the club again on the skull, cutting short a whining growl of pain and rage, and the bear sank down with outstretched paws and relaxed jaws almost within reach of Ursule's feet that were wildly hammering the ground in a last desperate effort of defense.

Huldah dealt repeated blows upon the head until the bulging eyes stared fixedly and there was no answering quiver of muscles when the stroke fell; and then, her own strength almost as completely gone, she dropped her weapon and sank trembling to the ground, clasping her dazed child convulsively to her breast.

At the first appearance of the bear Huldah's companions, who were seated on the standing rave of the broken sled, arose simultaneously and attempted a retrograde movement into the bushes; but Jane Briggs' heel caught on the rave, and she fell prone upon her back into a bed of ferns, carrying Maria down with her and plunging both of her elbows into the two baskets of berries, and there the two women lay discreetly silent for fear of giving their whereabouts to the enemy.

When Ursule became assured that she was not in the clutches of her pursuer, she rolled herself off of her half-smothered son, and grasping him by the arm as she regained her feet, tore down the road at break-neck speed, uttering discordant shrieks, to which Antoine the younger piped a shrill accompaniment.

When the outcry grew faint in the distance Maria Hill called cautiously:

"Huldy, Huldy, be you killed?"

"No, I hain't, Marier, but I b'lieve the bear is," Huldah answered, in a voice between laughing and crying.

"What! you don't say! What killed him?"

"Why, I s'pose I did, erless he died o' somethin' sudden. It's a she one, I guess. Sam says they're ugly when they've got young ones."

"You killed her? Why, Huldy Lovel, what be you talkin'? Be you crazy?"

Maria and Jane scrambled to their knees and stared in new alarm at Huldah sitting limply on the wrecked sled, with the boy in her arms.

"The critter's gone arter them French! That is what! I heered 'em yellin' bloody murder," said Jane Briggs.

Huldah bent forward, looking fixedly at the motionless form of her late antagonist.

"No, she's dead. There's flies lit on her eyes and flyin' into her maouth. Come an' look! Ugh! don't she look ugly yet?"

Huldah stood up and her comrades came forward timidly.

"An' you killed her. Haow did you?" Maria asked, still incredulous.

"She was most on tu Antwine's womern, an' I give her a lick ont' the back wi' that ol' stake, an' somehaow it stopped her. An' then I give it to her with all vengeance over the head till she lay still. Oh, I don't know haow I done it, only, thinkin' o' that womern an' her young uns!"

"Ah, oh, Hu-Huldy Lovel! You be the be-beatin'est of all women 'at ever I see, so there!" Then breaking down completely after struggling through this tribute of praise, Maria hugged Huldah and wept upon her shoulder, while Jane Briggs, with more self-restraint, wiped her eyes upon her juice-soaked sleeve.

Presently the men came running up the road, Sam, Joseph and Solon in the lead, for Ursule meeting them had told a doleful story of their wives' peril and her own miraculous escape, which she attributed to the interposition of the several saints to whom she had prayed.

The three husbands were greatly relieved when they counted their due allotment of wives, and Sam, his boy under Huldah's wing, all standing unharmed by the roadside; and then all stood stock still in dumb amazement before the dead bear.

"I was goin' to scold you some for leaving the sled so shifless," said Huldah, when the other women had told the story of her exploit and shown the blood-stained, fur-clotted stake in evidence, "but now I know you left it just right an' in the right place."

Sam, Joseph and Solon skinned the bear, and as they bore the shaggy trophy down the road, each with his wife beside him and little Sammy astride his father's shoulders, Solon for the first time remarking the crimson stains upon his spouse, asked:

"Why, Mis' Briggs, have you likewise brewed your hands and face in ursuline blood and be'n a-wadin' elbow deep in gore?"

While she was denying the flattering impeachment and explaining the harmless nature of the apparent battle stains, Uncle Lisha met them with a roar of welcome, and Gran'ther Hill, after bestowing unstinted praise on Huldah, marched at the head of the party whistling toothlessly his favorite military air.

At last the whole company was gathered again by the brook with the addition of Ursule Bisette and her children, among whom she sat dejectedly mourning the loss of her berries and the discovery of the richest part of the field by these intrusive Bostonians.

"Met'ink, Mis' Lovel, you ought for give me half dat bear," she whined dolefully, "'cause, you see, me poor hwomans lose mos' all mah berree for dat bear, an', you see, if 't a-n't for me you a-n't keel it an' gat de baounty, probly."

"It kinder seems 's 'ough," said Joseph, breaking the silence which followed this audacious demand, "'s if Mis' Antwine hed ortu be thankful the bear didn't git her."

No one seemed to recognize the justice of the claim except Huldah, who set forth her view of it to Sam.

"Why, yes, I hadn't thought on't. But, you see, she was sort o' bait, a-fetchin' the bear right tu me 'f I didn't n't'ral'y want no bear. I guess I ortu give her a leetle suthin' if I do git the baounty."

"By the Lord Harry!" cried Gran'ther Hill, glower-

ing at Mrs. Purington and smiling grimly upon Huldah, "I don't see, Eunice Borden, haow you an' Pur'nt'n ever come tu have that gal. She hain't none like nary one on ye. But then you can't never tell. Joseph don't take arter me ner yet his mother. Come, let's all go hum."

ROWLAND E. ROBINSON.

Rare Creatures.

How to Disarm the Scorpion.

NATURALISTS assure us that there are 750,000 distinct species of insects, exclusive of those called parasitic. A hundred years would not suffice for one to become familiar with such a multitude of forms. Indeed, any museum collection requires more study than most of us are able or willing to attempt. But while dwelling in forests, where one has time to meditate upon nature, he cannot fail to delight in examining some of the marvelous creatures that thrust themselves upon his attention, though their gay-colored bodies may contain venom that will entail upon the traveler sickness or death, particularly in tropical countries.

While exploring the interesting old ruins in Yucatan (Mexico) we found the insects more dangerous and troublesome than leopards and snakes. The last two were not aggressive; the former intruded everywhere, and sharply resented interference. If any spiteful, big, red ant was disturbed while walking over us, its cruel fangs sent a shock from the crown of our head to the end of our big toe; the sensation was about like having a red hot needle thrust into a nerve.

In climbing to the roof of an old building, on one occasion, we saw a rare and beautiful spider that had spun its web in the branch of a tree. The spider's back was shaped like that of a common black beetle, but resembled polished steel, with many crimson specks, and its legs were like bronze. This handsome creature's web was as soft and fine as floss silk, brilliant and yellow as gold, abundant and strong.

The Indians entreated us not to meddle with the insect, insisting that it was both spiteful and poisonous.

Among the many lizards that we examined there was one called by the natives toloc, said to have a venomous tooth. The body was only 6 in. long, but the tail measured nearly thrice that, the creature's total length being about 24 in. Its head was completely surrounded by a bright yellow crest or coronet, like a veritable crown of gold, whose upper edge terminated in a series of small peaks.

The scorpion, often alluded to by ignorant persons as a reptile, is a spider very common throughout Central America. The commonest species is nearly black, from 4 to 8 in. long. At the end of the tail there is a good-sized, very sharp dart. The venom exuded from this is so powerful that, although only one-thousandth part of a drop is infected into the wound, it suffices to immediately paralyze the victim's tongue, making speech difficult. If antidotes are not quickly applied, fever sets in and is followed by prostration, which in rare cases only culminates in death.

Physicians recommend various remedies to assuage the suffering—ammonia, opiates, or emollients are applied to the wounds, the first two being also administered internally. The negroes in Honduras rub the wounded parts with indigo, asserting that this neutralizes the venom and prevents its baneful effects.

The Maya Indians in Honduras, Guatemala and Yucatan know that if the scorpion can distil a most virulent poison in self-defense, its body also contains the best antidote to counteract its noxious effects. No sooner is an Indian stung than he kills the insect and applies its bruised intestines to his wounds. At once all pain, the palsy of the tongue and other symptoms disappear as if by magic. When unable to catch the offender, these natives apply to the sufferer a ligature to check the circulation of the blood, and then suck the virus from the wound, first coating their mouth with tobacco juice.

These natives occasionally gather a few pennies by fearlessly playing with live scorpions, armed with their sting and using it freely before a crowd of astonished persons, awe struck at seeing the objectionable creature crawling over bare hands and arms, even on the face of the man, who handles it unconcernedly and cares not how many times it stings him. He is regarded as a wizard who, by occult means, special charm or magic word, has bewitched the insect and deprived it of all power.

The man has, in fact, rendered the scorpion inoffensive by clipping off two small vesicles situated at the lower end of its thorax, outside, that seem to have a direct action upon the poison gland, which is situated in the last abdominal segment, at the base of the sting. The vesicles are feather-shaped, transparent, and erect when the insect is angry; they adhere to the body by tiny pedicles and can be easily cut away without injury to the creature. Seen through a magnifying glass, they resemble small pancreatic glands filled with white translucent liquid. By amputating these, and causing the insect to spend on any inert substance the small quantity of poison contained in the duct connecting the poison gland and the sting, it is rendered as harmless as a viper whose fangs have been extracted.

The scorpion is not viciously spiteful, it only defends itself when molested. Trustworthy persons have affirmed that it will commit suicide if surrounded by fire. Repeated experiments have convinced us that all scorpions will not do this any more than all men will commit suicide under pressure of events and conditions.

The female scorpion is consumed by her offspring, and to see her dragging herself about, with many young ones clinging to her like leeches, is a piteous, revolting sight. Atom by atom she is devoured. When only an empty shell remains, away scamper the many, produced by one.

The scorpion casts its skin, as snakes do; we have found very perfect discarded ones, quite white, standing as when filled with life, and the tail upturned—its usual position. It is remarkable that the creature can emerge, like a snake, through its mouth, without even breaking its lobster-shaped claws.

ALICE D. LE PLONGEON.

Old Porter's Spirit.

Editor Forest and Stream:

I send you by even mail two time-stained issues of Porter's Spirit of the Times, dated March 14 and 21, 1857, the leading article continued in both numbers being my own. It is entitled "The Bandit and the Borderer," and is descriptive of wild life west of the Missouri River at that period when the plains Indians were yet untutored, and "devil bent for ha'r." I have kept them hitherto among my archives for the forty-one intervening years, but as I am growing rusty myself I have decided to turn them over to you for keeps.

You will be interested to see how the leading sporting paper of the day looked, antedating the FOREST AND STREAM, as it did, by seventeen years or more. But most striking is the coincidence that your two publication offices should be located at precisely the same spot and number, at 346 Broadway, on the corner of Leonard street. Verily, the mantle of the earlier occupant has descended upon you! Wm. T. Porter, the "tall son of York," was the leading spirit of the paper then, and a host of those old sports whose memories are so much revered now used to gather there in those days, of whom possibly the venerable Isaac McLellan is the sole survivor.

In these two issues will be noticed the arrival of Sir Charles Napier, British Ambassador, accredited to President Buchanan, who had just been inaugurated, as well as the celebration of the annual Mardi Gras festivities at New Orleans, where Pandemonium and the entire court of His Satanic Majesty were represented in tableaux, and hosts of evil spirits appeared in Tartarean costumes on the ballroom floor in polka, waltz and redowa. The death of Charles A. King, a favorite actor, is noticed, as well as the return of Mr. and Mrs. W. G. Florence from a successful European tour, the first attempt of American artists abroad. Also the introduction into America of the Cashmere and Angora goats—into South Carolina and Tennessee—and the arrival at Indianola, Texas, of a consignment of forty-one camels from Africa by the steamship Suwanee in charge of two Turks and five or six Greeks. They were imported by the Government for mail and military purposes, arriving in good condition, and served their purposes well for several years until the occurrence of the Civil War in 1861, when the camel service was incontinently broken up, and the experiment came practically to an end. Survivors of these introduced camels have been seen at times in desert districts until very recently. The animals on arrival were delivered to Capt. Van Vocklin, U. S. Quartermaster at Indianola. Mention is also made of an 800 mile sleighride from Dixon, Minn., to St. Paul and return, accomplished by the Messrs. Noble and their wives, occupying three weeks.

Quoting from the Albany correspondent of the Courier and Enquirer, it states that "efforts are again making to pass a law to prevent the cruel and wanton destruction of deer," and urges that "there are seasons when the deer should be allowed to roam unmolested, and it is an outrage on all woodcraft that the slaughterer has taken the place of the sportsman."

With this issue of Porter's Spirit its readers were presented with a colored lithograph of Flora Temple, she being the fastest trotter at that time on the American turf. This bit of enterprise entailed such extra labor in the mailing department as to delay the edition.

It would be entertaining at least, if not instructive, were recurrence oftener had to old files. In looking up facts which are overgrown by time, I have recently had occasion to refer back to the files of FOREST AND STREAM for 1873-4, and am surprised to discover the very intelligent and comprehensive treatment which I find there regarding a multitude of topics geographical, physiological and biological. In those years pains were taken in the theses, and accuracy was the first aim; but in the present era of exploitation and hero-making writers for sporting journals, like all the rest, seem to aim especially to dress up in a fantastic or sensational way the identical materials which educators of the old school were fain to present in homely colors, but always with accuracy and truth. The new generation of thinkers and explorers had rather adopt the flying machine than abide by the staid old methods of travel; and so from a high intellectual plane they map out new courses of thought, while they overlook or ignore the footprints of the pioneers. Whoever is not up to date is necessarily a back number, and the old veteran, if not actually decrepit or superannuated, is relegated to the high shelf. Hence, at my ripe age, I have no call to lie on with the hustling crowd, or to seek vantage ground which I can never hold. Fain would I lead in the old paths, but the beaters point to the new.

In the era of canoes and saddles our old foresters and field naturalists were able to solve problems by the light of tried experience. They could observe closely because they moved slowly and flew low; but in these days of scientific aerostatics, when time is distanced and space is set at naught, the speculative student claims to be able to compass more at a bird's-eye glance than we of the old school could ever know who have plodded the ground over for generations. In his estimation there is more glamour in the upper air than along the lower earth. Nevertheless the making of history must continue, and upon this rock the record-breaker must build. It is well, though, sometimes to search among the crypts.

CHARLES HALLOCK.

THE interest felt in the FOREST AND STREAM and the permanent value attaching to it are shown by the continued demand for back numbers which we receive from libraries and other public institutions. Such institutions always bind each volume of FOREST AND STREAM when it is complete, just as they bind other periodicals, which are useful for reference, and when at the end of the volume the twenty-six numbers are sorted out to go to the binder, if any issue is missing the office of publication is requested to supply the lacking number. Such demands come to us from all over the country, and one of the most recent reads as follows: "United States Department of Agriculture, Library.—Washington, D. C., June 7, 1898.—Dear Sir: Will you not favor us with the following issues of your publication, which have failed to reach us. Nos. 21, 22, Vol. L., 1898. The Department is carefully preserving the files of this publication and indexing many of the articles. Respectfully,

W. P. CUTLER, Librarian.

(per M. N. Barnard.)

"Address: Secretary of Agriculture, Washington, D. C.

My Only Indian Massacre.

BY ELLIOTT COUES.

IN Arizona days of 1864-65 I hunted Apaches sometimes, and sometimes I was hunted by these Indians. Once we came to terms, which were those of a bloody massacre, as I will relate.

The Indians made things red hot for the white citizens and soldiers in those years. I was a youthful army surgeon, fresh from college, on duty with troops at Fort Whipple, close by Prescott. There was not a trail leading into either the fort or the town that had not been reddened with blood; travelers were killed and stock was run off within sight and sound of both places. During the winter of 1864-65 we hunted Indians like any other large wild game, and had killed a good many, when another expedition was made against them, and I asked and was granted permission to join it—such was the foolishness of extreme youth, fancying there would be fun in killing Indians, besides being needlessly curious in such beastly business. In later years I attended such performances when it was my duty to do so, certainly never from choice.

I have before me an old journal which reminds me that on Sunday evening about dusk of Jan. 8, 1865, I rode alone about five miles from Fort Whipple to Jake Miller's ranch to join the party there bivouacked. It consisted of Capt. John Thompson, of the California Volunteers, in command—a red-headed, red-whiskered, blue-eyed, freckle-faced Irishman, of renown as a hard swearer, hard drinker, hard rider and hard Indian fighter; myself, an uncertain factor in this affair; George Cooler, citizen guide, a tall, lank fellow, who knew all about the country and Indians; two scouts, one of them a tame Indian boy, and twenty-three soldiers—total twenty-eight. We had an alarm the first night, tumbled out of blankets and charged into the brush; but it amounted to nothing.

On the 9th and 10th we made long marches through Mint and Williamson's valleys in search of a trail leading to a rancheria we were to attack; part of the march by night. It was intensely cold; my canteen burst and let a stream of water down my leg, instantly freezing; and we stumbled over very rough country in the dark till we came upon the scouts, camped in the rancheria we were going to jump; it was deserted, and we rolled in our blankets on the spot, about 1 A. M. of the 11th.

At daylight the scouts went ahead again, and meanwhile we examined the rancheria, consisting of twenty-one wickiups, representing, as we supposed, some 100 Indians. The scouts returned soon, reporting that the whole body of them had moved off slowly, neither in fright nor in mischief, but simply changing camp. We shifted camp also, intending to take up the trail next day. This was in the vicinity of Walnut Creek and on the edge of the Juniper hills, a few miles from that spot on the Whipple to Mojave road which in after years became the location of Camp Hualapais.

On the morning of the 12th we took up the broad, plain trail, and it soon grew "hot." The sign was plenty, where the Indians had moved along, stopping every few minutes to warm themselves by setting fire to clumps of grass. Presently we found on a bush a slip of paper from Cooler: "Go slow; Indians must be very near." A few minutes later he appeared in person with some news I will condense in the Arizona vernacular:

"Game jus' over the hill thar—all-fired big gang of 'em—more'n a hundred, squattin' tergether, eatin' that steer they stole from Jake Miller. They ain't got no idea we're 'round—can jus' sneak up 'n' wade in 'n' whale hell outen 'em—corrall the whole kerboodle slicker'n greased lightnin'."

Thompson gave his orders very quietly; he was a good soldier, always coolest when things were hottest. He hustled the cavalry horses and pack mules into a thick clump of cedars, where four men were detailed to hold them, and told me to stay there. I expostulated that I hadn't come out for that, when he said, "Well, come along then if you want to," no doubt adding to himself, "if

you want to be a durned fool." We dispensed with unnecessary clothing, and I could notice some white faces and set teeth among the soldiers as they waited for the word. "Forward!" said Thompson, in a low voice, and the twenty-four of us crept quickly in silence up the hill.

The woods ceased on its crest, and there was the rancheria down in an open hollow about 80 yds. off, the wickiups strung along a little space, and among them men, women and children, unconscious of danger. For a moment I wished myself anywhere else. I was armed with a double-barreled shotgun, 10-gauge, muzzleloader—we had no breechloaders in those days. My ideas were not agreeable—about equally divided between imagining my helplessness as soon as I should have fired twice, and the miserable butchery we were about to commit. Then a dog barked in the Indian camp. We were discovered. But the men had meanwhile deployed in line of battle on the crest of the hill in the edge of the woods. "Fire!" shouted Thompson. The volley rang out. "Forward—double-quick—charge!" And we made the rush with a yell.

I was pretty lively on my pins in those days, and there were only two who got in ahead of me. One was our

instant Thompson shot him dead with his revolver, else probably I should not now be writing.

The killing was all over in probably five minutes. Thompson called it off promptly, and then the looting and firing of the wickiups was in order. This miserable business included shooting some babies in the head with revolvers as they lay helpless in their wicker cradles. My expostulation about this with one of the soldiers was met by the undeniable remark, "Nits will breed lice, you know, Doc." (This soldier shortly afterward murdered in cold blood his first sergeant, in the Whipple barracks, in the face of the whole company.) My share of the plunder was the bow and arrows of old Red Shirt, the chief, who had intended to shoot me with them; some trinkets off the dead body of his squaw, who was lying by his side, and all the buckskins I could carry.

We counted twenty-eight dead bodies, mostly of women and children; not one of us got a scratch. There were doubtless some killed or wounded we never knew. When we jumped this rancheria we knew nothing of a second one, quite as large, only a few hundred yards down the little valley, but concealed from our view. This was evacuated at the first alarm, and no Indian was killed there; but we looted and destroyed it like the

other. As we drew off from this sad scene of carnage the Indians gathered in the woods at a distance, yelling defiance, but no further demonstration was attempted. This was perhaps fortunate for us. We must have jumped at least 200 Indians in the two rancherias, and they could have made it hot for us if they had had the courage and any sort of a fair show. I know that Thompson was more worried after than before or during the fight. He ordered a prompt retreat, and we made forced marches back to Whipple. On the way we murdered one Indian—an old man, who was returning to the rancherias we had destroyed, and ran into us before he discovered us. We turned him prisoner over to the guard, with orders to shoot him if he tried to escape, and the column moved on. Not five minutes afterward a shot was heard, and the sergeant rode up and saluted Thompson. "Well, what is it, Sergeant?" "Prisoner tried to escape, sir." "Well, what did you do?" "Shot him, sir." And we rode on.

I shall never cease to regret my participation in this atrocious affair. I was perfectly innocent, to be sure, and had no suspicion we were not hunting hostile Apaches. Whether or not Capt. Thompson and George Cooler knew beforehand that these were friendly or at least not hostile Indians I was never sure. But I think there was reason enough for worry when Thompson discovered that it was Red Shirt he had killed. I was afterward given to understand these Indians were chiefly, if not entirely, Hualapais. I know the affair led to a series of bloody murders in reprisal, which cost more lives of whites than we took at the time of Indians, to say nothing of the hundreds of Indians killed in the Hualapais war of

later years. I have nowhere seen, and do not think that there exists in print at least, any fair account, such as I have given, of the Juniper Mountain massacre.

Sixteen years afterward, in 1881, I rode out from Camp Hualapais in company with my friend, Mr. Frank Cushing, to look at the spots so deeply branded in my memory. A settler's cabin was in the valley, and a cornfield waved its tassels over the ground once reddened with the blood of those inoffensive men, women and children. I picked up a relic or two of the slaughter on the exact spot where I had taken the bow and arrows from the stiffening hands of the dead chief, Red Shirt.

The atrocious massacre so graphically described by Dr. Coues is only one of many which took place in the old days. We imagine that massacres were perpetrated only by Indians, but the fact is that in our Indian wars the whites have killed a far greater number of non-combatants—women and children—than the Indians ever did. This particular "fight" was never officially reported to the War Department, is not of record, and the account is an absolutely new contribution to Indian history.

INDIAN WARRIOR.

By A. P. Proctor.

boy of an Indian scout, racing like a deer; next was tall George Cooler with his immense strides; Thompson was next to me, and the rest well in together at our heels. In a few moments we were in the camp; the shots rang out again and again; yells, shrieks and groans resounded; the peculiar smell of blood and burnt gunpowder was wafted past my nostrils. There was no resistance; I do not think an arrow was fired; there was no fight; it was a massacre. After momentary confusion the Indians broke away. Some had been killed at the first fire; others, especially women and children, as soon as we got among them; for the rest it was a race through the woods for half a mile, devil take the hindmost with them. kill as can catch with us. I tried my best to kill an Indian and am happy to say I failed. The only good shot I got dropped before I pulled trigger, with a piercing scream, and a pappoose rolled off the back of its dying mother. I was blown with running, and could not have hit a barn door. The chase had meanwhile swept on beyond me, when I heard Thompson call out at my elbow, "Watch out, Doctor, for that big buck!" I turned my head, and there was a tall Indian—he looked about 10 ft. tall—drawing his bow about 10 ft. off; at the

Around the Camp-Fire.

BY FRED MATHER.

THE snow lay in patches on the north sides of mountains, while in the ravines it was deep and soft with rain, so we camped on the north side of the lake, in a pouring rain, not an intermittent sort of rain that leads one to think that it may clear up in an hour or so, but a steady drizzle that had already soaked everything for two days, and offered no promise of ever letting up, for spring in the Adirondacks is an uncertain quantity as to weather. The ice had gone from most of the lakes, and the brook and lake trout were rising to such flies as are to be found near spring water even on the snow in midwinter, and there were two parties of two each in search of early sport and health. In each party there was one invalid who was more in need of ozone than of trout, while the other was a more robust friend who liked to take his trout with ozone "on the side," or as a "chaser."

The two parties were strangers and had come to the lake by different routes, and had camped on different sides of the lake in tents. A northeast storm had soaked the ground on the south side of the lake, and the party there, seeing the smoke from a well-protected camp on the other side, packed up, rowed across and introduced themselves. There was a stalwart bank president and his invalid friend, who had been run down by a siege of grippe, and who should not get wet, and who wanted the expected clear cold air instead of the "Scotch mist" which he was breathing. He was well provided with waterproofs and sweltered in them. He had been a paymaster in the navy, but was on the retired list. The president was a man of fifty, while the paymaster was his senior by many years.

The other party consisted of a man of about fifty-five, who had been a hunter, trapper and army officer, who was called "Major." His friend was afflicted with a complication of disorders, and knew that his time was short on this earth, but was as jolly as the jolliest, because he was a philosopher and realized the fact that it's only a question of a very short time with all of us, some a trifle shorter than others, but he never bothered other people with his troubles. We called him "Frank," and one of his favorite quotations was from Emma Wheeler Wilcox:

"Laugh, and the world laughs with you;
Weep, and you weep alone."

There you are: Introduced to the whole crowd in an Adirondack camp in what promised to be a week's soaking rain, which would discourage most men, but not a grumble was heard. There was the president, the paymaster, the major and Frank. Four quite dissimilar men in their tastes and business habits, as well as physical conditions, but all with a love of fishing and each possessing a fund of humor, without which no man is companionable, in the woods or out of it.

The new camp was arranged on the sheltered north shore by the president and the major, and a stock of dead wood gathered for a camp-fire. The president learned how to ditch his tent in order to keep the water from flowing under it, and the commissary department was organized so that the stores should be in common, and a menu for each day laid out, one able-bodied man should cook while the other should gather fire wood and "police" camp. The major injected the latter military term into the camp regulations, and it means cleaning up company streets, and in army parlance "police duty" is cleaning camp. In our case it meant washing dishes, burning rubbish and overseeing things generally. In an established camp there are sinks for men and officers, and in Adirondack camps such minor regulations must be enforced. If order is nature's first law, then neatness is the first law of a camp, whether of four men or four thousand.

The President's Story.

The heavens wept, with no indication of a let-up. The four men of the new camp had dined as the sun went down and had gathered under a fly to smoke. For quite a while the only sounds were the steady patter on the trees and an occasional rattle of big drops on our canvas when a gust shook the leaves above us. It was miserable enough, but there was not a grumbler in the party; all were equally miserable, but took it philosophically and made the best of it.

The president knocked the ashes from his pipe and remarked: "If there was thunder and lightning with this storm it would be something like a fishing trip I had on Rice Lake, over in Canada, some thirty years ago, when I was a young bank clerk on a vacation."

"Well, tell us about it, since it reminds you of something," said his friend, the paymaster, "there's nothing else to do, and perhaps it will put us to sleep."

The president put on a fresh log, kicked the old ones into a blaze, stretched his length on the bed of balsam boughs and blankets, and began: "I had done a little trout fishing on Long Island and in New Jersey, as well as pickerel fishing in the lakes near New York city, for there were no black bass in our Eastern waters then, and I had read of the pleasures of the wilderness, where the roar of the railroad, the shriek of the steamer's whistle came not, and the silence of nature brooded over the home of the trout, the pike and the deer."

"I merely intended to show that the poetry of the wilderness had been absorbed by reading of it, and the locality of Rice Lake was selected by reason of the stories of an older bank clerk, who had gone there in the autumn for the duck shooting, which the wild rice of the lake made famous as a feeding ground for ducks. He told marvelous stories of the fishing, of which he knew little, but which fixed my imagination to go there."

"Rice Lake is in the county of Peterboro', Province of Ontario, some twenty miles back from Cobourg. It runs N.E. and S.W., and is some thirty by ten miles in extent, and fed by trout streams, while the lake itself was the home of monstrous fish of many kinds. I had established communication with a half-breed Frenchman whose front name was Jean Baptiste something or other, for most French-Canadians are christened Jean Baptiste or Antoine. In the former case they pronounce it Zhaw-Batise, all in one word, with hardly an accent

on the first name. Therefore I soon knew my guide as 'Shobatise,' and a stalwart fellow he was.

"His log house on the western end of the lake was a comfortable one, and had a neat garden and every evidence of industry and thrift. His wife was also a half-breed who had been educated at a Roman Catholic mission, and to my surprise she had a library among which I saw works of standard English authors. Her husband, whose translated name means John the Baptist, I will speak of as John. He could not read, although he spoke English well, and it was the custom of his wife to read Tennyson, Longfellow and other poets to him at night, for he dearly loved poetry. Three girls, from ten to sixteen, graced their home, and they also had some education from the missions, and when I add that the eldest had a piano and some knowledge of music you will realize that the mother of this family was no ordinary half-breed, nor was the father, even if he could not read.

"I had not escaped civilization; and as I climbed to my bed in the loft the strains from Balfe's Bohemian Girl: 'I dreamt that I dwelt in marble halls,' followed me into oblivion. The opera house had moved up to Rice Lake, and Caroline Richings was a half-breed girl who had somehow invaded that region to sing that song for me, and then to hear Devilshoof say: 'Come down for brekfus, da sun he be up—a-soon an' we mus' go for da feesh.' It was the soprano of Miss Richings suddenly changed to the baritone of Shobatise, whose name I had transposed in John without objection on his part. A hasty dressing, a wash outside the house in cool spring water, which was brought near the door in a V trough, and I was ready for breakfast.

"Mrs. John and the three bright-faced girls greeted me and hoped that I had slept well in their little home. I assured them that I had slept so well that between the last notes of the song and the morning call I was entirely ignorant of the fact that I lived. A good breakfast of trout, bacon, eggs and coffee followed, and the eldest girl placed a wild flower in my buttonhole and all kissed husband and father and we were off.

"John's boat was a 15ft. sharpie with just the proper breadth of beam to row if the wind failed. There was an N.E. wind, and John said: 'Da feesh be better in de sout' sho', 'long 'bout a fo'-mile p'int, an' it tak-a time to go, but I tink a-best; w'at you say?'

"All right, John, you know best, I only want to have a pleasant outing and take a few fish. If you say go to the other side of the lake, go there, I am in your hands."

"We crossed and trolled for pike and pickerel up and down a great bed of weeds on the shallows, and had taken many fish when John said: 'Da sun he pass da noon mark, s'pose we go asho' an' eat?' Those words awoke a latent appetite, which now asserted itself, and John put on sail for a favorite camping spot. We cleaned pike and bass, built fire, and with the bread and coffee from home dined to our satisfaction. It is a first-class dinner that satisfies the man who eats it."

"That's so," interrupted the major, "I've made many a good meal off what civilians call 'hardtack,' but we call 'stovelds,' and salt horse or * * *"

"Major," said Frank, "you are out of order; the woods appetite may be closely allied to the army appetite, but this is not your story. If you will kindly restrain your ardor and not inject your approval or disapproval of the menu of an angler's camp it will facilitate the story, which our friend, the bank president, is telling us."

"Well," said the president, "we dined luxuriantly, as the saying goes, and we were somewhat tired. We lay off on the point where the breeze kept the mosquitoes off, and dozed for a couple of hours. Then a violent thunder shower came up from the west, and we turned our boat over to protect us from it. The thunder seemed to split the heavens and give us a view of the vivid light beyond. The rain came in such torrents that the steady downpour of to-night might be compared to a drizzle. The storm was like that of the night on which Tam O'Shanter took his terrible ride."

"But all violent storms in our latitude soon blow over, and in half an hour the sun was shining, and we launched the boat and fished on our way back home. At the landing John took the sail and I the oars, he saying that he would bring a basket back for the fish, of which we had some 20lbs. We leaned the sail and oars against the house and John opened the door, while I was busy with a fishing rod. The door had been left open and I saw him fall to the floor. Rushing into the house, I saw the mother lying dead across the stove, and her three girls dead around it. A great hole in the floor showed where the lightning shattered it and told the story. John had fainted, but I wet his head and face, slapped his hands and brought him to. He either could not or would not speak, and sat gazing at the hole in the floor for so long a time that I feared his reason had fled. Then, after what seemed to be several hours, he drew a long breath, groaned and cried like a child. Then I knew he was safe, and I sat with him until morning, when happily two neighbors came to see him on business. They took charge of affairs, set me on my way back to the bank, for I wanted no more vacation."

"What became of John?" asked Frank.

"He left the country, and a dozen years later I heard that he was up on Hudson Bay, trapping for the company. Poor fellow! I think of him every time I hear thunder or hook a pike."

Frank's Story.

Frank threw a chunk of wood on the fire in a way that did more harm than good, and remarked: "Now we'll have a cheerful light when that gets started, but there is never any lightning with a week's steady drizzle such as this, no fear of it," and he filled his pipe, lighted it and puffed away as in a reverie for some minutes, and then said: "A thunderstorm out on the water when one is in an open boat is not the most pleasant condition of life," and he again resumed his pipe and his reverie.

"This storm, of which I was about to speak," said Frank, "could never have come up suddenly, it must have been growing for centuries, only we were not aware of it. The storm was sudden to us, just as a tiger is sudden to the hunter in India, but neither could have

been improvised for the moment. So our storm had been nursed for months in distant parts of the earth, had grown to boyhood among the cyclones of the Philippine Islands, and being of a truant disposition, had gathered the strength of manhood as it passed around the globe and struck us off the East Coast of Florida before it wrecked the small craft off the Bahamas."

"There were two sail in our fleet, one carried Dr. Ferber and a friend, both from New York, and a native boatman, called Pete; in the other was the noted sportsman and ornithologist of western New York, the late Greene Smith, myself and a colored boatman named Joe. We were out after tarpon, and I was to referee the case between Dr. Ferber, who declared it the poorest kind of fishing, and Smith, who praised it highly. They had argued it the night before at the hotel, and as I had never taken this fish and only had a reputation on striped bass, it was suggested that I divest myself of all prejudices and decide if the tarpon was a foe worthy the angler's steel or not."

"I accepted the position of referee with diffidence. Dr. Ferber was a famous angler for striped bass, and a member of one of those great bassing clubs in and about Martha's Vineyard. Smith was more of a gunner than an angler, the son of the serious minded abolitionist Gerritt Smith, who tried to break the boy's proclivities for the gun by wielding the rod, after the advice of Solomon, but Sol's rod differed from that of the angler. Gerritt did not succeed, or Greene Smith, then some forty years old, would not have been in the boat with me."

"A light wind had wafted us out a few miles by noon and we had taken a beastly lot of skates, dogfish and sharks, but no tarpon. Smith was annoyed, mainly on my account; the sun was blistering hot, and as the wind was off shore we moved with it without feeling it. 'Joe,' said Smith, 'is this kind o' wind likely to keep up all day? If it is we won't be able to get back to-night. Not that we care, for we have grub enough, but the sleeping accommodations of your craft are not first-class.'

"I'll tole you, Mr. Smith, da win' he'll come stronger in de evenin' an' we get good breeze to tack home on in a couple o' hours. Yo' see dat leetle cloud way down low ovah da coas'? Well, he mean dat we hab a good wind."

"We fished away and as the breeze increased we saw a prospect of getting home before midnight, and were happy. Smith hooked a big shark that towed us along for a time until the other boat was nearly out of sight. When he landed him and we had killed him and cast him adrift, things looked black. Joe called out: 'I gotta take a reef, a storm come up quick.' By the time he had taken a reef it blew so that he had to lower all sail and let the boat drift. There was no lightning nor rain, only wind; there seemed to be no room for anything else. We were helpless, and night shut down early. We crawled into the little cabin, ate, drank and smoked without a light or a lookout. These would have been of no use, because we could not have controlled the movement of the boat in that hurricane."

"Joe was scared. His passengers had only themselves to lose, while he had his boat in addition to himself to figure in the losses. We filled up and slept as well as the violent tossing of such a little craft would permit, but Joe stood watch all night, occasionally risking his hair by peeping out of the cabin to look for lights."

"Morning came and there was a light breeze, but a violent sea, and we were three more nights out before we tied up along the wharf. Dr. Ferber's boat was in before us, but his boatman, Pete, had been swept overboard and lost; he had been struck by the boom while trying to reef and the doctor then tried to take the helm and put the boat about, but the tornado tore the sail from the mast and the man was lost. They procured an extra sail from a passing fisherman, and so beat us in."

The Paymaster's Story.

The president asked his elderly friend, the invalid paymaster, about a shark story, of which he had heard a portion some years ago, and then lay down on the blankets, where Frank had already stretched himself, to listen. The old man sat up, coughed and began: "It is not much of a story, but it happened so long ago, when I was a youngster, that it made a lasting impression on me."

"It was away back in the early forties that I found myself in the Paymaster's Department of the U. S. Navy, and detailed to the brig Somers, 266 tons, and the fastest craft in the navy. We had on board a lot of naval apprentices, cadets they call them now, and we were to cruise about the West Indies after we had found the frigate Vandalia somewhere on the western coast of Africa. We missed the frigate after chasing her to the Azores, Madeira and Teneriffe, and on reaching Liberia found that she had sailed for home. Then Commander Alexander Slidell Mackenzie turned our bow toward the West Indies and all hands were happy at the thought of getting home again. The winter was very near, and thoughts of getting home by Christmas were floating in our heads when, like a clap of thunder out of a clear sky, came the announcement that Midshipman Philip Spencer, son of John C. Spencer, then Secretary of War; Samuel Cromwell, boatswain's mate, and Elisha Small, ordinary seaman, had been arrested for mutiny and were in irons."

"I will pass over the trial of these men and of their hanging at the yard arm and burial at sea; Spencer in a rude box and the others in their weighted hammocks. There was a feeling of depression on the brig, all hands having been ordered to witness the execution, and we knew that others were suspected and were placed in irons, but were released in New York by order of the Secretary of the Navy. The occurrence made me ill for several days."

"We reached the Leeward Islands and anchored in order to get provisions and water. Purser Heiskel and I were looking over the rail into the water watching a couple of sharks which were swimming about. 'I hate a shark,' said the purser, 'let's catch one with a hook, since we are not allowed to use firearms on board.'

"I went below and found the purser's steward, John W. Wales, who had informed Commander Mackenzie that Spencer had approached him with a proposition to seize the brig and turn pirate, and he fitted me out with

a big shark hook attached to 2ft. of chain, a stout line and a couple of pounds of salt pork for bait.

"We cast the bait twice before the sharks saw it, for they can't see far, and had sheered off by accident each time that we tried to get the bait in front of their noses. At the third cast it was seized, swallowed, and the tussle began. Quartermaster Rogers gave us a hand, and we had the best end of the string.

"Midshipman Tillotson came along and said: 'Save that shark, because Lieut. Gansevoort wants the oil from its liver for his boots, and some of the rest of us may want some, hang on to him until I get an order from the lieutenant to lower a boat and secure the fish.'

"He got the order, and Surgeon Leacock joined us and down we went in the boat. We hauled the big shark alongside, considerably weakened by his struggle, and I struck an axe into its brain and settled his accounts with this world. 'Get a hitch around his tail,' said the purser, 'and then slip a line about his waist and we'll get him in the boat, where we can open him and get the liver and let Dr. Leacock examine his other combinations, as he is always doing with beasts and fishes.'

"That shark was fully 10ft. long, gauged by the length of the boat, and it had a fine big liver, which was good for a gallon of oil of the best kind for shoes, which are so often wet with salt water.

"Roll him overboard," said Purser Heiskel.

"Hold on a bit," said Dr. Leacock, 'let's see what the beast has in its stomach, it appears to be full.'

"The doctor cut away in surgeon's fashion through the thick stomach, and after he had laid it open to his satisfaction there were the bones of a man's leg from the knee down, the flesh and some of the smaller bones of the toes gone in the process of digestion. The doctor put the bones together and said: 'It's the left leg of a man, that is a thing which an unprofessional eye can see, but if you will look closely at the bones you will see that there are bones missing on the outside of this foot which cannot be laid to the digestive organs of the shark. If you will remember that a man's foot was crushed when we left Norfolk, and I took off two of his toes and some metatarsal bones, you will agree with me that the leg now before us in the leg of ordinary seaman Elisha Small, who was hanged a few days ago. His hammock must have been improperly sewed or was ripped open in some way which we cannot account for, but here we have his leg and foot, which I identify as a bit of my own surgery.'

"We boxed those bones and had them buried over in Hoboken, after we arrived in New York, for many of us believed, with the press of that day, that the execution of these men at sea was not a necessity, since they were in irons within a few days' sail of New York."

The paymaster had exhibited signs of fatigue while telling this story of his younger life, every word of which is true, as may be attested by any of the older naval officers, Piseco, and others, but when his narration was done he flopped down exhausted between the president and Frank, as if he should say: "There, I've told my story and am tired."

The Major's Story.

Perhaps the major had been dozing, for the evening was getting late, but he roused up when the paymaster had finished his yarn, yawned and remarked: "It was about the middle of June, 1864, when our division, the First Division, Second Corps, Army of the Potomac, reached Harrison's Landing on the James River. I was a first lieutenant then, and was officer of the guard. My regiment was larger than many of the old brigades, and we had to cross on several boats at night by embarking by the light of 'jacks' or cressets.

"About 10 P. M. I took my relief from one transport to the next, and observed a man sneaking between the steamers. After halting my men and sending one back for a lantern, I hailed the man, who replied: 'I'se a colo'd man, sah, an' I'se a fishin' fo' to get a brakfus fo' de ole massa an' his fam'ly. Doan shoot me, pleas', 'cause I'se on'y fishin' fo' fish.'

"I went down between the steamers and saw that he was harmless, took twenty perch from his string and gave him a dollar, and sent the fish back to be served for breakfast. A shell from the enemy upset that pan of fish in the morning, and we had to fall back on the army ration, but about a week afterward—"

At this time Frank raised up and remarked: "Are you talking yet; all the rest are snoring and I only just woke up. You had better turn in and we'll all go to sleep."

A Story of Fate.

A chapter from Podgers' forthcoming "Book on Yachts, Yachting and Yarns Below Deck."

If any man was to accuse me of being superstitious I should indignantly deny it, but at the same time I have my beliefs and opinions on boats and vessels being lucky or unlucky, and from many years' observations that "There is a divinity that shapes their ends, rough hew them as we will," as Shakespeare says, although he may not have had boats and ships in his mind, nor did the divinity refer to a ship carpenter. Be that as it may, there is a coincidence in the ill luck that names seem to bring to a vessel, or an accident on launching. There seems to be a fatality in certain names that has followed such vessels.

Take for instance that of "President" and "Henry Clay." One of our earliest steamships of the former name, on her voyage across the Atlantic, sailed with a full list of passengers and was never heard of. She was supposed to have struck an iceberg and gone to the bottom, every soul on board being lost; and every subsequent vessel of that name has been lost, wrecked or burned.

Then again, every vessel named Henry Clay has met a similar fate. A fine packet ship built in New York was noted from the remarkable fact that she was taken from her dock at sunrise, put into dry dock, coppered, and brought back to her berth at sundown, the entire work being done in one day. She sailed for a port in Ireland, took on board 600 emigrants, ran on the rocks on that coast, and nearly every soul perished.

A North River steamboat running between that city and West Point took fire, burned, and a large number of her passengers were lost. Another steamer of the name came to California and was put on the route between San Francisco and Sacramento. She never made a trip that some accident did not happen to her, and finally took fire and burned. A fine schooner of the name, built on the Pacific Coast, was lost on her second voyage. The fatality of the name is so proverbial, and also that of the "President," that they are no longer used, being considered a hoo-doo.

A friend of mine, to show the folly of the sailors' superstition about sailing on a Friday, had three fine lumber schooners built. The contracts were made on a Friday, they were begun on a Friday, launched on a Friday, sailed on three successive Fridays. The two first were lost on their first voyages, the third on her third voyage. A 35ft. yacht was built at Benicia and launched on a Friday. She tumbled off the ways in launching. On her trial trip she capsized and drowned one man. On her second trial trip she again capsized and drowned two men. She was raised and sold to a fisherman. Sailing up the bay on a foggy 4th of July morning, we discovered what we at first took for a buoy we were looking for, but with the glass saw it was a man clinging to a topmast, and beating up to it we, with great difficulty, rescued him in an exhausted condition. The boat proved to be this same unfortunate craft, and she was left to her fate. No one would accept her as a gift.

Let any ill luck attend the launching of a craft, and it is proverbial that she is never a successful vessel. I had a small yacht built which fell off the ways in launching. On her trial trip the tiller broke in a squall, she luffed up, ran into a ship, carried away her bowsprit and topmast, tore the mainsail, and nearly wrecked herself. In repairing her, the man setting up her topmast lost his footing and came tumbling down on deck, breaking two ribs, costing me a four weeks' hospital bill for repairs. I loaned her one 4th of July to a party of four to go out to witness the Master Mariners regatta. It was a blowy day, and the party being full they capsized her, and she went to the bottom. Fortunately the crew were so full of beer there was no room for water, and all were rescued, but we never saw the boat again. It is one of the peculiarities of San Francisco harbor that no vessel sinking in mid-channel is ever heard of again, as was instanced in a case of a bark that, capsized and water-logged, was turned on the mud flats just at low tide and left over night. The next morning she was gone, and neither hide nor hair of her was ever seen again. The heavy undertow of the ebb tide probably swept her out to sea and no vestige of her was ever found.

I have occasionally come in for a little experience in the bad luck that follows a bad start on a duck shooting expedition. As an instance I had invited four friends to a cruise up the bay to the shooting grounds on one occasion. Our cook had been sent to the market for a supply of good things, and we were impatiently awaiting him. He at last made his appearance, puffing and blowing as only a fat ducky can. The yawl brought him alongside, but in his efforts to get aboard with a heavy basket he put one foot on the gunwale, capsized the boat, and disappeared, market basket and all. When he rose to the surface the boat hook was hooked on his collar and he was retrieved, but all our nice prog was gone, involving a delay to replenish that lost us the favorable tide and left us to beat against a flood all night.

I said, "Boys, we have had bad luck at the outset, and mark my words, it will pursue us the entire trip." I had hardly made the remark when plump we brought up hard and fast, having missed the channel in the darkness; and any yachtsman knows that to get aground in a heavy boat on an ebb tide is a trial of patience. The almanac may tell you that it will be low water at 12, and flood begin to run at that hour, but does it ever do so? Not a bit of it. If you turn out at 1, 2 or 3 you will find that devilish tide still running ebb, and your craft high and dry, and the flood never shows up until 6 in the morning, and then comes sauntering along at a provoking slowness, and the slow flood says: "Hello. You here? Not in a hurry, I hope?" You finally get off, but too late to reach the morning shooting. Breakfast restores our equanimity somewhat, and just as you are settling down to a pipe there is a row forward, and the next thing the yacht is brought up all standing. One of the amateurs having gone forward conceives the idea that he can improve the look of the chain, turns around the bits and sets to work to make it more shipshape, and loses the turns, the suspended anchor gets the start of him and drops, and 60 fathoms of chain run out, bringing the yacht to a sudden standstill. It is the big anchor and heaviest chain too, and a suspicion of profanity follows.

We finally get the anchor up, losing nearly an hour's favorable tide, the culprit causing the disaster meanwhile seeking privacy with the cook. We at last reach our goal and get ready for a sundown shoot. Just as we reach the shore in the act of landing, a duck comes hurtling along. Stupid No. 2 stands up in the boat to get a shot overhead, the recoil of the gun throws him off his balance and overboard he goes, gun and all, dipping the boat half full of water, wetting us all and soaking our cartridges. We go aboard again to change our clothes and Stupid takes a grapnel and goes to grope for his gun. Sufficient for the day thereof, and we console ourselves with a good dinner, smoke, and turn in.

In the morning we assay again, and just as we begin to shoot Stupid No. 3 wants to cross a slough, which he thinks he can jump; tries it, lands in the middle and goes under, another gun lost, and another victim of misplaced confidence to be taken aboard and dried, by which time the morning flight is over, and breakfast is in order. Stupid No. 3 explains at great length how it came about that he missed jumping the slough, when all his life he had been a noted jumper and won honors at the gymnasium. Number 4 suggested that there was nothing faulty about the jumping, the quality was all right, but the failure was a deficiency in the quantity—not enough of it.

Toward evening we went ashore again, and our luck

seemed to have changed, for we bagged several dozen mallards and canvasbacks, and a dozen English snipe, and our old cook spread himself on a game dinner of the birds killed the previous day. (A duck is not fit to eat that has not been hung up in the rigging for at least twenty-four hours.) The only happening for the day was the blowing a hole through one of the boats by Stupid No. 1 in clearing his gun, forgetting that he left a cartridge in it.

The next morning we had a couple of hours' good shooting. The only accident that happened was the bursting of one gun in consequence of No. 3 falling, and pitching his gun into the mud, half filling the barrels and narrowly escaping blowing his own head off.

The next day we started homeward and met a thick fog, and a steamboat that undertook to cross our bow carried away our bowsprit and brought down our topmast, which ended the chapter of mishaps that followed as the result of an unhappy beginning, which never fails—verifying my theory that a bad beginning carries bad luck for the voyage, and in instances too numerous to describe, hence my superstitions—pooh-pooh them as you may.

Disbelievers doubtless will quote a hundred instances to the contrary, which reminds me of the case of the old-time minstrel Billy Birch, who in one of his plays is brought up before the court for stealing a pair of boots, and being convicted says to the judge: "I say, judge, you convict this nigger on the evidence of four witnesses that say they saw me steal de boots, when I can bring fifty men to swear they didn't see me take 'em."

PODGERS.

Mountain Goat Hunting.

HUNTERS who are yet to have their first experience in the pursuit will find that it is not quite as easy as "rolling off a log" to kill the white goat. They will find that the mountains the goat affects are not the easiest to climb, especially when one goes from sea level or near it; and they will also find that while not as wary as the bighorn the goat can hear you, all things being favorable, before you see the goat, and then the chances are you do not see the goat unless it is to catch a glimpse of his white coat as he skips round some rocky Craig in the distance or goes over some ridge which is so far distant from you that shooting is out of the question. The goat may not be very rapid in his movements, but it will surprise any tenderfoot to see how much ground he can get over in a short space of time, and such ground! rocks, cañons, and gullies, with an occasional precipice, or the next thing to it, thrown in for a change. There is one advantage one has in hunting the goat, and that is their fur or hair or wool—just as you please—is so white that they stand out very prominently against the dark background of rocks or earth, and one can see them much more readily than any animal in the mountains. And while one might pass over a deer while scanning a mountain side they would not be apt to miss seeing a goat. And of course it is a great advantage to be able to discover your game.

They have a way of seeking some high point, generally the pinnacle of a steep, rocky mass of earth; and there, standing as if carved from stone, outlined against the sky like a statue. I recall several instances of this habit, one in particular, which illustrates also the faculty they have of getting out of sight quickly and disappearing as if the earth had swallowed them. I was returning to an Idaho camp one afternoon, and when only a few hundred yards from it, walking slowly along an old Indian trail, I chanced to raise my eyes to a high rock which surmounted a small hill, which on the side toward me was nearly perpendicular, and there, standing on the highest point, and at the extreme edge, was a goat. I stopped suddenly and cogitated whether I should try a long shot, several hundred yards, or try to get down into the cañon and then flank the game. The goat evidently was cogitating too, but I did not seem to be the subject of its musings, as it still stood like a statue. I flattered myself I was unobserved, as a slight fringe of trees was between us, and I thought that by being careful I could gain the shelter of the hill. I walked silently along, and the last glimpse I had the goat was still standing unmoved. It only required a few moments for me to climb up the opposite side of the peak, where I fully expected to find the game within easy shot, but alas for human expectations! It was gone; and though I sat down on the point of vantage I had gained and scanned the mountain side, I did not again see it. This also illustrates the fact that they do not always go up, as I believe the sheep are nearly always apt to do. The goat seems to go any way to get away. I counted on their going up one day and waited patiently for a band to be driven up to me by a companion. Result: I was treated to the sight of one a half mile away on the mountain side, while my companion got three. I think he had the best of the bargain, though I had the easiest time, waiting for a shot I did not get. I would advise no one to wait for the goats to climb up. They may climb around, or possibly down; but that they are not apt to do if frightened.

Now, regarding size and supply of specimens: There is no use in any one taking a decided stand in regard to the size of any wild animal. That is, within certain limits. From one experience I would not hesitate to say that there are goats weighing nearly if not quite 300lbs., and an animal of that weight would appear much larger owing to the thickness and length of the hair. Your correspondent F. B., of New York, has the head and hide of a male which would have caused some people to open their eyes had they seen it alive. And I saw another which at a little distance looked as if it was as large as a fair-sized cayuse pony. So much so, indeed, that as we had a white pony in the outfit I did not shoot at first sight, thinking she must have strayed up the mountain. But because there are large goats, it is not to be stated as a fact that they all weigh 300lbs.

PRAIRIE DOG.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Early Days in the West.

DENVER, Colo., June 3.—*Editor Forest and Stream:* First, I want to congratulate the FOREST AND STREAM most sincerely upon its first quarter century of history, creditable to it in every way and at all times. I have read it from the beginning, and can say conscientiously that it has always pursued an even course and a dignified tone, above criticism. Next, I congratulate the editors upon the able and consistent management they have given it for these many years. The journal has been a power in the land in its field, and its influence grows from year to year.

As you remind me, I have seen the growth of this western half of the United States for a long period; almost from the beginning of its civilization. I have seen the red man go and the white man come, and I have noted the decimation of many varieties of wild game, and the great reduction of all others. It seems almost like a dream. I was first in Chicago in 1850, when its sanguine people claimed a population that was variously estimated by them at from twenty to twenty-five thousand. In the winter of that year I went hunting to the "Big Timber," as it was then called, upon the upper waters of Iowa River, in Iowa. About twenty or twenty-five miles above Iowa City was a little town of log cabins named Mar-engo, and this was the frontier settlement, except about half a dozen families who had pushed on twenty-five or thirty miles further to the beginning of the "Big Timber," where they had built cabins and started a settlement. This had been the country of the Musquaka Indians, who had been removed the year before, rather against their will, by the Government, to the Indian Territory, and set down somewhere in what is now either Nebraska or Kansas.

They spent the winter west of the Missouri River, but did not like it, and in the spring of 1850 returned to their old stamping ground, and announced their intention to hold it. The few settlers were so terrified that they "forted up" in a couple of block houses and lost their summer's crop. Before the next snow the Indians were removed again, with an escort of blue-coats, and they came back no more except as stragglers to mourn over unforgotten graves and sell moccasins. We were visitors to a conquered country, and among old-fashioned pioneers who knew nothing of luxuries, and lived mainly off the natural resources of the neighborhood. The city of Marshalltown now occupies the site of that early settlement. Marshall was one of the settlers, and he and the writer claimed a distant relationship. The country was full of game, but we struck it at a bad time; got caught in a spring thaw and with flooded streams, and finally had a man badly hurt in crossing the river on an ice jam, and left for home on the Mississippi River. We violated no game law and have no big story to tell.

The next fall I again headed for the West with an outfit to engage in the survey of public lands in western Iowa. Fort Des Moines was then the frontier, though two town sites, Indianola and Winterset, still further west, were marked by a few log cabins. After passing them there were two settlers; Allcorn on Three Rivers and Hedges on Indian Creek (at an old Indian town), and then there were no more until we reached the vicinity of the Missouri River, where was then the great headquarters of the Mormon Church. After leaving the Des Moines settlements we traveled through a country plentifully supplied with game—deer, turkeys and prairie chickens. We had a young man with us who had never seen a wild deer, and he was very much excited in anticipation of that event. We also had a rifle, and he took much pleasure in handling and caring for the gun, and speculating upon how he would kill game. When the first bunch of deer was sighted near the trail, he happened to be standing up in the wagon with the gun in hand, at "order arms." When his attention was directed to them he gazed a moment, then stooped and carefully laid the gun in the bottom of the wagon and began climbing out. Some one asked: "What are you going to do?" He answered: "I'm

going up close to get a good look at them." I never have seen that man since the close of that season's work, but two or three months ago I received a letter from him asking me to arrange a meeting some time this summer or fall at the Trans-Mississippi Exposition at Omaha.

The heart of the Mormon settlement at that time was Kanesville (named for a brother of Dr. Kane, of Arctic fame), now the city of Council Bluffs, Iowa. When the Mormons were driven from Nauvoo, Ill., in the winter of 1845, they wandered across Iowa by many routes, living mainly upon such food as the country afforded. One article that entered largely into their diet was slippery elm bark. For many years their trails

THE BUFFALO CHASE.

By Edward Kemeys.

could be followed by the dead elm trees from which the bark had been stripped as high as men could reach. They reached and crossed the Missouri River, and built a great camp of log cabins and called it "Winter Quarters." The next spring they plowed up the broad plateau of second bottom land from where the heart of the city of Omaha now stands for six miles north to their Winter Quarters, and planted it to corn. The Trans-Mississippi Exposition buildings now occupy the very heart of that great cornfield of fifty-two

did supply it. Nevertheless, while twenty-five years ago game was often seen from the car window, the best hunting was of course not along the railroad track. Yet in very many places by going twenty-five or thirty miles north or south from the line of the road, game might be killed—and often was killed—literally by the carload, and was often hauled to the railroad and shipped to such Eastern markets as Omaha, St. Louis, and Chicago, while many of the settlers, as regularly as the cold weather of late autumn came around, made trips to the game country to load up their wagons with meat for the winter's use.

In those days there were buffalo, and these great beasts with black beards and crooked horns were still found within a day's ride of the Platte River. At this time the skin hunters had just begun to realize that in the buffalo they had a bonanza of small proportions, and they slaughtered them with so much energy that they lasted in that country only a couple of years longer. They butchered them in most systematic fashion, and ended up by surrounding all the water in the country and killing all the buffalo as they came to it. The history of the butchery which took place at that time in the southern country and nearly ten years later in the north has been well told by Dr. Allen, as well as by a number of other writers.

In those days the man who was traveling often carried no provisions with him. When he camped at night he rode out and killed a heifer and the next day carried on with him the choice

parts of the animal, which would last him for two or three days. In those days too the buffalo robe constituted the almost universal bed of the plains traveler and his winter overgarment. A good robe, Indian tanned, could be bought for \$3 or \$4. I paid \$7 once for one that was really a silk robe.

Nebraska was a new State then, thinly settled in the east and not settled at all in the western and northern parts. Omaha was a good-sized country town. In the summer of 1873, just about at the time the FOREST AND STREAM was started, I killed elk in Nebraska only a little more than 100 miles west of Omaha. Here where there were elk there were also mule deer, whitetail deer and a few antelope, though the antelope and the mule deer were somewhat more abundant further to the west and north, in the high sand hills of the Loup Fork

RECLINING BUFFALO.

Clay Sketch by Edward Kemeys.

years ago. Then the Indians complained to the "Great Father" that white men were encroaching upon the Indians' land, plowing it up, cutting their timber, and killing or driving their game away. Government placated the Indians by a promise that the Mormons should remove before another summer, and pacified the Mormons by offering them the free use of land on the east side of the river for five years. When winter came on they did move, hauled their cabins bodily across the river on the ice, and strung them along the banks of Lousy Creek, where it emerges from the hills and flows out across the Missouri River bottom to that stream. And that is the city of Council Bluffs to-day. The actual and original "Council Bluff" of Lewis and Clarke, where they held council with the Indians in 1804-5, was twenty miles up the river. WM. N. BYERS.

The Old West.

ANNIVERSARY days cause us to look backward, and often with regret. It is human to be blind to the good things of to-day, and to long for the vanished joys of days gone by. In America the period covered by the lifetime of FOREST AND STREAM is a long one, in the sense of that it shows a multitude of changes. Ours is a century of rapid development, a time of swift transformations and progress, and nowhere do the scenes shift more rapidly, nowhere do events follow each other in quicker succession than in America. And of all America what portion has moved fastest during these twenty-five years? The West.

It is well to pause a little and to think what has happened in civilization since FOREST AND STREAM began. Some of the conveniences of life that are now most common, most necessary—since we have become accustomed to them—were unknown then. Commercially a knowledge of electricity had not advanced beyond the use of the telegraph. There were no electric lights, no electric railroads, no telephones. Cable lines had not been invented, the half-tone process of illustration was unknown.

In the West there was already a transcontinental railroad, a single line, stretching like the thread of a spider's web from ocean to ocean, but it supported no adjacent population. For all its length it touched but one considerable community, whose people it could transport. As you rode along on it you could often see from the car windows deer, antelope, elk and sometimes buffalo.

While that railroad was being built the hands employed in its construction were fed very largely on wild meat, and professional hunters took contracts to supply such meat in quantities at \$2 per roolbs., and

game was often seen from the car window, the best hunting was of course not along the railroad track. Yet in very many places by going twenty-five or thirty miles north or south from the line of the road, game might be killed—and often was killed—literally by the carload, and was often hauled to the railroad and shipped to such Eastern markets as Omaha, St. Louis, and Chicago, while many of the settlers, as regularly as the cold weather of late autumn came around, made trips to the game country to load up their wagons with meat for the winter's use.

In those days there were buffalo, and these great beasts with black beards and crooked horns were still found within a day's ride of the Platte River. At this time the skin hunters had just begun to realize that in the buffalo they had a bonanza of small proportions, and they slaughtered them with so much energy that they lasted in that country only a couple of years longer. They butchered them in most systematic fashion, and ended up by surrounding all the water in the country and killing all the buffalo as they came to it. The history of the butchery which took place at that time in the southern country and nearly ten years later in the north has been well told by Dr. Allen, as well as by a number of other writers.

In those days the man who was traveling often carried no provisions with him. When he camped at night he rode out and killed a heifer and the next day carried on with him the choice

parts of the animal, which would last him for two or three days. In those days too the buffalo robe constituted the almost universal bed of the plains traveler and his winter overgarment. A good robe, Indian tanned, could be bought for \$3 or \$4. I paid \$7 once for one that was really a silk robe.

Nebraska was a new State then, thinly settled in the east and not settled at all in the western and northern parts. Omaha was a good-sized country town. In the summer of 1873, just about at the time the FOREST AND STREAM was started, I killed elk in Nebraska only a little more than 100 miles west of Omaha. Here where there were elk there were also mule deer, whitetail deer and a few antelope, though the antelope and the mule deer were somewhat more abundant further to the west and north, in the high sand hills of the Loup Fork

country. To-day there is not a wild elk in Nebraska, and probably there are not too wild antelope or mule deer. Even the whitetails that were formerly so numerous along the willowy bottoms of the Platte River have almost altogether disappeared.

Good sport used to be had in Nebraska in those times, chasing elk as we chased buffalo. A good horse was needed, for a band of trotting elk, even when they were fat, passed over the ground at a rapid rate, and chose ravines and sand hills where there were blowouts and generally the roughest country that they could find for their line of flight. Unless circumstances were such that a good start could be had on them, the chase was likely to be a long one unless your horse was very swift; but if you came close enough to them to seriously frighten them, so that they would break their trot and run, they were likely to be overtaken soon. It seemed as if their wind gave out when they were obliged to run, and although the run is swifter than the trot it did not last nearly so long.

The mountain sheep, now the shyest and wildest of North American game, had not then lost all its natural silliness. Then too it was often found out on the prairie at some considerable distance from any rough and rocky refuge. Sometimes it might be seen far from any hills, feeding with the antelope, among which the ewes would hardly be noticed until they began to run. They were swift creatures too, and seemed to hold their own well with the antelope as all fled together. Sometimes if you came upon them suddenly on the prairie they would stand and stare with the same curiosity that the mule deer used to show. At that time the mountain goat was hardly known to sportsmen. It had been described of course, but except for Indians and persons living in its range the number of people who had killed it could have been counted on the fingers of one hand. Wild fables were current about its activity, its wisdom, and the difficulties and dangers of hunting it. It was not then known that the species is one of the tamest and most easily approached of our wild animals, provided only the hunter has the legs and the lungs to clamber up to the heights which it frequents.

In Nebraska on the head of the South Loup there were once rumors of a moose having been seen, but the identification of the animal has always been doubted. It was said to have been with a band of elk, and great stress was laid on the fact that it was black. It is more probable, however, that it was not a moose at all, but an elk that had been wallowing in black mud, and so had changed its color, as elk so often do. The most southeasterly locality in which we know of moose having been taken is near Fort Fetterman, on the North Platte River, in Wyoming. Here in 1868 Wm. Roland killed a bull moose.

Besides the wild game so abundant in the West in those times, which we now call "early days," there were the wild men, who lived by the pursuit of this game. Those were the days of the Indian wars, which had

begun long before, and in which heroic fighting by both white man and red man, and cold-blooded and unprovoked massacres by white and red alike, often took place. The possibility of meeting hostile Indians gave a spice of added interest to Western travel in those days, and taught the traveler alertness, readiness of resource

took part in the stirring days of twenty-five years ago have put down on paper some of their memories. That this early history has interest and value is shown by the fact that a well-known publishing house is now issuing a series of volumes under the title "The Story of the West." In these volumes have been and will be

recorded many a memory that is worth preserving.

In the early 70s a very great part of our Western country was scarcely better known than it was in Bonneville's time. Every summer exploring expeditions were sent out by the War Department and by various bureaus of the Interior Department in the effort to find out more and more about our unknown domain. Then indeed guides were needed. Each army post had its force of guides and scouts, who were supposed to know intimately the surrounding country, and that which was further off to some extent. Of course these men, accustomed to travel alone over the wide prairie or through the rugged mountains, acquired to a greater or less extent that additional sense of locality and direction which we so often see in men who spend much of their time out of doors and alone, and which may be assumed to be applied experience. Most of these good men are dead now, lost in winter storms, killed by Indians or whites, or dead from natural causes. Only a few are left.

Often in those old times young men got lost and sometimes perished, either from starvation or by being picked up by Indians, but it was really not half so easy to get lost then as it is now, when the country is cut up in all directions by a confusing tangle of wagon roads and a not less annoying maze of barbed-wire fences. Then if a man wanted to go to a certain place he went there, turning aside only to avoid mountains or to look for fords across rivers. Now he has to follow a road and really needs a guide to direct him which one to take.

In the Dakotas, Nebraska, Kansas, and even in States further west, the young men of to-day carry the shotgun and devote themselves to the killing of little birds. Their fathers used the rifle, and the antelope and the turkey were the smallest creatures that they shot at. They had a contempt for the "scatter gun," an arm which in fact would have been useless to them in their work of pioneers, supporters of families, defenders of their homes against attacks by hostile Indians.

We all know that the extermination of wild game in the West put an end to the Indian fighting, which for years was a danger to settlers, an expense to the Government and a trouble to the army. We all know that the country which supports a million head of domestic cattle is more valuable than one which supported a million head of buffalo. Domestic sheep bring in more money than antelope

or deer. The country is getting rich and is being developed, and it is all very nice, but there remain a few aged men who wish that there were left some place where they could go and make a little hunt and not hear the hills all about them echoing with the shots of other hunters.

killing a buffalo you were skinning it, mounted men would ride up out of some nearby ravine, and you were forced to make up your mind quickly whether you would fight or run. If you were smart and your horse was good you usually ran.

Too little of the history of that old West has been written, but happily of late years a few of those who

Reminiscences.

CHARLESTOWN, N. H.—*Editor Forest and Stream:* The announcement that the forthcoming number of *FOREST AND STREAM*, for June 25, would complete its fiftieth volume, and in some sense be a "Jubilee Number," carries me back to the day when I first saw it, and welcomed its appearance, as a worthy successor to my old love, the old Spirit of the Times, which had been wrecked in the great crash of the Civil War. The old Spirit at its prime depended largely on Southern contributors and subscriptions, and as these dropped off the paper suspended, but my thoughts return to those days, half a century ago, when I depended on its weekly arrival as much as I now do on that of *FOREST AND STREAM*.

I always dropped into the old office in Barclay street when in New York in those days, and had a chat with the editor, Wm. T. Porter, the "tall son of York," genial John Richards, the publisher, and Dick Hayes, the ever active factotum of the office, and as Porter and myself were both natives of the Upper Connecticut Valley we soon fraternized most cordially. I well remember going with him one day to eat "broiled oysters at Windust's old restaurant, at the corner of Ann street, overlooking the park, and making the acquaintance of Horace Greeley, who was there on the same errand. There were almost always some of the old contributors in at the office about noon, and in those days an adjournment to Frank Monteverde's, next door, for a cocktail, at that time was always in order. Those were rather Bohemian days, which luckily have changed for the better, and the spirit flask is no longer a necessary companion of the powder flask in a sportsman's outfit. It is long since I became a believer in the creed of Kingfisher, and trusted to a rubber-drinking cup and the coldest spring I could find for refreshment on my tramps.

But to return to the Spirit office. There I often met Frank Forester, Phil Anthon, Wm. P. Hawes (J. Cypress, Jr.), and occasionally Albert Pike, the great Southern poet and Free Mason, when he was in the city. I may call him great justly, for he was so physically as well as mentally; full as tall as either Porter or myself, he far outweighed either of us, and his imposing presence was never to be forgotten. There were many others, whose names after fifty years have faded from my memory, but the "old Spirit crowd" was a jolly one, and I was proud to be a junior member of it.

Herbert was not much of a fisherman, though he afterward wrote a book on fishes and fishing, but he was an authority on dog and gun and feathered game, and I well remember the delight with which I read his "Warwick Woodlands" long before I ever saw him.

The old Spirit covered a wide field; it took in the turf and the stage as well as the rod and gun, and filled the place in those days now occupied by *FOREST AND STREAM* and I know not how many more. Its dramatic criticisms were especially good, and its Boston correspondent Acorn was a recognized authority on stage matters.

It had other good Boston correspondents; Tom Battelle (Corinthian Tom), the brothers Duriage (the Old 'un and the Young 'un), a sketch by one of whom, "The Fastest Funeral on Record," describing the spurt of speed made by an old race horse, who had descended to drawing a hearse, on the way to Mt. Auburn, when excited by the attempted passage of a fast trotter, would excite the risible muscles to-day if it could be reprinted.

Some of the Southern correspondence was very brilliant. The story of Bob Herring and the Big Bear of Arkansas would outlay any of Brother Hough's experiences with Capt. Bobo, and another sketch, "How we Ride and Shoot in South Carolina," still lingers in my memory.

But enough of the old Spirit, for few of your readers will recall it, and *FOREST AND STREAM*, though less wide in its scope, covers its own ground far more thoroughly. I have spoken of this as a Jubilee Number; it may be considered as marking the golden wedding of science and sport! The fifty volumes which this concludes are replete with valuable information, zoological, ichthyological and biological, and a treasure of delight in their descriptions of excursions by field and flood, during which all this knowledge was gathered and accumulated.

Since the days of which I have written the Adirondacks have been explored and opened to the sportsman, for all we then knew of them was the waters of Fulton and Hamilton counties and Piseco and Schroon lakes. We had some of us been a short distance into Maine, and knew of the "Sebago trout," now the landlocked salmon, and that there was good fishing somewhere about Bangor, but of the salmon fishing in the British Provinces, or the wealth of the Great West in both fish and game, we had no conception, and our experiences of both were gained this side of the Mississippi, if not of the Alleghanies.

My thoughts go back a dozen or more years further to the days when I caught my first trout, and shot my first gray squirrel, the latter with an old-fashioned, small bore, muzzle-loading rifle, carrying a ball of about eighty to the pound, which was the way we counted gauges in those days.

I may have told the readers of *FOREST AND STREAM* of that first trout before, and how, like old Christopher North on a similar occasion, I ran home with him, enraptured with his beauty, to show my prize without ever waiting for another! That was a long, long time ago, for I was a very small boy, in jacket and trousers which buttoned together at the waist; but how well I remember it all! How when I went into the alder swamp, which then lay back of my father's house, to cut a pole, I lost a brand new green fish line, for which I had just paid 5 cents at the village store, and how my mother made up the loss by a ball of strong "piping cord" from her capacious work basket. My father had showed me how to braid a strong snell out of black sewing silk, which made a very good substitute for gut, then unknown to the country boys, and how I sallied forth to the mill pond and cast into the little brook under the bridge where it crossed the road, with the result above noted, and how that afternoon a young man, who was studying medicine with my father, went back to the brook with me and gave me a lesson.

Then I annually extended my range of excursions. For the first three or four years I would start from home

with my fish line in one pocket and my bait box in the other, cut the best pole I could find on my way to the brook, and throw it away when I got done, and string the fish on the most convenient willow crotch I could find when I caught the first one. After a while an uncle of mine gave me a slender bamboo tip, about 9 ft. long, and to this I lashed rings and extemporized a reel out of a big thread spool, to which I fitted a crank handle and mounted it on a wire pin, for which I drilled a hole in the butt of the rod. This served amply for my purpose—to wind up my line short, to poke it under an overhanging bush or let it out for a deep hole, or to cast across a wide reach to the opposite bank. For my first creel I fitted a cover, cut from a broad shingle, to an old work basket of one of my aunts, and adorned it with pen and ink drawings of trout.

It was a somewhat crude rig, but I caught hundreds of trout with it, and gave it away to an old playmate when I left home at the age of seventeen to seek fame and fortune, the last of which at least I never found.

When I went home again on my first vacation I was the happy possessor of a rod, an English trunk rod in five joints, which I picked up at a bargain in a variety store, and which did yeoman's service for many years. I had bought a regular creel too, and was fully fitted out. Some time after I began, an older friend brought me from Boston a hank of gut and two or three dozen Limerick hooks, which I soon learned to tie properly, and since then I have tied all my own hooks if possible, for I have lost too many good trout by the hooks slipping from the gut when I had bought them ready tied at some cheap tackle store. I lost three that way one afternoon when last up north from some hooks I had picked up at a store in Colebrook, having run short.

I also cleave to the Limerick hook yet, despite my friend Mather. I do not like those long-shanked, slender, crooked hooks. The real Limerick is stronger in the bend, the barb is long, and the point projects a little from the line of pull, and after sixty years' experience I find nothing better, though I am well satisfied with the sproat. When my old trunk rod gave out finally, after using up half a dozen tips, I bought a long, slender bamboo and had a country gunsmith joint it for me in 4 ft. lengths; of which I used three for trout and four for pickerel and other river fish. I still keep this and use it for bass occasionally, but I have had a 100z. split-bamboo for more than twenty years now, which has "killed its thousands," and is good yet. I have also a 6½oz. rod, which is as light as I want. The reminiscent mood sent me May 2 of this year (May 1 being Sunday) to the spot where I caught that first trout, but not a bite did I get (trout never nibble!), and the brooks were too full of cold water. May 13 I went again, caught one trout 7 in. long and lost one by the hook, which had been tied at least three years, slipping from the gut! It was not one of my tying though! That one trout would just about have mated that first one I ever caught, more than sixty years before, but I did not come home in quite such an exalted condition.

However, I was not disheartened, and the next morning, being somewhat warmer, I decided to try a little brook within a quarter of a mile of the village, which is fed entirely by springs from the base of the hills, and on which Livingston Stone once had his well-known Cold Spring-trout ponds.

After my usual after-breakfast visit to the post-office I slipped on my shooting jacket and boots and started for the springs, not a rifle shot from the sheet to fish down. The first three pastures showed no signs of a fish, and it was not till I got down on the meadow level that I had a bite. The first trout proved about 6 in. long, but I put him in my basket for luck and went on. Just as I came to the meadow road, by which the fields are reached for farm purposes, I had a more vigorous bite, and my hook came back to me pretty well stripped of bait (the brook was barely 3 ft. wide, and no room to cast a fly). I rebaited, and dropping on my knees cast again in the same place, and was rewarded by a gin. trout; another cast met a still stronger response, and my rod bent as I swung a trout a foot long and very fat and heavy, weighing nearly a pound, over my head on to green grass of the meadow. I was so utterly surprised that I yanked him out as if he had been a fingerling. No such trout had been seen in that region since the day of Stone's breeding ponds. A third cast followed with no bite perceptible, but on lifting my line from the water I drew up another one 8 or 9 in. long, just out of water, when he dropped off on the bank and was back in the brook before I could reach him. The next meadow gave me two more of the 12 in. fellows, and the third one two more still, so that when I got to the next boundary, just as the noon mail train was whistling for its entrance to the village, I had five trout, each a foot long, and weighing nearly a pound, one of 9 in., or a quarter pound, and four of 6 in. each, and I turned home to dinner.

I had all the trout I wanted, and gave away part of them to my neighbors. Where those big fellows came from in that little brook is a mystery. No such trout were ever caught there before in the memory of the present generation.

I think they came up from the Connecticut River, tempted by the heavy rain of Thursday and Thursday night, to explore this cold brook in search of food, and that, like Nessmuk, "I met them on the June rise."

I fear my reminiscences have taken too personal a turn to be interesting; let us return to our subject. While *FOREST AND STREAM* has taken a position and maintained a character, never before attained by any periodical devoted to field sports, may it not be assumed that it has because it has been true to its name and confined itself to the recreations found in the woods and waters, leaving the drama and the turf to find other exponents?

Nor should the contributors who have aided in making it what it is be omitted. As we look back down the vista of years we recall with sad, yet pleasant, memories the names of Nessmuk, Ned Buntline, Ufford, Wells, O. O. Smith, and many more, who have filled its columns with delightful experiences, and we find others who are still adding to our pleasure. To the founder, Charles Hallock; to Awahsoose, Antler, Piseco, and Aztec; to Kelpie and Kingfisher; to Comanche and Shoshone; to Fred Mather and A. N. Cheney; to S. H. Greene and A.

B. Wingfield; to Podgers and Special; to the gorgeous and effervescent Starbuck, and the irrepressible and indomitable Hough; with the hope that all may long find in the actual delights of *FOREST AND STREAM* the pleasures of which they give us the reflections in its printed columns, I send the greetings of their brother angler,

VON W.

The Record of "Forest and Stream."

THE record of any journal which has passed the fifty volume mark in its history, of which so many good things can be said as may be truthfully said of dear old *FOREST AND STREAM*, is one to be very proud of. It is not given to very many journals to enjoy this distinction, hence it is that to-day every contributor to its columns, every subscriber upon its mailing list, all those who have in any way or measure assisted in this work, and especially those who have stood with the enterprise from the first days of its existence, feel a personal pride and exultation in the successful completion of this record. Since the days when Charles Hallock and his co-laborers began the task of a practical demonstration of the soundness of their belief that a pure, dignified, honest, high-toned and withal readable paper, devoted to the best interests of field sports, natural history, aquatic pursuits; to the dispelling of prejudice and the destruction of crookedness, rowdyism and illegal practices; to the betterment of their fellow men, could and would be sustained, its course and varying success has been watched by its friends, sometimes with solicitude, but always with pride, and strengthened by words of encouragement. During all these years I have been an interested weekly reader of its pages, and enjoying the appreciated distinction of being a frequent contributor to its columns, I have in a special corner of my abode, and it requires a liberal allowance of space at that, piles on piles of these papers. Not a complete file, I most deeply regret to add, but many hundred copies that are like old friends. I doubt, if I had now the whole of the fifty volumes bound and set up in formal and imposing array in my library, that I should take the same comfort and pleasure in them. They would not be the same as the old copies that I have read and often marked—sometimes clipped from—not the old familiar friends that have been coming weekly for so many years.

The conviction has forced itself upon my mind, as it has upon hundreds of others, who, like myself, have followed its course in the courageous treatment of all topics coming up within its domain, that it has been a mighty factor in the moulding of public sentiment, in the elevation of field sports, in the inauguration and upholding of all movements for the punishment of illegal practices. But it is not to be supposed that its sentiments have always pleased even its friends. No man that has ever been known on earth has succeeded in pleasing everybody. It remains for the future to produce that *rara avis*. Tastes differ. Prejudices exist. Opinions are widely various on every subject. In many things there is no standard, and just what constitutes perfection in a particular object may be an open question. It is said of Lincoln that upon being asked what he thought should be the proportionate length of a man's legs, he replied:

"Without giving the matter any thought, I should say a man's legs should be just about as long as necessary to reach from his body to the ground."

Thomas Jefferson said that it was as undesirable that men should all think alike as that they should all look alike, and on that point, if any, we are pretty nearly agreed. One cannot help thinking what a horribly monotonous state of things would exist if there was not an occasional dispute over what constitutes the difference between a large and a small-mouth bass, and what the most successful lure wherewith to enveigle him from the crystal depths; or what was the weight of the big fish that got away; or the kind of ammunition that is best for a certain purpose; or the particular make of gun that is infallible. Life would indeed be "stale, flat and unprofitable." So we are content when the views of our favorite paper differ from our views, as we know the difference is, anyhow, an honest one, and we immediately sit down with the most trenchant of pens, the most decided of black inks, and most killing of arguments, to prove to our dear Mr. Editor that he is dead wrong on every one of his points.

But to return. What a wonderful community of interest and feeling of comradeship exists between the contributor and reader! As a good example of this, a fellow sportsman said to be a day or two ago when talking about the *FOREST AND STREAM*: "I actually feel that I could take any of those writers by the hand with as cordial a grasp as though I had known them personally all my life." That I think conveys the highest compliment to the writer's best gift in any domain of literature—perfect naturalness.

Yes, the position which *FOREST AND STREAM* occupies to-day, after rounding out its fifty volumes of entertainment, education and usefulness, is a proud one: it has contributed to that new gospel of orthodoxy which is so clearly, naturally and truthfully spoken of by Rev. Dr. Henry Van Dyke in the following words:

There is such a thing as taking ourselves and the world too seriously, or at any rate too anxiously. Half of the secular unrest and dismal, profane sadness of modern society comes from the vain idea that every man is bound to be a critic of life, and to let no day pass without finding some fault with the general order of things, or projecting some plan for its improvement. And the other half comes from the greedy notion that a man's life doesn't consist after all in the abundance of the things he possesseth, and that it is somehow or other more respectable and pious to be always at work making a larger living, than it is to lie on your back in the green pastures and beside the still waters, and thank God that you are alive.

That covers the ground, I think, and having done it, I will simply say, let the anniversaries come, and may each successive one bring a still greater measure of success.

JOHN M. BULKLEY (Kenka).

DETROIT, June, 1898.

Sportswomanship.

"To take no unfair advantage of any living thing is a good code for the sportsman of to-day."—*FOREST AND STREAM*.

This theory does not apply to sportswomen when the game is man.—*New York Sun*.

The Walrus.

ONE of the most interesting mammals of the circum-polar regions is the walrus, also called sea horse by the old English navigators. The waters of the Bering Sea seem to be especially adapted to the requirements of these creatures; vast tracts of comparatively shallow water extend along the eastern and western shores of the sea; the chain of islands forming the southern boundary, called the Alutian Islands, presents no attraction for the walrus; being environed by waters of great depth, and the waters in the many passages rush through with great strength, consequently they shun these waters from the Peninsula of Alaska to the Commander Islands, a distance of twelve hundred miles or more.

On the northern shores of the Peninsula of Alaska are found numerous outlying sandy reefs, which form convenient resting places for the walrus herds in summer, for it should be understood that the greater part of the old males remain in the Bering Sea at all times of the year. The females, with their young, and the younger males migrate annually to the waters of the Arctic Ocean. These shallow waters abound in shell fish of various kinds, and especially a large thin-shelled clam, and these clams form the greater part of the food for the walrus herds, for when a walrus is killed on first coming to land the stomach will always be found to contain a large proportion of these clams.

These great shallow plateaux extend from the Peninsula of Alaska on the eastern shore of the sea as far north as St. Lawrence Island, and from this point the shoal water extends entirely across Bering Straits and through them into the Arctic Ocean and comprises the greater part of the open summer ocean. On the Siberian coast the walrus grounds are found a short distance to the south of the large Island of Karagin, off the coast of Kamchatka, extending northward until it joins the shallows of the American coast and becomes one vast feeding ground for the walrus. The Island of Karagin is a famous hauling place in summer for the Western herd, for they love to come ashore on some point in fine weather and bask in the sunshine, and usually remain for several days if the weather is fine. In this they are first class weather prophets. I have often seen them coming to land during a present storm, but fair weather was sure to follow, for such prediction is unerring. Beside resting, their purpose in coming to land is to kill the parasites which infest and torment them, and this the sunbath does. The parasites are like little crabs and a good exposure to the hot sun destroys them; although in hauling ashore the walrus have a habit of massing in such a compact way that they cannot entirely free themselves from the pests.

The walrus is gregarious in the extreme, and is never found alone unless sick or wounded; it then, like most other animals, goes away by itself to die alone.

They come to land in great numbers, gathering near, on the approach of fine weather. At first a few of the old males go to the top of the hauling ground, and survey the scene. When satisfied that the coast is clear, these old sages proclaim the fact, and the landing begins in earnest. At first they emerge from the water slowly, but those on the outside begin to stir up those ahead with a friendly prod of their tusks, which on any other animal would inflict a painful wound, but which on these creatures is simply a reminder to move on. So they gradually work themselves to the top of the beach or as far as they wish to go and lie down in every conceivable posture, many overlapping others, until every inch of ground is covered. At all times there are a sufficient number awake to keep up a deafening roar, while the great multitude are sleeping. All throughout the herd are posted sentinels, who with raised head and watchful eye keep guard over their comrades. The din is great and the stench from them sickening.

The movement of the walrus on land is sluggish and unwieldy. They move but a short distance at a time before resting; to go 10 or 15 ft. would be a good effort. On arriving at the top of the beach or near high water mark those first there will go no further, but turn and face the coming herds and yield no more ground; so the band begin to haul up on each side, in the same way at all times keeping a compact mass. After a while comparative quiet is restored, so many are now asleep, and the most of the herd have gotten to land, for they always begin to haul up on rising tide and do not seem to care to do it when the tide is falling; if there are late arrivals they simply get out of the wash of the waves and await the following rising tide. I have often seen from five to ten thousand congregated on a small sand point. Notwithstanding the constant bellowing and wrangling of the herd and the terrible stench arising from such a mass of animal life, if a boat should pass a half mile to the windward of the herd they would all start immediately for the water, and in a short time all would be in their native element, the sloping beach greatly assisting them in their flight from the land. But a boat could pass to the leeward of a herd within a hundred feet and they would remain; they might make a little more bellowing and show restlessness, but if they do not scent a foe or strange smell they seem contented to remain. I think the odor most offensive to them is the smell of smoke. One whiff of smoke from a passing ship will be a signal for all to get into the sea. It seems that they depend on the sense of smell much more than sight to warn them of the approach of danger.

To shoot these fellows on the hauling grounds it is usual to wait until low water, then rush between the herd high up on the beach, drive the stragglers into the sea, leaving a broad band of beach between those high up on the shore and the water, then the shooting begins with those nearest the water. It is an easy matter to watch a chance to shoot the ball into the base of the brain and kill the animal instantly. While part of the men are shooting the rest are busy with poles about 12 ft. long with a strong sharp spike in the end to keep the herd from escaping to the sea. They are quite sensitive about the muzzle and can thus be held in their position on the beach. The men doing the shooting kill off those nearest the water, the dead bodies forming a bulwark between the living and the sea. When a sufficient number have been killed, the living are released, and the

work of saving the ivory and blubber begun, for there is much hard work to be done, and the weather may soon change to stormy, and this might take all your work back into the sea and all would be lost. For this reason it is best not to try to get too many at one time. In selecting a place to haul out the walrus invariably choose a point if possible where they can reach water deep enough to swim in near the shore at low water. An outlet to the sea between the sand islands, where the currents wash a deep channel, makes a most desirable resting place, for they feel that they can flee to the sea at any time, and it is a fact they are well protected except at low water, and this is the time of their greatest danger.

There is a great amount of labor to be done to cut out the ivory from the strong bones of the head, and to cut off the blubber. The skin of a bull walrus when taken off the animal will average 1 in. in thickness, and is covered with round lumps or scars, the result of many battles, in which they strike with their strong ivory tusks.

I once killed on the islands near Herendeen Bay and Port Moller over 1,000 walrus, not one of which was a female; and at least 900 of them were old battle-scarred veterans. Many have the appearance of having attained great age; their bodies are so completely covered with scars that I doubt if a tea cup could be placed on any part and not cover one or more scars. These old males are almost entirely destitute of hair, and when in the water have a bluish white appearance. They seem to avoid the younger and more vigorous of their kind. One small herd of these I once saw on Walrus Island, off the Pribilof group, near St. Paul, on which I landed. It was in the nesting season of the murre, great numbers of which covered almost the entire surface of the high part of the island, and it was interesting to see how the walrus trusted to the sea birds for intimation of the approach of a foe. They were lying under a low bluff and could not see any one approach from over the land, while they could see my approach from seaward. One boat was lying off shore, where the herd was in full view. While I landed they slept soundly on. As we crossed over the island the murre began to leave their eggs and gather near the cliffs; and when we came quite near the sea birds flew off in vast numbers. It was now that one old walrus sage must have remarked, "We had better get out of here." And they went. Notwithstanding our smart run to the edge of the cliff, but a single walrus was hesitating on the edge of the rocks. Two cracks from our Sharps rifles rang out and the lifeless body hung on the edge of the rock, with the waves swinging its great white horns among the sea weed.

From all appearances the walrus must live to a great age. Young robust males of perhaps five years have just a scar or two; and are all covered with short brown hair; their tusks are short and sharp, and in a herd one can select animals of various ages until we can almost imagine that some of the old fellows might have seen Vitus Bering when he plowed the waters of this sea.

The females are well covered with short brown hair and seldom show a scar. Their horns are much more slender than those of the males; the skin is much thinner and the freedom from scars makes it much more desirable than the male's to the Eskimo for canoe covers. The muzzle is flat across the front, and oval in outline; at right angles to the muzzle the tusks protrude about 18 in. The muzzle is covered with stout stiff whiskers, which doubtless serve to brush the clams from the sand and mud turned over on the bottom by the two tusks, which serve as picks to tear them out of the sand.

I once had an opportunity of seeing the work done by a herd of about fifty walrus at the Moller Islands. At near high water about fifty of them came off the beach and into the lagoon between the sand islands and the mainland. It was a beautiful calm day and I could see them stirring up the mud in their work, coming to the surface from time to time with intervals of ten or twelve minutes, and uttering hoarse cries as they again came to the surface. At one time I could see the most of their movements as they drew in quite near the shore. They stuck their tusks into the sandy bottom and tore it up with a quick jerk of their strong neck, then brushed over the bottom with their horns (or tusks) and searched for the food which had been uncovered. The shell fish so found are broken in their strong jaws, the soft parts sucked out and the shells rejected. I have often examined the ice where a herd of walrus had been reposing and very few fragments of shell could be seen on the surface of the ice.

Although the tusks are very strong they are sometimes broken. I once observed a large male, whose tusks were broken off close to his nose; notwithstanding this he was in fair condition; he doubtless followed the feeding herd and could pick a good share of the clams uncovered by his friends. The jaws are short and strong, and when the animal is excited it opens and shuts them with great rapidity, like a person with the ague, and the strong jaws and teeth make the rattle audible for some distance.

The teeth protrude little above the gum and must grow out rapidly, for they wear away quite fast in grinding up the clams.

I have never known the walrus to come on land in winter. This may be accounted for by the fact that the Bering Sea in summer is entirely free of ice in the southern part early in the spring, and the males, which do not migrate to the Arctic feeding grounds with the females and their young, are fond of coming to land in fine weather for rest and sleep.

The young are born in May on the ice fields off shore. The mating of the males and females takes place immediately after. The period of gestation is one year, like that of the sea lion, fur seal and kindred species. The young grow quite rapidly, since in July, three months later, their little tusks begin to show a white point in the corner of the mouth, and they are fat and robust at this time. They doubtless nurse the mother until the tusks are long enough to dig with, though they no doubt follow the mother to the bottom and learn to pick up clams and feed with her. I have often seen a young one, when the mother had been shot on the ice, crawl upon the body of its mother and cry like a lamb, paying no attention whatever to the men working on the ice, until seeming to realize that the dead body could be

nothing more to it, it would go away, and often adopt another mother, or perhaps be adopted. At least at this season, when many females were killed, the orphans would keep with the young of a living mother. Whether they at last succeed in reconciling the mother to her increased family I know not, but I do know that often two and sometimes three pups would be seen following one mother.

During the winter the walrus herds keep about the southern edge of the ice floe, and are drifted to and fro as the ice is driven by the wind. In May and June the strong southerly winds carry the ice fields more and more to the north, until late in June they are in the vicinity of the large island of St. Lawrence, near what you may call the southern entrance to Bering Straits. The southerly winds of this season carry this ice more rapidly in conjunction with the currents, and the ice fields, with the migrating herds, are soon swept through the Bering Straits into the Arctic Ocean. In the middle of July a great many bands of them can be seen scattered about on the ice as far as they can be seen, and these may number from fifty to more than a thousand. In the early days of the Arctic whale fishery they congregated in vast numbers, before the whalers turned to their capture as a source of profit at a season when the whales were scarce. In July many ships would take from 800 to 1,200 walrus, and these were mostly females, because the females yielded more oil and were therefore more profitable.

At first, when the whalers began their capture, they used the ordinary harpoon on a whale line, with five or six harpoons fastened to the main line with short lines, and with a bow line, through which the main line traversed freely. When all was ready the boat was pulled up to a floe on which a herd of walrus were sleeping and resting, the men always keeping to the leeward, and in this way the boat could approach very near. Then with a few smart strokes with the oars the boat in a moment would be near enough for the harpooner to throw all his harpoons into from five to eight walrus, and all these were secured to the long line by as many short lines as there were animals. The killing then began. Some of the men would haul on the line and pull the boat up to the wounded animals, and a lance thrust in a vital part of first one and then another soon killed them. But in their struggles they often struck the boats with their tusks and stove them badly, and the method proved very destructive to the boats. Soon after this it was found that the improved rifles of heavy caliber would kill them instantly if shot in the brain. The rifle was thereupon adopted as the weapon for the hunting of walrus, and a mighty destroyer it proved, for in shooting large numbers it very often happened that the warm blood flowing on the ice from the slain would so weaken the ice that when the shooting was done and the living were driven off the ice the balance would change and the dead lying on this weakened ice would break off the floe. In such a case very often all the walrus that had been killed were lost, and another band would have to be sought for.

Although the walrus is not given great credit for cunning, yet he always selects rotten ice, and that which lies low in the water, with holes here and there where he can soon plunge into the water and escape. They are not often found on high strong ice. The walrus drifting around on the drifting floe has but a short distance to move to get into the water, and twenty or twenty-five fathoms beneath there is food in abundance.

I have never observed any great numbers of females with their young on the American shores south of Bering Straits after July, but in the Gulf of the Holy Cross on the Siberian coast I have seen them in thousands in the months of August and September feeding in the shallow waters of that region.

When the shooting of walrus began a small boat carrying two men was used, the men being dressed in white, and the boat and all its apparel painted white, so that there would be little contrast with the surrounding ice. The same order was observed on approaching a herd on the ice as those on the land.

It was estimated that 50,000 were destroyed annually when the industry was at its height; it will be seen that the pursuit was rapidly exhausting the herds, but the depression of the oil market and the growing shyness of the animals on the approach of man made the business less and less lucrative, until now they are very little disturbed.

The average amount of oil obtained from a walrus was twenty-two gallons, and the amount of ivory from the females was 4 lbs. A thousand males killed at Port Moller averaged 8 lbs. each, although 20 lbs. have been taken from a single male. The ivory is valued at about 60 cents per pound. The smallness of the valuation put upon it is due to the fact that the center of the tusk is not true ivory, but a hard, granulated substance not at all like ivory in appearance or texture. Were the whole tusk solid ivory it would be very valuable and would command a much greater price in the markets of the world.

E. P. HERENDEN.

[TO BE CONCLUDED.]

"Early Days in the West."

MR. BYERS adds to his interesting recollections (see page 508), writing of the site of Council Bluffs:

The Mormons made a great settlement here, entirely self-sustaining and independent of the gentile world. We had a Christmas dinner there in 1851, at the house of a Methodist missionary, to which it was stated all the gentiles (other than Mormons) who lived on the Missouri slope (water shed) of Iowa were invited. The party numbered eight, and five of them were our squad of surveyors. Two others were the missionary and his wife, and the eighth must have been a "stray."

Meantime, while the faithful had prospered in this garden spot for five years, their managers and scouts had traversed the Western plains and mountains and settled upon the Great Salt Lake basin for the permanent home of their people, and thither they went in the spring of 1852. They went as the wild pigeons (used to) go. I was in the heira, but not of it.

WM. N. BYERS.

A Quarter Century of Fishculture.

IF we may trust the records, the artificial fertilization and hatching of fish eggs was 125 years old when *FOREST AND STREAM* first saw the light of day; yet the results accomplished since the establishment of this journal far exceed in extent and importance all the previous results in the history of fishculture.

Jacobi waited twenty-two years for a publisher and eight years longer for a substantial recognition of his services in the form of a life pension, which he did not need, from George III. of England. His followers began to practice fishculture after still greater delay, as, for example, in Italy in 1791, in France in 1820, in Bohemia in 1824, in Great Britain in 1837, in Switzerland in 1842, in Norway in 1850, in Finland in 1852, in the United States in 1853, in Belgium, Holland and Russia in 1854, in Australia in 1862, in Canada about 1863, in Austria in 1865, in Japan in 1877, in Hawaii in 1879, in Mexico, New Zealand and South Africa within recent years.

All of the earlier operations in artificial breeding were limited to fishes of the salmon family, chiefly to the Atlantic salmon, and several kinds of trout. It was natural that attention should first have been attracted to such species. The eggs are large and showy; they are deposited in shallow places, usually in mountain streams, and the spawning fish become conspicuous by reason of their breeding habits. The fish are among the most highly prized by all who know them. In the countries in which private fishculture was first practiced, moreover, the fishing waters belonged to the State or to private individuals, and these interests were best promoted by the increase of the game fishes.

The "wet" method of fertilization of the fish egg must have been suggested by observations upon the spawning grounds, and it is not surprising that Vladimir Wraski's discovery of the better plan of "dry" mingling of the eggs and milt before immersing them in water was delayed until nearly a century after the publication of Jacobi's methods. This is only one of many valuable fishcultural discoveries for which America is indebted to Europe, but America has given more than a fair equivalent in return. Dr. Borodine has justly written: "Europe has originated and developed the methods of fishculture, but America has carried it on upon an industrial scale under Government auspices, and has invented and introduced in general practice methods suitable for large operations, quite different from those used in Europe."

Dr. Oscar Nordqvist also has remarked that "On account of the enormous amount of fish breeding, the Americans have invented a number of exceedingly simple, cheap and easily managed (forms of) apparatus for the purpose, and have thus materially simplified the work." He attributes the great extent of fishcultural work in the United States partly to the prevalent rights of fishing here, which throw upon the general Government, or the State, the duty of preserving and increasing the supply of fish, a duty which would be wholly neglected were it not for such supervision.

How far the artificial breeding and planting of fish should be supplemented by legal regulation of the fisheries is as much a vexing problem to-day as it was when *FOREST AND STREAM* was young. The same schools of fishery economists in Great Britain, owing allegiance to Huxley on the one side, opposed to legislation except for inland waters, and to Dr. Francis Day on the other, advocating strenuous legal regulation of all fisheries, exist and combat each other's views as vigorously as ever.

In the United States public opinion is still largely antagonistic to fishery legislation. After fourteen years of scientific investigation Prof. Baird was not convinced that the permanence of the sea fisheries required the enactment of laws, and he never recommended legislation in that direction. The anglers, however, believing that certain forms of apparatus used in the commercial fisheries are destructive of food fishes and their eggs, are constantly trying to secure legislation against the use of such apparatus in shallow bays near the shores.

Whenever such proposed restriction is shown to be necessary to the public good it will meet with hearty approval; but it may easily work unnecessary hardship upon those who buy fish, as well as upon those who catch them, unless it is well grounded in facts. The laws of the States very properly aim to protect fish in their spawning season and from destructive methods of fishing; also to prevent the pollution and obstruction of streams and to preserve stocked waters from fishing until the fishes have reached a suitable age and abundance.

There is still a great deal to be desired in the way of uniformity of laws and limits of open seasons.

The first public fishcultural establishment was set up at Huningue, in Alsace, by the French Government in 1850 under the direction of Prof. Coste. The Government of Norway extended its patronage to public fishculture in the same year. Canada entered upon the work more than thirty years ago; and the New England States were first in the United States to appropriate money for stocking public waters. The United States Government began fishcultural operations in 1872. The first attempt at the artificial spawning of salmon in the United States was made by M. C. G. Atkins, at Craig Brook, Me., in 1871, under the direction of the Fish Commissions of Maine, Massachusetts and Connecticut. Artificial propagation of the quinnat salmon began in the McCloud River, Cal., in 1873, with the work of Livingston Stone. In this same year the U. S. Fish Commission sent 35,000 shad fry from the Connecticut River to the Sacramento, in California, the only prior shipment having consisted of 12,000 fry from the Hudson, taken over in 1871 by Seth Green for the California Fish Commission.

Public fishculture was very young and awkward in the United States in 1873. The Wraski method of "dry" fertilization of eggs, although published in 1856 or 1857, was republished in French only in 1871, and became known to us through a translation by Geo. Shepard Page. Atkins had greatly improved the apparatus for the hatching of salmon and trout eggs by substituting wire cloth bottoms for trays instead of gravel and glass grilles; but shad eggs were laboriously developed in floating boxes in the rivers, and their fry were trans-

ported in milk cans, carried in baggage cars, from Connecticut to California and the Southern States. The shad hatching cone, of Bell and Mather, did not make its appearance until 1875. This was followed two years later by the plunging buckets, and soon afterward came the automatic hatching jar of Marshall McDonald, one of a type of jars, including Chase's, Clark's and Wilmot's, which has revolutionized certain lines of fishculture.

Another automatic glass jar of more recent invention is the bottomless bottle of a Swiss named Weiss, which is inverted, the water entering at the neck and overflowing over the edges of the bottom.

Floating eggs, and indeed eggs of marine fishes in general, had not entered into the scope of the Fish Commission's work until 1879, when the semi-rotating cylinder, designed by H. C. Chester, was used for hatching eggs of the cod. James W. Milner and R. E. Earll soon afterward discovered the utility of an intermittent siphon for producing the tidal motion necessary to the proper development of cod eggs, and this principle was introduced and made available in the tidal box of Marshall McDonald, in which so many hundreds of millions of floating eggs have recently been hatched.

Twenty-five years ago, if any one desired to hatch heavy, adhesive eggs, he placed them upon bunches of twigs or glass plates, to which they adhered. Now, thanks to the ingenuity of Prof. J. E. Reighard and J. J. Stranahan, we separate such eggs readily by the use of starch or fine muck, and hatch them in glass jars, as we do with shad eggs. It is the simplest thing in the world now to hatch 400,000,000 eggs of the pike-perch in a short season instead of a few hundred thousand by the old methods.

The past quarter century has witnessed other noteworthy improvements in public fishculture, such as the use of steamships and steam machinery for hatching; the introduction by the States and the United States of cars especially fitted for the hatching en route and the transportation of fish and eggs; the employment of refrigeration and aeration systems, by means of which the results of fishculture have been wonderfully increased.

Public fishculture worthy of the name exists only in the United States and Canada. This is clearly shown in a review of fishculture in Europe and North America for the year 1891, published by Dr. Borodine in *FOREST AND STREAM*, and in the Bulletin of the U. S. Fish Commission for 1893. According to his statements all of North America appropriated for fishcultural work in that year \$406,669; all Europe appropriated only \$37,032.50. The number of fish produced in North America was 1,616,027,192; in Europe 277,973,016. Of the 416 fish hatcheries in Europe only 82 belonged to the respective Governments, while 80 referred to in North America were all Governmental establishments. Europe is almost without hatcheries for fishes of the shad and herring kind, the perches and marine fishes generally, and little attention is paid to stocking public waters, but nearly all fry are furnished to private streams.

It would be unfair, however, to omit reference to the assistance actually rendered to public fishculture by various governments. Germany contributes funds annually for the support of the fishcultural operations of the Deutscher Fischerei Verein and of the hatchery at Hünningen, in Alsace. Norway grants a subsidy to the great cod hatchery at Flodevigen and for other purposes. Switzerland pays the owners of private hatcheries for the fry planted by them in public waters. France maintains five small Governmental hatcheries, and gives a subsidy to a private shad hatchery on the Seine; the Government has provided also for a fishcultural school at the Gremaz hatchery of Mr. Lugin, the inventor of the method of artificially propagating live food for fry. Italy paid \$6,500 for the construction of a large hatchery at Brescia in 1891, and has established a smaller one in Rome under direction of Dr. Decio Vinciguerra. The Netherlands planted salmon fry in the Rhine in 1891 at an expense of \$2,084. Great Britain makes grants for scientific investigation, and such allotments are used in part for the support of a marine hatchery at Dunbar, Scotland. Assistance is furnished also to the St. Andrews marine laboratory, where fishcultural investigations have been carried on since 1884, and to the laboratory at Plymouth. Sweden contributes nothing directly for fishculture, but makes provision for the improvement of the fishery industries. Russia does very little beyond making small grants for a hatchery at Nicholsk, founded by the inventor of the "dry" method of fertilizing eggs, and for the Fishery Society for Finland.

In the packing and transportation of eggs and young fish great improvements have been made. In Europe eggs are not transported, as a rule, until they have reached the eyed stage; but in the United States newly spawned eggs are freely and successfully shipped even for a period of several days. The fear that this may result in hatching weaker fry does not outweigh the enormous advantages gained in reaching a central hatchery from several field stations. By the use of suitable trays and the assistance of quick transportation the yield of shad and whitefish, has been wonderfully increased.

A notable improvement in the results of stocking streams has come from the use of young fish several months or a year old instead of very young fry. This is now pretty generally accepted as the best method of planting, and many failures of the past may be turned to successes in the future by the change of plan. Since the rearing of shad in ponds has proved entirely feasible and promising of good results, the same principle should be applied to whitefish and pike-perch, about which fishculturers have been greatly discouraged, after years of hard work planting the fry. In Europe whitefish and pike-perch are very successfully reared in ponds, and in our own country Mr. Thomson has accomplished similar results in Indiana.

There is room for much more activity in rearing natural food for fish, and the successes of the next quarter century will revolve around that problem as a center. It would be a good plan to foster experimental work in fishculture under the auspices of the general Government. The little that we know is so painfully in contrast with the mass of unknown problems as to call for prompt and generous action in behalf of public instruction. The proper treatment of fish in disease is as imperfectly known as the cure of consumption. Even the various troubles caused by fungus find the average fish-

culturist helpless to overcome them by any means.

It must not be supposed that there has been a dearth of literature in the period under discussion. Expositions have been numerous, and each one has called forth more or less work in fishculture. Among those in which the apparatus and methods of fishculture were made a special feature were the following: Philadelphia, 1876; Berlin, 1880; Edinburgh, 1882; London, 1883; New Orleans, 1886; Cincinnati, 1888; Paris, 1889; Chicago, 1893; Atlanta, 1895; Brussels, 1896; Nashville, 1897; Bergen and Omaha, 1898. At Berlin, in 1880, were given in the department of fishculture ten gold medals, five silver medals, seven bronze medals, and fifteen diplomas of honorable mention, the United States having received six gold medals, one each of silver and bronze, and two certificates of honorable mention. Essays and books upon fishculture formed a natural preparation for these expositions, and the materials exhibited in turn supplied subjects for new literary productions in that direction.

What follows is not an attempt to give a complete list of writings upon the subject, but merely a brief mention of the most important recent sources of information, and this to some extent is of necessity drawn from memory. The expositions at Berlin, 1880; London, 1883, and Chicago, 1893, were especially fruitful in fishcultural literature, as will be seen from the titles:

1873, "An Essay on Fishculture," John H. Klippart, Columbus, O.

1877, "Practical Trout Culture," J. H. Slack, New York.

1877, "Domesticated Trout: How to Breed and Grow Them," L. Stone, Boston.

1879, "Fish Hatching and Fish Catching," Roosevelt & Green, Rochester, N. Y.

1881, "Die Fischzucht," Max von dem Borne, Berlin.

1881, "Epochs in Fishculture," G. Brown Goode, in *FOREST AND STREAM*.

1883, "Fishculture," Francis Day, London.

(Besides this, numerous important essays were prepared for the London Fisheries Exposition of 1883.)

1883, "Modern Methods and Apparatus," R. E. Earll, in *Nature*, Oct. 4.

1894, "Bulletin U. S. Fish Commission for 1893," devoted entirely to papers prepared for the World's Fishery Congress at the World's Fair, Chicago.

1895, "The Angler's Paradise and How to Obtain it," J. J. Armistead, Dumfries, Scotland.

1897, "Manual of Fishculture," in Report of U. S. Fish Commission for 1897.

1898, "Proceedings of the World's Fisheries Congress at Tampa, Fla.," in Report U. S. F. C. for 1898.

A little book upon fishculture was published in Italian several years ago, and a work on marine fishculture in France has recently appeared from the pen of G. Roché.

To the foregoing must be added the very valuable essays and short articles which have appeared frequently in *FOREST AND STREAM*, the *Field*, *Land and Water*, the *Fishing Gazette* (London), in the journals of the French Society of Acclimatization, the circulars of the German Fishery Association and allied organizations, the French, Norwegian, Swedish and Finnish fishery and fishcultural magazines and reports, the annual reports of the Department of Marine and Fisheries of Canada, Transactions of the American Fisheries Society, annual reports of State Fish Commissioners, the Reports and Bulletins of the U. S. Fish Commission. There is no lack of good literature; what we need now is a working manual drawn from these sources and from extended experience in the hatcheries.

A hasty glance at the list of fishes now made the subjects of artificial breeding and rearing will serve to show how far we have progressed in the quarter century past. Fishculturers are regularly occupied with:

Pacific, Atlantic and landlocked salmons.

Rainbow, steelhead, red-throat, brown trout (and several of its European allies).

Lake and brook trouts and the saiblings.

Whitefishes and lake herrings.

Graylings.

Smelts.

Shad.

Black bass, rock bass, crappies.

Mascalonge.

Mackerel.

Cod, haddock, pollock, tomcod.

Flatfish, sand dab, four-spotted flounder.

The following may be added as fishes under experiment: Golden ide, sturgeon, yellow perch, Spanish mackerel, tautog, cunner, scup, sea bass, squeteague, sheepshead, sea herring, alewife.

Among the economic invertebrates receiving much attention are the lobsters, oysters, clams, mussels, and sponges (the last propagated now from cuttings, like some plants).

What has fishculture accomplished during the *FOREST AND STREAM* era? It has passed out of the stages of experiment into the realm of great operations, upon which depend important commercial fisheries and remunerative private enterprises. It has established the shad in the Pacific States, where it was unknown before, and restored the fish to rivers of the Middle Atlantic States. It has acclimatized the striped bass in California. The rainbow trout of the Pacific slope has been thoroughly domesticated in Eastern waters. The brown trout of Europe is now greatly multiplied in America, New Zealand and Australia. The inshore cod fisheries of New England have been effectively re-established, while a similar result has been accomplished for Norway through the agency of its great hatchery at Flodevigen. The valuable salmon industries of the Columbia and Sacramento rivers rest to-day upon the basis of artificial breeding, and the enormous yield of red salmon in Fraser River and the Gulf of Georgia is surely maintained by fishcultural operations, combined with protective legislation.

That there have been some failures or indifferent results goes without saying; experiments do not always lead to success in any line of human endeavor; but improvements in methods and apparatus have come so fast as to make public fishculture one of the principal factors in the increase, and the consequent cheapening, of the food supply. With the outlay of the same energy and intelligence continuing during the next twenty-five years, who can foretell the development of our fishcultural system and the achievements to follow?

TARLETON H. BEAN.

Days with the White Goat.

In the closing days of August, '97, we started for Winnipeg, where we expected to find out from the officials of the Hudson Bay Company, whose headquarters are located in that city, the best point at which to leave the railroad, with the home of the white goat as our final destination. We spent Thursday afternoon and Friday morning in Winnipeg, where we were most kindly received by the Hon. C. C. Chipman, and by his advice we set out for Vernon, British Columbia, on the other side of the Rockies. We arrived in Vernon Aug. 30, and were very much surprised to find that we were in a pleasant little town surrounded by fruit plantations and ranches, where grain and hops are grown successfully, and where there is as good a little hotel as one could wish for in any part of the world.

Vernon is only about 1,200ft. above the sea, and is located at the head of Okanagan Lake, a body of water ninety miles in length. We were detained here for three days, trying to procure guides. We had no difficulty in getting a cook and two packers, but the hunters were harder to find. At last we secured as head guide Henry Macdonald, an Indian, and as second guide Will Thomas, a young chap born in the States, but living in British Columbia, and trapping for a livelihood. Though but 20 years of age, Thomas stood at least 6ft. 2in. in height, and weighed considerably over 200lbs.

On Friday, Sept. 4, we left Vernon with our party of eight men and thirteen horses—really an unlucky number of horses to take, as I may show later. The course we followed was southeast, toward the Arrow Lakes and Columbia River, among the peaks of the Gold Range, practically the western part of the Selkirks.

By Sunday noon we had covered the last ten miles of our journey and were encamped on the South Fork of Cherry Creek, between two peaks called Big and Little Goat Mountains. Our camp was located about 4,300ft. above sea level, and the summits of the mountains which we were to hunt were 2,500ft. or more above us.

We had seen no game excepting one or two willow grouse, and as we had not brought a very large supply of bacon—and eight men can do a great deal of execution on bacon while climbing mountains day after day—Harry and I decided, though it was Sunday, that we would cross the South Fork of Cherry Creek and climb the mountain directly opposite Goat Mountains, hoping to find a mule deer.

We took with us Will Thomas, and after struggling through a wilderness of fallen trees and briars for a couple of hundred yards, we emerged upon the side of the mountain we had picked out to hunt. The side of the mountain was not so very steep, but we had to ascend about 2,000ft., and the ascent was continuous, without a break. It was our first climb of the season, and I do not know what Harry thought of it, but I had very little use for anything but level country by the time I had gotten half way up. We reached the summit, and following out our programme separated and started to circle the mountain top. I had gone along the crest of the mountain as quietly as possible for a half mile or so, when I heard several shots at some distance to my left. I had seen several tracks, and some of them fairly fresh, so I supposed that Harry had started his deer. After waiting several minutes I started in the direction of the shots, and found Harry and Will Thomas trying to find the balance of a covey of grouse, two of which they had killed with a .22cal. Stevens pistol. At that altitude, with no wind and at a half mile distance, I had taken the report of this weapon for that of a .30cal. Winchester. Once or twice afterward I made the same mistake.

As dusk was coming on and we had quite a distance to go we started for camp. After sliding and slipping down the hillside until we had gotten within a couple of hundred yards of the bottom we sat down to rest a moment, and seeing no sign of life about us I amused myself by rolling some loose stones down into the brush and small trees at the base of the hill. Suddenly Thomas, who was sitting between us, said: "There's

your deer!" But unfortunately the deer was on the move, and before we could have located him would have been out of sight among the trees, but that Thomas realized the situation and took a shot himself, which luckily broke the deer's back. Thomas had with him a dog but a year old, a cross, I think, between a deerhound and a mastiff. This dog had been well broken, even at this early age, in catching wounded animals. He had no trouble in catching a deer with its back broken, but as he is the hero of an adventure with a goat I mention the dog here—Hoodlum was his name, and his nature bore testimony to the fact that this name had been well chosen.

We ran down the hillside and a few hundred feet be-

out on this our first day. So Harry started with Macdonald, the Indian, and the Cavalryman and I took our way up Little Goat Mountain with Thomas. The morning was cold and misty, but we soon got warmed up. We followed the gulch on which we were camped to the trapper's cabin at the head of it, and then turned sharp to the left up the mountain. The first fifteen or sixteen hundred feet of the ascent was over three-quarters of a mile of a steep grassy slope, partly covered with small brush, and then we came to the foot of a cliff of possibly 1,000ft., almost perpendicular. Here Thomas said the goats were wont to disport themselves; but looking along the cliffs for a half mile we could see no signs of game. We decided by the advice of Thomas

to follow around the foot of the cliff back toward camp, only a couple of thousand feet above camp, to the point of the mountain where we could climb the rocks.

I remember very well that we did climb the rocks, and that while we were a little over half way to the summit I slipped and fell on my knees to keep from sliding back. After getting a good brace for my feet I looked down, and it seemed to me that the bottom of that cliff was too far down to be of any possible interest to me, and that the most prudent thing for me to do was to keep looking upward and going that way.

We finally reached the crest of the rocks, and no sooner had we gotten a good footing than Thomas said: "Look out, there is your goat!" And sure enough there was a goat about 200yds. off and busily engaged in trying to make that 200yds. 400. I imagine he succeeded, for he was out of sight among the rocks before we could get a shot. We followed in his tracks, and found that he had crossed the top of the mountain and gone down the cliff on the northerly side. On this side the rocks were not nearly as precipitous, but were cut into by several gullies running clear to the top of the mountain.

We passed the first ravine without seeing anything in it, and also the second; but after crossing the head of the third we heard a noise, and looking back saw on the opposite side of the ravine and about 50yds. below us a good-sized nanny heading for lower altitudes. The Cavalryman unlimbered his .30-40 Winchester and opened the action with two rounds. However, the Cavalryman had not gotten his breath yet after the climb and overshot the goat. By a lucky shot I broke the animal's neck before any more military ammunition could be brought into play; and while, as I said before, this side of the mountain was not

perpendicular, yet from the way that goat rolled down the side of the mountain for 200 or 300yds. I imagined the grade must be quite steep.

While the Cavalryman was congratulating me, and I was condoling with him, we heard a rattle of falling stones in the gully we had previously inspected, and as quickly as possible started back in that direction. Before we reached the side of the ravine goats began to pour out of its head on to the top of the mountain. They must have been there all the time, hidden in crevices in the rocks. At any rate the Cavalryman shot at the old billy who led the procession, and the lead-pointed bullet striking the goat in the side of the face removed his lower jaw almost entirely. The goat ran around behind a large rock and immediately came back again, and kept turning around as if in doubt where to go. During his gyrations he received another .30-40 in the hip, which passed through him to the shoulder, and also one .45-70, which passed through him from side to side, but which was not needed. The billy finally fell off into the ravine and rolled down about 100ft., where he lodged against a rock.

In the meantime I had killed a small goat, which rolled to within 40ft. of the billy, and had knocked over a larger one, which I could not trace.

We now had to hunt for a way to reach the goats and a place in which to remove their skins and heads, and then to find a way to get around the side of the mountain back to camp. This last trouble was not the least, for this side of the mountain was composed almost entirely of slide rock in assorted sizes, and we

ON THE SLIDE ROCK.

Photo from life.

low found a fine two-year-old buck, a mule deer, of course, and Hoodlum endeavoring to remove the buck's head for us. We took that task off his hands, and very soon had the deer in shape for carrying to camp. I took the hindquarters on my shoulders, Thomas the head and forequarters, and Harry had the pleasure of carrying three rifles. We had only to get down into the bed of the stream, and after crawling over and under fallen timber for about 100yds. to climb out of the gulch on the other side, and we were in camp.

Our camp was pitched in a grove of firs on the side of Little Goat Mountain, and was pleasantly situated except that one had to go down hill about 100ft. to water. About a half mile further up the gulch, between the two mountains on which we expected to find goats, was a trapper's cabin, and there was water near it, but at this place there was no grass for our horses, so we had to make the best of a bad job and crawl down the hill several times a day with the water buckets. The men had regular wall tents, but the Cavalryman, Harry and I slept in a lean-to about 15ft. in length, 10ft. in depth and about 8ft. in height in the front. It was made of very light duck and was very easy to carry, and by keeping up a fire in front of it we found no trouble in being comfortable, even when the temperature was considerably below freezing.

We had taken but two guides for the three of us because we intended that one of the three should stay in camp each day, thinking that hunting two days out of three would be enough in the long run. However, on Monday morning we decided that we should all go

PEARL R.

Portrait for FOREST AND STREAM by Edm. H. Osthaus.

found the rock well named, for it does slide if you encourage it at all. To add to our difficulties a cold rain began to fall, and we were not warmly clad, as we could not stand heavy clothing and do the sort of climbing which was necessary.

We found a crevice in the rocks which led us to the billy and his companion, and finally managed to skin them and remove the heads under difficulties, two of us digging our heels in the soil and holding a goat so that it would not slide down the mountain, and the other skinning as well as possible.

Then we slid and fell down to where the first nanny had lodged at the beginning of the slide rock, and removed the skin and head, and after doing so we sat down in the rain and divided a piece of chocolate which the Cavalryman happened to have in his pocket. While eating this luncheon we happened to think what day of the month it might be, and discovered that it was Labor Day, and very well named at that. We each packed a head and hide, and finally reached camp tired and hungry, but happy. There we found Harry and the Indian returned from the big mountain with two fine goats.

On Tuesday morning the Cavalryman decided to take the Indian and ascend the same peak where we had killed our goats on Monday, while with Thomas I attempted the ascent of Big Goat Mountain. We started off to hunt the side furthest from camp, and after two or three hours' climbing we decided that there were no more goats left, as all we had seen were the bodies of the two killed by Harry on Labor Day. While coming around the back of the mountain, I began to hear shots on Little Goat Mountain, and finally counted up to twenty-one rifle shots. I concluded that my friend the Cavalryman had discovered the dwelling place of a large family of goats, and that we should need no more heads or skins after that day's shooting.

Just as Thomas and I had made up our minds to go back to camp without any game we noticed a goat lying down on the cliff about 1,000ft. above us. Thomas was sure that it must be an old billy, since it seemed to be alone, and we made a long detour to get above the animal. Succeeding in this, I took the lead and crawled to the edge of the cliff just above the ledge where the goat had been seen. As I looked over the edge the goat saw me and jumped to its feet. Without waiting for further investigation I fired and killed a yearling. The goat fell and rolled at least 700 or 800ft. down the cliff. When we had skinned it dusk was coming on, and I returned to camp, taking the skin and one hindquarter. I found the meat very fair eating, but could not dispose of much to the rest of the party, principally because we had lots of blacktail deer in camp.

I found that the Cavalryman had killed one large old billy, and had wounded another which had lain down on a ledge which it was impossible to reach. He could see a little of the goat, and while the Indian was skin-

ning the first billy, which unfortunately had broken one horn in falling, the Cavalryman endeavored to knock the second goat off the ledge or frighten him into falling off. He succeeded in accomplishing neither, and the goat is probably there yet.

Wednesday morning Harry, with the Indian, went up the smaller mountain. At first I was inclined to remain in camp with the Cavalryman, but finally determined to make one more attempt to procure a large head. So Thomas and I again ascended the larger peak, and Thomas' dog, Hoodlum, accompanied us. We hunted the mountain faithfully on all sides without seeing a sign of goats, and about 2 o'clock in the afternoon we sat down on the top of the mountain to eat some bread and bacon. Hoodlum had been following very closely at our heels all day, and after finishing our luncheon I suggested to Thomas that he allow the dog to run ahead, thinking that on the way home we might run across some grouse, which the dog would tree for us. The top of the mountain was covered with patches of small brush, and the dog had not gone 100yds. from us when I heard him barking, and then a great crackling and breaking of brush, and from the direction in which he had gone I saw a large goat approaching us. I shot the goat at about 50yds. distance and killed it instantly for a wonder, the ball striking it in the back of the neck and passing through the animal, and on inspection found it to be a very large old nanny with a fine head. The noise in the brush where Hoodlum had gone kept up, and Thomas and I ran down to see what the dog was doing, and found that he had a kid weighing about 60lbs. and was on the point of strangling it. We took the poor thing away from the dog with the intention of releasing it, but the animal's neck was bleeding quite badly, and I was afraid that if it did not bleed to death some animal might track it that night by the blood and easily kill it. So I asked Thomas if he could carry it to camp, provided I took both rifles and the skin and head of the big goat. He did so, and it was no easy work, for the little goat was scarcely a quiet burden.

On arriving at camp I bandaged the kid's neck and fastened it to a tree for the night. It was too frightened to eat, and I decided in the morning that it would be of no use to try and carry it back to town with us; so I got the Cavalryman to take a couple of photographs of it—which did not come out clearly, by the way—and then I carried it back to the foot of the cliffs and let it go, much to its satisfaction, judging from the speed at which it climbed.

While engaged in getting the kid home to camp I had not heard Harry fire a shot, but I supposed that he might have done so without my noticing the fact. When I saw him at night, however, I found that he had taken his camera with him and had devoted his day to procuring a photograph of a goat on his native heath, or rather cliff, and that Harry succeeded in his attempt

is proven by the photograph which accompanies this article.

Harry and the Cavalryman spent one more day after the goats without result, and we all three spent one more day looking for deer, while our men were searching in vain for two of our horses, which had disappeared, and which we never found. We then decided to travel southeast for a couple of days and spend some time with the caribou.

H. L. BURDICK.

The Purple Sandpiper.

From Audubon's Ornithological Biography.

I AM surprised that my worthy friend Thomas Nuttall speaks of this species as being scarcely ever seen in the United States, where, to my knowledge, it is on the contrary very abundant, and nowhere more so than in the neighborhood of the harbor of Boston, in the markets of which city it is sold in autumn and winter. When I was there a gunner whom I employed brought me several dozens, which he had killed in the course of a single afternoon. I have seen some in the markets of New York. Further south, however, they are rarely met with.

Timid, though not shy, they are seen in flocks of eight or ten on the rocky shores of the sea. They seem to shun sandy beaches, and seldom advance far inland. While I was on the Bay of Fundy I observed numerous small flocks winging their way northward, in the month of May. On one occasion a flock alighted almost at my feet, so that I was obliged to return to a proper distance before shooting at them.

Their flight is pretty rapid, and when necessary sustained, for I have observed them flying in compact bodies across the Gulf of St. Lawrence. When started along the shores they emit a feeble weet, which is repeated two or three times, take a sweep over the water, and return to the same spot or near it, somewhat in the manner of the spotted sandpiper. They are generally very busy while searching for food, run nimbly, with the body lowered on the legs, which are much bent, go to the edge of the water, seize on small shellfish, shrimps and worms, and search industriously among the sea weeds for marine insects. Their marked predilection for rocky shores has caused them to be named rock snipes by the gunners of our Eastern coast. In autumn and winter the young birds become fat and afford delicate eating.

I was sadly disappointed at not finding them breeding on any part of the coast of Labrador which I visited. The more so because Dr. Richardson says they are abundant on the shores of Hudson Bay, where they breed. Their color is yellowish gray, interspersed with some irregular spots of pale brown, crowded at the obtuse end and rare at the other." The illustration is of the adult in summer and winter.

ALERT.

Drawing from life studies for "Forest and Stream," by C. Rungius.

AUDUBON'S PORTRAIT OF THE PURPLE SANDPIPER.

Fresh-Water Angling.

No. IX.—The Two Crappies.

BY FRED MATHER.

THE crappies resemble the black basses in one respect; there are two of them which many anglers cannot correctly name, if indeed they have not some local name for one or both species which is either absurd or is confined to a small territory. These are good fishes, one is especially so, and they should be better known and placed in Eastern waters which are suitable to them. They are not as game fighters as the black basses, nor even as the white and yellow perch, yet with light tackle they afford sport and are excellent for the table. In my early days, when fishing the "sloos" of the Mississippi River along Grant county, Wis., they were my favorite table fish, above the pike or anything else which those waters afforded.

Local Names.

While the local names are many, and applied indiscriminately to both species, there is one abominable corruption of the name that is often used by writers who should know better, and that is "croppy," or sometimes "croppie." The U. S. Fish Commission publications; Goode's "American Fishes"; Prof. D. S. Jordan, both in his "Manual of Vertebrates," Shield's "American Game Fishes," and his other publications; Norris, "American Angler's Book," and other writers spell the name as I do, surely there is authority for it.

I have a theory that the misspelling of the name comes from the fact that some farmers use "crap" for "crop," and speak of "a right smart crap o' corn," and thus some may suppose "crappie" to be a corruption, and they blunder when they try to correct the name.

We find the names "goggle-eye" and "goggle-eyed perch" given to these fishes, as well as to rock bass, or red-eye, *Ambloplites*, in the South; the war-mouth also bears the name goggle-eye occasionally, and this shows how the names are mixed, not inextricably, let us hope, but it will take many generations and much literature to straighten out the kinks. The local names will be treated more at length when the species are defined.

I have a fancy for classifying these fishes by their mouths, as has been done in the case of the two species of black bass, and some years ago wrote up this mode in another periodical, which is not now at hand. I think that they may be called "big-mouth" and "small-mouth" crappie, at least I will attempt it, and it may possibly catch the fancy of others. Dr. Henshall once called them "northern" and "southern" crappies, but it did not take root, for their range is nearly identical.

The Small-Mouth Crappie.

This is *Pomoxys sparoides*, Lacépède; called strawberry bass in New York and parts of Ohio; grass bass, Ohio. In the latter State it is also "bitter head," "lamplighter" and "bank lick bass." In Illinois it is "calico bass," while in the Southern States it is called "goggle-eye," a name shared with other fishes, and also "speckled hen" and perhaps other names. For absurd names this fish stands high among our many ridiculously named fishes.

The range of this species is the lakes and ponds of the Great Lake region, western New York, New Jersey.

the streams of the Carolinas and Georgia east of the mountains, the Mississippi Valley especially northward; it being the more northerly species. It prefers clear, quiet waters where the bottom is covered with grass, and it shuns muddy waters. The angler who judges by color will never be able to separate the two crappies; he must consider the mouth, the profile of the head, and the fin-rays. Both species are "undershot," as they say of bull dogs and pugs, but the small-mouth is the least so, and this makes its mouth smaller. It has 7 or 8 spines in its dorsal fin, while the other has but six. Both species are colored alike, a silvery olive mottled with green, but usually the small-mouth has a lighter green than its brother, while its forehead is but slightly dished in comparison.

The Big-Mouth Crappie.

This is the more Southern species and is known to science as *P. annularis*, although it is not marked with rings. It has many of the local names of the other, and in addition to the name of crappie it is called "sac-à-lait" and "chinquapin perch" on the lower Mississippi, the latter name being shared with a handsome member of the numerous sunfish tribe. In the Ohio Valley if it is distinguished from its relative it is a "bachelor," while in Kentucky and Indiana it is a "new light" or "campbellite," two absurd names for a fish, because they are names of religious sects.

To one accustomed to both species the greater depression over the eye, and the elongated, thickened lower jaw would reclaim the big-mouth at once, without waiting to count the dorsal spines and find that there were only six. These fishes are more alike than the two black basses, yet they are as distinct in structure and in habits. Their fins are alike in shape, there is little difference in the outlines of their bodies and they are similar in color and markings.

The big-mouth loves muddy bottoms, but it is often found in the same waters as its congener. It is the only species which Norris records, but he never fished much in the West and South. It is the only fish called crappie in the "Fisheries and Fishery Industries of the United States," Sec. 1, p. 407, and by Jordan and other writers. The grouping of the two multi-named species under the generic name of "crappie," and separating them by the mouth, is a scheme of my own which seems to be a necessity in order to simplify the matter, as was done by Dr. Gill with the black basses a quarter of a century or more ago, and which after a while has been adopted by all except a few old fogies who still speak of "Oswego bass." When a man uses that term for the big-mouth he convicts himself of being an old foggy, who has let the angling world go by him and has not read FOREST AND STREAM.

Value of the Crappies.

The State of New York has distributed a few small-mouth crappies under the absurd name of "strawberry bass," but they should be in every pond where there are no trout, but where perch and sunfish abound. They have been neglected because we have a wealth of such fishes and no writer has presented the claims of these to the angler and fishculturist, if we except the late Prof. Kirtland, of Ohio, who said of the small-mouth crappie, using the local name:

"The 'grass bass' has not hitherto been deemed worthy of consideration by fishculturists; yet, from a long and intimate acquaintance with its merits, I hesitate not to pronounce it *the fish for the million*. [Italics are Dr. Kirtland's.] It is a native of our Western rivers and lakes, where it usually resorts to deep and sluggish waters; yet in several instances, where it has found its way into cold and rapid streams, and even small-sized brooks, by means of the constructing of canals or by the hand of man, it has adapted itself to the change, and in two or three years stocked to overflowing these new localities. As a pan fish, for the table, it is surpassed by few other fresh-water species. For endurance and rapidity of increase it is unequalled. * * * The grass bass is perfectly adapted to stocking ponds. It will thrive without care in very small ponds of sufficient depth. * * * It will in nowise interfere with the cultivation of any number of species, large or small, in the same waters. It will live harmoniously with all others, and while its structure and disposition restrain it from attacking any other but very small fry, its formidable armature of spinous rays in the dorsal and abdominal fins will guard it against attacks of even the voracious pike."

As the food of the crappies is the same as that of the sunfishes and all other fresh-water fishes with compressed sides, i. e. small fish, crustaceans, insects and their larvæ, we must consider that their destructiveness is that of their class. I do not know of a fish, in America or on any other continent, which takes no animal food. When the carp was introduced into America it was heralded as "a sheep among fishes," which grew to great weight on vegetation alone. It is true that the carp eats much vegetation and is fond of that green conferva which ignorant people call "frog spittle," or "frog spawn," with which the frog has as much to do as the editor of FOREST AND STREAM has, but the carp also loves worms, insect larvæ, and will take a small fish if the fish can't escape.

There may be fishes which are strict vegetarians, if so I don't know them. The brook suckers love trout eggs and work the mud for insect larvæ; the storage mough over mud for the snails and other animal life which they get, and we must only consider the question of how much and what kind of animal life a fish consumes in order to plant it in our lakes and streams.

Speaking as a fishculturist, I would, if I could, exterminate every pike, pickerel and mascalunge in the waters of the earth, for the reason that their diet is exclusively fish, and they consume a hundred times their weight in other fishes and then are not as good for the table as some that they have eaten.

As an angler I take no note of what it costs in good food fish to raise a pike to rolbs. weight, if the pike will only condescend to take my hook. This is a logical appeal from Philip sober to Philip drunk. As a fishculturist, the ratio of food consumed to value of fish for market is a vital one, as much so as the growing of horses, cattle, pigs and poultry is to the farmer; but when my fly is cast, or a baited hook is spinning astern, there is an *alter ego*, another self, watching for results, and the latter fellow never stops to consider whether his catch is worth all the food it has devoured to enable it to pull down the scales to a creditable point, or whether the balance is on the other side. As a fishculturist I would like to exterminate the whole pike family—pike, pickerel and mascalunge; but as an angler, thinking only of personal sport, the point of view differs.

Habits.

Although not a climbing fish, like that peculiar perch of India which ascends trees, yet the crappies are often found in tree tops, when the trees have fallen into the water. Here they find protection and food; the limbs are the abode of snails, crustaceans and worms of various kinds as well as of small fishes, for the crappies are omnivorous in their tastes. The preference of the small-mouth for clear and colder waters has been alluded to, but as many lakes have both grassy and muddy spots, they afford homes for both species.

I have taken the small-mouth crappie in spring holes while standing on the ice, but they were dipped up with a net, and I don't know if they would take a hook in winter. This was in Grant county, Wis., in 1857, and we wanted fish for the table. This is told in detail in "Men I Have Fished With," p. 309. There were black bass there at the time, and they sometimes lie dormant in winter, while the pike and the perch feed the year round. I have fished through the ice with small minnows for bait, and where crappies were plenty, but never took one. This, however, does not prove that they do not feed in winter.

[TO BE CONTINUED.]

"Shiftless Jim Tracey."

"SHIFTLESS JIM TRACEY" the townspeople called him; though why a man who always paid his bills, had every appearance of being well fed and whose clothes were scrupulously neat, if plain, should be called "shiftless" might not be apparent to one not acquainted with the ethics of New England village life.

True, Jim did not devote any considerable portion of his time to manual labor, in the general acceptance of the term, but he worked steadily through haying and harvesting time, and usually had a good contract for cutting off a wood lot in the winter. Still he was "Shiftless Jim."

Jim lived on a small farm bordering on the lake. The house was at some distance from the main road, and was seldom visited by the neighbors. Here Jim kept "bachelor's hall," and here came the few friends who never thought of him, much less referred to him as "Shiftless Jim."

From the nearby city visitors frequently came to spend a day or two with Jim, usually taking back with them any surplus garden truck that he could spare. These people came to shoot or fish with Jim; and herein lay the secret of his reputation for shiftlessness. That an able-bodied man should spend the entire spring in slopping up and down the trout brooks; the fall in tramping the side hills and valleys behind a bird dog; the summer days in whipping over the bass reefs and the evenings thereof in floating about the bay in his canoe, with pipe and dogs for companions, instead of sitting indoors and reading the Christian Advocate or the Weekly Free Press by the light of a vile smelling kerosene lamp, could be attributed to but one thing by the good people of Shelburne—"shiftlessness."

Ah, Shiftless Jim! Little did they realize the wealth of knowledge brushed aside each day or trodden beneath their cowhide boots. Birds sang their joyous carols to ears that heeded not; flowers raised their dainty heads to eyes that looked beyond and saw only the growing crops. The breath of nature; that subtle ether springing from untainted Mother Earth and all her wealth of verdure, through which we are most nearly brought to see, to feel, the guiding hand, permeated beings with souls of clay, untouched by the spark which would have put them in sympathy with nature's marvelous book, always outspread before them.

This sympathy had Shiftless Jim; and having this power of appreciation he necessarily had a desire for its gratification. Jim lived so much in the woods that he came to know their secrets thoroughly—and the woods have secrets which they guard most jealously. He knew where all the birds rested, where all the wild flowers grew, and in just what pools the big trout made their homes. He knew where the foxes had their burrows; where the bees stored their wealth of golden honey, and the study of all these things seemed as necessary to Jim's life as the taking of food for the nourishment of his body.

In all Shelburne there was but one person who could understand Jim's love for the woods life. This was little Ned, Squire Dexter's son. The squire himself was hard and grasping, worshipping his earthly possessions as had his father before him, and respecting his fellow men according to their thrift. No need to quote his opinion of Jim Tracey. But little Ned inherited from some remote ancestor a love for the birds and flowers, and on Saturday afternoons, when his weekly tasks were done, he would stroll off into the woods alone and lie stretched full length on his back for hours, watching the birds and bees and squirrels.

There he first met Jim, and through their mutual liking for wild things they became great friends. They spent many afternoons together, and Jim took great delight in sharing his knowledge with one who could appreciate it. He showed Ned where the first sprig of arbutus blossomed in the spring, and later where and how to catch the wary trout, and when summer came took him out on the lake in a real canoe. To Ned, Jim was the most wonderful man in all the world.

Shelburne had made unusual preparations for the observance of Decoration Day. A memorial service was to be held in the modest little church at 10 A. M., then there was to be an outdoor meeting on the common, after which a procession would form and march to the cemetery, where the graves of the soldier dead would be decked with tender tributes of flowers. Squire Dexter was the orator of the day, and had been hard at work for weeks preparing an address which should do sufficient credit to the leading citizen of the town.

Shelburne, as usual, was early astir on that morning, the men folks to get their chores done, and the women to gather what few old-fashioned flowers they had been able to coax into an early blossoming. One of the earliest risers was Mrs. Griggs, who owned a house and a few acres of land adjoining Squire Dexter's farm. She was the widow of a veteran of the civil war, with a

scanty pension; and how to make both ends meet was a serious problem with Mrs. Griggs. But she worked cheerfully from morning till night tilling her little piece of land and tending her large flock of hens.

On this particular morning she had finished her numerous household duties, looked after the hens, and went around to the front yard to pick the little bunch of lilies of the valley which was to be her floral tribute to the memory of her brave husband.

Could there be a more bitter disappointment? The entire flower bed had been trampled down and not a blossom remained. Beside the ruins stood the destroyer—one of Squire Dexter's cows. Mrs. Griggs was sorely grieved. She had watched over the little stalks ever since they had first showed their tender shoots above the earth, with but one end in view; had seen the tiny buds grow into full formed blossoms. Now they were ruined, and Mrs. Griggs could see but one chance of replacing them, and that almost a hopeless one. Squire Dexter had flowers in plenty. She would drive home his cow, explain the damage she had done, and, close as the squire was, he might offer to make good her loss.

Squire Dexter was hard at work putting the finishing touches to his oration when Mrs. Griggs called. He listened to her only long enough to learn that the property destroyed was nothing more valuable than a few flowers:

"Oh, bother your old flower bed!" snapped the squire, "Don't you see I'm terribly busy. I'll run down to-morrow and see about them."

Mrs. Griggs retired meekly and went home almost heartbroken. She gathered up the few sprays of blossoms which had been broken off, but not trampled on, and tried, with the addition of much green stuff, to make a presentable wreath or bouquet, but it was impossible. She could not take such a shabby-looking offering to the cemetery—not in company with her neighbors; yet she could not bear to let the day pass without a visit to her husband's grave. She might go alone. Yes, that would be best. She waited until the townspeople were gathered on the common, listening in open-mouthed wonder to the squire's grandiloquence. Then she carried her humble tribute to the bleak little churchyard with its unkept walks and mildewed headstones, and placed it with a tearful prayer above the resting place of all that had been brightest in her life.

As she neared her home two mud-bespattered figures stepped from the woods directly in front of her and with every evidence of confusion bowed a guilty good morning to her. The younger one had a trout basket slung over his shoulder, and the older carried a large roll of birch bark. Both had trout rods, and their purpose was evident.

"I should think they would look shamed," said Mrs. Griggs to herself, indignantly, "goin' off troutin' on Memorial Day. Just like that Jim Tracey, but wouldn't Ned catch it if the squire knew; I hope he'll grow up just as worthless as Jim is—serve his father right; the mean old thing."

Ned had been present at the short interview between his father and Mrs. Griggs, and was deeply pained at the outcome of it. After Mrs. Griggs had gone, he went out into the garden and thought seriously of picking a bunch of flowers and taking them to her, although he knew this would be little better than stealing. If he only knew where there were some wild flowers. But the arbutus was all gone, and it was doubtful if he could find enough violets to answer his purpose.

At the sound of a low whistle Ned looked up. There stood Jim with trout rod and creel.

"Thought you might be able to slip out while the governor was making his speech," said Jim.

"Oh, I wouldn't dast to," replied Ned. "Not to go fishin'. But if I knew where I could get some wild flowers," he added, "I'd run away in a minute." Then he told Jim all about Mrs. Griggs' loss, and how much he wanted to do something to help her out of her dilemma.

Jim scratched his head thoughtfully for several seconds:

"Now I know where there's some flowers, Ned," said he. "I go to see them every spring, but I've never taken a living soul there yet. Nor never picked one of them myself. It's pretty early for them, but if they're out, they're the handsomest things you ever saw. When your father starts for the common you get into some old duds and come down to the old oak tree just this side of Haines' big swamp and maybe I'll take you in there."

When the squire had arrayed himself in his black broadcloth suit and the most uncomfortable of stiff collars, he and Mrs. Dexter set out for the common. Ned was missing, but there was no time to hunt up youngsters, and he was left behind. The exercises went off very smoothly, and the squire's oration was delivered with such a display of vocal effort and awkward gestures as greatly to impress his hearers. Then the procession was formed and marched to the cemetery.

Mrs. Griggs, through partially closed shutters, watched it pass. The minister, with Squire Dexter, led the way. Then came the old soldiers and quite an imposing line of townspeople and school children, each bearing a wreath or bouquet, and many with small American flags.

How miserable her tribute had been compared with all this splendor. She sat beside the window with a heavy heart. This was the most depressing Memorial Day—always a sorrowful occasion for her—she had ever known. Before long the procession returned, and as they passed the Griggs place everybody seemed to stare at the house in the most unaccountable manner. Could they see her peering out through the blinds? Or was it because her absence had been noticed! That would scarcely attract so much attention. They had seen the little bunch of lilies. That was it.

Oh, the shame of it! Better to have left her husband's grave bare than to have placed upon it so poor a remembrance. As soon as the procession was out of sight she started for the cemetery again; this time to remove the decoration, which now seemed more shameful than ever. As she approached the spot she noticed a figure seated beside it. It was the schoolmaster.

"Oh, Mrs. Griggs," he exclaimed, in surprise, "I stayed behind to admire them. I never saw this variety before, though the yellow ones, the pubescins, are quite

common. These are extremely rare, and I had no idea they grew about here. I hope you will tell me where you got them."

Mrs. Griggs hardly heard him, her attention being wholly given to the narrow mound of earth, on which, beside the little knot of lilies, was a rudely-fashioned basket of birch bark containing a great armful of the most beautiful flowers; each with three flaring white petals and suspended beneath them a pouch of deep, rich pink. Mrs. Griggs had never seen anything like them, had never seen anything half so beautiful, she thought.

"I'm sure I don't know where they came from," she said. "I never saw anything like them, and I don't even know what they are."

"They are a variety of the lady's slipper, cypripedium cantabile, or showy orchis, they are called, and they are one of the very rarest of our wild flowers. I would very much like to see them growing."

"Perhaps, if you ask Mr. Tracey, who lives down on the lake shore, he might know something about them," said Mrs. Griggs, who had been rapidly thinking over the happenings of the day.

"Oh, Jim! wasn't it great?" exclaimed Ned the next time they met. "Everybody noticed them, and the school-master told us a whole lot about them in school. I can't remember what he called them. I'm afraid though that Mrs. Griggs 'spects us. She's tried to speak to me two, three times, but I kept out of her way. I couldn't get down to tell you before 'cause I had to stay in the last two Saturdays for running away that day. But I'm glad we did it, if I did lose two half holidays. Ain't you, Jim?"

Jim appeared to be terribly interested in something out on the lake.

"I know where there's an old woodcock got three young ones," he said. "Let's take Dash and go over there; maybe we can see her fly off holding one of them between her knees. It looks awful funny."

HARRY MORSE.

An Artist of the Old West.

A BREATH from the past comes with the sculptured representations of American animals from the hand of Mr. Edward Kemeys, a breath from the past of the old plains, which, with their first inhabitants, are gone forever. It was the rare fortune of this rare man to tread the prairies and the mountains of the West in the old days, before the buffalo were gone, and while all the creatures native to the mountains were to be found in abundance. The long and patient and loving studies of those days gave Mr. Kemeys the intimate knowledge of wild animals which alone was needed to supplement his love of them and his acquaintance with the principles of his art. It is no compliment to call Edward Kemeys the Barye of America, for his methods were as different from Barye's as America is from France, and the work of no one genius resembles that of another genius. Rather, if you wish to be alike accurate and complimentary, call Mr. Kemeys the "Old Hunter," his own favorite title, which carries him back to the days when the Sharps rifle was the ordnance of the range, and the west-bound wagons carried bundles of butcher knives for the skinning. Not for skinning, but for study, did this American sculptor, then a young man, join the wagon trains of the robe hunters who pushed out into the plains. Buffalo he killed in numbers, but lovingly, talking to them, as he did when he killed the grizzly bear, and promising them another life. This life they have received. Their bulk, their ponderousness, their pathos of helplessness, all showed for themselves in the figures of the buffalo in repose. One may have seen the same sight at many a water hole in the old days. The wild action of the chase for these great creatures, the daring and skill and strength of the red men who hunted them in the way of their fathers, may equally well be noted in the reproduction of the group known as "The Chase," a bas relief which has all the quality of the open air. It is one thing to study buffalo in the parks, and Indians behind a gate, but those who knew both before the plains were gone can tell the difference between such acquaintance and that vouchsafed the man who saw both at home more than a quarter of a century ago.

To-day Mr. Kemeys dreams of those old days, dwells upon them. He came to Chicago to be nearer to the old days. His ambition in life has been to perpetuate them, if that may be, in a series of enduring bronzes which shall show the wild animals and the wild men of the West, as they actually were at the period of their natural existence, in that balance of nature which the coming of the white man has destroyed forever. His work is parallel with the literature fit to be called history, and likeness of it belongs very fitly in the columns of a journal with purposes such as those of FOREST AND STREAM, to which he extends the courtesy of its reproduction. Photographs of sculptured figures lose much of the original force of line, and the engraving is apt to lessen this still more, but even so, the readers of FOREST AND STREAM may have an inkling of the treasures of the studio of Mr. Kemeys (which is located at Bryn Mawr, near Chicago). Examples of Mr. Kemeys' work are in the possession of wealthy sportsmen both in this country, France and England, and in the latter countries he is accepted, as he is in America, as the unique and foremost exponent of his chosen line of art, from which he does not care to depart, and into which he throws the devotion of a lifetime. Readers of FOREST AND STREAM will take interest in the fact that trophies of bronze and clay are not more numerous in Mr. Kemeys' studio than trophies of horn and hide. The sculptor himself might be a figure for an athlete or a sportsman, and he is not only an ardent but a skillful follower of the sports of the field, and a fine shot with rifle or gun. He is grayer now than when he saw the buffalo, but he will be always young, and in his hands he holds many things which shall be also young and unchanged as the years go by.

E. HOUGH.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Days on the St. Lawrence.—IV.

From unpublished manuscript of S. H. Hammond, author of "Wild Northern Scenes." By courtesy of Mr. Hammond Van Vechten.

PERHAPS, my excellent friend, you have heard of "Lighthouse Point," and "Willson's Bay," and "The Salmon Trout Hole," and "Grenadier Island," and perhaps you have not. They are noted localities in the neighborhood of this beautiful little town. Cape Vincent is situated upon a pleasant slope fronting the St. Lawrence just below where that majestic river leaves Ontario, at the head of the Thousand Islands. Off to the left is the broad lake, while to the right the noble river winds away among the islands, losing itself behind wooded promontories, and green fields and rocky shores. Were it not for the presence of Ontario and the strong current sweeping forever by, the St. Lawrence itself would be regarded by you and me as a beautiful lake, large and wide and deep, and pure enough for all the purposes of ornament or use. Three miles west of the village is a high rocky bluff (high for this region) reaching far out into the water, forming one of the points where the lake ends and the river begins. On this bluff stands the lighthouse in a beautiful grove of low trees, above which looms the tower containing the beacon. Looking west from the tower you see only a broad expanse of water, the horizon resting upon the water like sky and ocean. From the village to this point is a pleasant drive, and the villagers and visitors improve it often to look out from the lofty tower, enjoy the lake breeze, or picnic beneath the shade of the trees around.

Off this point the water is underlaid by smooth rock for some 80ft., the depth varying from 4 to 10ft., and then drops suddenly down to a depth of from 20 to 30. The shore is walled in by a precipice of some 20ft. of perpendicular rock, above which the ground is level, and you can walk to the brink and look straight down upon the lake. When the winds are still and the water calm, you can see bass, pickerel, an occasional muscalunge, and sometimes a salmon trout, swimming lazily about in the water beneath you. With a strong line and rod you can amuse yourself of a still morning by lifting some of them bodily from their native element high over your head, landing them on the green grass behind you. The bass are as plenty here, but not so large, as those in the neighborhood of Carlton Island. When the south or the west wind blows, and the waves come rolling in from the lake, they dash with mad fury and a fierce roar against this rocky barrier, throwing the spray far over the grass and among the trees above it.

Following the lake to the west you enter a little cove, known as the "salmon trout hole." Around this cove is a pebbly beach, from which the bottom descends with a steep declivity to an unknown depth. It is said that at certain seasons of the year the salmon trout gather in great quantities in this locality, and tradition makes it the great fishing ground of the Indians long ago. How much truth there may be in the tradition I have no means of knowing. I have visited this "salmon trout hole" on several occasions, but found no trout. Bass I have found there, and very large ones, and it is one of the places for a sportsman to visit when the air is still or the wind is in the right direction. Further still and around a rocky point is Willson's Bay, in which, when the wind is from the north, is capital bass fishing. This bay contains perhaps 250 acres, shut out from the lake by bluff promontories, save a narrow strait on the west or southwest, and is always calm when the breeze comes down from the north. Further still is "Grenadier Island," several miles in circumference, all around which, and especially off the outer points, is great bass fishing ground. A difficulty, however, is found in the fact that the lake is seldom calm enough to allow a little craft like a skiff or sailboat to ride at anchor without making a landsman feel somewhat doubtful of his own security, a sensation by no means promotive of pleasure while indulging in the amusement of bass fishing.

We started this morning in a taut little sailboat for Grenadier Island. There was a gentle breeze from the north, so delightfully cool, so steady and unfitted, that we all (four of us besides the sailor who had charge of the boat) burst into a loud and impromptu hurrah as the sails filled and we glided quietly up the St. Lawrence. At Lighthouse Point we landed to take a view of the lake and country from the tower. With a telescope we scanned the broad lake. Here and there a white sail dotted the surface, rocking gracefully to the roll of the waves. About the lighthouse, as I have already said, is a grove of near an acre consisting of low trees, beneath which the grass is always green, the air fragrant, and the shade under the clustering foliage makes it an inviting retreat from the heat of a summer sun.

We spread our sails again and entered the little cove containing the "salmon trout hole," and trolled around and across it, but caught nothing. We circled Willson's Bay, taking a few beautiful bass on our cruise. Leaving this we stretched away for the head of Grenadier Island, off which we anchored at 11 o'clock. The bass here behaved toward us with that courtesy which is due to strangers, and for a couple of hours we had exciting and beautiful sport among them. At 1 o'clock the heat and glare became oppressive, and we landed to dine under the shadows of the elms and beeches that lined the shore. We had laid in a store of creature comforts before starting in the morning, and our fare was neither scanty nor partaken of with a dainty appetite.

There is a beauty as well as majesty about these lakes which I think the world (I mean the people of the world) do not sufficiently appreciate. In no other country can such vast bodies of fresh water be found. They are great inland seas, rendering as such their aid to advance the interests of the commerce of the world. Beyond and around them are States, which, though even now teeming with wealth, are yet in their infancy, and which in the distant future will make these waters the highway of a limitless trade. They form, too, a boundary of empires, and may in the future, as they have done in the past, bear a prominent part in the conflict of nations, by bearing upon their bosoms hostile navies to meet each other in the tug and carnage of battle. There are hundreds of beautiful bays and quiet coves hid away

around bluff promontories and outreaching points. Into these it is pleasant to drift and enjoy the hush of their repose when the winds are still. I love to stroll along the beach, or row along the shore, when the waves are sleeping and calmness has smoothed the face of the waters, asking of the shapeless stones, the wave-worn rocks and fragments of trees that have drifted to the strand, the history of the long centuries when these waters layed a wilderness shore, before civilization reared its temples, or planted its standards in this new world; to ask whence came the red man, and who his ancestors were; whether they, like the white man of these modern ages, came floating over the ocean to drive out a people older and less powerful than themselves; or whether the same creative fiat that called them into being placed them here to bide the advent of civilization and Christianity, and then to disappear with their generations from the world forever? What if no voice respond, and these rocks and silent shores make no answer? What if no light comes flashing out of the darkness of the past, and the eternity that stretches in everlasting vista behind us yields up none of its secrets? Still these are primeval things, and who does not love to commune with such?

After mid-day the wind died away and the whole surface of the lake became calm and moveless and polished as the face of a mirror. No breeze swept across its placid bosom. Here and there a great fish would throw his unwieldy form awkwardly from the water, falling back with a splash, and sending a circle of wavelets around to dance about for a minute, and then subside into stillness again. There was something enchanting in this repose, this calmness of the air and water. And herein, my excellent friend, is the great charm of the country in the burning days of mid-summer; and herein, too, is one of the peculiar charms of the margins of these Great Lakes. It is not when the winds sweep wildly over the waste of waters, and the billows heave and roll to the shore, breaking into spray as they come surging with a bound and a roar against the rocks, that I admire these waters most. There is coolness in the breeze that sweeps thus over the lakes; there is life, activity, freshness, power and all that, but the charm of quiet, the luxury of repose are wanting. There is a blustering rudeness, call it a boisterous hilarity, if you please, about these noisy demonstrations that I do not like. You have enough of life, activity, enough or rudeness, enough even of boisterous hilarity in the city, in your teeming marts of life, where the competition, the strife and rivalry of business incident to the greed of gain keep things in motion, throwing everybody against each other in one everlasting jostle. What we need and what we seek here is repose, calmness, quietude, when the sun is high in the heavens, and his flaming touch blazing down from a cloudless sky. True, the shade and foliage of the old trees, the low chirrup of the birds among the branches, the voices of the grasshopper and the cricket add their influence to the contentment that steals over us here. These, however, are mere adjuncts, helps only in promoting the luxury of passive enjoyment. The great feature, the fundamental fact, is the calmness, repose and quiet that pervade the earth, the air and the water out here in the country.

Toward evening a bean breeze, such as a landsman while on the water loves, sprang up, a breeze that wafts him quietly along, untroubled by breaking waves and unscared by the rush of waters. For myself I do not profess to be a fast man. I am opposed to fast horses, to fast running on railways, and especially to fast sailing. Six or eight miles the hour, by horse power, is speed enough for me. I detest a two-forty gait. When the cars go beyond thirty miles an hour (I like about twenty best—a man can get over a great many miles in a lifetime even at that rate) you may leave me at the first station till the "slow train" comes along. But, I repeat, I have a special dislike to fast sailing, originating perhaps in a natural alacrity at sinking, a strong downward proclivity, when loose in the water. I am, I presume, no more afraid of death in the abstract than other men, but I have a decided penchant for dying in my bed, in a natural and Christianlike way. I do not like to be food for fishes. Your worm is the legitimate heir to these bodies of ours, and I am not disposed to rob him of his birthright. Besides, to be nibbled at by chubs and shiners, gnawed at by catfish and sheepsheads, tugged at by plebeian suckers, and have slimy, snaky eels crawling and wriggling in and out of one's skull through the eyeholes. Pshaw! the thought is horrifying! As a natural sequence, I prefer dry land to a billowy sea in a gale, and always go ashore when the winds get a trifle angry. I have great respect for the waves when they put on their "white caps" and always get as far out of their way as I can. I hold Dibdin, if he was the author of the following verse, to be a goose, especially in regard to his preferences expressed in the two last lines:

"Oh, for a soft and gentle breeze,
I heard a fair one sigh;
But give to me the snoring blast,
The white waves dashing high."

And then too, what he can find to be jolly over in the description of things as given in a subsequent verse passes my comprehension:

"There's tempest in yon hov'ned moon,
There's lightning in yon cloud;
And hark, the music, mariner!
The wind is piping loud!
The wind is piping loud, my boys!
The lightning flashes free;
The hollow oak our palace is,
And merry men are we!"

If any sensible man can be "merry" under such circumstances, there is no law that I know of against it. Let him enjoy himself. He can indulge his humor without any opposition or interruption from me. If I could be warranted against its being blown down or struck by lightning, as a matter of choice, I think I should in a like case prefer a hollow tree on the land to the staunchest of Dibdin's "Hollow Oaks" on the water. But *de gustibus non*, and so forth.

About 6 o'clock we spread our sails to the breeze and directed our little craft toward home. Two hours of

delightful sailing landed us at the railroad dock, and so closed one of the pleasantest and successful days of the season.

Sport in Samoa.

THE islands of the South Sea have never been heralded as a sportsman's paradise, no matter how much they have been lauded on other counts, greatly overrated it must be confessed by those who are acquainted with them. Some will tell you that the only thing to do with a gun in Samoa is to ship it away as promptly as possible or else spend a large share of all available time in keeping the weapon in order. This too is an exaggerated statement, although a gun in the humid salt air of Samoa entails careful attention to ward off the ravages of rust from lock and barrel; and even the other member of the honored triplet, the stock, may not entirely escape, for there are boring insects which are capable of reducing it to a mere shell.

Yet with all the disadvantages a gun can have some value in Samoa. The game is abundant, though of few varieties. There are indeed but four things worth shooting—the pigeon, the wild duck, the wild boar, and bush cattle.

The pigeon is far the best bird Samoa has to offer to the gun. There are several of the columbidæ indigenous to the islands, and at all seasons of the year the jungle paths are vocal with their cooing. Most of this, however, is due to a pale blue dove known to the Samoans as manutagi, "the bird which cries," it is found everywhere from the woods at the shore line to the summits of the inland mountains, which rise as high as 5,000ft. It has no food value, being very small and of thin flesh, without any particular flavor; it is very commonly kept as a household pet by the Samoans, who are fond of listening to its cooing about their houses.

Another pigeon is good eating, but is rare and very shy; it is of particular interest to the ornithologist as being the only living congener of the dodo, a fact which is announced in its scientific name of *Didunculus strigirostris*. The Samoans know it as manumea, "the red bird," from the brilliant color of its bill, legs and feet. It attains almost the size of a hen, is a sluggish flyer, and is found almost always with its mate in the tops of the tallest trees in deep gorges high up near the summits of the mountains.

But the pigeon above all others is that which the Samoans call "lupe." Of the size of a spring chicken, it has a dark plumage of a rich metallic green, set off by several brilliant red feathers at the pinions. Its note is not at all dove-like, but sounds like the long roll of a muffled rattle, a sound very easily imitated by rolling the tongue in a strong exhalation of unvoiced breath, and commonly employed in tolling the bird. Although the birds abound, they are very rarely seen or heard by day except as the keen eye can discover them on the small branches at the tops of the trees, so closely snuggled up against the leeward sides of the trunks as to appear to be knots or clusters of dead leaves. The time to get them is to be out in the bush when the day is about to break, and to use every moment of the brief twilight. I have keen recollections of pigeon shooting on the very backbone of the island of Upolu. The chief Suatete has a house there, the only house to be found between the villages of the north shore about Apia and those of the south coast about Safata, the only house except the dangerous huts of the runaway black boys from the German plantations, who are known to have a camp somewhere in the mountains, and who are feared as cannibals generally are. After a sleep on the mats, and with thick covering—for even in the tropics the night air grows keen past midnight at 3,000ft.—the Samoans awaken us in what seems the dead of night. From every direction the forest rings with the note of the bird which sings just before day, the ma'oma'o, whose note is as melodiously sweet as the English nightingale, and a far more finished song. But the long roll of the pigeon is heard as well, and gives promise that the gun will find its game. As soon as the night takes on the first faint glow the pigeons are seen circling in great flocks overhead and out of range. Their own note, imitated from the dark depths of the jungle, will bring them flapping down to get their share of the berries on which they feed, and which they seem to prefer when the dew of night is on them. Right and left leave a hole in the flock, and then comes an immediate chance at them again, for at the shock of the discharge the flock almost invariably settles on the nearest trees, and the time of shooting is all too short for one to despise a pot shot. Even that is not an utter certainty; the man who stands at the foot of a tree and draws a sure aim on the pigeon which he has seen to light on an upper branch need feel no surprise when he shoots with deadly and scattering effect a clump of dead leaves. Move on a little further under the dripping trees, carefully force the way through drenched herbs head high, walking in ground as sodden as a morass, and another flock may be tolled into view. The pigeon is a savory bird, and its fame has been spread to distant parts. Scarcely a single trip of the monthly mail steamers but carries a consignment of the birds in its cold storage to some epicure in Auckland or Sydney, Honolulu or San Francisco. Minister Sewall, who was my first predecessor to hold the post of Consul-General at Apia, has not forgotten the dainty game, and his monthly pigeon suppers at Waikiki are quite a feature of the gastronomic side of the Hawaiian capital.

The pigeons were hunted long before the coming of guns. In their old savage days Samoan towns went into the jungle in a body to catch pigeons. Only one or two old men yet remember how it was done, and their accounts are hazy as to details. But it necessitated the building of great stone terraces; these are still to be found in many places, as though built to last for all time. Each terrace was the hunting place; it had smaller terraces for the assistants scattered in diverging lines on the sides of the valley. Tame pigeons were used as decoys, and whole flocks were lured up the valley and to the great platform, where they were caught in scoop nets as they swept by.

The duck is very rare in Samoa, probably because there are very few reedy estuaries such as it most affects in

Fiji, where it is common. In general appearance it is much like a very dark mallard, and has a similar flavor. It **commonly** appears in twos or threes, and is not attracted by decoys. It is very wary, and must be approached from leeward. It is better to risk a long shot than to attempt to get close.

There are wild boars in the mountains, and cattle which have escaped from the plantations and have bred fierce in their free life. It is not easy to get on their track, and one may hunt a long time without finding one. But when a boar or a bull comes into sight it is necessary to be quick about throwing a new cartridge into the gun. In that dense jungle it is rare that one can get a fair sight along a hundred feet of distance. When either of the beasts sees a man a charge invariably follows, and it is always well to be prepared with a load of slugs sufficiently heavy to stop the charge, which carries tusks or horns. It must always be point blank shooting, and it is pointedly proper not to miss. The bull if dodged must maneuver to get into position for another rush, and just as likely as not will keep straight on along his course. But the tusker, what the Samoans call "sisilino," is a dangerous fighter. If he is not stopped by the shot he knows no fear; he is hard to dodge; he can wheel at any point in his charge with an inconceivable disregard of the ordinary laws of momentum, and his snugly curled tusks can inflict a wound not to be disregarded.

There is a plenty of fish in the sea about these islands, and in the tidal mouths of the many small streams. The sweet-water sorts are all small and not worth the taking. But there are some in the sea and in the quiet waters of the lagoons within the reef that give sport to the fisherman. There is the conger, but there is nothing in which his pursuit differs from the catching of any eel except that he has a fierce mouth full of teeth, which it is just as well to beware of, and when he has thrown himself into a pair of half-hitches around a stem of coral it will test tackle and patience to land him.

There is the mullet; he is good fishing. Go out at low tide to the reef and stand as close to the breakers as you can; the breakers heaving in from the bare Pacific will adjust the distance if you have come too close. Have ready the long pole of a single stalk of tough bamboo, carefully and evenly dried in the sun, the butt mounted in a hand grip of hard wood, carefully lashed on. Use the native hook of a thorn barbed from a thin strip of pearl shell, a little larger than the thumb nail. As the huge roller heaves itself high over your head and is just toppling over to break, make a long cast over and onto its smooth seaward slope. Keep a sharp watch on your tackle if your cast is vain, for the wave may tie it fast for you in the jagged foundation of the reef. But if you have the luck to strike a fish in this, his favorite feeding ground, give him line and let him follow his own bent in making seaward. Then play him at the second roller, meet his glorious leaps into the air, let him feel the sting of the hook every moment, and let the drag of the line be ever on him. When at last he jumps no more, and his steady seaward pull is weakening, then it is time to think of landing him. Get him close to the seaward face of the breaker, and watch your chance. As the roller comes in keep him in the swift back rush, just behind its crest; keep him just there, with full strain on the line, until the crest just about to go into foam heaves him forward. Then is the moment to put muscle into the rod and bring him high on to the dry reef, for the smother of breaking water and the coral teeth would cut even a whale to slivers.

Best of all is the bonito fishing out in the open ocean. There are enough points in this to meet good luck or ill luck to satisfy the most superstitious banker. It begins with the canoe; the wood must be from one particular tree, and it must be filled at one phase of the moon. So long must it season in the log before the planks are hewn out. In just such a way must it be put together. Even when it is completed there is a fearful weight of responsibility about choosing the lucky time for first putting it into the water. So it is with the hook; there are many chances for ill luck to creep in and spoil everything. The hook is a fine piece of work. It is all of pearl shell and in two pieces. One is an inch wide and from 4 to 6 in. long; the other is curved and cut into a barb; the two pieces are firmly lashed together with fiber of the cocoanut husk. The line is coir sennit, of which every single fiber has been tested for strength before being used, and it will stand any amount of usage. It is usually fifty fathoms long, and so strong that it must be a powerful fish that can bite it through. Out through the boiling pass in the reef and into the deep, long swell of the ocean the fishing party sets bravely out in the canoe—two stalwart paddlers, the one in the stern steering and handling the line. In all sorts of weather these specially built bonito canoes are as buoyant as a bubble, and perfectly seaworthy to one who has caught the hang of the long outrigger along the port side. In a chock in the after half deck is fitted the pole, stayed in place by the back of the steersman. No danger that a fish will hook itself unknown to him; the danger is the rather lest the strain on the pole force him suddenly off his thwart. Far astern the line cuts the sea, and further yet astern flashes the brilliant troll, as the send of the sea heaves it into sight. The sea birds sweep shrieking down upon it; a good sign, for the birds attract the fish. Dead ahead a school of flying fish shy into the air like silver spray. No need to ask what sent them into the less practicable of their two elements. The two men dig the sea with their paddles in their haste to draw the troll over that tract of water. Soon is heard the pattering scutter of flying fish astern; the bamboo bends even to the water, and as the strain comes hard upon his back the steersman knows that at the other end of the line is one of the king of fishes. Down into the bilge goes his paddle; his mate must paddle for two, for a bonito is task enough for any man. He breaches at the end of the line, he sounds, he sulks as the canoe drags on his mouth, he shoots clean into the air, he thrashes the sea—a fathom of sea wickedness incarnate. He must be played at full length of line and thoroughly weakened before shortening home; even then one is not safe from his most savage trick. Often he underruns the line after a mighty leap in air to get his bearings; like a javelin he lances himself in air, **aimed straight for the fisherman.** It is no light thing

to receive this charge of a bonito and to go overboard entangled in the line. But the line holds good, the hook is tightly sewed together, the barb is in his jaw; the bonito fights with every trick he can invent until his strength is gone. Warily the fisherman hauls in the line, cautious against some new flash of spirit, for no one can safely neglect the astuteness of the game fish. Length by length the fish is brought alongside, until a stroke of the paddle edge can break his neck. Into the canoe the great fish must somehow be stowed, and then it's away to shore with the eager sharks snapping their jaws alongside.

WILLIAM CHURCHILL.

Early Summer in the Adirondacks.

OLD FORGE, N. Y., June 15.—There has been unusually good fishing in and near the Fulton Chain of lakes this season. Very large catches of trout have been made on the South Branch of the Moose River, near Kennell's. Several parties have taken more than they should. The fishing in the small lakes and ponds has also been excellent.

Last Friday Robert Perrie, the veteran fisherman of Fourth Lake, landed a 10lb. lake or salmon trout. A 14lb. fish was also taken recently by a guest of the Bald Mountain House. Both fish were taken with live minnows and light rod and line. Victor Adams, of Little Falls, is in camp enjoying the early fishing.

All interested in the advent of summer tourists are busy with improvements, and are making preparations for old friends as well as those who may come this year, for the purpose of avoiding sea shells and possibly other shells of Spanish extraction. There is a decided novelty in the steamboat management on the lakes this year, in so much as perfect harmony exists among the formerly hostile craft. The Fulton has been enlarged and improved.

Along the line of the Adirondack R. R. new settlements are springing up and old ones are growing at an alarming rate—alarming because their growth means the progress of the saw mills and the destruction of the forests, which the State should own.

Fishing at Tupper Lake is reported good. The bass season is just opening, and large pickerel (pike) are plentiful. The Saranacs are as lovely as ever, with more guests at the hotels than usual at this time of year. The flies, "punkies" and mosquitoes are both early and late.

In all parts of the woods deer are said to be plentiful. The past winter was very mild and food abundant. Frank House, of Tupper Lake, tells me he saw more than twenty deer in one day. The new road from Old Forge to the head of Fourth Lake, cut out a year ago and soon to be graded, is covered with fresh deer tracks.

If best means most perhaps New York State has not the best hunting and fishing. If the attendant charms of forest and stream are to be considered we can boast of the best fishing from pole to pole.

JOHN B. MACHARG, JR.

CHICAGO AND THE WEST.

Young Ruffed Grouse in Captivity.

CHICAGO, Ill., June 4.—Mr. Carrington Phelps, lately of Minneapolis and Lake Minnetonka, Minn., has been spending the winter and spring in North Colebrook, Conn., and thence writes me regarding things which have been going on in that part of the world, among others the interesting story of a young ruffed grouse whose front name I take it should have been Obiit. Of this he says:

"We happened to find a ruffed grouse's nest with fourteen eggs. Mrs. Phelps took three home and set them under a hen. A day or two after something killed the grouse and left nothing but feathers and some eggs. One of the three eggs hatched out four days since. I never saw anything to equal the activity and intelligence of that little ball of yellow down, for two days. It would come to call; eat flies from the fingers, and worms too; hunt for itself in the grass. I was hoping for a chance to see if the ruffed grouse could be raised in captivity. But it crawled out of the warm flannels in which we wrapped it at night, and in the morning was on top of them, thoroughly chilled. This morning it died. You would have been interested in it."

Readers of FOREST AND STREAM may remember something of Mr. Phelps' tent ranch on Lake Minnetonka, and the pet red fox Roxie, which was one of the features of the place. Roxie is dead, to the great regret of her owners and friends. "Mourn with us for dear little Roxie," says Mr. Phelps, "for the sweet little companion and pet died Monday morning. Next to my dear old dog, Darby, she was the favorite. Her very helplessness and state of captivity made her the dearer. You know that cat, dog or even horse can exist independently of you. For four years and a half her welfare has been an almost hourly thought for both of us, and her bright, affectionate companionship was ample recompense."

Cold Storage Abroad.

June 9.—Mr. Chase S. Osborne, State warden of Michigan, who is just back from a trip in Europe and the Orient, makes a very pleasant companion on a railway journey. He is just telling me about his trip abroad, and among other things tells me that in Egypt he ate American Bob White quail, shipped over in cold storage. He also found America quail in Turkey. He says Russian black game is also plentiful in such markets, Russia being next to America in laxness of game laws.

Mr. Osborne says that he had the peculiar experience of taking a shot at a hyena somewhere over there in Asia, near where Moses is buried. In taking this wing shot Mr. Osborne used a gun loaned him by a Bedouin named Jim. The gun measured 8ft. 7in. from tip to tip, and was loaded with a bullet and some gravel. Mr. Osborne says he snapped the ancient piece eight times before it would go off, and by that time the hyena was half a mile away, and putting tombs behind him at every jump. That is a great country for tombs.

Mr. Osborne tells me that he had a talk with Gen. McKenzie, a Hudson Bay factor of Abitibi, P. Q., and the latter tells him that the close season of a term of years on beaver is apt to prove a cause of extinction of that animal over a large region. There has been a rabbit famine, and the Indians have been obliged to kill and eat their beaver. The Indians district the beaver out among themselves, and only kill the best ones, whose pelts they sell. Now that they cannot market the pelts for money with which to buy food, they kill and eat the beaver themselves, and so kill off the stock, on the basis that beaver flesh is not worth so much as beaver fur.

E. HOUGH.

1206 BOYCE BUILDING, Chicago, Ill.

Indians in New York.

WHILE we lived at the corner of Park Place and Broadway it was not at all unusual to see parties of Indians on the streets, consisting of four or five warriors with a suite of squaws and children; the men clad generally in blankets hanging in some way from their shoulders and an occasional buffalo skin, with feathers in their hair, and armed with bows and arrows. The bows were very strong and stiff sticks of hickory, well shaped and strung with something resembling catgut, which I supposed to be sinews of wild animals. My father had much curiosity about these Indians, and asked many questions about them of persons he supposed to be well informed. On one occasion, I remember, he accosted a party of them as they passed his door, and invited them in. They accepted, and he provided them with an impromptu meal, naturally including some grog, which they took to very kindly. After they had refreshed themselves, he asked them questions as to their mode of life, their weapons, etc. (though to what extent either party understood the other was unknown), and at his request an example of shooting was given. My father took a shovel from the side of the stove that heated the shop, and setting it up at the rear against some shelves of books there, asked one of them to hit it. The fellow drew his bow, and in an instant the arrow struck the shovel right in the middle, making it suddenly take the form of a segment of a cylinder. My father was rather surprised at the force of the blow, but declared that the shovel was much benefited by the curl given to its blade, as it now could enter the door of the stove more conveniently than before. To prove his approbation of what had been done, he called for a repetition of the performance, setting up some other mark, but this time the Indian who fired was somewhat careless; the arrow flew from the bow prematurely and struck plump into the back of a handsomely bound quarto volume, which it knocked into a cocked hat in the most extraordinary way. The book was ruined, and my father, disgusted with the entertainment, from which he had derived so little instruction, and which proved so costly, brought the performance to a close as speedily as possible, and got clear of his guests.—*John T. Doyle in Evening Post.*

A Trustful Bird.

Editor Forest and Stream:

A few weeks ago I noticed a short sketch of a farmer who was so careful of the birds that he would stick a stake by every bird's nest before starting his mowing machine, and then would leave a little grass standing by the stake. It reminded me of an incident in my own life. When I was farming in Vermont I began to plow a field. I soon found a bird's nest about one rod from the edge of the field. I took the nest and carried it about three rods and fixed it on the grassy ground; then cut a bush and stuck down by it for a shade. Of course the old bird saw me move the nest. I went to my work; she went to her nest. In one or two weeks there were four little birds in the nest. Every time I passed that way I would stop and see how the little birds were getting along. The mother was not alarmed. She seemed to think I was a friend, and would do them no harm, and she was right.

R. C. ALLEN.

Pearl R.

THE portrait of the English setter bitch, Pearl R., published in our columns this week, is masterly in its fidelity to the original, in its spirited and realistic posture on point, and in its technical excellence. Pearl R. is owned by Dr. M. F. Rogers, New Albany, Miss. She is black, white and tan in color, by Sam Gross—Donna Inez. She won first in the Manitoba Field Trials Club's Derby, at Morris, Man., last year, in a field of eleven starters, and was one of the three kept in the final series of the champion stake of the Northwestern Field Trials Club, which was run immediately following the M. F. T. Club's trials. She won second in the E. F. T. C. Derby, at Newton, N. C., last fall, and second in U. S. F. T. C. Derby, at Newton, the week following thereafter. In the Derby of the Continental Field Trials Club, in its winter trials run at New Albany, Miss., this year, she won third. Our readers will recognize at once that the portrait is from a painting produced by the deft hand of Mr. Edm. H. Osthaus.

Pictures of the Field.

Mr. Edm. H. Osthaus, of Toledo, O., made a brief call in FOREST AND STREAM office on Monday of this week, he being then en route for his Western home. He attended the open air show of the New England Kennel Club on June 4, and made a few brief visits with old friends. To our readers, Mr. Osthaus is best known as a painter of field scenes whose theme is the dog and gun, but his masterful skill with the brush enables him to paint horses and cattle, stretches of field where the birds hide, or water where the fish hide, and this with the same truthful portrayal which is peculiar to his best known field scenes. He is quite as enthusiastic a devotee of the rod and reel as he is of the rod and gun, and his beautiful paintings are taken from the true sources and the true inspiration, those of nature.

New England Fishing.

BOSTON, June 17.—The fishermen are returning from the trout and landlocked salmon waters. Mr. George Harlow is back from a successful fishing trip to Four Ponds, about three miles up the mountain from Bemis, Me. He was accompanied by two or three friends, part of whom went in to the ponds by way of Houghtons, in Byron; there being a road through the woods and up the mountain that way, considerably used by the fishermen of Rumford and Byron, who know the ponds. They had good success, taking a good many trout on the fly, though of small size. Another camp is being built at the ponds by fishing parties, making three or four camps at those ponds.

Mr. A. S. Woodworth and his friend, Mr. Kidder, have just returned from their trip to the Rangeleys, though most of their fishing was done at Kennebago and Seven Ponds. Their sport was in fly-casting altogether, and they found the fly-fishing especially good almost everywhere they fished. One hundred trout in a day was not at all difficult, the great majority being returned to the water. Mr. A. C. Farley, of the Camp Stewart party, extended his trip to Kennebago, where he had excellent fly-fishing.

The H. B. Moore party of fishermen has returned from Moosehead, where they had excellent fishing till the black flies became too inquisitive altogether for comfort. Then the party took leave, leaving the flies in full possession. In the party were Dr. J. C. French, H. B. Moore, of Boston; Edward A. Moore, of Westford; Mrs. Moore; George C. Moore, of North Chelmsford; E. Richardson, Mrs. Richardson, and E. A. Smith, of Lowell. The party were quartered at Capen's, Deer Island, and were accommodated with a private steamer and all the conveniences of a first-class fishing trip. Fly-fishing for squaretails was excellent.

The Duck Lake Club party has returned to business again, much pleased with the spring fishing. The club has fine camps and accommodations at Duck Lake, one of the Schoodics, and at other lakes and ponds. The party was in charge of Mr. H. O. Underwood, as usual, and consisted of W. B. Lambert, Herbert L. Harding, H. R. Brown, E. C. Johnson, Geo. W. Wheeler, Edward Reed and J. Swift, Jr. They had fairly good luck, but were a little too late for the best fishing. Mr. C. W. Shaw, usually of the same party, went a week or two earlier, and had good sport. Landlocked salmon fishing at the Schoodics has been better than ever this year.

June 20.—Mr. and Mrs. L. O. Crane have just returned from one of the most successful fishing trips they have ever made. First they visited Round Mountain Lake, where they had good fishing. In one day Mr. Crane took a full 100 trout on the fly, all but twenty of which were returned alive to the water. It is his invariable rule to save only such trout as can be used for food. From the fishing at Round Mountain they came to Rangeley Lake, where Mr. Crane landed a salmon of 3½ lbs. Thence to the Upper Dam they struck fishing that was particularly pleasing. Mr. Crane declares that at the Upper Dam is the trout pool of the world. "You may fish for some time without a strike, but when you do get one it is a big one." He showed at his place of business Saturday three trout, brought out to his friends, one of 4½ lbs. and two of 3¼ lbs., all taken on the fly. At the Dam he witnessed the most novel salmon catch on record. On Friday Mr. Eugene Lynch, of Boston, was fishing in the pool, when Mr. Crane came out with his boat and guide and attempted to anchor a short distance below Mr. Lynch. The latter suggested that considerable room would be desirable, as he had a big fish hooked, and thought it might be a salmon. Mr. Crane then went a little distance below another boat that was down the pool from Mr. Lynch, and anchored where he could watch the handling of the big fish. The fight was a hard one, and prolonged for more than half an hour. At last the salmon made a mighty swirl partly across the pool and down stream toward the other boat, in which was Mr. Porter, of Norwich, Conn. Then he made a dart out of water at an angle of about 45 degrees, into the air, landing squarely in Mr. Porter's boat. The latter jumped on the fish and succeeded in preventing him from jumping out of the boat. He was killed, and proved to be a splendid specimen of landlocked salmon, weighing 6 lbs. and 2 oz. Those who witnessed the leap consider it one of the most remarkable in angling records. It goes to show what a salmon will do when hooked. He was caught on a Jock Scot fly. Mr. Lynch is justly proud of his catch, while Mr. Porter claims the honor of having landed one of the biggest salmon of the season at that pool.

Other good catches are being made at the Upper Dam, among which are eighteen trout in one day to the credit of L. R. Eddy, of Webster, Mass., the string weighing 23 lbs. The next day he took nineteen trout, the largest weighing respectively 6½, 4¼ and 3 lbs. The next day he took one of 5 lbs. on the fly. E. L. Bartlett, of North Oxford, took nineteen trout on Monday, the largest one of 3½ lbs. The next day he landed eleven, the largest weighing 4½ lbs.

At Bemis the fishing continues good. Sylvanus Poor, of Andover, Me., has taken two trout of 4½ and 5 lbs. weight. F. H. Marston, Lewiston, Me., has taken home a fine string, the largest weighing 6 lbs. At Rangeley Lake the fishing is improving. Mr. A. H. Proctor and A. F. Breed, of Lynn, Mass., have had good fishing. Mr. Proctor's first day out brought an 8½ lb. salmon, and one of 4½ lbs. Mr. Breed's largest fish is a 7 lb. salmon. Mr. J. R. Eddy, of Troy, N. Y., tried to land a deer Thursday afternoon with his salmon rigging. The result is he is minus rod, reel and line. With his guide, Martin Fuller, he was out fishing when they saw the deer swimming in the lake, and gave chase. They tried to prevent the deer from landing on Maniskotuck Island. In the excitement Mr. Eddy forgot to reel in his line. The deer became entangled in the line, but escaped, line, rod and all running out of the boat, but from which he soon cleared himself, and disappeared in the woods.

Fishing at the Birches has continued good. At the Middle Dam the fishing is reported particularly good. Good catches are being made at the Pond in the River and at B. Pond.

SPECIAL.

Grand Rapids' Great Week.

The Fly-Casters' Trout Trip.

MAYFIELD, Grand Traverse County, Mich., June 10.—The fly-casters and their Grand Rapids hosts to-day carried into effect their intention to have a turn at the practical part of fly-casting for trout. The two railroads, the Grand Rapids & Indiana and the Chicago & West Michigan, came to the support of the town in the most generous manner, and offered to carry free to the splendid fishing grounds of Michigan all the visiting sportsmen and their Grand Rapids entertainers.

To-day at shortly after 7:30 A. M. a special car, in charge of that prince of railroad men, Mr. C. L. Lockwood, general passenger agent of the G. R. & I. (the "Fishing Line"), rolled out of Grand Rapids north-bound. The car was equipped with every convenience and stocked with good things, and the party that occupied it was pleasant as a company of anglers always is. Those on board were Messrs. C. L. Lockwood, general passenger agent; W. B. Stimson, superintendent; F. S. Gorham, ex-auditor; R. R. Metheany, auditor; Chase S. Osborne, State game warden; Col. E. Crofton Fox, D. G. Henry and Frank J. Rogers, of Grand Rapids; Geo. W. Strell and H. G. Hascall, of Chicago; Fred D. Divine, of Utica, N. Y. These dropped off at various points along the road, which penetrates the choicest part of the wonderful Michigan angling country. When the train split at Walton Junction, three of the party, Col. Fox, Mr. Strell and myself, left the others and came on up to Mayfield, 140 miles north of Grand Rapids. Here we met Mr. H. Widdicomb, a very ardent and skillful sportsman, of Grand Rapids, who had come up the day previous to make arrangements for our party, which was assigned to the Boardman River, in the hope that we might make the acquaintance of some of the big rainbow trout of that famous stream.

We found the Boardman River a magnificent, bold and heavy water, just within the possibility of wading, and full of trout. A couple of weeks ago Col. Fox took over fifty fine trout a day on a three days' trip on the Boardman, some crowding 2 lbs. in weight. To-day we did not have quite so good luck in raising the very big ones, but we got nice baskets, I should think about 100 trout in all for four rods in one afternoon, many thanks to the skillful rods of Mr. Widdicomb and Col. Fox. To-night one of the local anglers came into our quarters with a prize which he had just taken in a mill pond across the railway track not more than 100 yds. from our stopping place. This fish looked to be a 2 lb. trout, though 1½ lbs. was all we could induce the scales to call it. It was taken on bait after dark.

June 11, On Board Car Monaco, G. R. & I. Railway, 8 P. M.—We have concluded our Boardman trip, a most enjoyable one, and are on the special car bound south, meeting again Mr. Lockwood, Mr. Stimson, Mr. Metheany, Mr. Gorham. I have just had a look into the ice box, and can testify that the luck on the Maple River was good. Mr. Lockwood caught 43 trout; Mr. Stimson 36, Mr. F. Quaintance 27, Mr. Metheany 24, all on the Maple near Pellston, some of the fish running very nice indeed. At Pellston Mr. Hyde, a New York lawyer, who has been in this region on a visit, has been having good sport, rarely less than 50 a day, and one day taking 110 trout. Mr. D. G. Henry, of Grand Rapids, and his guest, Fred Divine, also fished the Maple, but had not yet come in, and we do not know what success they had. We had not yet heard from the parties on the Little Manistee and the Pere Marquette. They will not be back for a day or two yet. Now it becomes the painful necessity of saying good-bye to the entertainers of Grand Rapids, who have so easily and nicely done so much to give us comfort, sport and pleasure. I do not remember to have seen a more sportsmanlike assembly of men than those who met at Grand Rapids this week, and the whole programme from start to finish has been unique. The fly-casters who stayed away are those who were unlucky. Those who came have enjoyed the brief experience of owning a city and a railroad. It is not easy to discharge a debt like that.

The fishing is good now in the south peninsula. The rainbow trout is the coming fish. I have taken both rainbow and brook trout out of the same pool in the Boardman. The rainbow outclasses the speckled trout two to one as a fighter. The man who kills one of these big 5 lb. rainbows in the Boardman on light tackle has done an angling feat. They are there, any number of them. They take the fly better than the speckled trout.

1206 BOYCE BUILDING, Chicago, Ill.

E. HOUGH.

Yachting.

Wreck of the Heather Bell.

A ballad describing the loss of the wood boat Heather Bell on the St. John River, New Brunswick, in November, A.D. 1877, by collision with the steamer Soulages, an old and extremely erratic craft, which then ran as a night boat between St. John and Fredericton.

BY FRANK H. RISTEEN.

It was the wood boat Heather Bell
That plowed the wintry main;
And the skipper, his name was Bowser,
And the crew, his name was Kane.

White was her deck with the evening frost,
Her sails and her masts all white,
And over her bow in the darkling gloom
There glimmered her signal light.

The skipper he stood beside the helm,
His pipe in his mouth was set,
While a gross of matches lay strewn around
He had scratched on his pantalette.

And with every squally gust that blew
He would light another match,
And for every griping flaw that flew
His gable end he'd scratch.

Then up spake the skipper's mate
(Likewise his name was Kane),
"I pray thee, put into Opnabog,
For I fear a hurricane.

The mainsail sheet is frozen stiff,
The martengale leaks fast,
The piston rod is smashed in twain,
And the spinaker yaws the mast!"

"Then haul the bobstay hard to port
And hammer down the hatch!"
And the skipper laughed a scorn laugh
As he lighted another match.

"No fear have I," old Bowser cried,
"Of weather, wind or sea;
Trice up the binnacle to the poop
And splice the whiffletree!"

But wilder and wilder came the gale,
And the darkness and the rain,
Twin specters from a world of woe,
Their wings spread o'er the main.

Then up spake the boatswain bold
(His name likewise was Kane),
"O, let us take the larbord tack—
The Jimsag we may gain."

"Go bowsen up the collar beam,"
The skipper roared aloud,
"And tightly reef the throttle valve
And jibe the scupper shroud!"

And still from the Devil's Back
And o'er the reach it blew,
And down the vale of Nerepis
The fierce tornado flew.

It swept the jilpoke off the poop,
It ripped the sails like tow,
It stove the gangway into shreds
And bilged the dynamo.

Yet though the wind blew fierce and fast,
And though the blast blew raw,
The skipper cheerily sought to light
The pipe that would not draw.

"O, skipper, I hear the sound of guns,
O, say what may it be?"
"Tis a Nerepis maiden chewing gum
And cracking her teeth," said he.

"O, captain, I hear a wailing cry,
O, say what may it be?"
"Tis a mermaid singing her bridal song
In the eel-grass on our lea."

"O, Bowser, I see a gleaming light,
O, say what may it be?"
"Tis the old Soulages on our bows,
And dead men both are we!"

* * * * *

At daybreak on the Long Reach shore
The inhabitants stood aghast
At the sight of a seemingly defunct
Lying close to a broken mast.

The limbs were fixed, and fixed the eyes
That met their startled sight,
And fixed in the stern unyielding mouth
Was the pipe he had tried to light.

They watched and waited long in hope
Some glimmer of life to see,
When lo! the form riz up and roared:
"Bring hither a match to me!"

Ah, sires, 'twas piteous to see
That ancient river man
As in a rage he smote the match
Upon his diaphragm.

"Shake out the mizzen jib," he cried,
"The whisker pole let free!"
Then jammed his helm hard to port
And steered for the unknown sea.

* * * * *

And this is the tale of the Heather Bell
That plowed the wintry main,
Which the skipper, his name was Bowser,
And the crew, his name was Kane.

A score of years have ebbed and flowed
Above her resting place,
Yet still her flying form is seen
Where the night-long breakers race.

White is her deck with the evening frost,
Her sails and her masts all white,
And over her bow in the darkling gloom
There glimmers her signal light.

A Quarter Century of Yachting, 1873-1898.

THE history of American yachting dates back just over half a century; the formal organization of the New York Y. C. on board the schooner Gimcrack on July 30, 1844, being generally accepted as marking the definite crystallization of various individual ventures in yacht building and racing, and the establishment in America of yachting as a national sport. The even quarter century of the FOREST AND STREAM's existence thus covers very nearly half the history of yachting in point of time, but very much more in point of development.

The history of yachting up to 1873 covers two periods, one of marked progress, the other of actual retrogression. The birth of the sport, under the influences of the spirit and enterprise of the Stevens family and the genius of George Steers, was marked by the production of some

notable and most successful vessels, first of all the schooner America. Fast, seaworthy and staunch in build, she excelled all of her fellows; but they all shared in a lesser degree these admirable characteristics. They were built for actual service in cruising, the keel type originally predominating, and as a class in default of much actual racing, the early yachts and their cousins, the New York pilot boats, were noted for the speed, whether in smooth water or at sea, alongside of the commercial vessels of the day. Though starting thus auspiciously with America and her mates and the winning of the first great international race in 1851, the progress of yachting in the next twenty years was by no means phenomenal, and in fact its condition in 1873 showed little or no advance in the very important branches of design and construction over 1848.

The sport as a whole had prospered; though through the 50s its growth was slow, and just when better things were promised it was nearly extinguished by the Rebellion. The end of the war, however, witnessed the inauguration of one of the great eras in American yachting, that of the big schooners. Between 1864 and 1873 were built such noted yachts as Sappho, Palmer, Resolute, Henrietta, Tidal Wave, Magic, Fleetwing, Columbia, Wanderer, Dreadnaught, Dauntless, Vesta, Idler and Alarm. Even though some could lay little claim to distinction save in the matter of size, the fleet, numbering some thirty odd vessels of from 100 to over 300 tons, was an imposing one, and under the conditions of yacht racing in those days large fields of starters were the rule, and even the slower yachts were accustomed to race in the hopes of some lucky chance. Schooner racing, and in vessels of large tonnage, was the one great feature of yachting in the 70s; at the other end of the scale was the sandbagger, either cat-rigged or jib and mainsail, and the little centerboard sloop yacht of the Gowanus and Penny Bridge type, but the sloop rig was still second to the schooner in the larger classes, and no one ever imagined that the day would come when the huge single-sticker Maria would be dwarfed by a Vigilant or Defender of the same rig. The fleet by this time had increased to about 500 yachts registered in the lists of the day, and there were thirty clubs in the United States, with the Royal Canadian Y. C. in Toronto and the Royal Halifax in Halifax. The number of races sailed in 1873, as officially recorded, was sixty-four. The sport was firmly established and popular; it had the active support of such wealthy and prominent patrons of sport in general as Bennett, Douglas, the Lorillards, Osgood and Osborne, besides others who were distinctively yachtsmen; and at the other end were numerous owners of small racing craft, who sailed constantly in the regular regattas and also in private matches for large prizes.

The weak point of American yachting in 1873 was the technical side, relating to the designing and building. The fleet, both large and small, showed a marked retrogression from the day of Steers and the America. The keel boat had disappeared save for a dozen of the largest schooners, such as Sappho, Dauntless, Fleetwing and Dreadnaught, and the centerboards, which made up almost the entire yacht fleet, were practically of one type, large as well as small. Assuming that it was necessary or desirable to confine the whole designing of a nation to one single type, it would probably have been impossible to have devised a worse one than that which was distinctively the national type of American yacht in 1873. Its characteristics were excessive beam for length, very light draft and depth of hold, light displacement, inside ballast of stone, slag or possibly pig and scrap iron, little or not overhangs and an excessive sail plan, with a weak and faulty construction. In the smallest yachts, the open sandbag catboats and jib and mainsail boats, sailed by experts who could swim ashore in case of the frequent capsize, the type was bad enough; it became seriously dangerous when enlarged into the cabin sloop of 40 to 70ft. waterline, and infinitely worse when further enlarged to make the typical centerboard schooner, with a draft of 6ft. on a waterline of upward of 100ft.

As was largely the case in all branches of naval work, there was at that day in yachting nothing of the nature of systematic designing. The builders, with whom the designs originated in the form of crude models, were men of limited education, with no practical training outside the ordinary routine of the building yard. They were one and all wedded to one single theory of design embodied in the typical craft above outlined. In essentials a new yacht, large or small, was like the old ones, the whole range of experiment being limited to a varying of the extremes of beam, light draft and sail area. The construction of the day was as stereotyped as the model, practically the sail boat construction adapted to the yacht, with flat plank keel, light floors, and inadequate bracing and fastening.

As a class, the builders, the sole arbiters of design, were prejudiced in favor of their own pet ideas, and ignorant alike of the principles of systematic designing and of the progress made in their trade in other parts of the world. There were a few of unquestioned genius, though hampered by the lack of a technical education, like Capt. Bob Fish, and some were more uniformly successful in their work than others, whose fame perhaps rested on one particular craft, which they were never after able to equal. But there was conspicuously no one who could claim to be a worthy successor of George Steers; and the science of naval design as then represented by yachting was on a far lower plane than in the days of the yacht America, the pilot boat Mary Taylor, the American clipper ship, and other nautical triumphs of which Americans are justly proud. Through her fast ocean passages and successful international races the big schooner Sappho, as rebuilt by Capt. Bob Fish, did much to sustain in foreign waters the fame of the schooner America, but she stood very far above the standard of the fleet of the day as a whole.

In the important matters of organization and co-operation among clubs, yachting was far behind other sports. There was no semblance of union between the different clubs; not infrequently even harmony was lacking. Each looked out for itself as best it could, and there was no organized attempt on the part of the clubs or of individual yachtsmen to advance the progress of the sport. The racing was limited to the old-fashioned "regatta," frequently a closed race and held without regard to similar events of other clubs. Though large fleets turned

out for these events, they were comparatively few in number, each club holding an "annual regatta" early in the season and perhaps a "fall regatta" as well. Regular series of open races throughout the season were few, and the best racing was found in the special races, sweepstakes or private matches, such as were frequently sailed. The merits of a yacht were determined rather by a few notable victories over large fleets than by the tabulated record of a large number of races through the season against yachts of her own class. The absolute independence of the yacht clubs resulted in universal confusion in the matter of rules, and also in a generally poor standard of yachting legislation and racing usage. Each club had its own rule of measurement, and while the majority were based on the single factor of length there was a wide difference in the details of the rule, so that no two clubs had the same method. Some measured the waterline only, some the over all length only, while more combined the two in varying proportions of one-half, one-third or one-fifth of the overhang added to the waterline. The New York Y. C. at this time, immediately following two international contests with British yachts of large displacement, had found it expedient to adopt the "cubic contents" rule, practically the actual bulk of the vessel, including top sides. Even where the measurement rule was the same in two clubs, the class limits were probably different, so that there were serious obstacles in the way of open and interclub races.

In the matter of the sailing rules of the road and general racing methods, starting, timing, etc., there was as little uniformity as in measurement. Each club had its own rules, changed at will without notice to others, and often in deference to mere local considerations; so that, in addition to the lack of uniformity, the rules in themselves were very defective.

The yachting literature of the day calls for little notice; there were no American works on yachting; in fact, there were very few English. The best of these by far, Mr. P. R. Mallet's "Yacht Building," was published here in 1872 by the New York branch of the London publishers, and in 1870 a copy of an earlier edition had been brought over by Mr. Robert Center. Mr. Center was one of the party on the schooner Fleetwing in the great ocean race from New York to Cowes in December, 1866, afterward spending several years abroad. In 1871, at his suggestion, and with Mallet's book as an aid, Mr. A. Cary Smith undertook the making of a design on paper, in place of the block model then in universal use, as the first step to the construction of a keel cutter, the famous Vindex. The yachtsman of 1873 depended for his yachting news upon the daily papers, mainly the leading New York papers, several of which had yachting reporters of ability and experience. In the way of periodicals, the old Aquatic Monthly boasted of a yachting department, sandwiched in with its archery, horse racing, croquet, billiards, etc.

The efforts of the yachting writers of the day, both professionals and amateurs, who wrote over the nom de plumes of Devoted Yachtsman and similar terms, were directed almost exclusively to the indiscriminate laudation of the American centerboard type and of the sloop rig. Such things as the broad discussion of technical matters pertaining to yachting, intelligent and unprejudiced criticism, and suggestions for improvement, were practically unknown. Where all was already perfect what room could exist for either? The proverbially disputatious proclivities of all yachtsmen found vent in discussions as to the value of half an inch of dead rise, more or less, as a vital factor of design, or in disputes over the merits of one individual builder over another. So far as the actual work of reporting the races was concerned, on the part of the leading papers it was well done, by able and experienced yachting reporters, but these gentlemen had no inclination to wander into the field of free criticism, and if they had done so their work would have been condemned both by their superiors in the office and the yachting public for which they wrote. In the rather important detail of an annual Yacht List, Neils Olsen, the present veteran superintendent of the New York Y. C., then compiled and published a small, but very complete and accurate, list of yachts, clubs, races, etc.

It must be confessed that the period in which FOREST AND STREAM began its existence was the duldest and least productive in the history of American yachting. For about ten years there was practically no material progress in design, in spite of the large amount of ocean cruising, ocean racing and international racing in American and British waters. Following the great ocean race of 1866, the three yachts which competed returned to this side of the Atlantic. Sappho, Dauntless, Meteor, Enchantress made repeated passages back and forth, competing in races in English waters. Dauntless and Cambria sailed an ocean race from Queenstown to New York, and many international races were sailed on this side, for the America Cup, the Bennett cups and other trophies, by the British yachts Cambria and Livonia, and the American fleet. In spite of the grand scale on which yacht racing was conducted, in yachts of great size and imposing appearance, for stakes of great value, and with strong international rivalry, the course of design was actually backward instead of forward.

Sappho, whose career really dates from her rebuilding in 1869, as she was a failure when built in 1867, stands as the best yacht of this era of the great schooners, but she was exceptional rather than typical; the real representatives of the American model of this period were Tidal Wave (long known from the marked peculiarities of her design as "the snake with a toad in her belly," built in 1870) and Mohawk, built in 1875, whose capsize and sinking in New York Bay in sight of the club house in the following year resulted in the drowning of her owner, Com. Garner, his wife and several friends.

Mohawk, with her draft of but 6ft. on a waterline of 121ft., was neither an accident nor an exception, but the natural and legitimate product of the theories of yacht design then universally accepted in this country by owners, builders and yachtsmen both amateur and professional. She was a typical centerboard "skimming dish," as were the smallest catboats, the sloops, small and large, and most of the vessels of her own rig. The story of over a century of yachting is plainly told in the two words America—Mohawk; a retrogression from the re-

cognized principles of good design, which brought honor and triumph, to baseless fallacies and inexcusable ignorance, bringing disgrace and death.

The whole history of American yachting as chronicled in the FOREST AND STREAM is a lengthy one, and can only be outlined in its more prominent points. Going back a little further than its birth, the year 1871 brought a shock to all truly patriotic yachtsmen in the shape of various heretical ideas imported from England by the late Robert Center. This gentleman, to the horror even of his friends, started in to violate all proprieties by building a yacht after models and methods directly opposed to those then held sacred by all true Americans. The case looked bad enough at the outset, when it was first known that, in place of the conventional skimming dish model, Mr. Center actually contemplated a cutter, a keel boat, of great depth, without a centerboard, and with the full cutter rig. It was worse, however, when Mr. Center, with singular perversity, refused to place himself completely in the hands of some inspired builder who would whittle a model representing the outside surface of the frames, and announced that the yacht would be built entirely from a design on paper, made in all its details before the construction was commenced. The final revelation capped the climax; instead of nice, light, soft wood, loosely nailed together, the yacht was actually to be built of hard, heavy iron in all of her parts save the deck, the keel being made specially thick to serve as ballast. It was only natural that the average professional builder and boat sailor should declare that it was impossible to build a vessel without a block model, and that an iron hull would never float; but this display of ignorance was by no means confined to this class; yachtsmen who by education and intelligence should have known far better were loud in the exploitation of the same ideas.

In his new work Mr. Center found an able and willing coadjutor in Mr. A. Cary Smith, then a yacht builder after the accepted methods of the day, but also a marine artist. With Mallet's book as a guide, following its instructions in the designing and the calculation of the elements, and taking as a basis for the proposed yacht the lines there published of the famous Musquito, the first American cutter, Vindex, was designed, and she was finally built and successfully launched at the yard of Reany, Son & Archbold, Chester, Pa., afterward Roach's Shipyard. Somehow or other Vindex did float, and not only that, but she was fast as well, and an admirable sea boat, as Mr. Center proved in a whole winter's cruising off shore in company with the New York pilot boats, and in many races.

When Vindex was built the single-stick rig, the typical sloop except in her case, was just beginning to rival the schooner in popularity, and by 1876 the sloop of from 45 to 70ft. waterline was quite as distinctive a feature of American yachting as the large schooner. The sloop Gracie was built as far back as 1868, but the class grew with Vision, 1872; Arrow, 1874; Fanny and Hildegard, 1876.

In this latter year occurred the third international race for the America Cup, with the Canadian challenger, Countess of Dufferin, schooner, notable chiefly as marking the last contest of the schooners for this great trophy and the growing popularity among racing men of the sloop of moderate size.

The year 1878 is notable as marking the beginning of a new era in yachting. As a mere incident, but important in its way, may be mentioned the building of the fine keel cruising schooner, designed for Lloyd Phoenix, Esq., by A. Cary Smith, a vessel that, still afloat and in service, has made a notable reputation in home and foreign waters. It was in 1878 that attention of American yachtsmen was first drawn to the British cutter through the exertions of a small band of "cutter cranks," as they were soon named in derision. The plain comments of these gentlemen upon the prominent defects of the American yacht of the day, and upon the current methods in designing, building, sail making and general racing practice, provoked a battle that was fought long and bitterly.

It cannot be said of the FOREST AND STREAM that in its earliest years it dealt with yachting in a much more vigorous way than its contemporaries; but just about the time that the cutter and sloop discussion came up the editorial force was strengthened by the addition of its editorial force was strengthened by the addition of the late C. P. Kunhardt. A man of original ideas and strong convictions, a ready writer and keen disputant, a draftsman of exceptional ability, and devoted to yachting above all else, he was, as events proved, the man for the occasion. The mere suggestion that the yachts of the day, Columbia, Madeline, Gracie and Fanny, were other than perfect was at first met with derision from all American journals, and when it came to a definite arraignment on the part of the first "cutter cranks" of the proportions, ballasting, construction and canvassing of American yachts, derision changed to positive abuse, both from the press and from yachtsmen. The FOREST AND STREAM was the first and for years the only American journal to take up the dispute purely on its technical merits and to carry on the discussion on a strictly technical basis as a matter of serious scientific investigation. When the first general charges of the inefficiency of the skimming dish type took the form of a discussion of definite principles of design, Mr. Kunhardt's technical education and knowledge of naval architecture and designing placed him at an overwhelming advantage over all of his opponents, the ablest of them failing to reply in kind and being forced to resort to mere epithet and ridicule—a style of warfare not entirely unknown in yachting journalism at the present day.

The question which presented itself at the time was a serious one for an American journal devoted to the advancement of American sport, involving nothing less than the severe and almost wholesale condemnation of nearly all the details of a sport in which the nation had won international honors. After a careful survey of the entire situation and the weighing of the many important technical points involved, it was determined that the future policy of the FOREST AND STREAM should be to approve or condemn solely by the standards of the recognized truths of naval architecture and the broad principles of fair play, as established by the best usage of yachtsmen and other sportsmen.

Starting on this basis, Mr. Kunhardt advocated a system of procedure which involved a complete revolution in American yachting methods. First came the recognition of the educated naval architect and specialist in yacht designing, working from exact drawings and calculations, in place of the builder with his rough block model. In place of the work of creating the design or model, which he had previously monopolized, the builder was left to concentrate his efforts upon the one subject of construction, changing his methods to produce a stronger and lighter as well as a more durable craft. In the details of design a material lessening of the beam and increase of draft were advocated, with the adoption of the keel in place of the centerboard wherever the draft of water permitted, and above all the abandonment of inside ballast, slag, stones and scrap, in favor of the lead keel. The necessity for safety, seaworthiness, and absolute immunity from capsizing was insisted upon above all other qualities of a yacht. The rig came in for quite as general a criticism as the hull, a smaller and more compact sail plan was advocated, with shorter, lower mast, longer topmast fitted to house, longer gaff, pole bowsprit in place of the built-in stick of timber with its toy jibboom, neater and stronger ironwork, stronger blocks and rigging, the double headrig of staysail and jib in place of one big jib, heavier canvas, and greater skill in making and care in bending and handling sails.

The proposed changes were not limited to the yacht alone; better and in particular uniform rules for measurement, classification and sailing were called for. Corinthian handling was earnestly advocated, with the establishment of the English method of building strictly to class, without time allowance, and of starting races from the gun instead of the then common interval of 15 minutes in which to cross the line. Though then very far from its realization, the scheme of a national union of yachtsmen, already formulated by a few, found its most earnest advocate in the *FOREST AND STREAM*.

All of these things are now so much matters of course that the younger generation of yachtsmen will find it difficult to realize that anything different ever existed, or that the great majority of American yachtsmen were bitterly opposed to them; but such, however, was the case for many years—the *FOREST AND STREAM* standing alone among the journals of the day, both sporting and daily, in its advocacy of them.

The first practical application of the cutter idea, after *Vindex* and her sister, the wide cutter *Volante*, designed by Mr. Center in 1877, was in 1878, when Mr. James Stillman, a well-known New York yachtsman, built from the designs of John Harvey, the English designer, the 10-ton cutter *Muriel*; a yacht whose extreme proportions, of narrow beam and great draft, rivaled in inverse ratio the excessive beam and limited draft of the American sloop. In the fall of 1879 the keel was laid for what proved a famous craft, the sloop *Mischief*. Designed by Mr. A. Cary Smith for Mr. J. R. Busk, of New York, she was a centerboard sloop, but in many important respects an improvement on the existing yachts of her class, and a convincing argument of the truth of the new ideas. With beam reduced and draft increased to a moderate degree, she showed a marked advance in form, more displacement, a fuller and abler section, less hollow to the forward waterlines, and less of a hard knuckle in the quarter, with a higher freeboard and straighter sheerline. Her hull was of iron, and though the rig was distinctively of the sloop type, it included many improved details, both on proportion and construction.

The success of this "compromise," as the term then ran, was clinched in her second season by her selection, after a series of trial races, as the representative of the New York Y. C. in the defense of the America Cup for the fourth time, the first race for the single-stick rig and the first in which the defender consented to meet the challenger on equal terms so far as the selection of one defending yacht to sail the entire series of races was concerned. Following her victory over the older wooden sloops in the trial races, *Mischief* easily defeated the challenger, the sloop *Atalanta*, of Canada.

In 1880 Mr. M. Roosevelt Schuyler, one of the leaders of the cutter movement, had built from his own design the little cutter *Yolande*, of five tons, and in 1881 the revolt against the old order of things assumed serious proportions. In the fall of that year Mr. James Coates, a prominent member of the yacht racing fraternity of the Clyde, sent over on the deck of an Anchor Liner the 10-ton cutter *Madge*, designed by Mr. Watson, the crack of her class. She came out in charge of her skipper, Capt. Duncan, who practically had entire charge of her races, in the absence of her owner. The result of seven races at New York and Newport, against the three best American sloops that could be selected (six wins for *Madge*) placed the sloop and cutter controversy on an entirely new basis.

The same year witnessed the launching of the first large American cutter, *Oriva*, designed by Mr. Harvey for the late C. Smith Lee. Not only was she narrow, deep and fast, but her Corinthian owner disdained the services of professional skipper and crew, and steered her himself, with a crew of amateurs picked from the Seawanhaka-Corinthian Y. C. The yacht and her crew soon made a name for themselves in numerous races against the centerboard sloops, even when the latter were manned by picked professional crews. Following *Oriva*, in 1882, came *Bedouin* and *Wenonah*, both designed by Mr. Harvey and built by Piepgrass, for Mr. Archibald Rogers, a young Corinthian, and Mr. Stillman, who had built *Muriel*.

The years 1882-3 and 4 were notable ones, marked by many hard fights between cutter and sloop, the former represented by the yachts already mentioned, of moderate beam, and the imported cutters *Madge*, *Maggie*, *Stranger*, *Ulidia* and others, of extreme narrow beam, as well as by various "compromise" yachts, both keel and centerboard. The cause of the centerboard sloop was upheld by *Gracie*, *Fanny*, *Hildegard*, *Vision*, *Fanita*, *Madcap* and others, all of them making open confessions of failure from time to time by alterations and even entire rebuilding, adopting the lead keel, long overhangs, higher freeboard, and cutter rig, until all but the name of sloop had disappeared.

We have seen how the years from 1868 to 1878 brought little change and no advancement to American yachting, and how a period of controversy and experiment succeeded it. This period ended with 1884, giving

way to a new era of prosperity and improvement on lines determined by the long battle of the sloop and cutter.

In the fall of 1884 there came another challenge from England, after an interval of thirteen years, for the America Cup; the challenger, Sir Richard Sutton, being the owner of the 80-ton cutter *Genesta*, designed by Mr. J. Beavor Webb, then at the end of her first season, a very successful one. The victories of *Bedouin* and *Oriva* had brought doubts to the most faithful of the sloop men as to the ability of the best of the 70ft. sloops to meet a cutter of anything like their own size, and it was plainly evident that they had no possible chance against a much larger vessel, such as *Genesta*. It was evident that a suitable defender could only be had by building, and steps were promptly taken to that end. How much had been accomplished in one direction at least by the *FOREST AND STREAM* and the "cutter cranks" is shown by the fact that while in 1881 the New York Y. C. was well content to entrust the production of a Cup defender to a builder of the old school, in 1884 it turned, as a matter of course, and with no practical opposition, to the designer, without regard as to who should finally build the yacht. How much this one incident meant can only be understood by those who have heard, as we have, the personal abuse freely showered by prominent yachtsmen of the time upon yacht designers as a class, and all who believed in them.

The great question involved in the designing of a defender was, of course, that of type; the challenger was an extreme cutter, of known speed and of the most recent composite construction. On the one hand, national pride forbade that she should be met by a keel boat, or anything approaching her own type; and on the other, even those who still owned and swore by the American centerboard sloop knew well the danger of risking the defense of the Cup to that type.

The result, so far as New York was concerned, was a compromise on the side of the sloop, an enlarged *Mischief*, a steel hull, but with no outside keel, the lead ballast being inside the skin. While the rig was a compromise, including double headsails and other details of the cutter rig, its proportions, with long lower mast and short topmast and gaff, were essentially those of the American sloop.

Another competitor for international as well as national honors appeared from an unlooked for quarter. The central point of American yachting has always been New York, its birthplace and the home of the great yachts of the early days, as well as of later years. At the same time it is a question whether there has not been more of the true yachting spirit, though displaying itself less prominently in the construction of very large yachts, about Boston and Massachusetts Bay. This much is certain, that the East has always produced a deeper, stauncher and abler type of yacht, even in the centerboard classes; that from the first Corinthian sailing and cruising has been more popular about Boston than about New York in proportion to the size of the two cities; and that, as a class, no bolder or abler yachtsmen are to be found anywhere than those who cruise and race between Cape Cod and Cape Ann. While the skimming dish type prevailed, even in these waters, from the earliest times the centerboard boats were deeper and abler than those of New York and Long Island Sound, and in addition there were not a few keel yachts. Though unknown about New York and in other parts of the country, even on the Great Lakes, the keel type was distinctly in evidence about Boston at the time of the first agitation of the cutter question, and when the building of keel boats began in earnest they increased far more rapidly in the East than about New York.

When some of the leaders of Eastern yachting, headed by the late Edward Burgess and Gen. C. J. Paine, determined to build a large yacht to compete with New York for national honors in the trial races, they approached the same problem from a different position. They were less positively committed to the centerboard sloop as a matter of national pride, they were more thoroughly conversant with the advantages of depth and low ballast; and the designer was accorded far more freedom of choice in the determination of type. The result was *Puritan*, a centerboard cutter, and distinctly a cutter, although she embodied three important principles of the sloop—large beam, the centerboard, and the laced mainsail. Her general form, her appearance, her heavy and comparatively deep outside keel of lead, the proportions of her rig, with its relative lengths of lower mast, topmast and gaff, its round, straight bowsprit, staysail and jib and general mechanical details, all testified at once to their British origin and to the technical knowledge and broad liberal spirit of progress of the men who built her.

The story of *Puritan* and her successors, also designed by Mr. Burgess and owned by Gen. Paine, needs only a brief mention, it is too well known to all yachtsmen. She first defeated the New York boat *Priscilla*, then the British challenger *Genesta*; the next year a larger sister, *Mayflower*, defeated *Galatea*, practically a larger *Genesta*; and a year later a third Burgess boat, *Volunteer*, defeated the Scotch *Thistle*. This latter craft was a wide cutter, the British designers, after the victory of *Puritan* and *Mayflower*, having abandoned the old tonnage rule and the extreme narrow beam which it compelled, and adopted a length and sail area rule with no direct tax on beam. *Thistle*, the first yacht built under the new rule, was considerably wider than the old cutters, but with no more draft, and failed through the inefficiency of her lateral plane, she having no centerboard and a comparatively shoal keel.

The results of this grand series of races were of incalculable value on both sides of the Atlantic; on this side they not only brought convincing and indisputable proof, even to the most obstinate of the older yachtsmen, of the defects of the shoal sloop, and the value of correct principles and a knowledge of naval architecture, with the recognition of the yacht designer as a necessity; but they made it possible to adopt indirectly through *Puritan* and *Mayflower*, instead of directly through such British yachts as *Madge* and *Bedouin*, the deep hull, the lead keel, the bold and handsome sheerplan, the cutter rig, and a hundred details of design and construction unknown in the days of *Arrow*, *Gracie* and

Vision. On the other hand, the British yachtsman was freed from the evil influence of a rule that, in the first place leading to an excellent type of yacht through the positive premium on depth and low ballast, had finally compelled an extreme of narrow beam that had far passed a reasonable limit in racing yachts, the result being a type of craft which sailed on her side, at a great angle, at a loss of comfort and speed.

The question of which side gave up the most and which gained the most has always been disputed by American yachtsmen, who love to point to *Puritan* as an original conception of Mr. Burgess, properly loved and revered by them, her remote origin, if she had any outside of his mind, being various imaginary American yachts with iron keels, of which no definite records exist. Looking over the field now, at a long interval after the hard fighting, we are still opposed to this view. The gain to British yachts has been in two directions, speed and comfort; the yachts built between 1888 and 1893, or from *Yarana* to *Britannia*, were faster through their improved proportions, largely the added beam, their laced cotton sails were better than the old loose-footed hemp sails, and with added buoyancy and stability they were drier and more comfortable. The gain to America was far greater, both in degree and extent; in the first place the fleet was made absolutely safe from capsize, a danger that of old faced every yacht, from the great *Mohawk* down to the smallest catboat. The increase of depth of body and the added lead keel, both taken directly from the British cutter, removed one constant source of fatal catastrophes. Apart from the question of capsizing, the fleet was vastly improved in sea-going qualities, in staunchness of construction, and in efficiency of rig. The gain in this respect was a most important one. The rig of the old sloop was essentially a sail boat rig, whatever its dimensions, weak, lubberly, faulty in its mechanical details, and dangerous in the extreme. The rig of the old cutter was that of a ship, heavy and complicated, it is true, but at the same time correct in principle and complete in its mechanical details. First adopted in its entirety in this country, it was very soon improved upon in various details, the housing of the bowsprit was abandoned as of very little utility compared with the complicated gear necessary and the accompanying strain of the bobstay; some of the purchases and other details of the full cutter rig were discarded as involving useless weight and complication. In the course of international competition a great many minor improvements have been made on both sides in the arrangements and quality of details of rig, blocks, ironwork, wire, turnbuckles and spars, the American designers and manufacturers being responsible for the greater part of this work, especially in the later Cup defenders. In the very important detail of sails, the British were ahead at the time of the first invasion of the cutters, both in material and making. As the result of the *Puritan-Genesta* contests, a material improvement was made in this country in the production of better cotton duck, and the making of better sails; the superiority soon being accorded to this side. After a time the universal custom of a loose-footed mainsail was abandoned by the British in favor of the American laced mainsail. For some years past the two nations have kept closely together in the twin arts of weaving and cutting canvas.

We have pointed out that *Puritan's* claims as a representative of American ideas rested mainly on three points, the centerboard, the beam and the laced mainsail. The first of these lay close to the root of the sloop-cutter controversy, in fact, it was the one predominating point. It was not settled in any way by the races of 1885-6-7; there were too many other questions involved, but in 1888 it was put to a final test by the Scotch 40-footer *Minerva*, a keel cutter of moderate beam. Her many races against the best of the modern centerboard class, corroborated by the additional evidence of the American keel boats in the same class, not to mention the extreme narrow cutter *Clara* in the 53ft. class, finally settled this question in favor of the keel. So conclusive were these results that the later victory of the keel cutter *Defender* was superfluous as a proof of the superiority of the keel type to the centerboard in point of speed.

The triple series of races for the America Cup brought up another serious question, in which *FOREST AND STREAM* was again called upon to take the unpopular side. The defeat of *Thistle* in 1887 was followed on the same day by a new challenge from the Royal Clyde Y. C. for the Cup, naming 70ft. l.w.l. as the size preferred for the contestants. The great success of the 53ft. cutter *Clara* in this country at the time led to some doubt on the part of American yachtsmen as to the probable success of the *Puritan* type as opposed to an improved *Clara* of 70ft. l.w.l. Immediately on the receipt of the notice of challenge steps were taken to alter the terms of the deed of gift on which the Cup was held by the New York Y. C. One such alteration had already been made after the *Mischief-Atalanta* contest of 1881, barring yachts from the Canadian shores of the Great Lakes, but otherwise differing but slightly from the original terms laid down by the donors of the Cup. The work of making another new deed was deputed to a special committee, and was carried on with all possible secrecy until the document was framed and finally made as nearly legal and binding as the circumstances admitted. Not until this was done was it submitted to the members of the club and the public.

The whole matter brought up some very important questions, the right of one of five original donors to alter the original terms of the trust, the propriety of a temporary custodian of the trust making new conditions under the nominal plea of returning the Cup to the surviving donor, the haste and secrecy with which the new deed was made, the legality of action in the name of the club without a formal vote of its members, and finally the specific nature of the changes from the original terms of trust. These questions, which involved the good name of American yachtsmen, were brought prominently to the front by the many circumstances attending the framing of the new deed of gift in the face of a formal notice of challenge, and of the astounding nature of the provisions of the deed, demanding the dimensions of the challenger nearly a year in advance, with no assurance in return of the size of the defender.

The action of the New York Y. C., generally con-

demned by foreign yachtsmen, was the question of the hour in the yachting world, and yet to discuss it fairly and thoroughly on the triple basis of law, equity and the accepted usage of sportsmen meant nothing less than the condemnation of the club and the men who had for three successive years won honorable victories for American yachting. As previously in the case of the sloop and cutter, in 1878, the *FOREST AND STREAM* was compelled to decide a serious question as to its course. Apart from a few strong criticisms of the new deed when it first appeared, the American dailies and periodicals which had devoted pages to the reports of the victory of Volunteer showed no disposition to discuss this difficult question, ignoring all foreign criticism of the new deed. As a matter of principle, however, such a course was impossible, and, as before, the *FOREST AND STREAM* decided upon a bold and unprejudiced discussion of the whole case on its technical merits. This it began the week that the new deed was made public, and it has continued ever since. Its statements of fact have never been disproved, its arguments have never been disputed. It has been abused and vilified without stint by those who could not answer its objections and who, through bitter national prejudice, fail to realize that the underlying principles of science, of law and of fair play know of no political boundaries. On the other hand, its course has been justified by the attempts of the makers of the new deed to repudiate, to interpret, and to nullify the objectionable provisions.

The period from 1884 to 1892 was an important and interesting one, an era of material progress in design and construction, of spirited racing, and of extended development of yachting throughout the United States and Canada. It includes the first cutters, Bedouin and her fellows, the "compromise" sloops Valkyr and Thetis, the modern schooners Sachem, Grayling, Sea Fox, Marguerite, Iroquois, Yampa, the fleet of big single-stick Cup defenders, the smaller Gloriana, Wasp, Clara, Minerva, the 40ft. and 30ft. classes; and numerous exciting international contests for the America Cup and in local racing generally. Following it, with its fleet of fast, able and roomy yachts, of good construction and fitted for other service as well as racing, came the era of the fin-keel and the skimming dish racing machines. This period, with Vigilant, Defender, Wenonah, Niagara, Onawa, Spruce, Ethelwynn, El Heirie and the two Glencairns, has not yet passed by, it is a matter of to-day, and familiar to the youngest yachtsman, so we shall not tarry over it; while America has been almost uniformly successful in the international contests, through Vigilant, Defender, Niagara and Ethelwynn, both nations have kept closely together in the improvement of the racing yacht and the development of racing, and the conditions of the sport are much the same to-day in England and America.

Important as they are, our space does not permit the discussion of these conditions at present, it is sufficient to say that yachting is suffering from that extreme development which is found at times in all sports. Within this period so much has been done to develop the highest absolute speed in each class, and to perfect the racing machine, that the entire nature of the sport has been changed and much of its charm eliminated. The racing machine has attained such a close approach to absolute perfection as such that it is worthless for anything but racing, the average yachtsman finds it impossible to live on it, and even the most enthusiastic racing men cannot or will not attempt to live up to it. The cost of construction and running, whether in a defender of 15ft., racing measurement or an El Heirie of but 15ft., is so inordinately out of proportion to the pleasure derived from a victory, to say nothing of the disappointment which is the inevitable lot of all but one contestant, the yacht is so worthless, either for further racing after the main contests are concluded, or for conversion to a cruiser, that very few are found to try a second venture in the construction of an up-to-date machine, either for special international matches or for the usual races of the season.

We have seen that the period from 1885 to 1891 was one of progress and prosperity in yachting, while that from 1891 to 1898, in which the extreme type of racing machine such as Defender displaced the all-round yacht such as Puritan, has resulted in a cessation of yacht racing, and a general stagnation in yachting in all but the smaller classes. It is evident that yachting is now entering on a new period of general and salutary restrictions on design and construction. The first step to this end was the establishment several years ago in England of various "restricted classes," each under stringent limitations, in many cases every yacht in a class being built from one standard design, all subsequent alterations of ballast, hull, rig, etc., being prohibited. Even where the one-design is not followed, some liberty being left to individual designers, the leading features of the class, dimensions, ballast, general construction, etc., are strictly guarded, as in the Boston knockabout, one of the most successful of these classes on either side of the ocean. As general racing under the established formula has decreased through the introduction of racing machines, the restricted classes have increased, first in England, but of late with great rapidity in this country, until we find in the fleet built during the past winter by Mr. Stearns, at Marblehead, for four clubs, fifty yachts to practically one design.

The result of the establishment of local "restricted classes" is already visible in connection with general yachting legislation. Two years ago the British Y. R. A. adopted its present rule, with the avowed intention of discouraging the extreme racing machine and promoting the building and racing of yachts of greater displacement and capable of a wider range of use. The Seawanhaka rule of length and sail area was adopted in 1883, the *FOREST AND STREAM* standing alone at the time in its advocacy of the proposal. This rule has since come into universal use in the United States and Canada, and up to the introduction of the fin-keel its results were most satisfactory. It has, however, failed entirely to meet the most recent advances of racing design, and there is now an imperative necessity for a new formula. What this will be no one can say, but there is no doubt that it will be strongly restrictive in its nature, encouraging as far as possible a type of racing

yacht with the general characteristics of the fleet of 1885 to 1891, of strong and durable construction, reasonable living accommodation, and sea-going qualities. Even with a perfect rule of this kind, which is a good deal to expect, it will be a long time before yacht racing, in other than the smaller classes, is restored to the prosperous condition of the days of Puritan, Mayflower, Minerva and Gloriana.

The present situation in American yachting presents two different and contrary views, accordingly as it is examined from the standpoint of racing and the large yachts, or of the sport in general. From the first position, and remembering the fleets and triumphs of the past, the outlook is most discouraging; there has been for several years no building of other than small yachts, and no disposition to race the existing boats. Prizes that are valuable both from association and intrinsically, like the Goelet cup, the Larchmont schooner cup, and the Commodore's prizes of the Seawanhaka-Corinthian Y. C., are awarded for sail-overs or left without contest in the silversmith's vaults. Special efforts to stimulate racing by means of handicaps, extra prizes and novel races have all uniformly failed. This is true not only of the classes in which the racing machines are supreme, but in special classes from which they are excluded in the interests of the older and outclassed boats. The immediate conditions of the present season are of course exceptional, the war has disturbed yachting in common with more serious affairs, but the outlook at the conclusion of last season and through the winter, before thought of war arose, showed that nothing was to be hoped for as an improvement on 1896 and '97.

Looking at the other side of the picture, yachting as a national sport was never more prosperous than at the present time; it is more generally popular than ever before, there are more yachtsmen, more yachts, more clubs, and the numbers are growing rapidly. Races are sailed and cruises made from Puget Sound down the Pacific Coast, and from the Gulf of Mexico up to Halifax, while the inland waters, the Great Lakes and the innumerable small lakes and rivers are thickly dotted with the sails of the American pleasure fleet—to say nothing of their being also scented with the fragrant vapor of the naphtha launch. While individually the yacht clubs are numerous and strong, collectively they have recently taken a great step forward in the organization of local associations and a national union. As a result, a wonderful improvement has been made in the general revision of racing rules, the establishment of a higher standard of racing usage—quite as important in maintaining the purity of the sport as the printed rules of racing—and a general harmony of action in the advancement of yachting and yacht racing. Narrow and local interests have largely given way to work on a broader and more generous basis in the advancement of yachting at large rather than of one club at the expense of another.

As opposed to the dullness and lethargy, that distinguishes yacht racing in those points which were once the marked centers of the sport, there is among the clubs at large a general interest in racing; apart from the immediate effects of the war, there has been for several years an increase in the number of clubs, the number of racing boats, and of races sailed. One important factor in the smaller classes is the Seawanhaka international challenge cup, established in 1895, and made famous by the Spruce-Ethelwynn races of that year; from this as a starting point, a very large fleet of small racers has grown up throughout the country, as at Montreal, New Orleans, on the Massachusetts coast, and on the small Western lakes.

The machinery of yachting and yacht racing is to-day more perfect than ever in the past, and is extended over a vastly greater area; what is needed is something to start it into motion, some revival of the old racing spirit which was the one conspicuous feature of the days when the yachts themselves, as well as the rules and all accessories of yachting, were but crude and imperfect. What this moving power may be we cannot venture to predict, it may come through an international race or through the final advent of that long-looked-for period of business prosperity. The one thing to provide for is that when it arrives there shall be in general operation throughout the country a good rule of measurement, under which a new fleet will be built.

Looking back for a quarter century, there are innumerable details of yachting progress we should like to note if space allowed: the wonderful growth of such young clubs as the Larchmont and the Corinthian, of Marblehead; the increased conveniences and luxuries of yachting, such as the naphtha launch and electricity, the latter not only lighting the yacht in saloons, engine room and on deck, but also driving owner's gig; the conveniences in the form of numerous well-equipped club houses extending their hospitality to yachts of other clubs, and of such a system of club stations as has been established by the New York Y. C. With these has come a wonderful improvement in mere mechanical appliances, such fittings and appurtenances as were once obtained with difficulty when made to order can now be had instantly, of improved construction and at less cost, of any supply house. This is especially the case as applied to the smaller yachts; where there once was nothing suitable in the way of blocks and fittings, now every detail and fitting can be had, of the proper size and proportions and the most improved material.

In yachting literature of all kinds, the yachtsman of to-day is far ahead of the old fellow of 1873. In place of Maret's book and Bowditch, he has now in his club library standard works on design, construction, navigation, with cruises in all waters, from the North Pole to the southern seas, made in yachts and written by yachtsmen. Added to this, he has technical journals of a high class in English, French, German and Italian, all treating of his favorite sport.

In the way of a purely exterior accessory to yachting, there is nothing that has done so much as the advance of photography. In 1873 a photo of a yacht was practically unknown, now this branch of the art is a specialty with the most expert photographers, as offering one of the most inviting fields for artistic success; while on the other hand the yachtsman himself carries his smaller camera for a permanent record of exciting races and pleasant experiences. To photo-

graphy and the dry plate the yachting of to-day owes much of its popularity and success; it is the camera, more than any other agency, that has introduced the yacht to remote localities, and has trained the eye of the amateur yachtsman to an appreciation of the highest standards of beauty of form as well as of mechanical details of hull and rig. By its aid the complete details of all important races are accessible to those who are unable to witness them in person, and it gives a record of actual movements and positions that offers unimpeachable evidence in the case of a dispute.

It is with no small degree of pride and pleasure that the *FOREST AND STREAM* surveys the yachting of to-day as compared with that of 1873, the fleets of handsome craft, shipshape in form and perfect in all mechanical details, each class starting with the gun, and the race being over when the first boat crosses the line, without waiting until next day or next week for the calculation of time allowance and the announcement of the result. Almost every detail of the yachts and the racing, so different from those of twenty-five years ago, the leading points of design, construction and rig, the building to class, the one-gun start, the absence of time allowance, the open race, was first advocated in this journal and for years in it alone. It was the *FOREST AND STREAM* that first urged the need of material improvements in American yachting, and pointed out the specific lines on which such improvements were possible, and it was the *FOREST AND STREAM* that of late years has sought to prevent the evident danger of over-development from which yachting now suffers, and advocated the timely adoption of restrictions upon extremes of design and construction. The *FOREST AND STREAM* was the first to point out twenty years ago the dangers of the extreme shallow type, and to advocate a material increase of depth, and draft; at the same time it was the first, within a few years past, to protest against that abuse of draft and low ballast which produces the fin-keel racing machine, and prohibits the yacht of moderate draft and displacement.

It has been the invariable policy of this paper to deal promptly and positively with every matter which comes up in yachting, forming its own opinion on the merits of the case, and expressing that opinion in terms plain enough to be unmistakable. The record of these opinions is on file in the fifty volumes of the quarter century, and there is very little in it that we would change if we could. While it would have been easier and safer to have waited for a time to make certain that a new thing would be successful and popular before approving of it, we have preferred the other course, of putting ourselves boldly upon record as soon as all the essential facts were known, leaving it to the future to vindicate the correctness of our judgment. It has sometimes been a matter of years, as in the question of the value of the lead keel, from 1878 until the success of Puritan in 1885, before a popular verdict has endorsed our first judgment, but in few cases indeed out of hundreds has that verdict failed. Looking back over the long record, we find but two important points on which our judgment has been proved to be in error.

The first of these is that of narrow beam; there was a time when, in our opinion, there was an advantage in the extreme narrow beam of the cutters of 1875 to 1885. This opinion was based upon a lively appreciation of the evils arising from the abuse of great beam in American yachts, and upon the numerous demonstrations of the good qualities of the narrow cutters, their safety, speed, sea-going qualities, accommodation and appearance, as compared to the sloops of the day. We have to admit that in a discussion involving a large number of important issues we placed an altogether false value upon one, narrow beam, as a material element of advantage, instead of the reverse, as was afterward proved by the cutters of moderate beam. It may be urged that our knowledge of naval architecture in the abstract should have prevented this mistake, but at this time the cutters, in spite of their narrow beam, were winning new victories each year from the wide sloops; and we were, too, in pretty good company on both sides of the Atlantic in attributing a part of this success to the lack of beam. Of all the innumerable other points relating to models, methods and yachting in general, which were in controversy for over ten years, there is no important one on which we would change our original position.

The second matter is of quite a different nature; it will be remembered that in the course of the discussion of the new deed of gift the *FOREST AND STREAM*, about 1890, made the assertion that no British yachtsman would challenge for the America Cup under the new deed. In this, as events proved, we were wrong, as the Cup was challenged for and raced for twice, in 1893-5. In making this assertion, after a careful consideration of the case, we had in mind the explicit statement of the Royal Yacht Squadron that it would back no challenge under the new deed, and we had canvassed thoroughly the list of British yachtsmen whose prominence and position fitted them to follow Sir Richard Sutton and Lieut. Henn. As events have proved, there was not then or after one of this class willing to recognize the new deed; but there was a novice, then practically unknown in yachting, who was at once so careless of the question of principle involved as to waive it entirely, so selfish in his desire for fame as a challenger as to compromise his fellow yachtsmen, and, unfortunately, so powerful in his influence as to be able to compel even the Royal Yacht Squadron to humble itself before the New York Y. C.

What with explanations, interpretations and special stipulations, the question of the exact terms of the international races of 1893-5 has never been settled, but without any appearance of quibbling whether the final terms were or were not literally those of the new deed, we are quite willing to admit that in this case the *FOREST AND STREAM* was wrong and the New York Y. C. right; it did indeed obtain a challenge, in fact two of them, from a "British yachtsman," with results only too well known.

It is quite evident that our course in the past has been satisfactory to our readers, that is, to the leading yachtsmen of all countries, as the *FOREST AND STREAM* has long since won the respect and confidence of foreign as well as American yachtsmen by its bold and open discussion of all questions, and its unprejudiced reports of actual facts. This being the case, we can promise nothing more than a continuance of it for the future.

W. P. STEPHENS.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

Fixtures.

June 23.—Corry, Pa.—No. 2 tournament of the Corry Gun Club. A. P. Pope, Sec'y.

June 25.—Long Branch, N. J.—Opening shoot of Hollywood grounds. Live-bird shooting every Saturday afterward.

June 27.—July 3.—Milwaukee, Wis.—Tournament of Milwaukee Gun Club, carnival week. Live birds and targets. \$1,000 added money.

June 30.—Auburn, Me.—First annual tournament of the Auburn Gun Club. L. A. Barker, Sec'y.

June 30-July 1.—Milwaukee, Wis.—National Gun Club's tournament.

July 1.—Sherbrooke, Canada.—Grand annual tournament. Targets. Regular sweeps, variety and merchandise. C. H. Foss, Sec'y.

July 3-4.—Davenport, Ia.—The West End Gun Club's amateur tournament on targets. L. Haneman, Sec'y.

July 4.—Brockton, Mass.—All-day shoot of the Brockton Gun Club. Special prizes.

July 4.—Pawling, N. Y.—All-day shoot of the Pawling Rod and Gun Club, at targets. Morton Haynes, Sec'y.

July 4.—Centredale, R. I.—Fourth of July shoot of the Centredale Gun Club. N. F. Reiner, Sec'y.

July 4.—Geneseo, N. Y.—Geneseo Rod and Gun Club's annual shoot. W. E. Lowe, Sec'y.

July 4.—Louisville, Ky.—The Kentucky Gun Club's fifth annual championship shoot. Emile Pragoff, Sec'y.

July 4-5.—St. Louis, Mo.—Open shoot, \$100 added; 145 targets per day. Dupont Park.

July 4-6.—Newport News, Va.—First annual tournament of the Chesapeake Gun Club. Geo. B. James, Sec'y.

July 6-7.—Meadville, Pa.—Tournament of the Interstate Association, under the auspices of the Meadville Gun Club. Chas. Stein, Sec'y.

July 7-9.—Denver, Colo.—First annual tournament of the Overland Association. Open to all. Inanimate targets. Added money. John W. Kane, Manager.

July 13.—Albany, N. Y.—Forester Gun Club's annual tournament; targets. H. H. Valentine, Manager.

July 15.—Poughkeepsie, N. Y.—Trophy shoot, Hudson River Trap-Shooters' League, on the grounds of the Poughkeepsie Gun Club. J. B. Rogers, Manager.

July 14-15.—Bedford, Ind.—Tournament of Bedford Rod and Gun Club.

July 19-21.—Palmyra, Mo.—Eight annual tournament of the Missouri Amateur Shooting Association, under the management of the Palmyra Gun Club. Targets and live birds. Added money announced later. W. N. Bates, Sec'y.

July 23.—Ogden, Ill.—Ogden Gun Club's third annual tournament for amateurs. Wm. McKinley, Sec'y.

July 26.—Brooklyn, N. Y.—Tournament and clam bake of the Hell Gate Gun Club.

July 26-28.—Little Rock, Ark.—Eighth annual tournament of the Arkansas State Sportsmen's Association. Paul R. Litzke, Sec'y.

July 27-28.—Meriden, Conn.—Tournament of the Interstate Association, under the auspices of the Parker Gun Club. C. S. Howard, Sec'y.

July 29-31.—Milwaukee, Wis.—Milwaukee Gun Club's tournament. S. M. Du Val, Sec'y.

Aug. 3-4.—Worcester, Mass.—Tournament of the Worcester Sportsmen's Club. Targets.

Aug. 11.—Marlborough, N. Y.—Trophy shoot, Hudson River Trap-Shooters' League, on grounds of Marlborough Gun Club. J. B. Rogers, Manager.

Aug. 17-18.—Waterville, Me.—Tournament of the Interstate Association, under the auspices of the Waterville Gun Club. E. T. Wyman, Sec'y.

Aug. 17-18.—Warsaw, Ind.—Lake City Gun Club's tournament. J. S. Campfield, Sec'y.

Aug. 24.—Warwick, N. Y.—Special shoot, Hudson River Trap-Shooters' League, on grounds of Warwick Gun Club. J. B. Rogers, Manager.

Aug. 24-25.—Minneapolis, Minn.—Tournament of the Minneapolis Gun Club. G. J. McGraw, Sec'y.

Aug. 24-27.—Omaha, Neb.—Indian tournament, on grounds of Omaha Gun Club; three days targets; one targets and live birds.

Sept. 6-8.—St. Paul, Minn.—St. Paul Gun Club's twenty-first annual tournament at Minnesota State Fair grounds during fair week. H. C. Lawrence, Sec'y.

Sept. 7-8.—Kingston, N. Y.—Tournament of Hudson River League, on grounds of Kingston Gun Club.

Sept. 7-8.—Haverhill, Mass.—Tournament of the Interstate Association, under the auspices of the Haverhill Gun Club. Geo. F. Stevens, Sec'y.

Oct. 4-6.—Newburgh, N. Y.—West Newburgh Gun and Rifle Association's fall tournament.

Oct. 12-13.—Greensburgh, Ind.—Greensburgh Gun Club's tournament. W. Woodfill, Sec'y.

Cleveland Fifth Annual.

WEDNESDAY, FIRST DAY, JUNE 15.

CLEVELAND, O. June 15.—The fifth annual tournament of the Chamberlain Cartridge & Target Co., of Cleveland, is a pronounced and unmistakable success. The entry to-day showed 102 different guns participating, and an entry of 91 showed in one event in the middle of the day, of which 81 were amateurs and 10 experts. A look down the lines shows a great many faces which are unfamiliar. They are shooters from Amateurdum, such as do not customarily appear when the "gang" is on hand.

The "gang" was the chief subject for deliberation in the plans of the management for this year, the aim of that management being well known to be up with or a little ahead of the tendency of the times. The sentiment grows, especially since the Omaha shoot and its wonderful percentages, that it is nearly time to call a halt on the game as she has been running. Old shooters say that a return to five traps, one man up, is not unlikely. The walk-around has reached its climax at the same time with the paid expert.

At Omaha Jack Fanning shot three days, averaging about 93 per cent., and he tells me he earned \$8.45 in the three days. What an 80 per cent. amateur would have we may figure out at leisure. To-day at Cleveland Vale (Valentine, of Norwalk, O.) shot a 90 per cent. gait and won \$55 and a duck boat himself as an amateur. That is the difference between a modern "open" shoot and a "closed" one, such as that put on the docks by Paul North this year. The truth seems to be that an "open" shoot is the most air-tight "closed" shoot that could be devised, and the closed shoot is really the open one, and the only open one which any middle-class amateur of sound mind, limb and brains ought to think of attending. It was some time ago that the programme for Cleveland shoot was arranged, but it hits in with singular patness in view of late events.

To-day there were eleven different States represented. Ohio and Michigan sent a good quota of course. West Virginia sent Messrs. F. E. Mallory and S. T. Mallory, of Parkersburg; E. O. Bower, of Sistersville; J. F. Mallory, of St. Mary's; Mr. L. E. Mallory, the fourth of the brothers, comes from Bradford, Pa. Ernie Fish is on hand from Eau Claire, Wis., and E. K. Tripp from Indianapolis, with Elmer Neal, of Bloomfield, same State. Mr. G. S. Wride is from Rochester, N. Y.; Mr. J. Nichols from Georgetown, Ky.; Messrs. W. Weidbusch and W. H. Stroh from Scranton and Pittston, Pa., respectively, while Messrs. F. A. and G. Nesbitt came from Wilkes Barre, Pa. All the way from Portland, Me., are Messrs. J. W. Coleman and E. A. Randall. Mr. J. T. Miner, of the Gold Dust Powder Co., comes from Kingsville, Ont. Mechanicsburg, O., sends in one delegation Messrs. D. D. Gross, C. W. Phelps, E. W. Patrick, R. B. Guy, and S. D. Morgan. Ralph Trimble and a few lines of brothers are on from Kentucky; and so it goes. If you will look at the clientele of any other recent shoot, you will hardly observe so wide a section covered. The war horses may all be there, but the plain lamb whose face isn't a household word will be conspicuously at home in the bosom of his family.

A separate stall was provided for the war horses here at Cleveland, where they could cavort around by themselves. As in the past they have partaken abundantly of the substance of the amateur, so now they were asked to contribute thereto. This they did by putting up 25 cents for each event, or \$2 a day, for the benefit of amateur average purses. Ten experts or manufacturers' agents were thus classified as professionals. Messrs. McMurchy, of the Hunter Arms Co.; Jack Fanning, of the Gold Dust Powder; A. G. Courtney, of the Remington gun; W. F. De Wolf, of the Le-fer gun; W. K. Park, of Sporting Life; R. S. Waddell, of the

Hazard powder; W. L. Colville and J. T. Miner, both of the Gold Dust powder; W. R. Crosby, of the Baker gun (?), and Ralph Trimble of the Winchester? Nice men, all of these war horses, and able to display their goods handsomely, but they had to look over the bars and watch Chan. Powers and Denny Upson eating choice corn with the bits out of the bridle. These two swift amateurs and one or two others were willing to take advantage of the privilege offered in the programme of putting up a double entrance and allowing the score to count in the experts' class also, but as no more expressed a willingness to do this the proposition was declared off, and the line between amateur and expert remained drawn sharply as above. Of course, this created no feeling whatever, as the war horses all knew the situation in advance as well as anybody. No average money was up for the amateurs to-day, but high men were: Vale, of Norwalk, O.; Upson, James and Prechtel, of Cleveland, tied on 90 per cent. Second gun was Powers, .892, and in the third class were Fanning and Redwing, .885.

This is the second season of the present club grounds of the Cleveland Gun Club, which are now located on the opposite side of town from the former grounds. The site is at the top of a high and breezy bluff, and the wind had a good swing at the magautrap food. The club house is large and amply commodious, and numbers of tents and a good lunch table pieced out the accommodations. Two scores, and two busily revolving magautraps, kept a load in the air all the time, and by 6 in the evening the programme of 140 targets was run off nicely, in spite of the heavy squad rolls. The cash office was handsomely kept by R. C. McConaghy, brought up from Cincinnati for the purpose. Mr. J. E. Brocklesby was chief score-keeper, and this work also was done perfectly. At night a completely tabulated set of scores was handed to each newspaper man, who was thus allowed to press his virtuous pillow at night instead of sitting up with an electric light playing tag with his ebullient brain. The newspaper man who wouldn't say a good word for a management like that must be a very new one, not acquainted with the past, and not open to a sense of gratitude. In short, Paul North, who was hustler-in-chief, and Mr. Webster, of the Cleveland Target Co., who was hugging himself because he wasn't behind the cash window this year, should be highly complimented for running a shoot as usual up to date, or a little ahead of it, and one plumb full of good sporting principles of fair play and good horse sense.

Following are the scores and percentages of the day:

Events:	1	2	3	4	5	6	7	8	Broke.	Av.
Bluerocks:	15	15	15	15	20	20	20	20

SECOND DAY, THURSDAY, JUNE 16.

The second day is the test. At the "open" shoot, which is the closed shoot to the amateur and the inept, the first day is usually enough to satisfy the man who pays his own freight, and he packs his gun and goes home. At this shoot the second day was good as the first, 99 guns going to the score, and the squad roll of the regulars remaining almost unchanged. It is likely that a large number will shoot through the programme, in which case average money, large and ingeniously compounded as it is, will not make any one man rich. To-day was marked by no special incident except the steadiness of the machine, which was now running like a clock. Even the weather was perfect, and the scores took a big jump upward.

According to the programme the 90 per cent. men of yesterday were required to pay \$4 extra to-day. These men were Upson, Vail, James and Prechtel, and \$16 thus dropped into the amateur till. The 85 per cent. or better men of yesterday were Neal, Bibbee,

Kelsey, Powers, Perry, Fleming

THIRD DAY, FRIDAY, JUNE 17.

The weather continued very favorable and the shoot progressed most smoothly, the events being all run off by 4:30 P. M. The scores improved on the whole. In the amateur class interest still centered in the race between Powers and Upson for first average. On the first day Upson led Powers one bird. On the second Powers beat Upson two birds, and to-day Upson beat Powers by one bird, leaving them tied, Powers having the misfortune to lose 3 birds out of his last 20. As the prize for high average was an elegant diamond watch charm, which Powers did not especially covet and which Upson liked, the latter bought out Powers for \$25, and the tie was not shot down.

In the expert class a new arrival was S. A. Tucker, of the Parker gun, who shot a 90 per cent. gait. Mr. Lefever, of the Lefever Arms Co., who arrived yesterday, shot in only four events to-day. McMurry, of the Hunter Arms Co., only shot in one event, and was then obliged to put up his gun for the day. Mac has lately had a serious operation performed, involving the nasal bones, and had no business shooting at all so soon after this operation. He became afflicted with a violent headache, which kept him up all night, and he was unfit to go to the score at all. This cut down the experts who finished the programme to five men: Fanning, of the Gold Dust; Courtney, of the Remington; R. Trimble, of the Du Pont; Crosby, of the Baker; and Park, of the Sporting Life. Of these, Fanning was easily in the lead, 31 birds ahead of his nearest competitor to finish, and one bird ahead of even the highest amateur score, 393, he breaking 394 out of the 420, .938 per cent., to the .936 per cent. of Powers and Upson. The two latter men shot Parker guns, Fanning an L. C. Smith.

The average money, increased as it had been yesterday by the extra moneys of the 90 per cent. men and the 85 per cent. men of the day last preceding, now began to foot up in very considerable fashion, amounting in all to about \$351. This was divided as per the programme announcement, 30 per cent. to the first fifteen high guns and the balance pro rata among the finishers. The fifteen high guns took down \$6.60 each, and the rest of the amateur finishers received \$6.25 each. Following is a list of those who finished the programme, in both classes, in order of their rank:

Broke, out of 420 shot at, three days:			
Amateurs.			
Powers	393	Gardner	353
Upson	393	Tripp	353
Vail	384	Stroh	352
Rike	382	Hopp	351
Kelsey	377	G Nesbitt	350
J F Mallory	372	Goss	350
F E Mallory	372	L E Mallory	349
Grant	372	Dade	348
Perry	371	Neal	347
Alkire	371	Forrester	346
Red Wing	371	Allen	345
Fish	370	No. 9	343
Phellis	370	Pills	342
Ribbee	369	Randall	342
Spross	369	A Nesbitt	341
Bessemmer	369	Burton	339
S T Mallory	367	Hull	339
James	367	Fleming	338
E Trimble	364	Jenkins	338
Hammond	363	Guess	336
Lane	362	Chic	334
Adolph	360	Byers	333
Dale	360	Coleman	332
Patrick	359	Evans	327
Nichols	355	Kiser	325
McQuaid	354	Hess	304
Fisher	354		
Experts.			
Fanning	394	Courtney	350
Crosby	393	Sporting Life	302
R Trimble	361		

There were something over 33,000 targets thrown during the three days' shoot from the two magautraps. Of course the amateurs were not charged for their targets, only the experts being allowed to pay for the birds. This would be about the same as adding to the purses of the amateurs \$1,000. To this should be added merchandise to the value of \$160, and also expert target money amounting to about \$100, so that the total values put in competition ran up to something like \$1,250, the only deductions made by the management being for the two medals above referred to, the price of these being taken from the purse money of the amateurs and the target money of the experts, the latter not shooting any sweeps. Thus it may be seen that the plan of the tournament was really a very liberal one, and to say the shooters were pleased would be putting it very mildly. A great many thought that the old system of wide open tournaments would hardly again be so popular after the success of this shoot was made fully public. This, however, is a matter which can be better decided by future events. A big open shoot, or a series of them, bringing together the cracks of the entire country, would seem almost a necessity in the natural run of events, but the professionals should not be surprised if they found at such a tournament only a few amateurs of the more skillful grade, whose experience has qualified them to shoot with the best of the land. Of course there were very many shooters at Cleveland shoot who cannot profess so great a skill as that, but who none the less enjoy a tournament such as that just brought to so successful a close.

No one won a great amount of money here, but a great many won a little. For instance, Upson, who tied on first average, won \$22.85 the first day, \$7.60 the second day, \$7.35 the third day, or \$37.80 in all. Take from this the cost of his shells, say \$12, and one has left only about \$25. Out of this he would have been obliged, if he had been a non-resident, to pay his railway fares and hotel bills. I presume Powers made about the same amounts, and while the class moneys paid more or less, as the case might be, it is not likely that any one got rich. Yet a great many got into money who would never have gotten into it, or indeed who never would have shot at all, had this been a wide open shoot.

I talked with nearly all the experts who were barred out of the fold at this shoot, as these were the men most interested in the departure from the open-shoot methods. Jack Fanning said: "I know that some of the boys were sore on this shoot, and would not come to it, and said that it would fall flat, but I am tickled to death with it myself and think it is all right, and you newspaper men can't say too much about it. There are more new men here than I have seen at any shoot for many a month." Harvey McMurry said: "I would have come to this shoot if I had had to come on one leg. It is the biggest rest you ever saw. I don't have to hustle and worry about what I am getting at the cash window. I shoot and lay down my gun and go talk to the men I want to see, and it's like heaven."

Mr. Tucker thought that this shoot was a good one, and was very much pleased to see so many men about, but as to its meaning any new feature in shooting at large or any change of the system of shooting in tournaments, he was not prepared to say.

Mr. Colville (Swiveller) was a very happy man when approached on this point. He said this was just the sort of shoot that manufacturers needed, and so did manufacturers' agents. In this opinion Mr. Miner, of Canada, agreed, and so did Mr. Crosby. Mr. De Wolf, of Chicago, was pleased with the shoot and the way it was conducted, and had no word of criticism.

Mr. Courtney thought that this tournament was all that it claimed to be and more. It was the kind of thing which was falling out of the custom, but it was time that customs changed and that the sport be not ridden to death by paid shooters. Mr. R. Trimble also expressed himself as highly satisfied, though he said he thought that the experts ought not to be asked to pay for their targets, when the amateurs had targets thrown free for them. Uncle Dan Lefever was entirely satisfied with the tournament, and the opportunity it afforded him to get about among people who had not their guns and ammunition supplied them under salary. Mr. Park said he had not covered himself with special glory at the score as an expert during the shoot, but he had enjoyed himself and had made new friends. He was enthusiastic over the tournament and thought we should have more like it. Mr. Waddell, who left earlier in the week after shooting one day, is quoted as having been very much pleased at the success of the shoot.

These opinions, from the class of men most affected by the bar, would seem to indicate that sentiment is by no means against separating the paid men from the unpaid. It would appear that the animus of most of the paid men who object to putting up the bar is that of actual selfishness, and not of a business nature. It may make a paid representative a little more money personally to shoot where he can skin the easy ones, but

it doesn't make his house any more money, and it seems possible that after a while a good many houses will realize that. If all human beings were built alike the humble but soulful onion, which can be skinned continuously, it might be different, but the gentle amateur seems to have lost about as many layers as he can afford these hard times. He is plucky, this American amateur, and he likes to shoot. It is these two facts, and not any real system of justice and fairness, which has brought the trap-shooting of the country into such high development and perfection and extent. The Cleveland management thinks it is time for a change, and it was in the field with a very pretty demonstration of its suggestions.

Following are the scores of to-day:

Events:	1	2	3	4	5	6	7	8	Broke.	Av.

The fifth championship annual shoot of the Kentucky Gun Club will be held at Fountain Ferry Park, Louisville, Ky., on July 4. There are sixteen events on the programme, eight of which are at 15 targets, \$1.50; four at 20 targets, \$2, and two live-bird events. No. 7 is for the gold medal and championship of Kentucky, 50 targets, \$5 entrance. The medal is now held by R. L. Trimble, Covington, Ky. No. 9 is the three-men team championship, 25 targets, \$6 entrance. All target shooting will be class shooting, purses divided 40, 30, 20 and 10 per cent. If the entries are more than fifteen in 20-bird events, then there will be five moneys. Emile Pragoff, secretary.

DRIVERS AND TWISTERS.

Jack Parker's host of friends will rejoice to learn that he has inherited a snug sum of money, and also that he will not lose interest in trap-shooting. By the way, Jack has been shooting a regular war horse gait. At Grand Rapids he won the best average for the first day, general for two days, individual expert State championship medal, the conditions being unknown traps and angles; the Ray County handicap trophy by a score of 24 out of 25. The Detroit team won the State team race and diamond buttons; also the Shooting and Fishing five-men team race. He tied for King's Smokeless handicap trophy with Marks, then withdrew and permitted the latter to win it. Jack uses King's Smokeless powder, Peters cartridges and a Parker gun. He manages a shoot at Richmond, Mich., June 21 and 22; one at Rockwood, Mich., June 23 and 29; one at Windsor, July 1 and 2; one at Sidell, Ill., July 4 and 5.

Owing to the absence of a quorum, no meeting of the New Jersey State Sportsmen's Association was held on June 17. But two delegates appeared, Mr. Ike Terrill, of the South Side Gun Club, of Newark, and Mr. Edward Banks, of the Endeavor Gun Club, of Jersey City. The latter said that he and his club were willing to actively assist any movement toward the encouragement of trap-shooting. The signs seem to indicate that the New Jersey State Sportsmen's Association has relaxed to its former apathetic state, and it would be best for all concerned to there let it rest. There are live trap-shooters enough in New Jersey to form an up-to-date, live association if they would take interest enough in the matter to try for it.

Mr. C. O. Gardner, secretary, writes us as follows: "On June 7 the Bergen County Gun Club elected the following officers for the ensuing year: H. D. Warner, President; G. P. Griffiths, Treasurer; C. O. Gardner, Secretary, and J. R. Banta, Captain. On June 25 the club will hold a regular, monthly shoot. Special event, 25-bird handicap, entrance \$1, for handsome silver cup. Cup to become the person's property of the winner."

The programme of shooting events at Hollywood for 1898 is quite elaborate. Shooting will commence at 11:30 A. M. on Saturdays, and 2 P. M. on Wednesdays. There will be sweepstakes shooting after the advertised events. Ten per cent. will be deducted from sweeps. Price of birds, 50 cents per pair. In private matches, 60 cents. Address Hollywood Gun Club, Hollywood, N. J., for programme and other information.

Mr. H. C. Lawrence, secretary of the St. Paul, Minn., Gun Club, writes us that the club's twenty-first annual tournament will be held on Sept. 6-8 inclusive, on the Minnesota State Fair grounds during Fair Week. The list of average prizes will be larger than usual. The Sergeant system will be used. Targets, 2 cents.

Mr. Gus Greiff has returned from an extended Western trip in the interest of the Troisdorf Powder Co., of which he is manager. We learn, however, that he will soon resume his old position with Messrs. Von Lengerke & Detmold, at 318 Broadway, New York.

In the return eight-men team match between the Endeavor Gun Club and the Dunellen Gun Club, on the grounds of the former at Marion, N. J., June 18, the Endeavors were victorious by a score 154 to 134.

The committee of the Calumet Heights, Ill., Gun Club is arranging a prize shoot for July 4, both live birds and targets. There will also be rifle shooting, fishing and athletic diversions for those who prefer them.

The South Side Gun Club, of Newark, N. J., holds weekly shoots on Saturday afternoons, and extends a cordial invitation to visitors, who are always welcome.

On Saturday next there will be a contest for the Troisdorf cup at the shoot of the Brooklyn Gun Club. A good attendance of shooters is expected.

The Genesee Rod and Gun Club will hold its annual shoot on July 4. The receipts of the shoot will go into the club house fund.

The Baltimore Shooting Association is arranging for a shoot on July 4, with most encouraging signs that it will be a large event.

The next shoot of the Brockton Gun Club, Brockton, Mass., takes place on Saturday of this week.

The Seattle, Wash., Gun Club shoots the Tacoma Gun Club this week for the State cup.

Boston Gun Club.

WELLINGTON, Mass., June 15.—The eighth date of Boston Gun prize series arrived simultaneously with a beautiful day, and nine members hurried out to do it justice, the close proximity of Bunker Hill Day doubtless having due effect on the balance of the crowd. The weather could not possibly be at fault, for it was beautiful and cool, with only occasional zephyrs to mar the shooting conditions.

But one of the nine was equal to the occasion, Mr. Hollis negotiating close on 85 per cent., and placing a 25 in the prize match, which advances him eight points in his grand total, on a par with Spencer for third position. Woodruff now holds first with 127, Horace second, 124. Two shoots remain for improvement.

Events as follows:

Boston.

The New York State Association for the Protection of Fish and Game.

ROCHESTER, N. Y., June 19.—The prospects for a successful shoot of the New York State Association are very flattering. There was a good attendance this afternoon at the old baseball grounds, Riverside Park, where the shoot is to be held, everybody being intent on getting some practice.

The weather was unfavorable, a high wind and some rain squalls playing havoc with the scores. The rain was welcomed gladly, as it laid the sand that blew about everywhere, filling eyes, gun barrels, coat pockets, etc., with a charming disregard of the discomfort it was causing.

Among those present were: Edward Banks, secretary of The American E. C. & Schultze Powder Co.; J. S. Fanning, of the Gold Dust Powder Co.; E. D. Fulford, shooting a Remington gun and Schultze powder; Uncle Ben Catchpole, of Wolcott, N. Y.; A. S. White, Syracuse; Charlie Wagner, Fulton; W. L. Clark, St. Louis; H. M. Levington, Saratoga; F. D. Kelsey and Harry Kirkover, Buffalo; and a whole lot of others, among them Messrs. Hadley, Borst, Hicks, Byer, Wride and President Myers, of the Rochester Club. Harvey McMurchy, of the Hunter Arms Co., and B. H. Norton, of the Hazard Powder Co., were also in town, but did not show up at the grounds. There are also shells at the grounds for a large number of shooters who have not arrived yet, among them Ferd V. Van Dyke, of the Winchester Repeating Arms Co. and W. A. powder; Bill Crosby, Baker gun and E. C. powder; W. F. Parker, of the firm of Parker Bros. All in all, the preliminary day's work promises well, some thirty shooters taking part in the eight 15-target events shot during the afternoon.

Three magatrans are in position. Paul North, fresh from the success of the Cleveland Target Co.'s shoot last week, is on hand, and sees to it that everything works smoothly. Awnings protect the shooters at the score from the rain or sun, while numerous tents are spread in a segment of a circle behind the scores. The cashier's office is roomy and easy of access. In fact the Rochester

Rod and Gun Club has worked hard to make its guests comfortable, and has succeeded admirably to all appearances.

The convention will be held this evening, but the real work of the tournament commences to-morrow (Tuesday). Three days will be devoted to targets, Friday, the fourth day, being set apart for the decision of the Lefever medal contest and the Dean Richmond trophy, the latter a live-bird event, three-men teams, 20 birds per man, \$15 per team, birds extra.

ROCHESTER, N. Y., June 21.—At the meeting of the Association last night officers elected were: President, James J. Reed; Vice-President, Kennedy; Secretary, George J. Schmidt; Treasurer, George E. McArthur; Captain C. S. Burkhardt. The next shoot will be held at Buffalo under the auspices of the Audubon Club. Utica was the other candidate, but lost by a vote of 25 to 20. After earnest debate the old title was retained.

B. WATERS.

ON LONG ISLAND.

BROOKLYN GUN CLUB.

June 16.—The all-day invitation shoot of the Brooklyn Gun Club, held to-day, had ten events on the programme, four of which were at 1-cent targets. Nos. 4, 6 and 9 were prize shoots, with an allowance of misses as breaks; the remainder were sweepstakes. In No. 4 first prize, a silver back brush and comb, was won by Mr. Chase; second prize, a Maine souvenir spoon, was won by Gus Greiff. No. 6 had for first prize a substantial leather shell case; second, 100 loaded shells; third, a silk umbrella. In this event Hopkins was first, Sanders and Remsen divided second, and Chase was third. In No. 9 first prize, the set of gold shirt studs, was won by Cornell; second, a silver fruit spoon, was won by Banks, who was scratch man.

The weather was pleasant and favorable for good shooting. A set of new expert traps threw the targets very swiftly, making very difficult shooting, and making a variety of results in the scores. Mr. John S. Wright was manager. Mr. John D. Regan was cashier. Following are the scores:

Banks, 1	0111101101110111011101	15	1	16
Cornell, 3	11110011000110000001	10	3	13

FOUNTAIN GUN CLUB.

Brooklyn, L. I., June 18.—The club shoot of the Fountain Gun Club, at live birds, to-day. Dr. Wynn stood at 30yds., all others at 28. Scores:

Club shoot:					
Dr Wynn	1122200112	— 8	M M Hayden.....	202220110*	— 6
W R Stewart.....	2121011210	— 8	J Anderson	0000101100	— 3
J Wye	110221101	— 8			

Sweepstakes, 5 birds: Dr. Wynn 5, John Wye 4, John Anderson 4, L. Putney 4, W. R. Allen 2, J. J. Cunningham 2, M. M. Hayden 1.

Sweepstakes, 5 birds: Dr. Wynn 5, W. R. Allen 5, John Wye 5, M. M. Hayden 5, John Anderson 4, S. L. Putney 4, J. J. Cunningham 3.

Missoula Rod and Gun Club.

MISSOULA, Mont., June 12.—None of the boys seemed to shoot so well to-day. The light was very deceptive. J. P. Menard, who has been the club's standby for years, has not got himself into shooting trim yet, and some of the younger shooters are beating him, though perhaps he is only getting us into the belief that we can beat him, when he will regain his old form of about 86-90 per cent.

T T McLeod	011101101100110011111100	16
J P Menard	11111011001101010011011	17

W. E. GRAHAM.

Fort Smith Gun Club.

FORT SMITH, Ark., June 15.—The regular weekly practice shoot of the Fort Smith Gun Club took place at the Fair grounds last Saturday evening. The attendance was above the average and some fair scores were made, though there has been of late a general falling off in percentages that is unaccountable.

Mrs. Ben Atkinson graced the occasion with her presence, and also participated in the shooting, much to the discomfort of Mr. Chas. Boyd. A glance at the average column will tell why. Following is the score:

Shot			Shot		
	at.	Broke. Av.		at.	Broke. Av.
Mrs Atkinson..	10	3 .300	Robertson	50	33 .660
Matthews	60	50 .830	Echols	40	26 .650
Edelin	50	40 .800	Webber	60	26 .430
A W Boyd.....	60	45 .750	C H Boyd.....	40	11 .270

SECRETARY.

Midway Gun Club.

Matawan, N. J., June 15.—A steady breeze was blowing. The birds were fine. Nos. 1 and 2, 10 birds, \$5, two moneys; No. 3, 6 birds, \$3, two moneys, 70 and 30 per cent:

Luke	222222212	10	222222222	10	110022	4
Munpeal	0011222000	5	222210022	7	002000	1
Applegate	0110110212	7	2022210202	7	022112	5
McDowell	111122211	10	122122112	10	212220	5

Rifle Range and Gallery.

Cincinnati Rifle Association.

CINCINNATI, O., June 12.—The following scores were made by members of the Cincinnati Rifle Association in regular competition at their last regular match. Conditions: 200yds., off-hand, at the German ring target. Payne was high on the honor target with a score of 61. Gindele was declared king with a score of 219. Payne made the best score, handicap, for the Uckotter trophy by rolling up a 223. Weather very warm:

King target:	17	24	20	22	25	22	23	21	22	23	219
Gindele	22	21	16	19	16	23	25	16	24	24	206
Payne	20	14	22	14	24	16	23	17	21	9	180

CANOE HANDLING.

BY C. B. VAUX ("DOT")

Price \$1.00.

FOR SALE AT THIS OFFICE.

NEW YORK, March 11, 1898 - Geo. B. Hurff, Esq., Sewell, N. Y.: DEAR SIR:—Please send me a box of **Porpoisine Oil Paste** for oiling and softening boots and shoes. It is the best article of the kind I ever got hold of. After once greased with it, the leather remains soft and pliable for a long time. I never found anything to equal "Porpoisine" in preventing boots from becoming hard. When I quit hunting in the early spring I always give my horse hide hunting boots a good dose of "Porpoisine," and invariably find them soft and pliable in the following autumn. **Porpoisine Oil Paste** will keep the leather thoroughly pliable and watertight.

ROBT. C. LOWRY.

This preparation is indispensable to soldiers and campers, and is adapted to black and all shades of russet or brown leather. If your dealer does not keep it, a box will be sent you on receipt of 25 cents in postage stamps.

USE A MARLIN REPEATER
And SAVE MORE THAN HALF on the cost of Cartridges

32-calibre cartridges for a Marlin, Model 1892, cost only \$5.00 a thousand.
32-calibre cartridges for any other repeater made, cost \$12.00 a thousand.

You can save the entire cost of your Marlin on the first two thousand cartridges. Why this is so is fully explained in the **Marlin Hand Book** for shooters. It also tells how to care for firearms and how to use them. How to load cartridges with the different kinds of black and smokeless powders. It gives trajectories, velocities, penetrations and 1000 other points of interest to sportsmen. 198 pages. Free, if you will send stamps for postage to **THE MARLIN FIREARMS CO., New Haven, Conn.**
